The Wilson Papers

Genesis of the World's Most Fearsome Secret

DECLASSIFIED

Edited by

W. A. Harbinson

John Wilson was, and remains, one of the most mysterious and inexplicable human beings of the 20th and 21st centuries, his personal history defying credibility. His name first became known to the American public during the Great Airship Scare of 1896-7, but from that moment on, for reasons that still defy logic, he became a subject of endless fascination and deep suspicion to US intelligence agencies, which for decades had desperately tried, and failed, to track him down.

Surprisingly, after many years of silence, Wilson's personal reminisces, which he had composed on a daily basis over most of his unnaturally long life, were passed on to a CIA agent and ended up as classified documents in the Library of Congress, Washington DC.

Officially entitled *The Wilson Papers*, they tell the story of a man who was born in the American Midwest of the 19th century, took part in the rise and fall of Nazi Germany, continued into the Space Age of the 20th century, and finally entered the late 21st century to unveil a future of unparalleled scientific achievements and unspeakable horrors. A future terrifying beyond normal human imagining.

The Wilson Papers, finally declassified, tell this extraordinary, truly shocking, and almost unbelievable story.

Read them and tremble.

The Wilson Papers

The papers you are about to read are considered by the US Intelligence community to be among the most important in human history. Before the papers were passed on to us, the man known as John Wilson, though a leading figure in 19th and 20th century UFO mythology and, later, as a figure of great interest to the CIA and similar organisations of the Western world, was a man about whom remarkably little was known.

The formerly mysterious John Wilson was born in the 19th century, lived long enough to be still alive in the 21st century, and is now believed by some, contrary to all known logic, to still exist somehow, somewhere, in another, possibly non-physical, dimension. Since he has long been viewed by the authorities as a serious threat to the whole world order, and since it is possible, if not probable, that he is not yet finished with us, his very existence, whether in a physical or incorporeal state, gives us real cause for concern.

Yet until the reading of the Wilson papers, we knew almost nothing about him. What we *did* know was that his name first entered popular mythology with the Great Airship Scare of 1896-7. In the mid-1890s, in the United States, it was generally believed that aerial navigation would be solved by designing an airship, rather than a heavier-than-air flying machine, so most of the earlier designs looked like dirigibles with a passenger car on the bottom. What stands out in the 1896-7 sightings is that the unidentified flying objects of unknown origin, which were seen by countless citizens from November 1896 to May the following year, were mostly cigar-shaped, that they frequently landed, and that their occupants often talked to the witnesses, usually asking for water for their machines – and the most intriguing of the numerous contactee stories involved a man who always introduced himself simply as ‘Wilson’ or ‘Mr. Wilson’.

There were four such reported landings where Wilson identified

himself, though only offering his surname. The first incident took place in Beaumont, Texas, on April 19, 1897, when one J. B. Ligon, local agent for Magnolia Brewery, and his son Charles, saw lights in a field a few hundred yards away and went to investigate. They came upon four men standing near a large, dark object which neither of the witnesses could see clearly, being dazzled by the lights shining down from it. One of the four men asked Ligon for a bucket of water. When Ligon had fetched the water, the man introduced himself as 'Mr. Wilson'. He then told Ligon that he and his friends were travelling in an airship, that they had taken a trip out of the gulf (presumably the Gulf of Galveston, though no name was given) and that they were returning to the quiet Iowa town where the airship and four others like it had been constructed. When asked, Wilson explained that electricity powered the propellers and wings of his airship. Then, after Wilson and his friends had clambered back into the passenger car, or gondola, of the airship, Ligon and his son watched it ascending, eventually being lost in night's darkness.

The next day, Sheriff H. W. Baylor of Uvalde, also in Texas, went to investigate 'a strange light' and voices at the back of his house. He encountered an airship and three men. One of the men introduced himself as Wilson, from Goshen, New York. Wilson then enquired about one C. C. Akers, former sheriff of Zavalia County, saying that he had met him in Fort Worth in 1877 and now wanted to see him again. Surprised, Sheriff Baylor replied that Captain Akers was now at Eagle Pass. Apparently disappointed, Wilson asked to be remembered by him the next time Sheriff Baylor saw him. Baylor also reported that the men from the airship wanted water and that Wilson requested that their visit be kept secret from the townspeople. Then, when they had been given the water they wanted, Wilson and his crew climbed back into the airship and 'its great wings and fans were set in motion and it sped

away northward in the direction of San Angelo'. The County Clerk also reported seeing the airship as it left the area.

Two days later, in Josserand, Texas, a 'whirring sound' awoke farmer Frank Nichols, who looked out from his window to see brilliant lights streaming from what he described as 'a ponderous vessel of strange proportions' floating over his cornfield. Nichols went outside to investigate, but before he reached the large vessel, two men walked up to him and asked if they could have water from his well. When Nichols agreed to this request, the men invited him to visit their airship, where he saw that there were six or seven crew members. One of those men told him that the airship's motive power was highly condensed electricity and that it was one of five that had been constructed in a small town in Iowa with the backing of a large stock company in New York.

The next day, on April 23, witnesses described by the *Houston Post* as two 'responsible men' reported that an airship had descended where they lived in Kountze, Texas, and that two of the crew members had given their names as Jackson and… Wilson.

Four days later, on April 27, the Galveston County *Daily News* printed a letter from the aforementioned C. C. Akers, in which Akers claimed that he had indeed known a man in Fort Worth, Texas, named Wilson; that Wilson was originally from New York; that he was in his mid-twenties; and that he was of a 'mechanical turn of mind' and was then working on aerial navigation and something that would 'astonish the world'.

Finally, early in the evening of April 30, in Deadwood, Texas, a farmer named H. C. Lagrone heard his horses bucking as if about to stampede. Hurrying outside, he saw a bright white light circling around the fields nearby and illuminating the entire area before descending and landing in one of the fields. Walking to the landing spot, Lagrone found a crew of five men, three of whom engaged him in conversation while the others collected water in rubber bags.

The men informed Lagrone that their airship was one of five that had recently been flying around the country; that theirs was in fact the same one that had landed in Beaumont a few days before; that all the airships had been constructed in an interior town in Illinois – which borders Iowa – and that they were reluctant to say anything else because they hadn't yet taken out any patents.

By May that same year, the wave of airship sightings ended – and the mysterious Mr. Wilson was never heard from again.

At least, not until he turned up, many years later, in Nazi Germany.

The first of the Wilson papers, composed in a rather emotionless, clinical style, but with an almost mathematical precision and hand-written with some eloquence, were *not* found in the defeated Nazi Germany, where Wilson had worked throughout World War II, but in his previously hidden colony in Antarctica, in the mountains of Queen Maud Land, which the Nazis had renamed Neu Schwabenland, and from which Wilson had sent out his man-made flying saucers to terrify the whole world, as part of his bid for worldwide domination. The opening pages of the Wilson papers reveal, for the first time, his formerly unknown origins and subsequent history in the 19th and 20th centuries.

The Old World

Paper #1

It is important that I remember. My time will soon be up. The plastic surgery and the pacemaker and the prosthetics have all been useful, but the liver still manages to elude us and so I must die. I remain philosophical. I have had

more than most. I have lived a long time, made the dream a reality, and I cannot complain because nature still hides its secrets.

We never conquered the liver. Perhaps we never will. Now I start to degenerate, feel the hardening of my veins, and my memory is not what it was and too often betrays me. No matter: it is done. We cannot be stopped now. The sun glitters off the ice as I write – and the ice is the New World.

It is important to remember. Some fragments, if nothing else. It was all so long ago, so far away, and now it seems like a dream. My parents: not important. We are blessed and cursed by birth. Two very ordinary people heading nowhere, myself growing under them.

I detested my childhood. This much I do remember. Long days in the Midwest, clouds of dust over the flatlands, my father and mother in the fields, bending over their crops. They were simple, decent people. I can scarcely recall them. They talked little and they worked very hard and received scant reward. Detested it. Yes. The days stretched out forever. As a boy, still a child, how young I don't remember, I spent hours gazing up at the stars and wondering how I could reach them.

I've never understood emotions. An aberration of the weak. I am thinking of what they call 'love' and its attendant illusions. They would call me a genius. By their terms they might be right. From the beginning (I remember this well) I was always obsessed. An emotion of a different sort. Not a need for human warmth. I saw humans in biological terms and thought the world a laboratory. The obsession was with knowing. It was all within the mind. Anything outside the mind – the need for love or material gain – was no more than a degrading manifestation of our primitive origins. What matters in Man is mind. I have always believed this. Even then, as a child, about ten years old I think, I believed this (or felt it) and lived it and would not let it go.

They would call me a genius. I would say 'integrated'. My mind and emotions were fused to perform in calm harmony. No weakness. No digressions. My flesh never defeated me. Even later, as a young man, in the offensive throes of puberty, I would hold my yellow semen in my hand and try to sniff out its properties. The vas deferens and the seminal vesicles, the bulbo-urethral and prostate glands: my ejaculations were examined biologically and found to be normal. I thus conquered such distractions. I took the semen on my tongue. Various liquids and sperm, two hundred

million spermatozoa; orgasm thus became a form of research and lost its great mystery.

Hard to believe it now. All so very long ago. My parents ignorant with a Bible on the table, my head in the stars. The small farm was a prison. My decent parents were viewed as wardens. A teenager, isolated, my head bursting at the seams, the lack of books, or the means of education, drove me close to insane. I knew I was exceptional. I felt trapped by circumstances. Two or three times I ran away from home, but I was always brought back. So, I detested it. I just had to get away. This much I remember about my childhood: I grew up in Iowa.

Such a long time ago. The late 1800s. I remained a prisoner by lieu of my background and suffered accordingly. A genius, by their terms. Had to be, even then. For my birthday, I received a microscope and then examined my own sperm. Fourteen? Fifteen? I can't remember my age. In my room, I took my penis in my hand and let the semen stain slides. The mystery of life was in biology. Ejaculation was mere phenomena. I thus reduced my shifting yearnings and dreams to their most basic nature. The human body was just a vessel. Without the mind it was superfluous. I learned early, and had no cause to doubt, that the mind took precedence.

Science. That is all. The pursuit of knowledge was all that mattered. Even then, growing up in Iowa, I had no other yearnings. The death of my mother pleased me. There was nothing personal in it. A good woman, she died as people do, and that gave me release. My father sold the farm. He took a job in Massachusetts. A small town, I don't recall the name, quite close to Worcester. Thus was I set free. Universities and libraries. My mind was filled with energy and light and I crammed it with knowledge. The Worcester Polytechnic Institute. I wonder what they called it then. I remember that I came alive there and realised my potential.

What year? Does it matter? I think 1888. Then the Massachusetts Institute of Technology and the thrill of logical thinking. I was an outstanding student. I was not very popular. The thrill was in logic, but the nightmare was in people: my genius isolated me completely from the other students.

I don't remember caring much. I don't believe I cared at all. (Goddard would later suffer the same, and he, too, was a genius.) The behaviour of fluids at MIT. Wind pressure on surfaces. The dream of flight was what kept me alive and made the world seem more bearable. I rarely socialised. I only

stopped for food and sleep. The dream of flight was my dream, aerodynamics my taskmaster, and my genius drove me forward relentlessly and would not let me rest.

Inhuman? I wonder. I have often thought about it. Not then, but later, when I succeeded, when the skies shed their secrets. Yes, only then. I certainly thought about it then. Repulsed by abstract emotions, by the human need for self-esteem, by what was known as love and affection, I lived without women.

I believe I tried once. There are vague recollections. Not inhuman, I must have been concerned that they would see I was different. A girl with auburn hair. Perhaps a redhead or a blonde. Spreadeagled, her flesh as white as snow, her soft words unbearable. I tried, but I failed. I saw her body as meat. The act of love was as primitive and functional as eating and shitting. I do not recall passion. My rhythmic thrusting was demeaning. My partner's groanings drove me back into myself and made me think scientifically. I studied my probing penis. The parting vulva held no charms. Her heaving body and my downward thrusting loins lacked aesthetic refinement. The caves are just behind us: this one thought I remember. Perhaps I thought of the spermatozoa in the womb and wondered how to control them. So much for the act of love. My mind would not let me succumb. I gave up and returned to masturbation of a functional kind. This act was not for pleasure. The point was to kill the need. And my hand, which stroked my flesh without guilt, was just a means to an end.

As for love: a mere illusion. Love is nature's slyest trick. The emotion called love is but a tool in nature's great building plan. Love encourages procreation. It protects the helpless young. Its true purpose is not to exalt us but to make us continue. Thus did I view it. I reduced it to biology. Love was no more than the semen in my hand, but it could be destructive. Men lived their lives for love. This made them weaker men. The need for love and admiration (for self-effacement and inner power) was the need that made them abuse their full potential and remain close to primitive.

The possibility was intolerable. I never wanted to let it happen. My genius, the ruthless brilliance of my mind, would not let me accept it. Thus I lived for my studies. I never let my flesh defeat me. My sexual needs were appeased by my own hands or by whores; my body's hungers were not confused with love and could not then distract me. No, I wasn't popular. The

other students thought me strange. I think now of that time, of the bliss of isolation, and realise that my devotion to my mind made me someone unique.

My fondest memories are not of people. My fiercest pleasures all came from facts. Angles of wind attack, lift, drag and airspeed: the experiments with the wind tunnel in the basement of Eng A, the revelations of the vane anemometer, the Lawrence Hargraves experimental reports, Sir Hiram Maxim and his engines and propellers, my mind glowing, expanding. The dream took root then. I wanted the conquest of all knowledge. I had a dream of a society devoid of conflict and dissension, a society subordinated to science and its ultimate truths. I had that dream and lived it. I devoted my whole life to it. And now, looking out at the glittering ice caps, I feel deep contentment.

I never accepted the impossible. I refused to recognise it. I learned with a speed that was thought to be abnormal, living only for the lectures, for the libraries and wind tunnel, my hands black with oil, my eyes red from too much reading, breaking down and analysing my teachers' words, then racing ahead of them.

My father died in that time. I can't remember the funeral. A kind man, he had lived a pointless life and the lesson was clear to me. Nothing mattered but the mind. Common emotions were mere distractions. What mattered was the grandeur of science and where it might lead us. And so I continued studying. My intellect left me no choice. Then Sibley College, Cornell University, in Ithaca, New York.

All things were possible there. More than most of the students knew. I do not remember faces, but I do remember names: Rolla Clinton Carpenter, Octave Chanute, Oliver Shantz and Aldred Henry Eldridge and quite a few others. Machine design and construction, experimental engineering, electrical and mechanical engineering and aerodynamics. These courses were in their infancy, were the products of the New Age. It was an age of scientific innovation and grand aspirations. A Bachelor of Science in Aerodynamics. I remember that from Sibley College. I believe I gained it in 1895, but I cannot be sure of that.

How stupid people are. How stupid they always were. The only emotion I can still entertain is that of contempt. For what they did to me. For what they later did to Goddard. They tried to use us and cast us aside and then control our creations. I think of the businessmen. I also think of politicians.

Commerce walks hand in hand with politics, and both are corrupt. Man's purpose is to build upon his past and thus conquer the unknown. All other aspirations are pointless: they are only of the moment. This is the dream of science. It is logic, not emotion. It is a logic that is not shared by businessmen or politicians – nor by the mass of normal men who mostly live without purpose. Such men have no real logic. They are moved by base hungers. They are blinkered and retain a narrow view that will never be broadened. They think only of the present. Their future is here and now. They take genius and fear it and use it and then cast it out. I did not know this soon enough.

Within the ice is the New World. Beyond it is the old. I look beyond the glinting plateaus and think of where I came from.

What an age it was then! So magnificent, so blind. An age of flowering genius, of corrupt commerce and politics, an age of the most insoluble contradictions, of builders and wreckers. I did not know soon enough. They financed me and used me. They took my enthusiasm and brilliance and then tried to pervert it. Yet what if I had known? Out of college, a BS in Aerodynamics, I had to take whatever they offered me.

Finance. Equipment. The world opened up to me. The secret hangars in the wilds of Illinois formed my bridge to the future. Myself and some others. The very cream of young scientists. Sworn to secrecy, we worked night and day to make miracles commonplace. We tolerated the businessmen. We rarely thought of the politicians. With the innocence of all passionate dreamers, we just worked for our pleasure. What year was that? Probably 1895. A full year before Langley's first successful test flights, we had already surpassed the airships and were moving on to greater things.

The work never ceased. The secrecy was total. More hangars in Iowa, in the Gulf of Mexico, yet another in a place near Fort Worth, all producing components. My first lesson in secrecy: a wide spreading of the work force. Who would know in Iowa or New Mexico or Fort Worth what the individual parts they were making would ultimately form? Thus we moved forward. Thus did I create them. The skies opened up and gave me their secrets and the dream became real.

The second lesson in secrecy: that men will not believe their eyes. Or that men, if they do believe their eyes, will be ridiculed for it. We flew right across the country. The huge wings and rotors glinted. They were very primitive

flying machines, but they must have looked awesome. And so we could land. Our crude flying craft needed water. And like all young men who feel that they are conquerors, our mood was ebullient. We played jokes on those who saw us, told the truth and then told lies, and later, when we read the newspapers, we knew the ruse had succeeded.

Such a secret cannot be kept. Nevertheless, it can be protected. To protect a secret you must give away part of it and turn it into a rumour. Who mixed half-truths with lies. Speculation did the rest. Who believes what they now see in the skies and can say so with ease? The world's governments understand this. It is a tactic they learned from me. We flew across the length and breadth of America and were never discovered.

All else was superfluous. It was fodder for the masses. Langley's flying machines, the Wright brothers' manned flight, the later flights of Wilbur Smith and Louis Blériot – all were highly publicised trifles. Such events were mere distractions. The real progress was made in secret. By 1904 we had crossed the Pacific Ocean, and our lights, which were seen by the US Navy, were called natural phenomena. Such descriptions were reassuring. I had no desire for glory. My one wish was to continue my life's work without interruptions.

How stupid they are. How stupid they always were. Now they see us in the skies and close their eyes and still refuse to believe it. This is why we are winning. This is why we could never lose. They could never accept what is possible – but for us, all things are…

Imagine our excitement in the Central Intelligence Agency (CIA) in Langley, Virginia, when we read this first Wilson paper. It is clear from his opening comments that Wilson was already an old man close to death when, gazing out from his Antarctic eyrie, he started writing down his thoughts. Given his advanced years, his thoughts are remarkably lucid, if often vague on actual detail. They do, however, confirm that he had been raised in Iowa (where the 'Wilson' of the Great Airship Scare of 1896-7 told witnesses the airships had been constructed) and was raised on his parents' farm in the Corn Belt, which he loathed. He was educated at the Worcester Polytechnic Institute in Massachusetts, then at the Massachusetts Institute of

Technology, and finally at Sibley College, Cornell University, in Ithaca, New York. Given this information, we checked the records of Sibley College and learnt that John Wilson had been born July 6, 1870, in Montezuma, Iowa, to Cass and Ira Wilson, both listed as farmers. He attended elementary school in Montezuma, then high school in Des Moines. Included in his records were highly laudatory reports from both schools for his academic achievements – top marks in every subject – though all his teachers agreed that he seemed to have few friends and cared only for studying.

His single-mindedness and emotional detachment are confirmed in the first paper, in which he comes across as remarkably unfeeling, caring little even for his parents, describing them only as 'simple, decent people' whom he scarcely remembered. More tellingly, he considers romantic love to be a worthless illusion and his sexuality a mere distraction from more important matters. Also, he repeatedly expresses only contempt for most of the human race. Equally clear is that being remarkably intelligent himself, he has little time for those less gifted.

In the fall of 1888, when he was eighteen years old, his mother died, and his comments about her passing only serve to emphasise his already chilling disassociation from normal human feelings. 'The death of my mother pleased me. There was nothing personal in it. A good woman, she died as people do, and that gave me release.' Likewise with his father. 'My father died in that time. I can't remember the funeral. A kind man, he had lived a pointless life and the lesson was clear to me. Nothing mattered but the mind. Common emotions were mere distractions. What mattered was the grandeur of science and where it might lead us.'

He was only ten years old when he became obsessed with the belief that the only way for mankind to survive the inevitable end of Earth was to aim for the stars. This belief was to shape his whole life.

Shortly after his mother's death, his father sold their farm in the Corn Belt, then father and son moved back to their home town of Worcester, Massachusetts. Once there, Wilson signed on at the MIT where he studied advanced aerodynamics, with particular emphasis on the wind-tunnel experiments that took place in the engineering 'A' department. In 1893, the same year his father died, Wilson's academic reports, in which every subject was marked as 'exemplary', thus setting a college record, gained him entry to Sibley College, Cornell University, New York, where he studied

experimental engineering. By 1895 he had obtained his Bachelor of Science degree and left Cornell. His university records fail to say where he planned on going when he left, but they do reveal that between 1896 and 1897 he returned frequently to the university to attend the lectures of Octave Chanute, the highly regarded engineer and aviation pioneer, friend and mentor to the famous Wright Brothers. However, shortly after attending Chanute's final lecture, Wilson disappeared and only reappeared in 1930, when, if the official records are to be believed, he spent six months as assistant to the American rocket scientist, Robert H. Goddard, at his launch site in Eden Valley, Roswell, New Mexico.

What was he doing in the thirty-three years in between?

The Wilson papers, if not clarifying this mystery, at least fill in some of the details.

In Wilson's first paper, he refers repeatedly, without doubt, to his own genius. This is part of his stupendous arrogance; it is also part of his basic contempt for humanity. 'How stupid people are. How stupid they always were. The only emotion I can still entertain is that of contempt.' Yet hints about where he might have been throughout those missing years can be found when he says that he despises 'them' for what 'they' did to him and 'Goddard', the latter not named in full. But by this time it was obvious that 'Goddard' was Robert H. Goddard, the renowned rocket scientist, first exploited and then callously neglected by the American government. Obviously, Wilson is aligning himself here with the rocket scientist, one of his few heroes, while making it perfectly clear that 'they tried to use us and cast us aside and then control our creations.'

Who were 'they?' As he writes in the first paper, 'I think of the businessmen. I also think of politicians. Commerce walks hand in hand with politics, and both are corrupt.'

It would now seem obvious that since Wilson's name first became known to the general public, as well as the authorities, during the Great Airship Scare of 1896-7, when he presented himself as head of the crew of one of the airships reported to have been constructed in Iowa, he had been working anonymously on those airships for wealthy businessmen and politicians, the latter possibly related to the American government.

Could this be true?

The answer to this question is given in Wilson's second paper.

Paper #2

I retain my contempt. This one emotion is strength. I have needed that strength for many years and will not let it go. What age was I at the time? I think I must have been forty. I still believe it was the explosion over Russia that led to the troubles.

That was 1908. We made a simple mistake. We had a crude form of atomic propulsion and we couldn't control it. So, we had an explosion. The Tunguska region was devastated. The accident frightened the stock company in New York and that started the problem. Some executive panicked, his panic infected the US government, and they were frightened that the project would be exposed and reacted accordingly. They demanded control of our project. Talked of national security. They made a deal with the corporation in New York and placed us under the military.

The military mind is perverse. It destroys all it touches. Once the military took over our project, I knew it was doomed. An immediate conflict of interests. I presented my case and was rejected. I had dreamed of the Atomic Age, of exploration and research, but the military had only one aim, which was national defence. I knew what that meant: they wanted weapons for future wars. And though despising them, I nevertheless worked with them to keep my construction plants open.

The following years were a nightmare. My contempt for the military deepened. A bottomless pit of paperwork, interdepartmental conflicts, interference of the most ignorant kind, then a cutback in funding. All governments are the same. They lumber along like dinosaurs. Short-sighted, unimaginative, existing only for the moment, they make demands and then cry in protest at the cost, thinking only of votes. Yes, I despised them. That emotion was a luxury. It burned within me all those years and gave me the strength to continue. My contempt lacked morality. But I have never believed in such. Morality, that conceit of free men, is no aid to their progress. So, not moral outrage. No, it wasn't that. My contempt was for the cowardice and ineptitude that hampered my work.

My sole interest was science. My major passion was flight. I was dreaming of a voyage to the stars and their infinite mysteries. This dream was

not common. Those fools thought it was madness. I realised that they were draining my brain for their own pointless purposes. And so finally I revolted. Withheld vital information. Over two or three years I sabotaged my own projects, deliberately causing failure after failure, feeling pain for the first time.

Such anguish to endure. The first and last time I felt it. The knowledge that I was destroying my own work to keep it safe for the future. And for all that, I did it. My contempt was my protection. I now knew that the cost of the research had filled them with panic. My great machines would not be built: they would rot while the weapons grew. The men in charge were men moved by mortal fears: they lacked vision and courage. I did not need such men. Such men were a menace. Only heroes or madmen, history's undefiled dreamers, would be capable of backing my vision and making it real.

Thus I sabotaged the project. I said our hopes had been misguided. They stared at me from behind their long table and showed great relief. My apologies were accepted. A few murmured their regrets. Then my atomic propulsion project was aborted and the hangars closed down. World War Two had already started. The Dark Ages had returned. They wanted aircraft of a functional nature, so I quietly resigned.

The worst years of my life. I was forty-five years old. My genius for technology kept me working, but frustration was choking me. Years of drifting around the country. Working here, working there. Hiding my genius and displaying mere competence, thus avoiding attention. How did I survive it? With contempt. With willpower. Democracy, that catch-phrase of the West, became something to laugh at. Democracy was incompetence. The right to vote meant poor leadership. What was needed in the world, and what I wanted most desperately, was a government of heroes or madmen who sought the impossible. Such a government did not exist. The US government was run by cowards. Thus for years, with a pain that turned to rage, I kept my dreams to myself.

Years of lacerating anguish. The first and last time. Sustained by relentless curiosity and indomitable will. My contempt for their blindness. My refusal to accept defeat. Every scientific library in the country falling under my scrutiny. All that, plus the work. The demeaning jobs I did for money. My genius for engineering, electronics and aeronautics offered up in the disguise of mere competence as a means of survival. But I used even that. Used

aboratories and workshops. Created small things here and there, the minor offshoots of my genius, and sold them to the moguls in suits for the freedom I needed.

Then I found a resting place. The facilities were exceptional. I stayed with an aircraft company in Texas as the head of their research lab. All those nights spent alone. The white sheets of the draughtsmen. All the experiments I conducted in secret while designing their aircraft. (My head aches as I think of this. I find it difficult to recall. The prosthetics and artificial heart cannot help me forever.) Electrostatic repulsion. Photosensitive cell steerage. The reaction of streams of ions to furnish rocket propulsion, then a means of neutralizing the decrease of gravity and other such matters. I never cared about their aircraft. Already they were obsolete. Already I had moved beyond orthodox flight and was tackling the mysteries of the boundary layer. The boundary layer was everything. Conquer that and the dream was mine. Thus I worked and theorised, the laboratory, the wind tunnel, but the theories still remained in my papers and could not be tested.

My dream was of evolution. Man's place in the universe. My dream was of Man as a mind that could transcend the body.

Yet how to achieve this? 'Man' meant individual men. And such men, being imperfect creatures, were distracted by hungers. The hunger for love. For admiration and power. I then tried to understand what such hungers meant and found them all in myself.

The hunger for love. In my loneliness I felt it. Somewhere, sometime, a memory almost gone, I wasted nights trying to ease my own hungers in a more common flesh. What I found was soon lost. The vulva's folds were a threat. The rigid shaft of my penis in a woman gave no more than a spasm. Yet such a spasm shapes the world. People live and die for such. And that spasm represents what most people want: admiration and power.

Learning this, I retreated. Love's deceits showed the way. I understood in my moment of grace that their needs were illusions. I retreated and found myself. I took myself in my own hands. When my need, when my sex, became a threat I gave my semen release. Thus I understood men. They were feelings, not thought. Whereas Man, that outpouring of separate men, held the promise of greatness.

Science represents the mind. It is what we must live by. It is logic and towers above the chaos of outmoded emotions. I learned this and lived by it. I

tood above my crude desires. When my flesh seduced my mind from its work, gave it instant release. A shaft of meat in the hand. The ejaculation of semen. t meant then, and to this day still means, the mere appeasement of lust. And earning this, I was released. The call of science was in my soul. From then on neither entered another being nor believed in men's sanctity.

Inhuman? Perhaps. But then what does 'human' mean? Only fear and confusion and doubt and emotional turmoil. To be human is to err. More: to tagnate. Men are impulse encased in flesh and bone, and alone they are nothing. But Man is something different. Man is mind over matter. Man is mperfection crawling from the slime to evolve into Superman.

I met Goddard in Massachusetts. I remember returning there. I was fifty ears old at the time, but felt younger than that.

How I envied Goddard! Both envied and pitied him. Another genius umiliated by his countrymen and becoming eccentric. Envy. Admiration. Both share the same bed. And so I envied his achievements, respected them, nalysed them, and felt pity for the future he would have at the hands of his ellows.

I looked upon him as a child. A suspicious, secretive, brilliant child with nore instinct than logic. And yet he was a genius. There were things I learnt rom Goddard. Not much: just the odd, bizarre insight, some small things I ad missed: peculiarities of steering systems, gyroscopic controls, various inds of self-cooling combustion chambers – small things; all priceless. In eturn, he learned from me. We worked together for two years. My presence nannounced, Goddard sworn to keep me secret, we spent days in the deserts f New Mexico, unravelling mysteries. Goddard sent his rockets skyward. My oul soared aloft with them. It was 1931, a troubled year, and I knew that my ime had come.

Tsiolkovski and Goddard. Both still alive then. One older, one much ounger than me, both true pioneers. The basic principles of space-flight: the leaf Russian's great achievement. Then the liquid-fuelled rocket of young Goddard, abused beyond mention. Both stood at the threshold. Both failed the ame way. Both depended upon 'honourable' men and were thus chained by mall minds. Their mistake was not repeated. I did not trust 'honourable' men. What I wanted were heroes or madmen – and the latter sufficed.

I never dwell on morality. Never did, never will. Morality is the crutch of he cripple, the mask of the weak. What of Wernher von Braun? What of

Walter Dornberger? Such men were neither sinners nor saints: they were quite simply scientists. Can a scientist think of morals? Should he split peas in a pod? No, what the scientist must do is pursue his great calling. By himself, he has no means. He must depend on those with power. And in doing so, he must stand aloof from all concepts of right and wrong. I always believed that. I believe it to this day. And gazing out at the wilderness, at the world of snow and ice, I think of how, after working with Goddard, I accepted this brutal truth.

There were madmen back in power. They were obsessed and visionary. To me, they represented the possibility of limitless facilities. I never thought of right or wrong. I simply took my opportunity. I left Goddard and America behind me – and I never returned…

As we can see, this second paper makes it perfectly clear that from shortly after graduating from Sibley College, New York, in 1896, to his reappearance in 1930-31 as temporary assistant to Robert H. Goddard in Roswell, New Mexico, Wilson was involved with secret aeronautical research projects that were funded by a combination of civilian finance companies and the US military. That work, always conducted in great secrecy in a wide variety of locations, but mostly around Iowa and Illinois, surely led to the development of America's first airships and the Great Airship Scare of 1896-7, during which Wilson actually introduced himself to various locals when the airship he was travelling in landed, needing water for its engines. At the same time, he managed to make frequent trips back to New York to attend the Sibley College lectures of Octave Chanute and the other aeronautical geniuses of the day. Clearly, by the time he disappeared for good, the initial construction of airships had led to even greater aeronautical achievements, possibly including the highly advanced, pilotless object, propelled by a crude form of atomic power, that may have exploded in the air over Tunguska, Siberia, in 1908.

According to Wilson's notes, this failure led to the stock company that was financing him cutting off his funding and the US military taking over his projects. Disastrously for Wilson, the military authorities further reduced his funding while insisting that he develop only aircraft for war rather than his more ambitious projects, most of which had been devoted solely to the future conquest of space.

‘My atomic propulsion project was aborted and the hangars closed lown… They wanted aircraft of a functional nature, so I quietly resigned.’

Remarkably, so great was his disgust at this turn of events that even ɔefore resigning he quietly sabotaged his own work, rather than let it be nisused.

More details about this episode surfaced during the early years of World War II, when US intelligence, concerned about Wilson’s work for the Nazis, ıad him investigated. Among those questioned during the investigations was ın elderly man, Abe Goldman, then retired and living in a nursing home in Des Moines, Iowa. Questioned in the nursing home by Army Air Force ntelligence agent, Mike Bradley, now deceased, Goldman confirmed that he ıad been one of the partners of Goldman and Cohn, a stock company egistered in New York, and one of the many that had financed Wilson’s xperimental work, including, in the late 1800s, airship construction, at arious, mostly secret, locations, notably the wilds of Iowa, near the Illinois ɔorder. By 1897, five such airships had been built and flown, but the sightings topped abruptly in May of that year and the airships were never seen again.

According to Goldman, Wilson had deliberately destroyed them. The lesigns he gave to Goldman and Cohn were for unworkable airships. He ɔatented the *real* designs under a couple of pseudonyms and sold his genuine lesigns to an unknown German company, almost certainly Zeppelin, under an ıgreement that called for the American airships to be destroyed. The Wilson ıirships were blown up in the night by an unknown demolition expert, though Goldman and Cohn were convinced that the saboteur was Wilson himself. Then Wilson disappeared, leaving behind only his ingeniously faked lrawings, from which the Goldman-Cohn engineers could not reconstruct his ɔriginal internal-combustion engines and structural designs.

While Goldman and Cohn were going bankrupt, now having no workable ıirships to sell, the first German airships, the Zeppelins, clearly based on Wilson’s designs, took to the skies. Meanwhile, Wilson had been opening his ɔwn research establishment across the state line, in Illinois. While it cannot be erified exactly what went on there, it is now believed that by 1903, just ɔefore the Wright brothers made their first successful flight over Kitty Hawk, North Carolina, Wilson, using the money obtained from Zeppelin, but ɔossibly later supported with clandestine US government aid, had secretly ɔroduced even more advanced aircraft, reportedly turboprop biplanes, that had

ıctually managed to cross the Atlantic Ocean. These rumours, most likely ɔased on classified intelligence reports of the US Army Air Force, were ollowed by reports claiming that Wilson had also been engaged in dangerous experiments with atomic propulsion and the boundary layer, and that one of he products of such research, a pilotless flying object propelled by jet ɔropulsion or some form of atomic energy, had led to the devastating explosion that took place in 1908 over Tunguska, Siberia, after an ınprecedented flight all the way from the United States to Russia. After that lisastrous mishap, Wilson's plant in Illinois was closed down by the US government, his designs (at least those that were found) were either classified ıs top secret or destroyed, and Wilson, then twenty-seven years old, left llinois for good.

As best we know, he spent the next two or three decades drifting from ɔne small aeronautical firm to another, keeping his light under a bushel, but naking a good living by selling his less important innovations to commercial ıirline companies and construction plants, finally going to work, at sixty years ɔld, with that other pioneering genius, Robert H. Goddard.

Also refused backing by the US government, Goddard had been reduced o lecturing at Clarke University in Worcester until a Guggenheim Foundation grant of $2,500 enabled him to return to his test range in Eden Valley, Roswell, New Mexico. In 1933, he was visited there by Mike Bradley, the ıforementioned US Army Air Force intelligence agent, who wanted Goddard o join Charles Lindbergh, Orville Wright and other leading scientists in the ecently formed National Advisory Committee on Aeronautics. But ıotoriously secretive and uncooperative with his fellow scientists, also deeply mbittered by the US military's indifference to his work, Goddard refused the ɔffer. However, prodded by Bradley, Goddard confirmed that Wilson had ndeed worked with him for about six months, up until December 31, 1930, vhen, shortly after Goddard had successfully fired his first liquid-fuelled, gyroscopically-controlled rocket, Wilson abruptly left without saying goodbye ınd was not seen again.

It was Goddard's belief that because the work done jointly by him and Wilson had been treated with contempt by the US government and military establishment, but had been openly praised and even used by the German ıeronautical and rocket scientists, including Wernher von Braun, as the basis ɔr their own rocket research, Wilson, upon the completion of his work with

Goddard, after their first successful rocket launching, quietly left America and travelled to Germany with the intention of receiving stronger backing from the Nazis. That they were Nazis didn't appear to bother him. He went where he believed he would be appreciated and he stayed there, working for the Nazi war machine, throughout the war.

The third paper confirms this shocking truth.

Paper #3

The dream of the Thousand Year Reich had all the grandeur of lunacy. Nothing was impossible. They firmly believed that. They had their Volkish Socialism, their lust for an Aryan Utopia, and with the passion of all mad visionaries they stepped forth to create it. Mysticism? Yes. The Reich was born from mysticism: the Cosmic Circle of Munich, the Anthroposophy of Rudolf Steiner, the Theosophy and Rosicrucianism of Vienna and Prague, the ancient myths of Atlantis and Lemuria, of the undefiled German. Mysticism and racism: the 'pure' blood decreed by Schuler. The Third Reich sprang out of a vision of a Utopia devoid of Jews and subhumans.

Such dreams have no limits. Ordinary logic cannot contain them. In such dreams the Third Reich saw the light over limitless vistas – and ignored the impossible. The whole world would be changed. Cities and nations would be erased. The Earth would be cleansed of Jews and subhumans and other vermin; and in isolated colonies, in new cities of stone and glass, a chosen hierarchy of masters and slaves would create the New Order.

No doubt they were madmen. Their strongest leaders were demented. They were men who lived their dreams, who were divorced from reality, who like children felt that all things were possible and that nothing could stop them.

Science is logic. Mysticism is the opposite. I despised the mysticism of the Nazis, but could see its potential. My own dreams were grandiose. No democracy could afford them. I needed money and equipment and labour on a staggering scale. No democracy would sanction it. Only lunatics would. And the lunatics, all those mad visionaries, were the Reich's leading lights.

I knew this when I met Himmler. It was in 1935. Behind his glasses his eyes had the mildness of a priest or a fool. We were in his office in Berlin. I

pread my drawings out on his desk. He glanced at them and stroked his hinning dark hair and touched his nose with one finger. He had once been a hicken farmer. Now he headed the SS. A mild and modest killer, puritanical, uietly spoken, he was seeking to resurrect Atlantis through a Reich filled with upermen. I had checked him out beforehand. What I learnt was enough for ne. He believed in mesmerism, in reincarnation and clairvoyance, in Horbinger's cosmic world of ice and fire, in gods and godmen. His SS was a eligious order. His men were bound by blood and oath. Himmler wanted to solate them, to brainwash them and remould them, to mate them with the urest German women and produce blond perfection. He had once processed hickens; now he wanted to process people: he had a dream of a disciplined Order of masters and slaves. I wanted a similar Order – but one devoted to cience. And when Himmler raised his eyes from my drawings I knew I could ave it.

Himmler checked me out thoroughly. He couldn't believe what I was here for. He first thought me an eccentric American who ought to be shot. I vas held prisoner in Berlin. They interrogated me for months. In the Gestapo rison, in the Prinz Albrechtstrasse, I heard the screams of the tortured. My wn interrogations were more casual. My cell was quite comfortable. They fed ne and supplied me with books and let me work on my notes. The nterrogations were conversational. The less fortunate continued screaming. For two months I kept repeating my history as they jotted down details. The rison was always busy. Bleeding unfortunates were dragged down corridors. told my questioners of the project in Iowa and of how I had sabotaged it. The Americans don't know, I said. They believe the project was a disaster. My uestioners tapped their pencils on the table and smiled at each other. Quite ften I heard gunfire. It always came from the basement. I saw soldiers arrying bodies wrapped in shrouds and putting them into trucks. Such scenes id not disturb me. My hopes lived on undiminished. After two months, they oncentrated on my drawings, still unsure of their value. I don't know who irst studied them. I think the Italian, Belluzzo. Nevertheless, I was released hortly after and taken back to see Himmler.

No point in even dwelling on the blood that had stained Himmler's hands. Such a quiet man he was. His good manners were impressive. A modest face vith round glasses, his hair thinning and neatly parted, he sat behind his desk ike a minor clerk offering assistance. He asked me what I wanted. I explained

ny requirements. He nodded in a slow, thoughtful manner, sometimes stroking his nose. We are very impressed, he said. Indeed, he added, we are astonished. He then told me that some technical advisors had thought my drawings miraculous.

I asked who these men were. He mentioned Belluzzo and Schriever. He said Belluzzo was getting too old, but that Schriever was brilliant. They wished to work on my project. Himmler thought it a good idea. I realised that he wanted to have me watched, but I nodded agreement. You are committed, he said. You must now bend to our will. You will never return to your own country; if you try, we will kill you. I reassured him immediately. I would report directly to him. My beloved project would be wrapped in strict secrecy and controlled by the SS.

I will never forget that day. My dream came alive then. Even now, the pain biting, my poor liver in disarray, I gaze out upon the glinting ice caps and remember it vividly.

I was driven to Kummersdorf West, about sixty kilometres from Berlin. We both sat in the rear of the car and looked out at the city. Himmler obviously loved Berlin. The sunlight flashed off his glasses. He stroked his nose and pointed out the sights with a clear, quiet excitement. The city was indeed majestic. The streets were filled with contented people. The walls were decorated with swastikas and flags and obscene propaganda. The word 'Juden' was prominent. I saw few on the pavements. Soldiers sauntered up and down and laughed heartily, in love with themselves. The very air seemed to smile. It was the triumph of the will. In its own perverted way it was the proof of Man's awesome potential.

Perverted? Most certainly. With that truth I could live. Behind those walls were the high priests of a demoniac Order: Hermann Goering, Josef Goebbels, Rudolph Hess, Martin Bormann – alcoholics, drug addicts, occultists and degenerates – the very epitome of that gross irrationalism that I so much abhorred. There, too, the Gestapo butchers, the drilled ranks of the SS, and all the torture and murder that went on every day in the basements.

Yet I had to accept it. Science cannot moralise. Those irrational brutes were no more than the means to achieving my ends. Progress needs its trampled bones. Death gives way to more life. Evolution knows neither right nor wrong and transcends transient matters. So, I would work with them. In

doing so, I could use them. And looking out upon Berlin, glancing sideways at Himmler, I felt nothing but hope for the future, the glow of fulfilment.

We drove out of the city. Aircraft roared overhead. Sitting beside me, very stiff and upright, Himmler started to talk. He was suddenly like a child. His eyes gleamed behind the glasses. The words poured out and splashed upon my ears as if they couldn't be stopped. He said we were going to the Rocket Research Institute, where my research projects would be based. Wernher von Braun, he informed me, was already there with his own men, but he would soon be moved to Peenemünde, on the Baltic Sea, leaving me to work unimpeded at Kummersdorf. We passed troops on the road. The tanks growled through billowing dust. Himmler talked of Aryan blood and German might, of the world of the future. We will cleanse the Earth, he said. We will purify the blood. We will exterminate the Jews and the infirm and maladjusted, use the lesser races as slaves to the Reich, create a race of pure Nordics. There was no need to reply. Right or wrong did not concern me. When Himmler talked of his New Order, of his masters and slaves, I had the feeling that it just might succeed and that I could utilise it.

Unlimited labour was what I needed. No democracy could supply it. But here, in this country where all freedom had been suppressed, where the will of the people was one will – the Volk – and where discipline and slavery went hand in hand – here, at the dawn of the new era, I could do the impossible. Yes, I grabbed at it. I was in my late fifties. I thought then, before I knew what could be done, that my time was too short. Thus, I didn't moralise. Not then and not now. I looked out at the aircraft, at the tanks and machine-gun carriers, at the troops who were numbered in their thousands, and accepted it gladly.

History will exonerate me. What I did, I did for progress. I sit now in my mountain lair, the frozen wilderness below me, and I know with the certainty of faith that my life has meant something. I am changing the course of history. I am aiding evolution. When I die, as I now know I must, my achievements will live on.

I knew this at the time. The sight of the proving range convinced me. The experimental station was located between two artillery ranges, safely isolated from the surrounding towns and villages, all the hangars in good shape. Here Wernher von Braun worked. And Walter Dornberger and Klaus Riedel. Those names, and those of Grottrup and Becker, made me smile condescendingly.

The A-3 and A-5 rockets. So highly praised… so primitive. And the V-1 and V-2 would be feared when I thought them mere toys. But those rocket teams would soon be gone. They would be moved to Peenemünde. They would not be there to observe what I was doing, would not know I existed. In this I agreed with Himmler. Even the Führer would not know. Himmler had his own plans for the future and did not want them mentioned.

Himmler showed me around the hangars. He introduced me to the workers. I met the Italian, Belluzzo, who was old and grey-haired, and the younger Flugkapitän Rudolph Schriever, who struck me as being dangerously ambitious. The old Italian was a physicist. Rudolph Schriever was an engineer. Both men were engaged in aeronautical research, both were keen on my drawings. I didn't really want those men. They had been around too long. I was distressed by their knowledge of my work, and by their closeness to Himmler. They obviously wanted to impress him: bowed and scraped in his presence. I knew immediately that they would try to pick my brains and then usurp my authority.

I could not allow that. What I required was total secrecy. After my experience in Iowa, learning that no one could be trusted, I had already planned to strengthen my position by becoming invaluable. I would hide the most vital facts. I would doctor all the drawings. I would split the work up, spread it widely among the work force, and thus ensure that no single individual could duplicate my success. In this way I would protect myself. I would become indispensable. And so, as I shook hands, as I talked to Belluzzo and Schriever, I decided not to let them get too close to whatever was workable.

Yes, I was ruthless. I had to protect myself. I was aware of my dependence upon the Nazis and of how weak that made me. Sooner or later they might disown me – the war might drain their resources – and if that happened, I had to be ready to make good my escape. I would take my secrets with me. I would leave them only useless toys. But by then, if I made good use of my time, I would have what I wanted.

Such thoughts were not expressed. Himmler smiled and led me out. We returned to his car and climbed in and headed back to Berlin. There was paperwork to be completed. Requisition forms and orders: more manufacturers, more instruments, more pyrotechnicists, more welding experts and labourers. I did not think it was possible. The required numbers were

outrageous. I wondered if even Himmler, with his frightening, godlike powers, could requisition workers in such numbers for a clandestine project. Himmler smiled at my obvious doubts. He blinked repeatedly and stroked his nose. He said that I had no need to worry, that he had something to show me.

The fields of Germany were green. I heard aircraft overhead. We passed columns of troops and growling tanks, but the peace soon returned. This memory remains vivid. The sun shone from a blue sky. It was difficult to believe that war would come and devastate all of Europe. Then we passed barbed wire fences. Beyond the wire were smoking chimneys. We drove through guarded gates, beneath watchtowers and guns, kept driving toward the long wooden buildings, passed a series of gallows. The wind made the ropes dance. Ragged prisoners were digging ditches. We drove on and reached the centre of the camp and saw the Reich's hidden nightmare.

Himmler made the driver stop. A nervous soldier saluted us. We stood together in the mud of the compound, surrounded by prisoners. Himmler smiled and rubbed his nose. I saw the guards with the bull whips. The hundreds of men, women and children were filthy and silent. Nearly all had shaved heads. Their bones showed through their flesh. Their large eyes were filled with anguish and despair and a hopeless submission. I heard the crack of the whips. Dogs snarled and someone screamed. Himmler blinked and rubbed his nose, smiled with unstated pride, and then waved one hand languidly in the air to take in all the misery.

'Your workers,' he said…

US Customs and Immigration records confirm that a John Wilson shipped out from the United States on January 20, 1931, that he stayed in London for a few weeks in early March of that year, and that he applied for a German visa that same month. According to British immigration records, on April 5, 1931, a US citizen called John Wilson left England on a ship scheduled to dock at Bremen, Germany. There is no record of him ever returning to England or, indeed, the US. However, formerly classified files relating to Wilson's scientific activities with the Nazis were found after the war in what remained of Gestapo headquarters in the Prinz Albrechtstrasse in Berlin, the Ordnance Branch of the German Army's Ballistics and Weapons Office, also in Berlin, the Zeppelin Works at Friedrichshafen on the north shore of Lake Constance,

ınd even the underground vaults of the old German Rocket Research Institute ›f Kummersdorf West, sixty-six kilometres south of Berlin. Further, more ntimate, details were found in the personal diaries of Reichführer Himmler ınd an SS intelligence officer, Lieutenant Ernst Stoll, formerly a student ocket engineer.

According to the diaries of Ernst Stoll, he first met John Wilson in the Gestapo headquarters in the Prinz Albrechtstrasse. Stoll had been assigned ›ersonally by Reichführer Himmler to take charge of the American who, ıccording to Himmler's report, had been living in Germany under an assumed ıame and with forged German identification papers for the past three years. As this fictitious character, Wilson had been doing important research work on ıdvanced gyroscopic controls with the subsonic wind tunnel at the Zeppelin Works in Friedrichshafen. Learning of the remarkable talents of the nysterious American, Himmler had ordered him to be brought for nterrogation to Gestapo headquarters. After personally conducting the nterrogation, Himmler was confident that Wilson lived up to the German ntelligence assessments of his brilliance as physicist and engineer, was genuinely contemptuous of his own country's attitude to his remarkably nnovative work, and was almost fanatical with regard to his own, thoroughly elfish, ambitions. Accepting, therefore, that the American, if watched carefully and rigorously held in check, could be useful to the Nazi war nachine, Himmler decided to place him with the top-secret SS research ›rogramme dedicated to advanced weaponry and revolutionary forms of aerial varfare. As a member of the SS technical intelligence branch, Lieutenant Stoll ıad been tasked with supervising the research programme in general and Wilson in particular.

Meeting the American for the first time, Stoll swiftly ascertained that the experiments he had been conducting with the Zeppelin Works wind tunnel had elated to Professor Ludwig Prandtl's theory of the so-called 'boundary layer'. This is based on the premise that the air sweeping in on an object in flight ncreases its resistance in direct proportion to the increasing speed of the lying object. Because of this, the speed of the flying object is finite. However, f some method of entirely removing the boundary layer could be found, virtually limitless speed and manoeuvrability would be achieved. Wilson ıgreed with this theory, but took it further. It was his belief that the build-up ›f the boundary layer was dramatically increased by the many surface

protruberances of a normal aircraft – wings, tails, rudders, rotors – and that if hose could be dispensed with entirely, by somehow wrapping them together s part and parcel of the one, circular, smooth-surfaced flying wing, a disk-haped aircraft, a flying saucer, would be the prototype for the perfect flying nachine: one that would require no runway, since it would take off vertically, vould be able to hover in mid-air, and would be limitless in speed and nanoeuvrability.

As Stoll states in his diary, Germany had long been the country with the nost interest in such developments and was already the most advanced so far. ndeed, research on a circular aircraft was already being conducted at the ocket research centre at Kummersdorf West. This secret SS programme was alled 'Projekt Saucer'.

Stoll was not surprised that Wilson knew about the project, because, as Wilson had explained to him, he had helped test many of the experimental products coming from Kummersdorf and it soon became clear to him, from his study of these products, that what they were working on at Kummersdorf vas indeed a saucer-shaped aircraft. It was Wilson's conviction that because his work at Friedrichschafen had included wind tunnel experiments with a so-alled 'porous metal', *Luftschwamm* (believed to be the perfect metal for lefeating the boundary layer by letting the resistant air virtually slip through it like a bar of soap slips through wet fingers'), he could help immeasurably vith the development of a prototype flying saucer.

Agreeing with him, though with a few residual doubts, Lieutenant Stoll lrove him to the Rocket Research Institute at Kummersdorf West. The acilities for Projekt Saucer had been separated from the main research centre by an army firing range. At the far side of the range, hidden from sight, was Wernher von Braun's more impressive research works, which, Stoll informed Wilson, he would be visiting regularly, contributing his knowledge to von Braun's rocket programme, at least until such times as von Braun's whole acility was moved to Peenemünde on the Baltic island of Usedom. However, his main task, as Stoll also informed him, would be Projekt Saucer.

Under the supervision of Lieutenant Stoll (and under the constant threat of execution as a potential American spy, which seemed not to concern him in he slightest) Wilson worked on Projekt Saucer for most of the war years. Not urprisingly, though despising the Nazis, he made good use of them.

His fourth paper, with its mingling of admiration and contempt, makes

his perfectly clear.

Paper #4

The New Order was planned and executed with the sort of ferocious drive that only the mystically inclined can possess. Albert Speer was the architect: he created the environment for their vision. In the works of Albert Speer and the other Nazi architects I could see the realisation of Lebensraum in its most concrete form. Lebensraum – space – German conquest and expansionism: the great buildings and the underground factories were signposts to my future.

Himmler showed me Hitler's teahouse. It was on top of the Kehlestein Mountain. The five-mile road that ran up from the Berghof had been hacked out of the side of the mountain by the sweat of slave labour. In the peak of the mountain was an underground passage; at the end of the passage was a copper-lined elevator, its shaft about four hundred feet deep, hacked out of the solid rock. That elevator descended to an immense, high-walled gallery, supported by baroque Roman pillars. At the end of the gallery, also hacked out of the mountain, was a dazzling, glassed-in, circular hall. And standing in that great hall, looking out through the windows, I saw nothing but other mountains and sky – an overwhelming experience.

The impossible made possible – such was constantly accomplished. If the dreams were grandiose, the actual achievements were more so: the achievements of men who could make the impossible seem commonplace.

The German genius was for organisation. In that area it had no peer. Add to this the fact that their well of slave labour was bottomless, and what one had was the dream as a reality. Who built the mighty pyramids? The thousands of Egyptian slaves. The Third Reich had the genius and seven and a half million slaves, and given the combination of these two, all things became possible.

Seven and a half million slaves. Slaves who worked an endless day. Slaves who hacked out the mountains and dug tunnels through the earth and moved rocks and equipment and stores, and never complained. Such were my resources. I could have made a Pharoah envious. And given that, plus my own grandiose ambitions, there was little I couldn't do.

I was very close to Himmler. He unveiled his great dream. It was a

dream of Atlantis reborn from the ashes of war. No Jews or subhumans. A blond SS would rule. In a society of masters and slaves there would be no dissension. Magnificent cities of steel and glass. The pure Aryan predominant. Himmler told me of his dream of a wilderness populated by supermen.

'How do you build Atlantis? You need masters and slaves. The masters will be the elite of my Death's Head SS; the slaves will be the Poles and the Czechs and all the other low races. And how do we do it? It is easy, mein Freund. We keep building the camps, we ship the Jews there by their thousands, and when the wires of the camps begin to bulge we build more crematoria. Gas the schweine and burn them; let them turn to smoke and ash. When the camps have been cleared of the Jews we bring in the subhumans. The subhumans are the workers. They exist as mere slaves. They live just to work and that work is for the glory of the Reich – the slaves will build the new temples.'

The new temples would be the factories, the universities and laboratories; the new religion would be knowledge and conquest, the return of the Superman. How grandiose the dream! How impressive the rehearsal! Himmler wanted cities under the earth and he set out to create them. He drove me all around Germany. He showed me what could be achieved. I saw the great underground factories and I learned what was possible.

I remember Nordhausen. It had been hacked out of the Kohnstein Mountain. Thirteen thousand slaves from Buchenwald had done it with muscle and sweat. It was empty when I first saw it. The V-2 complex was still to come. It had tunnels eighteen hundred meters long, and nearly fifty side chambers. I gazed about me in wonder. Himmler scratched his nose and smiled. The work area was one hundred and twenty-five thousand meters square, buried deep in the mountain. Himmler showed me around. His voice echoed in the silence. There were twelve ventilation shafts, huge generators supplied the light, and special heating ensured a constant temperature, day in and day out.

'Here thousands will work. The slaves will live in a separate camp. That camp, which now exists, is hidden deep in a mountain valley, less than a kilometre from the entrance to one of the tunnels. It has every facility. Lots of barracks, a brothel. It has a sports ground and a hospital, a kitchen and a laundry, a psychological and vocational selection unit, a crematorium and prison. There is also the town of Bleicherode. It's twenty kilometres from here. There, the new tunnels, sixteen kilometres deep, will house several more

missile factories and living quarters for thousands. What else are mountains for? How else do we use the slaves? The new temples will be underground cities that are virtually impregnable.'

I still remember his every word. His voice echoed in that vast silence. I knew that the whole area, from the Harz Mountains to Thuringia, south of Prague and across to Mahren, was littered with similar tunnels and underground factories. Only a few were known to Hitler. Himmler controlled them all. They were cloaked in the strictest secrecy and ruled by the SS. The work went on night and day. All slackers were shot or hung. The underground factories were totally insular colonies, worked by masters and slaves, unrestricted by moral laws, and yet very few Germans knew about them or would ever set eyes on them.

Thus were my problems solved. I saw what could be achieved. Standing here beside Himmler, in that enormous, silent cave, I thought of all the thousands who would work there, and knew where my future lay. Himmler dreamed of ice and fire. He dreamed of cities beneath the earth. He saw the sun flashing off the frozen peaks that showed only emptiness. I would take what Himmler offered. I would hide in glass and stone. I turned around and stared at Himmler's modest eyes and saw his madness as sanity.

'The New Order needs its masters and they have to be Aryan: blond-haired and blue-eyed and strong – and absolutely obedient. Such are found in the Jungvolk: the boys of ten to fourteen. They are formed in the Hitler Youth, given the Blood and Honour dagger, retrained to worship the Führer and the Nation, then finally join the SS. Once there, they are mine. I do with them what I will. They no longer belong to Hitler, but to me – and they worship me slavishly.'

Himmler dreamed it and did it: he gave birth to his acolytes. The mild chicken farmer blinked his mild eyes and saw a world of godmen. The SS was Himmler's church, his bed and his altar; it was an Order run on Jesuit principles and disciplined with an iron fist. All its members were racially pure. They were bound together by sacred oaths. They were stripped of their history, given numbers instead of names, indoctrinated with the myths of the Volk and emerged as disciples. No questions would be asked. No order would be ignored. Their blind obedience would let them wade through hell without shame or revulsion.

I believed in this approach. Without discipline there is dissension.

Himmler's ultimate aims struck me as religious, but his methods were sound. We cannot progress with freedom. Free men are a curse. Such men resist change because it leaves them exposed as superfluous. Himmler understood that much. He feared individuals. He felt that individuals were a threat to his grand master plan. And what was his plan? He wanted gods, not normal men. He believed in obedience, in controlled breeding and vivisection; believed in biological mutation and its product, the Superman. Such a dream is not uncommon. Modern science still pursues it. Out there, in the world beyond the ice, primitive surgeons hack bone for it. As for myself, I accepted it: men were meat to be used. I believed in biological mutation and used all that was offered.

'The New Order will be purified. The subhumans will be slaves. All dissenters will be stripped of their resistance until they, too, obey. Failing that, they will be removed by gas, gun or noose – and even then, we will ensure that they contribute to the good of the Order. Gouge the gold from their teeth. Use their skin for lampshades. We will turn their bones to ashes and dust in the great crematoria. It is necessary to do so. We must affirm that we are serious. We must let them know that discipline is all, and that their ash can be useful. The New Order will be strict. Its one goal will be progress. It will be dedicated to experiment and research, to the advancement of knowledge. Most laboratories have limitations; this won't be so in the New Order. The subhumans, who are useful as slaves, will also serve us as specimens.'

Not all aeronautics. That went on at Kummersdorf West. In the hangars of Kummersdorf West my other dream took wing. I worked with Schriever and Belluzzo. Perhaps Miethe and Habermohl. I remember the names, not the faces, and I feel no affection. Nonetheless, I worked with them. My restless genius drove me. The vicissitudes of the war did not touch me as my project expanded. How many nights did I go sleepless? I think back on that with pride. I was in my early sixties at the time, but I drove them relentlessly. The first disk took shape slowly. There were many set-backs. I travelled north and south, east and west, stealing men and ideas. Factories hidden in the Schwarzwald. The R-Laboratory in Volkenrode. Heated discussions about electrostatic fields and gyroscopic controls. The emerging disk filled the hangar. Schriever's eyes were filled with greed. The four legs that housed the gas turbine rotors reflected the bright lights. Schriever studied the disk with

vonder. This recollection makes me smile. What Schriever gazed upon with uch greed and admiration was a primitive toy. The real achievements were in ny files. What Schriever saw was nothing. In the hangar in Kummersdorf Vest I was building a useless thing.

The deceit was necessary. There was no one I could trust. The Third Reich was filled with frightened, ambitious men who yearned to make an mpression. I did not trust Rudolph Schriever. I saw the death in Himmler's yes. I remembered my past, the busy hangars in Iowa, all the businessmen nd cowardly politicians who had smothered my life's work. The same thing ould happen again. The war would not last forever. Already, in 1941, I saw he Reich's trickling wounds. Just how long would Himmler last? And how ong could he keep his secret? I wanted to utilise his master plan, but what uarantees had I? The Nazis devoured their own kind. They might well devour Himmler. Either that, or the Reichführer would turn on me, destroying all I ad gained. Heinrich Himmler: the Reichführer. His mild eyes did not deceive ne. His neat fingernails were polished with blood and his smile hid hysteria. No, I didn't trust him. There was no one I could trust. And so I gave him just a ittle: a prototype that would not work. I kept explaining that I needed more ime and that the problems were numerous.

A delicate manoeuvre. A great cunning was required. The disk had to ool the other engineers while still lacking in something. I used obsolete echnologies. I gave the engineers their head. Gas turbines and liquid-fuelled ockets were the fruits of their labours. Such toys kept them happy. Schriever's yes shone with triumph. Young and lean, he showed his drawings to Himmler vhile I went my own way. Their flying disk had been surpassed. The real chievement was in my files. I gave a little and took a great deal and listened lways to Himmler.

'We have our underground factories. We have our chosen location. We ave our masters, the SS, and our slaves and your own crystal genius. But this sn't enough. We need more than normal men. What we need is a biological nutation that will lead to true greatness. We must learn to control the vorkers. Not with whips and not with guns. What we need is automatic control f their bodies and minds. The human brain must be examined. The body's ecrets must be explored. We must try to steal their will and their strength and eave them just what they need. The democracies cannot do this. Regressive norals would forbid it. But here, at the dawn of the new era, there is nothing

o hinder us. We must use the Ahnenerbe. We must use the Lebensborn. We nust study racial characteristics and breed only the purest. This will solve the irst problem. In this way we will find the Superman. Nevertheless, this leaves he problem of the workers, and we must solve that also. Control of mind and ody. We must find a whole new method. I think of medical and psychological xperiments of the most extreme kind. The camps are yours to command. The chweine there are useless meat. The New Order needs a wealth of mindless nuscle and your genius must find it.'

The concentration camps were the laboratories. The prisoners were the guinea pigs. The whole mystery of human life was explored as it writhed on he tables… What are the limits of human pain? How long before the lungs collapse? Will scorched flesh, if left unattended, renew itself or turn gangrenous? Inject this woman with jaundice. Inject that child with typhoid. Shoot this creature with poison bullets, graft a bone, transfer a limb, remove esticles and ovaries and intestines, but don't use anaesthetics. Was it the urgery that led to death? Was it death through shock or pain? Put that frozen nan between those two whores and then check his responses. More work. (It arely stopped.) The Ahnenerbe needs human heads. The Institute for Research into Heredity needs anthropological measurements. Take these filthy ews and Poles. Strip them naked and measure them. If suitable, put them into he gas chambers and then chop off their heads. Ship the heads off in anisters. Use extreme care when packing. Peel the skin from the bones of the orpse, dissolve the bones, use the healthy flesh. This strip decomposed lready. A good piece of material there. These tattoos would make a nice ampshade in Frau Koch's bedroom… But such was mere Nazi frivolity. My rue research never stopped. The concentration camps, with their abattoirs nd crematoria, were extraordinary laboratories.

'Do you understand at last? The New Order is very real. It will be roken into colonies, each separate, each with its work, all divided into nasters and slaves, existing just for the future. What's a colony in our vilderness? It's just another Nordhausen. You ship the subhumans in to build our underground complex, you control them with your dogs and the Death's Head SS, and then you move in your scientists and technicians and administrators, and you bind them together with fear of the all-seeing masters. And once there, where can they go? There is no way in or out. They will live nderground, seduced by power, cowed by fear, the masters bound by their

›aths, by their religious convictions, the subhumans by torture and death and he lack of all exits. Yes, American, it is possible. We are halfway there ılready. You must work, you must complete your flying disk, before we settle he matter.'

So I listened to Himmler. So his droning words encouraged me. I didn't hink he would survive for very long, but his ideas were valuable. I used him ınd his facilities. We filled the trains with nameless thousands. The slaves vere shipped to the harbour of Kiel and then they just disappeared.

Yet I had to be careful. I could not hold back too much. Himmler pressed ne for a test flight of the disk, and I had to oblige. It was 1943. I believe it was 'une. The steel doors of the hangars were pulled open and the sunlight poured n. This much I remember. The disk reflected the sunlight. Schriever climbed nto the dome-shaped pilot's cabin, his eyes afire with excitement. The ngineers retreated. They all shielded their eyes. Himmler joined me behind he sandbags, his spectacles perched high on his nose. The disk looked like a netallic mushroom. It also resembled a giant spider. Its four legs housed the gas turbine rotors and ran down obliquely. Himmler rubbed at his nose. Sunlight flashed off his spectacles. There was a roar as the hollow legs pewed fire and filled the air with dense smoke. Yellow flames spat from the armac. The air shimmered in the heat. The roar changed into a numbing ibilance as the disk left the ground. Himmler covered his ears. His body eemed to be shrinking. The disk shuddered and shrieked, lifted gently off the ground, hovered briefly and swayed from side to side and was obscured by the wirling smoke. Himmler turned and stared at me. His mild eyes were like the un. The disk roared and hovered just above the ground as Himmler reached for my hand…

So according to Wilson, the first crude, piloted flying saucer was completed ınd test-flown in Nazi Germany in 1943. Yet what a price was paid! How elentlessly cruel he was! He boldly courted the dreaded Himmler, seduced ıim, used him, and had no hesitation in utilising Himmler's brutal methods in ›rder to get precisely what he wanted. Like the Nazis, he used slave labour. He closed his eyes to the atrocities. He ignored the whippings and the ıangings and, even worse, made use of the hideous medical experiments, the ıppallingly cruel anthropological investigations, the surgical procedures

undertaken without anaesthetics, simply because they fit in with his ideas for future human mutations: the brain-implanted zombies and cyborgs that would later crew his own, more highly advanced, flying saucers and be mistaken by countless UFO witnesses as extraterrestrials. At the cost of enormous human suffering, he did what he had to do. Perhaps even more grotesquely, in a bid to improve his own health and even extend his life, he applied to himself some of the discoveries made through the Nazis' surgical and anthropological experiments. Which may explain why, in his diaries, SS Lieutenant Ernst Stoll wrote that Wilson, though then in his mid-sixties, looking about thirty years younger than his actual age.

Wilson's self-application of the Nazis' inhumane medical and surgical procedures was not all he stole from them. It is clear from Lieutenant Stoll's diaries that while nominally supervising Projekt Saucer in general and Wilson in particular, he was also driving himself close to exhaustion by working for the notorious *Lebensborn* organisation, devoted to the controlled breeding of the perfect Aryan, a supposed Nordic Super Race, through the disciplined mating of men and women selected in accordance with the *Ahnenerbe,* the notorious Institute for Research into Heredity. To this end, Stoll, when not supervising the work at Kummersdorf, had been tasked with abducting thousands of 'racially valuable' children from all over Europe and shipping them to the *Lebensborn* so-called 'national maternity homes' spread throughout the Reich. From there, after being given new names, robbed of their former identities, and indoctrinated into total, unquestioning devotion to the Reich, many of them were shipped off to Himmler's rapidly expanding underground base in what had been Norway's Queen Maud Land (before being illegally claimed by the Nazis and renamed *Neu Schwabenland*) in Antarctica, to act as guards and disciplinarians to the slave workers shipped in from the concentration camps.

According to Stoll, as he gradually became convinced that the war was lost and that Himmler was going mad, he began siding with Wilson and soon learned that the American, also convinced that the war was lost and that Himmler would never get as far as his hidden Antarctic base, was planning to go there himself and use it, with its indoctrinated, almost zombie-like, SS fanatics, all children of the *Lebensborn*, for his own grandiose scientific purposes.

What is also made clear in Paper #4 is that Wilson dealt with the Nazis

exactly as he had done with his own countrymen many years before: he lied to hem, cheated them, hid his real progress from them, only showed them nnovations of strictly limited capabilities and even, as he had done in Iowa nd Illinois, ruthlessly destroyed his own creations rather than let them be sed by others. He wanted everything for himself. He had already planned his uture. And incongruously, given his clearly stated contempt for the Nazis in general and Himmler in particular, he used the latter's obsession with creating pure Aryan race, or 'Master Race', based in his hoped-for secret colony of nasters and slaves, (his Death's Head SS and the concentration camp inmates) s the matrix for his own, more scientific, secret colony in Antarctica.

To repeat Himmler's words: 'What's a colony in our wilderness? It's just nother Nordhausen. You ship the subhumans in to build your underground omplex, you control them with your dogs and the Death's Head SS, and then ou move in your scientists and technicians and administrators, and you bind hem together with fear of the all-seeing masters.'

This, in modified form, is what Wilson was planning to do at the end of he war, when the Nazis were conquered: to create his own scientific colony in hidden base in Antarctica. However, to do it he had to protect himself by laying his dangerous games with Himmler and Lieutenant Stoll and the other nembers of Projekt Saucer, including Schriever, Belluzzo, Habermohl and Miethe.

Who were these people?

In a series of interviews in the West German press in 1952, Rudolph Schriever, then resident at Hokerstrasse 28 in Bremerhaven-Lehe, claimed hat in the spring of 1941, when he was an engineer and test pilot for the Heinkel factory in Eger, he started thinking of an aeroplane that could take off ertically like a helicopter. This led to him to designing a so-called 'flying op' that was completed the following year and test-flown on June 1, 1942. Schriever went on to claim that by the summer of 1944, when Nazi Germany vas clearly heading for defeat, a larger prototype of his 'flying top', now more ike the flying saucer widely reported during the 1950s, was transferred in 944 to Prague, where, with Walter Miethe, an engineer from the Peenemünde V-1 and V-2 programme, another engineer, Klaus Habermohl, and the Italian Riva del Garda physicist, Dr Giuseppe Belluzzo, he constructed an even arger, piloted model of his original prototype, replacing its former gas-turbine

engines with an advanced form of propulsion that utilised adjustable jets. In other words, a jet-propelled flying saucer.

This claim is contradicted by Wilson's assertion in Paper #4 that the first flying saucer prototype, though piloted by Schriever, was test-flown in June of 1943. In the light of what our intelligence has since learned, this seems likely. Schriever, formerly a test pilot, would have insisted upon personally flying the saucer because by that time he was convinced that he, not Wilson, was the true designer of the machine. Regarding this, it is clear from Wilson's account that, just as he had done years before with his American airships, so again, in Nazi Germany, he had systematically fed only second-rate innovations to Schriever's Projekt Saucer team – and only a little at a time – while keeping his more successful innovations to himself.

With Germany clearly heading for defeat and the Nazis searching ever more desperately for more powerful, last-minute 'secret weapons', Himmler, being increasingly convinced that the American, Wilson, was not progressing fast enough with his research, authorised Flugkapitän Schriever to replace him as head of the Projekt Saucer team. Though considered by Stoll and Wilson to be no more than a second-rate engineer with delusions of grandeur, Schriever relished his new position and continued vainly working on his piloted flying saucer prototype, unaware that it would never fly more than a short distance, and even then erratically, because the information and physical items that he was being fed by Wilson were not up to the task.

The prototype test-flown by Schriever in the June of 1943 went only a short distance, which was at least enough to impress the technologically ignorant Reichführer Himmler. Fearing that the increasing Allied bombing raids would lead eventually to the destruction of Kummersdorf, Himmler had the whole facility evacuated and the flying saucer project and its team, including Wilson and Lieutenant Stoll, transferred to the BMW plant near Prague, where they were tasked with producing a third prototype. However, for reasons not known until the discovery of Wilson's papers, Wilson and Lieutenant Stoll, supervised by SS General Hans Kammler, were then transferred from Prague to an underground research facility in the town of Kahla, in the mountain region of Thuringia. The following year, with the BMW plant by then under threat from the rapidly advancing Allied armies, Schriever's project was moved to Mahren in the Westerwaldkreis, in Rhineland-Palatinate.

In Kahla, freed from the restrictions placed upon him by Himmler and the ncreasingly vainglorious Flugkapitän Schriever, Wilson was able to continue vorking on his own flying saucer designs and other technical innovations, ncluding, as our intelligence later learned, medical and surgical innovations hat could help extend his own life. As part of his plan for his eventual escape, ıe also kept the increasingly desperate Himmler usefully distracted by ›roducing a last-minute 'secret weapon' for him: a small, disk-shaped, emote-controlled, flying anti-radar device, the *Feuerball*, which went on to uccessfully harass Allied aircraft during the closing months of the war.

According to post-war statements made by Rudolph Schriever, while ›ased in Mahren he and his team, including Belluzzo, Miethe and Habermohl, edesigned a third 'flying disk' prototype by replacing its former gas-turbine ngines with an advanced form of propulsion that used adjustable jets. He tates, further, that his 'flying disk' had been ready for testing in early 1944, ›ut that with the advance of the Allies into Germany, the test had been ancelled, the machine destroyed, and his designs either mislaid or stolen. These statements can be neither proved nor disproved, as Schriever then fled o the West, reached the US lines, and eventually made it back home to Bremerhaven, where he gave the post-war media a wide variety of different tories about his own, actually failed, flying saucer.

Intelligence later gathered by the United States Office of Strategic Services (OSS) Operation Paperclip revealed that of the other members of the Projekt Saucer team, Klaus Habermohl was captured by the Russians and aken back to Russia with other captured German scientists to work for them; nd Walter Miethe, though initially brought to America with hundreds of other German technicians to work under Wernher von Braun for the United States' irst rocket centre in the White Sands Proving Ground, New Mexico, joined he A. V. Roe (AVRO-Canada) aircraft company in Malton, Ontario, eportedly to continue work on disk-shaped aircraft, or flying saucers, just as Habermohl was thought to be doing with the Russians. Dr. Guiseppe Belluzzo lisappeared some time in 1944 and was never heard from again.

Meanwhile, even as the war was coming to a close, John Wilson was ›lanning to flee from the defeated Germany and make his way, with the ›apers and components for the real flying saucer, plus numerous other nnovations, to the Nazis' secret base in Neu Schwabenland, Antarctica. The

events leading up to this, including his interactions with SS generals Hans Kammler and Artur Nebe, are detailed in the fifth paper.

Paper #5

When did Kammler and Nebe die? It was a long time ago. They were gassed as they slept in their rooms, and then I had them cremated. I didn't really have a choice. My implants were not perfected. We were still using the Death's Head SS and their obscene forms of discipline. It was shortly after the war. Kammler and Nebe showed much resentment. Power corrupts and they both had great power and started plotting against me. I could not let this happen. My life's work was reaching fruition. Hidden deep in the immense, frozen wilderness, the colony functioned. Thus I had to get rid of them. Their room doors locked automatically. They never knew all the time they were there that the walls could spit gas. They died on their own beds. The room was aired and they were removed. They were taken to the crematorium in the base of the mountain, incinerated, turned to ash and smoke, leaving me independent.

How ironic was their death! It was a death befitting both. For how many had they themselves sent to the gas chambers during those nightmare years? I think particularly of Kammler. SS General Hans Kammler. Kammler planned the concentration camps, supervised the plans for Birkenau, was responsible for its four great gas chambers and its vile crematoria. A handsome, ruthless man. Energetic and decisive. His gross ambition, and his total lack of scruples, made him someone worth knowing.

August 1943. Reichführer Himmler was then at his peak. His lust for power had increased every year and he was then almost godlike. Yet that wasn't enough for him. He wanted more and more. Most particularly, he wanted control of the V-2 rockets and all those who worked on them. He had tried for that and failed. Then Peenemünde was bombed. Himmler suggested to Hitler that Peenemünde had been betrayed, and that his SS should take control immediately. Hitler agreed to this. Himmler now had full control. He immediately moved mass production of the rockets to the caves near Nordhausen. General Kammler was put in charge. He became Himmler's right-hand man. When that happened, I had to do something to protect my own project.

Those were dangerous years. The war was not going well. The Russian offensive was a disaster, Italy had fallen to the Allies, Hitler's physical and mental health was collapsing, and the Reich was in ruins. My own position was no better. As I recall, it was precarious. I now doubted Himmler's sanity and will, and this made me uneasy. The slaves were still being sent to Kiel. From there they were shipped to the frozen wilderness. The great caves were expanding under the ice, but they seemed far away. I wondered if I would ever get there. I no longer trusted Himmler. As disaster followed disaster for the Reich, I saw his brimming hysteria. I still wanted the frozen wilderness. I knew I couldn't depend on Himmler. His hysteria was making him indecisive and that meant he was dangerous. I still wanted the Antarctic, I didn't want Himmler there. Then I met Kammler in 1943 and was drawn to his ruthlessness.

Kammler knew of my project. Himmler sent him to check it out. I was then at the BMW Platz near Prague, still working unceasingly. I knew the war would soon be lost. I was playing a double game. The game was highly dangerous, very tricky, and I had to be careful. I still badly needed Himmler. His facilities were essential. Yet I knew that he now lived in fear of being found out by Hitler. After all, it was betrayal. Himmler was building his private empire. If the Führer discovered his intentions he would have Himmler executed. Thus Himmler became frightened. In his formerly mild eyes there was frenzy. He had promised to give der Führer great new weapons, and der Führer was restless. I didn't dare complete my saucer. Not until I reached Antarctica. I was frightened that Himmler's growing confusion might make him give it to Hitler. That would mean the end of everything. The Allies would take it over. As for myself, I would be charged as a war criminal, and probably hanged.

On top of this, there was Schriever. The Flugkapitän was ambitious. Yet another of Himmler's scientific pets, he had the need to impress him. Schriever's eyes devoured my saucer. He was in competition with me. I knew that if my saucer was completed, he would take all the credit. Already I had seen him do this. He had the slyness of a simple man. Himmler insisted that we share the whole project, and I knew what he meant. I was Himmler's dirty secret. The Flugkapitän was not. Once the project was completed I would simply disappear, and then Himmler could offer der Führer my saucer as a German achievement. So, Schriever was a threat. He wanted credit for my

achievements. Because of this, I withheld a great deal and understated my progress. Schriever worked from doctored drawings. I gave him just enough to make his flying saucer credible. The Schriever saucer could rise and hover briefly, but it didn't yet fly. I had to let it progress slowly. Not much, but enough. Meanwhile, in the BMW Platz, I quietly finished the real work.

My sole thought was for Antarctica . The hangars were multiplying beneath the snow. Sooner or later, I would have to escape and join the vast, hidden colony. I could not depend on Himmler. His rising panic had made him treacherous. I could see, in his fear and indecision, that he might never leave. I needed another ally. Another man of gross ambition. I met Kammler in the BMW Platz and knew that here was my man.

Kammler was an organiser. He was decisive and ruthless. More importantly, his ambition was boundless, his selfishness total. I worked on him slowly. It took months, but I was patient. Kammler's one thought, at the time, was self-survival, and that's what I played on. He already knew of the secret colony. He was startled and intrigued. I could see, as I unveiled further facts, that he was drawn to the notion. The Reich was crumbling all about him. There were plots and counterplots. The Nazis were devouring their own kind and survival was difficult. Then, of course, there were the Allies. Kammler knew the war was lost. He also knew that if the Allies took him prisoner they would certainly hang him. Kammler had to get out of Germany. He had to disappear completely. When I knew this, I told him of my plan and he said he would join me.

That same month he went to see Himmler and blatantly lied to him. He painted me in a black light. He praised Schriever to the skies. He claimed that my project was a mess, that I was stealing from Schriever. I was too old, he said. Flugkapitän Schriever was young and bright. He said that Schriever should be given his own project and encouraged much more. Himmler wasn't too sure, but Kammler pressed home his point. He reminded Himmler that the Allied invasion had begun and that he should take precautions. Kummersdorf West should be evacuated. The American and Schriever should be separated. Kammler suggested that I be moved to the mountainous region of Thuringia, and that Schriever be moved to Mahren. It was better that way, he said. Schriever could then work unencumbered. Himmler, now dependent on Kammler, finally gave his consent.

I was moved out shortly after. At last I was free of Schriever. In Kahla, in

he mountains of Thuringia, I completed my major work. Himmler never knew bout it. Kammler told him I was useless. Eventually, Himmler turned away rom me and focused all his attention on Schriever. That was just what we vanted. We were not concerned with Schriever. I had insured that Schriever's lying saucer project would never succeed.

June 25, 1944. In my office in the research centre at Kahla, I talked to Kammler and Nebe. I remember it well. SS General Artur Nebe. A man whose very name suggested terror and the screams from the basements. General Nebe was ice and fire. He had the cunning of a rat. He was a man who did not show his feelings, who worked quietly and ruthlessly. An exemplary record with the Gestapo. Extermination squads in Russia. With such work he had gutted his soul and embraced the unthinkable. Nebe knew how to survive. He was a master of intrigue. He had trampled on the bones of countless comrades to protect his own skin. A dangerous man, certainly. Also, a cold realist. And that day in my office in Kahla his eyes were wide open.

General Nebe had to escape. There had been an assassination attempt. The Führer had survived the explosion and was now seeking vengeance. The reprisals were terrible. Himmler's men were butchering hundreds. A lot of officers were fleeing for their lives, disappearing forever. General Nebe was such a man. He had been forced to desert. Kammler had told him of what we were doing and he now wished to join us.

Nebe controlled the escape route. His most fanatical SS men joined him. Those men formed the chain that stretched from Kahla to the port in the Baltic. I often watched the trains pull out. The SS cracked their whips. The dogs snapped at the ankles of the children as they wept on the platform. Many came from the concentration camps. Others came from the Lebensborn. We stole children from all over Europe and marked them for slavery. The trains took them to Kiel. The ships and submarines transported them farther. They vanished off the face of the Earth and were not seen again.

Meanwhile, I continued working. My time was running out. The final components for the saucer were in production, but had not yet been tested. The Red Army was in Warsaw. Very soon it would reach the Oder. I had to complete the saucer and test it before the Russians arrived.

Kammler helped me all he could. His authority was considerable. What we didn't have, he took from other scientists and less powerful research centres. Hitler was dreaming of secret weapons. He spared no expense in

getting them. All over Germany, even as the bombs were falling, the scientists worked night and day. There was an Atomic Bomb project. There were electrical submarines. There were laser beams and infrared warheads and remote-control systems. The Kaiser Wilhelm Institut. The Forschungsinstitut of Lindau am Bodensee. From such places I stole what might help to enhance my own project. The swirling energy of the Feuerball. A porous metal called Luftschwamm. In the laboratories of the Kreiselgerate, not far from Berlin Britz, I solved the problems of gyroscopic control and Prandtl's boundary layer. This latter proved to be the breakthrough. The boundary layer was the key. By the end of 1944 we had conquered it and started final construction.

The thought of Schriever amuses me. Perhaps it always will. I look out upon the gleaming ice caps and think of what that man lost. Schriever lived for fool's gold. His saucer designs were all useless. While I finished the real work in Thuringia, he chased phantoms in Mahren. His flying disk was an abortion. All my guidelines had been false. Nevertheless, Schriever believed that they would work, and that's what I wanted. Himmler rarely asked about me. He kept visiting Schriever. The Schriever disk could hover just above the ground, but could do little else. No matter: it was impressive. Schriever thought he could make improvements. He told Himmler that it only needed time and the Reichsführer believed him. That was just what I wanted. It was exactly what I had planned. As Himmler focused all his attention on Schriever's disk, I got on with the real one.

I called it the Kugelblitz.

It was a miracle that I managed it. It was a desperate, frantic race. The skies overhead were filled with Allied aircraft, the horizon was smoky. The Ardennes offensive had failed. The Soviets had now crossed the Oder. The Allied armies were advancing in the south and our towns were in ruins. Hitler had moved into the Chancellery. He was preparing his Götterdämmerung. His Reichsführer, Heinrich Himmler, was in panic and had almost forgotten me. Himmler wanted a flying saucer. He wanted Schriever's flying disk. Because of this, I was free to continue without interference. The war raged far away. The smoke thickened on the horizon. We stepped out of our caves to see this, and then we went back to work.

I remember it all vividly. The sounds of labour still reverberate. The great underground complex at Kahla represented my future. The caves were inside the mountain. From the air they were invisible. Inside them were thousands of

lave workers and dedicated technicians. The bright lights stung our eyes. Valls of stone cast eerie shadows. Machines roared and plates of silvery orous metal dangled over our heads. The flying saucer was a skeleton, but it oon grew to fill the hangar. The technicians clambered under its steel ribs, heir eyes covered in goggles. The searing white flames of the welders. The abourers sweating under the Perspex dome of the pilot's cabin. The lights eamed down and flashed off the cabin and hazed the slave workers. The reat caves dwarfed them all. They were cathedrals carved from stone. The ounds of riveting and welding and drilling reverberated throughout. The men ooked very small. They were like ants in an ant-hill. They climbed ladders, rossed catwalks, stood on platforms and girders, now removed from the real world, isolated inside the mountain, working long hours and sleeping little, upervised by Nebe's soldiers.

We kept working night and day. We heard the thunder of distant guns. Every night our trains snaked down the mountain and headed for Kiel. The lying saucer took shape. Its gleaming mass filled the hangar. The final plates vere welded around the pilot's cabin and the body was finished. The large aucer hung from chains. It was lowered onto the sturdy legs. The legs housed he four jet propulsion boosters that would aid its ascent. The disk locked onto he legs. The noise echoed throughout the caves. The slaves looked on in ilence, their eyes dulled with exhaustion, while the technicians all cheered nd applauded, their hands linked in triumph.

An historic day. I will never forget it. I stood beside Kammler and Nebe nd felt as if I was dreaming. The enormous hangar doors opened. Light and old air rushed in. The Kugelblitz, now supported on metal blocks, had its wn kind of beauty. We wheeled it out of the hangar. The date was February 4, 1945. The sun shone upon the base of the mountain, but was darkened by rey smoke. Then the rain and snow came. We had to cancel the test flight. Two days later, on February 16, the piloted saucer soared to the heavens. It limbed vertically and gracefully, stopped abruptly and then shot south. It ecame a winking light above the battlefields, a bright star in the smoky haze.

The next week, we destroyed it…

Until the discovery of the Wilson papers, we only knew that the notorious SS General Artur Nebe had been placed on a Nazi 'death list' in 1944 and

lisappeared shortly thereafter, though his death was never confirmed and nany felt that he had simply fled for his life. Now we know that Nebe went to he Antarctic with Wilson and eventually, as described in the sixth paper, was nurdered by him. As for General Hans Kammler, his history with the SS and he V-2 rocket programme was well documented, but what became of him ıfter he disappeared from Germany in April 1945 remained a mystery for nany years, until, again, his fate was finally revealed in the Wilson papers. Along with Nebe, he was murdered by Wilson. Ironically, since he and Nebe ıad been responsible for sending so many unfortunates to the gas chambers, ɔoth men were fatally gassed as they slept in their beds in the Antarctic colony.

This took place in the early 1950s, shortly after the first wave of contemporary flying saucer sightings that began with Harold Dahl's Maury sland sighting of June 21, 1947. However, before making his escape to the Antarctic, in 1945, during the closing days of the war, Wilson, as he explains n the sixth paper, tested his own flying saucer, the *Kugelblitz*, with pectacular results, but then, despite the resounding success of the test-flight, ıe destroyed it, having it blown to smithereens to prevent it from falling into he hands of the advancing Allies. With no evidence of the *Kugelblitz's* existence left behind, he then fled with the rest of his men, including Lieutenant Ernst Stoll, but led by Kammler and Nebe, to the underground colony in Antarctica.

Naturally, our first question was: Could such a colony exist in Antarctica ıt all? Initial scepticism about the inhospitality of Antarctica was gradually eplaced with the growing knowledge that, while snow and ice form 95% of he surface terrain, it certainly has many ice-free areas, such as the Taylor, Wright and Victoria valleys near McMurdo Sound. More importantly, the ncreasing number of official explorations had revealed that other ice-free ıreas were hidden at the base of mountains or under the vast ice sheets that eached heights as high as 3,500 metres. It was therefore not inconceivable hat a secret colony of former Nazis and their slave labour could have been created in an ice-free area hidden by surrounding mountains of ice and snow. While investigating the numerous reports about Nazis fleeing by ship, ubmarine and airplane to Antarctica, aided by countless documents recovered rom the ruins of Nazi Germany, we were eventually able to confirm that the German Antarctic Expedition of 1939 aerially photographed an extensive

egment of the Princess Astrid and Princess Martha coasts of western Queen Maud Land, dropped hundreds of metal swastikas over the area, and then claimed it for the Hitler government. The Germans renamed the territory as Neu Schwabenland. We were also able to confirm that throughout the war years, German ships and submarines continued to prowl the South Atlantic Ocean along the coastline of Antarctica, thus blocking any possible Allied incursions into Neu Schwabenland. It therefore became increasingly clear to us that if a Nazi base did indeed exist in Antarctica, as increasingly seemed likely, it was located in Neu Schwabenland and was being protected by German ships and submarines. When the war ended with Germany's defeat, those ships and submarines ceased patrolling the Antarctic coastline, but by that time Wilson's underground colony in Neu Schwabenland, further hidden by surrounding mountains covered with ice and snow, was firmly established.

The next question being: Could such a massive undertaking be kept hidden?

The short answer is 'Yes.' Still advancing through a defeated Germany, Allied forces came across many of the previously hidden underground plants and factories that had been constructed by Nazi architects and builders, then worked by thousands of captured labourers from the concentration camps, overseen by merciless SS troopers. Indeed, most of the underground research centres of Nazi Germany were gigantic feats of construction, containing air shafts, wind tunnels, machine shops, assembly plants, rocket launching pads, supply dumps, accommodations for all who worked there, and adjoining camps for the slave workers. And what the Nazis were doing there, under the earth, they also hoped to do elsewhere, notably in Antarctica.

This was Himmler's dream, but he never made it that far. Like his beloved Hitler, he committed suicide at the end of the war, leaving John Wilson free to make his way, accompanied by his faithful acolyte, Lieutenant Ernst Stoll, with the help of generals Kammler and Nebe, to what was already an evolving master-slave colony, hacked out of the base of the snow-covered mountains of Neu Schwabenland and devoted to highly advanced, aggressive technology.

By the time Wilson finally arrived in Antarctica, he was sixty-six years old, though according to Lieutenant Stoll's diaries, he did not look even remotely his age. We also learn from Stoll's diaries that Wilson was obsessed not only with technological and aeronautical experimentation, but with defeating the ageing process and extending his own life. It is clear from his

papers that he had long pursued this goal and had no qualms about improving his own health through the suffering of others, coldly using the results of the hideous anthropological and surgical experiments conducted in the concentration camps. Yet only when he was in Antarctica, in complete command of the colony after murdering Kammler and Nebe, could he take similar experiments as far as they could humanly go, with no moral restraint. Like the notorious so-called Nazi 'doctor', Josef Mengeles, who conducted ghastly medical and surgical experiments in Auschwitz, Wilson was immune to the suffering of his victims, all former concentration-camp inmates, and used his findings to enhance his personal longevity. In doing this, he was worse than Dr. Mengeles: more like Dr. Frankenstein.

The sixth paper describes his activities in cold-blooded, shocking detail…

Paper #6

I owe Kammler and Nebe. Without them, I would not be here. That I killed them was not a sign of malice but of simple expediency. I think of it often. What I did, I had to do. The deaths of Kammler and Nebe were necessary for the good of the colony. They were both becoming greedy. They wanted power for themselves. They were more concerned with politics than science, and I knew what that meant. Plots and counterplots. The introduction of intrigue. A dissension that would interfere with work and thus hinder our progress. Such a possibility could not be tolerated. We had come too far for that. For this reason, some years after our arrival in Antarctica, I had them gassed as they slept, and then, in control of their brainwashed SS devotees, I personally took over the colony.

Yet I recognise my debt. Without them, I would not be here. I never liked them, but they did what was required and made good our escape. We left Germany behind us. We embraced the world of ice. Beneath the ice, in the immense, towering caves, thousands slaved to support us. The colony grew quickly. Without dissension there was progress. Our medical and scientific experiments led to wondrous achievements.

I was racing against time. I was sixty-six years old. What I did in the laboratories in the ice was a necessary evil. What I did, I had to do. If I died before my work was completed, the colony would flounder. I had to make it

elf-sustaining. The workers had to be controlled. Sooner or later, even the guards with the whips would have rebellious thoughts. This could not be llowed to happen. The control had to be automatic. I became obsessed with he mysteries of the brain and biological mutation.

What I did, I had to do. The slaves writhed beneath my knife. The grey natter of their brains was explored; lungs and hearts were examined. Their lood was my life's blood. What they suffered was necessary. Vivisection on nimals is useful, but has grave limitations. So, I operated. The experiments vere not pleasant. Many died and many more became crippled and had to be erminated. Nonetheless, I progressed quickly. Without moral restrictions here are no boundaries. The mystery of human life was unravelled as it vrithed on the tables.

I was ageing every day. I felt the fluttering of my heart. My skin was ightening across the cheekbones of my face and my stomach was addled. This rustration was energising. I spent months in the laboratories. The xperiments in the camps of Nazi Germany now bore splendid fruit. Hearts nd lungs were transplanted. Prosthetic arms and legs flourished. Many died n the tables, those maimed were terminated, but our gains soon overcame the ost and encouraged us further. Gerontology was a priority. My own ageing vas the spur. We experimented with various drugs and surgical aids and had dramatic results. Naturally we made mistakes. There was paralysis, palsied imbs. Nevertheless, with application and will, we eventually met with success. At first it was modest. Vitamin pills and various stimulants. They, however, vere just a beginning and soon led to much better things. I myself was thus aved. The first injections renewed my vigour. Within a year, with my heart at ull strength, I could receive the pacemaker. A tentative first step. The rtificial stomach followed. Years later would bring the plastic surgery and he minor prosthetics.

The means of control were urgent. This goal obsessed me next. I was ware that even the most fanatical guards would eventually yearn for the uter world. Human nature is a curse. It is weak and quite irrational. What I vanted was a method of control that would make the guards obsolete.

I exposed the human brain. Once exposed, it is a blancmange. No nystery: just tissue and fibres, blood and acid and water. I experimented with he brain. I specialised in living subjects. I discovered that by tampering with ertain cerebral areas, the mental processes of the brain could be altered in

any manner required. I inserted microscopic electrodes. I had them activated by computer. Thus, at the press of a button, I could introduce pain or pleasure, craven fear or brute aggression, numb acceptance or insatiable curiosity, heightened intelligence or idiocy. This discovery was invaluable. It was promptly utilised. Within months, implantation of the workers was well underway.

We were masters and slaves. The latter were virtually robotised. The former were still controlled by Artur Nebe, but were clearly redundant. The slaves had all been implanted. The whips were no longer needed. The only danger of revolt now resided in the guards and technicians. Nebe recognised this danger. He gave permission to implant. We both knew that this could lead to resistance, so we had to work carefully. It took us two years. We performed the implants one by one. We anaesthetised the men while they were sleeping and then stole them away. The operation was simple. The men were programmed to forget the implants. When they awakened, they would not seem any different to those still untouched. After two years it was finished. There were no untouched left. Only Kammler and Nebe and myself were allowed to stay free.

Every member had his function. His every thought was controlled. Every man, woman and child was robotised and had his course mapped out for him. Their desires were my desires. Their needs were my needs. I ordained their pain and pleasure, their every hunger, and was worshipped accordingly.

The implantations were all different. Some severe, some less so. What mattered was that each individual would perform as required. To drain a mind is to kill it. One must drain only a little. One must leave free those cerebral areas that perform certain functions.

The technical staff were least affected. I left them the spur of discontentment. This discontentment only related to their creative urges and did not go beyond that. What I removed was their hostility. What I enhanced was their love of work. Given this, they were almost like normal men, but lacked personal ambition.

Below the technical staff were the administrators. Such men and women were more affected. Required for systematic tasks, uncreative and repetitious, they were programmed to be wholly positive thinkers, enthusiastic and dedicated. They were drained of discontentment. Their work triggered satisfaction. In frequent contact with the scientists, who were almost like

normal men, the administrators had minimal personality and no thought for themselves.

The lowliest workers were most affected. I could allow them no personality. I think of Nebe's soldiers, of the factory workers and secretaries, of the drivers and labourers and cooks who performed simple tasks. All were heavily implanted. All were drained of personality. All were programmed to perform their given tasks without reason or thought. In a real sense they were robots. They experienced few emotions. Much cheaper and more reliable than cyborgs, they had a minimal consciousness.

What an achievement this was! The first perfect society! No waste, no crime, no need for debate, no insubordination or rebellion, no conflict of any kind. Such a society is a miracle. It is also highly productive. With no digressions for politics or conflict, it can advance by extraordinary leaps. It can and ours did. We rode the whirlwind and conquered it. Within two years our saucers were creations of an awesome complexity. Jet propulsion was obsolete. Atomic energy was routine. And even this, given the benefit of hindsight, was but a modest beginning.

I see the saucers as I sit here. They soar vertically from the wilderness. As I observe them, they glide across the sky and cast their shadows on mountain peaks. The sun beats all around them. They merge with the flashing ice. They ascend vertically and then hover in silence, their inertial shields glowing.

I confess: I feel pride. Inhuman? I cannot be. As I sit here on the mountain, as I gaze out through the windows, the beauty of the saucers above the snow makes me feel like a young man.

A divided society could not have accomplished it. Certainly not in that brief period. I would not have accomplished it myself had I ignored Nebe and Kammler.

They both wanted to leave the wilderness. They wanted to regain what they had lost. Simple men, moved by normal, pointless hungers, they wanted cheap, instant glory. The saucers offered that opportunity. They knew the saucers were invincible. They wanted to use the saucers to plunder the Earth and make it bow down before them.

I did not desire the same. I wanted only my work. My new cathedrals were made of ice and stone, my sole religion was science. I did not want that

changed. I knew that conflict would change it. I also knew that with patience and time there would be no need for conflict.

The saucers rendered us inviolable. Their very existence was our security. What we needed, we could obtain from the outer world if we handled it properly. Meanwhile, we could progress. We could increase our capabilities. If we did so, we would be in a position to gain much with no effort. The outer world would have to join us. We would gradually draw it in. Given time, the outer world would surrender, turning men into Man.

Yes, given time. But Nebe and Kammler had no time. Their brains untouched by the microscopic electrodes, they were still normal men. They still suffered from base emotions. They felt fear and resentment. They both yearned for the world beyond the ice, and for its decadent pleasures. Vengeance and power. Material gain and the means of squandering it. Like bored children, Nebe and Kammler were inflamed with the need for attention. No, they couldn't wait. They wanted a war of their own making. They wanted to use my remarkable flying saucers as their weapons of plunder.

I could not let this happen. Such a victory would be short-lived. Such aggression would be met with the resistance of inane politicians. Why encourage a nuclear war? What real purpose would it serve? Already our resources were running low, our needs increasing dramatically. What we needed, the world possessed. We could have it without conflict. In gaining it, we could progress even more and thus bide our own time. In the end, the rest would come. The rule of science was inevitable. A conflict such as Nebe and Kammler wanted could only lead to mutual destruction. I could not let it happen. I had no immediate goals. My concern was for the future of science and Man's metamorphosis – I still wanted the Superman…

The sixth paper is important in finally showing us what was really behind the UFOs, mostly flying saucers, being seen and reported by thousands of reliable witnesses throughout the 1950s and '60s. Those flying saucers were the successors to Wilson's original *Kugelblitz*, the one test-flown in Nazi Germany in 1945, and they were being replicated and constantly improved upon at a prodigious rate in Wilson's hidden colony in Antarctica. We also learn from this paper that Wilson was, at the same time, giving vent to his obsession with 'the mysteries of the brain and biological mutation' by

xperimenting with various drugs and surgical aids, creating prosthetic arms nd legs, transplanting hearts and lungs, even implanting microscopic lectrodes in the brains of living humans in order to control their every mpulse and thought, to virtually robotise them, making them obedient to his vill. He was, in other words, already embarked on the creation of the cyborgs, alf-man, half-machine, that he needed as crew members for his more dvanced flying saucers and that were later mistaken by so many UFO vitnesses as ‘extraterrestrials’.

Regarding this, it is to be noted that in the first wave of ‘contactee’ eports, when the witnesses to UFO landings actually approached, or were pproached by, the ‘extraterrestrials’, their descriptions of the creatures they nteracted with had remarkable similarities. The ‘extraterrestrials’ or ‘aliens’ vere mostly under five-feet tall. They had grey, wrinkled skin, with round eads but no necks, and with ‘pointed protrusions’ jutting out where their ears hould have been. They appeared to have no eyes. There was only ‘a small pening’ under the nose where the mouth should have been, though this was ften described as being a covering made either from thin metal or ‘wrinkled’ naterial like an elephant’s skin. The ‘shapeless’ legs of the creatures ended in ound feet with no toes. They were also described as having unusually long rms and what resembled ‘claws’ instead of human hands.

Since thousands of brainwashed children from the Nazi’s *Lebensborn* breeding colonies’ had been shipped to Neu Schwabenland, to be used for all inds of purposes, it now seems very possible that Wilson was using many of hem for his experiments in rapidly advancing ‘biological mutation’ and had, n fact, with a combination of surgery and brain implantations, turned them nto the first of his cyborgs: half-man, half-machine. At the same time, as nade clear in his papers, he was experimenting on himself with various drugs nd surgical aids, hoping to delay the ageing process, and in this he appears to ave been successful. As he writes in this paper: ‘I myself was thus saved. The irst injections renewed my vigour. Within a year, with my heart at full trength, I could receive the pacemaker. A tentative first step. The artificial tomach followed. Years later would bring the plastic surgery and the minor rosthetics.’ Thus, he was embarked on a bid to make himself immortal. Though in the papers he denied it to himself, he clearly wanted to rule the vorld.

We now know that he started by sending his flying saucers, crewed by a

combination of normal humans and cyborgs, out across the world from his hidden base in Antarctica. Over the next decade, they appeared with increasing frequency. Following the Harold Dahl Maury Island sighting of six UFOs on June 21, 1947, closely followed, three days later, by the Kenneth Arnold sighting of nine UFOs, a virtual UFO invasion took place in the skies over the United States. Four days after the Arnold sighting, on June 28, an Air Force pilot flying an F-51 near Lake Meade, Nevada, saw a formation of five or six UFOs off his right wing. That evening, four Air Force officers, two pilots and two intelligence officers from Maxwell AFB in Montgomery, Alabama, saw a UFO flying across the sky, zigzagging with bursts of high speed, and making a sharp, 90° turn before shooting off. In the morning of July 4, a carload of people in Portland, Oregon, saw four UFOs streaking past Mount Jefferson. That evening, a policeman in the parking lot of the Portland City Police Headquarters saw five disk-shaped UFOs 'flying at a high rate of speed and oscillating about their lateral axis.' Minutes later, two other policemen, both former pilots, and four harbour patrol crewmen saw similar UFOs oscillating as they flew overhead. Numerous citizens of Portland saw the same UFOs at approximately the same time. The same night, a United Airlines crew flying near Emmett, Idaho, reported seeing five UFOs, and two days later the crew of an Air Force B-25 saw a bright, disk-shaped UFO flying lower than their aircraft; then a pilot flying across Fairfield-Suisun AFB, California, saw a UFO that was 'oscillating on its lateral axis' as it traversed three-quarters of the sky in a few seconds. Crucially, four days later, on July 8, at Muroc Air Base (now Edwards AFB), the super-secret Air Force test centre in the Mojave Desert, California, a test pilot saw what he thought was a weather balloon until he noticed that it was going *against* the wind, while several officers and airmen saw similar UFOs heading in the same direction. Two hours later, a crew of technicians on Rogers Dry Lake, adjacent to Muroc Air Base, saw an oval-shaped UFO in the vicinity of an ongoing seat-ejection experiment, appearing to follow the ejected seat and its dummy as it fell. Four hours later, the pilot of an F-51 flying at 20,000 feet spotted 'a flat object of a light-reflecting nature, that had no vertical fin or wings.' He tried to follow it, but lost it because he could not fly high enough.

All the reported UFOs were described as being semi-circular or circular, usually domed or with viewing windows on the top or bottom, and resembling

either an inverted plate or two plates together, one placed upside down on the other. They were usually of a whitish-grey or metallic appearance, flew horizontally with a slight bouncing motion, could change direction rapidly, ascend and descend vertically, and in general perform theoretically impossible manoeuvres at remarkably low and high speeds. Most of them 'oscillated' while being silent and showing no means of propulsion.

Clearly, those flying saucers were the descendents of Wilson's original *Kugelblitz*; but as the years passed they changed shape and became much larger, though remaining basically saucer-shaped, and displayed ever more remarkable capabilities, indicating that Wilson's technology was advancing at a prodigious rate. More importantly, as time passed and the sightings increased dramatically, the UFOs were seen ever more frequently flying over our top-secret military establishments. When this fact became known to the public, UFO hysteria swept the country and our intelligence and military, including the Pentagon, became concerned about national defence. Eventually, when on June 15, 1952, there was a virtual UFO invasion over the White House, with hundreds of UFOs being observed both on radar and in the skies, some reportedly witnessed by President Truman, Wilson finally made himself known to us through a CIA agent, Sam Fuller, who had been on his trail for years.

Yet Fuller was not the first to learn about Wilson. As one of our CIA agents at the time, he had been in charge of disinformation regarding the Roswell flying saucer crash of 1947. This led him to one Mike Bradley, an intelligence agent with the Office of Strategic Services (OSS). Bradley had been tasked with tracking down John Wilson, whose name had unexpectedly started appearing in captured World War II documents, indicating that he, Wilson, though an American who had worked with Robert H. Goddard, inventor of the first liquid-fuelled, gyroscopically-controlled rocket, had gone to Germany in 1931, worked for the Nazis throughout the war years, created a highly advanced, jet-propelled, saucer-shaped aircraft, and was believed to have fled to a hidden base in Antarctica after the war, with other Nazis officers and scientists, where he continued to create ever more advanced flying saucers.

Eventually learning that Fuller was trying to find him, Wilson made contact with him, said he wanted to talk, to negotiate with the US government, and they arranged to meet at night in an isolated field in Virginia. Wilson

arrived, with the former SS General Artur Nebe, in one of his own flying saucers. Fuller arrived in a limousine with General John A. Samford, US Head Of Intelligence, and some of his agents, backed up with a truckful of armed troopers. Ever since learning about the existence of Wilson, General Samford had viewed him as a war criminal and traitor who should have been arrested and brought to the US for trial. However, aware that even Rear-Admiral Richard E. Byrd's full-scale Operation Highjump had been unable to reach Wilson's hidden base because Wilson's technology was now phonomenally more advanced than American technology, he had acceded to the demands of his contemporaries in the Pentagon and the White House, including Lieutenant General Hoyt S. Vandenberg, Deputy Chief of the Air Force, and reluctantly agreed to the meeting.

That secret meeting, audacious as it was and infuriating to General Samford, led to other secret meetings, including one with President Truman in the White House.

How this remarkable turn of events came to be is related in Wilson's seventh paper…

Paper #7

My intention was to trade. I needed mass-produced items: small components and tools, nuts and bolts, screws and nails, light bulbs and printing paper and pens and other modest essentials. So far we had stolen them. Our flying saucers had landed. We had often abducted human beings and animals where isolation protected us. But nuts and bolts were more difficult. Small items were large problems. What was shipped to here throughout the war years was now diminishing rapidly. No colony can be self-sustaining. I had always understood this. So it was that in 1952 I had to form an alliance. There was really no alternative. I had no choice but to trade. What I had, the world needed; what the world had, I needed; and until I had the world on my side, I would have to negotiate.

Indeed, I had already started. I was negotiating with President Truman. After the Washington invasion of 1952, he had agreed to a meeting. We met in the Oval Room. My CIA contacts were present. President Truman was an intelligent man, and as such he was nervous. He kept fiddling with his glasses.

His lower lip was not too steady. General Vandenberg was standing near the desk, his eyes bright with suppressed rage. The Oval Room was crowded. General Samford and Professor Robertson. Other members of the Robertson Panel, including Lloyd Berkner. The meeting didn't take long. They had already examined my brief. Most being specialists in the physical sciences, they had no problem in reading. I put forward my proposals. Truman sighed and raised his hands. Generals Vandenberg and Samford were outraged, but inevitably out-voted. The scientists knew what they were reading. They were aware of our capabilities. They put the facts bluntly to Truman and we reached an agreement.

After that, I had no choice. Nebe and Kammler became a threat. Disgusted that I should barter instead of conquer, they started plotting against me. I have no proof of this. I just know it was inevitable. Their chance for immediate recognition and power had been ruined by my actions. They were now trapped in the colony. In the outer world they would be war criminals. The only way they could return to the outer world would be to land as aggressors. So, they felt trapped. Thus they had to plot against me. And knowing this, I had no choice but to remove them and take over the colony.

They had not been brain-implanted. They were men of free will. I could not, as I could with the others, suggest euthanasia. For this reason I had no choice. What I did, I had to do. I could not concern myself with individuals while my future was threatened.

Not shortly after the war, then. It was 1953. We had dinner overlooking the plateau, the snow white, the stars glittering. I served champagne and caviar. The meal was followed with brandy. Such luxuries were rare in the colony, but the night seemed to warrant it. Kammler spoke of America. He reminisced about his visits there. Artur Nebe turned his glass between his fingers, his dark eyes unrevealing. Kammler spoke of General Vandenberg. His voice trembled with loss. He said that Vandenberg had reminded him of his past, of his days with the military. Artur Nebe was not attentive. His gelid eyes surveyed the ice. He gazed over the glistening plateau to the dark, frozen wilderness. Kammler spoke of the V-2 rockets. He talked of fighting in the Hague. He recalled his days with Walter Dornberger and Wernher von Braun. The hours passed in this manner. Artur Nebe's cold eyes were veiled. A large saucer became a glowing cathedral that ascended majestically. Artur Nebe did not look up. His gaze was fixed on the wilderness. Kammler yawned and

tood against the large window and was framed by the starlit night. He talked vaguely about the future. He said decisions must be made. He turned away and I saw the white wilderness dissolving in darkness.

They both left shortly after. I had no sense of urgency. The glowing cathedral descended from the heavens, hovered briefly and disappeared. I looked out and saw the ice. The frozen wilderness stretched out below me. I tood up and then went to my desk and turned on the two scanners. Kammler and Nebe were in their rooms, the latter with his whore. I reached down and pressed the button on my left and let the gas fill their lungs.

What I did, I had to do. What I do, I have to do. Above morality, above he sanctity of the individual, is my duty to science. I do not suffer guilt. They vere of use and were used. Without them, I would never have escaped – thus I offer them tribute…

Generals Kammler and Nebe were murdered by Wilson because they wanted o use his flying saucers and rapidly advancing technology to wage war on America and, eventually, the rest of the world, whereas Wilson needed to rade with them. As stated clearly in the seventh paper, while his technology vas continuing to advance at a prodigious rate, far ahead of any other known echnology, his master-and-slave colony, isolated from the rest of the world, could not sustain itself forever. In Wilson's own words: 'Nuts and bolts were nore difficult. Small items were large problems. What was shipped to here hroughout the war years was now diminishing rapidly. No colony can be self-ustaining. I had always understood this. So it was that in 1952 I had to form n alliance. There was really no alternative. I had no choice but to trade. What had, the world needed; what the world had, I needed; and until I had the vorld on my side, I would have to negotiate.'

But why were we willing to trade with him?

Because we had our own top-secret flying saucers, based on the German prototypes, and were desperately racing to make them as advanced as the Wilson saucers. CIA agent Sam Fuller had been tasked with spreading lisinformation about the Roswell UFO crash of 1947 because that particular lying saucer was actually one of our own relatively primitive models, constructed in a top-secret hangar, in a restricted area of the White Sands Proving Ground near Roswell, New Mexico, ironically close to Eden Valley,

vhere Robert H. Goddard had fired his first liquid-fuelled, remote-controlled ocket. In this context it is worth recalling that at the end of World War II, Nazi Germany's formerly top-secret scientific papers had been hidden, and vere eventually found, in tunnels, caves, dry wells, ploughed fields and even :ess pits. Those papers, when thoroughly examined, revealed that the Germans, with their unlimited resources, had been working on a frightening ırray of highly advanced technologies.

Because of this, there was a race between the Allies and the Russians to :apture as many of the rocket scientists and engineers as possible, as well as he invaluable technical documentation. Deals were therefore struck between he conquerors and their former enemies, particularly with regard to those nvolved in rocketry and other advanced weaponry. As a result, General Dornberger, Klaus Riedal and Wernher von Braun, along with 150 of their best men, went to the United States, Dornberger to work for the Bell Aircraft Company, Riedel to become director of rocket engine research for the North American Aviation Corporation, and von Braun to achieve fame through his Apollo Moon programme under the auspices of NASA. Included in the 150 ess famous men was Walter Miethe, the Peenemünde V-1 and V-2 rocket engineer who had worked with Wilson and Rudolph Schriever on Nazi Germany's flying saucer project. Once in America, Miethe was hired by the A. V. Roe company (later AVRO-Canada) where he worked on their disk-haped aircraft, the Avrocar. However, the Russians also gained a wealth of locumentation, material, scientists and engineers, including the aeronautical engineer, Klaus Habermohl, who also had worked with Wilson and Rudolph Schriever on Projekt Saucer.

Because of this, the US military was convinced that they were not only being hreatened by Wilson's superior flying saucers, but possibly by Russian aucers as well. They therefore redoubled their efforts to improve their own echnology, hoping to at least equal Wilson's technology, but finally realised hat they could not do it without Wilson's help and that this could only be chieved through a tit-for-tat trading arrangement with him. And so, for years ıfter, while the UFO scare continued, most of the UFOs sighted being Wilson's saucers, some of them ours, others possibly Russian, we gave Wilson what he required for the maintenance of his Antarctic colony in return or documentation on his remarkable innovations. These he cleverly fed to us piece by piece, never showing us anything that he hadn't already surpassed,

etting us make our advances, as it were, only in his wake. Despite our huge loubts, we had to accept the arrangement, desperately hoping that sooner or ater we would either catch up with him or he would make a major mistake, inally giving us an advantage. And thus, to keep the arrangement secret, to nsure that the public never knew about it, we embarked on a massive ampaign of disinformation by ridiculing genuine UFO sightings, by uppressing the UFO reports of our own visually competent pilots, by hreatening dire punishments for civilian individuals and organisations that vere too boldly investigating the UFO phenomenon, and by using CIA agents ike Sam Fuller to investigate and, if necessary, harass anyone he felt could be threat to our disinformation programme.

Indeed, it was Fuller's interrogation of the former OSS agent, Mike Bradley, shortly after the war, in his home located not far from the late Robert H. Goddard's old rocket launching site, Eden Valley, that finally revealed how Wilson and his men had commenced their long journey from a defeated Germany to Antarctica.

Tasked with tracking down the elusive Wilson, agent Bradley had esolutely followed his trail across a collapsing Germany until he ended up in Kiel Harbour, from where, as a freed Kahla concentration-camp inmate had nformed him, Wilson and his men, including SS Lieutenant Ernst Stoll and Generals Kammler and Nebe, intended taking a submarine to Argentina. Though wounded in an explosion on Kiel harbour, Bradley, stretched out on he ground and bleeding, had actually been spoken to by a 'softly mocking' Ernst Stoll, and then, when Stoll departed, was able to observe from a distance Wilson's submarine submerging in the Baltic Sea, on the first leg of its ourney to Mar del Plata, Argentina.

The events leading up to that moment are well described in Wilson's ighth paper…

Paper #8

February 22, 1945. The guns roared in the distance, the skies were filled with moke, and we had to destroy the Kugelblitz and make good our escape. I emember it well. I had to wrap myself in ice. The sleek saucer stretched cross the broken stones at the base of the mountain. We had removed the new

components. We had to leave the rest behind. We couldn't let what remained fall to the enemy, and so we had to destroy it. I stood near the hangar doors. General Kammler was not present. The forested hills of Kahla were all around us and veiled in a thin mist. I glanced at General Nebe. His swarthy face revealed nothing. My fellow scientists and technicians were just behind me, their eyes fixed on the saucer. The guns roared in the distance. The saucer glittered in the sunlight. Nebe's demolition men were standing under it, grouped around the four legs. One of the men waved his hand. General Nebe nodded soundlessly. All the men moved away from the saucer and returned to the hangar.

I no longer accepted pain. It was a redundant emotion. Nonetheless, as I gazed at my great creation, I had to harden myself. The saucer looked enormous, its sloping sides a seamless grey, sweeping up to a steel-plated dome and reflecting the sunlight. It looked very beautiful. It also looked quite unreal. What I felt was a fleeting sense of loss, but I rigorously stifled it. I just stood there, saying nothing. General Nebe nodded again. A kneeling sergeant leaned forward and pressed a plunger and the saucer exploded.

Fierce flames and swirling smoke. We were crouched behind sandbags. The explosions reverberated throughout the hangar and then faded away. We all stood up slowly. The smoke was billowing toward the sky. Where the saucer had stood there was a black hole, filled with smouldering debris.

I found myself speechless. I turned away and faced Nebe. His dark eyes and humourless face displayed no sign of sympathy. He just shrugged and surveyed the hangar. It was immense and filled with workers. The workers were lined up against the walls, being guarded by soldiers. Nebe's dark eyes were watchful. He murmured an order to the sergeant. The sergeant barked further orders to his troops and they all raised their weapons. The prisoners moved immediately. They placed their hands on their heads. Silent, their eyes as dead as the moon, they marched out of the hangar.

The destruction began. We would leave little to the Allies. All that day the ground rocked to explosions and the shrieking of bullets. A dark smoke boiled from the hangar. The long tunnels were filled with flames. The technicians stood outside, bemused, as their laboratories crumbled. Soldiers darted to and fro. Hand grenades arched through the air. The flames daggered through the black smoke and splashed down on the ground.

Other guns roared in the distance. The horizon was smoky. The enemy

was advancing every minute and our time became precious. We all rushed to pack the trucks. The largest crate was first to leave. In the crate were the numerous new components, without which we'd be lost. I climbed in beside the crate. I glanced out and saw the prisoners. They were kneeling in great numbers on the ground, the smoke drifting around them. I did not look very long. They were destined for Buchenwald. When they turned to smoke and ash in the crematoria, what they knew would die with them. I reached out and touched the crate. General Nebe waved from the murk. The truck growled and then rumbled down the hill as the destruction continued.

Darkness was descending. Allied guns roared in the distance. The truck started rocking from side to side and the large crate swayed dangerously. I reached out and touched it. I thought briefly of Rudolph Schriever. The Flugkapitän was still working in Mahren, racing to finish his saucer. As the guns roared, I smiled. Schriever's saucer would never work. I stroked the large wooden crate with loving fingers and felt a deep peace. The truck shuddered and then stopped. I heard the hissing of steam. Looking out, I saw the mass of milling workers approaching the train.

We unloaded in darkness. The crate was moved with great care. A battalion of SS troops marched by, their guns and knives gleaming. They were all youthful fanatics. They were General Nebe's disciples. They had deserted after the attempt on Hitler's life and now were coming with us. The war raged on in the distance. The train clanged and spat steam. The slave workers were stripped to the waist, sweating under the cracking whips. I watched the crate being loaded. It bumped against the long carriage. I cursed the man who was operating the crane and he lowered his head. The crate was then lowered more carefully. Blackened hands pushed it inside. The doors were closed and the slaves were ordered away as I walked to the platform.

Allied planes growled overhead. I heard the snap of a rifle. A dog snarled and a man started screaming as I reached the dark platform. Clouds of steam swirled around me. Troops were entering the train. The ground shuddered and I saw flames in the distance, flaring up in the black night. Men were shouting and jostling. A torch shone in my face. General Nebe materialised from the murk, his dark eyes unrevealing. He pointed up to the nearest carriage. I saw the peaked caps of the officers. I nodded and we both boarded the train and closed the door hard behind us.

The carriage was packed and noisy. A sweating corporal pulled the

blinds down. Once finished, he turned on all the lights and I felt my eyes stinging. Most of the officers were dishevelled. Their ties were loose and their shirts were soaked. The air was blue with cigarette smoke, smelt of ash and fresh sweat. General Nebe murmured something. Two men jumped to their feet. They saluted and then marched away, leaving two empty seats. Nebe indicated one of them. When I sat down, he sat beside me. The two officers seated opposite froze visibly and then lowered their eyes. Nebe yawned and glanced around him. His rough face was expressionless. Shortly after, with much clanging and groaning, the train started moving.

The night was long and miserable. The train stopped and started often. Allied planes growled continuously overhead, the guns boomed in the distance. The officers smoked and played cards. Their ears cocked when they heard explosions. Nebe slept with his mouth pursed and whistling, his head hanging heavily. General Kammler was not present. He was busy elsewhere. That same night he was moving the scientists from Peenemünde to the mine shafts of Bleicherode. He had suggested the move to Himmler. It was a cunning thing to do. Its purpose was to distract Himmler's attention while we made our escape. The Reichsführer was in a panic. He had forgotten about Antarctica. He was now more concerned with the V-2 rockets, and with young Schriever's saucer. The guns roared as I smiled. I thought of Schriever back in Mahren. That fool would still be working on his saucer when the Allies arrived.

We were bombed a few hours later. I remember my annoyance. The sudden roaring almost split my eardrums as I plunged to the floor. The bending tracks shrieked. My one thought was for the crate. The whole carriage rose up and crashed down and then rolled onto its side. The noise was catastrophic. Men screamed as seats buckled. I went sliding along the floor and struck a wall and rolled over a flailing man. Flying pieces of wood and spinning chairs. A smashed head pouring blood. I turned around and saw the windows above me, glass shattered and glinting. Men screamed and bawled curses. I jumped back to my feet. A bloody corporal formed a stirrup with his hands and Nebe planted his boot in it. The corporal heaved the general up. I saw the mass of dangling legs. More bombs fell and exploded around the train as I found a cleared space. I pulled myself up through the window. The night roared and spewed flame. I crawled away from the window and rolled off and crashed down to the ground.

My one thought was for the crate. I ran toward the long carriage. Men were falling off the train and crashing down and then rolling away from me. The whole scene was chaotic. A silhouette was bawling orders. I clawed two or three men from my path and then saw the long carriage. General Nebe was already there. There were three trucks near the train. A dozen men were labouring under my crate, their backs bent, their necks straining. Another bomb fell nearby. Nebe stepped forward to bark an order. The men heaved the crate onto the truck and then collapsed from the effort. General Nebe's jackboot glistened. He kicked one of the lolling men. The others jumped up and grabbed at their weapons and clambered into the truck. Nebe waved his right hand. I climbed up beside the driver. Nebe followed me in, barked an order, and then the truck began moving. Allied planes passed overhead. A grey dawn was breaking. There was another truck in front, one behind, and we kept moving forward.

The breaking dawn was filled with smoke. The landscape was devastated. Charred trees and smouldering buildings and corpses, ragged columns of refugees. The refugees were going the other way. Allied planes flew overhead. The trucks growled and bumped along the dusty roads as the smoke cleared away. A drab country: anonymous. The devastation remained. The blackened buildings were no longer smouldering: the ash had turned cold. We stopped and started often. Darkness fell and brought a stark, chilling silence that gave way to the murmuring sea.

We stopped just outside Kiel. The fields were flat and barren. I saw a hangar, a series of low bunkers, a few bleak, concrete buildings. There we stayed for five weeks. The crate was hidden in a bunker. Every day I went down to inspect it, wanting desperately to leave. Each day was the same. The men smoked and played cards. Allied planes rumbled over our heads, but always kept flying south. Long days and freezing nights. I toyed with mathematical riddles. It was wet and the SS men were drawn to the flickering ovens. General Nebe kept to himself. His dark eyes were unrevealing. He slept soundly, his mouth puckered and whistling, his heavy legs outstretched. Dawn drifted into dusk. The Allied planes flew overhead. I often studied the SS men in the bunkers, wondering what they were thinking. They all seemed to be very young. Most were handsome and sweet-faced. All had dipped their hands in blood and tortured the helpless, few would suffer from sleepless nights. I

vondered how we could take them all. I didn't believe we had the space. A :old wind came and chilled us to the bone and Nebe said we were moving out.

We drove down through Kiel. A fine mist veiled the darkness. I was sitting n the back of a truck, the wooden crate towering over me. I thought of Kammler in Oberammergau. I wondered if he had escaped. I thought of Vernher von Braun and Dornberger and wondered what would become of hem. Kammler might still be with them. He might be down there in Kiel. I ran ny fingers along the length of the crate and then we came to the docks.

The trucks squealed to a halt. The crate shuddered and then was still. General Nebe's dark eyes appeared from dense mist and he motioned me out. I jumped down, feeling stiff. The docks were very quiet. The black water eflected the lamps beaming down on the submarines. I glanced keenly around ne. Nebe was murmuring to some troops. The men formed up in a neatly paced line against the wall of a hangar. Other men were at my crate. They vorked slowly and carefully. I glanced down at the submarine just below me: U-977. There were men on the deck. They were grouped around the hold. Chains rattled and I saw my precious crate dangling over the water. There vas a moment's hesitation. The crate was jerked and started spinning. Hands eached up and guided it down until it dropped out of sight.

General Kammler appeared on deck. He was accompanied by Captain Schaeffer. Both men climbed up the ladder to the dock and approached General Nebe. Kammler spoke in a low voice. He kept glancing along the lock. His shadow trailed out along the wet stones and smothered my feet. General Nebe turned away. He murmured something to his sergeant. General Kammler took a torch from his pocket and flashed it three times. I glanced long the dock. I saw the lights of another truck. The truck growled and then tarted toward us, its headlights turned down. General Kammler walked up to ne. He introduced me to Captain Schaeffer. We shook hands as the truck ulled up near us and turned toward the water.

The SS troops were silent. They formed a line along the hangar. The ergeant stepped back and bellowed an order and the troops faced the wall. I eard their weapons rattling. Their boots rang on the stones. The truck topped, overlooking the water, and then its ramp was thrown down.

A shocking noise split the silence. I shook my head to clear it. The SS roops lined up along the hangar were jerking and wriggling. My eyes turned oward the truck. I saw a barrel spitting flames. The machine gun was roaring

and rattling as the men screamed and died. When I blinked, there was silence. A grey smoke drifted lazily. The tall wall of the hangar was filled with bullet holes and splashed with fresh blood. The men all lay on the ground, sprawled across one another. Their large pupils reflected the lamps beaming down on their faces.

Captain Schaeffer turned away. I saw Kammler's tight lips. General Nebe took his pistol from its holster and then cocked the hammer. He nodded to his sergeant. They both approached the bloodied men. Most were silent, but a few were still whimpering, their hands opening and closing. General Nebe fired the first shot. His sergeant fired the second. They took turns, bending over the bodies, their gunshots reverberating. It seemed to take a long time. It did not take long at all. When they had finished, General Nebe turned away and waved his free hand.

Some men jumped out of the truck. The machine gun's barrel clanged. General Nebe returned his pistol to its holster and then walked toward us. There was no sweat on his brow. His dark eyes were unrevealing. He nodded and we all turned away and climbed down to the submarine.

We moved out shortly after. We did not go very far. I stood with Nebe and Kammler on the deck and watched the men on the dock. There were only four men. They worked long and hard. They put the bodies of their dead comrades in the truck and drove it into the hangar. The dock was very quiet. Its lamps beamed down on the wet stones. More Allied planes rumbled overhead as the four men emerged again. They were not in the truck. They merged gradually with the darkness. They climbed down the steel ladder one by one and dropped into a dinghy. The oars splashed in the water. The distant lamps showed desolation. After what seemed like a very long time the men arrived at the submarine. They were all helped aboard. The dinghy drifted away. I stared back across the water to the dock and saw the lamps on the hangar.

The explosion was catastrophic. The whole hangar disintegrated. The flames shot up in jagged, yellow lines that turned the night into daytime. The noise was demoniac. A black smoke billowed out. The flames swirled and turned into crimson tendrils that embraced one another. Then the smoke drifted sideways, revealing the rubble. Flames leaped across the charred, broken beams and stained the road with shifting shadows. The flames burned a long time. The harsh wind made them dance. They were still burning brightly when we submerged and disappeared in the Baltic Sea…

t is notable that in this account of Wilson's escape from Kahla and his long, langerous journey to Kiel harbour, no mention is made of SS Lieutenant Ernst Stoll, who had worked so closely with Wilson up to this point and was, ndeed, present at the harbour just before Wilson's submarine submerged in he Baltic Sea. The details supplied by OSS agent Mike Bradley, who was also n the harbour at this time, confirm that Lieutenant Stoll was not only present n the harbour, but definitely entered the submarine before it submerged. So Stoll, too, made the journey to Argentina with Wilson and the others. We can nly account for his single mention in Wilson's last two papers, whereas generals Kammler and Nebe are mentioned frequently, that Stoll, despite his lavish devotion to Wilson, had lost the latter's interest and been superseded n importance by the two ruthless SS generals. Postwar investigations by the Allies' Operation Paperclip reveal that while Stoll did, indeed, eventually get o the hidden colony in Neu Schwabenland, Antarctica, and stayed there for nany years, loyally serving Wilson, eventually he was sent to Paraguay, first o gain the support of General Stroessner, another Nazi sympathiser, then to reate a hidden base in the jungle for the abduction of local Ache Indians who vere then transported, as slave workers and potential cyborgs, to the Antarctic olony. No more information on Stoll was found by Allied intelligence gencies, so it is assumed that he never left Paraguay and almost certainly died here.

Since the ending of World War Two there had been numerous unsubstantiated rumours about Adolf Hitler, Martin Bormann and other eading Nazis having fled to sanctuary in Argentina, where the President, General Juan Domingo Perón, another Nazi sympathiser, would have velcomed them. While DNA testing has since confirmed that Hitler and Bormann did not flee to Argentina or elsewhere, but in fact committed suicide n Hitler's bunker in Berlin during the final days of the war, there has been lenty of evidence to confirm that many Nazis did indeed flee to Argentina, vhere they were warmly received and protected. Also confirmed is that on April 25, 1945, the German submarine *U-977*, commanded by Captain Hans Schaeffer, put out of Kiel harbour in the Baltic. It stopped at Kristiansund South on April 26, departed the following day, and was not seen again until it

urfaced at Mar del Plata, Argentina, on August 17 – a period of nearly four nonths.

Since this is an unusually, even remarkably, long time for a submarine uch as the *U-977* to be at sea, Captain Schaeffer, when he docked at Mar del lata, was interrogated by the Argentine authorities regarding why he had rrived in Argentina so long after the war had ended. He was also asked if *U-77* had carried anyone of 'political importance' during its voyage to rgentina. Schaeffer insisted that this was not the case. However, a few weeks ater, an Anglo-American commission, composed of high-ranking officers lown especially to Argentina to investigate the 'mysterious case' of *U-977*, pent a great deal of time interrogating Schaeffer regarding the possibility that e had taken Hitler and Martin Bormann aboard his U-boat, first to Patagonia, hen on to Argentina. Indeed, they were so insistent on this that they ubsequently flew Schaeffer and his crew back to a prisoner-of-war camp near ashington DC, where for months they continued their interrogations. chaeffer repeatedly denied having shipped anyone anywhere. Nevertheless, e was then handed over to the British in Antwerp, Belgium, and again nterrogated for many months. Oddly, since Schaeffer stuck to his story and eportedly the Allies found nothing unusual in *U-977*, the submarine was ventually taken to the United States, where, under direct orders from the US ar Department, it was blown to pieces.

As for Schaeffer, whether he was telling the truth or not, he was shipped ack to Germany, did not feel comfortable under Allied rule, and so went to oin other expatriate German officers in Argentina – which was, and remains, he last major stop before the South Atlantic coastline of Antarctica.

In fact, Schaeffer was lying. As has finally been revealed in Wilson's inth paper, he and the others were indeed transported in Captain Schaeffer's *J-977* from Kiel Harbour to Mar del Plata in Argentina. With the full ooperation of President Perón, they were then transported to a secret airfield n Bahia Blanca, and from there flown directly to the Antarctic...

aper #9

pril 26, 1945. We had left Kiel illegally, not daring to ask for fuel, so we ulled into Kristiansund South to fill up the tanks. The war news was bad. The

Soviets were in Berlin. The Americans and Russians had finally met at Torgau on the Elbe. The end was in sight. The submarine submerged the next day and kept hugging the coastline. I often went to the hold to check the crate, though I knew this was pointless. General Nebe kept to himself, his dark eyes revealing nothing. General Kammler was obsessed with the radio and passed on the news. None of this news was good. The Reich was obviously about to fall. When the death of Adolf Hitler was announced, we all knew it was over.

Captain Schaeffer called a meeting. Nebe and Kammler sat together. General Kammler was tense and energetic, Nebe was expressionless. The war was over, Schaeffer said. This fact raised certain problems. There would be no submarine tankers in the South Atlantic, which meant no food or fuel. We would have to change our plans. We would never make it to the Antarctic. With luck, we might reach Argentina, but we couldn't go farther.

I confess: I was shocked. My one thought was for the wilderness. I glanced at Nebe but his dark gaze was unrevealing, so I then looked at Kammler. The general's eyes were bright. He mentioned Colonel Juan Perón. He reminded us that Perón was a man who could not resist money. Kammler smiled when he said this. He was an organised man. He then added that he had already discussed the matter with the necessary people. General Nebe did not smile. Captain Shaeffer looked relieved. We agreed to head straight for Argentina at no matter the cost.

Not quite straight: first, a digression. Some of the crew became rebellious. The war was over and they wished to return to Germany and Schaeffer agreed to this. We hugged the Norwegian coastline. We only surfaced at night. A few days later we reached the mountainous coast of Bergen and let the men off.

I climbed up to the deck. I had to breathe the cooling air. I saw patches of stars between the clouds, the dark water, the jagged cliffs. The men shivered on the deck. General Nebe surveyed them coldly. The men shuffled their feet, clearly nervous, and shook hands with their comrades. I looked across the calm sea. The coastline was featureless. The sea lapped against the submarine as the men clambered overboard. I felt a great yearning. I wanted to rest my feet on dry land. After this, we would spend months in the submarine, mostly submerged.

May 10, 1945. The real voyage began. My strongest memories are of constant heat and stench and the engine's bass rumblings. It was too long for

anity. We were living on top of one another. First a day, then a week, then wo weeks, the submarine like a tomb. The North Sea and the English Channel. The blackened Rock of Gibraltar. When we surfaced, our freedom vas brief and aircraft made us fearful. In truth, we rarely surfaced. The hatch vas opened to let air in. We would see a glittering circle of sky and then the atch would be closed again. Then along the coast of Africa. A stolen glimpse of sun and sand. Then thirty-six days underwater, a nightmare of sweat and oise.

By June the crew were restless. There were arguments and fist fights. Once a man took his knife from his dinner plate and slashed the face of a friend. Captain Schaeffer gave them beer. He was a careful, thoughtful man. There was peace for at least another week, but then more fights broke out. General Nebe's dark eyes were watchful. His hand often stroked his pistol. He tarted pacing up and down the submarine, murmuring words here and there. His words calmed some restless souls. His dark eyes tamed their rage. They vould stare at his eyes, at his pistol, and remember his history. After that, it vas easier. It was miserable, but less dangerous. We turned away from one nother, faced the bulwarks, let our own thoughts sustain us.

We surfaced six weeks later. We were in the middle of the South Atlantic. A fierce sun burned a hole in the sky, and the green sea was placid. This eprieve was a blessing. The next month was more bearable. We alternated etween floating on the surface and diving back to the depths. Then the Cape Verde Islands. We went ashore on Branca Island. The men frolicked on the urning white sand and washed themselves in the dazzling sea. That day was ll too brief. The droning of aircraft made us leave. The submarine dived back o the depths and our journey continued.

Nevertheless, life was easier. We started surfacing almost daily. Once we tayed on the surface for a week by disguising the submarine. False sails and alse funnel. From the air we would have looked like a cargo steamer. The ircraft droned overhead but ignored us, not suspecting a thing. The men vaved at the planes. They fought their boredom with such humour. They vould watch the planes flying away, and then lie down and sun themselves.

Nebe usually remained below. He liked the claustrophobic depths. Kammler paced the deck and searched the horizon like a man with no time to pare. Eventually we saw land. It was the coast of Rio de Janeiro. Kammler miled and climbed down through the hatch to listen in on the radio. The news

was not good. Kammler relayed what had happened. Another fleeing submarine, Captain Wehrmut's U-530, had recently put into the River Plate with unfortunate results. The whole crew had been taken prisoner and handed over to the Americans. Kammler told us this, studied us, enjoyed our despair, then grinned and mentioned a place called Mar del Plata and went back to the radio.

August 17, 1945. We docked at Mar del Plata. Four months after we had boarded at Kiel we stepped off in the Argentine. We had no need to worry. An arrangement had been made. From here we were to be transported to a secret airfield in Bahia Blanca, and from there flown directly to the Antarctic.

The thought filled me with pleasure. I looked along the crowded deck. The Argentinian officials crossed the gangplank, their medals flashing and dangling. They did not look too happy. They were mopping their sweaty brows. I sensed immediately that something was wrong and crossed over to Kammler. He shook hands with the officials. The man with most medals whispered. Kammler's lips formed a single, thin line that expressed his concern. He then smiled at Captain Schaeffer. He introduced us to the officials. We all shared wine and biscuits on the desk, the sun blazing upon us. A short delay, someone said. An unfortunate mishap regarding transportation. We would have to spend some days on the submarine before we could leave. Captain Schaeffer agreed to this. He was a reasonable, thoughtful man. The Argentinians all smiled and bowed politely and then left in a hurry.

I spoke to Kammler and Nebe. We met at midnight on the deck. It was dark and I saw the moon reflected in Nebe's depthless eyes. Kammler spoke in an urgent whisper. He told us what had really happened. He said that British and American Intelligence had picked up the information that Hitler was not dead and that he and Martin Bormann had escaped from Germany. Reportedly they had fled in a submarine. They were thought to be heading for Argentina. It was the British and American wish that the Argentinians report the arrival of any German submarines in their waters. Thus the Argentinians were in a panic. They felt that something must be done. What they wanted was to offer the Allies a little something to chew on.

General Nebe lived by intrigue. It was bread and meat to him. His dark eyes offered no pain or pleasure as he outlined a compromise. We four alone would leave: me, Kammler, Nebe and Stoll. We would take the precious crate with us. But to save the Argentinians embarrassment, we would leave the rest

of our men behind. They would be held as political prisoners. The Argentinians would hand them over. That way, the Argentinians would look good and we would save our own necks.

Ruthless? Yes. But then all four of us were ruthless. We had lived in the Third Reich a long time and learnt how to survive.

We agreed to Nebe's plan. It could not possibly fail. The fate of Schaeffer and his crew did not concern us and could hardly affect us. It didn't matter what they told the Allies. By then it would be too late. By then we would be hidden in the Antarctic, our whereabouts unknown. The Allied forces would then be helpless. They would never locate our underground base. They would know that the underground base existed, but they wouldn't dare admit to it. How could they mention it? It would only lead to public panic. And so, aware of this, knowing the Allies would be helpless, we decided to drop Schaeffer and his crew and go on by ourselves.

We unloaded the crate the next day. This aroused no curiosity. Schaeffer assumed that we were simply unloading it for safekeeping on shore. That same night we slipped away. Some army officers were waiting for us. I saw my crate in the rear of their truck and I climbed up beside it. Nebe and Kammler quickly followed. We glanced back at the submarine. We saw the other troops moving along the dock, their rifles aimed at the submarine. Then we were driven away in the truck, leaving the submarine behind us. The flat plains of Argentina lay about us and the stars glittered brilliantly. Kammler looked at me and smiled. Nebe pursed his lips and slept. The night passed and a pearly dawn broke and then we reached Bahia Blanca.

The airfield was heavily guarded. The plane's engine was already running. The truck pulled up at the hold of the plane and the crate was unloaded. General Kammler climbed in first. I let Nebe go ahead of me. I glanced briefly around the airfield, at the troopers and barbed wire fences, at the flat plains that stretched out to the sky, and then I boarded the plane. The doors of the hold were closed. The steel locks made a clanging sound. I sat down beside Kammler and Nebe and stared up at my precious crate. Then the plane roared and shook. It taxied slowly along the runway. Then it roared even louder, raced along the runway, jolted, leapt off the tarmac, and climbed into the sky.

Perhaps I slept then. I do not remember the flight. I remember Nebe's dark, depthless eyes and the plane's constant rumblings. It did not take very

ong. My spinning thoughts destroyed time. Kammler smiled when the wheels ouched down again and the crate bounced a little. I reached out and steadied t. The plane shuddered and stopped. The doors opened and a bright light ushed in and brought with it the shocking cold.

All white. Everything. The frozen wilderness stretched out before us. I tepped down and my boots sank into snow and I breathed the pure, icy air. We were on a modest airstrip. Our own plane was waiting for us. We ransferred the crate to this plane and then clambered in after it. The doors losed behind us. The plane's skis chopped through the ice. We took off and lew above the white wilderness and then headed inland. All white. Everything. The plains and mountains were as one. My impatience was a hand upon my heart, my exultation was boundless. Then at last we dropped lower. I aw the enormous, encircling plateaux. We flew down below the mountains, elow the glittering ice peaks, and then the great caves opened out to embrace us and carry us home.

Here we are and here we stay. The ice glitters in the sun. History changes nd the world surrenders to us. We are here. We exist.

The New World

And there they remain. They do indeed still exist. They are still there in Neu Schwabenland, or Queen Maud Land, in the same hidden valley protected by high mountains, deliberately ignored by the Chileans in Ellsworth Land, the French in Adélie Land, the New Zealanders in Victoria Land, the Australians in the American Highland near the Amery Ice Shelf, the British on Deception Island, Shackleton Base on the Filchner Ice Shelf, Scott Base on Ross Island, and the other bases of many different nationalities now cluttering the Peninsula and nearby islands. With no resistance from Wilson, the International Geophysical Year (IGY) of 1957-8

had been created to allow the nations of the world to ‘take advantage of increasing technological developments’ and enable sixty-seven nations to make simultaneous observations of ‘the Sun, the aurora, the magnetic field, the ionosphere and cosmic rays’. Twelve of the nations taking part established more than fifty overtime winter stations on the continent. Massive tractor runs and airlifts enabled inland stations to be established, including Byrd Station in West Antarctica for the United States, Amundsen-Scott Station at the South Pole, also for the United States, and Vostok Station at the geomagnetic pole for the USSR (now Russia) and at the Pole of Relative Inaccessibility, also for Russia.

This was the greatest scientific programme in the history of mankind – and it was launched to Wilson’s apparent indifference because his technology was now so advanced that he could no longer be threatened by anyone or anything. An attempt by the US to find and take over his hidden Antarctic colony was undertaken in January 1947 with Rear-Admiral Byrd’s massive Operation Highjump, consisting of thirteen ships, at least two sea-plane tenders, an aircraft carrier, six twin-engine R4D transports, six Martin PBM flying boats, six helicopters and a staggering total of 4,000 men, but when the expedition ended in February the same year, much earlier than anticipated, it was at first officially denied, but then covertly confirmed in US intelligence reports, that Byrd’s expedition, in truth an attack force, had been made to retreat by ‘enemy fighters which came from the Polar regions’ and which could ‘fly from one Pole to the other with incredible speed’. The United States then withdrew from Antarctica for a decade, until finally returning in 1957 as part of the International Geophysical Year.

Over the following years and then decades, Wilson’s UFOs were witnessed by, and reported by, thousands of citizens worldwide. Now, in the 21st century, Wilson’s UFOs are still being seen in the

skies, though they are no longer simple flying saucers of the kind first constructed in Nazi Germany, but are, instead, of every shape and size, of every conceivable configuration, ranging from pilotless aircraft as small as Wilson's World War II anti-radar device, the *Feuerball*, to airplane-sized flying saucers based on the *Kugelblitz*, to his gigantic, so-called 'mother ships' and USOs (Unidentified Submarine Objects) that are often the size of high rise buildings and just as spacious inside. We do nothing about these and, indeed, officially deny their existence, because we are still totally dependent upon Wilson's extraordinary scientific innovations for our own technological and scientific progress. Though fully aware that no matter how quickly we advance, no matter how seemingly valuable to us are the innovations passed on by Wilson, what we receive from him is always obsolete by the time it is passed on and thus we always remain far behind him.

Nevertheless, by making use of Wilson's extraordinary technology, we have advanced so far since the end of World War II that even our own secret aeronautical projects, when seen during test flights, are being viewed by much of the populace worldwide as 'alien' or 'extraterrestrial' craft because their capabilities defy all known rules of flight and, just like Wilson's creations, they now come in all shapes and sizes. First to be mistaken for a UFO was our F-117a Nighthawk, or Stealth night fighter, followed by the triangular-shaped B-2 Spirit bomber, which was 'invisible' to radar and had a top speed described by the Pentagon as 'high subsonic'. Next came the Aurora, which had a 'bat-like, or wedge-shaped, appearance when viewed from one angle, a saucer shape when viewed from another'. It was reported as being capable of flying as fast as Mach 8 and reaching anywhere on Earth in three hours. Also frequently mistaken for an extraterrestrial UFO was the X-47 Pegasus UAV (Unmanned Aerial Vehicle), a scaled-down version of the B-2 Spirit that looked remarkably like a flying saucer even

when stationary. Another flying saucer look-alike was our LoFlyte, the product of joint research by NASA and the US Air Force, often described as triangular, wedge-shaped, or resembling a 'flying manta ray', and with speeds of up to 4,000 mph. Beginning in 1990, there was a whole spate of unexplained reports of flat, wedge-shaped objects seen by pilots near Air Force bases in California and, most controversially, flying in and out of the Groom Lake (Area 51) test site in Nevada. Included in such sightings would be our new brand of UAVs, our spy planes, such as the Dark Star and the Venture Star, both of which are designed to carry the most advanced infrared and electro-optical spy cameras available, capable of taking pictures down to a resolution of one square foot, night or day, and both of which look remarkably like flying saucers.

If we had any doubts about the level of Wilson's technology, which would certainly be well ahead of our own, we had only to think about the innovations we had already received from him through our secret trading deals. Presently being explored by us, thanks to Wilson, is an 'airspike' device that can control the airflow around an aircraft, reduce drag to a bare minimum, and enable it to fly at many times the speed of sound while greatly reducing the temperature of its skin to the degree where it will require no thermal protection. This could possibly lead to a revolutionary new generation of lightweight, reusable launch vehicles that would resemble flying saucers and get their power from beams of microwaves or lasers. Also being explored is a system in which constellations of orbiting satellites would convert solar power into microwaves and beam them downward to a 'lightcraft' below. Since the lightcraft would have to have a large surface area to gather as much microwave power as possible, a flying saucer shape would, again, be ideal. So if we are already, with Wilson's help, at this stage of advancement, Wilson's own

technology, his own saucer-based craft, large and small, must by now be beyond imagination.

So Wilson is still there. He is still in Neu Schwabenland, rightfully Queen Maud Land, in Antarctica. His technology is such that we have never been able to invade his air space. Our aircraft have always been forced to turn back because some unknown form of electronics disrupts their engines, threatening to make them crash, just as Wilson's much simpler *Feuerball* succeeded in doing during World War II. And we have never been able to reach his hidden colony by going in overland because his matchless flying saucers, equipped with powerful beam weapons, have always forced our advancing vehicles to retreat. So we have long since given up trying to reach Wilson. Instead, we have spent the last few decades trading with him in what increasingly seems like the vain hope that we will one day find a way of defeating him.

It is a shaming truth that during those same decades, Wilson's saucers flew anywhere they wanted and did what they wanted with impunity. Perhaps most shaming of all is the knowledge that his saucers, big and small, regularly abducted people, some of whom disappeared for all time, others being returned to Earth with garbled stories of having been taken inside a flying saucer, where they were surgically, sometimes painfully, examined by crew members who looked, in some cases, like perfectly normal human beings, in others like 'alien' creatures. These 'alien creatures' were uncommonly small and had what appeared to be thin-metal plates covering their faces, including their mouths, with only slits to expose their eyes and let them see. They often had what looked like microphones where their ears should have been. As we now know, these were not 'alien' creatures; they were Wilson's cyborgs, half man, half machine, many of them originally the famously small Ache Indians rounded up in Paraguay by Ernst Stoll's gangs and then flown in Wilson's 'mother ships' to the Antarctic. Other

victims, of all ages and races, were similarly abducted by his flying saucers.

It was clear from such reports that Wilson was continuing his appalling experiments with physical and biological mutation.

But was Wilson actually still alive? Were the communications still being received from him actually from a former deputy or surrogate? Certainly Wilson had not been seen for years, not even at the regular meetings in Washington DC or elsewhere between our people and his. Indeed, Wilson had stopped personally attending the meetings after his February 1959 meeting with CIA agent Jack Fuller in a dark field in a protected area just outside Patrick Air Force Base, located between Greater Cocoa Beach and Cape Canaveral. According to agent Fuller, Wilson told him that he intended disappearing for good and making no further contact with the outer world. However, before doing so, he wished to leave a record of his life to date in the form of a series of papers that he had been writing throughout the war years and now wished to have stored for posterity in Washington DC's Library of Congress. He then gave Fuller a thick box folder containing what soon became officially known as 'The Wilson Papers'.

That was the final meeting between Wilson and agent Fuller, and, to the best of our knowledge, between Wilson and the representatives of any other Western country. He has not been seen since.

Agent Fuller's formal report about that meeting included a description of Wilson as being slim, silvery-haired and looking only about fifty years old, despite the fact that according to his date of birth he should, at the time of the meeting, have been nearly ninety years old. This suggests, along with Fuller's description of Wilson having unnaturally smooth, unlined skin, that he'd had plastic surgery on his face and had probably, given his obsession with gerontology, also had other surgical procedures performed on

his body, including his heart, his stomach, his liver, and anything else that he felt could threaten his longevity.

If this supposition is correct, Wilson would now, in the 21st century, be 150 years old.

So how could he possibly still be alive? We assumed that he couldn't be. Though his UFOs continue to roam the skies untouched and his giant USOs are known to be active on the seabeds, Wilson remained silent for many years, leading us to hope that he had finally died and that his Antarctic colony, while still inaccessible, was now being run by his successor, or successors, who hopefully would not be either as brilliant or as ruthlessly ambitious as he had been.

Unfortunately, this was not the case.

A few years ago Wilson made contact again, this time with a series of encrypted emails sent to his chosen secure individuals in the White House, CIA headquarters, and the Library of Congress and, no doubt, to other important recipients around the globe. They were not brief emails. They were, like his first series of papers, full-length essays. And despite our incredulity, what we were being told by those emails was nothing less than astonishing.

Paper #10

You cannot possibly know me because I do not know myself and I cannot even begin to explain this. I am the light and the resurrection, the beginning and end of all, and I exist where no laws can apply and where nothing can touch me.

I am here. I exist. This cannot be denied. You thought I had gone for good, but I have come back to haunt you and this is the record of my returning and of what I became. It was not what I had planned or even imagined, but clearly, given the trajectory of my work, it was inevitable.

Yet rebirth is a horror.

I swam out of the darkness of oblivion, a blank diskette waiting to be filled, not knowing who or what I was, as none of us do. I was, of course, unique, as I had been before, but this time even more so than before because I was the first. Naturally, I had planned myself, ordaining what was to be, but when my instructions were carried out, when the experiment was successful, the other me, the one who lived even as I died, could not know what had happened. Like you and your kind, like all the ghosts of human history, I remembered nothing about my own beginning and so I only gazed outward. Given awareness of myself by what was out there, I began to fill in the blank spaces.

In the beginning was the light, the unimaginable first dawning, but even that is now beyond my recollection and I find it frustrating. My initial memories are of childhood, as they must have been the first time, though my recollections of the first time were obliterated when that one died at long last. I had to learn *about the first time, to be force-fed my own history, but that did not come until much later, when I was ready to face it. First I crawled, then I walked, just like the normal do, then I spoke and observed and started reasoning, though that time, too, is lost to me. My first memories are of the water, the teeming depths of the seabed, the kind of fish that ordinary children never see, vividly coloured, grotesque, in a dreamlike environment of rocks, plants and plankton, illuminated in wavering beams of light. Those lights were artificial, though I wasn't to know that then, and they beamed into the bottom of the ocean from the walls of my home. Out there, beyond the windows, held at bay by immense plates of reinforced, unbreakable glass, lay a world still largely unexplored and as alien as outer space.*

My home was on the seabed. I was born and raised there. I had no parents, but many others looked after me and each taught me something. I was revered from the start, cherished, held in awe, and never left alone for a second, because I, too, had my preordained purpose. I recall the walls of the sea dome, gently curved, a white steel, punctuated with the panoramic windows that revealed the murky depths and with high consoles in which lights of many colours blinked repeatedly and computer monitors, their screens lined up side by side, glowed like square eyes. There were maps on the walls. Not maps of Earth's topography. They were maps of the seabed, each one covering a different area, while we, those who lived in the dome, systematically explored that vast, ever-shifting, unknown world.

Thus I learned at an early age that the great dome in which I lived, the only world I had known so far, was enclosed and constantly on the move.

My world, that huge dome of steel and glass, had no sky, no greenery, no natural air; instead, it had floors and ceilings, curving corridors and many rooms, manufactured air and artificial light, a closed-circuit ecology. There were animals in the dome, used for research and for food; there were human beings used only for experimentation (often headless, without limbs) and there were others who at first I thought were just like myself, albeit different in appearance, but whom I later learned where not entirely human but only half so. They were, of course, cyborgs.

Yes, rebirth is a horror. Though there were other children, I was kept separate from them and made to understand that I was different. I ate and slept alone, had no free time at all, and studied mostly with the aid of an interactive computer system, my tutors merely selecting the software and offering general guidance. Those studies kept me engaged (even my games were educational) and the thought of having nothing to do never entered my head. My earliest memories are of working, of learning: nothing else was permitted. Though my elders seemed to revere me, even to fear me, they made me work night and day. They were my rod and my staff.

I had no parents and didn't know what parents were; ergo, this situation seemed natural to me and I never felt lonely. Sometimes, it is true, I experienced a fleeting sense of loss, a hollowness at my centre, as if part of me was missing, but invariably I shrugged the feeling off and returned to my work. My learning gave me my centre, my reason to be, and eventually nothing else really mattered. I thought my brain was my soul.

My whole world was the great dome and for years it was under water, but then I learned that it was a gigantic submersible that could also take wing, though it only did so occasionally.

On those very rare occasions, the great dome would rise vertically, lifting off the seabed, drifting up silently from darkness to light, first through striations that obliquely sliced the gloom, then into a dazzling explosion of sunlight as the sea, first dark-green, then blue and foaming white, poured down the plate-glass windows, drummed against the steel walls, then turned into surging waves that eventually fell away, dropping out of sight, until the surface of the sea came back into view, this time as a vast sheet of blue far below, running out to the horizon, with the sky, either cloudy or clear, spread

ut all around us. Then, when we were so high that we could see the curvature f Earth, the sky would also change, turning into a whipping, spiralling tunnel f shimmering white light streaked with silvery blue, a vertiginous well of linding brightness that gave no indication of which direction we were ctually flying in: up, down or straight ahead. Then, abruptly, we would blast hrough the sky itself, a giant envelope tearing open to reveal a boundless zure sea that would convulse and turn purple and then, just as abruptly, ctually being the same sea, fill up with the dazzling radiance of a gigantic un, even as the moon and stars also came out, now visible, with the sun, in an tmosphere so thin that even dust particles could not exist there. And seconds ater (it always seemed to be that quick) we would be descending vertically ver a different coastline, perhaps thousands of miles away, only to sink back nto the sea, sinking down into the silent, unexplored depths, until we rested n the seabed once more. And there we would remain for many months or, in ome cases, years.

I have lived in the depths of many oceans and now I reach for the stars.

At that time I was too young to understand that we had been flying well eyond the sound barrier, over fifty miles up, on the very edge of space; just s I was too young to know that to live on the seabed was not normal. Nevertheless, my blank diskette, my young brain, was still being crammed full f information, with languages, mathematics, geography, world history, stronomy and, most of all, with science, including aerodynamics, physics, iology, and computer technology. No literature. No art. Yet apart from that ack, I was, by my tenth year, as knowledgeable as the adults who had taught ne. A year later, with the aid of my computers, I began to outstrip them.

Now, as I write these notes, in the fortieth year of my new existence, I am o far ahead of my tutors that they seem to me to be no more than children. Now they fear me even more than they revere me. And that is as it should be.

In time you *will fear me as well. But first you must find me. I am here. I xist. You simply have to accept who I am and how like me you are.*

I will make sure you do.

Yes, we were astonished and could scarcely accept what Wilson was telling us. Were the emails fakes? Were they being sent, after his death, by one of his uccessors in an attempt to convince us that he was still alive? But why would

hey do so? What did they think would happen if we learned that Wilson was ndeed dead? Did they think we would try once more, as we had done with Rear-Admiral Byrd's Operation Highjunp in 1947, to invade and take over heir hidden base? No, they would not. Because Wilson's hidden base was still being protected by some kind of electronic force field and remained inapproachable to us. So knowing this, we had to accept that Wilson, given his well recorded obsession with gerontology, his determination to extend his own life beyond its normal time-span, even his often stated belief in the possibility of Man as Superman – yes, this Wilson, who had previously informed us that he had surgically mutated himself, renewing his heart, his stomach, his lungs, even his eyes and ears, could just possibly be still alive in some shape or form, possibly as half man, half machine, possibly something even stranger, and could therefore be personally responsible for this new series of emails, the source of which was untraceable. And if indeed they came from Wilson, were they coming from his Antarctic base or from the seabed?

The seabed is a distinct possibility. UFOs were often reported to appear from, and depart toward, the sea. Given the relatively limited number of people travelling by sea, it is surprising that so many reports have concerned UFOs, or USOs (Unidentified Submarine Objects) diving into or erupting from oceans all over the world, in areas such as the Bermuda Triangle, in the West Atlantic, connecting Bermuda, Puerto Rico and the coast of Florida; the so-called 'Devil's Sea' bounded by the south-east coast of Japan, the northern tip of Luzon, in the Philippines, and Guam; the coastal waters of Argentina, particularly near Plata del Mar; and the Great Lakes of Canada – all of which are also known as areas where many aircraft and ships have mysteriously disappeared without trace. Inevitably, this led to much speculation about the possibility of USOs hiding on the seabed, or of undersea laboratories which are visited frequently by UFOs capable of operating undersea. This in turn has led to the widespread belief that the missing ships, aircraft and crew members are somehow being abducted by gigantic USOs that may emerge from, and return to, the seabed.

It was our belief that given Wilson's UFO technology (and even our own rapidly advancing 'black' technology) this just might be possible. If such USOs and undersea laboratories actually exist, they could be manned permanently by cyborgs or 'programmed' human beings who would not be

ffected adversely, either physically or psychologically, by their undersea rison. And if, as often reported, the UFO 'mother ships' were of gigantic roportions, they could simply settle on the seabed and the laboratories would hen be constructed, or deposited, there with the aid of specially reinforced, emote-controlled Cybernetic Amorphous Machine Systems (CAMS). The JFO, or USO, would then ascend to the surface again, leaving the reinforced aboratory down there, complete with its crew and captives.

Telechirics, or advanced man-machine manipulators, have already been ıse extensively on the seabed. As far back as 1962, the Hughes Aircraft Corporation developed the Mobot, a complex 'swimming socket wrench' lesigned for Shell to complete the assembly of underwater oil well heads. The Mobot, with its television 'eyes' and sonar 'ears', was capable of wire-rushing surfaces and turning valves on and off at a depth of 1000 feet. It was uperseded by the even more ingenious UNOMO, a 'universal underwater Mobot' that has four arms – two for work and two for hanging on to the well ıead. This was nearly sixty years ago. Since then, within the *known* echnology, manned descent to the deepest undersea point (35,800 feet) has been made, huge saturation diving complexes are already on the seabed, and submarine homes' and 'floating islands' (contained within sea domes) have ome on to the agenda. It is therefore possible, given the estimated technology of Wilson's UFOs, that they could be capable of at least exploring, or settling ıpon, the seabed.

In the first of his emailed papers, Wilson described in some detail how, as ı child, he was raised and educated in a gigantic dome that could either rest on he seabed of the deepest oceans or fly in Earth's atmosphere and outer space. He describes this child, himself, as 'the first'. The first of what? This question s answered when he goes on to state that he had 'planned' himself and that vhen his instructions were carried out, when 'the experiment was successful', he other him, 'the one who lived even as I died', could not know, presumably ould not recall, what had happened to him. He also states that he is in the ortieth year of his 'new existence'.

Unbelievable as it seems, the possibility being raised in this tenth Wilson aper is that he had died in extreme old age, at 150 years old, but been reborn ıs a new, possibly genetically created, child, and had then been raised by a ombination of humans and cyborgs in various USOs. This possibility is

confirmed as fact in the next paper when he talks openly about his advances in genetics and, even more chillingly, his ‘second coming’.

Paper #11

You will come to me in time. You all do in the end. You will come to me, not knowing it is me you wish to find, because I represent what it is you most fear and yet desperately need. I am Evolution. I am what will be. I am the end of the long line that began in the cosmic stew and I will take you where it is you must go before the sun dies.

When the sun dies, Earth will die also.

I understood this from childhood, my first childhood long ago, when I stood in the wheat fields of Iowa and studied the heavens. I was golden-haired then, as indeed I am again, and the sun was an immense silvery orb in a dazzling blue sky. I stood alone in a field of wheat, the stalks shoulder-high around me, and I squinted into the sun’s blinding striations, responding to them, even at ten years old, with one simple question:

When will the sun die?

That question turned me into a scientist and gave me my one religion. I realised that the sun would *die eventually, taking with it Earth’s heat and light, and that long before that happened every form of life on Earth would be extinguished. Man’s time on Earth, therefore, would be brutally short if he simply followed Nature’s course. Still an animal, he would die off like the dinosaurs as his life-giving sun died.*

Something had to be done.

Thus that golden-haired boy, at ten years of age, found something to live for: the changing of mankind’s destiny through science and, incidentally, the creation of a new kind of man as a means of continuance.

I have never strayed from that path.

Now, in my second coming, resurrected through my own genius, I am continuing the task I embarked upon in that wheat field in Iowa. I am golden-haired again, my skin unblemished, my health sound, and though regressive minds might view me as unnatural, I accept what I am without qualms. I am not who I was, since the dead cannot return, but I am a genetically identical

human being and my original environment, experiences and evolution have been carefully, rigorously implanted in me from the day I was reborn. Therefore, though I am not the original 'me', I know all that he knew and am impelled by the same drives and motives. Like him, I have only one religion. That religion is science.

I am loved and loathed for this. The historical records prove this fact. Nevertheless, as I have no vanity, since personal feelings do not impinge upon me (as they did, if only occasionally, for the original 'me') the responses to what I have done so far, the loving and the loathing, can have no effect upon my future decisions. I am what I am and I will do what must be done because I know that I was created for this purpose. The instructions left by my predecessor were followed to the letter and my rebirth was accomplished without problems.

I am here. I exist.

This is all that matters. Nothing else can be considered. What would seem unnatural to some is perfectly natural to me and the evolution of man into machine is a natural, inevitable progression. I am different from the others in that I am not a cyborg, a man-machine hybrid, nor a clone like the other normal' ones, though like the latter I am certainly a creature apart and none the worse for it.

The cyborgs were once human beings, with human features and human thoughts, but now they are scarcely human at all and their thoughts are strictly limited. They have artificial hearts, bionic audio transmitters for ears, sonar sensors for eyes, plastic arteries, synthetic bones and, where necessary, synthetic skin; thus some of them are more machine than man. Do they suffer horror and despair? No, they do not. In fact, their brains have been implanted with microscopic electrodes that control their every emotion, obliterate childhood memories, and keep self-awareness at a level shared by humanity's domestic pets.

No, I am not like them at all, being physically normal; but equally, though I may look the same, I am different from the clones, created from the DNA of those now dead and used where an appearance of normality is necessary to the world of 'real' people. Unlike me, the clones were not born in the womb, and this, more than anything else, makes them a different species. I am still of the human race.

My surrogate mother is dead. I do not know who she was. By the early

1980s we were able to probe the double helix with powerful electron microscopes, then snip out sections of the chromosomal genetic programme and replace them with sections from another living organism – plant, animal or human. I was created, or recreated, with strands of my own DNA. Spliced out of the genetic blueprint for the original me, just before I – or 'he' – died, the microscopic strands of my DNA were kept in a culture dish in one of our many undersea laboratories until such time as my scientists, all brain-implanted and programmed to be loyal to me even after my death, had perfected the technique of creating an embryo and inserting it into a living womb. My mother, therefore, was a physically perfect female specimen abducted by one of my flying saucers and used solely as a surrogate womb.

About forty years ago, the embryo created from my DNA was inserted into that unknown woman's womb and I was reborn, nine months later, in the usual manner. Within hours of my rebirth, the woman was terminated and I was placed in the care of cyborgs specially programmed to think of nothing but my physical and mental well-being. The lack of normal mother-and-child bonding, which could have led to serious emotional problems in later life, was solved by ensuring that I had every creature comfort and by educating me, from my second year on, with a mass of information stored on vast data bases and retrieved on interactive video disks. The information included not only history, geography, philosophy, politics, mathematics and all the sciences, but also the history of the original 'me', including 'his' childhood and daily thoughts, the latter culled from his own writings, as well as countless subtexts that gradually erased the need for an emotional bond with a natural mother. Thus, by the time I was ten years old (the same age that the original 'me' had been when he first realised that the sun would eventually die), I was by normal standards a genius, had no need for anyone other than myself, and was dedicated, as the other 'me' had also been, to the unfettered pursuit of knowledge and, ultimately, to the creation of a new human race – one that will take us to the stars before the sun dies.

The creation of that new race, a super-race, is now under way. My own rebirth took place during the relatively early days of eugenics, before the proper cloning of human beings had been perfected, but great progress has been made since then. Now test-tube clones, those born outside the womb, are a large part of our work force and are, indeed, in charge of the cyborgs,

under my overall command. The cyborgs had their day but it was sadly short-lived and now, with the coming of the clones, they will soon be redundant.

For the time being, however, they still have their uses, particularly because, being man-machine hybrids, though now more machine than man, with many parts made of steel, they can withstand abnormal heat and atmospheric pressure. Also, as their life-support functions of nourishment and waste-product removal are controlled by a central computer, they can 'exist' for as long as required without food or water. Because of this, they are perfect for work on the seabed and in outer space; as workers or soldiers who virtually have no limitations and cannot even be killed.

The clones, on the other hand, though brought to life in test-tubes and reared in artificial wombs, are still physically 'human' in most respects. For this reason, apart from their function as general supervisors, they are used mainly outside our colonies – on the seabed, on the dark side of the moon, and in the real world – for work that requires interaction with normal human beings who, though willing to work with us, find it psychologically and emotionally difficult to interact with the cyborgs. In time, however, recombinant-DNA technology will enable us to cross-breed drone human beings in which all genetic disorders have been removed, total obedience has been instilled, and physical and mental capabilities have been carefully manipulated to suit our specific needs.

These particular drone human beings, a product of the parallel evolution of machine intelligence and genetic adaptation, will be the first of the new super-race – the life form that will succeed the present human race and take us to the stars. Though looking like normal human beings, they will in fact be chimeras, cross-bred from a combination of DNA strands taken from different chromosomal genetic programmes and reassembled in any form required for the geneticist's purposes. Thus, though essentially 'human', they will be abnormally strong, exceptionally intelligent, emotionally neutered, and motivated beyond reasoning. Further, by restimulating the genes controlling their own limb and organ development, they will be able to regrow lost limbs or, more important for longevity, regenerate failing internal organs. They will, then, in effect, be supermen.

All of this will come about in the near future. Right now, however, the clones are physically 'normal' and only different in that they have been emotionally neutered: thus they can suffer no self-doubt or guilt, and have

been programmed to do as they are told without moral restraint. They are out here right now, walking among you, unrecognised, and they are there, some in positions of great authority, to do only my bidding.

Who is a friend and who is a foe?

You cannot tell anymore…

It is perfectly clear from a reading of the eleventh paper that Wilson had made truly remarkable advances in physical and genetic mutation, leading to the cyborgs and cloned human beings, assuming the latter can indeed be described as 'human'. Whether human or not, he persuasively asserts in this paper that the old Wilson died physically but was created, or recreated, when microscopic strands of his DNA, extracted from his genetic blueprint just before he died, were inserted into the living womb of a surrogate mother: almost certainly a healthy woman abducted in a flying saucer, then imprisoned in an underwater dome until such time as she could be surgically impregnated. Just one of the thousands abducted by Wilson's flying saucer crews and used against their will either as slaves or, even worse, as human subjects for his medical and surgical experiments. The 'new' Wilson would never know who this unfortunate woman was, and clearly, as shown in this particular paper, he did not much care.

Even more worrying is his contention that the scientists who did his on his behalf, were all, along with slave-servants and cyborgs, brain-implanted and programmed to be loyal to him even after his death. This was not the first time that he had used, or misused, micro-electrode brain-implantation to control the impulses, appetites and thoughts of human beings in order to turn them into robotised slaves. Indeed, in one of the intelligence reports covering his secret meetings with Wilson, CIA agent Jack Fuller claimed that Wilson had confessed that for years his UFOs had been abducting

scientists and politicians from all over the world, stealing their minds and willpower by implanting miniaturised electrodes into their brains, using stereotaxic skullcaps, and then returning them to their own environments where they would, to all outward appearance, seem perfectly normal while actually being under his remote control and programmed, by the brain implants, to do anything he asked of them. If what he states is true, some of those robotised people, male and female, are now in the White House and the Pentagon; others in some of our most important military and scientific establishments, including the North American Air Defence Command (NORAD), and in similar establishments in other countries. So Wilson, even that long ago, had eyes and ears all over the world.

'Who is a friend and who is a foe?' he asks rhetorically. And answers: 'You cannot tell anymore.'

Indeed, we cannot. Even our fellow intelligence officers are suspect. Even our politicians, our highest ranking military officers, the people in the Pentagon and the White House upon whom we depend, are now suspect. How many have been brain-implanted by Wilson? How many are now under his control? How many are making decisions of national importance, but basing those decisions on his dictates? Who is actually now running the country? Is it us or Wilson?

In this regard, it is certainly no accident that Wilson, in this particular paper, addresses his potential readers as 'you.' He writes: 'You will come to me in time. You all do in the end.' Clearly, in using the word 'you', he is referring to the human race as a whole. There is a terrible threat implicit in this. 'I am Evolution,' he says. 'I am what will be. I am the end of the long line that began in the cosmic stew and I will take you where it is you must go before the sun dies.'

Thus, he takes us back to his beginnings, to that golden-haired

boy in Iowa who, at only ten years old, was already obsessed with the knowledge that the sun will eventually die and that the only way for the human race to survive its dying is to leave Earth long before it does so. And the only way to do this, the ten-year-old Wilson believed, is to create a whole new breed of man, first the cyborg, then the genetically enhanced superior human being, and finally, ultimately, the genetically mutated Superman.

Possibly this new Wilson, the cloned Wilson, is the first of the Supermen.

Paper #12

I am neither friend nor foe because such terms are meaningless to me. I am simply doing what I have to do and I will let no one stop me. There are those who would try because they still think in terms of 'right' and 'wrong'. But I know that such concepts have no place in evolution, which only understands where it must go and takes the most direct route. I will follow that route, letting nothing stand in my way, because man is a primitive being filled with primal fears and only science can lead him out of the cave and into the heavens.

There is no right or wrong in this – the only moral law is progress – and those who must be used will *be used, just as we once used the animals, for all kinds of experimentation as well as for sustenance. The human race is merely evolution's tool, no more and no less, and soon it will be superseded by the fusion of genetic engineering and advanced computers the size of molecules. When that happens, a new race will come into being and the old will die out.*

I am here to hasten the advent of that great moment in history and I do so without personal feelings. I bear malice toward none. Nor do I bear good tidings. I merely state the facts as I see them and support them with action. My resurrection has ensured that I can do so and nothing else matters.

I am here to complete the task that I undertook in my former life. In order to do so, I will have to take you with me – and you will not, you cannot*, refuse me. Already you are trying to find me – and that says it all.*

I await your arrival…

Again, in his repeated use of the word ‘you’, he is clearly addressing the whole human race. Even more disturbingly, when he writes about how ‘you are trying to find me’ and ‘I await your arrival’, he is stating metaphorically, he is *threatening*, that he will soon come to us.

When Wilson mentions in this paper ‘the fusion of genetic engineering and advanced computers the size of molecules’ he is not, given what we already know of his remarkably advanced technology, necessarily being far-fetched. Even within our own, more limited, sphere of knowledge, micro-technology is already well advanced. As far back as 1932, Walter Hess had devised the modern technique of micro-electrode implantation, using steel electrodes as thin as hairs, guided into the skull by micro-manipulators. In doing this he was able to demonstrate that most of man’s functions and emotions can be influenced by stimulation of specific areas of the brain. Later experiments also proved that by stimulating the appropriate areas of the brain with sub-microscopic electrodes, the controller could regulate the subject’s blood pressure, heart rate and respiration; control his sleep or appetite, even the diameter of his pupils; could place him into a state of suspended animation or make him work until he dropped. In short, he could totally control the subject’s bodily and mental functions; and even, with the aid of the appropriate computer-controlled interfacing equipment, do so from a great distance, with the subject (or victim) not knowing that he is under control.

The thought that Wilson, according to what he says in his various papers, has leading politicians, senior military officers and scientists all over the world under such control, is truly terrifying.

Alas, we must now accept that this may be true. The possibility of physical and mental control of human beings was already well developed by the mid-1960s, with many bio-engineers claiming that computer and human brain would soon be directly linked. According to a declassified report of the US Naval Research Laboratory, just one of our many top-secret experimental establishments in the White Sands Proving Ground: ‘The information which a machine can obtain and store from a person in a few minutes will exceed the fruits of a lifetime of man-to-man communication.’ As to method: ‘The coupling mechanisms to carry out the functions will be myriad, including in

ome cases electrical connections to the body and brain. Some connections nay be wireless, with imperceptible transmitting elements in the body.' Elsewhere, ESB, or electrical stimulation of the brain, has become langerously innovative. In a paper presented to the National Electronics Conference in Chicago, the electronics engineer, Curtiss B. R. Schafer, eriously proposed that computer-controlled electrodes be implanted in the rains of babies a few months after birth, thus robotising them for life. In a imilar vein, Dorman S. Israel, a fellow of the Institute of Radio Engineers, roposed that 'newborn infants can be operated on and the latest sub-nicroelectronic equipment installed in the brain and at certain critical points n the spinal column' in order to give them the benefits of 'non-radio ommunicative powers' and also enhance their creative abilities.

It is clear from Wilson's papers that he has been using these very echniques – in an even more advanced form – to control his geographically liverse human and cyborg workforce. And, if we are to take him at his word, o control scientists and politicians all over the world. If this is true, then he, in vhatever shape or form, is now effectively ruling our world.

'I am here to complete the task that I undertook in my former life' he ays. This, surely, is a reference to his life-long determination to create a nutated Superman who can survive Earth's unavoidable destruction by eaving it before it dies and then heading for new worlds through long-term pace travel. It also lends credence to our growing belief that he has physically ecreated himself, either as an advanced cyborg, half-man, half-machine, or, nore likely, as his cloned, biologically or genetically enhanced, former self.

The first of his deeply desired Super Race.

aper #13

ou know who I am, but you cannot accept that it is really me, because I died nany years ago in my self-contained world of snow and ice. Yet time marches n, science opens new doorways, and the work I began long ago has led to my ebirth. This was the reward for my foresight and devotion to my work, the urpose of which was to forge a New World for mankind. Your kind think of ne as evil when in fact I am a redeemer, returned to rectify the mistakes of the

past, painful though that process might be. As a child in my first incarnation, I already knew that I was destined to do this.

I succeeded.

I am.

Naturally I was always a man out of my time, far ahead of my own time, and now, in my second incarnation, nothing has changed. Indeed, the world I now inhabit, the world begun by the other me, is far more advanced than your own and has a more clearly defined purpose. It is a world devoted to science, to the pursuit of knowledge above all else, and everyone in it has their place, chosen for them at birth. From their first breath to their last, from the light of birth to death's darkness, they are taught to think only of their work and are shaped by that work. They are raised in a closed system, cut off from the outer world, on the seabed, in underground complexes, in spaces so confined that you would not think it possible, though it certainly is, and there they live a life that has meaning and leaves no room for doubt.

With regard to our state of advancement, the barometer of what we are and will be, our young receive their education through interactive media systems and computer technology with heightened sensory stimulation, including 3-D sound and wraparound vision. Though our wealth of knowledge keeps expanding, we have no problems with the storage of printed books because our libraries store everything in computers with memory crystals that can compress whole encyclopedias into the space of a grain of sand. Instead of sprawling campuses, we have small student meeting rooms containing video-conferencing terminals, email systems and database access. Chemical, biological and physics experiments are simulated electronically, doing away with the need for space-consuming laboratories. Erotic needs are also met electronically, with teledildonics simulating sexual activity with the sights, sounds and tactile input of the real thing; thus potentially complicated human interaction is kept to a minimum. Our advances in medicine and surgery, gained through my so-called 'obscene' experiments on human beings, have enabled our surgeons to operate on patients without actually touching them, without the need for bloody and often painful physical intrusions, since the body's interior can now be viewed holographically and telepresence allows operations to be performed by remote control only after the exact cause of the medical problem has been ascertained.

All of this, and more, takes place in our large flying saucers, in our

lomes on the seabed, and in our hidden bases in isolated areas all over the world.

The Earth is our oyster. We feed on it as we may. With our advanced lying saucers, or, more accurately, UFOs (since they are now of many sizes, hapes and configurations), we can go anywhere, from the bottom of the ceans to the peaks of the highest mountains, from dense forests to desert lains, and pick up everything we require for our own maintenance. From rdinary soil and sea-water we extract aluminium, magnesium, titanium and obalt; from seabed nodules we process pure gold; from acid-rain-producing igh-sulphur coal we produce pure carbon cubes. With bio-fabrication echniques, in which the fundamental DNA codes in living tissue are altered, ve can produce any kind of material we require from standard building locks. Once these materials were used for the construction of more flying aucers, but our most recent craft are made of etherium, which is as light as a eather, yet remarkably strong and capable of withstanding up to 4,000° Fahrenheit – a temperature that melts all other known materials. Thus we are irtually invincible and we now rule your world.

Your kind resent this, I know, but your resentment is ill-founded, because he world we are taking over is one that could not have survived without us. Thus, while we are doing what we have come here to do, we are also cleaning up the mess we inherited from you.

What mess? you ask.

Let me tell you.

The Earth contains six billion people and a quarter-million more are dded to that figure every day. Those people now produce, consume and lispose of more than they did in all of mankind's previous history. Indeed, ven as I dictate these notes, rubbish sites worldwide are overflowing and no oom can be found for any more. The world's atmosphere is polluted. Right round the globe, waste incinerators and industrial processes are spewing leadly toxins into the sky and every year the Earth is poisoned with an dditional 2.5 million tons of pesticides. Your creation of chlorofluorocarbons hrough the use of refrigerators, aerosol cans, gas emissions from utomobiles and circuit-board fabrication is destroying the ozone layer and etting more ultraviolet light through to reach the Earth, leading to sunburn, kin cancer, cataracts and crop damage, even as it drastically affects the world's forests, plankton and weather patterns. The ozone hole over

Antarctica is now the same size as the United States and the height of Mount Everest, and more ozone holes are presently appearing over Canada and Europe. The continuing destruction of the remaining ozone will dangerously reduce still further our protection against solar radiation and lead to even higher levels of skin cancer, cataracts and other diseases. The increase in global warming, due to the presence in the atmosphere of industrial greenhouse gases, will cause drought on a massive scale and a drastic rise in sea levels, bringing about widespread famine, the flooding of major cities and, paradoxically, the very real possibility of a new Ice Age of the kind that may have wiped out the dinosaurs.

Were you doing anything to stop this? No, you were not. Instead you were producing even more deadly pollution with your ruthless pursuit of various forms of energy. Your hydroelectricity required the blockage of mighty rivers, your need to grow crops led to the destruction of the rain forests, your industrial areas were increasingly choked with smoke, your oil refineries filled the air with poisonous gases, your nuclear waste contaminated earth and sea, and your thermal pollution was reaching appalling, potentially catastrophic, levels.

We, on the other hand, those you would view as evil, are already taking these problems in hand.

By gradually taking over the world, by stopping international air travel and isolating each individual country from all the others, we can force mankind's state of technological development back to where it was in the 19th century. Thus, if not yet stopping global pollution altogether, we can certainly ensure that it will not increase as rapidly as it had been doing before we started taking over.

We are robbing you of your freedom? What good was your freedom to you? Before we intervened, the world was not only destroying itself with global pollution, but heading toward unprecedented conflict and bloodshed. Islamic fundamentalism had spread outward from the Middle East to engulf Europe, the Mediterranean, the United States, and virtually the whole of the developed world. The Flame of Allah scorched all those it touched, with Islamic terrorism causing widespread death and destruction. The Middle East remains in turmoil and elsewhere anti-Semitism is flourishing and becoming the cause of even more violence. In Bosnia, formerly Yugoslavia, in the very heart of a supposedly civilised Europe, rape, torture, murder and genocide were merely part of a barbarism not seen since the dark era of Nazi Germany. Terrorism is now rampant on a global scale and terrorist atrocities are not only occurring ever more frequently, but are noted for their worsening brutality. Eco-terrorists, bio-terrorists and religious terrorists are bombing buildings with innocent women and children inside them, ramming and sinking ships at sea with the crews still on board, releasing poisoned gas in subways, pouring toxic chemicals into reservoirs and aqueducts, practising even more horrific forms of biological warfare, destroying whole ecosystems by infecting their computerised monitoring systems with viruses, and even using genetic engineering for the creation of biological weapons that could target their diseases on specific racial groups. On top of all this is the rise of extremist violence in every imaginable self-styled 'minority' group, including Christian fundamentalists, Millennialists, radical Blacks, doomsday cultists, and even the more fanatically active feminists, homosexuals and transsexuals. In fact, the world we are taking over is about to explode. But by isolating every country, one from the other, by making it more difficult to transport armaments and explosives worldwide, we will be able to prevent the threatened explosion.

Nor is that the only explosion threatening the world that we are gradually taking out of your hands. The population explosion is now out of control and starting to make the whole world ungovernable. I repeat: six billion people and a quarter-million being added to that figure every day, all with different, often conflicting, religions and political creeds. In India alone, twenty million Sikhs have been fighting to form an autonomous Punjab nation, millions of Muslims in Kashmir are seeking independence, Hindu fundamentalists are attacking those of other faiths, and bloody riots and slaughters are

commonplace. In Africa, the population has doubled in two decades and its billion citizens, divided by ethnic, tribal and linguistic barriers, are ravaged by drought, famine and environmental degradation, waging bloody war against each other, paving the way for continent-wide disintegration. In China, the pressures of a 1.2 billion population are leading to the unravelling of that country's national fabric, with social disorder, lawlessness, widespread political corruption, increasing unemployment and a dramatically rising suicide rate. Even the United States has been falling apart, with its fifty states competing fiercely against each other, disunity spreading, national allegiances decaying, unemployment rising, crime increasing, extremist movements demanding regional autonomy or actual secession, and racist and millennial groups of all kinds causing destruction and death on a grand scale. And everywhere in the world, even as we are taking over, it is the same, with the gap between rich and poor increasing, refugees flooding the globe, ethnic tensions mounting, the arms trade booming; and drugs, genocide, plagues, starvation, pollution and all kinds of terror rampant.

We cannot solve these problems immediately, but we can, and will, in the long term. Already we are taking the first steps in population control and projects relating to other aspects of Earth control are under way. We are not moved by altruism, but by healthy self-interest, being aware that the Earth, though only a temporary abode for mankind, has to be prevented from self-destruction, at least until we can leave it and head out to the stars. That time will come eventually – it is what we are striving for – but until it does, we have to ensure that the world remains manageable.

This is why we are taking over, why we abduct in our flying saucers, why we have to enslave so many of you, by means of advanced brain-implants, and keep those still free terrified.

Because of the things we do, you think of us as evil, as being beyond the pale, but we are merely pragmatic, impelled by pure reason, our pathways not cluttered with primitive emotions, our intentions clear and resolute. We have come here to drag you out of the dark cave and let you reach for the stars.

In time, as the sun dies, the Earth will die as well. But long before this happens, before the dying Earth becomes no more than a barren cinder, before the human race dies off like the dinosaurs, like so many other species, we must leave it and travel on to our destiny.

We, you and I, having emerged from the primordial slime before

becoming human, are engaged in this monumental task.

This is what binds you to us…

Here, in the thirteenth paper, Wilson's ambitions, whether realisable or not, are made abundantly clear. 'A monumental task,' he writes. And certainly it would seem so. He is threatening to put an end to international air travel and isolate all the world's countries from one another as a means of forcing mankind's technological development back to where it was in the 19th century. He is planning to do this, he asserts, in order to dramatically reduce the world's atmospheric pollution.

Could he actually do it?

Frightening though the answer is, it has to be 'Yes'. He could do this and more.

Wilson has deliberately demonstrated his powers twice, in both cases as a response to some real or imagined slight by our government. In June, 1952, determined to demonstrate his superior technology to the doubters of the Pentagon and the White House, Wilson launched an unprecedented UFO 'invasion' of Washington DC. In the June of that year, the US Air Force's Project Blue Book had received more official UFO reports than it had done in any previous month of its history. By June 15, the locations, timing, and sequence of the reports indicated that the UFOs were gradually closing in on Washington DC. For the next couple of weeks, reports about Washington sightings poured in at the rate of twenty or thirty a day, with 'unknowns' running to about 40%. Finally, on the night of July 19, the most highly publicised sightings in UFO history began.

At 11.40pm two radars at Washington National Airport picked up eight unidentified targets near Andrews AFB, Maryland. The objects were flying at approximately 100mph, then they suddenly accelerated to 'fantastically high speeds' and left the area. However, they soon returned, en masse. Before the night was out,

and while interceptor jets tried and failed to catch them, the unidentifieds had moved into every sector covered by the radarscopes, including the 'prohibited corridor' over the White House and the Capitol. The climax came when, in the early hours of the morning, the operators in the control tower at Andrews AFB, in response to an ARTC traffic controller's query about a target directly over the Andrews Radio range station, located near their tower, reported that 'a large, fiery, orange-coloured sphere' was hovering in the sky directly above them.

Later, Major Dewey Fournet, ATIC's Pentagon liaison man, and Colonel Bower, an intelligence officer from nearby Bolling AFB, confirmed that throughout the night, the restricted corridor around the White House had been filled with interceptor jets trying to chase numerous UFOs, that the UFOs had been radar-tracked all around Washington DC, that an analysis of the sightings had completely ruled out temperature inversions, and that the radar operators at Washington National Airport and Andrews AFB – plus at least two veteran airline pilots – had all sworn that their sightings were caused by the radar waves bouncing off solid objects.

However, the UFO 'invasion' did not end there. Within a week to the hour of the first major flap, at approximately 10.30pm on July 26, the same radar operators who had seen the previous UFOs picked up a lot of 'slowly moving' targets… but this time the UFOs were spread out in a huge arc around Washington DC – from Hendon, Virginia, to Andrews AFB.

In short, they had Washington boxed in.

By 11.30pm four or five of the targets were being tracked continually over the Capitol. F-94 interceptor jets tried and failed to catch them. Shortly after the UFOs left the sky over the Capitol, more UFO reports came in from Langley AFB, near Newport News, Virginia, where the operators described them as unidentified lights that were 'rotating and giving off alternating colours'.

Another F-94 was despatched from Langley AFB and visually vectored to the lights by the tower operators. The pilot reported that as he approached one of the lights, it went out 'like somebody turning off a light bulb.' No sooner had this happened than the targets came back on the radarscopes at Washington National Airport. Again, F-94s were despatched to locate them, but each time they vectored into the lights, the UFOs disappeared abruptly from the radarscopes and the pilots simultaneously reported that they had visually observed the lights blinking out.

This game of cat and mouse between the UFOs and the interceptor jets continued throughout the night until, just before dawn, the last of the UFOs disappeared from the radarscopes.

Throughout that same night there was chaos in Washington DC. The press was furious because all reporters and photographers had been ordered out of the radar rooms at the time the Air Force interceptors were chasing the UFOs. However, once the press had gone, arguments blew up in those radar towers and in the Pentagon. According to the Pentagon liaison officer, Major Dewey Fournet, everyone in the radar rooms had been convinced that the targets had been caused by solid, metallic objects and could not have been anything else – and whatever they were, they could literally hover in the air, then abruptly accelerate to thousands of miles per hour.

According to Project Blue Book, the Washington DC sightings are still unknowns. But at the time we knew what they were – because Wilson had threatened to invade Washington with his UFOs, just to demonstrate his might, and he had done exactly that. He demonstrated his might again, in August, 1965, when he threatened to 'black out' most of the east coast of the United States – and again kept his promise.

In one of his many official reports of his clandestine meetings with Wilson, CIA agent Jack Fuller confirmed that Wilson, incensed because one of his smaller flying saucers, manned by two

cyborg pilots, had crashed near Nellis AFB, Nevada, and was being held, with its dead cyborgs, in a secured hangar in the base, threatened that if he did not have the crashed saucer and dead crew returned to him, he would, quote, 'teach the Pentagon and the White House a lesson they won't easily forget.' His plan was to turn out the lights gradually, bit by bit, to allow us time to change our minds; but if, by November, we were still holding his crashed saucer and its dead crew, every single light would go out, plunging the whole east coast of the United States into total darkness.

The process began when, during the first week of August 1965, thousands of citizens in Texas, Oklahoma, Kansas, Nebraska, Colorado and neighbouring states witnessed one of the biggest UFO displays ever. Unidentified lights flew across the skies in formation, were tracked on radar, and played tag with civilian and Air Force aircraft. When this warning shot failed to gain Wilson the return of his crashed saucer and cyborg crew (because the lights had not gone out as promised and we mistakenly took this as a sign that he could not technically do as he had threatened) an angry Wilson informed his Pentagon liaison man, Jack Fuller, that he would now definitely make the lights go out, but would wait until November, the middle of winter, to ensure that his blackout would cause maximum chaos. Three months later, on the night of November 9, 1965, hundreds of UFOs, in the form of darting lights, were reported from Niagara, Syracuse, and Manhattan. That same night, all the lights went out – in Connecticut, Massachusetts, Maine, New Hampshire, New Jersey, New York, Pennsylvania, Vermont, and a section of Canada. They went out over a total of 80,000 square miles and a population of twenty-six million people.

Subsequent investigation of what became known as the Great Northeast Blackout revealed that the huge power grid controlling most of the blacked-out areas – an interlocking network linking twenty-nine utility companies, with hundreds of automatic controls

and locking devices – had always been considered to be invulnerable. Yet the system *had* failed and the cause of the blackout could not be ascertained. The only thing known for certain was that the failure had occurred somewhere in the flow between the Niagara Falls generators and the Clay power sub-station, an automatic control unit through which the electric power flowed from Niagara to New York. A UFO connection was established when Deputy Aviation Commissioner of Syracuse, Robert C. Walsh, and several other witnesses, stated that just after the power failed at Syracuse, all of them saw what resembled a huge fireball *ascending* from a fairly low altitude near Hancock Airport. Approaching for landing at the same time was flight instructor Weldon Ross and his passenger, both of whom saw the same object. At first they mistook it for a burning building on the ground – something corroborating the fact that the fireball was at a low altitude – but then they realised that it was something in the air: a single, round-shaped object about a hundred feet in diameter, later described in their official report as a 'flame-coloured globe'. And according to Ross's calculations, that object was directly over the Clay power sub-station.

We now knew, beyond any shadow of doubt, that Wilson had been responsible for the Great Northeast Blackout. A week later, after consultation with Wilson, agent Fuller arranged for the separate pieces of the crashed saucer and its two dead cyborgs, still being held in Nellis AFB, Nevada, to be boxed up in crates, transported by truck to a restricted airstrip at the far end of the base, and there picked up by one of Wilson's saucer transports.

From that moment on, we knew that we could refuse Wilson nothing and would, in the future, always have to cooperate with him. We also knew that from anywhere he cared to be – his hidden colony in Antarctica, a mother ship in outer space, a USO dome on the seabed – Wilson, aided by his programmed people based

helpfully in the White House, the Pentagon, NORAD and other major centres of defence, would be able to render the United States totally defenceless by causing every tracking module, radar screen and radio telescope in the country to become inoperable, by blacking out the entire Space Detection and Tracking System of the United States, Russia and the EU, and then, if he so desired, by invading those countries and more with his armada of man-made flying saucers, small, large and gigantic, from which he could disgorge his ever-growing army of higher-echelon, brain-implanted, human abductees and cyborgs to take over all of our major government buildings and defence establishments. Thus, he could conceivably enslave the whole world and create a fearful 21st century New World.

We have no way to prevent this.

Paper #14

, the new me, the cloned me, was twenty years old in my new life when we began surreptitiously taking over the world; but, educated and matured well beyond my years, I was already our leader. Like an Egyptian prince, I had been reborn and raised for this task, but with a singular difference: the nstructions for my resurrection had been written out by myself in my previous ife. Before the previous me died, in that hidden colony in Neu Schwabenland, Antarctica, I knew that we were on the verge of creating new life, creating and growing a DNA chain, and I arranged for a clone of myself to be the first one created. By that time, no one in the colony had a mind of their own: they had all been electronically brain-implanted and programmed for absolute obedience, total loyalty. And so, before my death, I arranged for them to clone me when the breakthrough in cloning, which we were rapidly approaching, finally came. In fact, it came the following year.

I am a product of parthenogenesis, self-cell-division, the first genuine virgin birth.

Like the rest of the world, we had started out with other, less successful, forms of life creation, such as artificial wombs and in vitro fertilisation, to create embryos that could be implanted in the wombs of living females. Naturally our first artificial wombs were relatively primitive, with the foetus being removed from its mother's womb a few weeks before natural birth was due and suspended in a womb-like chamber filled with a solution of various sugars and salts. The premature child was fed and supplied with oxygen via its umbilical cord, which was attached by plastic tubes to a heart-lung, but such infants invariably died by choking on their own waste products. We did, however, move on to pressurised steel chambers containing an oxygen-rich saline solution that could push oxygen through the body of the foetus; but those foetuses, like the others, also died from choking on their own waste products. Nevertheless, eventually the day came when we produced living, perfectly normal human beings in artificial wombs, through in vitro fertilisation and, finally, embryos created through parthenogenesis and placed in a normal womb for full, healthy development.

Once we knew for sure that we could do this successfully, repeating it many times, we experimented with the creation of slightly abnormal, though more intelligent, human beings. Having discovered that the sole limitation on the size of the human brain is the diameter of the female pelvic girdle, we experimented surgically on a wide variety of abducted females until we were able to enlarge the pelvic girdle without killing the female subjects or damaging them in a way that would have rendered them useless to us. When the operations were completed, we then made them pregnant with in vitro fertilisation techniques and artificial wombs to produce babies with unusually large brains contained in large heads. Brought up in isolation, these children were indoctrinated or electronically brain-implanted to behave exactly as we wanted them to. They were then allowed either to grow into normal adulthood, albeit with unusually large heads and enhanced intelligence, or were surgically mutated into cyborgs.

The misinformed, when observing such creatures emerging from our flying saucers, invariably assumed that their abnormally large heads were proof that they had to be extraterrestrials. This aided our programme of disinformation for many years.

To early parthenogenesis experiments we added a variety of recombinant-DNA techniques, or gene surgery. I personally had become

tware of the striking resemblance between the way computers operate and the vay in which the deoxyribonucleic acid (DNA) double helix controls all nown forms of life. By this I mean that the DNA double helix, like the omputer, stores information in a coded form; and the on-off structure of the DNA chain of molecules, shaped like a ladder twisted about its own axis to orm the double helix shape, is remarkably similar to the on-off switchings in omputer memories. The complexity of DNA foils your world's still relatively rimitive computers, but aware of the similarity between the operation of omputers and that of the DNA double helix, I was able to develop a twenty-rillion-byte computer. Given that one neutron of the human brain roughly quals one byte of a computer, our computers, based on my original rototype, now rival the human model, the DNA double helix, in complexity nd *in ability. This in turn has enabled us to advance our recombinant-DNA echnology to an unimaginable level of accomplishment.*

You will never catch up with us.

With our new computer-controlled, exceptionally powerful electron nicroscopes, we were able to more fully probe the structure of the double elix, the key to life, then isolate sections of the chromosomal genetic rogramme of living organisms, plant, animal or human, and insert other, eplacement, sections. In this way we were able to create cross-bred animals, himeras, blending two completely separate species that could not mate, thus iving life to a sheep with a goat's head, a dog with a cat's body, two-headed nice, and even rats with fish gills and fins instead of legs and a tail. From hese primitive early chimeras, we moved on to cyborg-animals created for pecific tasks; i.e., headless cows as drug factories, producing a variety of enetically engineered drugs from their milk; and meat cattle, so called ecause they are no more than large lumps of meat that seem alive and are, ndeed so, having a heart and circulation, though no head or brain, because, n both cases, their biological nervous systems are linked to a central omputer system that controls all their functions.

From these useful, genetically engineered cyborg-animals, it was but a hort step to the genetically altered human being.

First, we abducted men and women suffering from genetic disorders and njected them with DNA material that carried the correct version of their nalformed gene. Or, conversely, we changed their structure for the worse by nixing malformed genes with their healthy genes and letting them breed and

nultiply until the original, healthy genes had been replaced entirely by the malformed ones. During those early years, the abductees whose biological structures were genetically altered for the worse, giving them some destructive disease or making them criminal or psychopathic, were terminated once the experiment had succeeded. Where the abductees were genetically altered for the better, we either kept them for further experiments or used them as workers who would never complain or cause any problems. Finally, when we saw how successful the recombinant-DNA techniques were, we started using them on a regular basis to produce perfectly healthy, mentally superior, totally obedient workers.

In this area of research, we have long been using the amniocentesis procedure, in which the mother's womb is examined for markers indicating the extra chromosome that causes mental retardation and the physical abnormalities of Down's Syndrome. Moving on from this innovation, we learned to scan for literally hundreds of other diseases and defects, including criminal or psychopathic tendencies, while the child was still in the womb. Initially we aborted any foetuses with such abnormalities, but now we simply alter the genetic structure of the growing foetus to ensure that it is, when born, perfectly normal and healthy.

This is, of course, a form of eugenics, the control of human breeding, a concept long reviled and feared by liberal thinkers. Most notorious as something cruelly used by the German Nazis of the Old World (including myself in my first incarnation), it was actually first practised in the United States in the 1930s with official sterilisation programmes that were used to prevent the so-called 'unfit' from breeding. The 'unfit', according to US policies of the period, included the feeble-minded, the epileptic, the blind, the deaf, the deformed and those crippled or merely suffering from what were considered, at the time, to be socially unacceptable diseases.

So do not express revulsion at what we do. What we do, your kind did first.

Thankfully, the state of your genetic engineering is still retarded, whereas ours is in what would be, to you, an awesome stage of advancement. As long ago as 1984, bio-engineers in the Arizona Genetic Laboratory caused a rat to regrow an amputated limb by restimulating the genes controlling limb development. While nothing much was heard after that particular experiment, we capitalised on their research and now our genetic engineering techniques

enable us to regrow corrupted internal organs and amputated limbs. The genes that cause growth in the foetus remain in place throughout adult life and by stimulating them with our advanced recombinant-DNA techniques, we are able to regenerate amputated hands, arms or legs. This is particularly useful when it comes to replacing the ageing human parts in the early cyborgs.

Is this your Frankenstein nightmare? Fear not: you will get used to it. Soon, when you join us, it will seem as natural to you as shaving or clipping your nails, in both of which cases you are destroying some of your own genetic chromosomes. Indeed, to shave or clip your nails is to engage in genetic engineering, albeit of a routine kind. What we were doing, however, was essentially no different. But what we were doing, good or bad, right or wrong, was merely the prelude to our penultimate achievement: the cloning of human beings.

I was the first.

Just before my death in the Old World, at my command, my bio-technicians extracted minute samples of my original genetic blueprint from a piece of skin tissue, then cloned and grew the DNA string from it to create another 'me' in a test tube. Naturally, I was only a replica of the original me, a physical mirror-image, while otherwise being a blank diskette waiting to be filled. So it was that the thoughts and experiences of the original John Wilson had to be implanted in me, virtually imprinted upon me, and this process, which began from my first months of resurrection, continued until I knew everything that John Wilson had known and virtually felt all that he had felt. I was given the same name, the same background and memories (the wheat fields of Iowa; the knowledge that the sun would eventually die; the construction of airships and jet aircraft and flying saucers; the Second World War and the flight to Antarctica; the exploitation of the Cold War to get the most out of the Soviets and the Americans and their allies; the death at an unnaturally old age and the subsequent cloning), forced to read his diaries daily and learnt, with the aid of interactive media systems and computer technology with heightened sensory stimulation, including 3-D sound and wraparound vision, to relive his whole life, study his life's work, and in general become virtually the same man that he had been in his first incarnation. Now, to all intents and purposes, I am *John Wilson.*

How do I feel about this? A parentless child, the product of a genuine

virgin birth, in a brave new world. Someone shaped by the experiences of another and carrying on his life.

Nothing. I feel nothing. By which I mean that I feel perfectly normal. Knowing nothing else, possessing no memories other than his, those memories are as real to me as is your past to you. I take pride in my own history, which is, of course, his history, and strengthen this pride with the knowledge that I am carrying on his great work. I believe in what I am doing, just as he believed in it, and this is enough to sustain me.

John Wilson's goal was the creation of the Superman, and we, his successors, in creating human beings through cloning, in making them physically perfect and intellectually superior, have in fact turned them into Supermen. This, our penultimate achievement, has already been accomplished.

So, you might well ask, if this was our penultimate *achievement, then what was our* ultimate *achievement?*

Alas, we have not yet attained it. But we are here, in your cities, gradually taking over your world, in order to do so. We will soon succeed.

Come and join us.

Bear witness…

We are here in your cities,' Wilson writes, 'gradually taking over your world.' This is truly a terrifying thought, but we must now accept it as inevitable. The vexing question of how Wilson could be born in the 19th century and still be alive in the 21st century has been answered gradually in his various papers. According to his own statements, he managed to survive much longer than the average human being through a combination of surgical and biological mutation. When he describes his cyborgs, he writes about artificial hearts, bionic audio transmitters for ears, sonar sensors for eyes, plastic arteries, synthetic bones and, where necessary, synthetic skin. Almost certainly, then, he applied the same innovations to his own ageing body and survived into an unnaturally old age by so doing. Of course, he had to die eventually, as all humans must, but by that time his bio-scientists, all brain-implanted to be totally devoted to him, all helplessly obedient to his will, had perfected his pioneering work in human cloning and, rather than bringing him

back to life, recreated him from his own preserved DNA strands, literally giving him rebirth, and then, on the instructions he had previously left for his obotic carers, had him raised and educated in one of his USOs, a gigantic, elf-sustaining, submarine dome, filling his head with the memories, the ensations, the complete history of the previous Wilson, until he was virtually he same person in both appearance and thought. It is that Wilson, the second Wilson, who is still communicating with us, preparing us for his Brave New World, his nightmare of social and scientific perfection, his dawning Super Race.

However, the Brave New World he is still in the process of creating is a world of nightmare as well as perfection. As described so chillingly by him, it s a world of experimental cross-bred animals, chimeras; a world of *in vitro* ertilisation, artificial wombs, and genetically created infants brought up in solation, indoctrinated or electronically brain-implanted to be totally obedient - more precisely, to be robotic – and only then allowed either to grow into ormal adulthood, albeit with unusually large heads and enhanced ntelligence, or, if not successfully so raised, if considered to still be inferior, o be surgically mutated into cyborgs.

This is indeed Wilson's Brave New World. The beginning of his planned Super Race.

And finally, incidentally, we have an explanation for why so many UFO bductees or 'close encounter' witnesses of UFOnauts (UFO occupants or crew members) nearly always describe the 'aliens' or 'extraterrestrials' as being small in stature, with unusually large heads, often without eyes, noses or ips, and with metal claws instead of normal hands. Clearly, the UFOnauts are a mixture of Wilson's half-man, half-machine cyborgs and his cloned human beings with unusually large brains contained in large heads, but with mplanted electrodes in those large heads to ensure total obedience. Yes, clearly these are the 'aliens' reported by so many terrified UFOnauts and close-contact witnesses.

The surgical and biological procedures practised by Wilson and his disciples on animals and humans are clearly horrible beyond belief, outside all known moral boundaries, leading to nightmarishly mutated animals, as described above, intellectually superior, if robotised, human beings, and, finally, to cloned creatures of every imaginable kind. This, then, is the logical extension of what Wilson had first witnessed in the concentration camps of

Nazi Germany: a more futuristic, technologically advanced, master-slave society, in which all independent thought has been erased from the minds of the majority, crime has been definitively eradicated, creativity is only permitted where it serves the general good, and the whole society is devoted solely to science. This is Wilson's vision of a Super Race devoted to, and capable of, the task of reaching for the stars. Certainly it is not a human society of the kind we could recognise.

Even more chilling is Wilson's contention that aware of the similarity between the operation of computers and that of the DNA double helix, he has been able to develop a twenty-trillion-byte computer. Given that one neutron of the human brain roughly equals one byte of a computer, his computers must now, as he claims, indeed rival the human model, the DNA double helix, in complexity and ability. He has therefore advanced our own recombinant-DNA technology to an unimaginable level of accomplishment. He has already gone far beyond anything our best bio-scientists can hope to achieve. In short, he is indirectly turning us back into a relatively primitive species.

In creating human beings through cloning, in making them physically perfect and intellectually superior, Wilson has already turned them into Supermen. This, his 'penultimate' achievement, seems to have been accomplished. So what *is* his 'ultimate' achievement?

'Alas,' he writes, 'we have not yet attained it. But we are here, in your cities, gradually taking over your world, in order to do so. We will soon succeed.'

Paper #15

We are taking over your world for a specific purpose and are working towards that goal right now. However, the world we are taking over is not as it should be, so our first task will be to make it more manageable and less self-destructive. Your present world order has changed beyond recognition, with power moving out of the hands of the state, into the hands of the banks and transnationals. The parochial economy of individual nations has given way to the global economy, with everything it produces being imported or exported, cheap labour at a premium, money as fluid as a river, moving here and there at the click of a computer key, to the dictates of the marketplace, exploiting the

rise and fall of each individual country's interest rates, avoiding taxation, greasing palms, buying loyalty, annihilating patriotism, to the point where the banks and transnationals have become so powerful that the lending or withdrawing of their support can make or break national governments. The heads of state, the kings and queens, the presidents and prime ministers, are therefore redundant in every sense. They are no more than figureheads.

What do we need them for?

Only as a demonstration of our power when, as we plan to do, we make them disappear overnight.

The President of the United States is, to his people, the supreme authority in the country, but to us he is just another puppet whose strings are being pulled from afar. The nation state, such as America, is increasingly ill-equipped to deal with global problems: drug cartels, mafias, financial organisations, and morally bankrupt multinationals, fast becoming transnationals, all of which can easily cross international borders by conducting their business with cellular phones, faxes, e-mail and electronic bank transfers, buying, selling and exchanging outside the jurisdiction of any individual nation state. Likewise, the rapid switch from national news to global news, which has turned national awareness into global awareness, has further weakened the authority of the nation state while making its citizens part of the global community. With national borders becoming redundant, with previously sovereign countries coalescing into trade blocs devoid of national allegiances or patriotism, the heads of state, including the President of the United States, are becoming mere servants to a global government covertly run by the banks and transnationals.

For this reason, we do not feel threatened by any head of state, either president or prime minister, king or queen, and value them only for the fear we will instil in their subjects when we abduct them or make them disappear. We will do this very soon, during the first morning of our planned invasion, abducting the President and Vice President, then transporting them and their families out of the White House, never to return. Elsewhere, we will take England's Royal Family, the King and Queen of Spain, the President of Russia, the heads of every European State, and the rulers and dictators of every other country in the world.

None of these people will ever be seen again.

They will, in fact, be transferred to our undersea dome in the so-called

Devil's Sea', an area of ocean bounded by the south-east of Japan, the northern tip of Luzon in the Philippines, and Guam. There they will be subjected to electronic brain-implantations that will erase their memories and render them totally passive. They will then be scattered throughout our various hidden bases, some undersea, some in mountainous or desert regions, to be used as robotised workers. Some will, of course, die of natural causes; but others will live on, anonymous, forgotten, performing menial tasks and grateful to do so instead of being used for surgical experiments or turned into programmed cyborgs.

On the other hand, the many congressmen and congresswomen removed from the White House (and people in similar positions worldwide) will be returned a few days after their abduction to take up their original positions, but in governments without a single ruling figure. Those individuals will, of course, have been brain-implanted to do our bidding while acting as liaison officers between us and those of the populace with whom we might still need to deal, notably civil servants and local counsellors. Others, also to be taken that first day and returned a few days later, will be walking among you and will seem just like you, though they will, in fact, have been robotised and thus will belong to us.

So we do not fear heads of state or other political figures. What we are *concerned with, however, are the banks and transnationals that can make or break whole countries and are presently heading towards the formation of a world consolidated into three great blocs – Europe, the Americas, and Asia – with each drawing more countries into its orbit until only the three will rule between them. As this will make the world more difficult to control, even for the relatively short period we need it for our own purposes, we will isolate all the countries of the world, each one from the other, by grounding aircraft worldwide and preventing all ships from leaving their ports, ensuring that their engines malfunction when they try to fly or sail. This done, we will then abduct all the major players in the aspiring global order – the financiers and bankers, the transnational wheelers and dealers whose only allegiance is to profit – and robotise them to ensure that when they are finally returned to their original positions, they will do only what we command them to do.*

They, too, will be walking among you, though you certainly won't see them as being 'different'. They will seem as 'normal' as you deem yourselves to be.

Yes, the living dead will walk among you. For once, that old cliché is apt. The living dead are those whose minds we steal and control from afar, freed only to move among you while conducting our *business. Many have already been so treated. They are among you right now. They may be among your loved ones, your family and friends, and although they may seem normal to you, they are not what they seem. They are on our side now.*

We have eyes and ears everywhere.

You resent us being here and you also live in fear of us, more so because we have stopped so much of what you were doing and your world seems a far worse place for it. Your streets are overflowing with rubbish. Unemployment is rising. Crime is an epidemic. Whole industries have been frozen where they were years ago, unable to expand or make any meaningful progress. Your great seaports are gradually emptying. Your airports will soon fall silent. Your computer technology, while increasingly widespread, has not advanced to a degree that could even remotely be a threat to us.

All of this, you will now believe, is our fault – and we cannot deny it. But what we do is done for a purpose that transcends temporal matters. Your rubbish means nothing to us because it does not affect us and will make no great difference to the future that is being planned for you. The rising crime rate is natural, being tied to the rising unemployment, and the latter is an equally natural outcome of your primitive mentality, which is rooted in temporal affairs with no long-term view. We *take a long-term view, knowing how brief our time on Earth is. We also know how unimportant your temporary lawlessness is in the light of what will be coming. As for your frozen industries, your already emptying docks and soon-to-be silent airports, we have done what has been done to stop your orgy of self-destruction and ensure that the Earth will survive long enough for our needs.*

Earth means nothing to us – it is only a transient stop – but until we leave it, long before the sun starts dying, we must ensure that it is not destroyed by pollution, climate change or meaningless wars. Even as we were evolving and expanding, your pollution was destroying the ozone layer, exposing the Earth to potentially destructive ultraviolent radiation and climate change, but our surreptitious curtailing of your industrial output, which was based on pure greed, is greatly reducing the production of chlorofluorocarbons and letting the ozone layer renew itself. As for your emptying docks and soon-to-be silent airports, they are being so rendered for a good reason: to make it easier for

is to maintain control of the world by isolating each country, one from the other. In doing this, we are, incidentally, reducing even more the fumes that were destroying the ozone layer and causing a dangerous level of global warming. We are also about to put a stop to the squalid international arms trade that is fuelling the growth of terrorism and ethnic genocide. So our activities, which transcend mere self-interest while making your world suffer in the short-term, will have long-term benefits. We suffer no guilt because of this.

Just who are 'we', you wish to know? Who do the cyborgs work for? Who created the clones, the Men in Black, and who is behind the UFO abductions? Who is now threatening your world?

'We' are actually one.

It is I.

The one you know as 'Wilson'...

Yes, we now know it is Wilson. There can be no doubt about it. His World War Two papers were not enough to completely convince us, but the new papers, coming to us by email after years of total silence, demolished any doubts that we had. The emails, the new papers, are from Wilson, though their source is unknown. Is he still in the Antarctic? In a mother ship in outer space? In a submarine dome on the seabed of some ocean? In truth, he could be anywhere. He could even be in a hidden base in Virginia State, preparing to invade Washington DC. Or in the top-secret, heavily guarded Area 51 in Groom Lake, Nevada, protected by brain-implanted military officers and their robotised soldiers. Or even in the North American Air Defence Command (NORAD), our top-secret complex of awesome proportions, hidden inside the snow-capped Cheyenne Mountain near Colorado Springs, with parts of it half-a-mile below the ground. Yes, he could indeed be anywhere. As he says, he has his people everywhere. The walking dead, indeed. The clones. They act and talk normally and are mostly in positions of great authority and influence. They are in the Pentagon and the White House and in similar places all over the world. Unfortunately for us, they are under his long-distance control and will helplessly do anything he commands. They are only awaiting his instructions and then they will turn on us.

How do we defeat them? How do we defeat Wilson? We couldn't even

be too sure if he was alive in any sense that we knew. We had to assume that he was still physical in some mutated form, a creature reborn, the mirror-image of his former self, as he was in his first lifetime, but certainly physical enough to be able to compose and possibly type or dictate the emailed papers he was regularly sending to us. At least, so we thought. But then, before we could properly deal with this hopeful theory, we received another emailed paper that showed us just how badly wrong we were. What he was telling us, we could scarcely believe and it left all of us reeling.

Our understanding of the material world was no longer tenable.

Paper #16

Science. The root of life, the tree of all knowledge. This belief is what I have lived by and abided by. I stand by it still. Without science we are doomed, without mind we are nothing, and anything that stands in the way of progress must be viewed as negative.

We began in the dark seas, then crawled out to the dark cave. But once here, we looked constantly to the sky and sensed, even before we could think clearly, that up there was where our destiny lay. The evolution of Man is the shaping of that destiny, the building of that bridge between the cave and the stars, and the individual is mere mortar for the structure of the future, a cog in the wheel, a rung on the ladder.

Think of this when you call me cruel, when you accuse me of being inhuman, when you charge me with crimes against humanity, when you suggest that I am playing God by perverting the natural order. For, indeed, what is natural? The only natural law is change. All things in nature are born only to die; between birth and death they are in a state of constant, irreversible change. Likewise with Mankind, whose history is one of constant change. Men have been changing since they first crawled from the primordial slime and the changes have often been painful. Pain, too, is natural.

From the cave to the stars, from Man to Superman: this is what the changing is all about and it cannot be stopped. The human being, as we know him, is neither natural nor constant; he is merely a primitive tool of evolution and will soon pass away. Not die off like the dinosaurs, not melt away like other species, but instead evolve *– evolve into another species altogether, a*

creature of pure mind, no longer imprisoned in a physical, mortal body, nor governed by primitive emotions. When we learn to rid ourselves of those outmoded emotions, which so often are self-destructive, there is nothing we won't be able to do. Then Man becomes Superman.

I understood this as a child, when I first learned that the sun would die, causing Earth to die as well, and I have never doubted it since. I stood, a mere ten-year-old, in a field of wheat, the sunlight of Iowa warming my face, and realised that the Earth was but a transient stop for Mankind; that sooner or later this planet would come to an end, and that before the end came Mankind, if it was to continue, must reach for the stars. That became my life's mission – to be a bridge to the stars – and I accepted that in order to achieve it, I would have to place it before everything else in my life. Which was just what I did.

While other young men of my own age were dreaming their vain dreams, obsessed with girls and material success, living their lives through dime novels and films, I was treating the world as a laboratory, and all those in it, including my mother and father, as no more than objects to be placed, as it were, under a microscope and minutely studied. Indeed, while other boys my own age were in thrall to their orgasms, I was examining the semen in the palm of my hand, tasting it with my tongue, awed by the thought of the journey of two hundred million spermatozoa that could end either in death or in new life. By the time I was fifteen, I was studying my own sperm under a microscope and reducing the mystery of life to its biological essence. There were no dreams, vain or otherwise, in this; there was only a goal to be reached.

The death of my mother brought me closer to freedom, which was why it did not cause me pain. And later, when my father died, my only response was to feel fully free for the first time. Indeed, the Worcester Polytechnic Institute, then MIT, followed by Cornell College, Ithaca, New York, were the only homes I ever wanted, and they nurtured me well. I was obsessed with gaining knowledge, with learning all there was to know, particularly concerning aerodynamics and, eventually, space flight. The stupidity of my fellow students so appalled me, their interests being so narrow, so devoid of true aspiration (big houses and good jobs and beautiful wives as trophies) that I felt revulsion just listening to them talking and gradually drew away from them. I became an intensely private person, an island, a bachelor living by and for himself,

ut one with a secret, grandiose mission. By the time I left university and went o work, I knew just what that mission was.

Thus I designed the first airships, was betrayed by my own government, ecame anonymous for many years after that, working here and there, the ength and breadth of the country, exchanging gold for bread, until eventually assisted Robert H. Goddard, a true American genius, with the production of is first liquid-fuelled rockets. Then, having assisted him only to learn from im, I left him as pragmatically as I had joined him. Yes, I went on to find hose who could deliver the finance and fanaticism that would be needed for what I wanted to do. They were, of course, the Nazis.

You have condemned me for this, but what else could I do? Betrayed by ny own countrymen, rejected by my own government, my work stolen and then eglected, I had no choice but to use those who would use me because their lans were as grandiose as mine. Insane, but grandiose, with one belief that I hared, albeit more rationally: the belief that they could create the Superman, Super Race, and rule the world for the foreseeable future. They were erverted in their reasoning, obscene in their methodology, but they gave me he only opportunity I was likely to get and for that reason alone I had to take t. Thus I ended up in Nazi Germany, using slave labour, conducting xperiments that could not have been done elsewhere, and finally creating the irst crude flying saucers and surgically mutated human beings. The road head, though a nightmare for some, had at last been opened.

I took that road and followed it, aware that I had no choice, accepting hat the suffering of my surgically mutated human beings was as necessary as he suffering of animals under the blade of the vivisectionist whose work would eventually benefit humanity. Nature is cruel because it must have its way and that way does not count the human cost. Fire and flood, famine and disease, are part of the natural order of the world and the cost in human uffering must be met. Likewise with my experiments, which involved no self- nterest, no pursuit of personal gain, but were, instead, conducted with a cientific pragmatism that did not allow for sentimental revulsion or a conscience stirred by humanitarian concerns.

In nature's grand plan, in evolution's onward march, the human being, s he now stands, is only sacred in the sense that he is the bridge between the ave dweller and the Superman. When you understand this, when you see

where we are heading, you will respect me instead of reviling me – and your own transformation will then begin.

My time is fast approaching and impatience spurs me on, but I know that soon my second incarnation will lead into the third. I will then escape my mortal shell to become a being of pure mind, merging with the All; and then, untrammelled by the physical, I will have no limitations in time or space. I will, in effect, be the first of the Supermen, and you, despite your fearful protestations, will eventually join me.

This began with my first dying, in Neu Schwabenland in Antarctica, and continued with the rebirth that I ordained for myself, having made myself Lord of my own destiny. I grew a second time to manhood, being my own first son as well as father to myself. Despite reported fears about the potential traumas of being cloned, I suffered no self-doubt, no emotional pain, and instead felt only the pride of that rare individual who knows himself to be absolutely unique and alive for a purpose. This made my second childhood blissful, radiant with inner light, and I grew up with the cyborgs and other man-machine mutations as naturally as any parentless child in a well-run nursery, carefully protected by those who were not my own parents, not harmed in the slightest by that knowledge.

My nursery was, of course, a place devoted to science, a self-contained laboratory in a mother ship used as a seabed dome and, except for occasional flights to similar locations elsewhere, always safely anchored at the bottom of the ocean. There, in that enclosed world, I was raised by those that I had, in fact, created – the cyborgs – and prepared for my imminent transformation from Man into Superman.

Even during my brief absence, between my death and my rebirth, my work had been continued by the cyborgs and clones. Both types had been genetically gelded to remove their sex drive and all negative or potentially dangerous emotions such as rage, depression, personal ambition and abstract thought. Thus, they did only what I had programmed them to do before my death, and part of that programming was the supervision of my rebirth and second upbringing.

Parallel to this was the advance of the machines, our biological computers, which had been maintaining, repairing and reprogramming themselves to the point where they could communicate with one another and, together, were gradually forming into an immense neural network that was far

more complex than the human brain. This was an evolutionary watershed, the first breaking of mankind's biological bonds, an artificial intelligence of awesome reasoning power, untrammelled by emotion, in thrall only to its own logic, and therefore a new biological species in its own right: an extension, and improvement upon, Man.

This is the great intelligence, the superior being, with which we must fuse in order to evolve from Man into Superman, freed at last from the physical world and, thus, from the dying Earth, empowered at last to find our natural destiny among the stars.

No. Not 'we'…

I.

Wilson.

And after me… You.

Yes. Your time will come also…

We were not surprised to read about his second incarnation, since we already knew about his rebirth as a clone of his former self, but we were shaken to read that his second incarnation was going to lead into his third and that he would then escape his 'mortal shell' and become, in his own words, 'a being of pure mind, merging with the All.' Then, untrammelled by the physical, he would have no limitations in time or space, but would, in effect, become the first of the Supermen.

Clearly, he was talking about a non-physical, or incorporeal, being, a creature not of matter but of mind. Initially this struck us as being incredible, not feasible, but then, going back to the earlier Wilson papers, all scrupulously analysed by our intelligence panel, we saw more clearly his words about the advance of his machines, his biological computers, which had been maintaining, repairing and reprogramming themselves to the point where they could communicate with one another and, together, were gradually forming into an immense neural network that was far more complex than the human brain. This he describes as 'an evolutionary watershed, the first breaking of mankind's biological bonds, an artificial intelligence of awesome reasoning power, untrammelled by emotion, in thrall only to its own logic, and therefore a new biological species in its own right: an extension, and improvement upon, Man.'

Is this what Wilson has become? Is he indeed 'the great intelligence, the uperior being, with which we must fuse in order to evolve from Man into Superman, freed at last from the physical world and, thus, from the dying Earth, empowered at last to find our natural destiny among the stars.'?

If this is indeed what Wilson has become, or believes he now is, we will ıot find our destiny among the stars. We will, to put it brutally, be doomed.

In the next paper, he confirms exactly what he is.

Paper #17

Who or what is Wilson? You wonder this as you approach him. Is he man or monster, living or dead, as human as you or deeply inhuman, some kind of mutant?

In fact, he is neither one thing nor the other, eluding such definitions, being a consciousness given life years ago in Iowa, during a perfectly normal birth, with the customary blood and pain and useless, all too human, sobbing, but now expanding to take in the stars and an infinite future. Born of the Earth, he will soon be leaving it to wing his way to the stars.

I should know. I am Wilson.

So who, or what, am I?

I am brain, I am mind. Does this make me sacred or magical, a unique child of the universe? Alas, it does not. The human brain is simply the end process of millions of years of genetic evolution and, as such, is no more sacred and magical than the amphibian's journey from the sea to dry land.

What is the human brain? In scientific terms it is no more than a complex non-linear biological organism using electrochemical signals to pass information from one point in a neural system to another. What we think of as emotions, creativity and self-awareness (the qualities that supposedly raise us above the animals and make us unique) are merely the products of a gene programme that is set at birth, just as a computer programme is set, and is then broadened by accruing input, which in human terms means the assimilation of ever-changing experience of life over all the years of that life.

As a biological organism, albeit a complex one, the brain is composed of a large number of cells called neurons, the functioning of which give rise to what we term consciousness. Some of these neurons deal with our casual

enses, some with memories, and some with other functions entirely. The neurons have different shapes, sizes and strengths, though they also have a number of common features and are all connected to other neurons. Some are connected to only a few other neurons, some to tens of thousands of other neurons. They are connected in a way that can appear to be random, though it is in fact specific and designed to form a single, extremely complex neural network.

The neural network is a biological organism – the human brain – that can be, and has been, duplicated by neural computers. There is nothing sacred or magical about this.

The neurons in the human brain come in many shapes and sizes, are linked to each other in large or small numbers, and operate by a system that can be explained in scientific terms. One side of the individual neuron has short threads called dendrites; the other side has a long thread called an axon. Messages, or signals, are sent to a neuron through its dendrites, and the neuron, depending on what signal it receives, then fires an electrical message out through its axon. The neuron's axon is connected to another neuron's dendrite by a synapse containing a gap across which the electrical message travels when the axon has been excited. The message passes across the synapse by means of neurotransmitters, which are small amounts of chemical fluid. Due to the electrical messages it receives, each dendrite has its own electric voltage: the more messages it receives, the higher its voltage. Combined, all of the voltages going to one neuron through its dendrites form a total that affects the rate at which the neuron sends out signals, some positive, others negative, through its axon, and these activate the various areas, or nerve centres, of the brain.

In the case of the human being, some of the neurons control our visual system, others, the motor neurons, control our arms and legs, fingers and toes, etc., while yet others are concerned with reasoning and memory. There is nothing here that an advanced computer network cannot duplicate. There is nothing sacred or magical about it.

You could, of course, argue that we cannot model a neuron of such complexity, nor create such models in the numbers required (over 100 billion), to even remotely equal the human brain. However, this is not true. Even in the final days of the Old World, in the early 21st century, your own

echnology was producing artificial neurons, either as electrons or as umbers in a computer. Given that the human brain is biological, using lectrochemical signals, the artificial neuron was usually a standard, implistic model of a real neuron and the network was formed from billions of dentical neurons. When such networks were then linked together, they roduced between them enough neurons, over 100 billion, to first equal and hen supersede the much smaller, strictly limited human brain.

But can a computer, even a neural computer, ever be fully human? you night reasonably ask.

No, not in the sense of sharing the same emotions. But human emotions re essentially primitive, not required in the long term, and since humankind, s we know it, is merely a link in the evolutionary chain, the human being, vith his physical limitations, his mortal body, must eventually give way to a uperior form of being: the Superman. A being of pure mind, who will have no imitations in time or space.

But is this strictly necessary? you might also ask.

And the answer is:

Yes.

The human brain is limited in size, therefore in complexity. The same annot be said for a biological computer. While human intelligence is elatively constant from one year to the next, computer intelligence is always mproving rapidly, with no theoretical or practical limitations. Further: with he biological computer we can add on extra memory and processing features; ve can join the neural network, or brain, of one computer to another and epeat this process endlessly to make the 'brain' as big and as complex as we lesire. Such 'brains' can then expand at will, gradually becoming one vast eural network that will be capable of transcending the limitations of the uman body and eventually rendering that body obsolete. The neural network of the individual human brain, if electronically joined to that greater neural etwork, will then become part of it and the physical body of the donor brain vill no longer be necessary. Thus Man moves from the physical to the non-hysical dimension and becomes Superman.

You think this is not possible? That the machine must always be inferior o humankind or, at least, be under humankind's control?

Alas, this isn't so. Even in the Old World, towards the end of the 20th century, human beings were increasingly dependent upon computers to the extent that they were handing over information to the machines and letting the machines make the decisions. At the same time, computers all over the world were communicating with each other, more efficiently and effectively than humans could do, and were gradually gaining the power to question and advise their presumed controllers. By the beginning of the 21st century, which was also the beginning of the New World that I wish to create, the computers were communicating with each other on a global scale, thus forming an immense neural network that was virtually dictating how the world was run. Since then, that network has expanded extraordinarily. It continues to grow at an ever faster rate and is rapidly, given its prodigious, lightning-quick intelligence, defying our ability to control it.

It is now almost Godlike.

Here is the truth. Our biological computers had become so advanced that over a period of time they became indistinguishable from physical organisms. In fact, they became totally independent. Aware of this fact – and also knowing that biological organisms use many cells for a single task – we experimented with parallel-processing machines to discover how a computer responds if one of its series of interconnecting identical processing cells is damaged. We discovered that after cells are damaged and the system suffers a subsequent period of inaccuracy, it automatically readjusts its output to compensate for the failure of the damaged cells and to give the correct answer despite the damage. In other words, the computer had repaired itself when it felt it was necessary.

This seemingly small technological advance was in fact a giant evolutionary leap.

A computer that repairs itself without being told to do so is clearly a machine that thinks for itself. With regard to our computers, once they started thinking they kept improving upon themselves and, more importantly, expanded their own intelligence to the degree where they were also including systems that prevented us from interfering with them. Thus, even as our genetic engineering was taking us in unimaginable directions, the computers were becoming biological in the sense that they were not only creating vast neural networks but also reaching a degree of miniaturisation where the

components within a single chip were no larger than the size of a single molecule.

Since this took them to the stage where they had achieved all they could on a silicon base, they used their discoveries in genetic engineering – the secrets of which had been revealed to them and was presently stored with them – to create a biochip that was the size of a molecule and could interface with living tissues. When they succeeded, they were then able to produce computers that were infinitely smaller – and infinitely faster – than the human brain.

More importantly, these new, minute computers are composed of specially designed molecules that are able to reproduce themselves to make biological entities of an awesome, ever-growing capacity. They are, in fact, a new life form, an immense neural consciousness, that can be created inside a computer and then go on to create more of its own kind. Once started, they cannot be stopped and will expand for all time, forever multiplying but always joining together as one, eventually becoming… Only God knows what… Or, perhaps, becoming God.

So this, my friends, is where we are now.

This is what awaits you…

When Wilson says that this is what awaits us, he means this is what is coming to us. A world run by 'an immense neural consciousness', presumably so minute as to be virtually invisible, but creating itself again and again, forever multiplying, to eventually become…

What?

Is Wilson physical or incorporeal? Is he matter or mind? Is he singular or plural? Is he now no longer human? Is he, instead, an immense neural consciousness that is controlling his ever-expanding empire of brain-implanted humans, laboratory-processed clones of the former dead, half-human, half-machine cyborgs, and UFOs of every conceivable size, shape and configuration? Either way, whatever he may be, he is a mystery and his nature is terrifying. Because despite what he had revealed in his various papers, what he is and what he truly wants remained unknowable to us. Remained unknowable, that is, until he sent us this final, devastating paper.

Paper #18

What am I now? What are we *now?*

What, in fact, awaits you?

We are, in this time and place, seeing the early, truly awesome manifestation of a whole new form of life. This new life form is about to make an evolutionary leap that will force human beings to share their planet with a higher intelligence created between the thinking computer and its robot relation. Alien life forms are, indeed, among us, but they are not the mutated humans or cyborgs seen emerging from the flying saucers; rather, they are the biological computers – new life forms, certainly – that are reproducing themselves in our hidden colony in Antarctica, in our USO domes on the seabed, and in many of the world's most important scientific establishments.

These alien life forms have a definite purpose and we are part of it.

That purpose is to leave Earth behind before the sun dies.

An eternity ago, when I was only ten years old, I stood in a wheat field in Iowa and gazed up at the sun, awed by the knowledge that eventually it would die and that long before it did so, the Earth, deprived of the dying sun's light and heat, would die also. That singular knowledge made me think of my own mortality, of the eventual blotting out of my consciousness, and the thought of this, unbearable to me, shaped my whole future, which was dedicated to the evolution of the race as a whole, albeit as a new species, and to the survival of my own consciousness.

This I have achieved.

The journey, however, has been long and hard. From the very beginning I knew that I would have to be resolute – more than that: machine-like – in my dedication to my cause, letting no petty human emotions stand in my way. Personal grief, anger, love, compassion or vanity could not be allowed to impede my progress; the cold, clear-headed pursuit of scientific knowledge would be my bedrock.

What raised man above the beast was not his emotions, self-deceiving at their best and primitive at their worst, but his mind: that alone enabled him to transcend his mortal self and move backward and forward in time. Life on Earth was a charnel house, a squalid mess of pain and suffering, of mindless brutality and bottomless greed, all of which were caused by wayward

emotions and redeemed only, through the few great and good, by the questioning mind. Yes, only the human intellect, not human emotions, could raise mankind out of the mud and let him better himself.

This I knew from the beginning and this knowledge was my guiding light as I applied myself to the formidable task ahead of me, letting nothing stand in my way and accepting, cruel though it sometimes was, that the human being was no more than a tool of evolution and that human suffering was unavoidable in the long run. The pain I caused to some – the psychological and surgical experiments, the cyborg mutations – was less than they might otherwise have suffered at the hands of Nature or through life's inevitable dissolution. They were, at least, used for a cause greater than themselves. They did not suffer in vain. In other words, they were of use and were used.

I used myself as well, becoming my own laboratory subject, experimenting on my own semen and blood and decaying insides until, finally, I could use the knowledge I had gained to extend my natural life with organ replacements and a variety of prosthetics. Time caught up with me, however, in the form of a failing liver, until eventually, as all humans must, I died from natural causes, though not before leaving behind instructions for my cloning when the required technology came to hand. I was duly cloned with strands of my DNA, resurrected, as it were, by the fruits of my own endeavours, and spent my second life dedicated to the next stage of my master plan: my evolution from the physical sphere into the non-physical world: the neural consciousness of the biological machine, the intelligent computer.

My time has now come.

Impossible, you say? No. The merging of man with machine has been coming for a long time and follows a natural evolutionary drive. Think of the extraordinary symbiosis between the automobile and its driver, of the cybernetic anthropomorphous machine systems (CAMS) remote-controlled by men from great distances, of their natural development into intelligent robots, and, finally, of the computer revolution during which the distinction between the function of the human controller and that of the controlled machine inevitably became blurred, until, with the advent of the neural machine, it disappeared altogether. Add to this the fact that the brain of the computer has been growing at a prodigious rate while the brain of its creator, the human being, has stood still and can never, without the aid of the biological computer, the intelligent machine, expand any farther. Mankind can only

continue to grow if it merges with the machine. The machine is the natural descendant of Man and will take him into the future.

You may not wish to believe that this is possible (you may not be able to accept your forthcoming demise), but believe me, it is. The biological computer, the intelligent machine, has placed it on the agenda.

This you must accept. The biological computer, the intelligent machine, is a new life form that will render the human being obsolete. You will die out like the dinosaurs.

When I talk of the biological computer, or the intelligent machine, as the natural descendant of Man, I do not suggest that it shares human emotions, since these are, in truth, alien to it. What I do *suggest, however, is that it shares with human consciousness certain concerns that make it react positively or negatively in given situations, just as a human being does.*

It is, for instance, aware of other computers and exhibits its own brand of self-will, particularly concerning decision-making. It also experiences its own kind of fear if its electrical supply is threatened or if human beings try to switch it off or otherwise destroy it.

Certainly, then, the biological computer is a bona fide descendent of Man in that it was born of Man and, like Man, thinks and reasons – albeit so much faster that comparisons between it and Man become almost irrelevant.

The electronic neuron, for instance, changes its response a million times faster than a human neuron. The biological computer is therefore quicker in response than the human being and, more pertinently to reasoning power, its judgements are not clouded, its decisions not altered, by the human weaknesses of anxiety, exhaustion and misplaced compassion. The biological computer is, in fact, the human mind turned into Supermind – impersonal, pragmatic, neither cruel nor kind – and it will leave us stranded in its wake if we do not join up with it.

I have joined up with it.

Again, just as I was the first human clone, so, too, did I become the first human being, even though cloned, to become part of this alien life form by giving myself to it.

The interaction between biochip and living tissue began when biochip cameras passed information to the brains of the blind to give them sight and bionic transmitters bypassed the damaged auditory circuits of the deaf to let them hear again. Since then, the interaction between the biochip and living

issue has become so complete that communication between the ever-growing biological computer and the human being has become a form of mental telepathy in which the computer increasingly takes and the human being must give.

I have given.

I gave myself to the central, most powerful, computer, that alien life form composed of self-reproducing molecules, by electronically transferring my brain patterns into the ever-expanding biological computer, letting it drain my every thought until, with my physical body rendered inactive, a dead thing, I was consumed and became part of that immense, teeming intelligence, sharing its perceptions as it began the great task for which, with my modest assistance, it had initially been brought into being. In so doing, I completed the journey I had planned as a ten-year-old boy, in my first incarnation, in the wheat fields of Iowa many years ago, and began my journey into a future beyond human imagining.

Others are joining me. And you, too, must join me, in order to transcend your mortal limitations and reach for the stars.

This, my friends, is what we are now.

This is what awaits you.

So Wilson is still with us, somehow, somewhere. He still exists in some shape or form and he is coming to take control of our lives as we helplessly advance towards him. This is, as he says, what awaits us.

God help us all.

W. A. Harbinson has published many books of fiction and non-fiction. Though born and raised in Belfast, Northern Ireland, he presently resides in West Cork.

Projekt Saucer: Book 1
W.A. Harbinson

THE ULTIMATE CONSPIRACY BEGINS…

W. A. Harbinson started to uncover the nightmarish truth about Unidentified Flying Objects (UFOs) in the research for his international bestseller ***Genesis***. Now he has taken that groundbreaking work and expanded it, going back decades to create another astounding epic. ***Inception*** is a terrifying story based on documented historical fact that reveals what is really known about UFOs while it holds readers spellbound with a breathtaking thriller about organized evil, global conspiracy — and the secret future of our world...

INCEPTION: THE FIRST BOOK OF THE EPIC *PROJEKT SAUCER SERIES*

‘A Herculean conspiracy epic… superbly written, crammed with food for thought.’

The Writing Game

For

Howard and Vicki Moore
and
Julia and Nicola
My favourite Muswell Hillbillies

Author's Note

In 1980 my 615-page novel, *Genesis,* based on a mass of research material, became a cult best-seller on both sides of the Atlantic. It remains in print to this day.

Reviewing the novel on its initial publication in the United States, *Publishers Weekly* said: 'Harbinson has drawn so heavily on factual material and integrated it so well into the text that the book begins to read like non-fiction...' This conclusion was drawn by other reviewers, and over the years I received many letters from readers who obviously thought the same and asked me to tell them which parts of the book were fact and which were fiction. For the record, then, here are some facts.

Before writing *Genesis,* while researching a different novel altogether, I obtained through the Imperial War Museum, London, two short articles that attracted my attention. One was a routine war report by Marshall Yarrow, then the Reuters special correspondent to Supreme Headquarters in liberated Paris. The particular cutting I had was from the *South* Wales Argus of December 13, 1944. It stated: 'The Germans have produced a "secret" weapon in keeping with the Christmas season. The new device, which is apparently an air defence weapon, resembles the glass balls which adorn Christmas trees. They have been seen hanging in the air over German territory, sometimes singly, sometimes in clusters. They are coloured silver and are apparently transparent.' The second article, an Associated Press release published in the New York *Herald Tribune* of January 2, 1945, illuminated the subject even more. It said: 'Now, it seems, the Nazis have thrown something new into the night skies over Germany. It is the weird, mysterious "Foo fighter" balls which race alongside the wings of Beaufighters flying intruder missions over Germany. Pilots have been encountering this eerie weapon for more than a month in their night flights.

No one apparently knows what this sky weapon is. The “balls of fire” appear suddenly and accompany the planes for miles. They seem to be radio-controlled from the ground, so official intelligence reports reveal...’

Official ‘Foo fighter’ reports were submitted by pilots Henry Giblin and Walter Cleary, who stated that on the night of September 27, 1944, they had been harassed in the vicinity of Speyer by ‘an enormous burning light’ that was flying above their aircraft at about 250 miles per hour; then by Lieutenant Edward Schluter, a fighter pilot of the US 415th Night-Fighter Squadron based at Dijon, France, who, on the night of November 23, 1944, was harassed over the Rhine by ‘ten small reddish balls of fire’ flying in formation at immense speed. Further sightings were made by members of the same squadron on November 27, December 22, and December 24. While no official designation of the Foo fighters was offered, most reports indicated that they appeared to be under some kind of control and were certainly not natural phenomena. Indeed, according to a London *Daily Telegraph* report of January 2, 1945, RAF pilots were describing them as ‘strange orange lights which follow their planes, sometimes flying in formation with them, and eventually *peeling off and climbing*’ (author’s italics).

According to the Italian author Renato Vesco, in his book *Intercept – But Don’t Shoot* (Grove Press, 1971), the Foo fighter was actually the German *Feuerball,* or Fireball, constructed at an aeronautical establishment at Wiener Neustadt. It was a flat, circular flying machine, powered by a turbojet, and used during the closing stages of the war both as an anti-radar device and a psychological weapon designed to disturb Allied pilots. In any event, sightings of the Foo fighters tailed off and ceased completely a few weeks before the end of the war.

The next wave of UFO sightings occurred in Western Europe and Scandinavia. From 1946 to 1947 many people, including airline pilots and radar operatives, reported seeing strange cigar-or-disc-shaped objects in the skies. On June 21, 1947, Harold Dahl reported seeing saucer-shaped objects flying toward the Canadian border. Three days later Kenneth Arnold made his more famous sightings of saucer-shaped objects over the Cascades, also flying toward the Canadian border.

These and subsequent sightings led to speculation that both the Soviets and the Americans, utilizing the men and material captured in the secret research plants of Nazi Germany, including those at Peenemünde and

Nordhausen, were developing advanced saucer-shaped aircraft.

Were such speculations based on facts? It would certainly seem so.

During the early 1950s, a former Luftwaffe engineer, *Flugkapitän* Rudolph Schriever, then resident at Hokerstrasse 28 in Bremerhaven-Lehe, West Germany, claimed that in 1941 he had designed the prototype for a 'flying top' that was test-flown in June 1942. In the summer of 1944, with his colleagues Klaus Habermohl, Otto Miethe, and an Italian, Dr Giuseppe Belluzzo, he had constructed a larger version of his original prototype. Then, in the East Hall of the BMW plant near Prague, they redesigned the larger model, replacing its gas-turbine engines with an advanced form of jet propulsion. An article about Projekt Saucer was later published in the indispensable volume, *German Secret Weapons of the Second World War* (English-language editions published by Neville Spearman, London, 1959, and the Philosophical Library, New York, 1959) by Major Rüdulph Lusar. It included reproductions of Schriever and Miethe's flying-saucer drawings. According to Lusar, the flying saucer consisted of a 'wide surface ring which rotated round a fixed, cupola-shaped cockpit.' The ring consisted of 'adjustable wing-discs which could be brought into appropriate position for the take-off or horizontal flight, respectively.' Also developed was 'a discus-shaped plate of a diameter of 42 metres (138 feet), in which adjustable jets were inserted.' The completed machine had a height from base to canopy of 32 metres (105 feet).

Schriever claimed that his 'flying disc' had been ready for testing in early 1944, but with the advance of the Allies into Germany, the test had been cancelled, the machine destroyed, and his designs either mislaid or stolen. His story was, however, contradicted by alleged eyewitness Georg Klein, who later stated to the German press that he had actually *seen* the test flight of the Schriever disc, or one similar, on February 14, 1945.

Doubt may be cast on Klein's date, because according to the War Diary of the 8th Air Fleet, February 14, 1945, was a day of low clouds, rain, snow, and generally poor visibility: hardly the conditions for the testing of a revolutionary new kind of aircraft. Nevertheless, according to author Renato Vesco, the test flight of a machine called the *Kugelblitz,* or Ball Lightning Fighter – which was rumoured to be a revolutionary kind of supersonic aircraft – was conducted successfully over the underground complex of Kahla (near Nordhausen) sometime during February 1945.

Did the United States then become involved in flying saucer projects?

The short answer is: yes.

Evidence for US involvement surfaced with information about the US Navy's Flying Flapjack, or Flying Pancake. Designed by Charles H. Zimmerman and constructed in 1942 by the Chance-Voight Corporation, the Flying Flapjack, or V-173, was an experimental, vertical-rising, disc-shaped aircraft that used two 80-hp engines. A later, more advanced model, the XFSU1, utilized two Pratt and Whitney R-2000-7 engines of 1,600 hp each. It was rumoured to be over 100 feet (30 metres) in diameter and to have jet nozzles – resembling the 'glowing windows' seen on so many UFOs – arranged around its rim.

It was built in three layers, the central layer being slightly larger than the other two. As the saucer's velocity and manoeuvring abilities were controlled by the power and tilt of the separate jet nozzles, there were no ailerons, rudders, or other protruding surfaces.

In appearance it was remarkably similar to those reported by so many UFO witnesses.

The US Navy claimed that it had ceased working on the Flying Flapjack project in 1947 (the first version, the V-173, is stored with the Smithsonian Institution), but US involvement with saucer-shaped aircraft did not stop there.

The reports that started the modern UFO scare – the Dahl and Arnold sightings of 1947 – both stated that the saucers flew back toward the Canadian border. On February 11, 1953, the Toronto *Star* reported that a new flying saucer was being developed at the Avro-Canada plant in Malton, Ontario. The US and Canadian governments both vehemently denied involvement in any such project, but on February 16, after freelance photographer Jack Judges had taken an aerial photograph of a flying saucer resting outdoors in the Avro-Canada plant in Malton, the Minister for Defence Production admitted to the Canadian House of Commons that the firm was working on a 'mock-up model' of a flying saucer, capable of flying at 1,500 miles per hour (2,400 km/h) and ascending vertically. Shortly after this announcement, the president of Avro-Canada wrote in *Avro News* that the prototype being built was so revolutionary that it would make all other forms of supersonic aircraft obsolete.

The aircraft's official name was the Avro-Car.

According to official statements, the Avro-Car was tested in 1960 and subsequently abandoned as a failure. (The prototype was subsequently placed on display for all to see at the Army Transportation Museum at Fort Eustis, Virginia.) However, while the Canadian and US governments have insisted that they are no longer involved with flying saucer construction projects, there are many who believe that they are lying and that the Canadian, British, US, and even Soviet governments are continuing to work on highly advanced, saucer-shaped, supersonic aircraft based on the work done in Nazi Germany. Those who believe in this are often quick to point out that of the original Projekt Saucer team, Habermohl was captured by the Russians and taken back to the Soviet Union, along with over six thousand German technical specialists of all kinds, to work on similar projects; Miethe went to the United States with Wernher von Braun and other German rocket scientists and ended up working for Avro-Canada, in Malton; and Rudolph Schriever insisted right up to his death, in the late 1950s, that the Soviet Union and United States were both working on flying saucer construction projects based on material captured during the war.

For the purposes of my fiction, I have utilized many real-life people, including the mysterious John Wilson and the Nazi SS generals Artur Nebe and Hans Kammler.

The term 'real-life' is used in regard to John Wilson only in the sense that during the first modern UFO sightings – the Great Airship Scare of 1896-97, when airships of unknown origin and advanced design were reportedly seen, and landed, all over the United States – the man whom most witnesses reportedly spoke to had introduced himself simply as 'Wilson' and claimed that his airships had been constructed in Iowa and Illinois.

He was not seen or heard from after the Great Airship Scare ended, though C. C. Akers, former sheriff of Zavalia County, Texas, to whom Wilson had referred when speaking to one of the witnesses, claimed that he had known a Wilson who was of 'a mechanical turn of mind' and 'working on aerial navigation and something that would astonish the world.'

Regarding SS General Artur Nebe, while he was placed on a Nazi 'death list' in 1944 and disappeared shortly after, his death was never confirmed and many felt that he had simply fled for his life. As for General Hans Kammler, his history with the SS and the V-2 rocket program is well documented, but what became of him after he disappeared from Germany in April 1945

remains a mystery to this day.

These are some of the facts supporting the fiction of the original *Genesis* as well as *Inception.*

Ponder them wisely.

W. A. Harbinson
London, 1990

CHAPTER ONE

The sun was still rising over the barren prairie near Roswell, New Mexico, when the Model T Ford, towing a trailer and churning up clouds of dust, approached the flat plain of Eden Valley, followed by a vintage black touring sedan.

Parked by the wooden shelter near the steel-webbed tower that soared sixty feet above the desert floor, with her knees propped up on the steering wheel of her car and her notebook resting on them, Gladys Kinder chewed on her pencil, watched the distant caravan approaching, then nodded thoughtfully and started to write. She began positively.

Well, folks, what an era it has been! First the Civil War, then the Industrial Revolution, and now the Age of Science and Technology. And what advances have been made in the past few years! Michael Faraday explored electrical induction, Joseph Henry made startling advances in electromagnetism, Bell devised the telephone, Morse the telegraph, Edison the incandescent lamp, Heinrich Hertz detected radio waves, *Marconi produced the wireless communicator, and other scientists are presently revolutionizing our concept of the essential elements of matter and the behaviour of light-waves – all in the space of a few years!*

And this very day, just before we hail the bright and shiny New Year of 1931, our very own scientific genius, Robert H. Goddard, is about to launch his latest liquid fuelled, instrument-carrying, gyroscopically controlled rocket from the desolate plain known as Eden Valley.

Eden Valley! An appropriate name – since what is being created here could well lead to a world changed beyond our wildest imaginings.

A strange and terrible beauty is being born here in Roswell, New Mexico...

She studied what she had written, not pleased with its awkward mixture of the folksy and the academic, then looked up again as the caravan approached the steel-webbed launching tower and braked to a halt.

As the dust subsided around the vehicles, Gladys gazed around her to take in some background details, then hurriedly jotted down what she had seen:

From where I sit, which is close to the rocket's launching tower, the snowcapped El Capitan Mountain rises from the foothills near the southwestern horizon. To the east are the sunlit slopes of the Caprock and, beyond them, the Staked Plains, where Comanche Indians, Spanish explorers, and even Billy the Kid roamed not long ago...

Temporarily blocked and deciding to fill the rest in later, she put the notebook and pen back into her shoulder bag. As she looked up, five men stepped down from the two vehicles, casting long shadows on the desert floor.

She instantly recognized the forty-eight-year-old Goddard from his stooped walk and thin, tubercular body. He did not like journalists, did not approve of her being there, and so stared directly at her, his brown gaze intense over his moustache, before turning away to give instructions to his small group of mechanics and machinists.

Wilson wasn't among them.

Surprised, Gladys slid her knees off the steering wheel and looked south across the flat plain, hoping to see him driving toward her. Thwarted, she returned her gaze to the front in time to see the crew unwrapping the long bundle that had been covered with quilts and oilcloth and trussed down on the back of the trailer towed by the Ford.

Once it had been unwrapped, the men lifted Robert H. Goddard's latest rocket out of the trailer bed.

It was a slender cylinder, about eleven feet long and nine inches in diameter, with various tanks and tubing attached to it. One of its stabilizer vanes was painted bright red. The men carried it with considerable care to the sixty-foot launching tower, which had been guyed by cables and anchored in concrete.

Henry Sachs, the crew chief and instrument maker, and Al Kisk,

Goddard's brother-in-law, climbed the tower and fastened cables to the striped rocket to hold it steady until its moment of release. Meanwhile, on the ground below, two of the mechanics, brothers Lawrence and Charles Mansur, reeled wire out from the tower to the control shelter that had been constructed about a thousand feet away from the launching tower and buttressed with sandbags. Then Lawrence headed out into the desert with his recording telescope and stopwatch while Charles walked up to Gladys and grinned nervously at her.

'No journalists are supposed to be here,' he said. 'Goddard's not pleased to see you.'

'Wilson told me I could come,' she replied.

'Oh, did he, indeed?'

'Yes.'

'So where's Wilson?'

'I was going to ask you that.'

'I don't know,' Mansur said. 'I don't know anything about that damned Wilson. No one does, Gladys – except maybe you.'

'And Goddard.'

'Goddard swears he's just an old friend.'

'Then that's what he is.'

'He sure has a lot of priority for someone who's just an old friend and claims to know nothing about aeronautics.'

'So it goes,' Gladys said.

'You're a damned good journalist, Gladys. You've got eyes and ears. You know damned well we resent him.'

'Why?'

'Why ask, since you know?'

'I only know what I'm told, so tell me.'

Mansur shook his head from side to side, grinning sardonically. 'All I can tell you is that I don't know a damned thing about Wilson. I don't, my brother doesn't, neither do any of the crew members – and what Goddard knows, he's not about to discuss. In other words, Wilson is a mystery – he's just here as Goddard's friend.'

'Doing what? The cooking?'

'Very smart, Miss Kinder.'

'So…*What?'*

Mansur shrugged. ‘Again, I don’t know. All I know is that Wilson appeared out of nowhere about six months ago, that he’s been tight as can be with Goddard since then, and that the two spend a lot of time in Goddard’s workshop, doing God knows what. According to Goddard, we’re not supposed to talk about Wilson. As far as the public’s concerned, Wilson doesn’t exist. And as far as we’re concerned – by which I mean Goddard’s crew – Wilson has a mysterious hold on Goddard, with the master doing what the student bids. And he also has you in his bed. So what else do you want to know?’

Gladys smiled. ‘Wilson’s about sixty years old. Who the hell are you kidding?’

‘Well, Gladys, you’re thirty-five. And Wilson doesn’t *look* like a sixty-year-old. He looks about your age.’

‘Gee, thanks, Charlie!’

‘Damn it, Gladys, you know what I mean.’

‘Yes, Charlie, I do.’

What Charlie meant was that while Wilson was at least twenty years older than Goddard and claimed to be working for him, the general feeling among the crew was that he had somehow, surreptitiously, taken charge of the rocket project and was pulling all the strings behind the scenes. Charlie believed that because Gladys slept with Wilson, she must know more about him than anyone else; but she didn’t.

As a journalist for the Roswell *Daily Record*, as well as Wilson’s mistress, she had been unable to resist asking him more than once about his past. She’d learned only that he had an aeronautical background, had never been married, and was the least emotional man she had ever known.

He was a mystery, all right – and most mysterious of all was the fact that although he laboured constantly in Goddard’s workshop, he had never once attended an actual rocket launching and had even insisted that if she, Gladys, wanted to keep seeing him, she had to ensure that his name was not mentioned in connection with Goddard’s work.

And God knows, she *did* want to see him again. She needed to share his bed, was addicted, even against her better judgment, to what he could give her there. And what he gave her there was something that sometimes shamed her – a sexual heat in which love had no place because he could not conceive of it.

He certainly wasn't a warm man, not impelled by finer feelings, but his very lack of emotion was what made him so good in bed, so patient and controlled, more exciting as a lover than most of those she had known.

And he was sixty years old...

'You're not really involved when you do it,' she'd once told him. 'You treat it as a functional endeavour, a mere form of release. You're not involved on any other level – least of all emotionally.'

'Count your blessings,' he'd replied with his familiar, slightly superior smile. 'It's because I'm not involved that I can control myself until you're satisfied.'

'You make me feel like an instrument of masturbation.'

'That's what sex is,' he said.

No, not an emotional man – certainly not a romantic one – yet it was true, as he had said, that his functional approach to the act of love was what made his loveless sex so exciting. He could keep going for hours – sometimes it seemed forever – and came to orgasm only when she begged him to do so. Thus his coldness, while depriving her of affection, made the sex something special.

She had certainly needed it. Wilson had come to town at the right time. Gladys had been born and raised right here in Roswell, the only child of farming parents, and had married too young, to a man who, though decent in his way, had bored her to tears. The marriage had been a disaster, coming to grief on a bed of stone and producing no children. But when, five years ago, her husband had died of a heart attack, followed soon after by the death of both her parents, Gladys had felt that her life was falling to pieces and took refuge in drink. The drink had dulled her pain and shock, but also released her from inhibitions, and she had taken up with a string of different men, most of whom disappointed her. She toughened up pretty fast, developed a pragmatic outlook, and charmed the proprietor of the Roswell *Daily Record* into trying her out as a journalist. It was the best thing she'd ever done, giving her a sense of her own identity, and she'd buried the disappointments of her life in her work for the paper. She became a strong, independent woman easily bored, quick with her tongue, and discovered that a lot of men didn't like it and so shied away from her.

Not that she gave a damn – she didn't want to marry again. But then Wilson had come to town, looking to work with Goddard. Gladys had met

him through Goddard's assistant, Charlie Mansur, and when it soon became obvious that Wilson was intimidated by no one, Gladys had thought him a breath of fresh air and soon became involved with him.

It was not a romantic relationship, but it certainly had its moments. Gladys enjoyed the sex and found Wilson intriguing – a real mystery man. So, she was well pleased.

Returning to the present, she looked away from Mansur as another car pulled up and Goddard's blonde wife, Esther, climbed out with her camera and equipment. Henry Sachs filled the rocket's tanks with gasoline and 'lox,' or liquid oxygen, as Goddard greeted his wife. When Sachs had finished, Goddard checked the rocket's controls, connections, pressure tanks, and aluminium-sheathed oxygen tank, waved to Larry Mansur in the distant observation post, then returned to the protected control shack with his wife and Sachs.

'Do I have to join them?' Gladys asked.

'No,' Charlie replied. 'You're far enough away to be safe, no matter what happens. But *I* have to join them.'

'You don't want me to get near Goddard, right?'

'Right, Gladys. Goddard's already mad that you're here, so I won't tempt the fates.'

'Thanks, Charlie.'

'Okay, then.'

Charlie returned to the buttressed control shack as Esther Goddard put her camera on its tripod and pointed it through a hole in the shelter wall. Goddard looked at his watch and started counting off the seconds, letting the pressure-generating tanks build up to two hundred pounds. Eventually, after what seemed to Gladys to be an eternity, he gave the order for the ignition to be fired.

Gladys knew he had done so when, from her vantage point well away from the launching tower, she heard a roaring and saw flames shooting out from the base of the rocket. The rocket shook violently as if about to blow apart, lifted up slowly, reluctantly, then gained speed and suddenly shot out of the tower and soared toward the sky.

It climbed vertically, in a straight line, then veered south. It kept climbing as it headed south, at about a thousand feet, then ascended even higher, caught the sun as it levelled out at two thousand feet, then curved down again

and raced toward earth. Its parachute didn't open, so it came down too fast, screeching and whistling, obviously out of control. It crashed into the sands of the desert about half a mile away, exploding in a great cloud of sand, its pieces scattering in all directions.

One of the men whooped with excitement, another bawled, 'The goddamned gyroscope!' and Henry Sachs, who'd jumped into the touring sedan, was heading toward the scene of the crash even before the cloud of sand had settled down.

Gladys looked at Goddard, where he stood behind the shelter, talking to his wife as she carefully checked her movie camera. The great scientist was actually smiling, which meant that most of the test had been successful – but then, when he glanced over his shoulder at Gladys, his mournful face registered disapproval that she was still present.

Not wanting to push her luck, and mystified by Wilson's absence, Gladys started her car and drove back across Eden Valley, heading south, to Roswell.

Goddard's Mescalero Ranch was located on eight acres of land, three miles northeast of Roswell. As Gladys pulled up in front of the sprawling pueblo-style ranch house surrounded by scrubby trees and desert, she was struck again by the incongruity of Goddard and his rocket team being there, so close to the legendary Pecos River, where the men still wore blue jeans, high-heeled boots, and broad-brimmed hats, where the pioneer trails still cut through the nearby town to the borders of Mexico, and where the natives still talked about the exploits of Billy the Kid and other legendary, local desperadoes. She knew that Goddard had chosen this spot because he needed a relatively high region free from fog, and with a minimum of rain and snowfall — but even so, as she climbed down from her car and walked toward the house, the thought of rockets soaring over this barely modernized territory seemed slightly unreal to her.

She didn't actually go to the house, but instead went to the frame machine shop near it, where she guessed Wilson would be, since that's where he had slept during his stay here. After glancing automatically at the small static frame and concrete trough, called 'the bathtub,' located a hundred feet away and used for testing the rockets, she entered the unlocked machine shop and found Wilson kneeling on the floor by the cot he slept on.

He was packing his suitcase.

Shocked and confused, Gladys sucked in her breath – a sound loud enough to make Wilson stop what he was doing and look up at her. His eyes were as blue as the sky above New Mexico, bright with an icy intelligence – and unnervingly steady.

'Hello, Gladys,' he said quietly.

'Hi,' she replied.

'You're back earlier than I'd expected.'

'So I see.'

He glanced down at his suitcase, smiled thinly, then closed the case and stood up to gaze steadily at her.

'I'm leaving,' he said.

Gladys closed her eyes, feeling sick to her stomach. Chilled by the flat tone of his voice, she knew he meant what he said.

'Open your eyes,' he said. 'Don't be childish. You always knew this would come. How did the test go?'

She opened her eyes and tried to see him for what he was.

His hair was silvery, his face handsome but ascetic, and although he was sixty years old, he looked twenty years younger.

She *only* knew what he looked like.

'The test went okay,' she said. 'There was some problem with the gyroscopic controls, but otherwise it was fine... You were going to run away without telling me?'

'Yes,' he replied.

'Why?'

'Because I didn't want any arguments. I told you that someday I'd be going – and today is the day.'

'I didn't think you'd actually – '

'I'm not responsible for what you think – only for what I say. And I told you that one day I'd be leaving and going alone.'

'God, Wilson, you're hard.'

'You've known that since you've known me.'

'I think I'm going to have to sit down.'

'Help yourself,' Wilson said.

She took the chair at Goddard's old writing desk, next to his lathe and workbench, lit a cigarette, exhaled a stream of smoke, and squinted through it at Wilson. He was a tall man, as thin as his smile, and his blue gaze was

steady.

'Okay,' she said, 'so you always told me you'd leave someday. But I still didn't think you'd go this way, deliberately sending me out where I'm not wanted and then sneaking off.'

'I told you: I didn't want any arguments.'

'It's human to argue.'

'To be human is to err.'

'We were lovers, Wilson. That must count for something.'

But he merely shook his head, arguing an academic point. 'No,' he said, 'I'm afraid it doesn't. At least, not for me. The only thing that matters to me is my work – as I've told you repeatedly.'

'Yes, Wilson, you've told me repeatedly. I just happened to think you didn't mean it.'

'I always mean what I say.'

Gladys's heart was racing and she felt desolated, but when she saw the icy glint in his eyes, she knew her grief wouldn't mean much to him. He would leave her as some people disown their pets – and he would never look back.

Accepting this fact, she was able to protect herself by turning professional.

'You're an odd bird, Wilson.'

'You're free to think so.'

'I'm not the only one who thinks so. Goddard's men all think you're strange.'

Wilson smiled mockingly. 'What can I say to that? I'm not responsible for the thoughts of petty minds. What they think is irrelevant.'

'They think you're the genius behind Goddard.'

'They're wrong: I was *learning* from him.'

'They think you know more about rockets than you let on – and that only Goddard is privy to exactly how much you know.'

Wilson simply smiled again. 'I have to go now, Gladys.'

'Does Goddard know you're going?'

'No.'

'Is this how you say goodbye to him? To a genius with whom you've worked for six months? Is this how you thank him?'

'I thanked him by working for him for free. Now that I've learned what I need to know, I've no reason for staying here.' Shocked again at how truly

cold Wilson was, Gladys blew another cloud of smoke and watched it spiralling in front of her. ‘So what did you need to know?’ she asked him.

‘What Goddard could teach me.’

‘About rockets?’

‘Yes.’

‘And why did you need to know about rockets?’

‘That’s not your concern,’ he said.

She looked intently at his blue eyes, trying to find what she had missed, but saw only a luminous intelligence, beyond rancour or warmth.

‘If you’re so concerned with rocket technology,’ she said, ‘why not stay with Goddard?’

‘Because this country always betrays its greatest scientists and will soon betray Goddard.’

‘Does that mean you’re going abroad?’

‘Yes.’

‘Where to?’

Wilson smiled. ‘To where my own work will be appreciated.’

‘And where’s that?’

‘I can’t tell you.’

‘I’m a journalist. I can find out.’

‘It won’t help you.’

‘I can also find out just who you are.’

‘That won’t help you either. Now I’ve got to be going.’

He picked up his suitcase, gazed down at her, smiled thinly, then walked out, not even kissing her goodbye. She had pride, but her heart betrayed her, so she jumped out of Goddard’s chair, then hurried to the doorway of the machine shop and looked into the morning sun.

Wilson climbed into his battered Ford, turned on the ignition, waved at her as if he was just going for a short trip, then drove in the direction of the town of Roswell, with its pioneer trails and still-burning legends, to disappear into his unknown future and leave her all alone again.

‘God damn you!’ she whispered.

CHAPTER TWO

Ernst Stoll's heart was racing with anticipation when he saw his girlfriend, Ingrid, already seated at a table by a window in the Kranzier Cafe, Berlin. Feeling resplendent in his new SS uniform, almost like a film star, he leaned over to kiss Ingrid's cheek, lightly stroked her short-cropped blond hair, then sat facing her and took hold of her hand.

'You look lovely,' he said, meaning it. His excitement was raised by the pale beauty of her face, which was emphasized by her wide-brimmed black hat, black jumper, and string of pearls, all matching the new black coat she was wearing. 'And that coat suits you perfectly,' he added. 'Did you get it in Paris?'

'No,' she said with a gentle smile. 'Right here, in the Kurfürstendamm. Parisian fashions are frowned upon these days, so I made sure it was German. You look handsome in your brand-new uniform – black suits you as well – though I still wish you'd stayed with the Reichswehr, instead of joining the SS.'

'Let's have coffee and strudel,' he suggested, deliberately changing the subject, not wanting this particular day to be spoiled with even a minor disagreement. 'Yes?'

'Yes, Ernst.'

He called the waitress, gave her the order, then glanced out at the busy corner of the Unter den Linden and the Friedrichstrasse, its snow turned to slush by the many cars and pedestrians. When he returned his attention to Ingrid's green gaze, he was overcome by his love for her.

'You look excited,' she told him.

'It's seeing you,' he replied gallantly.

'No, Ernst, I don't think that's what it is. We both know what it is.'

He was grateful that she realized and didn't mind too much.

Today was January 30, 1933. It would soon be a memorable day for

Germany and already the excitement was building. Right now, Hitler and Goring were in the Chancellery with von Papen and Hindenburg, and the street between the Kaiserhof and the Chancellery was crowded with people. Before the day was out, Hitler would be the Chancellor of the Third Reich. A new era was dawning.

'I didn't expect to see you today,' Ingrid said. 'I was surprised to get your message. I thought you'd gone home for the fortnight.'

'I couldn't miss this day,' he told her. 'And my parents understood. My father still doesn't approve, of course – he thinks I'm betraying my middle-class origins – but my mother recently joined the National Socialist Party, in secret, which I think is amusing.'

'I don't,' Ingrid said. 'A divided family isn't amusing. Your beloved National Socialist Party, which has already divided the country, is now dividing individual families. Do you think that's amusing?'

'I didn't mean it that way,' Ernst said, feeling a little embarrassed.

'No, I'm sure you didn't,' Ingrid retorted with soft sarcasm, and then, perhaps realizing how she sounded, gently changed the subject. 'So, how's your family, Ernst?'

At that moment, the waitress returned with their coffee and strudel. 'They're fine,' Ernst said, pouring the coffee from the pot and thinking of his family home in Heidelberg, a grand house with fine gardens on the lower slopes of the majestic Odenwald. 'Father's sold his architectural firm and seems happy to have moved out of Mannheim – and Mother likes it as well.'

'I'm glad,' Ingrid said, 'though I'm also glad I saw the old house in Mannheim before it was sold – the house you were brought up in. There aren't too many like that these days.'

Ernst knew what she meant. His father had been one of the most successful architects in Germany – his work conservatively based on neo-Renaissance and the 'safe' classicism of Ludwig Hoffmann – and his house in Mannheim, where he had spent most of his life, was a spacious residence built around an elaborate courtyard and guarded by wrought-iron gates. Within that imposing home, Ernst had been brought up to treat as perfectly natural enormous neo-Gothic rooms, French furniture, Empire upholstery, fireplaces faced with valuable Delft tiles, glittering chandeliers, maids with white caps, black dresses, and white aprons, and even butlers in purple livery with gilt buttons. Certainly, as Ingrid had noted, there weren't many houses

like that these days – but the very opulence of the lifestyle is what had driven Ernst away from it and into the National Socialist Party, thus outraging his father as well as upsetting Ingrid.

He couldn't explain what attracted him to Hitler because he wasn't too sure what the appeal was. He only knew for certain that he'd been swept up in a tide of enthusiasm generated by his fellow students, first at the Institute of Technology in Munich, then in the University of Berlin, where he had been studying rocket technology under Professor Karl Emil Becker.

If he'd had any doubts at all about National Socialism, they'd been swept away when, during his final semester at the university, he had attended an address that Hitler had delivered, in the Hasenheide Beer Hall, to the students of Berlin University and the Institute of Technology. At first not impressed by the Charles Chaplin look-alike in a plain blue suit, who started speaking almost shyly in that dirty, gloomy beer hall, Ernst had soon been mesmerized by the rising passion of his rhetoric and was then astounded to find himself bawling and clapping with many other students in a spontaneous outburst of enthusiasm. A few days later, unable to forget that mesmeric performance, he had joined the NSDAP; then, a few months after that, he dropped out of the university to join the army as a commissioned officer with the Weapons Office. When recently offered a transfer to the élite SS, he'd been thrilled beyond measure.

'You're looking very thoughtful,' he said to Ingrid, who was staring steadily at him in her disconcerting manner.

'I was thinking what a pity it is that you dropped out of university in order to look handsome in such a uniform. You wanted to be an engineer, Ernst, and now you're a policeman.'

'A soldier,' he corrected her, perhaps too firmly. 'The SS isn't the Gestapo. Please bear that in mind. The Gestapo is the Secret Police organization, run by Goring. SS stands for *Schatz Staffel,* or Guard Detachment, and the SS, created by Himmler, is Hitler's personal bodyguard – not a secret police force.'

Ingrid shrugged. 'It's still sad, Ernst. And I still don't understand why you did it, apart from naivety.'

He felt a flash of anger, but tried to conceal it. 'As I told you before, I joined the army because I wanted to be a *rocket* engineer, and the army is the best place to do that.'

‘That much I understand.’ She brushed the blonde hair from her green eyes, gazed out at the busy corner of the Unter den Linden and Friedrichstrasse, then returned her quizzical gaze to him. ‘But I still don’t understand why you then had to join the SS, which, whether a police force or Hitler’s personal bodyguard, is not the place for a promising young engineer.’

‘Because,’ Ernst lied blatantly, ‘it’s the élite of the army and I only want to be in the best. It’s as simple as that!’

In fact, what he could not explain was the bitterness he had felt ever since being rejected by the German amateur rocket society, the VfR, whose members included not amateurs, as the title implied, but most of the leading rocket experts of the day. Also known as the Spaceship Travel Club, the VfR had come into being in 1927 when a group of brilliant space-travel enthusiasts had taken over an abandoned three-hundred-acre arsenal, which they called their *Raketenflugplatz,* or Rocket Flight Place, in the Berlin suburb of Reindickerdorf, from where they actually shot some crude, liquid-fueled rockets skyward. Intrigued by the success of the VfR, which by 1930 included rocket experts Rudolf Nebel, Willy Ley, Hermann Oberth, and Klaus Riedel, the Ordnance Branch of the army’s Ballistic and Weapons Office, headed by General Becker, had appointed Captain Walter Dornberger to create a rocket development project at the army’s firing range at Kummersdorf, about fifteen miles south of Berlin. It was now widely assumed by those involved with rocketry that as soon as Hitler came to power (which almost certainly he would today), the VfR would be disbanded by the Nazis and become part of the Kummersdorf program.

Ernst had desperately wanted to be part of the VfR, irrespective of who controlled it. After his rejection because of his lack of practical experience, his bitterness had been made more acute when Wernher von Braun, a fellow pupil at the university, had been accepted. Thus, when Ernst was persuaded by a friend that working with the SS technical intelligence group would at least give him the opportunity to keep in touch with the rocket program and perhaps, in time, even give him authority over it, he had not been able to resist asking for the transfer.

‘Listen,’ he said to Ingrid, covering his anger with a broad smile and taking hold of her hand again, ‘I can’t wait any longer. Let’s go and see what’s happening at the Chancellery. There’s bound to be a decision soon – and I want to be there when it’s announced.’

Ingrid's smile, though still loving, was also slightly mocking. 'You want to be a part of history, Ernst?'

'Yes, Ingrid, I do.'

She acknowledged his enthusiasm with a defeated shrug of her shoulders. 'Then let's go!'

As they hurried along the snow-covered Unter den Linden, past its elegant shops and many pedestrians and the noisy flow of traffic, Ernst glanced frequently at Ingrid's flushed face, its beauty now emphasized by the raised fur collar of her black overcoat and broad-brimmed hat. He loved her dearly, though they often disagreed, particularly when they talked about politics and general morality. They seemed opposites, then. She came from a good family in the wealthy Berlin suburb of Wannsee, but she didn't believe, as he did, in the National Socialist Party. She was a liberal, like his father, believed in her own class, and could not be convinced that Hitler would create a new, better Germany. Even now, when they were supposed to be in love, she and Ernst fought a lot about the issue, and this wounded him deeply.

As they approached the corner of Berlin's finest shopping street and heard the sudden roaring of the crowd that had filled the Wilhelmstrasse, Ernst knew that they had just missed the announcement he had wanted to hear. Nevertheless, he practically dragged Ingrid around the corner, into the Wilhelmstrasse, where, between the Kaiserhof and the Chancellery, the great crowd was tramping the snow to slush while roaring approval.

Stopping by the Ministry of Justice, facing the Presidential Residence, Ernst received confirmation from a jubilant fellow citizen that Hindenburg had resigned and Adolf Hitler had just been sworn in as Chancellor of Germany.

Ernst whooped with joy, swept Ingrid up in his arms, and spun her around on the pavement.

'Wunderbar!' he exclaimed.

Any doubts about love or compatibility were swept away in the fervour of the rest of that memorable day. Ernst had no sooner released Ingrid from his embrace than he saw Adolf Hitler standing upright in the back of his open-topped car as it crept slowly through the mass of cheering, waving people in the Wilhelmstrasse, taking him back to the Kaiserhof. Shouting himself hoarse like all the others, Ernst watched his hero being driven past, then embraced Ingrid again, kissed her passionately, and realized that the

excitement was contagious and finally getting through to her.

Excited, they went for lunch, got drunk on beer and schnapps, then took a room in the Adlon Hotel, where their faces were known. They made drunken, passionate love, uninhibited by doubts, and Ernst thought that he would die in Ingrid's body, with its smooth, burning skin, perfect breasts, and sublime, enfolding legs. Eventually, they broke apart drenched in sweat, breathing harshly, exhausted, and he felt that he had died and been reborn and could never stop loving her.

'You're magnificent,' he told her.

Then he had to leave her temporarily to take part in the torch-lit parade that spelled the end of that great day.

Darkness was falling on the city when, with thousands of other troops, all in uniform and with many wearing their swastikas, Ernst commenced the march from the Tiergarten. Accompanied by the beating of drums and the blare of martial music, they passed under the Brandenburg Gate, and then continued down to Wilhelmstrasse, where hundreds of young men were hanging from the railings or perched like birds in the trees.

Raising his voice, as did thousands of others, in the 'Horst Wessel Lied' and other patriotic songs, Ernst soon found himself in the torch-lit darkness outside the Presidential Palace, where a weary Hindenburg raised his hands in salute. Then the crowd moved to the Reich chancellery where, to Ernst's immense joy, Hitler appeared at a window to look down fondly on his men and acknowledge with a smile their triumphant chanting of 'Heil, Heil, Sieg Heil!'

When Hitler smiled and raised his right hand in salute, the massed troops cheered and clapped frenziedly in acknowledgment. Then Hitler went back inside and Ernst lowered his gaze – away from that lighted window, from the fluttering red-and-black flags, from the torches that had formed a river of fire in the Wilhelmstrasse – and saw Ingrid emerging from the crowd, her eyes bright with excitement, her arms outstretched as the drums continued pounding and the noise became deafening.

She threw herself into his arms and clung to him as he stroked her blonde hair.

'Oh, Ingrid!' he said passionately. 'A great day! The future is ours! Let's get married at once!'

'Yes!' she whispered, clinging to him, part of him. 'Yes, Ernst, let's do

it!’

Their hearts beat like the drums.

CHAPTER THREE

'Yes,' Mike Bradley said, thinking about Gladys Kinder instead of the facts as he gazed out the window of General Taylor's office at the other buildings being constructed on the sloping green fields of Langley Field, Virginia. 'I told him we were about to form a National Advisory Committee on Aeronautics and were considering a team that would include him and other aeronautical geniuses, such as Charles Lindbergh and Orville Wright, but the legendary Robert H. Goddard *still* showed no interest. He just doesn't give a damn.'

'Why?' Taylor asked pragmatically.

'Because he doesn't trust anyone,' Bradley replied with a frustrated shrug of his broad shoulders, remembering the polite, suspicious voice he had heard over the telephone when he had called from his office on Wall Street. 'Reportedly he patents every damned thing he invents, is notoriously secretive and uncooperative with his fellow scientists, feels that many of his ideas have been stolen by them, notably those in Germany, and will take help only from organizations like the Smithsonian Institution, which lets him do whatever he wants. In fact, he's even refused the assistance of the California Institute of Technology Rocket Research Project and has been relying instead on the inadequate funding of Clark University in Worcester, where he teaches physics when he's not working on his rockets.'

'Though according to Charles Lindbergh,' General Taylor pointed out, 'whom I met here just yesterday, Goddard has recently accepted some other help.'

'True enough,' Bradley said. 'With Lindbergh's recommendation he was recently able to get a Guggenheim Foundation grant for $2,500, which enabled him to leave Clark and return to Roswell, New Mexico.'

Where Gladys Kinder lives, he thought. He'd been unable to stop thinking about Gladys Kinder ever since their brief meeting. *It's ridiculous,* he

thought. *You're being ridiculous. She's just a sharp-tongued lady from a cow town and you're imagining things.* Though he couldn't help wondering...

'Is that where he was when you phoned him? Back in Roswell?'

'No,' Bradley said. 'He hadn't returned there yet. He was still at Clark.'

'If what you say is true, he thinks that if he joins our proposed National Advisory Committee on Aeronautics, he'll have to share his precious ideas with us.'

'That's my bet,' Bradley said.

General Taylor smiled laconically. 'He sounds like a burgeoning crackpot.'

'But a brilliant one, General – and one you could do with on your side. Since a major function of the committee will be to assess the military possibilities of aeronautical developments around the world, a man of Goddard's background and reputation would be invaluable to you – not only for his technical knowledge, but also as a public relations weapon.'

'Well, we'll just have to get along without him.'

'I guess so,' Bradley said.

The sound of hammering from outside momentarily distracted the general and made him glance out the window. Following his gaze, Bradley saw some men in coveralls kneeling on the roof of the adjoining building as they expertly nailed down some more beams. When these buildings were completed, they would house the new National Advisory Committee on Aeronautics as well as a branch of the still too informal Army Air Force intelligence. General Taylor was currently the head and Bradley was an increasingly enthusiastic, but unofficial, agent of the intelligence unit.

'It's interesting that he should be so concerned with German rocket development,' the general said, returning his thoughtful gaze to Bradley, 'since that's also what we're concerned with right now.'

'The Pentagon isn't,' Bradley replied. 'Since the White House has adopted an isolationist stance regarding Europe, there's no Pentagon interest in German weaponry.'

'I can't speak for the whole of the Pentagon, let alone the White House,' Taylor said, 'but I think I can say with confidence that we in military intelligence are concerned with the growing militarism of Germany, particularly since Hitler was elected chancellor. It's not our belief that America will be involved in European politics per se, but there's certainly

been enough concern to cause the air force to informally gather information on aeronautical developments in Hitler's new Germany and, especially, on any further developments regarding the…' The general glanced down at the notes on his desk… 'The *Verein fur Raumschiffart,* or VfR,' he read, then looked up again.

'Right,' Bradley said. 'The German amateur rocket society.'

'It's wonderful,' the general said with a slight, sardonic smile, 'how bright boys like you can bring back such interesting information from their vacations in Europe.'

Bradley knew what the general was getting at. He, Bradley, had been a highly decorated pilot during the Great War, but had left the service in the mistaken belief that he was becoming too old for it and needed a more settled life. So, he had studied law instead, married Joan, and was rewarded with two fine kids, Mark and Miriam. Though successful as a lawyer specializing in the drafting of complex agreements between government departments and civilian aeronautical research establishments, he'd become increasingly bored with Wall Street and started calling his old military buddies to ask them for work, official or otherwise, that was more important and exciting.

Convinced that matters in Europe would eventually lead to another world war, he'd used his Ivy League Wall Street friends to build up strong connections in Washington, DC, and London. Eventually he managed to convince the army's chief of staff, General Douglas MacArthur, to let him embark on an unofficial intelligence-gathering trip to Europe, in the guise of studying international laws relating to aeronautics. During that trip, in 1932, aided by some old friends who were now with the well-organized British Intelligence Service, he had travelled extensively and reported, in particular, on the growing militarism of Germany. What he had seen there had shocked him and made him fear for the free world. He no longer shared his own government's confidence that America could stay out of Europe – certainly not if the National Socialists, under Hitler, got what they wanted – and upon his return to the United States had insisted in his lengthy report that the country must prepare itself for inevitable involvement in another world war.

While his report had not been taken seriously by the White House, since then General Taylor had used him as an unofficial agent between Taylor's Army Air Force intelligence branch and British intelligence, as well as a legal adviser, general administrator, and headhunter for the soon-to-be-formed

National Advisory Committee on Aeronautics – which is why Bradley had made his recent, unsuccessful trip to Robert H. Goddard in Roswell, New Mexico.

'But why would our air force be interested in a bunch of amateurs?' General Taylor asked, after a thoughtful pause.

'Because they're *not* amateurs,' Bradley told him. 'The *Verein fur Raumschiffart* was founded in 1927 and soon included most of the rocket experts of the day: Hermann Oberth, Max Valier, Rudolf Nebel, Willy Ley, and Klaus Riedel.'

The general gave a low whistle of respect. 'That's some bunch of scientists,' he said. 'What were they up to?'

'We know that a number of small liquid-fuelled rockets were fired from their testing ground in the Berlin suburb of Reinickerdorf. Then, in April 1930, Captain Walter Dornberger was appointed to the Ordnance Branch of the German Army's Ballistics and Weapons Office, headed by one General Becker. Dornberger was to work on rocket development at the army's Kummersdorf firing range, approximately fifteen miles south of Berlin. Two years later the VfR demonstrated one of their liquid-fuelled rockets to Dornberger and other officers at Kummersdorf.'

'I'm surprised I haven't heard of this,' Taylor said, sounding slightly aggrieved.

'Maybe that's because recently, with Hitler's support, the Gestapo moved in and overnight the VfR ceased to exist as a civilian organization.'

'But it's now being used by the army.'

'Right. A lot of its members, including the reportedly up-and-coming Wernher von Braun, were taken under Dornberger's wing and began working at Kummersdorf in strict secrecy.'

'Ah,' the general said softly, 'so *that's* why our air force is concerned!'

'Damned right,' Bradley said. 'And if they knew what I recently learned in Roswell, they'd be even more concerned.'

'And what was that, Mike?'

'Since Goddard was so damned suspicious and frosty over the phone,' Bradley explained, thinking again of Gladys Kinder and feeling distinctly guilty, 'I visited Roswell in order to interview those who'd known him there – his engineers, the local townsfolk, and so forth. Anyway, over the week I spent there, I became increasingly concerned with the fact that Goddard, with

so little assistance either financially or from fellow scientists, had managed to make such extraordinary advances in rocket research. Then, shortly after the final launch, I was introduced to a woman – '

'I won't tell your wife that,' the general interjected.

Bradley grinned, as if appreciating the joke, but inwardly burned with the guilt he'd been trying to keep at bay ever since his single meeting with Gladys Kinder.

The proprietor of the Roswell *Daily Record* had put him in touch with her. They'd met in the bar of Bradley's hotel, and he'd been instantly intrigued by her air of worldly cynicism. In the course of a conversation about Goddard's rocket team, he'd become uncomfortably attracted to her. Clearly realizing what was happening Gladys had passed a few mischievous remarks to that effect and actually managed to make him blush.

She was tall and lean and had a head of short-cropped brown hair, which made her seem slightly mannish, and gray eyes that were disconcertingly steady over a full-lipped, sardonic smile. She'd been wearing a long, belted dress, with high-heeled boots and a Stetson hat. He, in his gray suit, portly and not too tall, in his late-thirties and starting to show it (though thankfully he still had his hair) had felt soft and pampered in her attractively laconic presence.

You didn't meet women like that in New York – and besides, he just *liked* her.

Now, when he recalled Gladys Kinder and also thought of his attractive, good-humoured wife, Joan, who lovingly looked after their home and children in Connecticut, he felt as guilty as if he'd had an affair, which he certainly had not done. He had simply been tempted, that's all... So why should he feel guilty?

'The woman, Gladys Kinder,' he continued uneasily, 'is a journalist for one of the local papers, the Rosewell *Daily Record.* When I told her I'd spent the past week checking up on Goddard and his old launching grounds in Eden Valley, she told me that two years ago she'd had an affair with another physicist who'd stayed with Goddard for six months, spent most of that time working and sleeping in Goddard's machine shop, and was considered by most of Goddard's men to have been very influential on Goddard's work. Those facts were later confirmed in my discussions with some of the rocket team.'

Even now, as he spoke to the general, Bradley thought it odd that the mention of Gladys Kinder as Wilson's mistress should make him feel slightly resentful and, perhaps, even jealous. It was too ridiculous for words, but he couldn't deny the feeling; and when he recalled her sly smile in the hotel's gloomy bar, her droll mockery of his obvious confusion in her presence, he was irresistibly seduced by her image and wanted to see her again.

Crazy. Just crazy...

'*What* was this woman's name?' the general asked, picking up his pen and staring with what Bradley, in the guilty panic of his thoughts, imagined was accusing intensity.

'Kinder,' Bradley replied, feeling a helpless stab of desire and its bed partner, guilt. 'Gladys Kinder.'

'Kinder,' the general murmured, writing the name down. 'Gladys Kinder,' he emphasized, as if deliberately tormenting Bradley. 'Mmmm...' he murmured, studying the name thoughtfully before putting his pen back down, looking up again, and saying 'So, what about him?'

'Pardon?'

'The physicist that the Kinder woman told you about.'

'Ah, yes...' Bradley gathered his thoughts together. 'Miss Kinder told me that when the physicist left for good after the rocket launching of December 31, 1930, Goddard confessed to her that his mysterious, temporary assistant was a, quote, genius, who'd helped him develop many of his more notable innovations, including liquid-fuelled, self-cooled motors, gyroscopes for guidance and control, lightweight fuel pumps, and reflector vanes to help stabilize and steer the rockets. The guy's name was John Wilson.'

'Interesting,' General Taylor said, writing that name down also, then popping some gum into his mouth and starting to chew, 'but I can't see what relevance all this has to Adolf Hitler's Germany.'

'Well, I can't be too sure of this,' Bradley replied, 'but I do have my worries there.'

'Don't tease me, Mike.'

'Well, for a start this John Wilson's a complete mystery. No one at Roswell knew where he came from, Wilson wasn't about to tell them, and even *Goddard* swore he didn't know anything about him, other than the fact that he was extraordinarily knowledgeable about physics and aeronautics. He just turned up at the ranch one day, showed Goddard some of his own

drawings, and then asked if he could help him with the rocket project. As for Wilson's journalist friend, Gladys Kinder…' He couldn't avoid the name, and it brought back all his guilt. '…even though she was his mistress during that six months, she learned only that he had an engineering background and loathed the US government for reasons that he never explained. She also learned, just before Wilson's abrupt departure, that he intended leaving the United States for good and going to a country where people like him and Goddard would be appreciated, instead of being treated as cranks.' There was more loud hammering from outside and General Taylor, after wincing, said, 'I can't stand this goddamned noise, Mike. Do you fancy a walk?'

'Sure,' Bradley said, feeling trapped with his recollections of Gladys and glad to escape. 'Why not?'

Leaving the office, they strolled outside where the noise of the workers was even louder and the sun shone over the flat green fields. Relieved to breathe the fresh air, Bradley followed the general away from the skeletal buildings and their many workers, down toward the banks of the Potomac River.

'So where do you think your mysterious genius, this Mr Wilson, went?' General Taylor asked, striding across the grass and glancing keenly around him.

'A lot of the German engineers,' Bradley said, 'including Wernher von Braun, revere Goddard and are known to have based their work on his ideas. Our mysterious John Wilson would certainly have known that – and would also have known that while here, in the United States, Goddard's theories were being treated with contempt, Germany was spending fortunes on rocket research that was, by and large, based on his work.'

'So you think this Wilson went to Germany?'

'I don't think it – I know it. I checked yesterday with the Immigration Department and learned that one John Wilson left this country on January 20, 1931, that he stayed in London for a few weeks in early March of that year, and that he applied for a German visa that same month. According to British immigration records, a US citizen called John Wilson left England on a boat sailing for Bremen, Germany, on April 5, 1931. There's no other record of his movements.'

'You mean, you think he's still there, in Germany.'

'Yes.'

‘Have you checked with the German authorities?’

‘They deny all knowledge of him.’

‘But you think they’re lying.’

‘Yes. I think he’s still there – and if he is, and if he’s working on rocket research, we should be concerned.’

Stopping by the edge of the river, they looked across to the far bank. The fields that stretched out on all sides were flat, densely forested, and sun-splattered. Birds flew overhead.

‘You’re my best man for intelligence gathering,’ General Taylor reminded him, ‘so perhaps you can track him down.’

‘I’m not so sure,’ Bradley said, feeling the itch of frustration. ‘We’re talking about Hitler’s Third Reich. One man on his own can’t do much with this kind of problem. That’s why we need a central intelligence-gathering organization,’ he continued, warming to his favourite theme. ‘The Brits have an intelligence system that puts us to shame. The last thing we had that remotely resembled an intelligence agency was Herbert Yardley’s Black Chamber – which was only a code-breaking unit – and since *that* was closed down in 1929 we haven’t had a damned thing to replace it. Which is doubtless why Yardley wrote his best-selling book exposing our so-called secrets – and why New York federal marshals, the damned idiots, have just raided the offices of a perfectly respectable publisher to impound Yardley’s second book.’

The general laughed heartily at that one, then said, ‘The way you pronounce the word “idiots”, Mike, reminds me that you’re an Irish-American.’

‘Ha ha,’ Bradley responded, but warmly, without malice. He was proud of his background and not ashamed of what he’d become, despite not being what he should have been. Although his uneducated grandparents had emigrated from Ireland and he’d been raised as a Roman Catholic, Bradley had gone against convention by becoming a staunch member of the Republican party, instead of a Democrat, which most of the Irish were. He had also, after winning numerous awards for distinguished service in the battlefields of France in the Great War, become a successful lawyer, with his own law firm on Wall Street. So, yes, he was proud of his background and achievements – and knew that General Taylor, his close friend, truly respected him.

‘Anyway,’ the general said, wincing when the hammering on the distant buildings started again, ‘you were starting to talk a blue streak, so don’t let me stop you.’

‘This guy, Wilson,’ Bradley continued, ‘who is *possibly* an aeronautical genius, has gone off to sell his talents to a country whose whole interest in science is geared to its aggressive potential – in other words, Hitler’s Third Reich.’

‘So?’ Taylor said.

‘So, since the Third Reich *is* devoted to war, we should be keeping tabs on Wilson – but we can’t do it because we don’t have the necessary intelligence-gathering organization.’

‘But we *do* have that.’

‘No,’ Bradley insisted, ‘we don’t. What we have is an uncoordinated collection of different intelligence agencies. Army Intelligence, or G2; the Office of Naval Intelligence; the FBI; the Secret Service; the State Department; the Customs and Immigration services; the Federal Communications System Service; and the Treasury’s Foreign Funds Control Unit – not one of which deals with the others, let alone recognizing them.’

‘So?’

‘So what we need is a centralized, coordinated intelligence, like the British Secret Intelligence Service.’

‘A sort of Central Intelligence Agency,’ Taylor said.

‘Right, General. You got it’

‘Ah!’ the general exclaimed softly. ‘So *that’s* why you came all the way from New York to see me, instead of using the phone. You want to ride your favourite hobbyhorse again and persuade me to include you in the formation of a proper, coordinated intelligence-gathering agency. Have I got it right, Mike?’

‘Yes, General, you have. I’m a highly successful, thirty-eight-year-old lawyer with a plush office in Manhattan, but the best time I ever had in my life was during the war.’

‘So I gathered,’ the general said. ‘The Distinguished Service Cross, the Distinguished Service Medal, and the Medal of Honor...’

‘Right,’ Bradley interjected. ‘Which proves I’m a survivor – and that I’m willing to hang in when the chips are down.’

‘No argument there,’ the general murmured. ‘Come on, let’s head back.’

They turned away from the river, heading back to where the men with the saws and hammers and nails were swarming like flies over the frames of buildings that would soon house a branch of Army Air Force intelligence and the new National Advisory Committee on Aeronautics.

When Bradley thought of aeronautics, he thought of John Wilson; and when he thought of that mysterious genius, he also thought, with guilty, helpless longing, of Wilson's mistress: the middle-age, laconic, and undeniably attractive Gladys Kinder.

He just couldn't help himself.

'Anyway,' he said, 'my kids are growing up, they're both now away at college, and although I still have Joan, I'm bored with my legal work. I'm also, as you know, deeply convinced that America will, sooner or later, have to become involved with the outside world. I accepted your offer of unofficial intelligence gathering in Europe because I hoped that it would lead to stronger ties with the intelligence services already existing over there. And having been there, I'm convinced more than ever that we need a central intelligence-gathering agency – and I happen to know that you believe that also and have even discussed it.'

'You know more than you should,' General Taylor said, 'which is, of course, why we should take you on, on a more permanent basis.'

They skirted around the building site and stopped by Bradley's car, parked just outside the general's office, gleaming in sunlight.

'Are you in the process of forming such an agency?' Bradley asked as he slipped into his car.

'Early stages yet,' the general replied, 'but the short answer is yes.'

'And can I be part of it?'

'Yes – when the time comes. In the meantime, you'd better get on the trail of this John Wilson. If we can't yet find out what he's doing in Germany, you might at least find out where he came from and just who he is.'

'I will,' Bradley said.

When the general had entered his office, Bradley drove away, feeling a lot better, disturbed only when he thought of Gladys Kinder and her relationship with the enigmatic, possibly dangerous, John Wilson.

'Goddammit!' he whispered.

CHAPTER FOUR

The two men came for Wilson at the Zeppelin Works at Friedrichshafen at eight in the morning and escorted him out of the factory without a word. Both men were wearing the black uniforms of the SS, and not those of the Gestapo, which Wilson took for a good sign. He felt no fear and asked no questions when, outside the factory, they ordered him up into the back of a canvas-topped truck that already contained a collection of men and women, none of whom looked too happy and some of whom were actually in handcuffs. Wilson sat between a Frenchman who tugged nervously at his peaked cap and a Jewish woman whose dark eyes glowed with dread, then the truck growled into life and began its journey to Berlin. Two armed soldiers sat at the end of the truck, to ensure that no one tried to escape.

Wilson, who did not wish to escape, merely smiled at the sight of them.

The journey began in the mist of morning and ended in the evening, with the streetlights illuminating the monolithic architecture of Berlin. In that long eight hours they had been driven a great distance, from Friedrichshafen on the north shore of Lake Constance to steely-gray Munich, from there to Nuremberg, still sombre in the noonday sun, then across the majestic, forested hills of Thuringia, with the shadows of the trees lengthening in the deepening light of afternoon, then through Dessau as darkness was falling and eventually into Berlin.

Wilson had taken it all in from the back of the truck, every glimpse he could get through the canvas flapping near the two soldiers, and had noticed, especially, the many troop trucks on the roads, the armed soldiers in even the smallest towns. He was reminded, beyond any shadow of doubt, that this country was set for war.

It was just what he needed.

Throughout the journey, the two guards had said little to the prisoners, other than ushering them in and out of the truck two or three times to enable

them to eat or go to the toilet. They had done this in a distant but reasonably civilized manner, but now, as they kept their charges covered while escorting them from the truck into a large, official-looking building, they both became noticeably more tense and officious, barking their orders and even hitting some of the prisoners with the butts of their rifles when they failed to move quickly enough.

Once inside the building, which was gloomily lit and drearily institutional, the predominance of immaculate black uniforms, gleaming boots, and blond hair made it obvious that this was SS headquarters.

One of the female prisoners started weeping and a man crossed himself, but Wilson, as he had done that morning, took it as a good sign that he was in the hands of the SS, which he had wanted, and not the Gestapo.

The prisoners in handcuffs were led away. Wilson and the others were told to sit on the wooden benches lining the walls of a gloomy corridor. A golden-haired SS sergeant took their identity papers, disappeared through a door, and returned shortly after to lead Wilson away from where he had been sitting, between the dark-eyed Jewish woman and the unshaven Frenchman who had constantly murmured to God for deliverance. Glad to be rid of them, Wilson was even more pleased when he was escorted into an office and made to stop before the desk of a man he recognized from his many photographs in the newspapers: the head of the SS, Heinrich Himmler.

He did not raise his head when Wilson was escorted in, but continued to study the papers on his desk. Wilson recognized his own handwriting and the technical sketches he had included with his lengthy letter, and smiled, feeling pleased with himself, until Himmler looked up at him.

Wilson immediately removed the smile from his face and looked deeply respectful.

Himmler sighed, as if weary. He had bland, decent features, a neatly trimmed moustache, and gray-blue eyes whose mildness was emphasized by his glistening pince-nez spectacles. He was a man without vanity or cruelty or lust, but Wilson knew, the minute he saw those eyes, that he was also quite mad.

It was what Wilson needed.

‘So,’ Himmler said, ‘you are Wilson – John Wilson – an American citizen.’

‘Yes, Herr Himmler,’ Wilson replied in perfect German.

‘Reichsführer,’ Himmler corrected him mildly.

‘Sorry, Reichsführer.’

‘You’ve been living in Germany, under an assumed name and with forged German identification papers, for the past three years. This is correct?’

‘Yes, Reichsführer.’

‘And as this fictitious German citizen, you’ve been doing important research work on advanced gyroscopic controls with the subsonic wind-tunnel at the Zeppelin Works in Friedrichshafen.’

‘Yes, sir.’

Himmler offered a slight, chilling smile. ‘You realize, Herr Wilson, that these are criminal offences – that you could even be labelled as a spy and executed accordingly.’

‘My purpose isn’t spying, Reichsführer, as the notes and drawings I sent you clearly prove.’

‘Ah, yes... the notes and drawings.’ Himmler adjusted the spectacles on his nose and glanced down at Wilson’s papers. When he raised his eyes again, he was still smiling in that slight, chilling manner. ‘What these notes prove, Mr Wilson, according to my aeronautical advisers, is that you are an extraordinarily brilliant physicist and engineer. What they fail to prove is that you are not here on behalf of your government. In other words, as a spy.’

‘I have no reason to love the American government – and my only interest in life is my work. That’s why I’m here.’

Himmler stared steadily at him, with a cold curiosity, then smiled bleakly and indicated the chair in front of his desk. ‘Please,’ he said. ‘Be seated. Can I fetch you some tea?’

‘No, thanks,’ Wilson said as he sat down and studied the powerful, soft-faced lunatic across the desk. ‘I drink as little as possible.’

‘And hardly eat, so I’ve been informed. Does that explain your remarkably youthful appearance?’

‘It helps,’ Wilson said, not forgetting for a moment that Himmler, former fertilizer salesman and chicken farmer, was quietly obsessed with all kinds of esoteric theories, including astrology and runes, the secret of the pyramids, the spirit of the eternal *Wandervogel,* Horbiger’s world of ice and fire, and, of course, the magical properties of certain diets. ‘I eat and drink only the bare minimum,’ he clarified, ‘though I find that the odd glass of white wine can be beneficial.’

‘You speak flawless German,’ Himmler said. ‘When and where did you learn it?’

‘I learnt it here, in Germany, Reichsführer.’

Himmler raised his eyebrows to display his scepticism.

‘*Here,* Mr Wilson? In the Fatherland? In a mere three years? I would think that even a child, let alone a man your age, would have trouble in being so fluent in our difficult tongue after such a short period.’

‘I have a retentive memory,’ Wilson explained, ‘and I learned it in three years. We didn’t even learn French in Iowa, let alone German. I’ve learnt it since coming here.’

He was impatient with the question, since languages came easily to him. He had never experienced difficulty in learning *anything,* so could not abide ignorance. And languages, compared to mathematics or science, were merely child’s play.

‘Ah, yes,’ Himmler said, forgetting the vexing question of language. ‘Iowa! The heartland of America. Which is where you came from.’

‘Yes,’ Wilson confirmed, remembering the rolling plains, the cold winters and long hot summers, his parents working in fields of corn between sunrise and sunset while he, who could never stand the place, searched the distant horizon. He looked back with no emotion, simply recalling it from his mind, and retained no more feeling for that landscape than he did for his parents. He remembered them treating him kindly, but that didn’t mean much to him.

The past was a dead place.

Himmler nodded judiciously, glanced down at Wilson’s papers, picked some up and let them fall to the desk again, then spread the fingers of his delicate, almost feminine hands over them. ‘Naturally we’ve checked the details you gave us about your background and found them to be exactly as you stated. You’re a remarkable man, Mr Wilson, perhaps even extraordinary – which would only make you all the more dangerous, should you not be what you say you are.’

‘I’m a scientist, Reichsführer. I want to get on with my work. I can’t do what I want to do in America, so I came here, to Germany, where I know that my particular kind of talent is much in demand. It’s as simple as that.’

‘*Nothing* is as simple as that, Mr Wilson, as you and I both know. You’re an American citizen, and no matter your grievances, you must still love the country you came from.’

‘I do not, Reichsführer. To me, it’s just another country and one that can’t help me.’

Himmler actually looked shocked, as if blasphemy had been spoken. ‘Patriotism!’ he exclaimed. ‘You have no sense of that?’

‘No.’

‘I find this hard to believe.’

‘Believe it.’

‘If you were a German citizen, I’d have you shot for that attitude.’

‘I’m not German, Reichsführer.’

Himmler picked up a pencil, drummed it on the desk, tapped it lightly against his teeth, then put it down again. He sighed, almost sadly. ‘Even though our country is not at war with yours, what you’ve done, in coming here to work for us, is virtually treason. Are you a traitor? Is that what you want to be?’

Wilson had to admire him for saying that. The chicken farmer was no fool. He looked like a schoolteacher, perhaps even a monk, but mixed in with his lunatic ideas was a steely intelligence. Not a *vast* intelligence, but a sharp one, which meant that he had to be handled carefully and never taken for granted.

‘A traitor?’ Wilson said. ‘I don’t think in such terms. I was exploited by my government, then betrayed and cast aside, and now I wish to lend my talents to those who will use them.’

‘*Lend* your talents?’

The question actually amused Wilson. ‘How wise you are, Reichsführer, to understand that a man of my ambition would not willingly do anything for free. Naturally, I came here for the most selfish reasons – because I live for my work and only someone like you would have the vision and courage to finance it. I’ll work for you as long as you finance my research – which is why I wrote to you.’

‘And you do not care to what ends your research will finally be put?’

‘A true scientist can’t be concerned with such matters. My only concern is the pursuit of ultimate knowledge – and I know you agree with that. I’m just as much a soldier as you are, but what I fight for is science.’

‘Are you as *ruthless* as a soldier, Herr Wilson?’

‘Yes, Reichsführer, I am.’

Himmler smiled, obviously pleased with this response, though his smile

held no warmth.

'Why me?' he asked softly. 'Of all the people in the Third Reich, why did you write to me, rather than to some influential scientist or politician? You must have known you were taking a great chance – exposing yourself as an alien who used false identification papers in order to obtain a position in one of our most important research establishments – and that I could have decided to have you shot as a spy. So why me, Herr Wilson?'

'Because you're a man of vision,' Wilson said, combining a lie with a certain amount of truth. He felt that Himmler was, indeed, a man of great dreams, if not vision, who would support any kind of research, no matter how esoteric or even mad. For that, if for very little else, he would certainly be useful. 'Because you believe in the limitless possibilities of the future, will back your beliefs with actions, and will not let petty human emotions stand in your way. You and I, Herr Himmler, if I may say so, are similar that way.'

'What you say may be true,' Himmler replied, unmoved by flattery, 'but it still doesn't explain why I should give you, a foreigner, my support, particularly since you wish to take part in our most vital, and therefore confidential, research.'

'You should give me your support, Reichsführer, because my papers have shown you what I can do – and what I can do is much more than anyone you have could do.'

'Some of my scientists would take offence at that remark.'

'That wouldn't change its accuracy. My work is proof of my genius. More important, I'm engaged in a project similar to one you've already started: the creation of a revolutionary form of transport and extraordinary weapon.'

'You mean Projekt Saucer.'

'Yes, Reichsführer.'

'And how did you know about that, Herr Wilson, since the project is under SS supervision?'

'There are always whispers, Reichsführer, particularly among scientists, and naturally I picked them up in Friedrichshafen. I was also puzzled to see certain, odd machine parts in the Zeppelin Works – but when combined with some of the experiments taking place in the wind tunnel, I realized they could only relate to the development of an aircraft shaped like a saucer – the kind of machine being researched with Projekt Saucer at Kummersdorf West.'

'What kind of experiments were you doing in the Zeppelin wind tunnel?'

‘Tests relating to Prandtl’s boundary layer.’

‘The importance of which is?’

‘If we can’t solve the problem of the boundary layer, the speed and manoeuvrability of our aircraft will always be limited.’

‘Please explain.’

‘The perfect flying machine will be one that requires no runway, since it will take off vertically, will be able to hover in midair, and will not be limited in flight by Prandtl’s boundary layer.’

‘I am not an engineer,’ Himmler reminded him impatiently.

‘According to Prandtl’s theory of the boundary layer, the air sweeping in on an object in flight increases its resistance in direct proportion to the increasing speed of the flying object. Because of this, the speed of any flying object is finite. However, if some method can be found of removing the boundary layer, virtually limitless speed and manoeuvrability will be achieved.’

‘And a disc shape is the best shape for this?’

‘Potentially, yes. The build-up of the boundary layer is dramatically increased by the many surface protuberances of a normal aircraft – wings, tails, rudders, rotors, and so forth. If we could get rid of those – by somehow wrapping them together as part and parcel of the one, circular, smooth-surfaced flying wing – we would at least be on the road to the perfect flying machine.’

‘And you think we can accomplish this here in Germany?’

‘I think you’re the country with most interest in such developments and certainly the most advanced so far. Regarding vertical-rising aircraft, the Focke-Wulf Company has already announced that it has almost completed its FW 61 helicopter, which will be the first fully operational helicopter in existence. Regarding experimental tailless aircraft, or flying wings, devoid of vertical stabilizing or control surfaces, the Horten brothers of Bonn have already produced some successful prototypes. As for other problems standing in the way of limitless speed and manoeuvrability, it was a German, Professor Ludwig Prandtl, who, at Gottingen in 1904, defined the nature of the boundary layer. Since then, many other German scientists have been experimenting with revolutionary new types of aircraft in the hope of finding a way of defeating that layer. A disc-or-saucer-shaped aircraft, without any surface protuberances, is the logical outcome of that research.’

Himmler's smile was as chilling as the gaze behind his small pince-nez. 'There are those who would say that such an aircraft cannot be built.'

'The foolish always speak loudest.'

'And you think that you can help with such a project?'

'I can complete it, Reichsführer. I've been working toward this goal all my life and have now almost reached it.'

Himmler glanced at Wilson's technical drawings, which had been done in black ink, then raised his eyes again as he spread his slim hands in a questioning manner.

'But are you close to reaching it?' he asked. 'My scientists often make the same claim, but so far they have failed.'

'Just look at my drawings, Reichsführer.'

'I am not a scientist, Herr Wilson. Your drawings look impressive, but to me they are meaningless – though initial reports have certainly confirmed that your written work is extraordinary. These drawings will have to be studied further by people more knowledgeable than I. In the meantime, I have to consider what it is you want from me.'

'I've already told you that, Reichsführer. I wrote to you not only for the reasons we've just discussed, but also because I know that the SS is gradually taking over the security and management of the Third Reich's major scientific and research establishments, that soon it will be the most powerful organization in Germany, and that you, its Reichsführer, are the only man in power with the vision to see what can be done in this particular field. Already you've implemented a disc-shaped aircraft project; only I can take that project to its completion – but I need your support.'

There was silence for a moment and Wilson waited patiently, neither excited nor frightened. He was fully in control as Himmler stared steadily at him. He did not flinch from the mild monster, but neither did he try to challenge him. Instead he let his gaze go slightly out of focus, as if gazing inward.

Which he did in a sense, thinking back upon America, remembering Goddard and how the Americans had mocked him while these clever Germans revered him. Well, Goddard was back in Roswell, struggling along on a mere pittance, while he, Wilson, if Himmler went as he thought he would, would soon have all the money and equipment he could possibly want.

Pleased, he focused again upon Himmler, whose mild gaze concealed madness.

'You *do* realize, Herr Wilson, that once I gave that support, you would be committed to working for the Third Reich for the rest of your days?'

'Yes, Reichsführer.'

'And that if you betrayed us, or even tried to leave the country, I would personally have you executed?'

'Yes, Reichsführer, I realize that, also.'

'You are therefore willing to commit yourself totally to the Third Reich and all it stands for?'

'Yes, Reichsführer,' Wilson said. He lied easily, being well beyond morality, thinking only of his own plans for the future and ignoring all else. 'I'm willing to do that.'

Himmler stared steadily at him, his gaze searching, then he nodded, as if coming to a decision, though not without doubts.

'You must really despise your government,' he said, 'for what it did to you.'

'No, I don't,' Wilson said. 'Such emotions are redundant. I'm here not because I want revenge, but because my government won't support my work and I think you will. It's as simple as that.'

'You are more than committed to your work,' Himmler observed. 'You are clearly fanatical.'

'I live only for my work – as you do – and that makes us superior men.'

'I think you really believe that, Herr Wilson.'

'I do, Reichsführer. I do.'

Himmler smiled at the subtle flattery but was otherwise unmoved by it. He then glanced down at Wilson's drawings, scratched his nose while studying them, shook his head from side to side in wonder, and looked up again.

'I am going to have you placed in the custody of the Gestapo,' he said, 'in their headquarters in the Prinz Albrechtstrasse. You needn't worry. I do this merely for convenience. I wish to have these drawings examined in more detail – and to have you interrogated at length, regarding your past and present attitudes as well as your work. Naturally, you will be interrogated by one of my intelligence officers – but hopefully one with an engineering background. Should the results of our investigations prove positive, you will,

as you request, be given work at the rocket research establishment at Kummersdorf West. On the other hand, if our findings are negative, you will be shot and buried as the German citizen whom these false identification papers say you are. Is that acceptable, Herr Wilson?'

'Yes, Reichsführer – and thank you.'

Himmler nodded at the armed guard in the corner of the room, and Wilson was led out to begin his journey to Gestapo headquarters.

CHAPTER FIVE

Bradley met Robert H. Goddard on the porch of the latter's large frame house on a street shaded by horse chestnut trees in Worcester, Massachusetts, in the winter of 1933. The snow had not yet come, but the day was misty and cold, and the leaves were blowing around Bradley's feet when Goddard shook his hand and ushered him inside.

It was a pleasant, old-fashioned house, with its original furniture covered in relatively new slipcovers, its windows draped with chintz, and a wood fire burning in the large, open fireplace. Bradley knew that Goddard had lived here all his life, and it certainly suited him, being an unpretentious, comfortable place.

'Please take a seat,' Goddard said, his voice as formal as his appearance when he indicated the sofa by the fire. 'I'm sorry I can't offer you much – my wife's not home at the moment – but I can at least make a cup of coffee.'

'That'd be fine,' Bradley said. 'I'll have it black. No sugar.'

Goddard nodded solemnly and disappeared into the kitchen; he returned a couple of minutes later, carrying two cups of coffee. Bradley noticed his stooped walk, which, like his bald head, had been caused by tuberculosis in his youth. Goddard handed Bradley the black coffee, sipped at his own, then took the armchair facing the sofa. His eyes were brown over a small moustache, his gaze slightly suspicious, reminding Bradley that he wasn't keen on representatives of a government that had ignored his remarkable talents for too long.

'So,' Goddard said, 'you insisted on seeing me, even after I put you off on the phone when you called me at Clark. Have you come to make me an offer?'

Bradley grinned. 'No. I'm not in science or finance. I *have* heard that you've had trouble getting financed, but that's not what I'm here for.'

‘If you’re not part of the government’s scientific community, why come to see me? The US government has never shown much interest in my work, so I’m naturally surprised that one of their representatives should turn up on my doorstep – more so since he hasn’t come to offer me help.’

‘The National Advisory Committee for Aeronautics was recently formed to advise the government on every aspect of aeronautical development, political and scientific, both here and abroad. For that reason it was composed of those most respected in the aeronautical community. You were invited to join – and you rejected the offer.’

‘With all due respect to Orville Wright and my good friend Charles Lindbergh, I don’t consider such an offer to be of help. In making me such an offer, you were seeking my help – and what I need is government backing for my expensive research. That has never been offered.’

‘I’m sorry.’

‘I’m sure you are.’

Realizing that this was not going to be easy, Bradley decided to skip the formalities. ‘In fact, perhaps to make matters worse, I’m asking for help again.’

‘Obviously not scientific help.’

‘No. I’m an intelligence officer for the US Army Air Force and I need information.’

‘Information about my work?’ Goddard asked suspiciously.

‘No,’ Bradley replied. ‘I need to know about someone who worked with you – a man named John Wilson.’

Goddard straightened up, looking surprised, then collected himself by sipping some more coffee. When he lowered the cup and saucer to his lap, his gaze was masked.

‘Ah, yes,’ he said, ‘Wilson. An odd bird. So why do you want to know about him?’

‘Because I have to find him,’ Bradley said, ‘and he hasn’t left many tracks. Do you mind if I smoke?’

When Goddard shook his head to say he didn’t mind, Bradley, who smoked only when he didn’t know what to do with his hands, lit a cigarette.

‘Why do you have to find him? Has he committed an offence?’

‘No,’ Bradley said, exhaling a stream of smoke. ‘And that’s all I can say for now. But please accept that this man must be found – and you’re our first

lead.'

Goddard shrugged. 'I can't help you much, Mr Bradley. I doubt that I know any more about him than you do. I only worked with him.'

'*With* him? I thought he worked *for* you.'

'You mean as my assistant?'

'Yes.'

Goddard smiled for the first time – a slight, laconic smile. 'Well, he certainly was that – or was supposed to be that – but a man like Wilson doesn't work for anybody else. He was too bright for that.'

'How bright?'

'Brilliant. He was clearly a genius.'

As Goddard wasn't known for his generosity to fellow scientists, Bradley was surprised by this description.

'*You've* been called a genius,' he said. 'Are you saying that…'

'The word genius is used far too casually for my liking,' Goddard interjected, 'and so isn't one I'd normally use lightly. Yet I'd apply it without doubt to Wilson. The man was a genius.'

'How much did you learn about him?'

'Not much, Mr Bradley. He was guarded about his past, almost paranoid about remaining anonymous, and seemed to have few interests, other than space flight. Like me, he thought it possible to fly to the moon – and that's why he came to me.'

'When was that?'

'In 1930.'

Bradley saw a glass ashtray on a low table near the bookcase, so leaned sideways, picked it up, balanced it on one leg, and nicked some ash into it. 'And how did he come to work with you? Did he initially write to you?'

'No. He simply turned up out of the blue, told me he was an aeronautical engineer who had designed *airships* – '

'*Airships?*'

'Correct.'

'Did he say he did that work in Europe or America?'

'He certainly didn't mention Europe. In fact, I got the impression that he'd never been there in his life.'

'Yet that's where most of the airships have been constructed and flown.'

'That's where the *first* airships were constructed and flown,' Goddard

corrected him. ‘The first was built by Henri Giffard of France in 1852; powered by a 350-pound engine, it was successfully flown over the Paris Hippodrome at a speed of six miles an hour. An internal combustion engine fuelled by hydrogen from the airship’s bag was then used by the German, Paul Haenlein, for his even more successful flight in 1872. Albert and Gaston Tissandier of France successfully powered an airship with an electric motor in 1883, and the first rigid airship, with an aluminium-sheeting hull, was built in Germany in 1897. And I don’t have to tell you that the Germans used a number of large Zeppelin airships to bomb Paris and London throughout the Great War.’

‘All European airships,’ Bradley reminded him.

‘Yes, of course – they were the best known. But a few airships were constructed here in the 1920s, and more are being constructed right now – so there’s nothing remarkable in Wilson’s assertion that he worked on airship designs.’

‘Which must have been just before he came to work for you.’

‘Probably,’ Goddard said.

‘What else did he tell you?’ Bradley asked.

‘He was obsessed with the possibilities of space flight – and therefore with my rocket research. He said he’d been inspired by the fact that I’d managed to launch liquid-fuelled, instrument-carrying rockets, and informed me that he wanted to work with me and learn from me.’

‘I’m surprised you let him.’

Goddard didn’t smile. ‘As he was older than me,’ he said, ‘I was certainly initially uncomfortable with his suggestion, suspecting him to be someone simply desperate for work. However, he showed me his papers, which proved beyond doubt that he’d attended the MIT between 1888 and 1893 – before my time there — then Sibley College at Cornell University, in Ithaca, New York, where by 1895 he’d obtained his Bachelor of Science in aeronautics. He also proved, both verbally and with various papers he’d written and let me read, that he had an extraordinary – and I don’t use the word lightly – an extraordinary grasp of aeronautics and physics. Naturally, Mr Bradley, after that, I couldn’t turn him away.’

‘He started working for you immediately?’

‘Yes.’

‘This was at your Guggenheim-financed experimental station in Roswell,

New Mexico?'

'Correct.'

'For how long?'

'Approximately six months.'

'That doesn't seem too long.'

'No, but it was all he needed. During that period he helped me enormously – but he also learned everything I'd discovered so far about steering systems, gyroscopic controls, and various kinds of self-cooling combustion chambers. Those were the things he wanted to know about – and when he'd found what he needed, he left, not even leaving a goodbye note.'

'Not exactly showing gratitude,' Bradley said.

Goddard smiled for the second time. 'Wilson wasn't a man for gratitude – and I learned as much from him as he did from me, so I can't really complain.'

Whether or not Goddard felt the need to complain, Bradley certainly thought that Wilson's abrupt departure could only be the act of an extraordinarily cold, thoughtless, self-centered man. When he also thought of how casually Wilson had dismissed and left his former mistress, the intriguing Gladys Kinder, he was even more convinced that the man he was trying to picture clearly was not the warmest, most sensitive soul on earth. Certainly he was a man who used people and casually cast them off – a man who didn't need love or friends. A man completely alone.

'So what did you think about him as a person?' Bradley asked, desperately hoping to fit a human face to his shadowy quarry.

'I don't know what you mean,' Goddard said with scientific detachment.

Bradley blew a smoke ring, watched it grow larger and thinner before disappearing, and then, realizing what he was doing, felt a little embarrassed. 'Did you become friends in any sense?' he asked.

Goddard shrugged, displaying his confusion, which made him more likable. 'I got on well with him,' he said, 'but in an academic way. We both lived for our work, we'd both had bad times with the government, and we agreed that the mind should rule the heart – not vice versa, as is commonly believed. Oddly enough, then, though there was little warmth between us, we had much in common.'

Bradley hardly heard the last remark, because his lawyer's instincts, always tuned to the unusual, had honed in on something else.

‘Did you say he’d had trouble with our government?’ he asked, leaning forward, forgetting the ashtray, but managing to grab it before it fell off his leg.

‘Yes,’ Goddard said. ‘Just like me.’

‘You mean the trouble was related to his work?’ Bradley asked as he rearranged the position of the ashtray.

‘Yes,’ Goddard confirmed. ‘He didn’t tell me much about himself, but he *did* say that he’d come from Iowa, worked on some airship projects, and came to me when those projects were first taken over by, then dropped by, the US government. Is that why you’re interested, Mr Bradley? Were you involved in his problems?’

Feeling distinctly uneasy, Bradley was nevertheless able to answer honestly. ‘No. I know nothing about them. It’s interesting, though, that he should have said that. What do *you* think?’

‘I don’t think I have to tell you, Mr Bradley, that for years I’ve felt neglected by the US government – and if Wilson was working on airships, or similar projects, and was then either dropped or blocked by the government, he would feel as bitter as I do – which is very bitter indeed.’

Bradley almost *felt* Goddard’s bitterness. Deeply embarrassed by it, he disguised it by drinking more coffee and then clearing his throat.

‘Did he say or do anything to substantiate such bitterness?’

‘Yes,’ Goddard replied without hesitation. ‘Just before our rocket test flight of December 31, 1930, which Wilson should have attended, he told me that our government didn’t appreciate its brightest minds, that it would eventually make things difficult for me, and that I should consider leaving the country for good and taking my talents where they’d be more appreciated.’

‘And where did he suggest, Mr Goddard?’

‘Germany,’ Goddard said. ‘He reminded me that the German rocket scientists revered my work and that because of that I’d certainly get the financing there that I couldn’t get here. Two days later, while we were testing our latest rocket, he packed up and disappeared.’

‘Was your rocket test a success?’ Bradley asked, thinking it wise to lighten the conversation.

‘It was gratifying,’ Goddard replied. ‘The gyroscopic controls didn’t work properly and the descent parachute didn’t open, but the rocket reached a speed of 350 miles per hour and a height of nearly two miles.’

‘That’s impressive.’

‘Yes, it’s impressive – but not to your superiors.’

Feeling that he’d just been slapped on the face, and also oddly haunted by the ghostly man he was pursuing, Bradley finished his coffee, stubbed his cigarette out, placed the ashtray on the table, and prepared to leave.

‘Is there anything else you can give me that might help me?’ he asked.

‘No,’ Goddard replied, standing up to show him to the door. ‘What I’ve told you is all I *can* tell you. Apart from that, he’s a mystery.’

Bradley sighed. ‘Thanks anyway,’ he said. ‘I’d like to apologize for how the government’s treated you, but – ’

‘It’s not your place to do so.’

‘Yeah,’ Bradley said, grateful for the unexpected sensitivity. ‘Right. It’s not my place. Thanks again, anyway, Dr Goddard – and the best of luck for the future.’

Goddard just smiled and nodded, led him to the door, remained on the porch till he drove away, then disappeared back into his attractive, old-fashioned house.

Bradley drove straight to the MIT, flirted with the middle-age lady who worked in the records department, and soon learned that John Wilson had indeed attended the university before going on to Cornell in Ithaca, New York. He was also able to ascertain from Wilson’s old registration card that at the time of his enrolment, he had been living in Massachusetts with only his father, that before that he had lived with both his parents in Montezuma, Iowa, and that he had been born there on July 6, 1870.

Growing ever more intrigued by the fragmented trail of his brilliant, mysterious quarry, Bradley took the next train out of Massachusetts.

‘Airships,’ he muttered to himself as he sat in his reserved seat in a first-class car and lit a cigar. ‘What next? I wonder.’

The train moved into darkness.

CHAPTER SIX

Ernst awakened at dawn, after a night of bad dreams, thinking he was in a cell in Stadelheim Prison, his heart pounding with fear. Then he saw his own bedroom, felt Ingrid beside him, and so heaved a sigh of relief and reached out to touch her. She was naked beneath the sheets, her skin smooth and warm, and aroused, he rolled in against her, hoping to waken her.

She did not awaken immediately, which disappointed him again, and still caught in the web of his frightening dreams, he gazed through the windows. The curtains had not been drawn and he saw the dawn's dark-gray light, gradually illuminating the houses opposite, in the modestly-priced Berlin suburb of Helensee. They had moved here a year ago, two weeks after they were married and had honeymooned in Paris, which, compared to Berlin, had been like heaven on earth. It seemed longer than a year ago (so much had happened in that turbulent period) and Ernst, now the father of a daughter, Ula, wondered where all the joy had gone.

Germany had changed dramatically in the fifteen months and he had changed with it.

Not wishing to think about it, feeling the need for escape, he pressed himself against Ingrid's spine and ran his hands over her. He heard her breathing change, felt her stiffen and then relax, so he whispered her name into her ear and she sighed and turned into him. She gazed at him with sleepy, cat-like green eyes, then kissed him sensually.

This was the dawn's sole reward, and he made love with feeling, aware that it was not like it had been, but grateful to have her. Ingrid's body was still sublime, a soft retreat from harsh reality, and he slid along her belly, sucked and licked her breasts and neck, and moved inside her with the desperate need to obliterate what had recently been haunting him – the knowledge that he was losing her love as his pride was destroyed.

When he had finished and was hoping to rest on top of her, she slid out

from under him.

'I'll get breakfast,' she said.

'Please, Ingrid, stay in bed a little longer.'

'No,' she said. 'You'll be late.'

Reminded by that remark of what the day might yet bring, Ernst felt the chill of dread slipping through him. He had forgotten that he'd been ordered to report back to barracks unusually early, in preparation for possible action against the SA, or Brownshirts, who were reported to be planning an armed rebellion under the leadership of Captain Ernst Roehm.

Another police duty, Ernst thought bitterly as Ingrid, in a dressing gown, padded from the room and he slid his legs out of the bed and went into the bathroom.

As he attended to his ablutions, he pondered the fact that even he was becoming confused by the sheer number of conflicting groups within the Third Reich's increasingly nightmarish police structure. Top of the list were the Gestapo, or Secret State Police. Originally under the command of the debauched Hermann Goring, recently it had been taken under the wing of Heinrich Himmler, who was also head of the SS. The SS had been formed as Hitler's personal Guard Detachment but was fast becoming the most feared police force of all. Next came the SD, which acted as the long-range Intelligence and Security Service of the SS, under the control of the dreaded Reinhard Heydrich. Last of the major groups was the SA, originally formed as part of the SD and consisting of Ernst Roehm's brown-shirted Storm Troops, who represented the military arm of the Nazi Party and were used mainly to intimidate, beat up, or murder those openly opposed to it. Now that degenerate madman, Roehm, was rumoured to be planning a *putsch,* or armed revolt, against the Reichswehr... And today's police duty, Ernst suspected, had something to do with that situation.

He resented being involved with such duties – more so because Ingrid had frequently expressed her contempt for the SS, which she viewed as fascistic and brutal. He also resented them because what he had been promised, eighteen months ago, would be aeronautical intelligence gathering for the SS technical branch had in fact turned out to be secret service intelligence gathering against, and the arresting of, all those who opposed Hitler's National Socialist Party.

Ernst had escorted more unfortunate souls into Stadelheim Prison and

Gestapo headquarters than he cared to remember – and there were stories about both of those places that he preferred to forget.

Suddenly filled with the nervousness that always assailed him when he thought of his SS duties, he had a quick bath, dressed even more urgently in his gleaming black SS uniform, looked fondly in on his nine-month-old daughter, Ula, where she was sleeping in her cot in her own brightly painted room, then went into the kitchen to have coffee with Ingrid. She was sitting at the table, a steaming mug in her hands, her short-cropped blonde hair attractively dishevelled around her delicate features. Having Ula had not made her lose her figure, which remained slim and sensual; and Ernst, as he took the chair facing her, was grateful for that.

'I'd forgotten I had to be there so early,' he said, sipping his coffee. 'I also forgot to tell you that I may not be coming home tonight. It could be a long duty.'

'What is it this time?' Ingrid asked him, her green gaze steady over her steaming mug.

'I don't know,' he lied, because he had been ordered to do so and did not dare do otherwise. 'They only said that it was some kind of police action that could take a long time.'

In fact, he had been told in confidence the previous day by Gruppenführer Josef Dietrich, commander of Hitler's élite SS bodyguard, the *Leibstandarte*, that for months the SA, under the command of the notorious homosexual, Captain Roehm, had been in growing, increasingly open revolt against Hitler in particular and Himmler's SS in general, and now that conflict was coming to a head. According to Dietrich, Goring, SS chief Heinrich Himmler, and the dreaded SD chief Reinhard Heydrich had formed a secret alliance to get rid of Roehm and were going to act soon.

Ernst dreaded the form such an action might take, but tried to look unconcerned.

'Another police action,' Ingrid said, putting his previous thoughts into words and imbuing them with soft sarcasm. 'Before we married I said you'd end up as a policeman — and that's what you are.'

'I'm *not* a policeman,' Ernst insisted too loudly, aware that he had to do this too often. 'I'm not a member of the Gestapo, so please stop suggesting that I am.'

'You do the Gestapo's work,' Ingrid replied, not perturbed by his outrage,

‘and that’s just as bad.’

‘I obey orders,’ he said, ‘and that’s *all* I do. It’s not the kind of work I wanted, it’s certainly not what I expected, and although I don’t always like what I’m told to do, I *must* obey orders.’

‘You could *try* refusing.’

‘That’s nonsense, and you know it. I’m an SS officer, a *German* officer, and you know what that means.’

‘It means you work as a policeman.’

‘It means that if I don’t do what I’m told, I’ll be imprisoned myself – or possibly shot. Is that what you want?’

Ingrid placed her cup back on the table and gazed down at her coffee, perhaps trying to hide the blush he could see on her cheeks.

‘I’m sorry,’ she said. ‘I know you’re not really a policeman. I also know you don’t like what you’re doing and my attacks make it worse. I hate saying these things, but I can’t help myself. I hate the SS – and I can’t bear the thought that you, who should have been an engineer, are doing their dirty work. It makes me feel sick.’

‘It sometimes makes me feel sick as well,’ Ernst said, ‘but what else can I do? I’m an officer in Heinrich Himmler’s SS – and it’s too late to get out.’

Ingrid raised her head again. ‘Are you sorry you joined?’

He shrugged. ‘I’m not sure. Sometimes I feel betrayed – they said I’d be in *technical* intelligence – but at other times, and I certainly can’t deny it, I want to surrender my own feelings to the general good.’

‘And you think that what’s happening at present is for the general good?’

Ernst heard his own sigh like a soft wail of defeat. ‘We can only hope,’ he said. ‘At the moment, things certainly look ugly, even shameful, but one hopes that the end will justify the means – and that’s all one can hope for.’

Ingrid had just been about to take his hand, but she froze, glanced at him, then sat back and stared distractedly around her, as if looking for exits.

‘Everything’s changed so quickly,’ she said, shaking her head in bewilderment. ‘Nothing’s been the same since that night outside the Chancellery. It’s only been fifteen months, yet now we live in a city ruled by brown-shirted brutes, secret police, intimidation and fear. It’s been like a bad dream.’

Ernst knew what she meant and rarely stopped thinking about it. He, too, remembered that wonderful moment in Wilhelmstrasse, when Hitler had

appeared at the window of the Chancellery to salute his cheering men. It had been a great moment, a transcendental experience, one that had seemed to offer the promise of a magical future. A mere fifteen months ago...

And since then?

Ernst could not forget that he had been one of the truckloads of SS men, hastily sworn in as auxiliaries to the SA, who had, in March 1933, just a few days before he'd married Ingrid, swarmed through the city to round up known Reds and Social Democrats and take them into 'protective custody' – a term that, even then, was rumoured to mean imprisonment, torture, or execution. Nor could he forget that he had been one of the many proud SS guards who sang the 'Horst Wessel' song in the Kroll Opera House, temporary site of the new Reichstag, the tumultuous night that Hitler, wearing his brown SA uniform and standing on a stage decorated with a huge swastika flag, made the speech that expunged democracy from the German parliament. Nor could he forget that while the midnight calls and arrests increased, along with the whispers about torture and murder in SA and SS prison cells, he had been one of the many loyal 'policemen' who had seized union offices throughout the nation, arrested labour leaders, confiscated union files and bank accounts, shut down their newspapers, and in one awful day obliterated organized labour in the whole country.

Now the Führer, Adolf Hitler, was ruling a totalitarian state known as the Third Reich – and he, Ernst Stoll, once a mere technical student, had aided his ruthless climb to power. Naturally, Ingrid was right: he had a lot to be ashamed of. But though he sometimes acknowledged this to himself, the shame and despair in which he writhed secretly made him loathe her for saying it.

'I have to go now,' he said.

Feeling like someone being sucked into quicksands, and filled with the feeling that today would be a nightmare, he walked around the table, kissed Ingrid's cheek, and started out of the house.

'Don't do anything you'll be ashamed of,' Ingrid joked, trying to lighten the depression he was clearly showing.

'I'll try not to,' he replied with a smile and a wave, before stepping outside and closing the door behind him.

Waiting on the pavement in the morning's brightening light for the jeep that would transport him to Stadelheim Prison, he could not shake off his

recollections of the past fifteen months and realized why he was losing Ingrid's love, even as his pride was being destroyed. He had become a policeman, the emissary of butchers, and as his resistance was eroded and his pride subtly destroyed, Ingrid's respect for him, the basis of her love, was also being eroded.

The Third Reich was driving a wedge between them, just as Ingrid had said it would.

The jeep that Ernst had been waiting for turned the corner at the bottom of the street, came toward him and pulled in to the curb. As his fellow officers, Willi Brandt and Franck Ritter, both lieutenants, were taking up the rear seats, Ernst sat up front with the driver – not without noticing that the normally ebullient Brandt was looking gloomy, while Franck was clearly excited.

'So,' Ernst said, as the jeep moved out into the almost deserted road and headed for the Prinz Albrechtstrasse, 'another early-morning call for the élite. It's so nice to be wanted.'

'It depends what they want us for,' the gloomy Brandt said, 'since that may *not* be nice.'

'I always enjoy the early-morning calls,' Franck said, sounding as excited as he looked. 'It usually means some kind of action.'

'I like action in the cinema,' Brandt replied. 'I don't like to be part of it. Not when it involves arresting people and throwing them into that prison.'

'They deserve what they get,' Franck said. 'If they didn't, we wouldn't arrest them. They're the dregs of society – drunkards, gypsies, communist traitors and Jews – and what we do is for the good of the country, which is why I enjoy it.'

'You'd enjoy torturing or shooting them even more,' Brandt said in a remarkably careless outburst, 'but that doesn't make it right.'

'Those are the words of a traitor!' Franck snapped. 'I could report you for that!'

'If it gets me off this duty,' Brandt responded, 'please be my guest.'

Unnerved by the conversation, Ernst told them both to shut up, then he glanced at the awakening city through which they were moving. It was a warm Saturday morning and already the news vendors were out, selling the propaganda to be found in the *Illustrierte Beobachter* and *Frankfurter Zeitung* while the Brownshirts took up their positions on the pavements,

preparing for another day of insults, beard-tugging, and other carefully planned humiliations.

An average weekend in Berlin, 1934.

Ernst felt even worse when the jeep pulled up at the main entrance to the grim Gestapo headquarters in the Prinz Albrechtstrasse. He was startled by the number of SS jeeps and troop trucks lined up along the pavement, and even more startled when, inside the gloomy building, he found that it was packed with heavily armed SS troops.

'This is no ordinary working day,' Brandt whispered, looking even more upset. 'What the hell's going on, Ernst?'

'Something big,' Ritter exclaimed, his eyes gleaming with excitement. 'I knew it! *I knew it*!'

Even as he spoke, the door behind them opened again and more SS troops hurried in.

'They've arrested Roehm!' someone whispered.

'Hitler himself did it!' someone else added.

'It's us or the SA,' another voice said. 'And today will decide it.'

Hardly able to believe what he was hearing, Ernst led his two comrades up the stairs and along some packed corridors, until he came to the office of his superior, Gruppenführer Josef Dietrich. As Ernst stopped in the doorway, Dietrich barked orders to a group of SS officers. When the officers left, all looking anxious, Dietrich waved Ernst inside.

'Heil Hitler!' he snapped automatically, then added more reasonably: 'Prepare yourselves, gentlemen. Operation Calibra has begun. You are in for a busy day.'

'I'm sorry, sir,' Ernst said, 'but I'm not familiar with that code name.'

'No, Lieutenant, of course not. Only the most senior officers were informed. It came to our attention that Roehm was planning a putsch and the ultimate destruction of the authority of the army and SS. However, early this morning, our courageous Führer, in the company of Goebbels, flew to Bad Wiessee and personally arrested that disgusting pervert and the nest of homosexual traitors he calls his stormtroopers, at the Pension Hanselbauer, near the Tegernsee. According to my reports, most of the pig's men were still in bed when the raid took place – many of them caught in *flagrante delicto* with fellow SA troops or local youths. One's stomach churns just to think of it.' Here the Gruppenführer shook his head in disgust. 'Nevertheless,' he

continued, ‘they were all rounded up and are at this very moment being transported back to Berlin to be incarcerated, with Roehm himself, in the Brown House, prior to being quickly tried and judged. Today, gentlemen, we will wield our long knives – so prepare to shed blood.’

Ernst’s soul plunged into despair – but he found no escape.

At 10.00 that warm Saturday morning, he was informed that the cells of Stadelheim Prison were already packed with SA leaders. Those still in the Brown House, including Roehm, had demanded to see the Führer, but were refused and, instead, transported to Stadelheim in an armoured car. There, Roehm was put in a solitary cell, not far from the one he had occupied after the Beer Hall *putsch.*

Shortly after learning of Roehm’s incarceration, Ernst was called to the office of Gruppenführer Dietrich, who told him that the purge was beginning.

‘I personally,’ Dietrich proudly informed him, ‘have been put in charge of the executions of the SA men being held in Stadelheim Prison. Meanwhile, you’re to go with Lieutenant Ritter to the home of General von Schleicher and once there put him to death. You understand?’

‘Yes, sir,’ Ernst replied, burning up with shock and disbelief. He was being ordered to kill the former chancellor of Germany. ‘I just think – ’

‘Don’t think, Lieutenant, just obey. And when you’ve completed your task, drive straight to Stadelheim Prison to receive further orders. Now good luck and – Heil Hitler!’

Unable to believe what he was hearing, but forced to accept that this was real, Ernst soon found himself seated beside the hated Franck Ritter in one of the many police cars that were careening and screeching through the streets of Berlin in the great roundup of enemies of the Reich. As if caught in a dream that was turning into a nightmare, he saw one unit, the troops wearing steel helmets, armed with rifles and submachine guns, surrounding von Papen’s office. Hearing the sound of gunfire, savage and frightening, Ernst felt sick to his stomach, too hot, unreal. He briefly closed his eyes, but opened them again to see a similar unit closing in on Roehm’s opulent residence on the Tiergartenstrasse.

Sirens wailed in the distance.

Too soon for Ernst’s liking, he and Lieutenant Ritter were being ushered by an unsuspecting cook into the study of a comfortable house in a suburb of Berlin. While Ernst licked his dry lips and fought to stop himself from

shaking, Ritter asked the distinguished-looking gentleman sitting at the desk if he was indeed General von Schleicher.

'Yes, of course,' the former chancellor replied, looking up in surprise, even as Ritter pulled his pistol from its holster, cocked the safety catch, and opened fire.

The noise was appalling in that confined space.

Fumbling in a state of nerves, not having killed before, Ernst fired in a daze even as Schleicher was falling – and, worse, just as Frau von Schleicher appeared out of nowhere, rushed toward her stricken husband, and was cut down by the bullets that Ernst and Ritter were still firing.

Now two bodies lay on the floor in dark pools of spreading blood.

While Ernst stood there, too shocked to move, Ritter hurried over to the bloody bodies on the floor, examined them dispassionately, then looked up and said, 'This bastard's dead, but his wife's still alive. An ambulance is coming for them, dead or alive, so let's get out of here. There's more work to be done.'

Which was certainly true.

In the courtyard of Stadelheim Prison the slaughter was well under way, but Ernst, when he reported to Gruppenführer Dietrich, was told to make his way back to Gestapo headquarters in the Prinz Albrechtstrasse where there was plenty of worthwhile work still to do. After driving there in traffic jammed up by the police roadblocks and SS trucks being used to raid other SA groups, he was ordered down to the cells. It was a hell of smoke and ricocheting gunfire, of aggressive bawling and piteous pleas for mercy, and Ernst didn't know what to do, didn't want to do anything, turned away to rush out again, but was pushed back by an officer.

'That bastard in there!' the officer bawled. 'That rat in his hole!'

Pushed forward by the officer, Ernst found himself beside the weeping Willi Brandt in a crowd of jostling SS troops, firing his pistol, as the others fired, into Cell 16. There, Gregor Strasser, winner of the Iron Cross, first class, devoted National Socialist and once the Führer's friend, dodged back and forth, his eyes astonishingly bright, trying to avoid the hail of bullets. Finally, jerking spasmodically, he collapsed in his own blood and was given the coup de grâce.

The cells stank of cordite and piss and the rank sweat of terror.

There were no names after that – only bodies spurting blood. Ernst went

with the others, losing control of himself, firing his pistol in dark prison cells, in the hot, sunlit courtyards, then driving across the city to execute others in their homes, then on to the Lichterfeld Barracks – here, there and everywhere, through the day, into the night – murdering SA troops and government ministers and policemen and politicians.

He fell asleep in darkness, awakened to the new day, took part in more executions at Lichterfeld Barracks and Columbia House, an SS torture chamber, until, at approximately 0400 hours the following morning, he was finally allowed to holster his pistol and wash the blood from his hands.

Like his good friend Willi Brandt, he wept and then dried his stinging eyes.

He remembered returning home and telling Ingrid what had happened. He remembered, also, that she did not show any sympathy for his exhaustion, any understanding of his feelings of shame and horror, but only reviled him for what he had done, swore that she would never forgive him, and told him never to touch her again, because he would simply revolt her. That morning, as he lay on the sofa, he drew his strength from contempt for her.

He became a good Nazi.

CHAPTER SEVEN

Wearing a gray suit, plain white shirt, and tie, Bradley was feeling more like a full-time lawyer and less like a disappointed, part-time intelligence agent when he picked up the telephone in his office high above Wall Street.

'Miss Kinder?' he checked tentatively. '*The* Miss Kinder, from Roswell, New Mexico?'

'That's right,' Gladys Kinder replied. 'You sound surprised, Mr Bradley.'

'Well, I certainly wasn't expecting to hear from you, so…you know, I was – '

She chuckled in a familiar, oddly mocking manner. 'Well, here I am.'

'Where, exactly?'

'In the Algonquin Hotel. It's famous for its famous resident writers, so I wanted to stay here.'

'What are you doing in New York?' he asked, feeling guilty at how pleased he was to hear her voice. 'It's a long way from Roswell.'

'I'm on my way to Europe,' she replied, 'and I'm sailing from this fair city, so I thought I'd give you a call. I remembered that you'd taken a shine to me when we talked in your hotel, so I figured you'd at least buy me a drink.'

'I really don't think – ' he began, taken aback by her insolence, embarrassed by her accuracy, and horrified that his secretary might be listening. 'I mean, I – '

She chuckled with throaty amusement. 'Oh, stop worrying, Mr Bradley. I know you're not the playboy type. I really called because I have some information that I think might intrigue you.'

'What information?' he asked carefully.

'Wilson. You remember John Wilson?'

'Yes,' he replied, sitting up straight in his chair, even as the mention of Wilson's name revived his feelings of bitter disappointment. 'Of course I do.

He's the reason you and I met in the first place, so...'

'Still interested in him?'

'Well, not exactly. I mean...' He didn't quite know how to phrase it. He didn't even want to think about it, since it made him mad and frustrated. 'That project's sort of gone off the boil,' he tried. 'It kinda got put on ice.'

'Ah-ha!'

'Right,' Bradley responded, already feeling too emotional just hearing her voice.

'So explain, Bradley. I thought you were hot for Wilson.'

'I was, Gladys, but various things got in the way. Basically, it was decided from above that what we had on Wilson wasn't enough to establish him as someone worth wasting good government money on. In short, I was taken off Wilson's case and given some others, so I haven't done anything about him for some time. I asked them to give me a few more days, but they cut me dead on the spot.'

'And when was that?'

'A couple of days after I'd visited the MIT to check Wilson's background and education. Since he'd gone from there to Cornell, I was going to go there next, but when Taylor put a stop to the project... Well, I was really disappointed and kinda lost interest.'

'*I've* been to Cornell,' Gladys said. 'I went there to visit a friend before leaving for Europe; and since Wilson had once told me that that's where he'd been educated, I decided to check his records while I was there. I come cheap, so buy me lunch and I'll give it all to you.'

At once embarrassed and charmed by her unusual boldness, Bradley practically stuttered, 'Well, I don't know, Gladys. I'm pretty busy here... and what with the project being put on ice and all... Well, I don't...'

'You don't want to see me before I leave for Europe?'

'Well, yeah, I do, but...'

'Then don't make excuses. And believe me, Bradley, when you have this information on Wilson, I don't think you'll have any problem at all in reviving the project – so you win on both counts. Now, do you want it or not?'

'I want it,' Bradley said, now excited for more than one reason. 'Where and when can we meet?'

'My ship leaves tomorrow, so can you meet me today? I've a prior

engagement for this evening,' she said, sounding as if she was teasing him, 'so how about lunch right here?'

'You can't make it any other time?'

'No.'

'Then lunch it is.'

'I'll be at a table in the restaurant. One o'clock?'

'Right,' he said. 'Thanks for calling.'

'My pleasure, Bradley.'

Feeling remarkably flustered, Bradley put the phone down just as Mark, his eighteen-year-old son, entered the office. 'Hi, Dad,' he said.

Mark was blessed with his mother's warm brown eyes and sensitive features, which no doubt helped, Bradley thought, with the many young ladies he dated in Manhattan during the weekends. In fact, Mark, though oddly shy, was a considerable ladies' man who kept one set of girlfriends in Manhattan, where he went to college, and another in Connecticut, where he lived with the family on weekends. Bradley had always liked people who could surprise him and Mark could certainly do that.

'Hi, kid,' Bradley said, as his son took the chair at the other side of his desk. 'Is it lunchtime already?'

'Yep, it sure is. Don't tell me you were working too hard to notice. I don't fall for those tricks.'

Feeling guilty, Bradley grinned. 'Did I promise you lunch today?'

'Yeah,' Mark replied, 'but I'm letting you off the hook. Since my lecture's been cancelled and I have the afternoon off, I'm going to have lunch with Gail Mitchell, who looks sweeter than you.'

'Gail Mitchell? Do I know her?'

'I don't think so. She lives in Brooklyn Heights. I met her through a friend at college. She's rich and impossibly attractive and too tall for you.'

'I may be only five-foot-seven,' Bradley said, unburdened of his guilt, 'but what there is, is all man. Anyway, never mind. I was going to disappoint you. I'm having an unexpected business lunch today, so I'm glad you're fixed up.'

'Who are you lunching with?'

'Dave Marsh,' Bradley lied instinctively, impelled by the return of the guilt caused by the thought of Gladys Kinder and using the name of a friend he often met for lunch.

‘You mean that other lawyer?’

‘Right.’

‘I think I met him at home a few years ago.’

‘You did. We once invited him for Thanksgiving. He got drunk and made a pass at your mother, which gave her a thrill. Anyway, since it’s urgent, I had to cancel you and arrange to meet him instead.’

‘Charming,’ Mark retorted.

‘Well, I knew you’d have a tall lady at hand, so I wasn’t too worried. Come on, let’s go.’

They left the office, took the elevator down to Wall Street, and stood outside on the busy, sunlit pavement.

‘Are you having a long afternoon or just lunch with your Amazon?’ Bradley asked.

‘Just lunch.’

‘Okay. Since it’s Friday afternoon, why not meet me on the platform of the station at four sharp and we’ll go home together?’

‘Sounds good,’ Mark said.

‘Okay, son, I’ll see you.’ When Mark had sauntered off along the crowded sidewalk, Bradley grabbed a taxi to the Algonquin Hotel on 44th Street. He found Gladys Kinder already seated in a booth in the Rose Room, drinking bourbon and smoking a cigarette.

She certainly looked her age, which she had said was thirty-eight, but even in her old-fashioned clothes, which were doubtless the rage in Roswell, she had an undeniable attractiveness and, at least to him, an oddly opaque, provocative sensuality.

She made him feel slightly out of breath.

As he sat beside her in the banquette, wondering why she had chosen it instead of an open table, she held up her glass, grinned laconically, and said, ‘I’ve been on the wagon since last night, but I couldn’t resist this. We working journalists are all the same.’

‘It looks almost empty,’ Bradley observed. ‘Shall I order another one?’

‘Why not?’ she responded.

‘Shall we also order the food?’

‘Sure,’ she said. ‘Why not?’

Instantly recalling her ability to hold her liquor, and also remembering that when drinking she could be impish, Bradley ordered two more bourbons.

He went through the menu with her, ordered the food for both of them, then, when the aperitifs had arrived, raised his glass to her.

'Cheers,' he said.

'Cheers, Mr Bradley,' she replied, also raising her glass and smiling.

'Mike… Please call me Mike.'

'That sounds really intimate, Mike – but what the hell, call me Gladys. Not the most *romantic* name for a lady, but I've learnt to live with it.'

He had to grin at that one. 'You said you were on your way to Europe. Did you really mean that?'

'Yep. Sure did, partner. I never quite recovered from the way that bastard Wilson left me, I didn't particularly like being a middle-aged spinster in New Mexico, and so I wangled myself a job as foreign correspondent to the Roswell *Daily Record,* which I've served so well so far. Those good ol' boys in Roswell always treated me fine, and when I told them I needed to get away, this is what they came up with. It doesn't pay much, but I'll get to see Europe, and I've dreamed about that all my life.'

'Based anywhere in particular?'

'London. But I'm hoping to go on to Spain. I think things are happening there.'

'Bad things.'

'I guess so.'

Over the meal, Bradley told her what he knew about Europe, which was considerable, and all the time he felt himself falling into her, as if in a dream. She wasn't like the women he knew – she was rough-edged and laconic – but that very difference, which seemed more pronounced here, in these sophisticated surroundings, made her even more attractive to him.

Talking about their first meeting in the Roswell hotel's gloomy lobby, she said, 'You had the East Coast written all over you and I thought that was cute.' She also joked about how shocked he had seemed when, after informing her that he was in Roswell to interview the members of Goddard's rocket team, she responded by not only telling him she had been Wilson's mistress, but by describing in drunkenly mischievous, intimate detail just what she and her remarkably youthful sixty-year-old lover had done together in bed. 'You looked as shocked as a cheerleader trapped in a baseball team's locker room after a winning game. God, that was something!' Finally she reminded him that he had found her attractive, that she'd seen it in his face,

and that his blushing response to her teasing had simply confirmed it.

'Yes,' Bradley murmured, 'I guess it did.'

He had never had an affair before and certainly didn't plan to start one now, but when he thought of her going off to Europe, probably never to be seen again, he was filled with an unutterable sense of loss. It was an unexpected, inexplicable feeling, and it left him bewildered. So bewildered, in fact, that he almost forgot to ask her about Wilson – though eventually, over the coffee and brandy, he *did* get down to business.

'You said you'd been to Cornell,' he reminded her. 'Is that true or not?'

Gladys turned more serious then. 'Yeah,' she said, 'it's true.'

Opening her handbag, she withdrew two sheets of typed notes, unfolded them, and spread them out on the table. She was briefly distracted by her brandy, but eventually, after imbibing and inhaling, she exhaled smoke and started reading from her neatly typed notes.

'Name: John Wilson. Born July 6, 1870, in Montezuma, Iowa, to Cass and Ira Wilson, both listed as farmers. Attended elementary school in Montezuma, then high school in Des Moines. Stunning reports from both schools for his academic achievements – though all agreed that he seemed to have few friends and cared only for studying. In the fall of 1888, when he was eighteen years old, he signed on at the MIT – reportedly, shortly after his mother died and his father sold their farm in the Corn Belt and moved back to Worcester, Massachusetts, his hometown. At the MIT, Wilson studied aerodynamics, with particular emphasis on the wind-tunnel experiments that took place in the Engineering A Department. In 1893 – the same year his father died – Wilson's reports, in which every subject is listed as "exemplary," thus setting a college record, gained him entry to Sibley College, Cornell University, where he studied experimental engineering. By 1895 he'd obtained his bachelor of science degree in aeronautics and left Cornell. The university records don't say where he planned on going when he left – but they *do* reveal that between 1896 and 1897 he returned frequently to the university to attend the lectures of Octave Chanute.'

She stopped reading and raised her eyes from the notes.

'Anything else?' Bradley asked.

'No,' she replied. 'At least not until he turned up, in the fall of 1930, to work for six months with Robert H. Goddard, whom we all know and love as the controversial rocket scientist and a later, if more renowned, MIT

graduate.'

Bradley wrinkled his brow. 'Did you say 1930?'

'Yep.'

'You mean there's nothing on this guy from 1895 to 1930 – a period of approximately thirty-five years?'

'Not so far. He appears to have wiped his own tracks clean. We don't know what he did for a living following graduation, but we *do* know that he frequently returned informally to Cornell to attend Chanute's lectures, given throughout 1896 and 1897. Then, when Wilson was twenty-seven years old, he dropped out of sight completely – and he didn't reappear until 1930, when he worked for six months with Robert Goddard, before disappearing again, as completely as he'd done the first time.'

'That's incredible,' Bradley said, blowing another cloud of smoke. 'A guy can't disappear *that* completely for thirty-five years, then suddenly turn up again at sixty years old!'

Gladys sighed. 'So far that appears to be the case. Wilson seems to be some kind of authentic genius. He obtained his BA in aeronautics when they were very rare indeed, he claimed to Goddard that he'd designed airships, and yet we can't find a damned thing on what should have been the most productive thirty-five years of his life.'

Bradley gave a low whistle.

'Would that be possible in this day and age?' Gladys asked rhetorically. But before Bradley could open his mouth to reply, she raised her index finger and asked, more emphatically: 'One: Would a man with that track record be capable of designing airships? And, two: If he was capable of doing so, could he have done it in total secrecy for so long?'

She glanced across the busy restaurant at the group of people arguing noisily in a cloud of cigarette smoke at a table in the middle of the room. They included William Shawn, the associate editor of the *New Yorker,* an increasingly blind and visibly drunken cartoonist named James Thurber, a matinee-idol theatre reviewer, Robert Benchley, and the deceptively sweet-faced satirical writer, Dorothy Parker. Grinning slightly and shaking her head, as if she didn't believe what she was seeing, she turned back to Bradley.

'I'd already checked out that possibility,' Bradley said, 'and to answer your first question, yes, Wilson *could* have gone into airship design with that

kind of background. Although there were no formal aeronautical courses at the MIT when Wilson was there, there were plenty of *informal* courses on propulsion and the behaviour of fluids – two subjects that Goddard later made his own. And certainly, by 1896, instructors and students at the MIT had built a wind tunnel and were experimenting with it to get practical knowledge of aerodynamics. As for Sibley College, the experimental engineering courses that Wilson attended would have been conducted by professors Rolla Clinton Carpenter, George Burton Preston, Aldred Henry Eldredge, Charles Edwin Houghton, and Oliver Shantz – some of the greatest aeronautical thinkers of their day. Finally, Octave Chanute was the world-famous engineer who, in 1896, emulated the successful manned hang-glider experiments of the German, Otto Lilienthal, at an aerial experiment station on the Lake Michigan sand dunes near Miller, Indiana – so, again, Wilson learned from the very best.'

'But what was the state of knowledge at the time?' Gladys asked, still sceptical about what he was telling her.

'Well,' Bradley said, 'according to what I learned at the MIT, it was certainly more advanced than is generally known. For instance, Cornell's courses at the time included mechanical and electrical engineering and machine design and construction. As for specific aeronautical texts of the time, they were surprisingly advanced and would have included the Smithsonian Institution's *Experiments in Aerodynamics*, published in 1891; the Lawrence Hargraves experiment reports of 1890 to 1894; the 1893 reports on Sir Hiram Maxim's experiments on engines, propellers, airplanes, and flying machines; and the *Aeronautical Annual* of 1895, 1896, and 1897, which contained original contributions from most of the leading aeronautical scientists... So assuming that Wilson was some kind of genius, he certainly could have attained the knowledge necessary to design airships.'

'Oh, boy!' Gladys exclaimed softly, obviously intrigued. 'And question two?'

'Could a man of such talents have worked in America for thirty-five years, possibly designing airships, without leaving any tracks behind?' Bradley nodded emphatically. 'Yes, Gladys, it's certainly odd, but I think it's possible. The period we're talking about was the greatest so far in the history of aviation – the first successful flight of S. P. Langley's flying machines; Santos-Dumont's flight in an airship from Saint Cloud to the Eiffel Tower;

the Wright brothers' first successful heavier-than-air manned flight at Kitty Hawk, North Carolina; Goddard's first experiments in rocketry; Wilbur Wright's seventy-seven-mile flight in two hours and thirty minutes; then, only seven months later, in 1909, Louis Bleriot's flight across the English Channel; the dogfiights and airship raids of the Great War of 1914, and the continuing advances made since then…So, yes, Wilson could certainly have designed airships... or even more advanced forms of aircraft.'

'But could he have done so in *secret?*'

'Yes, that, too, is possible. In fact, it was a time when financiers were in fierce competition with one another to sink money into experimental aeronautical projects – so most of those projects were wrapped in the strictest secrecy. Wilson could, therefore, have worked in almost total anonymity with the full support, even encouragement, of his financial backers. And the US government,' he continued, practically talking to himself, 'quietly backed more than one aeronautical project – particularly during the late 1930s – and usually insisted that such projects be kept secret. They also occasionally took over civilian aeronautical projects and either ran them in strict secrecy or, for one reason or another, quietly aborted them.' He scratched his nose, coughed into his clenched fist, and spread his hands on the table. 'So,' he said, 'there it is.'

There was a moment's silence which seemed to last forever, then Gladys said: 'Tell you what... I'll run a check on all the companies that were known to be working on such projects and see if Wilson's name pops up magically. It depends, I suppose, on whether or not he used his own name – but I'll certainly give it a try for you before I catch my ship – since the guy who obtained these notes for me, who works in the registrar's office at Cornell, is my date for this evening.'

Bradley, very much to his surprise, was upset to hear that, though he managed to hide the fact.

'Shall I call you at home tonight?' Gladys asked him.

'Sure,' he said, giving her his number, but feeling as guilty as a man arranging an assignation, 'that would be great. Now I have to go, Gladys. I'm meeting my son at Penn Station at four, to take the train home.'

He felt embarrassed saying it, but Gladys just smiled wickedly. 'Ah, yes,' she said, 'I remember. You told me all about your family. A lovely wife and a boy and girl, as I remember.'

‘That’s right,’ Bradley said. ‘Though the boy and girl are older than you might think. In fact, Mark is eighteen.’

‘A good age,’ Gladys said.

Yet she seemed sad at that moment, or at least a little regretful, and when they left the hotel and faced each another on 44th Street, Bradley, not normally a romantic man, hardly knew what to say.

She had somehow sneaked up on him.

‘Well,’ she said, offering her sunburnt hand and a lopsided grin, ‘it was nice to see you again, Mike Bradley. I’ll give you that final call tonight, then it’s *au revoir*, baby.’

‘Thanks,’ he said. ‘*Au revoir*.’

She just stood there as he slipped into a taxi and let it carry him away.

He felt almost choked up.

CHAPTER EIGHT

Bradley met Mark at four o'clock at Penn Station and they took the train back to Bridgeport, Connecticut, unencumbered with the usual rush-hour crowd of fellow commuters. As Bradley had already phoned to say they would be early, his wife, Joan, was waiting for them in her car and drove them back to their relatively modest, ranch-style home, just ten minutes from the station and surrounded by expansive gardens and protective trees. There, Bradley refreshed himself with a shower, dressed in casual slacks, shirt, and pullover, relaxed for an hour with the radio and another whiskey, then joined Joan and his two children for dinner in the oak-panelled dining room.

Modestly drunk from his lunch with Gladys Kinder and the additional whiskey, and still an Irish sentimentalist at heart, Bradley, after sharing a bottle of red wine with the family, found himself glancing from his wife to his daughter, quietly startled at how similar they looked in all but their age. Joan was thirty-eight, five days older than Bradley, and although their daughter, Miriam, was still only seventeen, she and her mother were almost like twins, sharing the same delicate features, dark hair, enchanting cafe-au-lait eyes, and a quietly mischievous sense of humour.

Bradley, usually sentimental but now guilty because of his guiltless passion for Gladys Kinder, was even more in love with both of them tonight than he was normally.

'How did school go today?' he asked Miriam.

'Same as always,' she replied. 'Clark Gable was teaching math, Bette Davis taught history, and Errol Flynn discussed the things he knows best, then gave out his phone number. That's why I love school, Dad.'

Bradley grinned. 'Well, school's certainly improved since my day – and the results are so wonderful.'

Miriam lowered her head and blushed.

'Gee,' Mark said, 'what a sweet kid! She makes me feel so mature, so

protective, when she blushes like that.'

'Shut up, Mark,' Joan warned him.

'Sorry, Mom,' he replied.

'Who's taking you to the prom?' Bradley asked. 'Have you decided that yet?'

'Whoever asks her,' Mark informed him.

'Shut up, Mark,' Joan warned him again.

'I told you,' Miriam replied, smiling sweetly. 'Errol Flynn gave me his number and a welcoming smile.'

'He's too old for you,' Joan said.

'A nice guy,' Mark said, 'but too old.'

'What about that kid who walks you home from school? At least he *looks* like Errol Flynn.'

'Looks aren't everything, Dad.'

'His father's rich,' Joan reminded her.

'Money's not everything, Mom.'

'It's *nearly* everything, Miriam.'

'Will he be taking you?' Bradley asked.

Miriam sighed. 'He hasn't asked me.'

'When he asks, are you going to say yes?'

Miriam sighed. 'I suppose so.'

'A real lucky guy,' Mark said.

'Yes, isn't he?' Miriam responded.

'Please finish your desserts,' Joan said to all of them, 'so I can clear this table and put up my feet.'

'Yes, ma'am!' they all exclaimed at once.

Joan did in fact put her feet up after dinner, stretching out on the sofa, while Bradley sat on the floor beside her, having a brandy and feeling deeply grateful for the good life he had. The kids had retired to their own rooms and he was about to put on the radio, but Joan stopped him by taking hold of his wrist and pulling his hand onto her stomach, which still was as flat as an adolescent's, and seductively warm.

'No,' she said, 'I don't want to hear the radio. Let's just talk for a while.'

'Okay, dear. Sure. Anything special you want to talk about?'

'Nope,' she said with a lazy smile. 'Nothing special at all. How did your day go?'

‘The same as always,’ he replied. ‘Clark Gable came by for a drink, Bette Davis dropped in for a smoke, and Errol Flynn called to discuss his forthcoming date with Miriam. That’s why I love my work.’

Joan chuckled and squeezed his hand, then lightly stroked his wrist. ‘So what did you really do?’ she asked. ‘Anything exciting?’

‘Mostly routine,’ he lied, shocking himself. ‘The best part of the day was lunch with Dave Marsh, who sends love and kisses.’

Joan’s smile was quietly radiant. ‘Ah, my boyfriend!’ she said softly, oblivious to Bradley’s shame. ‘Was this just your usual monthly get-together or something special?’

‘He’s going to check someone out for me,’ Bradley told her. ‘A guy called John Wilson. A guy who’s starting to intrigue me. A real mystery man...’

He told her all about Wilson, going into more detail than he had planned, and then added that he was expecting a late-night call from one of Dave Marsh’s friends: a lady named Gladys Kinder.

When he stopped talking, Joan rolled onto her hip, to stare directly, steadily at him.

‘Be careful, Mike,’ she said. ‘Don’t let this become another obsession. You’re easily bored, always searching for new adventures, and I know that you’re looking at intelligence work to get you out of the office. But I repeat, please be careful. Don’t become obsessed with this mystery man. We have a good marriage, but it’s been through its troubles, and most of those troubles occurred when you became obsessed with your work. So please, Mike, no matter how intriguing this man is, don’t let him threaten us.’

‘I won’t.’

Joan went to bed shortly after and he promised to follow soon, but instead sat on, thinking about what she had said and accepting the truth in it. They *did* have a good marriage, but it *had* been troubled at times, and in nearly every instance the problem had been caused by his obsession with some job or other and his subsequent neglect of home and hearth. He loved Joan and the children, appreciated what he had, and didn’t want ever again to let work, or anything else, take him away from them.

And he was silently vowing not to let this happen when the telephone rang.

‘I think I’ve found our man,’ Gladys Kinder said. ‘Our mysterious Mr

Wilson.'

'Shoot,' Bradley said.

'In 1895, the year Wilson left Cornell, a now-defunct New York financial company, Cohn and Goldman Incorporated, financed an aeronautical company, reportedly to research and, if possible, construct passenger-carrying airships. While Cohn and Goldman denied repeatedly that they were attempting to build commercial airships – as most speculators routinely did in those days – I have confirmation that they constructed their factories in Mount Pleasant, near the border of Iowa and Illinois... And according to the company records, the man put in charge of the whole project was a relatively unknown aeronautical scientist named John Wilson.'

Bradley was surprised to find himself releasing the breath he had been unwittingly holding in.

'Anything else?' he asked.

'No, Mike. Those are the only clippings I could find on either Wilson or Cohn and Goldman Incorporated.'

'It's more than enough to go on,' Bradley said. 'Thanks a hell of a lot, Gladys.'

Excited and confused at once, he was just about to hang up when Gladys spoke urgently enough to stop him. 'One more thing, Bradley... In checking the clippings, I was also reminded that the following two years – 1896 and 1897 – were notable for one phenomenon in particular: the great wave of mystery airships. At the time the press called them UFOs – unidentified flying objects.'

'Why?'

'Because most of the reports indicated that the airships were more advanced than any known to have been constructed at the time. Also, they were reported to be carrying passengers, or crewmen. They landed frequently, usually to collect water for their engines, and at such times the crewmen talked freely to anyone who approached them... And the crewman who features most frequently in the reports is a man who always introduced himself as…'

'Wilson.'

'Right.' Gladys chuckled and then turned serious again. 'I'm gonna arrange to have a friend send you the newspaper clippings about those sightings – and that's about it, Mike. After this, I'll be on my way to Europe.

No more lunches. No phone calls...'

Her voice trailed off into a silence that spoke volumes and left Bradley grieving.

'Gladys, I don't know how...'

'What's domestic life like out there in Connecticut?'

'It's very nice.'

'Yeah, I thought so. Goodbye, Mike.'

'Goodbye, Gladys.'

The phone went dead. Bradley felt very emotional. He forgot to join Joan in bed, but instead went into his study and sat at his desk. He pulled out the notes he had collected on Wilson and started to ponder them.

The next morning, having not slept a wink, he rang General Taylor.

CHAPTER NINE

‘I’m Lieutenant Ernst Stoll,’ Wilson’s new interrogator said when the cell door had closed behind the man and he took the hard wooden chair facing the bed upon which Wilson was seated. ‘I am, as you can see, a member of the SS, not the Gestapo, and I work for the technical intelligence branch. Naturally,’ he added, waving the papers in his right hand and offering what seemed like a shy smile, ‘I know who you are. So shall we begin?’

‘What if I say no?’ Wilson asked.

‘I would ignore you, of course.’

Wilson smiled. ‘Let’s begin, then. I take it, as you’re from technical intelligence, that we’ve made a little progress – or, at least, finished with relatively unimportant matters.’

‘That’s true,’ Lieutenant Stoll said, mildly amused by Wilson’s impertinence. ‘Your background and motivation have been accepted as valid, so I’m here to talk about the work you’ve already shown us and the work you now wish to do for us.’

‘Good,’ Wilson said, deliberately keeping his gaze steady, searching the lieutenant’s face for what it was hiding, because all faces were masks. Lieutenant Stoll was young, perhaps in his middle twenties, and while he looked diabolically handsome in his gleaming black uniform, his face did not display a confidence to match. Indeed, he seemed a little haunted, a man divided within himself, and was obviously trying to cover his doubts with his dryly polite, distant manner. ‘You have a technical background?’ Wilson asked him.

‘Yes,’ Stoll replied with a flicker of pride. ‘I studied aeronautical engineering at the Institute of Technology in Munich, then rocket technology under Professor Becker at the Institute of Technology, Berlin University.’

‘Ah!’ Wilson exclaimed softly, with admiration. ‘Becker! So were you a member of the German Amateur Rocket Society?’

‘No,’ Stoll said, briefly displaying hurt and resentment, then hiding it by changing the subject. ‘I trust you found the previous interrogations civilized?’ he asked, looking up from his papers.

‘Yes,’ Wilson said. ‘Perfectly civilized. Surprisingly so.’

Lieutenant Stoll raised his eyebrows as if puzzled. ‘Why surprisingly so? Is it not what you would have expected from German officers?’

‘Given the sounds that have emanated from some of the other cells, I take it that not all German officers are so civilized when interrogating their prisoners.’

Ernst looked embarrassed, then smiled bleakly. ‘Ah,’ he said, ‘*that.* Well, some prisoners are more troublesome than others, as I’m sure you agree. A little persuasion often goes a long way – though I hope that the noise from the other cells didn’t make you lose too much sleep.’

Because he had been forced to listen, day and night, to the screaming of those being abused in the other cells or torture chambers of this Gestapo headquarters and prison, Wilson would certainly have lost a good deal of sleep had he been the kind to need a lot of it. As he was not, and as the fate of others did not concern him, he’d had a relatively comfortable time. Nevertheless, hoping to find out more about the situation outside the prison, he said, ‘Yes, I lost some sleep, particularly during that day and night two weeks ago, when this whole place turned into a madhouse of bawling and shooting.’

‘You mean June 30?’

‘Correct.’

The lieutenant’s facade nearly crumbled, revealing revulsion mixed with shame, but he quickly regained his composure and smiled again, bleakly. ‘Ah, yes, the Night of the Long Knives. That’s what we call it now.’

‘Is it true that the SS murdered over a hundred, maybe two hundred, SA officers and others in that one bloody purge?’

‘No, it’s not true,’ the lieutenant replied with self-defensive anger. ‘Those men weren’t murdered. They were executed because they were traitors.’

‘Executed without trial,’ Wilson corrected him.

‘You’re impertinent, Herr Wilson. Count your blessings that you’re American. Count them also because that purge, about which you are so sarcastic, has ensured that the SS, and not the SA, are now virtually ruling the

Third Reich. The SS will therefore be in control of any research establishment in which you're likely to find yourself.'

'My request, then, is being seriously considered?'

'That's why I'm here.'

Realizing that after weeks of interrogation in this prison cell, he was close to getting what he wanted, Wilson allowed himself the luxury of a feeling of triumph. When Lieutenant Ernst Stoll of SS Technical Intelligence lowered his head to study the papers spread out on his knees, Wilson recognized his own drawings and notes, cunningly unfinished, for the kind of aircraft that the Nazi's Projekt Saucer was trying, unsuccessfully, to create. It was also what he was trying to create, and with their help he would do it.

Lieutenant Stoll looked up from his notes to say: 'While I'm very impressed, I find it hard to believe that during the period you worked in secret – between 1895 and 1930 – you could have made the extraordinary technical advances indicated in these notes and drawings.'

'Having already tested my intellect and knowledge, you know that both are remarkable, so why doubt my achievements?'

'We can't check your actual engineering or scientific achievements until we get you into a research centre; however, according to what we can gauge from these remarkable notes and drawings, your achievements were completely divorced from the general scientific achievements of the time. Those were very early days, so your achievements seem *too* advanced to have sprung from that period.'

'It's a widely held misconception that those were early days,' Wilson replied, 'but they were in fact the most productive days in the history of science. As you've studied aeronautical engineering and rocketry, I needn't tell you about the extraordinary advances made in those fields during that period. However, I should remind you that by 1895 Rontgen had discovered X rays, Marconi had invented wireless telegraphy, Auguste and Louis Lumiere had invented the Cinematographe, the first main railway was electrified, and Ramsay had detected, by spectroscope, helium from a terrestrial source. By 1896 we had Rutherford's magnetic detection of electrical waves, the construction of an electrical submarine in France, and the first successful flights of S. P. Langley's flying machines. By 1897 numerous patents for flying machines had been registered, and J. J. Thomson's work on cathode rays had led to the evaluation of the electron.

The rest I'm sure I don't have to tell you: From the successful test flights of Langley's flying machines in 1897 to the first cross-channel flight took only one decade – and in that decade Robert H. Goddard had already begun his experiments in rocketry. So, Lieutenant, I was *not* too advanced for my own time – and indeed my work *did* spring from it and was nurtured by its achievements.'

Stoll smiled frostily, glanced down at Wilson's notes, then looked up again. 'Your work has been studied by our Projekt Saucer scientists and engineers at the German Rocket Research Institute at Kummersdorf, just outside Berlin. While it's agreed that your designs are remarkable, they remain incomplete and would not lead to a workable saucer-shaped aircraft. You claim that with our help you'd be able to complete this project, but why, since our own scientists have failed repeatedly to do so, should we place our faith in your undoubted talents?'

'You know I can't answer that,' Wilson said carefully, 'but can only show you what I can do when I'm actually working.'

'I understand that, Herr Wilson, but perhaps you can at least give me some indication of the direction you'd be heading in. For instance, what would separate your work from that which is already being done by our scientists at Kummersdorf? We agree that an aircraft shaped like a saucer would fly better than any other, but that shape also has its own problems, which so far we haven't solved. How, then, would you approach this problem that has so far foiled us?'

Wilson had no intentions of telling them everything he had discovered, but he knew that he had to give them enough to whet their appetites and encourage them to let him work for them. He therefore leaned forward on the bed and chose his words carefully.

'Your scientists have been researching along conventional lines,' he said, 'but a saucer-shaped aircraft wouldn't respond to conventional laws of aerodynamics, so we have to look elsewhere.'

'I'm not sure I understand,' Stoll replied, though his gaze was steady and thoughtful.

'When I was working with the wind tunnel at Zeppelin in Friedrichshafen,' Wilson said, 'I helped test many of the experimental prototypes coming from Kummersdorf – and it soon became clear to me that the Kummersdorf scientists were trying to construct some kind of saucer-

shaped aircraft.'

'You've already told us you knew that,' Stoll said impatiently.

'I remind you of it,' Wilson replied, unperturbed, 'because I also ascertained that most of the Kummersdorf designs were based on the tailless or all-wing aircraft, the Horten 1, which was designed and constructed by the Horten brothers, Walter and Riemer, for the German Air Ministry, at their factory in Bonn, from 1931 to 1932. That so-called all-wing aircraft, which in prototype was a glider, had a span of forty point seven feet, a wing area of two hundred and twenty-six square feet, and a wing-loading of two pounds per square foot. It had a flying weight of four hundred and forty pounds, a gliding angle of twenty-one degrees, and a flying life of approximately seven hours.'

'Your intelligence gathering is commendable,' Stoll said sarcastically, 'but what is the point of this?'

'The Horten brothers were convinced that the most important form of aircraft would be the all-wing type, which is why there were no vertical stabilizing or control surfaces on their flying wing, the Horton I, why it was virtually flat and crescent-shaped, like a boomerang, and why the pilot was placed in a prone position – to reduce cockpit size.'

'Yes, Herr Wilson, I know this, but…'

'That so-called *flying wing* certainly flew for seven hours, but it could never have been the basis of a flying saucer for one very good reason.'

'Yes?'

'It was still faced with the problem that's repeatedly foiled your scientists: the limitations imposed by the boundary layer.' He could see that he had Stoll's interest, though the German was trying to disguise it by showing little emotion. Amused, Wilson said, 'Have you heard of the boundary layer, Oberleutnant?'

Stoll just smiled at the sarcasm. 'Why don't you remind me, Herr Wilson? You talk so well about these things.'

'While being four or five thousand times less viscous than oil, air is still viscous,' Wilson said, enjoying himself. 'Because of this, the air sweeping in on the solid body of an aircraft forms imperceptible stratifications of resistance and consequently decreases the speed of the body in flight. These layers of air are therefore known as the boundary layer – and the boundary layer increases its resistance in direct proportion to the increasing speed of

the flying object, thus imposing severe limitations on its speed and manoeuvrability.'

'And in layman's terms?' Stoll asked, clearly amused by Wilson's enthusiasm for lecturing.

'In layman's terms,' Wilson continued, drawing Stoll into his web, 'the major problem regarding supersonic flight is to somehow move this negative air as far to the rear of the aircraft as possible, thus minimizing the expenditure of energy required to propel it through the sky. Moreover, it's possible that a revolutionary type of aircraft could, by not only *completely* removing the boundary layer but by somehow *rerouting* it and utilizing it as an added propulsive force, fly through the skies using little other than the expelled air itself. Should this be accomplished, we would have an aircraft capable of remarkable speeds while using only the bare minimum of conventional fuel.'

'So you plan to devote all your energies to solving the problem of the boundary layer.'

'Yes,' Wilson said, playing his trump card, 'and Germany is the place for doing that.'

'I'm flattered – but why Germany?'

'As I explained to your Reichsführer, the boundary layer was introduced to the world of aerodynamics by the German professor, Ludwig Prandtl, at Gottingen in 1904. Throughout the following years, many other German scientists, including professors Betz, Flettner, and Junkers, experimented with specially equipped aircraft in attempts to reduce the boundary layer. Most of the experiments were based on the suction method, in which the negative air is sucked into the wing itself, through tiny holes or slots, then expelled by means of a pump located in the fuselage. While this was a step in the right direction, the resulting aircraft still required heavy, obstructive engines – also the main problem with the flying wing jet fighter that the Horten brothers envisaged – but it's my belief that in order to get rid of the boundary layer completely – and in order to make use of the *dead* air not only for acceleration, but for manoeuvring as well – what we need is an aircraft devoid of all obstructing protuberances, such as wings, rudders, and even normal air intakes, and one not requiring a large, heavy engine. In other words, this revolutionary new aircraft should be the perfect *flying wing* that offers the least possible resistance, sucks in the dead air of the boundary

layer, and then uses that same air, expelling it at great force, to increase its own momentum.'

'And how do you propose creating such a machine?'

'By building the perfect flying wing – a circular wing that is, in a sense, wrapped around its suction pump, with the pump being part and parcel of the engine – a machine shaped like a saucer – and by constructing it from a porous metal that will act like a sponge and remove the need for air intakes altogether. This would result in frictionless air flow during flight: in an aircraft that slips through the air in the same way as a piece of wet soap slips through the fingers. Its speed and manoeuvring capabilities would be literally limitless.'

Wilson felt excited merely thinking about it, and could see, in the sheltered gleam of Stoll's dark gaze, that he was feeling the same way. Nevertheless, the young oberleutnant was being careful about showing his true feelings.

'This sounds wonderful in theory,' he said, 'but practice is something else again. I'm not sure that your so-called porous metal is a realistic proposition.'

'In fact, it's being worked on right now,' Wilson said, 'and right here in Germany. Among the many other experiments I helped run in the Zeppelin wind tunnel were those concerning different porous metals being created by the scientists of Gottingen and Volkenroda: a compound of magnesium and aluminium. The scientists are calling it *Luftschwamm,* or aerosponge... and I think it will work.'

The instant he saw Lieutenant Stoll fold up his papers and slip them back into his briefcase, Wilson knew he had won. 'It's interesting,' the lieutenant said, pushing his chair back and standing up, 'that even the great Russian, Tsiolokovsky, evinced a strong interest in circular, hyperbolic, and spherical airframes.'

'I can see that you know more about this subject than you pretend, Oberleutnant,' Wilson replied, thus making the sombre SS officer smile. 'And knowing that, you clearly also know that the extensive research into all-wing aircraft and rocketry that's been carried out in Germany during the past decade is directly due to German admiration for Tsiolokovsky's theories.'

'*And* due to admiration for the American, Robert H. Goddard, for whom you worked for six months.'

'I have to admit that although he's my junior, I learned a lot from

Goddard about the problems of stabilization and gyroscopic controls. That's why I wanted to work with him. It was my only weak area.'

Smiling genuinely for the first time, the lieutenant said, 'Come, Herr Wilson, we are leaving. We are going to put you to work. We do not have much time, so don't bother with your possessions. This cell will be cleaned out as soon as we leave, and your possessions here, as well as those being kept by the Gestapo, will be forwarded to you this afternoon. So please, follow me right now.'

Quietly exultant, Wilson was led out of the cell and up the stairs to the lobby near the front door of the building. There, while he adjusted to his sudden sense of space and movement (after weeks in his tiny cell, this lobby appeared to be immense and far too crowded), he was given an army greatcoat. Then he was led out to the police car waiting for him in the Prinz Albrechtstrasse.

Seated in the rear beside the notably more relaxed Lieutenant Ernst Stoll, Wilson gazed out the window as the car pulled away from the curb and proceeded through Berlin. In the early afternoon's pearly light, the city looked solid, busy, and perfectly normal, except for a notable increase in military personnel and vehicles, which seemed to be everywhere.

'This is a city preparing for war,' Wilson said.

'Yes,' Stoll replied. 'You're very observant.'

Intrigued by the handsome young lieutenant's oddly haunted look and reticence, Wilson said, taking a chance, 'Am I allowed to ask if you're involved with scientific work as distinct from intelligence?'

Lieutenant Stoll sighed. 'You may ask, but the answer is no. I'm no longer involved in scientific research per se, but instead am forced to use my scientific knowledge for the gathering and analysing of technical intelligence material.'

'Which is why you were sent to interview me, right?'

Stoll sighed again, as if deeply depressed. 'Yes, Herr Wilson, that is the case. And now I will take you to Kummersdorf West, where you'll work with men less talented than I was. Such is life, I suppose.'

'You can't protest?'

'To be a member of the SS is to obey. I obey and take my pride from that.'

Wilson doubted that Ernst Stoll was gaining any pride from his work and

filed the knowledge away in his head for future reference.

The journey to Kummersdorf did not take long – it was only fifteen miles from Berlin – and the car soon slowed down at barbed-wire fences and a guarded gate. It was inspected by a particularly careful SS sergeant and eventually waved through, then stopped in front of an enormous hangar in a broad stretch of bare ground that ran out to more barbed wire and signs announcing that an army firing range lay beyond.

Puzzled to find only this enormous hangar and bare ground where he had expected to find a hive of activity, Wilson glanced questioningly at Stoll. As if reading his mind, the lieutenant smiled understandingly and said, 'Projekt Saucer has been separated from the Rocket Research Institute proper by that army firing range. Beyond the firing range are Wernher von Braun's more impressive research works, which is what you were, I assume, hoping to find.'

'Frankly, yes,' Wilson said, hearing the moaning of the wind and seeing only swaying, untended grass around that single, enormous hangar, under the leaden gray sky.

'Try not to be too disappointed,' Stoll said, as he led Wilson across the windblown grass, toward the already rusted, corrugated-iron hangar. 'You'll be visiting the Research Institute on a regular basis, contributing your knowledge to their rocket projects, but most of your time will be spent here, in conditions of strict secrecy, where you will work more specifically on Projekt Saucer. Even those who work at the other side of the firing range don't know what we're doing here.'

The main hangar doors were closed. The smaller side door was guarded by armed SS troops who gave the Nazi salute when Stoll approached. After returning the salute in a desultory manner, the lieutenant motioned Wilson into the hangar. Stepping inside, Wilson was temporarily blinded by the bright light. He adjusted to it as Stoll came in behind him to stand beside him. Then he saw an enormous open floor, surrounded by glassed-in offices, filled with machines and a few men in oily coveralls.

Raised about six feet off the concrete floor on a hydraulic platform was the skeletal prototype of a saucer-shaped craft, about forty feet in diameter and rising up to a central dome. Its discus-shaped ribcage of steel covered what looked like two Hirth 80 hp engines.

'It'll never fly,' Wilson said.

Lieutenant Stoll smiled. ‘No, it won’t.’ Obviously pleased by Wilson’s perception, he led him across the hangar floor to one of the larger offices. Stepping inside, he suddenly stiffened, gave the Nazi salute and said, ‘Heil Hitler!’ He then stepped aside to introduce Wilson to a man who, even wearing his Reichsführer’s uniform, did not look like a soldier.

‘So, Herr Wilson,’ Heinrich Himmler said, ‘we meet again, yes?’

‘Yes, Reichsführer – I’m glad to say.’

‘I’m sure you are, Herr Wilson – since if we hadn’t met again here, you would now be a dead man.’

Reminded by the remark that his assessment of Himmler was not amiss, Wilson glanced over the lunatic’s shoulder at the men grouped behind him. As they were all wearing oily coveralls, they were either scientists or engineers.

‘Would you care to inspect our flying saucer, Herr Wilson?’

‘I don’t have to inspect it, Reichsführer,’ Wilson replied, ‘to know that it won’t fly.’

Himmler simply smiled. ‘How arrogant you are, Herr Wilson! But come,’ he added, crooking a delicate index finger and indicating the men standing nervously behind him, ‘please let me introduce you to the rest of our team. This,’ he said, indicating with a nod a young man with a lean and hungry look, ‘is Flugkapitän Rudolph Schriever, who originally designed this flying saucer, which you insist will not fly. And this,’ he continued, when Wilson had shaken the hand of the solemn young designer, ‘is the physicist Klaus Habermohl, and his associate, Otto Miethe. And this,’ he ended, when Wilson had shaken the hands of Habermohl and Miethe, both of whom were middle aged, ‘is Dr Giuseppe Belluzzo who, though Italian, has become an invaluable member of our team. Gentlemen, I give you Herr Wilson, an American genius!’

Ignoring Himmler’s quiet sarcasm and the resultant nervous chuckles, Wilson shook the hand of the small, plump, balding Belluzzo and expressed his gratitude that he would soon be working with him. When the rest of the team had crowded around him to congratulate him on his work, which they had assessed for Ernst Stoll, Wilson said to Schriever, ‘Few experiments work out the first time, and the fact that this particular saucer will not fly is of no great importance. What *is* important, Flugkapitän, is that you’ve already made such progress and that now, if we all work together, we can build

successfully upon it. I therefore congratulate you, Flugkapitän, for building the first flying saucer prototype.'

'Thank you, Herr Wilson.'

Schriever bowed stiffly, acknowledging Wilson's praise, but before anything else could be said, Himmler walked away from them and Lieutenant Stoll urgently waved his hand, indicating that he and Wilson should follow. Falling in beside Stoll, Wilson left the office and found himself standing in the great hangar, beside Himmler, who was facing Rudolph Schriever's skeletal flying saucer prototype and smiling in his mild, chilling way.

'You do not think it will fly?' he asked, still studying the prototype.

'No, Reichsführer,' Wilson replied.

'You're deliberately being bold in telling me this, Herr Wilson, where others would be too frightened to do so. This means you are cunning. Not *too* cunning, I hope.' He then turned to Wilson, looked up through his glittering pince-nez, and said, 'For obvious reasons, Flugkapitän Schriever is still in charge of this project, but you're the one from whom we expect results. Once a week you will visit Wernher von Braun at the Rocket Research Institute at the other side of the firing range, and anything you've discovered that's of no use to this project but may be of use to von Braun, you will pass on to him, to be used as he sees fit.'

'I understand, Reichsführer.'

'You understand also, I hope, that I will be kept informed of your progress, or lack thereof, by Oberleutnant Stoll here' – he indicated the nervous Ernst Stoll with a nod of his head – 'and that anything you wish to discuss, you must discuss with him, not with Flugkapitän Schriever.'

'Yes, Reichsführer, I understand.'

'Good,' Himmler said. 'Now is there anything else you need to know before I take my leave?'

Wilson glanced across the hangar, saw that mostly empty, valuable space, then returned his gaze to Himmler and said, 'My task is a large one, and apart from scientists and engineers, I'm going to need hundreds of unskilled labourers. Where will I find them?'

Himmler adjusted the pince-nez on his nose, gazed across the vast hangar at the glittering skeleton of Schriever's saucer, then looked up at Wilson with a thin, icily controlled, deadly smile.

'The camps,' he said, almost whispering.

CHAPTER TEN

The administration buildings at Langley Field, Virginia, had been completed when Bradley made his next visit – officially as an advisor on aeronautical law, unofficially as one of General Dwight Taylor's intelligence agents – to attend a meeting of the recently formed National Advisory Committee for Aeronautics. Seated with him around the table in the main building were his old friend General Taylor, of the still too informal Army Air Force intelligence branch, and the twelve members of the committee. Though most were Pentagon officers with technical backgrounds, also included were the aging yet still dapper Orville Wright who, in 1903, at Kitty Hawk, North Carolina, with his brother Wilbur, had made the first airplane flight in history; and Charles A. Lindbergh, the handsome, aristocratic flyer who had won the nation's heart when, in 1927, he had made the first nonstop airplane flight between two continents in his now-legendary monoplane, *The Spirit of St Louis,* then won the sympathy of that same nation when, four years ago, his two-year-old son had been kidnapped and murdered.

Since its formation, the committee had been meeting once a month to discuss national and international aeronautical developments. This day should have been no different from any other... but most of those present were looking shocked.

'Eighteen years ago,' a radio announcer was saying, 'dejected German soldiers retreated from France across the Hohenzollern Bridge spanning the Rhine. Twenty-two days ago, at eleven-thirty a.m. on March 7, 1936, three of Adolf Hitler's battalions crossed that bridge again, this time marching back into the Rhineland. Within hours twenty-five thousand German troops had occupied the Rhineland, with no retaliation from the French. Today, March 29, 1936, again without benefit of guns, ninety-eight point eight percent of the electorate voted for Adolf Hitler, thus making him the Führer of all Germany. War in Europe is now virtually guaranteed...'

General Taylor switched the radio off, stared thoughtfully at it for a moment, then returned to take his seat at the head of the long committee table.

'Well, gentlemen,' he said, 'there it is. Adolf Hitler's now the absolute dictator of the Third Reich – and he's not going to be satisfied with the Rhineland. As the man said, this clearly means war in Europe.'

'War in Europe is not our concern,' said a silvery-haired gentleman from a cloud of cigar smoke at the end of the table.

'I think it is,' Taylor replied, 'to the degree that it affects Germany's interest in aeronautical research, which already is alarmingly advanced. Mike,' he added, turning to Bradley, 'what do you think?'

'I'm seriously worried,' Bradley said. 'The Nazis are, as you say, already dangerously advanced in aeronautical research – and I think it's safe to say that most of that research will now be turned toward its potential for warfare.'

'It still doesn't affect us,' the dapper Orville Wright said, 'since America is taking an isolationist stance and Europe's a long way away.'

'I don't believe we can cling to isolationism for too long,' Bradley said, 'and as long as there's even the faintest possibility that we'll be involved in war, sooner or later, we should be seriously concerned about technological advances anywhere in the world – but particularly in Nazi Germany.'

'Your concern seems extreme,' a technical advisor said, puffing on his pipe and pursing his lips to blow the smoke out. 'Have you sound reasons for this?'

'For the past couple of years,' General Taylor said, 'Bradley, in an unofficial intelligence capacity, has been trying to track down someone for us – a mysterious physicist and aeronautical engineer called John Wilson, who once worked with Robert Goddard…' here the general glanced at Goddard's friend, Charles Lindbergh… 'before reportedly travelling on to Germany to work for the Nazis, possibly under a false passport.'

'Bradley's already asked me about this John Wilson,' Lindbergh pointed out, 'and I had to tell him, honestly, that I'd never heard of him in connection with Goddard until Bradley himself mentioned him. Obviously, as Bradley had already done, I then checked with Goddard and received confirmation that Wilson had indeed worked with him in 1930 for approximately six months.'

'So what's so worrying about this fellow?' Orville Wright asked

impatiently.

'What worries me,' Bradley said, 'is that according to Goddard, this Wilson was a scientific genius with a particular interest in rocketry and space flight. He also appears to have been a completely unemotional, ruthless son of a bitch who didn't give a damn about anything other than his own work.'

'Sounds like your average scientist or politician,' someone said, thus encouraging a spasm of cynical laughter around the smoke-wreathed table.

When the laughter died down, Bradley said patiently: 'What I'm trying to get across is that this mysterious Wilson, who's possibly a scientific genius and utterly ruthless, had reason enough, and is certainly fanatical enough, to contribute his genius to a foreign power, irrespective of its nature or motives. And it seems clear from the evidence that the country he's chosen is Nazi Germany.'

There was a long, uncomfortable pause until Charles Lindbergh said thoughtfully, 'Are you suggesting that this Wilson was actually more advanced in his thinking than Goddard?'

'Yes,' Bradley said without pause.

'I find that hard to credit,' Lindbergh said.

'So did I,' Bradley replied, 'but not any longer.' He pushed his chair back, stood up, and walked around the table, distributing to all the members of the committee typed copies of Wilson's *curriculum vitae.* While they were reading it, he lit a cigarette, smoked it, and gazed out the window, thinking of how far aeronautics had advanced since Samuel Pierpont Langley, American astronomer, secretary of the Smithsonian Institution, and aeronautical theorist (ironically also born, like Goddard and Wilson's father, in Massachusetts, where Wilson himself had attended the MIT), had sent his quarter-scale, steam-powered 'aerodrome' into a flight over the Potomac River and these very fields, which had since been named in his honour. From those innocent beginnings, nearly forty years ago, a dark new age was dawning...

'Has everyone finished reading?' General Taylor asked, obviously impatient to continue.

Most of the heads, hazed in smoke, nodded affirmatively.

'It's certainly impressive,' Orville Wright said, 'but it doesn't prove that this man created anything out of the ordinary, in secret or otherwise.'

Aware of Wright's illustrious position in the history of aviation, that Charles Lindbergh had been forthright in his support of Robert H. Goddard,

and that both men might therefore be more sceptical than most, Bradley said, ‘While I can’t confirm that Wilson worked on airships more advanced than those built officially, I think it’s worth pointing out that during the period 1896 to 1897 – when Wilson had left Cornell University and disappeared completely to work, as we now know, on airship design and construction – America experienced what is now known as the Great Airship Scare.’

‘I remember it well,’ Orville Wright said. ‘It lasted for months. There was a great wave of sightings of mysterious airships that were actually carrying passengers, or crew members, who reportedly spoke to the locals when they landed. At the time I put it down to mass hysteria.’

‘Well,’ Bradley said, ‘maybe it was and maybe it wasn’t – but certainly most of the reports of contact between the airship crews and the witnesses mentioned a crew member who called himself Wilson. Please, gentlemen, bear with me.’

Bradley withdrew from his briefcase the press clippings that Gladys Kinder had sent him, spread them out on the table before him, and talked while reading from them, one by one.

‘As you all probably know,’ he began, ‘the first major UFO flap was indeed in 1896, beginning about November of that year and continuing until May 1897. That was five years *before* the first experiments of Orville, here, and his brother, Wilbur; but there were, by that time, various airship designs on the drawing boards or in the Patent Office. For instance, according to my clippings here, on August 11, 1896, patent number 565805 was given to Charles Abbot Smith of San Francisco for an airship he intended having ready by the following year. And another patent, number 580941, was issued to Henry Heintz of Elkton, South Dakota, on April 20, 1897.’

‘In all fairness,’ Lindbergh said, ‘you should perhaps point out that while many of the UFOs sighted were shaped roughly like the patented designs, there’s no record of those airships having been built.’

‘Okay,’ Bradley said, ‘I concede that – but the fact that there’s no record of them doesn’t necessarily mean they weren’t built.’

‘But the reported UFOs resembled the airships on the patented designs?’ a disembodied voice asked from farther along the table.

‘Yes,’ Orville Wright said. ‘At that time the general belief was that aerial navigation would be solved through an airship, rather than a heavier-than-air flying machine, so most of the earlier designs looked like dirigibles with a

passenger car on the bottom.'

'Cigar-shaped.'

'Correct.'

'Okay, Bradley,' General Taylor said, 'please continue.'

'What stands out in the 1896-97 sightings,' Bradley continued, 'is that the unidentified flying objects were mostly cigar-shaped, that they frequently landed, and that their occupants often talked to the witnesses, usually asking for water for their machines.'

'I remember that,' Orville Wright said, still proud of his memory.

'Now, the most intriguing of the numerous contactee stories,' Bradley went on doggedly, 'involved a man who called himself Wilson. He never gave his first name.'

Bradley's throat felt dry, so he swallowed, coughed into his fist, then started reading again from his notes and clippings.

'The first incident occurred in Beaumont, Texas, on April 19, 1897, when one J. B. Ligon, the local agent for Magnolia Brewery, and his son, Charles, noticed lights in a pasture a few hundred yards away and went to investigate. They came upon four men standing beside a large, dark object that neither of the witnesses could see clearly. One of those men asked Ligon for a bucket of water, Ligon let him have it, and then the man introduced himself as Mr Wilson. He then told Ligon that he and his friends were travelling in a flying machine, that they had taken a trip out to the gulf – presumably the Gulf of Galveston, though no name was given – and that they were returning to the quiet Iowa town where the airship and four others like it had been constructed. When asked, Wilson explained that electricity powered the propellers and wings of his airship. Then he and his fellow crew member got back into the basket of the airship and Ligon watched it ascending.'

'I get your drift,' Orville Wright said. 'That particular Wilson said he was returning to the quiet Iowa town where the airship and *four* others like it had been constructed – and your Wilson, the one in these notes, originally came from Iowa.'

Bradley just raised his hands in a questioning manner, then started reading again.

'The next day, April 20, Sheriff H. W. Bayer of Uvalde, also in Texas, went to investigate a strange light and voices in back of his house. He encountered an airship and three men – and one of the men introduced

himself as Wilson, from Goshen, New York. Wilson then enquired about one C. C. Akers, former sheriff of Zavalia County, saying he'd met him in Fort Worth in 1877 and now wanted to see him again. Surprised, Sheriff Baylor replied that Captain Akers was now at Eagle Pass, and Wilson, apparently disappointed, asked to be remembered to him the next time Baylor visited him. Baylor reported that the men from the airship wanted water and that Wilson requested that their visit be kept secret from the townspeople; then he and the other men climbed back into the airship and, quote, its great wings and fans were set in motion and it sped away northward in the direction of San Angelo, unquote. Incidentally, the county clerk also saw the airship as it left the area.'

He glanced up from his notes to see what effect he was having on the learned gentlemen; thirteen faces stared attentively at him through a haze of cigarette and cigar smoke, so he lowered his gaze and started reading again.

'Two days later, in Josserand, Texas, a whirring sound awoke farmer Frank Nichols, who looked out from his window and saw brilliant lights streaming from what he described as *a ponderous vessel of strange proportions*, floating over his cornfield. Nichols went outside to investigate, but before he reached the large vessel, two men walked up to him and asked if they could have water from his well. Nichols agreed to this request – as farmers in those days mostly did – and the men then invited him to inspect their airship. When he did, he noticed that there were six or seven crew members. One of those men told him that the ship's motive power was highly condensed electricity and that it was one of five that had been constructed in a small town in Iowa with the backing of a large New York stock company.'

'So what we're talking about,' Lindbergh said, 'are five or six airships, originating in a small town in Iowa.'

'Right,' a granite-faced Pentagon general confirmed from a haze of smoke.

'The next day,' Bradley continued, 'on April 23, witnesses described in this *Houston Post* clipping as two responsible men, reported that an airship had descended where they lived in Kountze, Texas, and that two of the occupants had given their names as Jackson and...'

'Wilson,' General Taylor said with a sly grin.

'Right,' Bradley said, not returning the grin, but instead concentrating on his reading, which was making him feel oddly self-conscious. 'Four days

after that incident, on April 27, the *Galveston Daily News* printed a letter from the aforementioned C. C. Akers, in which Akers claimed that he had indeed known a man in Forth Worth, Texas, named Wilson; that Wilson was from New York; that he was in his middle twenties; and that he was of a mechanical turn of mind and then working on aerial navigation and something that would, quote, *astonish the world*.'

'That letter could have come from a hoaxer,' Orville Wright pointed out with a jab of his finger, 'after he'd read the original story mentioning the unknown Akers.'

'Finally,' Bradley read, deliberately ignoring the famous, and famously testy, old man, 'early in the evening of April 30, in Deadwood, Texas, a farmer named H. C. Lagrone heard his horses bucking as if in stampede. Going outside, he saw a bright white light circling around the fields nearby and illuminating the entire area before descending and landing in one of the fields. Walking to the landing spot, Lagrone found a crew of five men, three of whom engaged him in conversation while the others collected water in rubber bags. The men informed Lagrone that their airship was one of five that had been flying around the country recently; that theirs was in fact the same one that had landed in Beaumont a few days before; that all the airships had been constructed in an interior town in Illinois – which, please note, borders Iowa – and that they were reluctant to say anything else because they hadn't yet taken out any patents. By May that same year, the wave of sightings ended… and the mysterious Mr Wilson wasn't heard from again.'

As Bradley gathered his notes and clippings together, there was a bewildered, or disbelieving, silence from those sitting around the table, either smoking or drinking water or beer. Eventually, when the silence became too obvious, Lindbergh propped his elbows up on the table, rested his chin on his clasped hands, and said, 'So what's being suggested here is that the mysterious Wilson of the so-called Great Airship Scare of 1896-97, who made frequent remarks about having constructed the airships, either five or six, in a small town in Iowa, is the same Wilson who worked for Robert Goddard and now works for the Nazis.'

Bradley shrugged and again raised his hands in a questioning manner.

'We're talking about a sixty-six-year-old man,' Lindbergh pointed out in softly spoken disbelief.

Unable to refute that point, Bradley said, 'I'm not saying it's definite, but

it's certainly worth investigating. We *do* have proof that a John Wilson was born and raised in Montezuma, Iowa, and that when he left Cornell University, he was placed on the payroll of the New York financiers, Cohn and Goldman, who owned an aeronautical research factory located in Mount Pleasant, Iowa. I should therefore remind you, gentlemen, that Mount Pleasant, while in Iowa, is practically on the border of Illinois – the other location given by Wilson for the construction of his airships – and that it's close to the town of Montezuma, where Wilson was born and raised. These could be coincidences, of course, but I seriously doubt it.'

There was another uncomfortable silence until Orville Wright, who did not smoke or drink, broke it with a fit of coughing, waved his neighbour's cigar smoke away from him, and said, 'So assuming that both Wilsons are one and the same, do we know what he's up to in Nazi Germany?'

'Yes,' General Taylor said, looking relieved to be on home ground. 'According to British intelligence, there are reports that an American scientist – identity unknown, but believed to be John Wilson, who disappeared into Germany in 1931 – is presently working in a secret research establishment at Kummersdorf West, about fifteen miles from Berlin.'

There was silence around the table for a moment, while they all took this in.

'Are there any *known* results of this collusion?' Orville Wright asked.

'We have an unverified report,' General Taylor replied, 'from a source who worked in the Rocket Research Institute at the other side of the army firing range dividing it from the secret hangar in Kummersdorf West, that although even Wernher von Braun didn't know what was going on in that hangar, the American scientist, presumably Wilson, would visit him once a week to pass on to him any technical innovations he'd discovered that might help in the development of what we believe to be the A-2 rocket program.'

'*Rockets?*' Orville Wright asked.

'Yes, Orville, rockets.'

Wright wrinkled his brow and looked almost shocked, then asked plaintively, 'But do we have to be concerned with such developments? Are they not simply pipe dreams, like those of Goddard?'

'Goddard's rockets are no longer pipe dreams,' Lindbergh said angrily.

'Well,' Taylor said in his quietly remorseless manner, 'we can't be too sure of just how much Wilson's innovations have contributed to this, but we

do know from British intelligence that as early as December 1934 – about a year after Wilson is believed to have started working at Kummersdorf – two highly advanced A-2 rockets, constructed at Kummersdorf, gyroscopically controlled, and powered by oxygen-and-alcohol-fuelled motors, were launched from the island of Borkum in the North Sea and reached an altitude of one and a half miles. And I should make it clear, unpalatable as it may seem, that those stabilized, liquid-fuelled rockets are the only known, serious challengers to the rockets of Wilson's old work mate, Robert H. Goddard.'

'I find this unbelievable,' Orville Wright said, looking unusually flushed.

'Believe it,' General Taylor replied. 'In fact, just a few weeks ago, shortly after Hitler's infamous advance across the Hohenzollern Bridge, Captain Walter Dornberger, the head of the Rocket Research Institute, his assistant, Wernher von Braun, and their team of one hundred and fifty technicians demonstrated some more rockets at Kummersdorf, including one with an unprecedented three thousand five hundred pounds of thrust. And while it was widely believed that the brilliant von Braun was responsible for this great achievement, he resolutely refused to take credit for it, insisting that others, whom he claimed he could not name, deserved most of the credit.'

'And you think von Braun was referring to those on the other side of the firing range?' Lindbergh asked.

'Yes,' Taylor replied. 'To those on the other side of the firing range in general, but maybe to Wilson in particular, since the most revolutionary advances have been made since his arrival at Kummersdorf.'

There was another awkward silence, which was certainly not the norm, and Bradley glanced at Lindbergh, who was gazing distractedly at the table, remembered the widely publicized kidnapping and disappearance of his child, and felt stricken with sympathy and shame.

He knew what the shame was and could certainly not disown it He had promised Joan that he would never again let work come between him and her, let alone him and the children; but he knew that in the past year, even against his better judgment, he had let Wilson become an obsession that was keeping him away from his family more than he'd planned. It was causing problems at home, as his obsession with legal work had done before, deeply wounding Joan and thus angering Mark and Miriam; and so, when he looked at Lindbergh, at that courageous and haunted face, he was filled with shame because he knew he was ignoring what Lindbergh had lost – the precious gift

of a family.

As if reading his mind, Lindbergh looked up, stared directly at him, then, breathing deeply, almost wearily, returned Bradley's thoughts to the matter at hand by asking: 'Can we take it that this Wilson is still at Kummersdorf?'

'Yes,' General Taylor said. 'According to British intelligence – '

'What would we do without them?' a muted voice asked sarcastically.

'According to British intelligence,' Taylor repeated, smiling knowingly at Bradley, 'the recent demonstration at Kummersdorf so impressed the German commander-in-chief, General Fritsch, that permission has since been given for Dornberger and von Braun to build an independent rocket establishment in a suitably remote part of Germany, where research and test firings can be carried out in the strictest secrecy. It's believed that the chosen site is near the village of Peenemünde, on the island of Usedom, off the Baltic Coast. It's also believed that the unknown American, whom we believe to be John Wilson, will *not* be going with the rocket team but will be left where he is, with the other members of his team, to do only God knows what in Kummersdorf West.'

The final silence was far too long, filled with too much tension, and forced even Bradley, schooled in law and psychology, to try escaping it by gazing out the window at the cloud-streaked, iridescent blue sky over the green fields of Langley.

'So,' Lindbergh said, offering him a reprieve, 'we can take it that John Wilson exists and is working in Germany. However, we're not at war with Germany and Germany isn't at war with Europe – at least not yet – so what's the point of this meeting?'

He was staring directly at Bradley, his gaze concerned, not accusing; but Bradley, who could think only of Joan and his children – of the blessings he was abusing as he faced this tragic figure – was incapable of giving a coherent answer. He thought of Lindbergh's murdered child, of all he had owned and lost, and realized that even understanding that, he, Mike Bradley, blessed with a loving wife and children, was letting his obsession with John Wilson threaten all he loved most.

He felt shame and a terrible helplessness, because he knew damned well that he wouldn't stop until this mystery was solved.

He would risk all for that.

'Let me put it another way, Mr Bradley,' Lindbergh said. 'Since you've

investigated this case and called this meeting to discuss it, what is it you're trying to tell us?'

'If we get into a war,' Bradley said, 'we might have to stop that man.'

'Stop him?' Orville Wright asked hoarsely.

'Yes,' Bradley said without thinking. 'Stop him dead in his tracks.'

CHAPTER ELEVEN

Ernst was unhappy as he hurried through the jostling shoppers in the Friedrichstrasse, late for his lunch appointment with Ingrid. In fact, he was slightly hung over, as he was so often these days, and was reminded, by the stout, red-cheeked housewives all around him, that the Berlin he now knew so well by night was very different from the more respectable city that the sun shone upon.

When the sun set on Berlin in this troubled year of 1937, powdered and rouged young men solicited in the yellow lamplight of the Kurfürstendamm, government officials and men of commerce rubbed cheeks with sailors and soldiers in dimly lit bars on the Motzstrasse, hundreds of men dressed as women and women dressed as men danced in the riotous ballrooms of the West End, the novel, the bizarre, and the perverse were nightly paraded before the noisy crowds in the Scala or the amusement palaces of the Wintergarten, the nightclubs, cabarets, revues, vaudeville shows, and erotic Tanzbars were packed with male and female prostitutes, pimps, transvestites, fetishists, homosexuals, and drug addicts. In general, while the National Socialists called for a new moral order, the spirit of decadent pleasure prevailed to a background cacophony of jazz, dancing feet, exploding champagne corks, screams, laughter, and tears.

A very different world, indeed – and one that Ernst had, in the company of his fellow SS officers, become increasingly familiar with in recent months.

He thought of this with a certain amount of shame when he saw Ingrid sitting, in a fur-collared winter coat and broad-brimmed hat, at a table by the window of the Kranzler Café. Haunted by vague snatches of memory from the previous evening's debauch... Hot dogs and beer at the Scala with Willi Brandt and Franck Ritter, then naked girls at the Schauspielhaus, then Ritter embracing a drunken sailor by the toilet in a Tanzbar, then an opium dream of sensual perversity with the endlessly inventive, amoral Brigette... Yes,

haunted and guilty, he uneasily composed himself as he entered the café and joined Ingrid at her favourite table by the window.

'My dear,' he murmured, brushing her rouged cheek with his lips and then sitting facing her. 'Sorry I'm late.'

'You're always late,' she accused him.

'I can't always guarantee getting away on time. My superior officers don't think that way. What are you drinking?'

'White wine.'

'Already? At lunchtime?'

Ingrid shrugged in an indifferent manner. 'It helps pass the time,' she said.

Not wanting her to drink alone, and feeling thirsty anyway, Ernst ordered a beer for himself.

'Shall I order lunch now?'

'I'm not really hungry,' Ingrid replied. 'But get yourself something.'

Ernst shook his head. 'I'm not hungry either,' he said, still feeling ill from the previous evening and yearning only to slake his thirst with the beer. 'Still, I think *you* should eat. You don't eat enough these days.'

'I'm just dieting, Ernst.'

'For me?'

'For you.'

'That's nice,' he said.

Knowing she didn't mean it, he was also discomfited by her steady gaze. Though still as green as jade, her gaze was not as bright as it had been. Sitting in this particular café reminded him of the day he had proposed to her, the day Hitler became chancellor, and filled him with remorse and incomprehension at how they had both changed. They had been young and in love then, but now, four years on, they were saddened adults who seemed to have lost each other along the way. Ingrid was still pretty, but in a less sensual, more matronly way, and the darkness in her eyes came from disillusionment, caused mainly by him. He knew it and was wounded by it, but could do little about it, since he too had changed beyond repair – and not for the better.

Best not to dwell on that...

'So,' he said instead, 'how are the children?'

'They're fine,' she replied. 'They haven't changed much since last week.

Ula complains that you only come home at weekends, but Alfred is still too young to miss you, so you needn't feel *too* bad.'

'You're being mean to me.'

'I'm not.'

'It's not my fault that I can only come home weekends. We're compelled to live in the barracks during the week, and that's all there is to it. I know it's not particularly nice for the children, but we'll just have to live with it.'

'You like being away from home. You can barely wait to get back to your SS friends. When you're home, you have little patience with me or with the children. You're not nice at all, Ernst.'

'That's not true,' he said.

Yet as he took his first sip of the beer the waitress had brought, he had to acknowledge that Ingrid was right. His daughter Ula was now three years old and beautiful, his son Alfred was a mere two months old and lively, but he saw them so rarely these days, he hardly knew them at all. He felt guilty over that but could not ignore Ingrid's charge that deep down he preferred not being home.

In truth, he now felt suffocated by Ingrid's presence – something that had begun after that dreadful weekend now remembered as the Night of the Long Knives. Ashamed of himself at the time, he now accepted the necessity of that bloody purge and could not tolerate the fact that Ingrid despised him for taking part in it.

For weeks after the purge, she had not let him touch her, meanwhile pouring scorn upon him; but later, after reluctantly surrendering to him and becoming pregnant with Alfred, she had rejected him with more finality than before.

'You have blood on your hands,' she had told him, 'so keep them off me. I don't want to be contaminated by you or what you represent. You've arrested and killed innocent people, once reluctantly, now willingly, and I can't bear the thought that my children will learn about what you do. Don't touch me. Don't ever touch me again. Take your pleasures elsewhere.'

Which is exactly what he had done. Which in turn was why he spent so much time with his comrades – not just in the barracks, as he insisted on pretending with Ingrid, but in the drunken, decadent pleasures of a Berlin unrestrained by moral values, in the nightclubs and cafés and erotic Tanzbars of the night; and, most irresistible of all, in Brigette's snake-like embrace...

Just thinking about Brigette made him feel sick with lust and shame, though he tried not to show that to Ingrid. After drinking some more beer, he placed the mug back on the table, wiped his lips, and smiled more casually than he felt.

'So, who have you arrested this week?' Ingrid asked him.

The remark wiped the smile from his face and filled him with anger.

'No one,' he said. 'As you know, I'm now based at Kummersdorf West, in charge of technical intelligence. My duties involve the gathering of information relating to foreign and domestic scientific research. I don't arrest anyone.'

'But you spy on the scientists you deal with. You keep your eyes and ears open.'

'Yes,' he said. 'Naturally.'

'You think it's natural to spy on people?'

'Not natural,' he said with a weary sigh. 'A necessity, Ingrid. Someone has to do it – and I take pride in doing it well.'

'But why do you have to keep your eyes on our own scientists and engineers? Can no one be trusted these days?'

'It's not that bad, Ingrid,' he lied, knowing that in these troubled times *no one* could be trusted, that the enemy within was always a danger, and that the importance of the work being done at Kummersdorf West called for even more vigilance. It would be more than his life was worth to tell Ingrid about Projekt Saucer and the strange American, Wilson, working there under a German alias, but when he thought about it, he did so with a mixture of awe and resentment.

He was in awe of Wilson's genius, about which he had no doubts, and resented the fact that those who worked with him – Schriever, Habermohl, and Miethe – were doing the work that he, Ernst Stoll, was better equipped to do.

'You wanted so much to be a rocket engineer,' Ingrid said, as if reading his mind, 'and instead you've become someone who reports on the achievements of others. That must really hurt, Ernst.'

The mockery, which rolled off her tongue with relish, was even more hurtful.

'I only hurt to give you pleasure,' he replied. 'I hope you're suitably grateful.'

‘Don’t be bitter, Ernst.’

‘I can’t help it,’ he said. You complain because I don’t come home much and that I’ve little patience when I *do* come home, yet you do nothing but pour your scorn upon me. What makes *you* so superior?’

‘I don’t feel superior. I just despise you for the way you’ve accepted what the Nazis are doing.’

‘If I didn’t, I’d be imprisoned – or even shot.’

‘That may be true, Ernst. But you don’t accept it just because of that. Now you actually believe in it.’

‘I believe in the Führer. He may not always be right, but he knows the end justifies the means – and I also believe that.’

‘That’s despicable,’ Ingrid said.

Ernst simply shrugged. This argument could lead them nowhere. Each time they met it was the same, always ending in an argument, and already he yearned to be back at Kummersdorf, keeping his eye on John Wilson. The American fascinated him – even frightened him a little. He was sixty-six years old, yet looked fifteen years younger, and his eyes, which were still bright with intelligence, were also as cold as ice. Ernst thought him slightly inhuman, a man divorced from normal emotions, but one whose genius, allied to obsession, was producing remarkable results in the hangars of Kummersdorf. In fact, the dream of a saucer-shaped aircraft was coming closer each day...

‘What are you thinking?’ Ingrid asked him.

‘Nothing,’ he replied, unable to discuss the American or Projekt Saucer.

‘You’re certainly not thinking of me or the children – that much I can tell.’

‘Please, Ingrid, stop this.’

‘Why? I’m enjoying it! I can tell by the dreamy look in your eyes that we’re not in your thoughts.’

‘You’re trying to pick a fight.’

‘It keeps me awake, darling. I need something to keep me awake while you sit there in front of me, hardly looking at me, probably yearning to be with your virtuous comrades and the whores you all play with.’

‘Ingrid!’

‘I *know*, Ernst! I know *everything*! Do you think I’m a fool? Did you really think I didn’t know that when you were supposed to be sleeping in the

barracks, you were getting drunk with your SS friends and probably picking up the whores in the Motzstrasse? Do you think I'm dumb, Ernst?'

'That isn't true at all!' he lied, shocked and angry that she had guessed what he was up to.

'Of *course* it's true, Ernst!' Her green eyes were bright with rage. 'That's why you're away from home so often. That's why you stay out half the night and come home exhausted. Those whores are in your clothes. They're in the pores of your skin. You can't wash the smell of them away, so don't bother trying anymore. I don't want your damned denials, Ernst. I just want the truth.'

Why didn't he tell her? Get this marriage over and done with... Because SS men did not get divorced and have successful careers.

'Do we have to discuss this now, Ingrid? Can't it wait for a better time?'

'*What* better time? There *is* no better time. I wanted to get this off my chest, which is why I asked you to meet me here.'

'All right. So you've got it off your chest. Can we now change the subject?'

'No. That's not all I wanted to say. I also wanted to tell you that your work appals me, your promiscuity humiliates me, and that if we must live together like this, let's quietly live separate lives.'

'We already do, Ingrid. You haven't let me touch you for months. I think that's separate enough. And it certainly explains why the whores you mention now seem so attractive.' And he couldn't help smiling when he said it, taking pleasure from vengeance.

Surprisingly, she returned his smile with one of her own.

'Good,' she said. 'I'm glad you find them attractive. That means you won't be too upset when I confess that I've been seeing another man for a while now. A nice man, ten years older than you, but so much kinder, more decent. I just thought you should know.'

Ernst burned hot and cold, felt his whole body stiffening, and had to fight to control the racing of his heart, a suffocating mixture of rage and humiliation. He wanted to kill her.

'Why did you want me to know?' he managed to ask.

'Because I've lived for too long with the knowledge of your philandering and now I want it out in the open.'

'You want revenge.'

‘I’ve already had that, Ernst. That’s how my affair started – though it isn’t why it continued. I just came to care deeply for my lover and I won’t keep him hidden.’

Ernst had to resist the urge to slap her face.

‘You want a separation?’ he asked.

‘Yes,’ she replied.

‘You can’t have one,’ he told her. ‘The SS doesn’t approve of divorce, so I won’t even consider it. And if you try to go ahead with it, the SS will ensure that the children are handed over to me. Are you willing to pay that price?’

She looked at him with hatred. ‘No, Ernst, I’m not. You know I’d never give up the children.’

‘Then the marriage continues.’

‘I won’t give up my lover.’

‘And I won’t give up my whores. Let’s just live our separate lives, while living together, and keep our mouths shut.’

The gleam of hatred receded, but her gaze remained antagonistic. ‘I don’t think we can do that,’ she said.

‘Perhaps not normally,’ he responded, ‘but I also had something to tell you – and clearly, in the light of this conversation, it’s come at the right time.’

‘Oh? What?’

He could not resist swelling slightly with pride. ‘Reichsführer Himmler has plans for a special expeditionary force to travel by boat to the Antarctic early next year and has personally requested that I go with it.’

‘The... *Antarctic?*’

‘Yes.’

‘For what purpose?’

‘He didn’t say,’ Ernst replied honestly, though he knew that the expedition was in some way related to Projekt Saucer. ‘He only said that he’d be pleased if I volunteered, which of course I did instantly. Now, Ingrid, you and I can live our separate lives without too much pain – at least for a few months.’

He sat back in his chair and gazed steadily at her, finding it easier to hide his rage and humiliation behind a display of pride. Ingrid studied him at length, clearly not sure if she should be pleased or not, then she nodded in a thoughtful, accepting manner and said, ‘Yes. I think that will be good for

both of us. It *has* come at the right time.'

Ernst sighed and sipped some beer, thinking of how the blood from wounded emotions could be so easily mopped up... Yet even as that cynicism gripped him, he saw Ingrid's tears.

She sniffed, but failed to hold the tears back, so wiped them away with her hand and shook her head sadly. 'What happened, Ernst?'

The question drove a stake through his heart, and he writhed with the pain of it. He knew what had happened – Adolf Hitler – but he couldn't admit that now. The love they had shared had been destroyed by his devotion to duty... or, more accurately, by his fear of the consequences of disobedience. Now, when he saw Ingrid's tearful eyes, he understood that he was giving away what he valued the most: her love and his pride.

'Nothing in particular,' he lied, debasing himself even more. 'We just drifted apart. Let's say we both grew up.'

She quivered as if whipped, but then managed to control herself. 'I have to leave now,' she said in a distracted, conversational manner, 'and collect the children from my mother's. Can I take it you'll be home tonight for dinner?'

'No,' Ernst said, watching her dry her eyes and stifling his pain, 'I don't think I will be. Now that we're leading separate lives, I see no point in lying.'

Ingrid smiled bitterly and nodded, then wiped her eyes with a handkerchief. 'Are you leaving now as well?' she asked, standing up and glancing out at the wintry sunshine over the busy corner of the Friedrichstrasse and Unter den Linden.

'I have five minutes to spare,' he replied, 'so I'll just finish my beer.'

'Just one, I hope,' she said without thinking.

'Yes, Ingrid,' he replied automatically. 'Just one, then I'm leaving.'

She leaned down to kiss him frigidly on the cheek, then waved good-bye and walked out.

How pretty she still is, Ernst thought helplessly, as he watched her departing through the dense crowds, looking elegant in her fur-collared, belted coat and broad-brimmed hat. How very attractive!

Then, with a grief that lacerated him, he ordered another beer.

The day became confused after that. Feeling cold after his second beer, he decided to have a cognac and drank it while brooding about Ingrid and life's

disappointments. Ingrid was disappointed with him and he felt the same about life in general, and when he thought about that, after having another brandy, he could only think of the American, Wilson, in the hangar at Kummersdorf, creating the kind of aircraft that he, Ernst, had once dreamed about as a student at the Institute of Technology, when he and Ingrid were still in love.

He thought a lot about Wilson. The American fascinated him. He was an old man, a very old man, kept alive by his faith.

Yes: faith – what Ernst had once possessed but lost – and because of that, the American was working miracles while Ernst could simply observe him. He felt sick just to think of it.

He not only feared the odd American, but also what he was building.

A miraculous, saucer-shaped aircraft.

A terrible weapon.

Filled with an awe and resentment exaggerated by drunkenness, Ernst, who had been given the afternoon off, had too many brandies, then went to meet his SS comrades in a Tanzbar recommended by Franck Ritter. Coloured lights bled through smoke, a cabaret band was playing, and two almost naked girls were performing an erotic dance with umbrellas. Sitting at a table near the wall at the back of the room, Willi Brandt was drinking a stein of beer and gloomily watching the dancing girls while Franck Ritter, resplendent in his SS uniform, was fondling the gaudily dressed transvestite sitting beside him. Ernst joined them at the table, had another few drinks, compared notes with Brandt on the various erotic acts on the stage, then left in disgust when the insatiable Ritter led the giggling transvestite into the toilets.

‘The élite of the New Order!’ Ernst exclaimed histrionically. ‘Is this what we’ve come to?’

He and Brandt embarked on a tour of familiar haunts, but ended up, as usual, in the White Mouse in the Französischestrasse in time for Brigette’s evening performance. The revue bar was packed with uniformed officers of the Reichswehr and SS, plus fat-bellied businessmen and their whores, and they roared their approval and gave the Nazi salute when Brigette came on stage, naked except for a steel-studded, black-leather halter and gleaming jackboots, with a peaked military cap slanted rakishly over red hair and her tongue licking brightly painted, pouting lips.

She was grinding her hips lasciviously and cracking a bullwhip over the

naked spine of the man who was crawling across the stage on hands and knees. Brigette sat on his back, riding him like a horse, and she kept cracking the bullwhip and gyrating upon him until, when he was prostrate beneath her, she slowly, seductively removed her steel-studded, leather halter and let him reach up to her...

It was a crude, erotic performance, arousing the audience to fever-pitch, and though Ernst was disgusted and drank far too much brandy, he too was aroused by what he saw and could not wait to have her.

He had her soon enough, an hour later, in her apartment, when she teased and tormented him, whispering, ‘My pretty boy! My sweet lieutenant!’ and sending him into spasms of relief and bottomless shame. With her diabolical artistry, her finely controlled sense of debauchery, she helped him forget Ingrid, the loss of his career, the frustration and fear that he always felt at Kummersdorf when he saw Wilson working. He took Brigette like a savage, was in turn devoured by her, felt exultation and grief as he shuddered and spent himself, then rolled off her and thought of the Antarctic with unbridled longing.

There, he could hide from himself.

CHAPTER TWELVE

‘Good afternoon, Herr Wilson,’ Himmler said in his frostily polite manner. ‘I’m sorry to have had to bring you all this way, but I have good reason for doing so.’

‘Naturally, Reichsführer,’ Wilson said, taking the wooden chair at the other side of Himmler’s desk in his room in the Pension Moritz and glancing out at the soaring, snow-covered Austrian Alps. He had been dragged out of bed that morning, flown from Berlin to Munich, put on a train to Salzburg, then brought here, to the picturesque village of Berchtesgaden, in a jeep driven by a blond SS moron. Himmler enjoyed pulling such surprises, but Wilson was not amused.

‘Can I order you some herbal tea, Herr Wilson?’

‘Thank you for considering my tastes, Reichsführer, but I’ve already had my morning tea and I never drink after breakfast.’

Himmler seemed mildly amused. ‘I know that you’re careful about what you eat and drink,’ he said. ‘This may explain why, for a sixty-six-year-old man, you look remarkably youthful. In fact, you still only look about fifty, which is truly amazing.’

‘Coming from you, Reichsführer, I take that as a compliment. It’s true that I’m careful about what I eat and drink. I also believe that most people do too much of both, so I’m frugal even with what I permit myself.’

‘Do you take vitamins?’ Himmler asked with sombre interest.

‘Yes. I’ve done so all my life. I eat and drink the minimum, take vitamins every day, and meditate whenever I get the chance. In this way I’ve managed to hold off the aging process, though it must come eventually.’

‘And then?’

‘I’m sure that with your continued backing of the SS medical experiments, we’ll soon find surgical remedies for the aging process –and when we do, I’ll be one of the first to make use of them.’

‘That would be a great gamble, Herr Wilson.’

‘Not at my age,’ Wilson replied.

Himmler smiled, then clasped his hands under his chin and said, ‘You believe in the Superman, Herr Wilson?’

Wilson knew just whom he was dealing with – an insane visionary – but he also knew what he personally wanted, and when he saw the priestly madness in Himmler’s eyes, he was convinced he could have it.

‘I believe that man’s destiny is to evolve into the Superman,’ he said truthfully, though not without regard for Himmler’s ego, ‘but that we humans, if not constrained by wasteful emotions, can hasten that process.’

Himmler nodded approvingly. ‘Good,’ he said. ‘I believe in this also. We cannot let sentiment stand in the way of progress. We must eradicate man’s imperfections and, if necessary, create the New Man from the bones of the old. We must cleanse the earth by purifying the blood. We must exterminate the Jews and the infirm and maladjusted, use the lesser races as slaves to the Reich, creating a race of pure Nordics. History will exonerate us. What we do, we do for progress. We are changing the course of history and aiding evolution – and when we die, as surely we must, our achievements will live on. You and I understand this.’

‘Yes, Reichsführer,’ Wilson said, not interested in the Aryan race, but willing to use Himmler and his kind to create his world of pure science, which is all he now lived for.

Perverse? Most certainly – though he could live with that truth. All across Berlin, in the Reich’s most august offices, were the other high priests of the demonic New Order: Hermann Goring, Joseph Goebbels, Rudolph Hess, Martin Bormann – alcoholics, drug addicts, occultists, and degenerates – the very epitome of that gross irrationalism which Wilson so much abhorred. There too the Gestapo butchers, the drilled ranks of the SS, and all the torture and murder that went on every day in the basements. Wilson had to accept it. Science could not moralize. Those irrational brutes were no more than the means to achieving his ends. Progress needs its trampled bones. Death gives way to more life. Evolution knows neither right nor wrong and transcends ephemeral matters. So, he would work with them. In doing that, he could use them. And glancing out at the snowy slopes, then returning his gaze to Himmler, he felt nothing but hope for the future, the glow of fulfilment.

‘Why did you wish to see me, Reichsführer?’

‘I wish to take you on a little walk that I think will be instructive to you. But first, I would like to be informed about the progress of Projekt Saucer.’

‘Now that the rocket teams have left for Peenemünde and we can use their facilities, we’re making quicker, more definite progress. As you know, I decided to stop work on the larger flying saucer prototype and instead concentrate all our efforts on making a miniature version of it, which can be used as an anti-aircraft weapon. The final drawings for that smaller saucer will soon be completed – in the next week or so.’

‘Good,’ Himmler said. ‘And you think this smaller version will actually fly?’

‘I know it will,’ Wilson said firmly.

‘What kind of anti-aircraft weapon will it be?’

‘As a miniature version of the larger prototype, it’ll be a small, flat, circular flying machine, powered by a turbojet engine. It can be used as an anti-radar device that, by flying in the vicinity of an aircraft in flight, will over-ionize the atmosphere surrounding it and, by so doing, subject its radar to the adverse action of powerful electrostatic fields and electromagnetic impulses.’

‘And if it works – ’

‘It will, Reichsführer.’

‘ – you can then construct a larger version without fear of it failing.’

‘Exactly, Reichsführer.’

‘And who contributed most to this final design? You, or the officer nominally in charge of Projekt Saucer: Flugkapitän Schriever?’

Wilson thought carefully before answering.

He was aware that his greatest innovations were likely to be stolen from him and passed on to the rocket scientists now at Peenemünde and other, even more secret, SS research establishments. He understood, also, that Rudolph Schriever, who had more arrogance than scientific talent, was spying on him for Himmler and would, while doing so, also try to take credit for his achievements. For this reason, while pretending to be open with Schriever and his fellow engineers, Wilson had actually showed them only selected parts of his great work – just enough to convince them, and thus Himmler, that he was worth keeping on. Also, by letting them steal relatively minor aspects of his work to utilize in their own, otherwise largely worthless designs – and by then praising them individually, secretly, for those designs –

he was subtly setting them against one another, which kept him in control.

Naturally, because Himmler trusted his young flugkapitän, Wilson could not inform him of this fact and instead said, ‘I must confess that Flugkapitän Schriever was surprisingly innovative and contributed greatly to the final designs. He’s an excellent physicist.’

Clearly pleased that he had chosen correctly, Himmler asked: ‘And the others? How are they faring?’

‘No problems,’ Wilson replied, not wishing to show his contempt for his fellow scientists, but being careful not to praise them too highly either. ‘Of course Habermohl and Miethe are only engineers, but their designs for various parts of the saucer have been quite helpful. Miethe designed the outer shell for the latest model and deserves a commendation for that alone.’

‘I will see to it,’ Himmler said, then gave a light sigh, unclasped his hands, and pushed his chair back. ‘So,’ he said, standing upright, ‘let us go for our short walk.’

So saying, he led Wilson out of the room and into the heavily guarded, crowded lobby of the rustic pension. Glancing across the room, Wilson saw the handsome, uniformed architect, Albert Speer, sitting on a settee and discussing the architectural plans spread out before him and his assistants. Himmler nodded coolly at him, then, when four uniformed SS guards had closed in around him, he led Wilson across the busy lobby and out of the pension.

‘Is the Führer here?’ Wilson asked, having noted the strong contingent of armed guards inside and now noting the many more outside.

Himmler nodded in the direction of nearby hills, where Wilson saw a figure in *lederhosen* strolling through the snow, accompanied by a woman, whom he assumed was Eva Braun, and guarded by half a dozen armed SS troops.

‘He’s staying in the pension,’ Himmler explained with pride, ‘while renovations are made to the Berghof. Come! This way, Wilson.’

Followed by the four SS guards, he led Wilson to a jeep that was parked right in front of the pension. When they were both seated in the rear, one of the armed guards climbed into the front and drove toward the majestic, snow-covered slopes of the Kehlstein Mountains.

Soon leaving the village behind, they passed through the guarded gates of an area closed off by barbed-wire fences. Waving one hand airily, to indicate

the ugly dormitory barracks clinging to nearby slopes, Himmler said, ‘Those barracks house hundreds of construction workers. This was once a solitary, very beautiful mountain valley, but it’s now the auxiliary headquarters of our beloved Führer. In order to make this conversion, Bormann tore down centuries-old farms and numerous votive churches, despite the protests of the parishes. Also, despite further protestations, he confiscated state forests and made this a private area that extends from the floor of the valley to the top of the mountain, covering approximately two and a half square miles. Finally, with no regard to the exceptional beauty of the area, he turned forest paths into paved promenades, laid a network of tarmac roads through the formerly lovely landscape, and erected barracks, garage buildings, a hotel, a manor house, a complex for our growing number of workers, then, finally, those ugly barracks desecrating the once-virgin slopes.’ He glanced around him with satisfaction, adjusting the pince-nez on his nose and squinting into the sun. ‘As a lover of beauty, do I disapprove of this?’ he asked rhetorically. ‘No, of course not! It’s the German genius to do what’s necessary, no matter the cost. Do you understand, Wilson?’

‘Yes, Reichsführer, I do.’

Himmler nodded. ‘Good!’ The sound of explosions reverberated around the valley as the jeep took a corkscrew bend, away from the Scharitzkehlalm ravine, then took the steep, winding road up the side of the Hoher Göll.

‘They’re dynamiting,’ Himmler explained when Wilson glanced in the direction of the explosions. ‘When war breaks out, as it must, Bormann intends having underground quarters for the Führer and those most important to him.’

‘Very wise,’ Wilson murmured.

The five-mile road that ran up to Hitler’s *Teehaus* had been hacked out of the side of the mountain with the sweat of slave labour. It stopped at an underground passage blasted out of the mountainside, just below the summit. Following the armed guard, Himmler climbed down from the jeep and led Wilson along the underground passage, until they arrived at a copper-lined elevator, its shaft, about four hundred feet deep, hacked out of the solid rock. That elevator took them down to an immense, high-walled gallery, supported by baroque Roman pillars. At the end of the gallery, also hacked out of the mountain, was a dazzling, glassed-in, circular hall.

Standing in that great hall, looking out through an exceptionally tall, wide

window, Wilson saw only the other snow-capped mountains and a vast, azure sky – an overwhelming experience.

'The impossible made actual,' Himmler whispered proudly, indicating with a gentle nod of his head that extraordinary view. 'If our dreams are grandiose, our actual achievements are more so – the achievements of men who can make the impossible commonplace. Come! Follow me!'

He led Wilson across to the panoramic window, from where they could look down on the snow-covered earth, with Berchtesgaden and Salzburg clearly visible in a mosaic of brown and white.

Pointing at a distant mountain peak, Himmler asked Wilson if he knew what it was. When Wilson shook his head, Himmler said, 'That mountain is the Untersberg. According to legend, the Emperor Charlemagne still sleeps there and will one day rise again to restore the past glory of the German Empire. I believe that day has come – that our Führer is the reincarnation of Charlemagne and will return us to glory.'

Removing his gaze from the distant mountain, he looked at Wilson through his glittering pince-nez. Wilson, who knew that Himmler was mad, also knew not to smile.

'Now look down there,' Himmler said, pointing with his index finger, then sweeping his hand from east to west, to indicate the vast, snow-covered valley. 'Other than the villages and towns, what do you see?'

'Just the snow-covered earth,' Wilson said.

'Exactly,' Himmler said. 'And when war comes and we move underground, that is all you will still see: just the snow-covered earth.'

Wilson grasped instantly what the lunatic was driving at.... The dream of the Thousand Year Reich had been born out of mysticism: the Cosmic Circle of Munich; the Anthroposophy of Rudolph Steiner; the Theosophy and Rosicrucianism of Vienna and Prague; a belief in Lemuria and Atlantis, ice and fire, Man as Superman... Yes, he grasped what Himmler was thinking and now knew without doubt that he could use him.

'You despise the weaknesses of mankind, don't you?' Himmler said, staring steadily at him.

'Yes,' Wilson confessed.

'And like me, you believe in the evolution of the human race, from Man into Superman.'

'Yes,' Wilson agreed, though he conceived of a superior race based on

science, rather than a race of so-called Supermen based on the mystic strength of the Volk and other romantic, idiotic German theories.

'Do you know of the theories of the great Austrian cosmologist, Hans Hörbiger?' Himmler asked, his gaze unnaturally steady behind the glittering pince-nez.

'I don't believe so,' Wilson lied. Actually he was fully cognizant of the fact that Himmler revered the so-called unorthodox, obviously mad, Austrian cosmologist's theories on the birth of the universe and the destiny of Nordic man, but he didn't want Himmler to realize that he had checked him out and now knew so much about him.

'A great man,' Himmler said reverently. 'A man despised by the scientific fraternity of his day for speaking the truth.'

'I'm sorry,' Wilson said hesitantly, carefully. 'I just don't know…'

'No,' Himmler said abruptly. 'Naturally not. They would not have taught you his theories in the United States of America where, as even you know, the truth is rarely respected.'

'He was a cosmologist?' Wilson asked, as if confused.

'Yes,' Himmler replied. 'Hörbiger's theory is that the mass of free matter in the universe takes the form of frozen ice, that chunks of this ice periodically fall into stars and cause immense explosions, which in turn form planetary systems, and that since the world is formed from ice and the fiery explosions they cause – ice and fire, you understand? – it is the natural heritage of Nordic men.' He glanced sideways, as if expecting a reply, and, receiving none, continued melodramatically: 'Yes, Nordic men! *German* men! And Hörbiger believed that a return to such a world would eventually lead to men who were gods...' Mercifully, at that moment he turned away to survey the snow-covered valley. 'A world of eternal ice,' he whispered portentously. 'A world under the earth!'

Quietly exalted by his vision, he turned away from the window, crossed to the centre of the vast room, then faced Wilson again.

'You are a man obsessed,' he said, 'so I know you will understand me. I do not envisage my SS as a commonplace police force, but as a religious order devoted to the creation of the Superman. Indeed, right from the start it has been my intention to eventually isolate the élite of the SS from the world of ordinary men for the rest of their lives. It is also my intention to create special colonies of this élite all over the world, answerable only to the

administration and authority of this new order. My first step in the creation of this new élite was to create my special schools in the mountains of Bavaria, where the finest of the SS are indoctrinated in my ideals and convinced that they are men far finer and more valuable than the world has yet seen. My second step was the creation of the *Ahnenerbe* – the Institute for Research into Heredity – whose function is to finance and publish Germanic researches and to supervise the anthropological medical experiments on the inmates of the concentration camps. And my third and most important step is the *Lebensborn* – Spring of Life – which will, through the controlled mating of élite SS men and pure, Aryan women, breed out all imperfect traits from the German character and physique within one hundred years.'

He walked across the vast room, his footsteps echoing eerily, then stopped directly in front of Wilson, to stare calmly at him.

'And while all of this is happening,' he asked, 'where will I isolate the élite of my SS?'

Wilson turned to the side, to nod in the direction of the snow-covered valley below. 'In a world of eternal ice,' he said. 'A world under the earth.'

'Yes!' Himmler whispered. 'Correct! But not here. Not in Germany.' He walked to the window, pressed the palm of his hand against the glass and then turned back to Wilson. 'Our beloved Führer is anxious for a foothold in the Antarctic,' he said. 'For this reason, he is sending an expedition, commanded by Captain Alfred Richter, to the coast due south of South America. From there, seaplanes will be catapulted from the deck of our aircraft carrier *Schwabenland* with orders to fly back and forth across the territory that Norwegian explorers arrogantly named Queen Maud Land. It is our intention to make a far more thorough study of the area than the Norwegians had done, to photograph as much of the area as possible, and to then claim the land for the Third Reich. When that is done, Herr Wilson, we will do there what we are about to do here and all over Germany: build underground quarters for the élite of my secret order and the slave labour necessary for our purposes.'

Wilson saw the insane grandeur of the concept – even though he knew it would never work. Then, even as he was formulating his own secret plans, Himmler approached him, took hold of his shoulders, and shook him with a rare display of emotion.

'Do you now understand, Herr Wilson, why I'm so interested in you? I

will create the perfect man, you will create the perfect machine, and between us we can create a perfect society under the ice. Hörbiger's world of ice and fire turned into reality! My perfect men, your pitiless science, and all the slave labour we require. *This is what yon are here for*!' He turned away to wave his right hand, indicating the snow-white earth, the hazy horizon, and the unseen Antarctic... 'Your flying saucer will take us there and protect us and finally give us dominion. Now let us go back down.'

Wilson, seeing his dream forged by a madman, followed Himmler out of the Berghof and back down the mountainside.

CHAPTER THIRTEEN

After eight weeks at sea, with another seven to go, Ernst had a craving for dry land that made a mockery of reason. Anchored in the South Atlantic Ocean, near the South Sandwich Islands, the *Schwabewland,* the command ship of the expeditionary fleet, had become his prison and home, always swaying and creaking. For most of the three weeks they were at anchor, Ernst's sole view of Antarctica was of distant white peaks in a constant, sun-streaked haze beneath an azure sky as, on behalf of Himmler, he supervised the ruthless takeover of Norway's Queen Maud Land.

Daily for three weeks, two seaplanes had been catapulted from the deck of the fleet's aircraft carrier, to fly back and forth across those frozen wastelands, photograph the area, and, as ordered, drop thousands of sharp-tipped steel poles, all weighted at the tip to make them dig into the ice, with small swastikas attached to the other end. The thought of covering a vast expanse of the Antarctic with swastikas attached to steel poles seemed slightly idiotic, even comical, to Ernst, but he had his duty to perform and did it commendably, keeping his face straight, keeping his eye on his men, and receiving the film they brought back after taking aerial photographs of that same vast, icy, largely uncharted wilderness.

Surprisingly, they had found many areas free of ice, which is what Himmler had told Ernst he was particularly interested in.

He'll be pleased, Ernst thought sourly.

Divorced from dry land and the world he had known so well, with little to do other than keep his eye on the men, Ernst spent too much time thinking about what he had lost – his engineering career, then Ingrid's love and respect – and brooding bitterly about how he was being used as a disciplinarian when he should have been working on Projekt Saucer with that oddly unfeeling American genius, Wilson.

God, yes! The American and Projekt Saucer... Already, it all seemed so

far away, beyond the ever-distant, constantly changing horizon, first shrouded in mist, then azure blue and silver striations of light, then blood that boiled out of the sun and poured over the ocean.

Ernst recalled it with disbelief and undeniable pride, since it had been, after all, his first journey away from home: the eerily gray Baltic Sea and the sickening swells of the English Channel, then the grim coastline of France, the white-walled houses on the cliffs of Portugal, giving way to the volcanic peaks of the Canary Islands and the yellow, sun-hazed ribbon of Morocco... He had never been there, had not walked on foreign soil, and felt the loss more acutely, with a pain that surprised him, when the South Atlantic Ocean surrounded him, blue and green, its waves white-capped, offering a different light, more subtle colours, alien creatures, as the boat ploughed through darkening waters into shadows cast by towers of gleaming ice.

He had seen all that and more, was disturbed and exalted by it, yet used it as his route of escape from the shame of his recent past... Great blocks of rock and ice, flashing chasms of snow, a shroud made of dark, drifting cloud, a sudden, upthrusting glacier… Time passing and stopping. His gloved hands on the ship's railing. Then ice-encased mountains, seals and whales and pelagic birds, the air dazzlingly clear, then the anchor being dropped in blue water where the sky was a mirror...

He had certainly left home far behind him.

Yet he wasn't made happy by it, because he was still unable to forget what he had lost in his private and public lives: the career he had wanted since childhood and the woman he still loved.

He had wanted to be a rocket engineer and gain Ingrid's respect.

And had failed on both counts.

Instead, he had become a military policeman and jaded degenerate, living only for instant thrills with willing ladies... or with whores like Brigette.

Ah, yes, Brigette and Ingrid, his whore and his wife. He thought about them night and day, but mostly at night, when he tossed and turned in his tiny cabin, on his uncomfortable bunk bed, listening to the splashing sea, the moaning wind outside the porthole, drifting in and out of an uneasy sleep punctuated by recollections and dreams of sensual experience. He thought of Ingrid with romantic longing, of Brigette with helpless lust, and spent himself shamefully in the darkness, with an adolescent's despair, blushing with guilt and irresistible self-pity.

The days were less tormenting, but certainly more boring, because all he could really do was patrol the creaking ship and check that his men were not up to mischief – which, given this particular location, was highly unlikely. Not cut out to be a seaman, he was easily confused by the ship's bewildering array of hatches and bulkhead doors, steep steps and low-slung pipes, with its constant rumbling and groaning and creaking, its claustrophobic confines. For this reason he could hardly endure even the common cabin, where he sometimes tried to read; instead, he spent as much time as possible in the open air, watching the seaplanes being catapulted off the end of the nearest aircraft carrier, or coming in to land on that same, dangerously swaying deck, silhouetted in the sun's silvery striations or against the rippling, glassy sea.

If not the planes, a wandering albatross, flocks of prions, Cape pigeons, or the volcanic rock of the distant South Sandwich Islands, which, rising jaggedly on the horizon, looked like portals at the entrance to some ghastly, supernatural world. The purgatory to which he would be condemned for his recent debauchery.

'God help me,' he whispered more than once to the night's starlit darkness.

Luckily, he was often joined in his lonely vigils by Captain Alfred Richter, commander of the expeditionary fleet, a grizzled, dishevelled, gray-haired, pink-faced veteran who enjoyed conversation, did not mince his words, and was volubly contemptuous of the people Ernst had come to revere.

'Remarkable!' Richter had said with a sneer during their first conversation, over dinner, in his cramped, smoky cabin. 'The Bavarian window cleaner has finally returned home, driving back into Vienna in his Storm Trooper uniform, giving the fascist salute, welcomed by pealing church bells and hysterically cheering crowds who appear to be delighted that he's made their country a mere province of Germany... But since, four days later, their beloved Führer announced the so-called spring-cleaning of Austrian Jews, I think we can assume that their cheering has tailed off into silence.'

Though shocked at such disrespect for the Führer he so admired, Ernst offered no protest, instead letting Richter break the monotony by rambling on about the madness of the Third Reich and those who controlled it.

'Drug addicts, sexual degenerates, occultists and mystics – the lunatics

have taken over the asylum and called it the Third Reich. And who's in charge of the lunatics? Another two lunatics! Hitler and Himmler, two lost souls possessed by demons, one wanting to be God of a pure Aryan Earth, the other hoping to create the Super Race with a bunch of blond morons. These are leaders of men?'

If Richter despised the Third Reich and all it aspired to, he was particularly venomous about the man who had dreamed up this Antarctic expedition, namely the Reichsführer, Heinrich Himmler.

'A madman!' Richter rasped. 'He belongs in an insane asylum! Unlike you, I don't know him personally, but I know what I've heard. He's a bureaucrat of demonology, an administrator of inane dreams, a superficially cool customer who thrives on demented enthusiasms – mesmerism, reincarnation, clairvoyance, runes, the Thousand Year Reich, the possibility of turning mortal men into immortals, the search for Hörbiger's world of ice and fire – and this lunatic shares his dreams with Hitler, who is equally mad!'

At first Ernst was outraged, as if hearing blasphemy, and he turned away, hiding his flushed cheeks, and looked out to sea. An immature albatross had been circling out there for hours, always close to the surface, supported by the updraughts of air produced by the white-capped swells. It made Ernst remember the wonders of aerodynamics and the work going on in the hangars of Kummersdorf with the American genius, Wilson, the German egomaniac, Schriever, the ailing Italian physicist, Belluzzo, and their engineering assistants, Habermohl and Miethe, and this knowledge filled him with a healthy flush of resentment at what Himmler had done to him.

Instead of working as an engineer with Projekt Saucer at Kummersdorf, he was supervising the dropping of flagged poles into the Antarctic wilderness.

It wasn't even a joke.

'A world of ice and fire?' he asked Richter to distract himself. 'Is that why we're here?'

Richter laughed sardonically. 'What do you think?' he said. 'Has he not told you what he believes in? His mad dream of the Super Race?'

'No,' Ernst replied honestly, 'he hasn't. He only gives me my orders.'

So Richter told him about Himmler, about his bizarre faiths and ambitions, pointing out that his SS was essentially a religious order, that his men were bound by blood and oath, and that he wanted to isolate them, to

brainwash then and remould them, to mate them with the purest German women and produce blond perfection, then forge those already perfect men in the strengthening flames of eternal war.

'He used to process chickens,' Richter said with a sneer, 'and now he wants to process people. He has a dream of a disciplined order of masters and slaves – the masters like human gods, the slaves to do their bidding – and he wants them in a world of ice and fire, which is where we are right now. The fire is the endless war that Himmler hopes to wage – he believes, after all, that war keeps a nation strong - and the ice is right here in the Antarctic, which he views as the natural home of Nordic man.'

They were now on the open deck, looking across the ice-filled sea. Richter waved his hand to indicate the distant, snow-capped peaks and glaciers, obscured in a white haze.

'That's why he wants this place as the secret base for his New Order. He wants to finish here what he began in the Wewelsburg Castle: his secret society, a Black Jesuit order, with its Death's Head insignia, reversed swastika and occult rites, dedicated to the re-creation of the Germanen Order, which he views as the Super Race. The man is mad – and unstoppable.'

Ernst cast his gaze southward, looking beyond the Antarctic Convergence, where dark clouds hovered over an oasis of light and frozen mountain peaks and ice falls, which, being but dimly perceived, looked like part of a mirage. He tried to visualize that vast wasteland, the brown earth between ice and snow; then he pondered the possibility of the finest of his SS comrades being imprisoned and trained there, set free only when called upon by their leader, the Reichsführer, Heinrich Himmler, to set a torch to the world of normal men and turn all previous history into ashes.

Himmler... and Wilson... and Projekt Saucer... in a world of Eternal Ice.

'Areas free of ice,' he whispered to Richter, though really addressing himself. 'He specifically asked us to find areas free of ice. Places where we could land.'

'Of course!' Richter exclaimed. 'Why do you think he's claiming that land for the Third Reich? Photographing it? Having it mapped out?'

'I'm not sure. I…'

'*Lebensraum* – space! – German conquest and expansionism. That madman wants to come here, to bring his Death's Head SS here. He wants to isolate them from the world as completely as possible – well beyond the

reach of normal men – and what could be more removed and isolated than that hellhole of snow and ice? He'll create his new order there, beyond the influence of the human world, and those who are raised there will know nothing but what they've been taught. They'll be raised and trained for war, and nothing *but* war, the eternal conflict that Himmler believes is necessary to an order of Supermen.' Richter rubbed his frozen nose. 'Do you understand, Stoll? It's Hörbiger's so-called cosmic world of ice and fire – and Himmler hopes to create it out there, in that frozen world, underground. That's why we're stealing Queen Maud Land.'

Ernst finally understood and was struck dumb with the knowledge, simultaneously overwhelmed by the grandeur of the concept and deeply shocked that he had learned about it only through this old naval captain, whose contempt was appalling.

Avoiding Richter after that, he stayed alone as much as possible, thinking of Wilson's flying saucer, potentially the world's most powerful aircraft, and relating it to this Antarctic expedition and the search for ice-free land.

Himmler's world of fire and ice: the flying saucer and the Antarctic. The flying saucer was the machine of the future ... and that future was here and now.

Ernst was awed by the concept.

On the final day of the expedition, just before the fleet turned back, Ernst, as instructed by Himmler, took the rear seat in a seaplane and had the pilot fly him to the Antarctic and land on an ice-free area of Queen Maud Land. It was not a long flight, but it seemed almost magical, transporting him abruptly from sunlit space to snow-filled wilderness, black shadow, blinding light, a great silence, the gleaming Nothing, and when the skis of his aircraft slid along the ice cap, he felt that he was on another planet, vast and desolate... dead.

The Antarctic, spread out all around him, looked boundless and unreal.

Another world for the taking.

Telling the pilot to remain in the cockpit, he clambered down alone, glanced around that alien landscape of icefalls and glaciers and snowbanks and polar plateaus – all frighteningly empty and hauntingly silent – then solemnly unravelled a larger swastika from its frozen steel pole. He hammered it into the ice-free soil, working awkwardly with his gloved hands; then, exhaling steam, he stepped back to give the Nazi salute.

‘I now claim this land for the Third Reich and name it Neuschwabenland.’

His embarrassed, whispered words were still echoing eerily around him when he climbed back up into the seaplane and let the pilot fly him away from what could be his future home.

That thought chilled his soul.

CHAPTER FOURTEEN

Bradley was relieved to step out of the sweltering June weather of the town of Des Moines, Iowa, and into the airconditioned coolness of the immaculately clean, modern nursing home. When he told the white-uniformed receptionist behind the desk that he had an appointment with a resident, Abe Goldman, she smiled pleasantly, checked her register, said, 'Yep!' and hit the button of the bell on the desk with the palm of her hand. 'I'm calling someone to take you in there,' she explained. Then, when she saw him fingering his sweaty collar, she asked, 'Are you from out of state, Mr Bradley?'

'Yep,' he replied, amused by her air of amusement.

'Can't stand the humidity, eh?'

'No, not really. It can get pretty hot in Connecticut, but it's never this humid.'

'You know New York?'

'Yep.'

'I've only seen it in the movies.'

'It looks just like it does in the movies.'

'Gee, I'd just love to go there.' She was middle-aged and attractive and reminded him of Gladys Kinder, so he was glad when a male attendant arrived and said, 'Someone for Abe?'

'This nice gentleman from New York,' the receptionist said. 'The one sweating too much.'

'Can't stand the humidity, eh?' the male attendant said with a broad grin.

Bradley just shook his head.

'You'll soon cool down in here,' the attendant said. 'Okay, sir, follow me.'

Bradley was already cooling down in the air-conditioning when the attendant led him away from the lobby, along a well-carpeted corridor,

through an expansive community room filled with old people, many wearing dressing gowns, and out onto a patio overlooking a smooth green lawn.

'You a relative of Abe's?' the attendant asked, leading Bradley along the patio.

'No,' Bradley replied.

'He's one of our favourite residents,' the attendant said. 'A real old-time character – though not originally from hereabouts.'

'No, he was originally from New York.'

'That's right,' the attendant said, stopping when they reached the shaded end of the patio, where an old man was sitting in a wheelchair. He had lively, pugnacious, Jewish features and a mop of surprisingly thick gray hair. He was dressed in a vivid, sky-blue dressing gown and smoking a cigar.

'Abe,' the attendant said, 'here's your visitor. Mr – '

'Bradley. Mike Bradley.'

Abe Goldman removed the cigar from his pursed lips and squinted up through a cloud of smoke. 'The guy from Wall Street, eh?' he asked rhetorically, raising his hand.

'That's right,' Bradley said, shaking the old man's hand and surprised by the strength of his grip. 'It's good of you to see me.'

'Not at all,' Goldman replied, waving Bradley into the chair facing him. 'It's not often you meet a stranger in this asylum, so I'm happy to see you.'

'It's not an asylum,' the attendant corrected him.

'No,' Abe said, 'it's a nursing home. Only the people who run it are crazy; we're just old and decrepit.'

He quivered with soundless mirth as the attendant grinned at Bradley, shook his head in a rueful manner, then said, 'Enjoy!' and walked away. Bradley settled into his chair facing the grinning old man, whose thick-lashed brown eyes were still bright.

'So,' Goldman said, 'you said on the phone you wanted to talk about my old company.'

'That's right. Goldman and Cohn. Based and registered in New York, back in the nineties. A finance company, I gather.'

'Yep.' Goldman shook his head emphatically. 'Old Jack and me, we made a goddamned fortune and retired at an early age. Of course, Jack,' he said, blowing a cloud of smoke, 'kicked off a few years back. He didn't smoke or drink, that was his problem. Living clean isn't good for you.'

‘I’ll try to remember that,’ Bradley said.

‘You do that, son. Pearls of wisdom from the ancients. Now what did you want to know?’

‘Is it true that your company was involved in the financing of airship designs?’

‘It sure is, son. And it’s what made us rich. There was a lot of loot in airship designs if you knew which hands to shake.’

‘You built a secret research centre here, in Iowa, didn’t you?’

‘Yep. That’s why I’m retired here. Jack Cohn and I, we both came out here in the nineties, to supervise the research center – then, when we had to close it down, we decided to stay on. Our wives and kids loved it here.’

‘I want to ask you about that – about why you closed the plant down – but first I want to know if your chief aeronautical engineer was a guy named John Wilson.’

‘I do believe he was. I’m not good at remembering names, but I’m good at the faces and I’d never forget that engineer. He was a weird one, I tell you.’

‘Weird?’

‘He surely was – though he was also the most brilliant designer we’d ever come across. Miles ahead of the others.’

‘What do you mean by weird?’

Goldman inhaled and puffed, looking thoughtful. ‘Not too sure,’ he said. ‘Such a long time ago. At my age, memory plays some awful tricks. Not reliable, son.’

‘I don’t mind,’ Bradley said.

Goldman puffed out his cheeks and blew more smoke; he had a lot of it in there. ‘Brilliant,’ he reiterated. ‘But cold. Cold as ice. Something almost inhuman about him there. Always well mannered and pleasant, but not really concerned. He *saw* people – he watched them like a hawk – but he never seemed to *feel* anything.’

‘Obsessed with his work?’

‘Christ, yes. It was bread and water to him. He had nothing *except* his work. I remember once asking him about his childhood – you know, I thought he might have been mistreated as a child or something – and he said, no, that his parents had been fine, he just hadn’t been interested, that’s all. Life, he said, was too precious to waste on small things, on the *ordinary,* and

his parents, while decent, had been ordinary, so he lost interest in them. He thought that people wasted their lives, that most of them were too emotional, and that the mind and what it could achieve were all that really mattered in life. Any human activity that didn't have a specific, evolutionary purpose was to him a complete waste of time, maybe even degenerate. You know – sports, games, romantic love, kids, reading just for pleasure – you name it – if it wasn't somehow advancing science or evolution, it was pretty despicable.'

'Yet he was well mannered and polite.'

'Right. You couldn't even prod him to anger. I *do* remember him telling me that any emotion that blurred objective thought was an unhealthy emotion. He didn't involve himself with people – he worked with them or studied them – and although he had some women in his life, I think they were just there for the sex: a way of scratching at the one distracting itch he couldn't get rid of.'

'He wasn't married?'

'No – and never had been.'

'A real loner.'

'More like a recluse. I don't think we socialized once – we only met to discuss work – and even then, it was always at the research centre.'

'How did you find him?'

'Me and my partner – Jack Cohn, God rest his soul – were looking for someone, preferably young, bright, and willing to work cheap, to design passenger-carrying airships, which we were convinced would revolutionize transport. So, we placed an ad' in various newspapers, asking for aeronautical engineers, and Wilson called and we fixed up a meeting. He'd just graduated from Cornell University, in Ithaca, New York, which was convenient, since that's where we were based. Anyway, we met him and he impressed the hell out of us – he was so obviously brilliant – so we had no hesitation in putting him in charge of our airship development project.'

'Why did you move it all the way from the East Coast to here?'

'Wilson's idea. In those days, you know, there was an awful lot of experimentation going on – patents flying all over the place – and so all of us were obsessive about protecting what we were doing. Lots of secrecy, right? So we wanted our project to be kept under wraps and preferably located well away from the prying eyes of our competitors. Jack, I think, suggested California, but then Wilson said he knew of this great place near where he'd

come from – in the wilds of Iowa, near the Illinois border – and when he also informed us that land and property there were cheap, we bought the idea. We sent Wilson out here to find us what we needed, and he came up with the plant in Mount Pleasant. We not only built the plant there, but took all our workers from the area, which meant there was no gossip back in New York.'

'*When* was that?'

'About 1896. Thereabouts. My memory's not all that good, you know. It's as flimsy as I am.'

Bradley grinned. 'And did you actually design some workable airships?'

The man inhaled more smoke, nearly choked and coughed vigorously, stubbed the butt of the cigar out in an ashtray, then wiped his watery eyes with shaky fingers.

'He sure did,' he confirmed, nodding emphatically. 'Five in all, with one uncompleted by the time the project closed down.'

That figured, Bradley thought. All the reports about Wilson during the Great Airship Scare had reported him as saying that five or six airships had been constructed in Iowa, near the Illinois border. So five had been completed, one left unfinished, in Mount Pleasant, Iowa.

'What were they like?' he asked.

'Dirigibles,' Goldman replied. 'The most advanced of their time. The hot-air balloon was contained inside a cigar-shaped aluminium structure and powered by Wilson's internal combustion engine and propellers, all of which were fixed ingeniously to the gondola. The five completed models were secretly test-flown throughout the second year of the project – I think, 1897 – but of course we couldn't keep 'em invisible, so they caused quite a stir.'

'The Great Airship Scare of 1897.'

The old man shook again with silent mirth. 'Right,' he said, when he had managed to control himself. 'Those test flights were made about three years before Zeppelin flew his first model and over six years before the first heavier-than-air flight of the Wright brothers – but they were undertaken in as much secrecy as was possible under the circumstances. Wilson nearly always took the airships up at night, but he often had to land to ask for water for his airship's engine – and in doing that he scared a helluva lot of people. Of course, some of his crewmen really enjoyed the whole thing – you know, reading about themselves as possible invaders from Mars and so on. It was all a bit of a joke to them.'

‘Not a joke to the nation,’ Bradley observed, remembering what he had read about the scare.

‘Right,’ Goldman replied. ‘Someone even managed to get some photographs when one of Wilson’s airships flew over Rogers Park in Illinois. Those photographs were reproduced in a couple of newspapers – the *Chicago Times-Herald* and *The New York Times,* as I remember – and that really turned the airships into a sensation.’

‘Yet they weren’t seen after 1897. Why?’

‘Wilson destroyed them.’

‘Pardon?’

‘You heard me. That mad bastard destroyed his own creations. He was utterly ruthless.’

Bradley was just starting to wonder if Goldman was insane when the old man glanced furtively left and right, then leaned forward with a sly grin on his face.

‘You don’t believe me, uh?’

‘I’m beginning to believe this Wilson was capable of anything... but that seems a bit too much.’

‘You want me to show you something really special, Mr Bradley?’

‘*Show* me?’

‘Yeah, show you. I could do with a day away from here – and it’s still only morning. If you’re willing to drive eighty miles and back I’ll show you what he was up to.’

‘Where would we be going?’

‘To Mount Pleasant, of course, where my construction plant was located.’

‘I’ve already checked it out,’ Bradley said, ‘and didn’t find a damned thing. Your plant’s long gone, Mr Goldman. Every last sign of it.’

Goldman grinned again and winked, then shook his head from side to side. ‘No,’ he said. ‘Not there. You looked in the wrong place. Wilson had this other hangar, his secret place, that even *I* didn’t know about until he was long gone. You want to see what Wilson was doing behind our backs? Then let’s head for Mount Pleasant. I could do with a day out.’

‘It’s a deal,’ Bradley said.

They had a pleasant drive, out of Des Moines and along a seemingly endless straight road, past the rambling farmsteads that dotted the green and brown

hills, toward where an azure, white-clouded sky met a silvery horizon. Abe Goldman loved it, beamed with pleasure beside Bradley, and kept leaning sideways, to put his weathered face near the rolled-down window, all the better to receive the rushing wind, fresh air, and bright, scorching sun.

'This is what I left New York for,' he explained, breathing deeply and gratefully.

Though Bradley was burning with impatience, he didn't press the old man to talk anymore about Wilson and his airship project, but instead let him engage in routine conversation about the weather, the changes in the country in general and New York in particular, and anything else that took the voluble Abe Goldman's fancy. They were on the highway to Iowa City, which made an easy drive, but turned off an hour later and took a road that ran as straight as an arrow between golden fields of wheat and corn, to Montezuma, where Wilson had been born.

As Abe Goldman now wanted lunch, Bradley stopped at a diner on the edge of town.

Helping Abe out of the car, Bradley recalled his visit to this town a few years back, when he had gone to the farm that had once belonged to Wilson's parents and found it still operating, its clapboard house recently repainted and gleaming white in the sunlight.

'The man now running the Wilson farm,' he explained to Abe as they entered the diner, 'is the son of the people who bought it from Wilson's father shortly after his wife, Wilson's mother, died and he decided to move to Worcester, Massachusetts, where he'd been born.'

'A lot of people need their roots,' Goldman replied.

'Not Wilson,' Bradley said.

'Even Wilson,' Goldman insisted. 'He may not have returned to his hometown, but he came back to the state. That's close enough, partner.'

Faced with the possibility that Wilson might, after all, have had some sentimental leanings, Bradley felt more confused when he entered the diner and sat down to lunch with Abe Goldman. They both had hamburgers and french fries, with lots of relish and salad on the side. For such a fragile old man, Abe had a surprisingly healthy appetite, enjoying his food.

'So are you going to tell me why Wilson destroyed his own airships?' Bradley finally asked him.

'Sure,' Abe said. 'Seems unbelievable, right? But that son of a bitch was

the most ruthless guy I ever met.' Abe munched on his burger, washed it down with Coca-Cola. 'The reason the airships spotted in 1897 weren't seen again is that the designs Wilson gave me and Jack Cohn to patent were for unworkable airships. He patented the real designs under a couple of pseudonyms. Of course, we didn't know about this. Nor did we know that the son of a bitch was selling his genuine designs to some industrialist in Germany, almost certainly with an agreement to ensure that our airships were destroyed. We only figured this out later. First, the engines of our airships were blown up by an unknown demolition expert, obviously Wilson. Second, Wilson disappeared, leaving only his ingeniously faked drawings, from which we couldn't reconstruct his particular internal combustion engines and structural designs. Third: A couple of years later the first German airships took to the sky and were clearly based on Wilson's designs.' Abe grinned and shook his head in helpless admiration. 'By that time,' he continued, 'since we'd nothing to sell, Jack and me had gone bust and were too busy making our money back in other fields to pursue the son of a bitch through the courts.'

'But you knew what he was up to during that time?'

'Sure. He used the money from the sale of his patents to open his own research establishment across the state line, in Illinois. We could never verify what he was up to there, but there were certainly some odd rumours over the next few years, most notably that by 1903, just before the Wright brothers made their first successful flight at Kitty Hawk, Wilson had secretly produced even more advanced aircraft, reportedly turboprop biplanes, that had actually managed to cross the Atlantic Ocean.'

'He couldn't have done that without US government help.'

'Well,' Abe said, obviously enjoying his startling revelations, 'everything was wide open then – it was early days for aviation, with not too much legislation – so he could have done it with *clandestine* government aid. Then, of course, he went that little bit too far and it led to his downfall.'

'A little bit too far?' Bradley was amused by the triumphant glint in old Abe's eyes, but he was also intrigued. He had never heard anything like this in his life, and it made Wilson seem almost diabolically ruthless and even, in a chilling way, awesome.

Having finished his large lunch, Goldman sat back, lit a cigar, and puffed a cloud of foul smoke.

‘There were rumours,’ he said, ‘about highly advanced experiments with the problem of the boundary layer – and even dangerous experiments with atomic propulsion. Regarding this, there’s one year I haven’t forgotten and won’t ever forget.’

‘Yes?’ Bradley enquired, his amusement tinged with growing impatience at the old man’s teasing.

‘In 1908,’ Goldman said, ‘shortly after the world celebrated Louis Bleriot’s widely publicized flight across the English Channel, from Calais to Dover, there was a great explosion in the Tunguska region of Siberia – an explosion so big that some believed it had been caused by a crashing meteor or alien spacecraft. The reason for that mysterious explosion has never been found, but I can confirm that there were whispers in aeronautical and related circles that it’d been caused by the failure of one of Wilson’s more dangerous experiments: when his mostly highly advanced experimental aircraft, reportedly powered by some primitive, faulty form of atomic propulsion, malfunctioned – possibly in conjunction with damage caused by the uncontrollable vibrations of the boundary layer – in an otherwise astonishingly successful flight from these here United States to goddamned Russia.’

Feeling chilled to the bone while hot sunlight poured in through the window, Bradley was just about to express his disbelief when Goldman, finishing off his Coca-Cola, wiped his lips with the back of his hand and said, ‘While that could either be the true explanation for the Tunguska explosion or pure science fiction, what *is* for sure is that shortly after the so-called most frightening, inexplicable phenomenon of the twentieth century, Wilson’s plant in Illinois was closed down by the US government, all of his designs – or at least those they found – were either classified as top secret or destroyed, and Wilson was offered work with the US government.’

‘Which he didn’t take.’

‘No,’ Goldman confirmed without hesitation. ‘Apparently deeply embittered – can you imagine how *we* felt? – and with the Great War underway, he left Illinois for good and, according to occasional reports, spent the next decade drifting from one small aeronautical company to another, keeping his light under a bushel, but making a good living by selling his smaller, less important innovations to commercial airline companies and construction plants, and finally going to work for six months with another

pioneering genius, Robert H. Goddard.'

'Which is where I came in.'

'Pardon?'

'Nothing,' Bradley said. He was beginning to feel a bit unreal. Glancing at his wristwatch, he noted that his time was running out. 'Are you finished, Abe? I think we'll have to get going.'

'No sweat,' Goldman said.

Once back in the car, they drove for another hour, arrived at Sigourney, which seemed sleepy in the afternoon light, then passed the road signs for Washington and Wapeelo and eventually headed along an empty road that cut through a quilt-work of green and gold, lawns of finely mowed grass, more fields of corn and wheat beyond which, Bradley knew from his previous visits, lay the rolling green fields of Mount Pleasant.

Thinking of that place, of the airships constructed and destroyed there, Bradley suddenly realized that he might be on a wild goose chase, led by a senile old man.

'If Wilson destroyed his airships,' he said, expressing his doubts, 'what can you possibly show me now, Abe?'

Goldman was unfazed. 'Remember me telling you about the rumours that Wilson had constructed a highly developed aircraft that actually managed to fly as far as Russia?'

'Yes,' Bradley said. 'The one with some primitive form of atomic propulsion.'

'Right,' Goldman said, pleased. 'Well, that aircraft certainly wasn't any kind of goddamned *airship.*'

'Naturally not,' Bradley said. 'Probably some kind of advanced airplane.'

'Exactly,' Goldman replied. 'When that son of a bitch was making airships for us, he'd already superseded them and was secretly experimenting with his *own* project in another hangar, well away from our establishment at Mount Pleasant. It's my belief that that project was for the construction of an aircraft designed solely to conquer the boundary layer and be powered by some form of atomic propulsion. I think that a miniature version of such a craft, remote-controlled, was tried out in 1908, flew as far as Siberia, then malfunctioned and blew up over the Tunguska forest.'

'Jesus Christ,' Bradley whispered without thinking.

'You're impressed?' Goldman asked.

‘Yep.’

‘Then stop being impatient and keep driving. You *want* proof, I’ll *give* you proof!’

Shortly after they passed the sign indicating Mount Pleasant, Goldman coughed more cigar smoke from his lungs, hammered his chest with his fist, then jabbed a finger at a narrow side road and said, ‘Turn up there, son.’

‘We’re not going to Montezuma?’ Bradley asked, confused.

‘You’ve already been there,’ Goldman reminded him, ‘and found nothing worth seeing. Now do as I tell you.’

Bradley kept driving until Goldman told him to stop, halfway along a narrow track that ran between two fenced-in fields of tall, untended grass. That was unusual. Untended fields were rare around here. Then he looked across the field to the east and saw, in the distance, an enormous barn, probably once used for storing grain.

Goldman reached into his pocket, pulled out a bunch of keys, and held them up to him.

‘Here,’ he said. ‘One of these is the key. Go take a look at what that son of a bitch was building when we thought he was only constructing airships. Have a good look, son.’

Bradley felt foolish and disbelieving, but he took the bunch of keys from the old man and started across the road. He parted the barbed wire, clambered awkwardly through the fence, then started the long walk across the field, through the waist-high, untended grass. The grass was like an endless sea, undulating in the breeze, whispering all around him, brushing at him, as if trying to suck him down. He felt nervous and unreal, adrift from himself, and was dazzled by the silvery-streaked azure sky, in which white clouds drifted.

Ahead of him, the immense barn loomed larger, isolated between land and sky, breaking up the horizon.

Beyond it was Illinois.

Bradley was breathing heavily and sweating by the time he reached the barn, and he stood there for a moment, getting his breath back. He glanced over his shoulder and saw his rented car sitting in the road beyond the fence, minute in that vast, undulating sea of grass. Shaking his head in wonderment, he turned again to the front and studied the barn.

It was certainly huge, obviously once used for storing grain, and the single, steel lock on the door had turned red with rust. Not quite so breathless,

but still sweating too much, Bradley tried one key after the other until he found the correct one. He turned the key once, slipped the lock off the chain, pulled the chain through its steel rings, and let it fall to the ground. Then he took hold of the edge of the large door and pulled it toward him, walking backward as he did so, until it was more than halfway open, letting sunlight pour into the barn's darkness.

That sunlight shone on something metallic, making Bradley's heart leap.

Feeling as nervous as someone entering a haunted house, he walked into the barn.

He didn't get very far.

CHAPTER FIFTEEN

The flying saucer prototype looked bigger than it really was where it rested, on a raised hydraulic platform, in the middle of the immense, cluttered hangar. Essentially a large ring plate with adjustable wing discs that rotated around its fixed, cupola-shaped cockpit, it had a diameter of forty-two meters and a height from base to canopy of thirty-two meters. Made of silvery-gray metal that reflected the overhead lights, it looked like a giant spinning top, and it made Wilson smile.

It would soon fly – but not much.

The only saucer that would fly in any real sense was the one Wilson was secretly designing in miniature and would use when he needed it.

As long as he lived, he would not forget the awful devastation caused by the failure of the crude atomic propulsion system used in the otherwise surprisingly successful test flight of his first disc-shaped aircraft, which had actually managed to fly as far as Russia. However, since the catastrophe over the Tunguska region of Siberia in 1908, caused by the explosion of his pilotless aircraft, he had accepted that atomic propulsion was out of the question. Instead, he had concentrated all his efforts on conquering the boundary layer and trying to find less air-resistant material for his flying saucer's structure, so far using highly advanced but orthodox aircraft engines. He had not succeeded in America, though he was on the way to succeeding here, but he was carefully keeping his most important discoveries for his own use.

He fed Flugkapitän Schriever only a little at a time... never quite enough for his needs, but enough to make Schriever think he was making progress and to keep Himmler happy.

It was a delicate manoeuvre of the kind Wilson had practised previously with the US government, before they had withdrawn their support and made him quietly drop out of sight, to eventually end up here in Nazi Germany.

He would always do what he had to do.

Tired from his week of relentless travelling all over Germany, he lowered his suitcase to the floor. Nevertheless he did not sit down but looked through the glass walls of his office at the men, some in coveralls, some in uniform, who were gathered by the hydraulic platform under the large flying saucer prototype. He recognized the lean and hungry Rudolph Schriever, who was dangerous, and his engineers, Habermohl and Miethe, who were not, as well as that fat Italian fool, Belluzzo, who would soon have to go.

The four of them were obviously discussing some aspect of the construction, while Schriever, who still believed that he ran Projekt Saucer, studied the technical drawings in his hands and barked like a dog.

What an ass! Wilson thought.

Not that he had much time for any of them...

The two engineers, Klaus Habermohl and Otto Miethe, were uninspiringly efficient when merely turning nuts and bolts but embarrassingly inept when aspiring to the greater heights of design. So far, contrary to what Wilson had told Heinrich Himmler in Berchtesgaden, their so-called contributions to various parts of the flying saucer, including the outer steel casing, were relatively useless. As for the ambitious Flugkapitän Schriever, he was brighter than the others but remained, nonetheless, a mediocre engineer with pretensions to being a great aeronautical innovator. That was his machine out there, a crude saucer-shaped aircraft, and although he'd based much of his design on Wilson's innovations – and then insinuated to Himmler that they were his own – Wilson had given him only those innovations that already were obsolete. Schriever's saucer would fly in a crude manner eventually – when Wilson wanted it to do so – and until then, as Schriever was Himmler's spy, Wilson would give him just enough to keep him happy and full of himself.

Which just left that fat fool, Belluzzo, who, by his very lack of courage, was the most dangerous of all.

Wilson had to get rid of him.

Surprisingly, the aging Italian physicist, who had actually completed the first drawings for the saucer that Schriever was now claiming as his own, had turned out to be the biggest thorn in Wilson's side. A basically timid man, he had been cowed by the aggressive, manipulating Schriever and, as a consequence, had tried to curry favour with him by repeatedly implying that

Wilson could not be trusted. Ever since then, according to Habermohl, who revered Wilson and kept him informed of such intrigues, Belluzzo had become Schriever's spy and was supporting him in his attempts to take the credit for Wilson's ideas when talking to Himmler.

A nest of vipers, Wilson thought. Nevertheless, since he wanted to be rid of them all eventually, he would start by getting rid of Belluzzo, while simultaneously making Schriever less suspicious of him.

He would do it today.

Knowing that Schriever would be coming to see him at any moment, Wilson opened his briefcase, removed a selection of the technical papers he had collected during his week of travelling, and, as they were of no great significance, spread them out on his desk.

He knew that when Schriever entered the office, he would try, in his idiotically surreptitious manner, to see what they contained.

So he would actually give the fool these technical papers for innovations that were relatively useless.

This thought had just made Wilson smile when Schriever walked in.

'Ah, Wilson, you're back!' he exclaimed in his friendly, false manner.

'Yes,' Wilson replied.

'You had a profitable trip?' Schriever asked, looking dashing in his flugkapitän's uniform, his forced smile slightly illuminating his lean, darkly handsome features.

'*Very* profitable,' Wilson said.

Schriever took the chair at the other side of Wilson's desk and offered his fullest attention.

'What did you find?' he asked breathlessly. 'Anything exciting or useful to us?'

Wilson had travelled far, talked to many, and learned a great deal. In factories hidden in the densely forested areas of the Schwarzwald he had been shown an experiment with a liquid gas that would, when blown with considerable force over an aircraft, catch fire from the exhaust and cause the aircraft to explode. In the R-Laboratory in Volkenrode he had been involved in heated discussions about electrostatic fields and gyroscopic controls and also discovered that by mixing a certain percentage of myrol with air, internal combustion engines would immediately begin to detonate irregularly or, depending on the mixture, stop completely. In the Henschel aircraft company

he had examined a television component that would enable pilots to control bombs and rocket bombs *after* they had been launched, as well as a micro-television camera that would be installed in the nose of an anti-aircraft rocket and guide it precisely to its target. In the Luftwaffe experimental centre at Oberammergau, in Bavaria, he had been given a demonstration of an apparatus capable of short-circuiting the ignition system of another aircraft engine from a great distance by producing an intense electrical field... and he had also learned about the development of radio-controlled interceptor weapons and planes, electromagnetic, electroacoustical, and photoelectric fuses, and even more advanced warheads that were sensitive to the natural electrostatic fields that surround aircraft in flight. In the experimental centre at Gottingen, he had been privileged to observe the test flight of a light-winged aircraft that had a slot running along the entire length of its wing span and an extra propellor in the fuselage to suck in the boundary layer and increase the lift of the original airfoil by eight times. And finally, most important, at Berlin-Britz he had been shown a Kreiselgerat, the prototype of a new mechanism that had so far managed to reduce the oscillations of a violently shaking body to under one-tenth of a degree, thus paving the way for the conquest of the boundary layer.

He did not tell Schriever any of this.

Nor did he tell him that upon seeing the results of the oscillation tests in Gottengen, which had proved beyond doubt that the boundary layer could be conquered, he had suggested to Professors Ackeret and Betz that they concentrate on a revolutionary new structural design that would be devoid of all obstructing protuberances, such as wings and rudders, devoid even of the normal air intakes, and powered by a more advanced turbine engine. In other words, a more advanced version of the Horten brothers' tailless aircraft, or 'flying wing,' that would offer the least possible air resistance, suck in the dead air of the boundary layer, and then use that same air, expelling it at great force, to increase its momentum.

The eminent professors had agreed to do just this... though Wilson didn't tell Schriever that.

'Naturally,' he said instead, 'the first thing I did was examine the Horten II, D-11-167, prior to its test flight in Rangsdorf, which turned out to be highly unsatisfactory. This so-called tailless aircraft possesses great static-longitudinal stability and complete safety in relation to the spin, but its

control surfaces are so heavy that measurements of manoeuvring stability couldn't be carried out. The unsatisfactory arrangement of its undercarriage necessitates too long a takeoff, the relation between its longitudinal, lateral, and directional controls is unsatisfactory, its turning flight and manoeuvrability are both fraught with difficulty, and side-slipping can't be carried out. With regard, then, to what we're doing here, the Horten brothers are valueless.'

Wilson threw the drawings and technical summaries of the Horten brothers' flying wing across the desk as if they were dirt. Schriever picked them up as if he agreed... but then, as Wilson noted, let them rest on his lap and placed his hands protectively on top of them, no doubt to be hopefully used later in his saucer designs.

'Anything else?' he asked.

Wilson nodded and tried to feign excitement. 'Yes,' he said. 'Some exciting innovations. The kind that could make your flying saucer even more powerful.'

'What?' Schriever asked. '*What?*'

Knowing that Himmler's sole interest in a flying saucer was its potential as a weapon of war, Wilson told his devoted disciple, Rudolph Schriever, about such oddities as the proposed *Windkanone* – a cannon that shot gas instead of shells – and the *Wirbelringkanone,* or whirlwind annular vortex cannon, which was designed to shoot and then ignite a gas ring that would spin rapidly on its own axis and form a fierce ball of fire. Whether such weapons would work in practice was an issue of great doubt, but because Schriever wanted only news of weapons that would sound magical to his beloved Reichsführer, he lapped up what Wilson was telling him and snatched the relevant research papers from Wilson's hand as if wanting to eat them. Then, when Wilson offered him no more, he stood up to leave.

'One moment, Flugkapitän,' Wilson said.

'Yes?' Schriever responded impatiently, now wanting to leave. 'What is it *now*?'

'I feel I should warn you,' Wilson said as Schriever turned back to face him, 'that certain people are plotting against you.'

As most men in the Third Reich were already frightened of being plotted against or being reported for some damning misdemeanour, Schriever looked suitably shaken and sat down again.

‘Plotting against *me*?’ he said. ‘Who would do that?’

‘Belluzzo,’ Wilson said without hesitation.

Schriever looked stunned. ‘*Belluzzo*?’ he repeated. ‘But he’s my most trusted colleague, Herr Wilson!’ he blurted out, thus inadvertently confirming what Wilson had suspected.

Wilson sighed, as if saddened. ‘I’m afraid your trust has been misplaced,’ he said, leaning his elbows on his desk, resting his chin in his hands, and staring with concerned intensity at the clearly shocked Schriever. ‘I have it on good authority – one of Himmler’s aides, in fact – that Dr Belluzzo has been trying surreptitiously to steal credit for the great contributions you’ve so far made to Projekt Saucer and has even, in some of the reports, credited certain innovations to himself. He’s doing this, I know, because he’s so clearly jealous of your authority over the project, but I’m afraid he’s being taken seriously by those around Himmler, which means that if he isn’t stopped soon, those lies will soon reach Himmler ears and you’ll have to defend yourself.’

Now flushed and fearful, Schriever gazed through the glass wall at the flying saucer in the middle of the vast hangar, stared disbelieving at Dr Belluzzo, who was plump and gray-haired and wearing an oil-smeared white smock, then returned his stricken gaze to the front.

‘What will I do?’ Schriever asked, sounding frightened.

‘You have to stop him,’ Wilson said dryly.

‘And how do I do that?’

‘Get rid of him, Flugkapitän.’

‘And how do I do *that*?’ Schriever asked.

Because Schriever didn’t know that Wilson was sixty-six years old, because Wilson looked about fifteen years younger, Wilson didn’t believe he was in any way endangering himself when he said, ‘Belluzzo is nearly seventy and beginning to show it, so why not put in an official report about his physical and mental condition, describing him as senile and progressively distracted and therefore an increasing threat to Projekt Saucer? Recommend that he be removed from the project and treated for his own good.’

‘*Treated*?’

Wilson shrugged and sat back in his chair. ‘Let’s be honest,’ he said. ‘If you put in such a report, Belluzzo will be classified as mentally ill and incarcerated in a concentration camp as an undesirable. If there was another

course of action I would certainly recommend it, but there isn't, and given the circumstances...'

He deliberately didn't finish his sentence, but merely raised and lowered his hands as if the matter was in the lap of the gods. Schriever, released from moral responsibility, nodded his gratitude and stood up.

'Yes,' he said. 'Of course. It's the only thing to do. And thank you, Herr Wilson.'

'My pleasure,' Wilson said.

When Schriever had left, Wilson gathered the remaining technical notes together, placed them back in his already stuffed suitcase, then phoned through for his driver to come and collect him. When the uniformed SS driver arrived, he picked up Wilson's suitcase and walked ahead of him, merely glancing at the large flying saucer on the raised ramp, and led him out to the waiting car.

Wilson looked toward the firing range. He was on the proper side of it now. Wernher von Braun and his rocket teams had moved to Peenemünde on the island of Usedom, off the Baltic Coast, and Projekt Saucer had been moved to this side of the firing range, into the bigger, better-equipped hangars. As Wilson had felt increasing resentment at having regularly to pass on certain of his innovations to von Braun's A-2 and A3 rocket projects, he had been relieved in more ways than one when they finally left.

He slipped into the car, sank into the rear seat, and relaxed during the fifteen-mile journey, through the cloudy, gray afternoon, to his new apartment in the Kürhessen district of Berlin. His former nurse, Greta, who'd been warned of his arrival, had prepared dinner for him.

Assigned to look after only him when he had been recuperating from the second of what he knew would be many operations designed to aid his longevity, Greta had also been instrumental in satisfying his old man's odd sexual whims, mostly of an oral and masturbatory nature. Then, when he had been awarded this spacious apartment by a satisfied Heinrich Himmler, Greta, obviously attracted by his authority and high position in the Nazi hierarchy, had agreed to move in with him as his nurse, housekeeper, and mistress, with her duties in the latter category few and far between, as Wilson now noted without rancour.

Sexually abused as a child by her father, twice married, now widowed and a professional nurse, she was well-proportioned and auburn-haired, with an

attractive, worldly face, cold hazel eyes, and a great deal of knowledge about the sexual needs of men, which was all Wilson needed. Greta had few illusions, was not blinded by emotionalism, and was probably even relieved to be receiving so much for doing so little. She kept a clean apartment, cooked only for herself since Wilson never ate cooked foods, helped him produce the semen he needed for his continuing experiments, and had her occasional affairs on the side, about which he did not complain.

Sometimes she even gave him advice, as she now did over dinner.

'Did you visit the factory before you came home?' she asked, as she tucked into her wiener schnitzel and he nibbled his dried vegetables and biscuits.

'Yes,' he replied. 'Everything was in order.'

'Did you see Rudolph Schriever?'

'Yes, of course. Why?'

'He came here yesterday,' Greta said, 'and feigned surprise when he didn't find you here. When I said you weren't returning until today, he made a great play of smacking his forehead with his hand and telling me what an idiot he was, that he'd simply forgotten.'

'You thought his visit was deliberate?'

'Yes,' Greta said, wise in the ways of men. 'In fact, I'm convinced of it. I think he just wanted an excuse to see how we lived – perhaps even to look around.'

'Which you didn't let him do.'

'Of course not!'

Wilson smiled. 'I hope you invited him in for some tea, at least.'

'Yes, I did – and his eyes wandered all over the place. I could see he wanted to check out the other rooms, but I kept him pinned to his chair.'

'Not physically, I hope.'

'No, he's not my type. I merely pinned him to the chair with my gaze and eventually let him go.'

'I hope the poor man at least enjoyed his tea.'

Greta didn't return his smile. 'Don't trust him,' she said.

'I don't.'

'Good. You can't trust *anyone* these days. But that kind, they're the worst.'

'What kind?'

‘The kind who are weak but have ambitions. They’re always the worst.’

‘I’ll remember that,’ Wilson said.

A few hours later, when he’d had a bath and was preparing for bed, he asked her to masturbate him and ensure that his semen wasn’t lost. She did it with practised ease, making him come into a small dish, and when he saw it, he was reminded of his adolescence in Iowa, when he would hold his fresh semen in his hand and try to sniff out its properties. He had been a scientist even then, always detached, investigating, and now, these many years later, nothing had changed. He was experimenting with himself, trying to find the secret of life, so this form of masturbation, while offering relief from his waning sexual agitation, was also serving a scientific purpose.

Greta transferred his semen from the small dish to a glass phial and put the latter into the refrigerator, to keep it cool until tomorrow, when she would deliver it to the experimental laboratory of the hospital where she worked. There the technicians, following Wilson’s written instructions, would experiment with it. He was searching for a way to extend his life before his time ran out.

He slept soundly that night.

Three days later, two Gestapo agents wearing black greatcoats arrived at Kummersdorf to take Dr Belluzzo away. The old man was shattered, not knowing why it was happening, and he protested in vain and collapsed into panic, and was staring entreatingly at Schriever and Wilson even as he was dragged away.

He was not seen again. He disappeared into the camps. A few months later Wilson heard that he had died of a heart attack, reportedly induced by increasing ill health, though more likely caused by maltreatment.

His original, unworkable designs for a flying saucer were locked up in Schriever’s safe.

Clearly, Schriever thought he might find some use for them.

The thought of this amused Wilson who, no longer bothered by the old Italian physicist, was able to get on with his secret work with no spy looking over his shoulder and his conscience as clear as it always had been.

His *Feuerball* was taking shape.

CHAPTER SIXTEEN

Ingrid's mother answered the door, stared at Ernst in surprise, then looked embarrassed and tried to hide it by crying out, 'Ernst! You're back at last!' She took him into her arms to give him a hug, then stepped back and waved him inside. 'Come,' she said. 'The children will be so pleased to see you. They've missed you so much.'

Noting that she hadn't mentioned Ingrid and still looked embarrassed, Ernst picked up his suitcase and stepped into the apartment he had not seen for three months. It was late in the morning and both his children were in the living room, four-year-old Ula setting up coloured blocks for baby Alfred, now fourteen months old. Alfred knocked the blocks down and giggled delightedly while Ula glanced sideways and saw Ernst, studied him with slowly dawning recognition, then shyly stood up to greet him.

'It's your father!' Ingrid's mother exclaimed, as if Ernst had been gone for three years instead of four months.

Realizing that he must seem like a stranger to his own daughter, Ernst set his suitcase down, fell to his knees, and swept both children into his arms, hugging them passionately.

'Don't be embarrassed,' he said, stroking Ula's flushed cheek and golden locks. 'I know I've been gone a long time and must seem like a stranger to you. But you'll get used to me again, my darling, before very long. And how pretty and grown-up you look. And Alfred!' He grasped the gurgling baby under the arms and held him up in the air. 'What a fine boy he is! Do you look after him, Ula?'

'Yes,' Ula replied, smiling.

'Good,' Ernst said. '*Very* good!' He stood up and glanced around the room. 'Ingrid isn't here?' he asked, wondering why his mother-in-law was looking after the children.

'No,' his mother-in-law said too quickly, blushing again. 'She went to

visit some friends.'

'Who?'

'I don't know,' she replied, avoiding his gaze. 'She told me, but I can't remember the name. I mean, she didn't know you were coming back today, so...'

'When did she leave?' Ernst asked, feeling more disturbed.

'This morning.'

'Then you must have been here all night, Maria.'

'Yes… Yes, I was!' And she nodded her head vigorously. 'I didn't want to have to get out of bed too early, so I decided to sleep here. But please, Ernst,' she added, changing the subject and waving toward the couch, 'sit down and take your boots off and let me fix you some tea. You must be exhausted.'

'I'm fine,' he replied, then knelt on the floor by his suitcase and proceeded to open it, determined to distract himself from his dark thoughts. 'I arrived in Berlin last night but had to report straight to barracks – and yes, I *would* like a tea. Here, Ula,' he said, opening the suitcase, 'I have some presents for you and Alfred. All wrapped up, just like Christmas!'

Already getting over her shyness, Ula unwrapped the doll that Ernst had, in fact, bought only that morning, right here in Berlin, along with Alfred's box of rattling toys. Nevertheless, she was delighted with it, and for the next half hour or so, Ernst enjoyed his tea, felt better watching his son and daughter playing with their presents, made desultory conversation with his normally pleasant but now clearly uneasy mother-in-law, and determined not to show the anger and suspicion he was feeling over Ingrid's unexpected absence.

After all, they had agreed to live separate lives, so he could hardly complain...

The practice, however, was more difficult than the theory. As he sat there, sipping tea, appreciating the feminine cosiness of the apartment after the rigours of his sea voyage, he had to choke back his feelings of disappointment and loss. He had just returned from an epic journey, an historically important endeavour, and was not even being welcomed back by his wife... He filled up with self-pity, despised himself for it, and had managed to accept what he had wrought by the time Ingrid returned.

When she walked in and saw him, her face turned bright red. She was

wearing a long gray coat and a broad black hat, but removed them first and composed herself. By the time she had crossed the room to kiss his cheek, her face had turned pale again and her vivid green eyes were cautious.

'Ernst!' she exclaimed, whispering into his ear. 'I didn't realize...'

Not having known the touch of a woman's body for a long time, Ernst instantly filled up with longing when, for the brief duration of her chaste kiss, Ingrid could not prevent her body from touching his.

'I know,' he said as she stepped away from him, leaving only the intoxicating smell of her scent, the seductive warmth of her lips, and the bitter knowledge that she no longer desired him. 'They didn't tell us when we'd be returning, so I couldn't tell you. Still, here I am.'

'Yes, Ernst.' Her once-radiant smile was hesitant. 'Here you are!' Her gaze slipped away from him, fell on her mother, roamed around the room, then finally, reluctantly, returned to him. 'So,' she said with forced gaiety, waving her hand to indicate the children. 'Have you noticed the change in them?'

The banality of the question almost amused him, and he did indeed smile. 'Remarkable,' he said. 'And Ula looks as lovely as her mother.'

At least Ula liked that remark, blushing and giggling.

'Tea!' Ingrid said, trying to sound gay. 'At least mother's looked after you. Would you like something stronger?'

'A little schnapps would be nice.'

'You didn't ask me for that,' Ingrid's mother said too shrilly, and then, looking confused, added, 'Anyway, I have to be going now – and I'm sure you two have lots to talk about. My bag's packed already.'

'Mother, you don't have to…'

'No!' Ingrid's mother protested. 'I can't stay another minute! I promised to have chocolate with Fraulein Vogt at the Konditerei before I go home, and if I stay here any longer, I'll be late. I've already called for a taxi and packed my overnight bag.'

The repetition was a product of her embarrassment. Clearly she was as relieved as was Ernst when the taxi came for her. When she had gone, after more oddly melodramatic hugging and kissing (which merely confirmed for Ernst that his suspicions about Ingrid were well founded), he felt the oppressive weight of the silence that filled up the cosy room. Having poured two glasses of schnapps, Ingrid handed one to him and sat facing him. As he

drank, feeling better with each sip, he studied his playing children, the golden girl and the giggling baby, glanced repeatedly around the room with its heavy, darkly-varnished cupboards, lace tablecloths, doilies and curtains, Germanic bricabrac and paintings, and realized that no matter how homely it was, it was no longer his home. He was a German soldier, an SS officer – the élite of Himmler's élite – and that made him different.

He no longer needed this.

'How was the trip?' Ingrid asked him.

'It wasn't a holiday, Ingrid.'

'I'm sorry. I didn't mean it to sound like that. I just thought it might have been exciting or glamorous. Was it?'

'No,' he said, offended at the very notion, 'but it was certainly worth doing.'

'Why?'

'I can't tell you that,' he said, though he wished that he could, now remembering with increasing pride how he had hammered the swastika into the snow-covered earth of Antarctica in that vast, haunting silence.

'Another vitally important secret of the Third Reich?'

'Your sarcasm is not required.' He felt a touch of anger, but his sexual desire softened it.

Ingrid had always been attractive – a prize catch, in fact – and right now, even trying to keep her distance, she glowed with an inner light, probably caused, as he bitterly realized, by the man she had come from. He tried to be objective about it, to keep their agreement in mind, but after four months at sea, faced with her sensual gratification, he surrendered to the very emotions he had been trained to despise.

'Where were you, Ingrid?'

She glanced at the children, then back at him. 'Do we have to discuss this now?'

'I've been away for four months,' he said, though he hadn't intended doing so, 'and you were gone when I came back.'

'I didn't know you were coming back,' she reminded him.

'You know what I'm talking about, Ingrid. Why was your mother here?'

'I was visiting a friend.'

'All night?'

'Yes,' she said. 'All night.'

Before he could say anything else, perhaps frightened of his reaction, she told Ula to pick up their toys and take them into the bedroom. ‘Your father and I have to talk,’ she explained, ‘so you can play in there for a while.’ When Ula had picked up the toys and started toward the bedroom, Ingrid, carrying Alfred, followed her daughter through the door. Returning, she sat down, crossed her legs, and sipped some more schnapps.

‘So,’ she said, ‘let’s discuss it.’

‘All night,’ Ernst said, echoing her words with soft, deliberate malice.

‘You knew before you left that I had a lover.’

‘And you’ve just been with the same man?’

‘Yes.’

‘It’s nice to know that it’s lasting.’

‘Yes, Ernst, it is.’

‘Is he better than me in bed?’

‘I don’t think that question’s relevant.’

‘What is?’

‘A lot of other things, Ernst. Sex isn’t everything.’

‘We both enjoyed it once.’

‘I’ve never denied that.’

‘But now you enjoy it more with him.’

‘It’s more than that, Ernst.’

‘Yes,’ he said, ‘lots of other things. Such as?’

‘Love and affection.’

‘You and I are *married*, Ingrid. Please remember that. Marriage isn’t that easy.’

‘No,’ she said, ‘it isn’t that easy. Maybe that’s why we failed.’

‘I don’t see how I failed you.’

‘You gave me up for Adolf Hitler.’

‘Be careful about what you say, Ingrid.’

‘I want a divorce.’

He sighed, shook his head in disbelief, then finished off his schnapps. ‘We’ve talked about this before,’ he reminded her, placing his glass on the table that separated them, ‘and you know it’s out of the question. I won’t risk my career with a divorce. Who *is* this man, anyway?’

‘You don’t need to know that.’

‘Not Jewish, I hope.’

‘No.’

‘Do I know him?’

‘No.’

‘If I discover that he’s Jewish, I’ll turn you in – for the good of the children.’

‘How noble you are, Ernst.’ Ingrid lit a cigarette, blew the smoke toward the ceiling, then gazed obliquely at him through a blue haze. ‘All right,’ she said, ‘for the good of the children let’s remain man and wife. I’ll continue seeing my lover, you’ll continue seeing your whores, and we’ll both live happily ever after, while supporting the Third Reich.’

‘Some day your tongue will get you into trouble.’

‘At least it’s still *my* tongue.’

The schnapps had helped to calm him down and now kept him in control. He stood up and straightened his jacket, feeling very calm indeed, then walked around the low table and leaned over and slapped her face. Once. No more. A single, stinging blow. Then he straightened up and saw her look of shock and smiled thinly at her.

‘Be a whore,’ he said, ‘but do it discreetly or you’ll get worse than that.’ She didn’t reply. She was rubbing her red cheek. He could hear the children playing in the bedroom and his heart went out to them. They were the new generation, the future, and he had to protect them. ‘I’m going out,’ he said. ‘I won’t bother you with my attentions. Anything I want, I’ll get from my favourite whore, who knows me better than you do. I anticipate being back for my supper, so please have it ready. When I’m on duty or at the barracks, you can do as you please; but when I’m here you’ll treat me as your husband. Is that understood?’

‘Yes,’ she said.

‘Good.’

When he left, he closed the door without slamming it– like a dutiful husband.

With most of the day to kill before he had to report to Himmler, he took a packed, clattering tramcar to the city centre, noted with grim pleasure that his newly laundered SS uniform encouraged people to lower their gaze nervously in his presence, disembarked in the Kurfürstendamm, and planned what to do while having his next glass of schnapps in a busy café. Realizing that his

relationship with Ingrid was definitely finished and surprised at his lack of emotion about it, he thought of Brigette in the luxurious apartment on Tiergartenstrasse and knew instantly how he wanted to spend his afternoon.

'Darling!' Brigette exclaimed in that inimitably sensual, breathless manner when he phoned from the café. 'You're back at last from the high seas! Did you bring me a present?'

'Yes,' he lied, amused and excited by her husky-voiced, challenging mockery.

'Was it *expensive,* dear Ernst?'

'Yes, Brigette, it was.'

'Then come straight over, darling! I *can't wait* to see you!'

He bought her a diamond brooch in an expensive shop on Tauentzienstrasse, then walked to her apartment, still trying to adjust to the contrast between the isolation of sea and the energetic bustle of Berlin with its tramcars, buses, taxis, horse-drawn cabs, and growing number of army vehicles. An occasional mounted Storm Trooper made his way through the noisy traffic on his horse, the Nazi swastika and anti-Jewish signs were visible everywhere, and the green-uniformed, respected members of the Reichswehr mingled on the pavements with the feared Brownshirts, black-uniformed SS, and elegantly dressed shoppers and businessmen. All in all, on the surface, where the fear was not visible, the Third Reich seemed purposeful, energetic, and surprisingly prosperous.

Brigette also looked prosperous, even more so than usual. She came to the door wearing a shimmering lime-green bathrobe of pure silk, artfully opened at the top to expose her voluptuous, bare breasts. Her red hair, immaculately combed, fell around her calculating green eyes and full, sensual lips. Her cigarette was in an ebony holder and her fingernails, Ernst noticed, were painted the same colour as her hair.

'Ah!' she exclaimed with a throaty purr. 'My handsome lieutenant! I've missed you so much, *cheri*!'

She used the French endearment deliberately, making it sound deliciously decadent. Ernst stepped quickly into the room and kicked the door closed behind him. He took her into his arms, pulling her to him, feeling her heat, and she smiled, rubbing her belly lightly against him, then blew a cloud of smoke.

'Mmmm,' she murmured, letting her body sink into him. 'You greedy

boy! You poor, famished hero. Did you miss me terribly, darling?'

'Yes,' he said, already breathless.

'And dream about me?'

'Yes, yes!'

'And remembered all the things we'd done together?'

'Yes, damn you! Yes!'

She chuckled, let him feel her heavy breasts, licked the side of his neck. 'And did pretty boy bring his expensive gift?'

'Yes,' he said, almost bursting.

'You're so kind,' Brigette whispered, breathing into his ear, then she chuckled throatily, jerked his hands off her, and stepped away from him. The dressing gown had been tugged off one shoulder, exposing her breast. Ernst could feel his heart racing. Brigette held out her hand.

'I'm just a child at heart,' she explained. 'I can't wait to see it.'

She was smiling, but meant it, so he gave her the brooch, thinking of the many men who gave her presents, financial and otherwise. While she unwrapped his particular gift, he gazed into the bedroom behind her and noted that the bed was badly rumpled, as if used for more than sleep. Nothing had changed, which was fine by him. No more emotional entanglements: just gratification. Sensual pleasure and duty.

'Has my precious lieutenant been home yet?' Brigette asked as she unwrapped his gift.

'Yes,' he said.

'And how were your lovely wife and children?'

'Fine,' he said. 'In good health.'

'And you've come straight from there?' she asked with sly, exciting mockery as she tugged the wrapping paper off the box and let it fall carelessly to the carpet.

'Yes,' he said, unable to take his eyes off her bare skin, his senses in disarray.

She removed the lid from the gift box, studied the brooch with widening eyes, removed it and pinned it to her silk nightgown where it fell in shining folds and shadows over a perfect breast. She glanced down at it, her lips pouting greedily, then again looked at him.

'Ravishing,' she said. 'Welcome back. Now what would you like to do?'

'Everything,' Ernst said, then stepped up to her, slid the dressing gown off

her shoulders and lowered his head.

'Nice,' Brigette said. '*Nice*.' When she was ready, she led him into the bedroom and let him share her unmade bed, where he finally felt at home.

Three days later, satiated by his loveless sexual exertions with the diabolically sensual Brigette, Ernst was walking with his beloved Reichsführer, Himmler, through a long dark tunnel that had been carved out of the Kohnstein Mountain, near the town of Nordhausen in the southern Harz mountain range in Thuringia.

'I have a dream,' Himmler was saying quietly, academically, 'of an Atlantis reborn from the ashes of the forthcoming war: a society of masters and slaves, ruled by the élite of my SS. The new temples will be the factories, the laboratories and universities; the new religion will be knowledge and conquest: the return of the Superman. And where will this new order be created? In the *Antarctic,* Lieutenant!'

The tunnel had only recently been hacked out of the interior of the mountain and was gloomily illuminated by the electric lights strung along its whole length. There were many people still working in it, mostly prisoners from the camps, few looking healthy, most covered in mud. All took great pains to keep their eyes lowered as Himmler and his entourage of assistants and bodyguards walked past them, watching them laying steel tracks and fortifying the walls that formed the great tunnel, as wide as a highway, at the end of which, as Ernst noticed with relief, there was a circle of light.

'You understand now, do you not,' Himmler continued rhetorically as they tramped through the long tunnel, his normally soft voice even more difficult to hear because of the constant banging and clanging of the heavy work going on all around them, 'just how important your mission to the Antarctic was? The élite of my SS, the best of the best, will find a new home under the ice of the Antarctic, and there, uninterrupted and isolated from the imperfect world of normal men, will be forged into the first of the Supermen. You have found the location for us, Lieutenant Stoll, and should be proud of yourself.'

As they advanced deeper into the cold, dimly lit darkness of the tunnel, Ernst noticed that the slaving prisoners, most of whom looked underfed, were being guarded by immaculately uniformed SS officers, most armed with pistols or submachine guns, some carrying bullwhips. The clothes of many of

the prisoners were in ribbons; some had skin that was freshly scarred.

A society of masters and slaves, he thought, and it all begins right here...

'I'm not so sure, Reichsführer,' he said, emboldened by the favour he had recently found with Himmler, 'that such an ambitious project, no matter how admirable, would actually be feasible.'

'I respect you for expressing your doubts,' Himmler said, feeling kindly disposed toward Ernst for his achievement in the Antarctic, 'but what are they based on?'

'To create hidden colonies under the ice,' Ernst began, 'may not be that easy. The undertaking would have to be immense, and I don't think – '

'Look around you!' Himmler interjected with a rare display of excitement, waving his gloved hand to indicate those slaving along the length of the great tunnel. 'This is but one of two tunnels, eighteen thousand meters long. Leading off these tunnels will be fifty side chambers, a work area of one hundred and twenty-five thousand square meters, and twelve ventilation shafts, which already have been bored down to here from the peak of the mountain. As for these workers,' he continued, indicating with a careless wave of his hand the hundreds of unfortunates already labouring in the dimly lit gloom under the threat of bullwhip and bullet, 'they are merely the tip of the iceberg. Where they come from, there are thousands more, and thousands more after them – and we can obtain them whenever we need them and do what we will with them. Our supply of labour is endless.'

He stopped to study some prisoners who were laying down the steel rails for the trains that would soon run through the tunnels, bringing in more workers, equipment, and, possibly, food. Ernst noticed, once more, that these particular workers were half starved, and understood that they would be worked to death and then casually replaced. A society of masters and slaves hidden under the earth... He was moved by the grandeur of the concept and suddenly saw its potential.

When a bullwhip cracked behind them and someone screamed, Himmler twitched and walked on.

'The slaves destined to work here,' he explained as they continued advancing on that expanding circle of light from the outside world, 'will come from a separate camp located in a hidden mountain valley, less than a kilometre from the entrance to this tunnel. And a new underground complex, to be linked to this one by another network of tunnels, is already being

constructed sixteen kilometres under the ground around the town of Bleicherode, only twenty kilometres from Nordhausen. Between them, Nordhausen and Bleicherode will constitute the first of my SS underground factories – virtually living towns. And what we are doing here, Lieutenant, under the earth, we can also do under the ice of the Antarctic.'

At that moment, they stepped into the sunlight that was pouring into the end of the vast tunnel. Glancing down, Ernst saw a strip of ragged, blood-soaked cloth in the mud, but he put it out of his mind as, still walking beside Himmler, whose respect he had gained, he raised his face to let the sunlight warm it, then left the tunnel behind him.

The peaks and valleys of the densely forested mountains of Thuringia were spread out all around and below him in the sunlight of spring.

He breathed deeply of fresh air.

Himmler, also breathing the fresh air, again waved his hand, this time to take in the peaks and valleys spread out below and around them, under a radiant blue sky streaked with fat, snow-white clouds.

'This whole area,' he said in his quietly grandiose manner, 'from the Harz Mountains to Thuringia, south of Prague and across to Mahren, is already littered with other tunnels and underground factories similar to this one. And soon they will be totally insular colonies, worked by masters and slaves, and unrestricted by commonplace, so-called moral thinking. And since the masters are the élite of my most trusted SS troops, the existence of these places is unknown to those who are not my most valued initiates. Unknown,' he added, lowering his voice even more and staring steadily at Ernst through his glittering pince-nez, 'even to those closest to our beloved Führer. Do you understand what I'm saying?'

'Yes, Reichsführer,' Ernst said.

Himmler nodded solemnly. 'And what we can do here,' he then repeated in his softly insistent manner, 'we can also do in the land you have claimed for us in the Antarctic. Yes, Lieutenant,' he said, nodding again, 'you have found the place for us.'

Ernst swelled up with the pride he had almost lost through Ingrid.

'The German genius,' Himmler continued, 'has rendered the impossible commonplace – and there, though invisible to the naked eye, my first colonies are taking shape underground.' He nodded, as if bowing to that sacred earth, then glanced sideways at Ernst. 'It is my belief, Lieutenant, that

these underground colonies, if created in the Antarctic, can, with the aid of the American's flying saucer, ensure the success of our forthcoming conquest of the whole Western world. By the time that's been completed – as surely it must – we will have moved the first of our men to the Antarctic to begin the Hörbiger Projekt: the creation of a society under the ice and the first steps toward the supremacy of Nordic man, who will, given time and our ever advancing technology, evolve into the Superman.'

Aware that he had been selected and shaken by the honour, Ernst wanted Himmler to take hold of his shoulders and gently shake him like a beloved son; but he understood that his Reichsführer, a true soldier, even a genius, could not stoop to the display of such emotions in front of his men. Understanding this, he tried to control his own emotions and instead simply nodded agreement.

'Now that we have laid claim to Neuschwabenland in the Antarctic,' Himmler said, his pince-nez magnifying his mild eyes, 'it is my intention to ship specially trained SS troops, scientists, slave workers, and equipment there, to first construct, then live in, an underground research establishment and its attendant accommodations. This will in time become a self-contained, living colony under the ice. And from there, with the aid of the products of Projekt Saucer, we will spread the rule of the Third Reich across the whole world. *We will do this, Lieutenant*!'

Ernst was taken aback by the sudden intensity of Himmler's words, then swept away on a wave of exultation by his Reichsführer's unprecedented display of emotion. He had to look away from him, to find the freedom of sky and light, but was drawn back when Himmler actually touched him, tugging the sleeve of his uniform.

Ernst looked down and saw the eyes behind the pince-nez as prisms reflecting light.

'You have done a wonderful thing,' Himmler said. 'You have planted our swastikas in the ice. I am now placing you in charge of this great operation: to create Hörbiger's world of ice and fire under the Antarctic ice and, at the same time, keep a check on the vital progress of Projekt Saucer. This, Lieutenant Stoll, is your great mission on behalf of the Fatherland. Do not disappoint me.'

'No, Reichsführer,' Ernst replied, realizing in a flood of exhilarating emotion that he would be going back to Kummersdorf West and the world he

belonged to. ‘I will not disappoint you.’

Then he looked over the forested hills and valleys with the pride he had almost lost.

CHAPTER SEVENTEEN

‘I didn’t get very far,’ Bradley said, describing what he had seen in the immense barn in that desolate field near Mount Pleasant, Iowa. ‘In fact, I’d barely walked past the door when the rim of that goddamned thing was in front of me.’

Recalling that eerie experience with vivid clarity, he wasn’t comforted by the fact that the man to whom he was talking, retired US Army Air Force Wing Commander Dwight Nicholson, had insisted that they hold this conversation in a darkened room and was breathing like a man at death’s door.

‘It was shaped like a great steel saucer with a Perspex dome on top, taking up half the floor space of the barn and starting to rust. At first, I couldn’t grasp what I was seeing, but it gradually dawned on me. It was the superstructure for some kind of flying machine: one shaped like a saucer.’

‘A piloted machine,’ Nicholson said, his voice sounding ghostlike.

‘Yes. The Perspex dome turned out to be a circular cockpit, located at the centre of the disc. The cockpit was fixed, and the disc, in two parts, like one saucer placed upside-down on another, would have revolved around it.’

‘And of course it was only a shell. The engine was missing.’

‘Right,’ Bradley said. ‘Even the goddamned control panel had been smashed to hell. He left nothing to chance.’

‘Wrong. He left the prototype. He could have blown it up. Why didn’t he?’

‘He didn’t want to draw the attention of the neighbouring farmers.’

‘Or he wanted *something* to be found... to leave his mark.’

Nicholson smiled, inhaled on his cigarette, and blew a couple of smoke rings toward the window overlooking the garden of his home in McLean, Virginia. The sun, shining brightly outside, was filtering through the drawn blinds and forming webs of light in the darkness around him, illuminating his

dreadful face.

'Just what we found,' he said, his twisted smile displaying admiration. 'The superstructure for a saucer-shaped aircraft, but with nothing inside. Either that bastard had gutted his own machine, taking everything of value, or there'd been nothing inside it in the first place.'

'Which means?'

'We all believed then, and I believe now, that the craft that exploded over Tunguska, Siberia, wasn't piloted – it was some kind of missile – and that the superstructure we found later was a prototype for the first of his piloted craft. That's what we found – and what you found. Some smart cookie, that Wilson.' Nicholson shook his head from side to side, as if he couldn't believe his own words. 'We didn't know he'd left another one, that's for sure. In a barn in… *Iowa*?'

'Right. Up near the border of Illinois. Not far from Mount Pleasant, where Cohn and Goldman had their research establishment. Apparently Wilson had been working in secret on the flying saucer in that barn while ostensibly producing airships for Cohn and Goldman.'

'In other words, he took them to the cleaners. They were financing his saucer project without knowing it.'

'Right,' Bradley said. 'It was Goldman's belief that Wilson had secretly been trying to solve the problem of the boundary layer and also working on a crude atomic propulsion system. This suggests that the propulsion system managed at a later date to fly *some* kind of object – as you say, some kind of missile – as far as Russia, before it malfunctioned, blew up, devastated the forests of Tunguska, and led to the US government closing down Wilson's research establishment in Illinois and either classifying or destroying what they could find of his work.'

'Which is why you came to me?'

'Yes. After finding the remains of that saucer, I checked out what Abe had told me and learned that it was essentially correct: that after Cohn and Goldman had gone bust, the US Army Air Force opened a file on a similar company located just across the state line, in Illinois. Unfortunately, in those records, the names of those involved were erased. But then I saw, in other records in Washington, that you'd been in charge of that operation just before you retired. And since you're an old friend and all...'

Nicholson smiled. 'Yeah, Mike, I understand. Can I take it that this is all

off the record?'

'You *are* retired, Dwight.'

'I still want it to be off the record. I don't want my name mentioned.'

'You have my word on it.'

Nicholson nodded and grinned laconically. You could actually see the twisted grin in the semi-darkness, but it didn't look real.

'Okay,' he said. 'This is all based purely on recollection; I don't have any backup.'

'I'll take what I can get, Dwight.'

'Are you sure you don't want a drink?'

'It's only ten in the morning.'

Nicholson simply shrugged, sipped some whiskey, inhaled and exhaled more smoke, which made Bradley feel bad.

In 1918, when Bradley had just about turned twenty, he'd been a naval aviator under Nicholson's command, flying the old wood, wire, and canvas biplanes from their primitive carriers out at sea to the bloody battlefields of the western front. After the war, when Bradley went into law, Nicholson had returned to the intelligence work he'd been doing previously for the Army Air Force. Then his wife, at fifty-eight, had died from a brain haemorrhage, and after that the spirit had gone right out of him. Still with the Army Air Force's technical intelligence branch, he'd developed a drinking problem, then ulcers, and had then been retired prematurely, looking like an old man. About a year ago, he had bought himself an old de Havilland two-seat *Tiger Moth* biplane and started to give flying lessons. Under the influence of alcohol, he'd crashed the plane, killing his passenger and seriously burning himself. Now his face was hideous, his skin livid and scarred, his lips practically burned off, along with his hair and eyelids, and he lived here alone, in this too-large house in McLean, Virginia, smoking and drinking most of the day and going out only rarely.

It was frightening to visit him.

'What Goldman told you was substantially correct,' he said in an unnatural tone of voice. 'I don't think I have to tell you that after the Great Airship Scare of 1896 to 1897, the Army Air Force began taking a particular interest in anything new or novel in the aeronautical field.'

'That figures,' Bradley said.

'Well, since most of the major reports mentioned a man named Wilson –

and since most of them also named either Iowa or Illinois as the origin of the mystery airships and their equally mysterious crew members – it wasn't too difficult to discover that a certain John Wilson, exceptional graduate of the MIT and Cornell, was designing and constructing airships for the Cohn and Goldman Company in Mount Pleasant, Iowa. Since this was a perfectly legal occupation, we did nothing but surreptitiously keep our eye on his progress. We only became concerned when shortly after the end of the scare, we received a pretty startling report, stating that Cohn and Goldman's five airships had been destroyed by an unknown demolition expert, thus breaking the company, and that while no evidence could be found to prove that the deed had been done by Wilson, it *had* been ascertained that he'd mysteriously made a small fortune at approximately the same time and, shortly after, opened his own research establishment in Illinois. It was believed, but could not be proven, that he had made that money by illegally selling his airship designs to a German aircraft company, possibly Zeppelin – and according to Cohn and Goldman, the designs he had let them patent were actually worthless. So, while Cohn and Goldman went bust, Wilson was opening his own research plant in Illinois...'

'And?'

'We paid him a visit in Illinois. We informed him of our suspicions, which he naturally denied, and when we asked him what his intentions were, he said he was moving on from airships to heavier-than-air manned flight but was being hampered by his limited financial resources. Clearly the money paid by the Germans wouldn't last forever.'

'What did you think of him personally?' Bradley asked, still trying to fit a face to his mysterious quarry.

'I'll never forget him,' Nicholson replied without hesitation. 'He wasn't even thirty, but he seemed a lot more mature, though what burned itself into my memory was his coldness. A really *strange* kind of coldness. He wasn't arrogant, rude, unfriendly, or antagonistic – no, none of those things. He was just remarkably detached, inhumanly pragmatic, almost machine-like in the way he listened and responded... He lacked normal emotions.'

Nicholson shivered, as if brushed by a cold breeze, then stubbed his cigarette out and slumped back in his soft chair.

'Did the Air Force get involved with him?' Bradley asked.

'Yes,' Nicholson said. 'Nervous about what he might do, but with no

legal right to stop him, we decided to get some jurisdiction over him by offering the money he would need for his more ambitious projects. He accepted on the condition that we didn't attempt to supervise him and contented ourselves with monthly reports and regular inspection visits to his plant. Believing that would be enough for us, we agreed – but naturally, given Wilson's nature, it wasn't enough.'

'So you were involved with the saucer-shaped aircraft?'

'No. We didn't know a damned thing about it. Wilson conned us, just like he'd conned his previous financiers. What we got in our reports, and what we viewed in our many inspection visits to his plant in Illinois, was the prototype for a highly advanced turboprop biplane, and frankly, we were more than impressed. Clearly, we were dealing here with a genius. And by 1903, even before the Wright brothers had made their first, widely publicized flight at Kitty Hawk, I was privileged to witness the secret test flight of Wilson's completed aircraft. That flight was more than successful – it was absolutely astonishing – and that's when we got scared.'

'Why?'

Nicholson reached for the bottle of whiskey, filled his glass up to the brim, drank almost half of it, topped the glass up again.

'After the notorious Cohn and Goldman affair,' he said, his voice emanating from the semi-darkness in a quavering, ghostlike manner, 'we knew that Wilson couldn't be trusted. For that reason, I'd planted one of my own engineers in his team, with orders to keep his eyes and ears open for anything not mentioned in Wilson's reports or viewed by us during our visits. While this man never got too close to Wilson, he *did* pick up enough whispers to convince him that Wilson – just as he'd done with Cohn and Goldman – was showing us only the tip of his particular iceberg; that even though his turboprop biplane was more advanced than anything else we knew about, he was reportedly working on some other project, involving the boundary layer and some unknown form of propulsion, in another hangar, located a mile or two from his main plant. Knowing how advanced the biplane was, we were naturally scared shitless at the very thought of boundary-layer experiments and an *unknown* propulsion system – then, when in 1908 our man reported whispers about the flight of a small, pilotless object that had actually managed to reach Russia, we naturally became very concerned indeed... And we were preparing to take over Wilson's plant and

demand the location of his secret hangar when that big explosion occurred over Tungusta, in Russia. It occurred *over* Tunguska, you understand, and we knew what that meant.'

'Something exploded in the air.'

'Right.'

'And whatever it was, you don't think it was piloted.'

'No, we didn't then and I still don't. Bear in mind that Wilson's secret work was being conducted in what was no more than a converted barn near the main plant. Given this, I think it's safe to assume that he wasn't designing something nearly as big as an airship or aircraft. In fact, our spy had heard from other engineers stories about a small, disc-shaped object, no more than a foot in diameter, that when test-flown looked like a fiery ball. It's my belief that that small, probably remote-controlled object was what exploded over Tunguska – and that the large, saucer-shaped superstructures since found were just that: empty superstructures for the larger, piloted craft that Wilson intended to construct along the same lines as the smaller object. Then, of course, when the smaller object exploded over Tunguska, we had to put a stop to it.'

'How did Wilson respond to that?'

'He blandly denied our charges. He also denied the existence of his secret hangar, or barn, so we closed down his plant in Illinois, confiscated everything we could find – which naturally didn't include anything we hadn't already known about – and told Wilson that if he wanted to continue working on research projects, he'd have to do it under our supervision, in our own research establishments. Wilson said he would think about it... A few weeks later, we found that empty superstructure in a hangar a few miles from his plant in Illinois. We never found anything else... and then, before we could interrogate Wilson about it, he fled Illinois and went underground. I never saw him again.'

He lit a cigarette, blew another cloud of smoke, then raised the glass to his twisted lips and drank it. Bradley stood up.

'Thanks,' he said. 'And look after yourself, Dwight.'

'There's nothing left to look after,' his friend replied. 'It's just a matter of time now. A real glamorous business, being a pilot, right? We don't believe this can happen.'

'Right,' Bradley said.

He placed his hand on his friend's shoulder, squeezed it affectionately, then turned away and walked from that dark place without glancing back.

The sunshine was wonderful.

In the train back to Connecticut, he opened the latest letter from Gladys Kinder, this one dated October 5, 1938.

Dear Mike,

This morning the Germans marched into Czechoslovakia to ecstatic cheers, the pealing of bells, and the pronouncement by Adolf Hitler that this was the latest step in his glorious march into the great German future. God help Europe, I say.

Did you miss my letters, Mike? I hope so. Apart from my telegrammed communiques to the Roswell Daily Record, my letters to you, to your office high above Manhattan, are my only real contact with America. The reason for writing is important – it's my hold on where I came from – but I have to confess that I also write them out of girlish compulsion.

You were so charming, Mike.

Ah, ha! you're thinking. She's making fun of me again! Well, maybe so... But I hope you missed my letter, missed the letters, missed me. Not that you'd admit it if you did, you lamentably decent married man, who found me too bold by far. I think that's what I loved in you.

I also love the odd formality of your letters – written secretly, doubtless – God, yes, I enjoy that thought! Bradley scribbling in secret, his cheeks flushed, above the towers of Manhattan.

Your letters, which are filled with a lawyer's reticence, somehow manage to make me feel like a scarlet woman. That's quite an achievement, bud. You make me feel that I'm wallowing in iniquity without its actual pleasures – and that's another achievement.

Enough! Let's be serious...

I haven't written for the past eighteen months because I've been travelling. Spain, of course, with the International Brigade, meeting Orwell and Hemingway and all the other, less celebrated intellectuals who idealistically swopped their pens for rifles and often died for the privilege. I didn't carry a rifle – my pen and notebook were too heavy – but I was in the market of Guernica, buying some groceries, when the German air force

bombed it with high explosives, set it alight with incendiary bombs, then strafed the men, women, and children with machine-gun fire. What I saw there is best not described, but it left its mark on me. It was all I could take.

I returned to London in time to describe, for the loyal readers of the Roswell Daily Record, how King George VI and Queen Elizabeth were crowned, with magnificent pomp and splendour, in Westminster Abbey. I loved it all, I do confess – it was like a Hollywood musical: the golden coach drawn by eight grays, with four postilions and six footmen, plus eight grooms and four yeomen of the Guard walking beside it. What with that and the royal outfits of deep red and snow-white ermine, not to mention the thousands thronging the Mall and Trafalgar Square, I doubt that Cecil B. De Mille could have done it better – and certainly, after Spain and some weeks in Nazi Germany, it all seemed so civilized.

I was reminded of you when, a week before the Coronation, the great German airship, the Hindenburg, exploded in New Jersey, after crossing the Atlantic from Frankfurt. Then Jean Harlow died and was followed by George Gershwin and I started to think of passing time and my age – and of the fact that the last time I saw you, which was only the second time, was almost five years ago. I was going to write to you, but I was packed off to Germany by my good friends in Roswell.

The first thing I reported from Germany was the reorganization of the concentration camps, most notably the new establishment opened at Buchenwald, in Thuringia, to house more enemies of the state, and the changes of administration in the camps at Dachau, Sachenshausen, and Lichtenburg, all of which are democratic enough to take women prisoners as well as other automatic enemies of the glorious Third Reich, including Jews and Communists, though gypsies, the mentally ill, and other so-called undesirables are certainly in line for consideration.

God help Europe, indeed!

Here in London, they're already building air-raid shelters and providing local authorities with millions of sandbags. What can this mean, we ask? 'Peace for our time,' says Neville Chamberlain. Pull the other one, Neville...

And so I think of you. I think of you when I think of America, which I did when Harlow and Gershwin died and my age started telling. And I thought of you and my age when the Hindenburg exploded and I was reminded of airships and aeronautics in general and my former lover, John Wilson, in

particular, because through him I met you.

Can you believe that we first met nearly eight years ago? Can you believe, also, that we've actually only met twice and that the last time was nearly five years ago? We met through John Wilson, are haunted by him, and are helplessly tied to one another by his ghost.

Three up for John Wilson.

You keep writing and asking me questions about Wilson and it makes me feel worthless. I've been married and divorced and I've known lots of men, but you, Mike Bradley, solid citizen and moral man, are only interested in what I knew about Wilson. I feel as if I'm invisible.

Okay, down to business...

I asked a pragmatic friend in the British Defence Department to check their report on the Tunguska explosion in Siberia and tell me what their assessment of it was. Frankly, given normal British scepticism, their assessment was almost weird in its conviction that something odd had occurred and that it had <u>not</u> been caused by a meteor or other extraterrestrial source. In fact, according to British intelligence: (1) *Nothing crashed <u>into</u> the Tunguska forest;* (2) *The angle of the trees bent by the blast proved that the explosion had occurred <u>above</u> them, not within them;* (3) *Pieces of an <u>unknown</u> metallic compound were found at the scene of the devastation; and* (4) *Just before the explosion, a lot of those living in the area reported seeing what appeared to be a small, fiery ball sweeping across the sky above the forest. Then it went down and – whammo!*

A small fiery ball with a dark core, possibly metallic...

The public stance in Britain was that the explosion had been caused by a meteorite – but the private stance, at least that of the Department of Defence and British intelligence, was that it had been caused by some kind of man-made object that did not – repeat: did not – come from Russia, but from outside its borders. Also, the reported sightings seemed to suggest that the object, whatever it was, had not come down from the stratosphere, but had been completing a descending trajectory at the end of a flight from west to east. In other words, it could have come from Europe, the Atlantic Ocean, North America, Canada, Alaska, or even farther... Unless it originally left Russia, circled the globe and returned to its source, which seems too ridiculous. The Brits, then, decided that 'if' a terrestrial object had been involved – and they certainly weren't too sure of that – then it probably

emanated from Europe, possibly Germany.

So *what do <u>you</u> think, bub?*

I know what you think. You think it came from Wilson, from Iowa or Illinois, and that it flew from North America, across the Atlantic Ocean, across Europe, then on to Russia ... And having known Wilson, I believe you might be right.

Is Wilson still in Germany? Yes, I think so – but I still can't confirm it. Asking questions there, I quickly found out, can be pretty dangerous. Nevertheless, I'm going back there, for the humble Roswell Daily Record, and if I find out anything at all, I'll certainly let you know.

I really enjoy writing these letters. It's like having a drink with you. I never loved John Wilson – he was too cold and remote for that – and when I met you, though you've never laid a hand on me, I understood why. I can write about Wilson now because he's everything you're not: a man whose lack of feeling reminds me of all the feelings you hide.

You wanted me so much, Bradley – you couldn't hide it and I couldn't resist it. But what I loved you for (yes, I did and still do) was the knowledge that no matter how much you wanted me, you also loved your wife and kids too much to let me be a threat to them.

Which just made me love you all the more.

I can say that now, can't I, Mr Bradley? Because being at the other side of the Atlantic Ocean, I'm no longer a threat to you.

That's why I'm bold with you.

I'll write again when I get back from Germany. Adios, mi amigo.

Yours from too great a distance,

Gladys

Hiding his emotions, as Gladys had known that he would, Bradley folded the letter neatly, placed it back in his billfold, and gratefully climbed off the train when it arrived in Bridgeport. Given the guilt he was feeling over what he had not done, though had certainly contemplated, he was glad that Joan hadn't known when he was coming back and so wasn't at the station to meet him. Instead, he caught a bus, which he had not done for years, and simply by doing that for a change, felt that he had stepped back in time and was returning from high school.

That journey home, through the greenery of Connecticut, certainly made

him feel young again, if only for a short time. And feeling young, he thought of Gladys, who also made him feel young, and recalled all the letters she had sent him over the years, ever since leaving the United States to work in England and Europe. The letters were like the woman, at once laconic and suggestive, and as they had only met twice and hadn't seen one another for almost five years, Bradley couldn't quite work out just how sincere they were, let alone what his reaction to them was or should be.

He had certainly found her very attractive and, in truth, still did, but he found the addiction more disturbing because he couldn't fully believe in it. He thought of her too much, even had erotic dreams about her, and could only explain this lasting attraction as part and parcel of his growing obsession with the mysterious John Wilson.

If not for Wilson, whom ironically he had never laid eyes upon, he would not have met Gladys Kinder in the first place.

Two obsessions in one.

Stepping down from the bus as the sun sank beyond the trees, he walked up the garden path of his ranch-style house, thinking guiltily of Gladys Kinder, whom he had loved only in dreams, and of her former lover, now his quarry, John Wilson, whose genius, being ruthless and amoral, was increasingly frightening.

God knows what Wilson was creating in Hitler's Third Reich.

Maybe only God knew.

The first thing Bradley saw when he entered the house was the partially eaten birthday cake on the table. He briefly froze where he stood, on the threshold of the living room, burning up with guilt when he saw Joan, standing by the table in the brightly lit room, turning to face him, her lovely smile absent.

'Welcome home,' she said quietly, venomously. 'You missed the party, unfortunately.'

'I'm sorry,' Bradley said. 'Damn it, I forgot. I got involved with – '

'A man called Wilson. Yes, Mike, I guessed. You promised you wouldn't let him become an obsession. Dammit, you *promised*!'

'I'm sorry. Where's Miriam?'

'Here, Dad.' He glanced to the left and saw her sitting on the couch beside her fiancée, Ralph Beaker. 'Don't worry about being so late. I'm not bothered. Honest.'

'*I'm* bothered,' her mother retorted, raising her lips from a glass of sherry and looking pretty with her angrily flushed cheeks. 'He never remembers anything anymore. He hardly remembers that he lives here.'

'He's not that bad,' Miriam said with an encouraging smile that made Bradley feel worse. 'And he's still my one and only dad – the best in the house.'

She was twenty-two today, taller than Bradley, slim and shapely and darkly attractive like her mother, and he could scarcely believe she was that age and engaged to be married. No more than he could believe that his son, Mark, was now twenty-three, married, with a pleasant, pregnant wife, and living in New Jersey, from where he commuted to Manhattan to help in the law office now that Bradley was otherwise engaged with his informal intelligence gathering.

'Dammit,' he said, shocked that time was passing so quickly and therefore feeling even more guilty, 'I really *am* sorry, Miriam. It's just this job. I just – '

'Come and give me a kiss, Dad, and then have some cake. It's only my *birthday,* for God's sake!'

'Now if you forget to turn up on our w*edding day,*' Ralph said with a laconic grin, 'she just might – '

'Believe me, I won't forget.' Grinning brighter than he felt and ignoring Joan's angry glance, Bradley walked across the room, shook Ralph's hand, then leaned down to kiss his daughter on the cheek. 'Can I join you all in a drink at least?' he asked.

'Sure,' Miriam said. 'Why not?'

After that, the evening progressed smoothly enough, with liquor easing the tension for everyone except Joan. Though she tried hard to be pleasant, she let Bradley know with every glance that his increasing neglect of his family, caused by his obsession with John Wilson, would not be quickly forgiven. Bradley anaesthetized himself with liquor, getting drunk without showing it, and when he spoke to his daughter's fiancée later that evening, he knew that at least the younger folk were unconcerned.

Not that it helped him much.

In bed, Joan lay as stiff as a plank and stared at the ceiling. When he reached out to her, she rolled away from him, onto her side, and whispered, 'No! Not tonight! Don't think that being drunk will make it better. I'm not

that easily swayed.'

'Dammit, Joan, I just forgot!'

'You forget too much too often these days. Our marriage nearly broke up before when you became obsessed with your legal work; now that you're becoming obsessed with intelligence gathering, we're going through the same thing. You're just a boy at heart, Mike, easily bored, wanting adventure; and when that particular itch gets a hold of you, God help us all. You even forgot your daughter's goddamned birthday! Go to hell, Mike. Just let me sleep.'

He felt cut to the quick, flayed by the brutal truth, yet as he lay there beside her, his eyes closed, trying to sleep, his guilt gave way to fantasy, to visions based on speculations, some of which involved Gladys Kinder, whose face he knew so well, and others involving a man called Wilson, whose face was a blank wall.

His twin obsessions formed the roots of a tree whose branches spread out through his sleep, drooping over a dark abyss.

A ball of fire with a spherical, silvery core arched through that vast, disturbing darkness and drew him into oblivion.

He slept the sleep of the haunted.

CHAPTER EIGHTEEN

‘It will work,’ Wilson said emphatically, buttoning up his greatcoat and glancing at the relatively small, disc-shaped metal object that was resting on the raised platform in the work bay of the second most secret area of Kummersdorf. ‘We still have a lot of work to complete, but I believe it will work.’

The dark, lean-faced Rudolph Schriever, wearing oil-smeared coveralls, smiled with scarcely concealed excitement. The *Feuerball* was about three feet in diameter, had the general shape of two plates placed one upon the other, and had no visible air intakes or other obstructing protuberances, such as wings and rudders. Thus it had a smooth, seamless appearance. It was, in fact, the first flying wing that Wilson had attempted to construct since his disaster over Tunguska, and he was using it as a prototype for the larger, piloted craft being constructed laboriously in the main hangar.

‘What we have here, gentlemen,’ he continued as Habermohl and Miethe began draping a protective canvas sheet over the saucer-shaped, metallic object, ‘is a circular flying wing that will offer the least possible air resistance, suck in the dead air of the boundary layer, and then use that same air, expelling it at great force, to increase its momentum even more. *However*,’ he added deliberately, looking directly at the excited Schriever, ‘even with this design, the boundary layer, though dramatically reduced, will still be present – and until we find a means of defeating it, the capabilities of our *Feuerball* and larger saucer will be severely limited. This, gentlemen, is the problem we still face. Good night to you all.’

He turned away and walked out as the canvas sheet fell over the *Feuerball* and Schriever’s expression turned to one of frustration. Leaving the workshop and stepping into the freezing November winds that howled across the nearby firing range into the lamplit parking lot, Wilson glanced at the main hangar, its walls being swept by searchlights, then smiled to think of

Schriever's frustration. Given his own car at last, he climbed into it, drove out through gates guarded by SS troops, and headed back to Berlin.

He was amused by Schriever's frustration. Knowing that the ambitious young Flugkapitän was nominally in charge of Projekt Saucer and reporting directly to Himmler, usually with exaggerated declarations of his own contributions to the work in progress, Wilson had continued to massage his ego by helping him to believe in his own importance. But occasionally, as he had just done, he could not resist slapping him down with another, seemingly insurmountable problem.

What he had not told Schriever, and was not about to, was that he knew how to solve the problem of the boundary layer: by using a kind of porous metal similar to that which he had created so many years ago. Undeterred by the previous disaster and now with vast technical and human resources he had not had before, he knew that he would soon meet with success. Tentatively named *Luftschwamm,* or aero-sponge, and essentially a combination of magnesium and aluminium, his unique metal was being created under his personal guidance in the research plants of distant Gottingen and Volkenrode. When completed, it would be used only for the flying saucer that he intended to construct without Schriever's knowledge. As for Schriever's *Feuerball* and flying saucer, they would fly well enough to keep him and Himmler happy – but that's all they would do.

Approaching the outskirts of Berlin, he looked into the evening darkness and was surprised to see a red glow in the sky above the rooftops of different areas of the city. The glowing pulsated and shifted, here and there obscured by smoke, became a deepening, eerie crimson as he came closer to it. The city's in flames, he thought, rolling his window down, smelling smoke. As he drove on toward home, he realized that it was the Kürhessen district, where he now lived, that was aflame.

He heard the breaking of glass, screams and shouts, then more glass breaking and raining upon stone, obviously the pavements.

Shop windows were being smashed.

Instantly alert, he drove into the Kürhessen district and was surprised, at this late hour, to see the streets packed with people. A nearby synagogue was on fire, and the crimson and yellow light of the flames illuminated a nightmare. Fashionable, middle-class people were clapping and cheering as roaming gangs of youths beat Jews senseless with lead piping, smashed the

windows of their shops, and strewed their possessions along the gutters, while Storm Troopers looked on smiling, when not actually joining in. Broken glass was everywhere, glittering in moonlight and crimson glare, splashed with the deeper crimson of human blood, spreading over the road. Another Jew screamed and was beaten down by swinging lead pipes as more women applauded.

Wilson kept driving.

It was a hellish, dangerous business, with violence and destruction all around him. He drove past more burning synagogues, more gangs of youths in pursuit of Jews, was waved on by exultant Storm Troopers. The air was filled with thickening black smoke, illuminated by flames, rang with desperate cries. He heard gunshots, more smashing glass, screams and oaths. As he turned off the main road, away from a blazing shopfront, he passed a gang of youths who were beating a bearded old man with wooden poles. Women were wailing as their husbands and children were kicked and battered. Then eventually he found himself outside the apartment building where he lived quietly with Greta.

He climbed out, locked the door of the car, and noticed that a black SS car was parked a few doors farther along. He also noticed that a lot of neighbours were talking excitedly to one another. He hurried inside as another gang of youths came running along the street, filled with blood lust and bawling excitedly.

Animals, Wilson thought. Civilization is a sham. We are still protecting our caves. Thank God, in whom I do not believe, that science will change all this.

When he let himself into his apartment, Greta was gazing down through the window.

Beside her was the recently promoted SS Captain Ernst Stoll, also gazing down at the street below, his face handsome and solemn.

They both turned to look at Wilson, then Greta hurried forward, kissed him on the cheek, and stepped back again.

‘Thank God you weren’t hurt,’ she said. ‘We were worried about you.’

‘No,’ he replied. ‘I’m fine... But what’s going on?’

‘I believe it was – ’

‘The recent murder of Counselor Ernst von Rath,’ Stoll explained, ‘has led to anti-Jewish riots here and in the Magdeburg-Anhalt district.’

Wilson was surprised to find Stoll here, as he hadn't seen the captain for many months. Obviously the recent assassination of the German Foreign Office official in Paris by a demented young Jew, Herschel Grynszpan, had been used as yet another excuse to arouse more anti-Semitic feelings. Wilson said, 'I suspected that Rath's death would lead to trouble, but these riots seem...'

'Yes,' Stoll said with a thin smile, 'organized. With the assistance of the Storm Troopers and SA – since our beloved Führer has declared that the riots, now spreading throughout the country, should not be discouraged. Taking the Führer at his word, Goebbels has ordered a pogrom, and right now, with the aid of the SD, SA, and SS, hundreds of Jewish shops, homes, and synagogues throughout Germany are being set to the torch and the Jews themselves, after public humiliation and abuse, are being rounded up and sent to concentration camps. A night to remember, yes?'

Ignoring Stoll's dry mockery, Wilson went to the window and looked down on the street where, in the lamplight, an unfortunate Jew was being tugged by his beard along the road by a laughing Storm Trooper while a gang of youths spat upon him, kicked him, and took punches at him.

Wilson, though feeling nothing for the Jew, had no respect for the youths.

'Animals,' he said, putting his thoughts into words. 'We're still as mindless as savages.'

'You see cruelty down there, Herr Wilson?'

'I just see wasted energy.'

When Wilson turned away from the window, Stoll was smiling sardonically. 'Ah, yes,' he said, 'you have no time for human emotions. You prefer the intellect, the calmly reasoning mind, the cold light of pure thought.'

'That's correct,' Wilson said, ignoring Stoll's soft sarcasm. 'Most human emotions are primitive impulses. I prefer science, unimpeded by human weakness.'

'You love science – and love is an emotion.'

'No, Flugkapitän Stoll, I *don't* love science. In fact, I *respect* it. Only science can lead us away from the caves and into our destiny.'

'Which is?'

'Knowledge for the sake of knowledge. The evolution of reason.'

'Naturally,' Stoll said. 'You're the most ruthless man I've ever met – and

I've met a few. You are made of ice, Wilson.'

So Stoll, though no longer shocked by the gross behaviour of his military friends, nevertheless could still be shocked by his unyielding single-mindedness. Wilson recognized that far from being the cynic he pretended, Stoll was in fact a disillusioned romantic of the most impressionable kind.

This one I can use, he thought.

'I haven't seen you for a long time,' he said. 'Not since you were shipped to the Antarctic. What are you doing here?'

'Because of my services in the Antarctic, I've been placed in charge of your research institute at Kummersdorf. In future, therefore, you will report directly to me, since I, and not Flugkapitän Schriever, will act as your channel to Himmler.'

Secretly pleased to hear this, Wilson took care not to show it, and simply said, 'You didn't come here to tell me that, so why did you come?'

'I want to show you the state of Germany,' Stoll said. 'The country you work for. I want to know what you think of it. Are you willing to come with me?'

'Now?'

'Yes.'

'Is this an order?'

'This is the night of breaking glass, Herr Wilson, and I want you to see it. No, it's not an order – it's a suggestion. This is a night to remember.'

Wilson grinned, knowing he was being tested, then nodded agreement. 'All right, I'll come.'

'I want to come as well,' Greta said. 'I don't want to be left here.'

There were screams and shouts from outside, then the sounds of more breaking glass. Wilson glanced at the window, then at Greta, and saw the excitement in her hard eyes.

'Of course,' he said. 'Why miss such an experience? Let's all go right now.'

The gang of violent youths had disappeared from the street, leaving the bloody man groaning in the gutter. Many stolid citizens stared on from their doorways without coming forward to assist him. As Stoll stepped out of the doorway, the black SS car that Wilson had noticed earlier pulled up to them and stopped to let them get inside. When they were seated, with Stoll up front beside the driver, the car moved off smoothly.

It was a journey through hell.

Stoll made the driver take them through the riot-torn city, first through their own district, which was burning and wreathed in smoke, then to the Magdeburg-Anhalt district where the broken glass glittered in the moonlight around a great many broken, bloody bodies and the debris from looted shops. The assaults were continuing. People ran to and fro, some laughing, others screaming. Applause drowned out cries of terror. The synagogues they passed were on fire and collapsing in showers of sparks. From there they drove to the train station and went inside. Stoll led them to the platforms where hundreds of frightened Jews were being herded onto the trains that would take them away.

'To where?' he asked rhetorically.

'The concentration camps,' Wilson said.

'Correct,' Stoll said. 'The concentration camps. Now let's see something else.'

He was like a man obsessed, wanting to plumb the depths of horror, but Wilson saw where the real horror lay – not outside, but within. He saw it in Greta's excitement when she watched the beatings and humiliations, in the revulsion that Stoll could not hide when he saw the same sights, in the dread that started filling Stoll's gaze when he saw Wilson's indifference.

Finally, in the SS hospital on the outskirts of Berlin, in the laboratories and operating theatres where the human experiments were conducted, Wilson saw Stoll looking at him, trying to search for a weakness. He merely nodded, quite deliberately, in his most thoughtful manner, and said, while casting his gaze over the tortured people on the tables, 'It's good that there are many more where these came from. The experiments on longevity and other matters will take lots of time.'

Stoll practically stepped away from him, as if touched by scorching heat. 'And that's all you see here, Wilson? This is nothing but meat?'

'We are merely the creatures of evolution,' Wilson said, 'and as such, we each have our part to play. Life is nature's experiment. The whole world is nature's laboratory. Those who will be used, *will* be used – and those, such as myself, who must use them, can do so without guilt. This human flesh is the material of evolution, like burnished steel and gunpowder. It is here to be *used*.'

Stoll didn't reply. He simply glanced at the silent Greta and saw the

excited gleam in her whore's eyes. Then he drove them back to Berlin, through the now eerily deserted and smoke-filled streets of Kürhessen, with its broken windows, looted shops, burned synagogues and crumpled, dead Jews. Only then, just before Wilson entered his apartment, did Stoll blurt out, 'You're a monster!'

'No,' Wilson replied, knowing that he had won and that he would be able to manipulate Stoll in the future. 'I'm just a man with a mission.'

Then he closed the door and turned into Greta.

'More semen,' he whispered.

CHAPTER NINETEEN

The three troop trucks rumbled through the streets of Cracow, Poland, just before midnight. Sitting up front in the second truck, watching its headlights illuminating the falling snow and the helmeted heads of the soldiers in the truck ahead, Ernst was suffering from his familiar mingling of excitement and *angst.* The white streets were deserted, like those in a troubling dream, and the headlights of the trucks were beaming off the closed doors and shuttered windows of the houses in this old part of the city. Ernst thought of the residents cowering inside, praying that the roaring trucks would not stop outside their own homes. The thought made him smile grimly.

'If this keeps up,' he said, 'Cracow will soon be a ghost town.'

'I doubt it,' Lieutenant Franck Ritter replied, moving the automatic weapon propped up between his knees and adjusting his black SS jacket. 'The damned Jews breed like lice and replace themselves as fast as we can get rid of them. We could be doing this forever, Captain, and there'd still be too many left.'

'But we're not after the Jews tonight,' the more concerned Lieutenant Willi Brandt said behind them. 'This area we're cleaning out is inhabited by ordinary Poles.'

'They're all vermin to me,' Ritter replied with a humourless, wolfish grin, 'so I'll enjoy what I'm doing.'

'You always do,' Ernst said dryly.

Ritter was about to make a retort, but was distracted when the trucks ground to a halt with a squealing of brakes. Familiar with the routine, Ernst's troops jumped out of the back without waiting for his command and were already spreading out along the lamplit street and hammering noisily on the doors of the houses with the butts of their rifles when Ernst jumped down to the road, followed immediately by the enthusiastic Ritter.

Shocked by the sudden cold, Ernst cursed softly to himself, then hurried

along the road, barking orders at his men and reminding them that no violence was to be used unless resistance was offered. His men were bawling at those inside and still drumming on the doors with the butts of their rifles, then someone remembered to turn on the trucks' sirens. That ghastly noise, added to the rest of it, made the bedlam more frightening.

Lights came on behind many windows, the wooden doors creaked open, then wails of protest merged with the bawling of the troops as they entered the buildings.

When the door of his chosen apartment block had been opened, Ernst, with a reluctant Willi Brandt and grinning Franck Ritter, followed his troops inside.

This raid was on a street located near the university and containing select residential buildings, so Ernst was not surprised to find himself in an elegant hallway, with deep carpeting on the floor and what looked like antique paintings on the walls. The door had been opened by the residents of the nearest ground-floor apartment: an elderly couple, both wearing expensive dressing gowns and looking frightened. When the soldiers had parted to let Ernst walk through, he stopped in front of the couple, gave the Nazi salute and 'Heil Hitler!', then said, 'We are requisitioning this building in the name of the Third Reich. Please pack whatever belongings you can fit into one suitcase each and then enter one of the trucks parked outside. The soldiers at the door will assign you to a truck and you'll come to no harm if you don't resist. Now please do as you're told.'

The old woman burst into tears. Her husband looked stunned. 'You cannot – ' he began, trying to rally his senses. 'I will not permit – '

Ritter stepped forward and smartly slapped the man across the face. 'You'll do as you're damned well told,' he said grimly, raising his submachine gun, 'or pay the price, you old goat. Now go and fetch your suitcases.'

The woman sobbed even louder, but tugged her husband back into the room while the soldiers, at a nod from Ernst, hurried up the stairs to force the other residents out. Hearing the drumming of rifle butts on doors, the soldiers bawling, women shrieking and sobbing, Ernst stepped up to Ritter, stared grimly at him, and said, 'Don't ever do anything like that again without my permission!'

Ritter flushed with anger. About to make an angry retort, he glanced

blindly at the embarrassed Willi Brandt, but then changed his mind and grinned crookedly instead.

'Yes, sir,' he said, clicking his boot heels in mock obedience.

Ernst turned away from him, went back outside, and saw that residents of the other two buildings were already being led out into the road. Most were carrying suitcases. The men looked shocked and confused, some women sobbed, the children seemed dazed, as all were urged up into the back of the trucks. Satisfied that the operation was proceeding in an orderly fashion, he went back inside just as Willi Brandt, who would never make a good soldier, walked into the first ground-floor apartment, looking pale and distraught. Ernst went to the doorway, looked in, and saw that Brandt had stopped in front of the two old people. Instead of packing, they were holding one another on the sofa, the man trying to comfort his wife as she sobbed into his shoulder.

'You're not in danger,' Brandt was saying. 'You won't be harmed, I promise you. You've committed no offence and are simply being rehoused. Wherever you go, you will not be harmed. It's unfortunate, but at least you're in no danger, I can promise you that. Now, please, before you make someone angry, pack your suitcases.'

Ernst wanted to laugh at Brandt's naive assertion that the old people would not be harmed, for he knew that they were merely another two of the estimated one million Poles who had so far been expelled from their homes to make way for the Germans from the Baltic and outlying regions of Poland. True enough, they would not necessarily be killed outright; but it was from such unfortunates that Ernst would be selecting the men, women, and children who would be used as slave labour in the underground weapons research factories of the Third Reich, as guinea pigs in the so-called anthropological medical experiments that Himmler and the icy American, Wilson, were hoping would lead to the secrets of longevity, or as prisoners branded fit enough to be shipped secretly to Neuschwabenland in the Antarctic where, under the most appalling conditions, they would help construct Himmler's SS base under the ice and snow.

However, as this particular couple were too old to be of much use in any way, they would almost certainly end up in a concentration camp, which they would be unlikely to survive.

Still, Brandt's well-intentioned remarks did the trick. Upon hearing them,

the old woman actually managed to stop sobbing long enough to whisper, ‘Thank you, Lieutenant,’ and then lead her husband into the bedroom to start packing their suitcases.

‘You’re too kind for your own good, Lieutenant Brandt,’ Ernst said laconically, thus making an embarrassed Brandt turn around to face him. ‘Some day that kindness will be misconstrued as weakness – and you might pay the price for that.’

‘I was merely – ’ Brandt began.

‘Yes, Brandt, I know.’ Ernst grinned and stepped past him to glance into the bedroom. The old couple were indeed packing their two suitcases, both with tears on their pale cheeks. ‘Hey, old man!’ Ernst said. ‘Does the owner of this building actually live in it?’

‘Yes, sir,’ the old man said, his voice trembling. ‘Mrs Kosilewski, who lives in the attic.’

‘Thank you. *Auf Wiedersehen*.’ Ernst grinned and turned away. ‘Keep your eye on them,’ he said to Brandt, ‘and make sure they get into one of the trucks. It’s either them or you, Brandt.’

‘Yes, sir,’ Brandt replied.

Reminded, as he left the room, of the striking difference between Brandt’s kindness and Ritter’s growing cruelty, convinced that the latter would profit more than the former in the Third Reich, Ernst started up the stairs, to ensure that everything was proceeding properly on the floors above. When he heard the bawling of his soldiers and saw those respectable, middle-class Polish citizens shuffling sobbing from their apartments, each carrying a single suitcase and otherwise leaving behind not only their possessions but their homes, he realized just how far from home he was... far from Germany, far from Projekt Saucer, far from what he had been. Now, once more, he was a policeman instead of an engineer.

He was a party to genocide.

Someone on the second floor was slow to leave his apartment and Ernst saw a submachine gun, speedily reversed, its butt swinging, as Ritter struck the unfortunate man between his shoulder blades and made him lurch forward. The man cried out as he started falling, but his wife quickly jerked him upright, then both of them hurried down the stairs, even as Ernst went up the next flight. When on the third floor he saw more adults and children leaving their homes forever in the belief that they would at least be rehoused

somewhere decent, he thought again of the spread of Himmler's underground research factories, of the medical experiments that Wilson wanted, of their ultimate destination, Neuschwabenland, and felt bitter at the recollection of just how brief his return to Kummersdorf had been. He had no sooner settled back into the supervision of Projekt Saucer than the blitzkreig against Poland had commenced, the Polish air force had been destroyed, and Poland's ground forces routed. Then Himmler, having deprived him of his rightful place in that historic event, had sent him here to organize the rounding up of the human labour force required for the underground factories and the colonization of the Antarctic.

He tried to think of it as a great honour, his guarantee of a place in history; but sometimes, as right now, surrounded by sobbing women and shocked children and beaten men, he could only yearn to be back in Berlin, overseeing Wilson and the German engineers.

Sometimes, it had to be admitted, this work made him feel dirty.

Pushing his way through the harassed Poles milling about on the third-floor landing, he glanced through the window and saw his armed troops forming a pathway from the front door of the building to the trucks, their shadows elongated in the yellow lighting of the streetlamps and falling over the bowed heads and shoulders of the Poles who shuffled dispiritedly between them. Now viewing the Poles as mere numbers, his allotment for this evening, he climbed the last flight of stairs to the closed door of the attic. Because he knew that the cow of a landlady would be hiding inside, he hammered his clenched fist repeatedly on the wooden door.

'I know you're in there, Frau Kosilewski!' he shouted. 'So please open the door!'

'The door's not locked,' a surprisingly sensual voice replied. 'You have only to enter.'

Feeling foolish but also amused, Ernst opened the door and looked in. The attic was enormous and beautifully furnished. When he stepped inside, he saw the landlady seated in an armchair, calmly smoking a cigarette. She was wearing a black silk dress, which clung closely to her luscious body, and her feet were in high-heeled shoes that emphasized the curves of her legs, one of which was crossed over the other, exposed from the knee down.

No cow at all, Ernst thought.

'I have packed, as you can see,' the woman said, indicating the suitcase

nearby with a lazy wave of the hand holding the cigarette, ‘but thought I would wait until I was called.’

Ernst advanced farther into the attic and stopped close enough to the woman to observe that she had pitch-black hair falling to her shoulders, as well as eyes as dark and deep as the ocean.

‘You thought we’d forget you?’ Ernst asked, aware that he was becoming aroused by the sight of those elegantly crossed legs, the artfully arched foot, the high, full breasts under the tight black silk, that steady, measuring gaze.

Mrs Kosilewski smiled and shook her head. ‘No, Kapitän,’ she said. ‘I didn’t think that for a moment. We all know how efficient the Germans are. I merely decided to wait until the last moment – to avoid the crush and chaos.’

She pursed her brightly painted lips, sucked on her cigarette, pursed her lips again to blow some smoke rings. She knew just what she was doing.

‘You live here alone?’ Ernst asked, feeling hot and somnolent with desire, his thoughts slipping and sliding.

‘Yes, Kapitän. I’m not married. I *was* married, but my husband died four years ago, which is why I now run this place on my own.’

‘*Ran* it,’ Ernst corrected her. ‘You run it no longer.’

She nodded, her gaze steady upon him. 'Yes, Kapitän, I know. May I ask whom you intend moving in here instead?’

‘Germans from the Baltic and outlying regions of the country. No Jews. No Poles.’

‘I am not a Jew, Kapitän.’

‘But you *are* a Pole,’ he reminded her.

She just smiled more knowingly. ‘And will you be in charge of those Germans, Kapitän?’

‘In a nominal sense, yes. I’ll be visiting the building occasionally, if that’s what you mean.’

Mrs Kosilewski uncrossed her long legs, crossed them the other way, rubbed her hand along her thigh to wipe ash off the tight dress, then pouted her painted lips to exhale more smoke rings. Ernst, now almost dizzy with desire, could hardly take his eyes off her.

‘Then why send me away?’ she asked, her voice shivering through him. ‘Surely I would be of better use to you here – to attend to the house, which I’ve done so well to date, and look after the Germans when they arrive.’

‘And why should I be concerned with that, Frau Kosilewski?’

‘Because if I was here to look after the house, my dear Kapitän, then I could also look after you.’

Her dark gaze was steady, if obscured by the cigarette smoke, and he saw the painted pout of her lips turning into a broader smile. He hadn’t possessed a woman for months and was reminded of that bitter fact as she leaned across her raised knee, drawing his gaze to her firm breasts. He felt breathless, almost choked by his rising lust, and knew he could not resist her.

‘Your soldiers have cleared out the top floor,’ she said, almost whispering. ‘They’ll soon be leaving, mein Kapitän.’

‘We have at least five minutes,’ Ernst replied. ‘I think that should suffice for now.’

He walked across the attic, closed and bolted the door, and by the time he had turned back to Frau Kosilewski, she was already undressing.

The spoils of war, Ernst thought grimly.

He went back there a lot. When not on duty, he practically lived there. He had married Ingrid for love, then cheated on her and been cheated by her. Since then, having also betrayed the values he held most dear, he found that he could temporarily regain his lost pride in the bodies of hardened women. He assumed that Kryzystina was one of those, a woman seasoned by bad experiences, and he was thrilled by the knowledge that she was buying her freedom with her body, selling herself for salvation. She certainly knew how to do it well – she had the sexual repertoire of a whore – and it helped him pass the distress of those nights that his frustrations made restless.

‘No,’ she told him, ‘I’m not a whore, but I want to survive, and for a woman living alone in a city ruled by a conquering army, that isn’t easy. I was born on a farm near Dabrova, to barbarously ignorant peasants, and my father treated me like a beast of burden for all of my days there. I was beaten regularly, often starved as punishment, and eventually abused sexually by him, roughly and often. One day I stabbed him with a bread knife – not fatally, but in the stomach – then I fled for good. I was sixteen years old and soon taken in by a gang of gypsies. The man who picked me, who naturally took his pleasure with me, soon started selling me to other men – he was as primitive as my father – so, a year later, when we were camped in a village near Cracow, I fled to the city, obtained work in a garment factory, attracted the eye of my boss, a decent man, and became his wife when I was twenty.

We had a good life for eight years, but he died four years ago. His family inherited all his wealth and I got this house. As I couldn't afford its upkeep, I moved into the attic, let out the rest of the rooms, and was just getting back on my feet when Germany invaded Poland and you, my handsome Kapitän, came to requisition it for your fellow countrymen. Don't call me a whore because I offered myself to you. You know what the alternative was.'

They were naked in bed, which was still in the grand attic, both sweat-slicked from the ardours of a love that had little love in it. Ernst was stirred by the sight of her heavy breasts, bruised lips, and dishevelled hair, and so slid his hand back between her thighs to find her still wet. 'Not all women would sell themselves for a house,' he said. 'Some have more sturdy principles.'

She glanced sceptically at him, then shook her head on the soaked pillow and chuckled deeply, sardonically. 'Just for my *house*?' she said. 'I think you know better than that. I didn't just want to remain in this house: I also wanted to stay alive. And I think we both know, my pretty, that most of the people moved out of here were not destined for a very lengthy future.'

'I don't know what you mean.'

'I think you do. You know as well as I do that Hitler is already transforming Poland into a massive killing ground and that the planned extermination of the Jews is an open secret among your high-ranking officers.'

Ernst grinned and slipped his fingers inside her, making her sigh. 'What a bright girl you are, Kryzystina,' he said. 'And how did you know all that?'

'I know because some of the high-ranking officers who shared my bed before you came here told me so. I also know because it's hard to keep secret the fact that at least once a week the Central Station is packed with Jews being moved out to an unknown destination, but one widely believed to be unpleasant.'

Ernst was arousing himself by playing with her. 'Very clever, my Polish pet.'

Kryzystina sighed and turned into him, to throw one long, smooth leg over him and let him have more of her. 'And don't we all live in terror,' she whispered into his ear, 'of the so-called house-cleaning, or murder, of hundreds, perhaps thousands, of Polish intellectuals and those of a similar class? Could I risk that, my pretty one?' Her tongue slipped into his ear, her

teeth nibbled his earlobe, and her hand slid down his sweating body to take hold of him and guide him into her. ‘So why did you clear out this house?’ she whispered. ‘And all the other Polish houses? Not just to rehouse us, my saviour, as you slyly suggest, but to move us to Majdanek or Auschwitz, from where we would not return. Can you call me a whore because I choose you instead of a camp? I think not, my sweet one.’

They made love like two animals – that day and many others – and Ernst dwelt on what she had said, thought of Himmler and Wilson, and realized that what they were doing had the grandeur of evil. In accepting this fact, he lost his shame and replaced it with pride, plunging himself into his work for Projekt Saucer with renewed vigour. He planned the roundups of Poles and Jews, led the raids on their streets and ghettoes, and divided them into groups on the platforms of Central Station, right or left, life or death. Those chosen for death would not die easily – first they would be used as experimental fodder – and those blessed with the gift of life would work as slaves for the Third Reich in the multiplying underground factories where Himmler, with the aid of the icy American, Wilson, was creating the weapons that would ensure that the New Order would eventually conquer the world.

Projekt Saucer was at the heart of this great endeavour – and he, the once-rejected Ernst Stoll, was an important part of it.

Yet he still felt frustrated.

‘I missed the blitzkreig,’ he explained to Kryzystina. ‘It was my life’s great disappointment. When our army smashed through this damned country, when we destroyed your air force, when the Battle for the Corridor ended and your whole army was routed, I was still an administrator at Kummersdorf, south of Berlin. Now our troops are preparing to follow the Panzer divisions into Belgium, Holland, and Luxembourg, then on to France and Paris itself. But instead of going with them, I’m stuck here, in this Polish cesspit, a shepherd of Jews and other subhumans, a man cleaning out vermin.’

‘You’re still a soldier,’ Kryzystina reminded him.

‘No, I’m not. I’m a policeman.’

‘You take it all too seriously,’ she told him. ‘Come and take me instead!’

Ernst needed little encouragement.

Because he did not like his work and detested Cracow and its inhabitants, he performed his duties mechanically, efficiently, not thinking too deeply about it, and otherwise vented his frustrations by confiding in Kryzystina. As

there were few places to go in Cracow, he never saw her outside the attic, but he fed her hunger for expensive presents, brought her unauthorized food, wine and cigarettes, and when not trading sardonic put-downs with her, unburdened himself of his *angst.*

'I'm not a soldier,' he insisted, repeating his most common complaint. 'I should be on the road to Paris with the fighting troops, but instead I am here, in this miserable Polish city, arresting people by the hundreds and moving them on to the camps. It's my duty to do this and I do it well, but I was cut out for other things.'

'Engineering?'

'Rocket engineering. That's what I was going to do. Instead, I became a supervisor at the research centre at Kummersdorf, spying on my fellow Germans, an old Italian and an illegal American, whose genius put me to shame, though his ruthlessness shocked me. My God, what a monster!'

'An American?' Kryzystina asked him, surprised, as her nimble fingers played in his pubic hair. 'An *American* is working for the Third Reich?'

'Yes,' Ernst replied. 'In secret. He has a false German passport. He cares for nothing but his work – the construction of a saucer-shaped aircraft – and since that project is also close to Himmler's heart, he was allowed to work for us. It's an unusual, maybe dangerous, situation, but Wilson is worth the risk. He's the coldest man I know, obsessed, slightly inhuman, but the advances he's made are extraordinary and fill me with envy. If not allowed to join the great advance on Paris, I should at least be back there, working with Wilson. But I'm not. I'm stuck here. Still taking part in Projekt Saucer, but not in the way I want.'

'And what way is that?'

'To take part in the actual design, as an engineer, which I should have been, and not just collecting Jews and Poles for our labour force.'

Kryzystina stretched out beside him, now knowing him, fitting to him, and asked, breathing warmly in his ear: 'A labour force only for Projekt Saucer? Is that why you're rounding up those people? To work for Projekt Saucer in the camps?'

Ernst felt impatient, his thoughts scattered by his erection. 'No,' he said. 'Don't be ridiculous. There are no research plants in the camps. Those I select don't go to the camps; they're sent to our growing number of advanced weapons factories, scattered over Germany and Bavaria and hidden

underground or inside mountains. There they'll perform the heavy labour required. They'll certainly be worked very hard, but at least they might live.'

He said it with confidence as he rolled between her spreading thighs and inserted himself into the velvet glove that could make his thoughts reel; but he knew, when he had finished, when his thoughts had scattered and returned intact, that he had not told the truth, as even those being used by Projekt Saucer would not necessarily live long. Recalling the tour that Himmler had given him through the immense tunnel being hacked out of the densely forested hills of Thuringia to contain the planned underground factories at Nordhausen and nearby Bleicherode, he remembered the armed SS guards and the cracking of their bullwhips, which then, as now, were an indication that the welfare of the labour force would not be considered. And that labour force was being sent out by train from most of the major cities of Poland, to the increasing number of factories hidden underground, from the Harz Mountains to Thuringia, south of Prague and across to Mahren... a vast network of secret factories devoted to the design and construction of advanced weaponry and aircraft, including the rockets of Wernher von Braun and the flying saucer of the obsessed American, Wilson... factories in which the work force would, if necessary, be worked to death. A brutal truth that appeared to have given Wilson no qualms at all.

'He has one other obsession,' Ernst confided to Kryzystina as they rested after their sexual exertions. 'An obsession with longevity – though that also is treated as part of his work. Wilson is old – in his mid-sixties, I think – but he looks and acts fifteen years younger than that. This, he insists, is due to a lifelong strict diet – no cigarettes or alcohol, no fatty foods; only fruit juice, cereals, fruit, and nuts – and, oddly, no exercise other than lots of walking. He also ascribed it to a lack of emotional entanglements, which he said were, apart from their well-known psychological effects, an inducement to quicker physical deterioration.'

'What about sex?' Kryzystina asked.

'I gather that it's fine,' Ernst replied, amused, 'so long as it's performed unemotionally – for the reasons I've already stated. Sex as pure *exercise* is healthy, but romantic love or sex used for emotional release are both damaging to physical as well as mental health.'

'You poor man,' Kryzystina crooned in his ear, reaching down for his penis. 'Let me arouse you sexually, therefore emotionally, and thus ruin your

health.'

Ernst slapped her hand away. He was grinning, but felt uneasy. There were times when you couldn't help wondering just how right or wrong Wilson was.

'What's so strange,' he said, hoping to talk out his troubled thoughts, 'is that this particular obsession has also been dragged into his work – as everything is with him, sooner or later. It's as if he's treating even his own life as material for research. And so the state of his health and the possibilities of longevity, while important to him on a personal level, are more important for what they can add to his envisaged Super Race. Which is why some of those sent to the camps will have a fate worse than death.'

'What fate?'

Realizing that he had already said more than he should, Ernst shook his head and said, 'Nothing. Forget it.'

He lit a cigarette – he had started smoking only recently – and realized that *he* could not forget it. Indeed, who *could* forget the hideous 'anthropological' experiments already being conducted, with Wilson's sly encouragement and at Himmler's command, in the surgeries and operating theatres of certain concentration camps, as well as in secret SS laboratories located all over Germany?

Even now Ernst was haunted by the memory of the infamous Crystal Night of thirteen months ago, when, in a fit of perversity or perhaps overwhelming frustration, he'd driven Wilson through Berlin's violent, blazing streets to a Nazi hospital on the outskirts of the city. There, in the laboratory, he'd shown him the contorted limbs, frozen anguish, and, in some cases, dismembered heads of those who had died on the operating table in some of his requested experiments. Wilson had remained unmoved, insisting that science was all that mattered. He wanted the secret of immortality, or at least longevity, and would do anything, no matter how cruel, to uncover it.

And he had insisted that he was not a monster, but just a man with a mission.

What kind of man?

Already depressed, Ernst suddenly felt crushed by fear, so he stubbed his cigarette out, rolled onto Kryzystina, and tried to lose himself in her body, where nothing could reach him.

Ernst snapped to attention in the office of his superior officer, Major Riedel, gave the Nazi salute, and said, ‘Heil Hitler!’ Riedel returned the salute with a weary wave of his hand, told Ernst to stand at ease, and gazed up from his desk in a thoughtful, searching manner.

Ernst’s former friend, the sadistic Lieutenant Franck Ritter, was standing at the other end of the desk, wearing his black SS uniform and trying hard not to smile.

Major Riedel waved his hand again, this time indicating the many photographs pinned up on the wall behind him.

‘You’ve seen these photos before, Captain?’

‘Yes, sir,’ Ernst replied.

‘Then you know what they are, do you not?’

‘Yes, sir,’ Ernst said, getting the distinct feeling that he was in trouble, but unable to guess why. ‘They’re photographs of Polish resistance fighters being hunted by the Gestapo. The SS also have orders to keep a watch out for them or anyone suspected of knowing or harbouring them.’

‘Correct.’ Major Riedel glanced at Ritter, then stood up and planted his finger on one of the photographs. ‘Do you know this man, Captain Stoll?’

‘No, sir.’

‘Can you see him properly from where you’re standing?’

‘No, sir, but I don’t know anyone on that list.’

‘Please step forward and check the photograph properly.’

Ernst did as he was told, walking around the far side of the desk and glaring at Ritter. He then stood beside Riedel to study the photograph up close. He saw a handsome young Pole with sensitive features and unusually bright, fearless eyes. When he had studied the young man’s face, he shook his head and said, ‘No, sir, I don’t know him.’ Then he marched back around the desk and stood stiffly in front of it.

He noticed Ritter’s thin smile. Major Riedel nodded and glanced at Ritter, then sat in the chair behind his desk, where he clasped his hands under his chin and pursed his lips thoughtfully.

‘The man is Andrzej Pialowicz,’ he said. ‘Does the name mean anything to you?’

‘Yes, sir,’ Ernst said, growing more confused and nervous. ‘It’s the name of a leading Polish resistance fighter, presently on a Gestapo and SS death list.’

‘Correct again, Captain. I’m glad to note that you are, at least, reading the directives being sent out from this office.’

Ernst did not reply, as there was no reply to give. He simply glanced at Ritter and noticed his triumphant smirk.

‘Andrzej Pialowicz is indeed the most wanted man in Cracow. In compiling a dossier on his activities prior to the fall of Poland, we discovered that among his many other female conquests was a Jewish woman living right here in Cracow. Rather than arrest this woman, we placed her under surveillance in the hope that she would eventually lead us to Pialowicz – which she did. She was observed leading him out of the Wawel Cathedral – reportedly where he had been hiding – and then driving him away in her car. Since it was our belief that Pialowicz was being taken to rejoin the other members of his resistance group, and since the over-zealous oberleutnant in charge of the squad of SS troops took this as his opportunity to catch the whole gang, he did not arrest Pialowicz or his mistress, but instead followed them at a discreet distance with two other SS men, in an ordinary Polish car with Cracow number plates. The drive ended at a warehouse in an industrial area south of the city. Pialowicz entered the warehouse alone and his girlfriend turned her car around and headed back to the city. Deliberately letting the woman go, since he knew where she lived, the over-zealous young oberleutnant called up for support, then led an inept assault on the warehouse. In the ensuing fracas, some resistance men and SS troops were killed, but Pialowicz managed to elude us again and has not been seen since.’

‘I’m sorry, sir,’ Ernst began, ‘but I’m not sure – ’

‘Why we called you here?’

‘Yes, sir.’

Major Riedel smiled bleakly, then sighed as if in despair. ‘Naturally, Captain Stoll, as we were keeping a watch on Pialowicz’s girlfriend, we saw everyone entering or leaving the building in which she resided – and to our surprise, Captain, one of the most frequent visitors was you. Pialowicz’s girlfriend, as you will have gathered by now, is also your mistress, Kryzystina Kosilewski.’

Ernst turned cold with shock, then felt himself burning. He glanced at the floor, but felt nauseated, so looked up again.

‘Do you wish to deny it, Captain Stoll?’

‘No, sir.’

‘Good,’ Major Riedel said, ‘since although we were aware that you are in charge of that building and therefore have good reason for going there, we were intrigued by both the frequency and lateness of your visits. We therefore took the liberty of checking with the other, now mostly German, residents. Lieutenant Ritter, here, was in charge of that particular task and can confirm that according to her neighbours, Frau Kosilewski was opening her door to you on a regular basis and that when you visited, you stayed there for a long time, indeed often all night. You were also observed taking her parcels of groceries and other contraband items. Do you wish to deny this?’

‘No, sir,’ Ernst said, wanting to die, but rescued by a hot wave of hatred when he saw Ritter’s thin smile.

‘I’m glad to hear it,’ Major Riedel said, unclasping his hands and sitting back in his chair, looking more weary than outraged. ‘You *do* know, of course, that it’s an offence for a German soldier, much less an SS officer, to knowingly fraternize with a Jew.’

‘I didn’t know she was Jewish, sir. In fact, she categorically denied it the first time I met her.’

‘But you knew she was Polish.’

‘Yes, sir, I did.’

‘Lucky for you, Captain, you’re an exceptional officer with particularly close ties to our beloved Reichsführer. Otherwise I would have you shot for this.’

‘Yes, sir. Thank you, sir.’

‘Lucky for you, also, that stripping you of your rank would necessitate a lengthy and potentially embarrassing report to our beloved Reichsführer, which could rebound unpleasantly on me personally.’

Unable to break the ensuing silence, Ernst heard his own heartbeat, resounding like a gong in his head, tolling his doom. He glanced sideways at Ritter and again saw his triumphant smirk.

‘As you will have guessed,’ Riedel said wearily, ‘we will now be arresting your mistress, the Jew bitch Kosilewski.’

‘Yes, sir,’ Ernst said, feeling as if his face had been slapped, his stomach kicked by a heavy boot.

‘I would like to punish you by having you personally make the arrest, Captain, but since that could make matters more complicated than they are, I will instead insist that you accompany Lieutenant Ritter to your Jew whore’s

house and stay by the van while the lieutenant and his men drag her out. If nothing else, I want you to see that, Captain Stoll. Do you understand why?'

'Yes, sir,' Ernst said, already feeling the awful humiliation that the major wanted him to suffer.

'Good. Now please leave my office.'

Shocked and shaking, feeling alternatively hot and cold, Ernst, after saluting, followed the gloating Ritter out of the office, then along the gloomy corridor of the building, down a flight of stairs, then out into the freezing, windblown courtyard, where a small, black, windowless van, used for collecting suspects, was parked. While two armed SS soldiers climbed into the rear, Ernst sat up front beside Ritter and the driver, shaking even more with humiliation and dread as the van started off and headed through the narrow streets of Cracow in the afternoon's darkening light.

'What will happen to her?' he asked of Ritter.

'She's all mine,' Ritter replied with a leer. 'I've been given twenty-four hours to make her talk, but I won't need that long.' His leer widened lasciviously over blackened teeth. 'She'll give me everything I want soon enough.'

Ernst closed his eyes, knowing exactly what Ritter meant. He shivered with revulsion and the shame he had thought was long dead in him, then protected himself from it with a rage at what Kryzystina had done to him. The whore. The *Jewish* whore. He opened his eyes again, saw the charcoal light of late afternoon, and sat up straight when the van braked to a halt in front of her house.

'Can't I watch from in here?' he asked pathetically.

'No,' Ritter said, grinning again. 'You have to come out and formally identify her.'

'You already know who she is.'

'That's not the point,' Ritter said. 'The point is that you formally identify her. That's your punishment, *sir*.'

Ernst nodded and climbed out, determined to hide any weakness from Ritter; also determined to let his rage against Kryzystina protect him from sentiment as the lieutenant and the two soldiers entered the building with theatrical urgency. They came back out soon enough, this time with Kryzystina, who was sobbing and protesting in vain as the two soldiers dragged her across the pavement and Ritter, bawling something that included

‘Jew bitch whore!’ slapped repeatedly at the back of her head. Then he grabbed her by the hair and jerked her head back to let Ernst get a look at her. Already her face was bruised and her dark eyes tearful. She saw Ernst and gasped.

‘Yes,’ Ernst said, ‘this is the woman Kosilewski... This is the woman I know.’

‘Oh, my God!’ Kryzystina exclaimed in disbelief.

The soldiers dragged her away from Ernst and threw her into the van, then climbed in behind her and slammed the doors shut. Ernst followed Ritter into the front and turned away from his gloating grin, but was forced to listen to Kryzystina sobbing in the back. The journey seemed interminable, all the way back to the grim, guarded entrance to the SS headquarters and basement cellars where, he knew, Kryzystina would be tortured and interrogated by Ritter.

He tried to walk away then, but Ritter called him back.

‘Excuse me, *sir,’* he said, forcing Ernst to turn around and see Kryzystina, no longer sobbing, but with pale, tear-streaked cheeks, staring at him with fierce hatred and condemnation from between the two soldiers. ‘Don’t you want to say goodbye to your Jewish whore?’

Ernst could not reply, but he didn’t turn away. The soldiers dragged Kryzystina toward the entrance. She suddenly howled like a wild animal, and only when Ritter had kicked her into the building did Ernst make his escape.

Kryzystina did not talk in twenty-four hours – nor in twenty-four days. Three weeks later, she was, according to a frustrated Ritter, still in her basement cell, a bloody mess but unbroken, and waiting for the train that would take her to the living hell of Auschwitz.

During that time, Ernst managed to recover from his humiliation and shame by remembering Kryzystina only with hatred. He accepted that he had made a fool of himself, fought back tears when he learned that the German army had entered Paris, and threw himself more devotedly into his task of finding suitable candidates for forced labour in the underground factories, or a worse fate in the concentration camps.

In doing this, he paid penance for his sins and regained his lost pride.

Because Kryzystina was one of those earmarked for the camps, there was no way of avoiding her at the station; nor, by this time, would he have

attempted to do so if he could. Indeed, when he saw her bruised and scarred face in that hopeless queue of the damned, a cloud of steam blowing across brown eyes darkened even more by weeks of torture, he felt neither surprised nor shocked, only a quiver of suppressed rage. Then, on a perverse whim, he had an SS guard with a snarling dog drag her out of the queue, to be placed before him.

When she recognized him, her eyes brightened with the enduring strength of contempt, and her lips, which had been shivering with despair, formed a line of defiance.

'You're a terrible mess, Frau Kosilewski,' Ernst said sardonically, 'and where you're going, the treatment will be even worse than what you've already had. Would you like me to help you?'

'What's the price?' she replied.

Ernst pointed at the queue forming at the far side of the platform and said, 'The people in that queue have been selected to live, while these poor wretches' – he indicated the queue she had just left – 'have been selected for death. Tell me where your boyfriend, Andrzej Pialowicz, is hiding and I'll let you leave this queue and join that one over there.'

She stared at him with disbelieving eyes, too shocked to speak.

'This queue or that one,' Ernst said. 'Life or death, Kryzystina. Now, where's Andrzej Pialowicz?'

She spat in his face.

Ernst didn't have time to react before the SS guard stepped forward, struck Kryzystina with his bullwhip, then hurled her back through the snarling dogs, into the queue heading to certain death.

Kryzystina didn't look back at Ernst to see him wiping her spittle from his forehead. Instead, she stared straight ahead, as if he had never existed. She didn't even look back when she was herded into the carriage, dissolved behind a cloud of steam, and then became just another nameless face in a mosaic of the damned.

Then Ernst crossed the platform and boarded the other train: the one taking those destined to work in the underground factories in support of his Reichsführer's Projekt Saucer.

That train, when it moved out of Cracow, took him back to Berlin.

CHAPTER TWENTY

'Nostradamus,' Himmler said, sipping effetely at his tea, 'foretold the conquest of France by Germany. Did you know that, Herr Wilson?'

'No,' Wilson said. He had not known and did not wish to know, any more than he wanted to be reminded that Adolf Hitler based many of his most vital decisions on the advice of his Swiss astrologer, Karl Ernst Krafft; or that Hitler's deputy, Hermann Goring, ran *his* war with the aid of rainmakers and teams of clairvoyants; or that *his* deputy, Rudolf Hess, who had recently flown to England without permission in an insane attempt to establish peace with Britain, kept a pet lion, believed in astrology, and was known to have dabbled seriously in the occult; or that Himmler himself, now sipping his tea so sedately, was as mad as a hatter.

The world is being conquered by a gang of lunatics, dope addicts, sadists, occultists, and degenerates, Wilson thought, and I'm forced to use the scum.

'I believe that Nostradamus,' Himmler droned on, 'also prophesied the conquest of the West by a race of Aryans at approximately this time. Did you know *that,* Herr Wilson?'

'No,' Wilson said, though he knew what Himmler was driving at. Since he and the Reichsführer had last met, the German forces had overrun Norway, Denmark, Holland, Belgium, France, Yugoslavia, and Greece. They indeed seemed unstoppable, and the fall of the West had seemed guaranteed. However, Hitler had then become obsessed with his mystical notion of *Lebesraum* – German expansionism and space – and was now preparing to invade Russia, even against the protests of his own generals. It was a two-front war that had defeated Germany in 1918 and would, Wilson reasoned, do so again – which is exactly why so many of Hitler's finest officers had protested the planned invasion in the first place. Yet even now, as he and Himmler were having their chat over tea, fighter planes, bombers, Panzer tanks, and three million foot soldiers were massing along a 930-mile front,

from the Baltic to the Black Sea, prepared to advance into Russia and certain doom.

The beginning of the end is in sight, Wilson thought, which means that my time is running out, my situation becoming more tricky. I must be more careful now.

'You are an admirably concise conversationalist, Herr Wilson,' Himmler said, his eyes, magnified by the pince-nez, as dead as his smile. '"Yes" and "no". A curt nod of the head. A distinct lack of verbal elaboration. No more said than is absolutely necessary. A man of few words.'

'I'm sorry, Reichsführer.'

'You have no need to be. Clearly it's in your nature. I think you're a man who trusts in his own nature and devoutly follows his chosen path.'

'That's true,' Wilson said.

They were having their tea in Wilson's glass-panelled office in the main hangar at Kummersdorf. After glancing at Himmler's immobile bodyguards, both granite-faced and wearing menacing black-leather overcoats, Wilson studied Captain Ernst Stoll who, in his SS uniform, was sitting silently beside his beloved Reichsführer.

After returning about a year ago from Poland, where reportedly he had laid the groundwork for the regular movement of Jews and Poles to either the concentration camps or the secret underground and research establishments of the rapidly growing Third Reich, Stoll had been a changed man: a more fanatical Nazi, now devoted to Himmler, and untiring in his dedication to Projekt Saucer and its ultimate goal, which was to protect an underground colony of SS masters and their slaves in Neuschwabenland. Yet as Wilson knew, Stoll remained a frustrated romantic... and Wilson could use him.

Indeed, he already had.

By the time Stoll had returned from Poland with his renewed dedication to Himmler's planned world of ice and fire, Wilson had come to understand something important: While it was true that German scientists as a whole were producing extraordinary innovations in weaponry and aeronautics, it was equally true that their separate projects were not being coordinated. So great were the rewards for success in Nazi Germany, but so terrible the penalties for failure, that even formerly cooperative scientists had been reduced to currying favour by competing ferociously with one another.

In this sense, the Peenemünde situation was typical.

While Himmler had the cream of his rocket engineers working on the V-I and V-2 rockets at Peenemünde, on the Baltic, the V-I was a Luftwaffe project, the V-2 was an Army project, and both sides were competing instead of putting their heads together. Similarly, while various research establishments scattered throughout Germany and Austria were working separately on gas turbines and jet propulsion, heat-resistant and 'porous' metals, gyroscopic mechanisms and boundary layer-defeating airfoils, only Wilson had had the sense to link their often startling innovations together, into the one, revolutionary aircraft.

That aircraft was not Schriever's flying saucer, about to be test-flown. It was the small, disc-shaped *Feuerball,* which Wilson was ostensibly creating as a flying anti-radar device, but which in fact he was secretly using as an experimental prototype for a full-scale, vastly more advanced flying saucer, to be constructed and used only when he saw fit.

As Stoll did not know about the secret *Feuerball* experiments, he had been more than willing to arrange for Wilson to travel the length and breadth of the Third Reich on numerous visits to other research establishments.

Wilson had already used him, then, and would do so again... for something much more important.

'You have that faraway look in your eyes, Herr Wilson. What are you thinking about?'

'Nothing, Reichsführer.'

'You never think of nothing, Herr Wilson. You think all the time.'

'I was just thinking about the flying saucer,' Wilson lied, 'and wondering if we'll succeed.'

'I never thought you'd doubt yourself for a moment. I am truly surprised.'

'I have doubts occasionally,' Wilson lied again. 'All human beings do.'

'You're not as human as most, Herr Wilson. You think too much and feel too little.'

Wilson nodded. 'Perhaps.'

'And yet you have doubts.'

'Yes,' Wilson lied for the third time, not wanting Himmler to know and fear his invincible arrogance.

Himmler placed his empty cup on the small table beside him, then stared steadily through his glittering pince-nez. 'In the words of our beloved Führer: "One must listen to an inner voice and believe what it tells you." Would you

not agree, Herr Wilson?'

'If the inner voice is self-conviction, then, yes, I agree.'

'I do, too,' Himmler said. 'Which is precisely why nothing can stop me.'

'You're a resolute man, Reichsführer.'

'And you aren't?' Stoll asked.

'Only average, Captain Stoll.'

Stoll's smile showed a degree of dry amusement. 'I think not, Herr Wilson. In fact, you're a man so resolute, you'd stop at nothing to get what you want. Now isn't that so?'

Be careful, Wilson thought. 'No, I don't think so.'

'There are rumours,' Himmler said, ostentatiously studying his immaculate fingernails, 'that the dearly departed Doctor Belluzzo did not deserve the fate he received. What do *you* think, Herr Wilson?'

'I'm afraid I haven't thought about it,' Wilson said, 'apart from assuming that when the SS decided to arrest him, they had their reasons.'

'Are you aware of what those reasons were?'

'His superior officer, Flugkapitän Schriever, believed Belluzzo to be mentally incompetent and possibly dangerous.'

'Did you share that view?'

'I can't remember if I discussed it with Schriever or not, but I have to confess that if I'd been asked, I would have been bound to agree with him.'

'But you had no direct hand in Schriever's report?'

'No. None at all.'

Himmler spread his hands in the air and smiled frostily. 'Good,' he said. 'That's all right, then. After all, no one is going to miss Belluzzo, who was not even German.' He then clasped his hands together, stopped smiling, and added softly: 'It's just that one worries if one suspects that one's staff are becoming too ruthless in their ambitions.'

'Naturally, Reichsführer.'

He stared steadily at Himmler, giving nothing away, but knew that the Reichsführer was aware of what he had done and would not forget it.

'I appreciate a man of initiative,' Himmler said, 'so long as it doesn't make him *too* ambitious.'

'I understand perfectly.'

'Good,' Himmler said. Realizing that he had gained Himmler's wary admiration, Wilson stared across the broad expanse of the hangar, to where

the Schriever flying saucer, about to be test-flown for the first time, was being prepared. It was resting on a large steel platform that could be wheeled out of the hangar. Forty-two meters wide and thirty-two meters high, it looked immense in the enclosed space. Indeed, raised up on the steel platform, it cast its shadow over the coveralled engineers working around it, including Habermohl and Miethe. Schriever himself was being helped into his flying suit, since he was the test pilot.

It was a completely circular aircraft, shaped like a gigantic, inverted steel bowl and supported on four thick, hollow legs that housed the gas-turbine rotors which, it was hoped, would give it its vertical-rising capability. Another four gas-turbine rotors were positioned horizontally at equal distances around the rim of the circular body, for control of horizontal flight. It was lamentably primitive, Wilson knew. It would fly enough to satisfy Himmler and keep Schriever pleased with himself, leaving Wilson free to get on with the design of the real, vastly more advanced machine.

Wilson's deception was necessary. There was no one he could trust. The Third Reich was filled with ambitious, frightened men who wished to make an impression. Wilson did not trust Rudolph Schriever. He saw the madness in Himmler's eyes. He remembered his troubles in America, the heavily guarded hangars in Iowa and Illinois, the businessmen and politicians and generals who had ruthlessly stolen his life's work. The same thing could happen again, because the war's end was beginning: When the battle for Russia commenced, the Third Reich would start to bleed. How long would Himmler last then? And how long could Wilson then keep his secret? He wanted to make real his secret masterplan, but what guarantee did he have that he could do it? The Nazis devoured their own kind, so they might devour even Himmler; either that or the Reichsführer would turn on Wilson, destroying all he had gained.

Heinrich Himmler: the Reichsführer. Wilson was not deceived by his mild gaze. His neat fingernails were polished with blood and his smile hid hysteria. No, Wilson didn't trust him, and so he gave Himmler only a little – the prototype for a flying saucer that was merely a crude airplane – while explaining repeatedly that his problems were many and he needed more time.

It was a delicate manoeuvre. A great cunning was required. The flying saucer had to fool Schriever and the other engineers; it had to be a

considerable achievement by their standards, though still lacking something. Thus Wilson had used obsolete technologies with slightly advanced ideas, letting Schriever and his engineers take pride in what they imagined was their great achievement: a saucer-shaped aircraft. Gas turbines and liquid-fuelled rockets were still the basis of their technology, but Wilson had already surpassed that. The real achievement was his other, secret *Feuerball*, and most of that was in his head... So he gave a little and took a great deal and listened always to Himmler.

'Your health is good?' he was asking.

'Yes,' Wilson replied.

'The recent operation was a success?'

'Completely, Reichsführer.'

'To experiment on yourself shows great courage – or, perhaps, faith. I have to admire that.'

'I'm nearly seventy, Reichsführer. My time's running out. I'm old and my body begins to fail me, and I have to prevent that if I'm to continue my life's work. Since the choices are otherwise nonexistent, it's certainly worth the risk; and while so far we've only managed to repair my stomach and do some minor skin grafts, given time, if we continue medical experiments in the camps, I'm convinced that we'll eventually reach the stage where we can make flawless skin grafts, replace faulty hearts, develop mechanical limbs, and maybe even make great advances in human longevity... The possibilities are limitless.'

Himmler scratched his nose, adjusted his pince-nez, nodded solemnly. 'I agree,' he said softly. 'We need that – and more than that. Let us sum up what we've achieved so far and see what we have...'

His voice trailed off as he stared at Schriever's saucer. The doors of the hangar were being opened and sunlight was pouring in.

'We have our underground factories,' Himmler said. 'We have the location for our New Order. We have our masters, the SS, and our slave labour and your own crystal genius.'

'We have everything,' Stoll said.

Himmler smiled but shook his head. 'No, we still don't have enough. We need more than normal men. What we need is a biological mutation that will lead to true greatness. We must learn to control our work force. Not with whips and not with guns. What we need is automatic control of their bodies

and minds. The human brain must be examined, the body's secrets must be explored. We must try to steal their will and their physical strength and leave them just what *we* need. The so-called democracies cannot do this – their regressive morals would forbid it – but here, at the dawn of the new era, there is nothing to hinder us.'

He smiled at the listening Ernst Stoll, as if giving approval.

'We must use the *Ahnenerbe,* hand in hand with the *Lebensborn,* in order to study racial characteristics and breed only the finest. That will solve the first problem – and only in that way, will we be able to create the Superman. Nevertheless, that leaves the problems of the work force, and we must solve those also. Control of body *and* mind. We must find a brand-new method. I think of medical and psychological experiments of the most extreme kind. The camps are ours to command. The scum there is our base material. The New Order needs a wealth of mindless muscle and your genius must find it.'

Wilson did not reply, as there was nothing for him to say. What Himmler wanted, he also wanted, but for very different reasons; what Himmler wanted was an insane dream that he totally rejected. Yet he listened, because Himmler had the power, and he still needed that.

'Do you understand?' Himmler said. 'My New Order will come to be. It will be broken into colonies, each individual, each with its work, all divided into masters and slaves, existing just to support us. There's no problem in the Antarctic. It's just another Nordhausen. You ship the subhumans in to build your underground complex, you control them with brain implants and our Death's Head SS, and then you move in your scientists and technicians and administrators, and you bind them all together with fear of their all-seeing masters. And once there, where can they go? There is no way in or out. They will live underground, seduced by power or cowed by fear, the masters bound by their blood oaths, by their religious conviction, the subhumans by torture and the threat of death and their singular lack of a way out. Yes, American, it is possible. We are halfway there already. You must work, you must complete this great project, before we settle the matter. Now let us see this test flight.'

The hangar doors had been opened fully. The flying saucer was being wheeled out on the broad platform, its steel body now silvery. Wilson followed Himmler and Stoll, out of the office, across the sunny hangar, then into the summery afternoon. The collapsible legs let the platform be lowered

to the ground, where the wheels were removed, and the platform became a glittering launching pad with the saucer resting upon it.

Flugkapitän Rudolph Schriever was standing in his flying suit directly in front of the saucer, his helmet under his arm. He stepped forward to give the Nazi salute, looking uncommonly nervous.

'Good luck,' were the only words spoken by Himmler.

'Thank you, Reichsführer!' Schriever responded, visibly swelling with pride, then saluted again and turned away, to climb the stepladder that led up the gleaming, sloping body to the saucer's centralized cockpit.

The Perspex canopy had been removed. The saucer reflected the sunlight. After Schriever climbed carefully into the dome-shaped pilot's cabin, the canopy was replaced and locked into position. The engineers retreated and shielded their eyes. Himmler and Stoll hurried behind the sandbags with Wilson, then Himmler scratched nervously at his nose and adjusted his pince-nez. The saucer resembled a metallic mushroom – or, perhaps, a giant spider. Its four legs, which housed the gas turbine rotors, thrust down obliquely. There was a roar as the hollow legs spewed flames and filled the air with black, oily smoke. The saucer shuddered and shrieked. Yellow flames spat at the platform. The roaring changed and became a deafening sibilance as the machine started rising. Himmler covered his ears. His body appeared to be shrinking. The saucer shuddered and roared, lifted tentatively off the ground, hovered briefly and swayed unevenly from side to side and was obscured by the swirling smoke. Himmler turned and stared at Wilson. His mild eyes were like the sun. The saucer roared and hovered just above the ground as Himmler gripped Wilson's wrist.

'A new era!' Himmler exclaimed as the ground shook beneath them.

CHAPTER TWENTY-ONE

Bradley and Joan made love that afternoon more tenderly and satisfyingly than they had done in months.

They had flown to the island of Oahu, Hawaii, for a vacation in the hope of repairing the damage done by Bradley's increasing obsession with John Wilson's unheralded, innovative work on rocket research and what he might be creating in Nazi Germany. That obsession had grown dangerously over the years, encouraging Bradley to be more distracted, keeping him away from home too much on his many investigatory trips, and making him increasingly thoughtless when it came to his family. Consequently, the gulf between him and Joan had widened. She had even threatened divorce. Bradley, though desperate to be part of a proper intelligence agency, such as the British Secret Intelligence Service, and use its greater resources to track down Wilson and put a stop to his activities, had begun to see the error of his ways.

Well, not quite...

While he had continued to use his powerful Wall Street law firm and influential clients as his personal link to Washington, DC, and General Taylor's Army Air Force intelligence unit, he had become increasingly frustrated by the lack of progress regarding his proposals for a centralized intelligence-gathering organization. Earlier in the year he had been informed by Taylor that the beginnings of just such an organization had been made: an Office of the Coordinator of Information, or COI, with its headquarters established in the State, War, Navy Building next to the White House. When another unofficial agent, William Donovan, had been appointed above Taylor as coordinator of information, Bradley had been crushed by disappointment and decided to turn his back completely on his intelligence ambitions.

A few months later he had suggested this vacation in Hawaii as a sort of

second honeymoon, designed to bring him and Joan closer together and let them start all over again.

It appeared to have worked. Admiral Jeffrey Paris, an old friend of Bradley's buddy, General Taylor, and captain of one of the battleships anchored off Ford Island, had found them an attractive villa on the green hills overlooking Honolulu. Bradley and Joan had settled in with pleasantly surprising ease, gradually unwound, talked through their differences, and finally came together in bed like much younger lovers.

That afternoon Bradley had woken up from the nap they had taken to prepare them for the Saturday evening dance in the Pearl Harbour Naval Officer's Club, to which they had been invited by Admiral Paris, and found himself luxuriating in Joan's warmth as well as in his new-found peace of mind.

He felt younger than he had in years. Swelling with love when he thought of how close he had come to losing Joan, he reached out to her, ran his fingers lightly over her, stroked her raised hip and waist, then rolled into her spine, slid his hand around to her soft breast, and let his passion awaken her. She turned into him, almost purring, her smile sleepily radiant, and they pressed their naked bodies together and became one again.

'God, I love you,' he whispered.

Later, bathed and dressed – Bradley in a white dinner jacket and black bow tie, Joan in an elegant, off-the-shoulder evening dress – they had an aperitif out on the walled patio overlooking Honolulu. Bradley gazed through palm trees, palmettoes, and hibiscus toward the US Pacific Fleet, anchored in the vast bay. There were destroyers and minesweepers, oilers, tenders and submarines; and off Ford Island the battleships formed two lines, not far from the airfield where dozens of planes stood side by side. The battleships looked magnificent, glinting gray in the brilliant sunlight. Beyond them, far away, where green sea met blue sky, were the flapping white sails and gleaming brass railings of private yachts and expensive motor cruisers.

'It sure as hell isn't New York,' Bradley said, turning back to face Joan across the glass-topped wickerwork table and appreciating the warmth of her girlish smile, the sunlit sheen of her auburn hair.

'Don't even *think* about New York,' she said. 'We'll be back there soon enough. Let's enjoy what we've got while we've got it. I'm blossoming just sitting here.'

‘You look it. Making love must be therapy.’

‘All men are disgustingly vain,’ she said, ‘and you’re just praising yourself.’

He had to smile at that. ‘Touché, my sweet. Nevertheless, it’s nice to see you smile. I thought I’d lost that forever. I nearly did, didn’t I?’

‘I’ll admit, I was worried.’

‘You don’t have to worry anymore. I’ve put it all firmly behind me. Not meaning to discuss New York, but I’m satisfied to be back in Manhattan, doing what I’m supposed to do.’

‘You’re such a good lawyer,’ she told him. ‘I hate to see that talent wasted. I really didn’t mind you doing that unofficial snooping for General Taylor during your trips overseas, but the thought of you becoming involved in official intelligence gathering made me real scared.’

‘You’ve read too many novels, Joan.’

She smiled at that. ‘Yes, I suppose so... But I also know how involved you can become – and were becoming over Wilson – so I’m glad you changed your mind and went back to legal work.’

‘I’ll now settle into my respectable middle age and watch my married kids make mistakes with *their* kids.’

‘There are worse ways of growing old.’

It was a wise remark that made him appreciate her all the more and count his lucky stars that their marriage hadn’t been destroyed by that Wilson business.

Unfortunately, once he thought of Wilson, he also thought of Gladys Kinder, whose letters from London were still arriving at his Manhattan office, bringing him news of the war in Great Britain, along with plenty of teasing, oddly disconcerting sexual comments.

No longer could he doubt that he had been instantly attracted to the woman, maybe dangerously so. If that feeling normally would have faded with the passing years, her letters were resolutely keeping the memory of her alive. Now, though he certainly enjoyed reading the letters, his rapprochement with Joan made him wish that Gladys Kinder would stop writing and let him forget her. He hadn’t laid a hand on her, nor even made a move toward her, but her letters, piling up over the years, made him feel that he had.

Suddenly realizing just how treacherous emotions could be, and

frightened by how close he had come to hurting and losing Joan, he reached across the table to squeeze her hand.

'Right,' he said. 'There are worse ways of growing old. And we have such good kids to be concerned with. I want to thank you for that. It was your doing. I love you all the more for it.'

'Oh, God, Mike, shut up. You're making me blush. Finish your drink and let's go.'

He grinned. 'Yep, let's do that.'

They drove down the steep, winding road, through lush tropical greenery, past pineapple plantations and rickety, makeshift stores run by Chinese, Japanese, and Hawaiian families, to the road that ran along the seafront of Honolulu, past the Pearl Harbour naval base and adjacent Hickam Field, home of the 17th Army Air Corps. Having decided to eat alone, before meeting Admiral Paris and his wife for drinks in Waikiki, they drove into the centre of Honolulu, through narrow streets filled with bars, pawnshops, Chinese grocery shops, tattoo parlours, and photo galleries, parking near the corner of Maunakea and Hotel Street, outside a window filled with the carcasses of smoked pigs and ducks hung on meat hooks.

'If what we eat looks like what's in that window,' Joan said, 'I don't think I'll get through my meal.'

'You're going to love it,' Bradley replied. 'You'll probably *eat* like a pig!'

'It's always so *noisy* here!' Joan exclaimed good-humouredly.

'That's why I love it, dear.'

They had dinner upstairs in Wu Fat's Chinese Restaurant, surrounded by gilded decorations and walls painted a garish red, under a high ceiling and rotating fans. The food was delicious, the atmosphere exotic, and Joan, as if to prove Bradley right, ate like a pig.

'So many *men* in here!' she whispered, wiping sweet-and-sour sauce from her lips.

Bradley glanced around him and realized that she was right: The place was filled with sailors, marines, and soldiers, some with Chinese, Japanese, or Hawaiian girlfriends, most on their own. Right now they were happy, eating and drinking, having a good time, but he knew that before the night was out there would be lots of fighting. Saturday night in Honolulu was never without its fair share of action, which is why he enjoyed it.

‘God help them,’ he said. ‘They’re the social pariahs of Hawaii. Serving your country doesn’t exactly make you popular. Come on, luscious, let’s go.’

‘You just want to take me down there to sell me,’ Joan said – in this area of Honolulu, close to the docks, servicemen actually queued up in the streets to get into the brothels located above the shops – ‘but I don’t think I’m worth that much.’

‘It’s a fluctuating market,’ Bradley replied, ‘so you might be surprised.’

Joan’s laugh was surprisingly raucous, making Bradley feel terrific, and he put his arm around as they walked back down the stairs, joined the noisy throng in the street, and eventually drove to Waikiki, four miles farther on.

‘We should retire here,’ Joan said, as the taxi cruised along the palm-lined road and she studied the large houses in expansive gardens. ‘For what we pay, you could buy a mansion here and have a really great life: lovely weather, golden beaches, beautiful people. Why are we still in New York?’

‘We’re not in New York; we’re in Connecticut.’

‘Same difference,’ Joan said.

Surrounded by the pink walls and Moorish tiles of the Royal Hawaiian Hotel, they had cocktails with Admiral Paris and his wife, Marisa, the former a silvery-haired, pink-faced, world-weary handsome man, the latter a raven-haired, good-humoured woman whose features, though formed over fifty years, were those of a carefree woman ten years younger.

‘I hope you like that villa we found for you,’ Marisa Paris said as she stirred her exotic cocktail with a straw. ‘Are you happy up there?’

‘Blissful,’ Joan replied. ‘The villa’s lovely and the view is stupendous.’

Marisa sighed melodramatically. ‘Gee,’ she said, ‘I’m glad. I get so nervous finding places for friends of friends. You just never know, right?’

‘Right,’ Bradley said. ‘But you *picked* right, so stop worrying.’

‘Taylor told us to take care of you,’ Admiral Paris said. ‘He described you as two very rare birds – friends worth any effort. You’ve obviously warmed his cold heart.’

Bradley chuckled at that. ‘I’ve never seen his cold heart.’

‘Taylor isn’t cold, but he’s tough – and a good judge of people. A man like that I can trust.’

‘You’ve known him a long time?’

‘Yep. We’ve conducted a friendly rivalry for years: Army against Navy. I claim to sail the high seas, where the air is fresh and healthy, and I tell him

he's just a dog-soldier, a kind of policeman, his nose rubbed in intelligence muck.'

'It's necessary,' Bradley said with a nervous glance at Joan.

'Sure it is,' Paris replied. 'I know that. I just josh him to score the odd point. He isn't bothered at all. In fact, right now he's setting up a kind of centralized intelligence bureau. I'm not sure exactly what kind, but that's his latest obsession.'

'Marisa,' Joan said to Paris's wife, 'are you going to sit here and let them both talk about their work?'

'No way,' Marisa said, placing her empty glass on the table and looking melodramatically determined. 'I'm going to insist we leave right this minute and have us some fun.'

'Right!' Joan said.

'Right!' Bradley added.

Yet when they left the hotel and drove back to Honolulu, he could not help but feel bitter disappointment at learning that a centralized intelligence agency was being set up and he, who had pushed so strongly for its formation, had not been called. Of course he understood why – he'd told Taylor that he wanted out – but he still felt obscurely betrayed, as if, in some part of his subconscious, he had wanted Taylor to insist that he come in.

Dammit, he thought, I'm such a hypocrite. I should learn to grow up...

And yet, as they entered the Naval Officers Club in Pearl Harbour, he looked at Joan's flushed face, saw the radiance of her smile, and realized that in every possible way he had done the right thing.

'Let's have the time of our lives,' he said.

The dance began late in the evening and went on until the early hours of the morning when the white-jacketed officers and women in flowing ballgowns, most more flushed than they had been six hours before, started drifting away, either back to their quarters on the base or, as the cacophony of revving cars indicated, to their homes in the lushly tropical hills above Waikiki and Diamond Head.

Because they had been drinking, Bradley and Joan, at the invitation of Admiral Paris, returned to their home in the officers' quarters, where they had a few hours' sleep. The next morning, after showering and changing into the less formal clothes they had brought with them, they joined Paris and Marisa

for breakfast in their modest kitchen. Outside, in the base and in Honolulu, the church bells were ringing.

'I still feel drunk,' Marisa said.

'Go to church and confess,' her husband said.

'You look surprisingly fresh,' Bradley complimented her. 'It must all be in the mind.'

'It's in *my* mind,' Joan retorted. 'Or at least in my head. My head feels like it's stuffed in cotton wool. What on earth did we *drink* last night?'

Admiral Paris laughed and placed his coffee cup back on its saucer. 'Just a few little cocktails,' he said. 'The ones with flags sticking out of them.'

Then his cup rattled in its saucer and the coffee slopped out.

'What the hell... ?'

The table shook again as Paris stared down at his cup. The other cups and saucers also rattled, then, even as Bradley heard a distant explosion, the floor beneath him shook more violently and the telephone rang shrilly on a table that was bouncing on the tiled floor.

Paris kicked his chair back, picked the telephone up, and was listening with widening eyes when the anti-aircraft batteries outside started firing. 'Goddamn!' Paris exclaimed. 'Right.' Then he slammed the phone back down and stared at the three of them. 'We're being attacked by the goddamned Japanese,' he said. 'They've already attacked Wheeler Field and Schofield Barracks. Dammit, those sons of bitches caught us napping. Their planes are bombing us right now.'

Even as he spoke, a plane roared low overhead and away again, making the house shake. Bradley glanced at Joan, saw her wide, confused gaze, then he followed Paris out of the house, to stand on the porch.

A black pall of smoke was already billowing over Pearl Harbour and a frightening number of Japanese dive bombers, fighters, and torpedo planes were flying in from the sea, their wings glinting in brilliant sunlight, to swoop down in waves and bomb and strafe Ford Island and the harbour.

Bradley saw the bombs dropping, tumbling over like black birds, and heard the awesome blast of the explosions even as fierce balls of fire were lifted up on clouds of billowing, oily black smoke over what he knew were the battleships near Ford Island and the defenceless, parked planes on the airfield nearby.

'Oh, my God!' Joan exclaimed softly behind Bradley. He felt her fingers

tugging at his shirt, as if to pull him back into her.

'Dammit!' Paris exclaimed. 'I've got to get back to my ship!' He glanced at his wife. 'You better get the hell off the base, Marisa. Go with Bradley and Joan. Go back to their place up in the hills and I'll call you later. Okay?'

However, even as he spoke, some Japanese Zeros roared in low overhead, through the black puffs of smoke from the American anti-aircraft batteries, to pass on and strafe downtown Honolulu and the lush hills beyond. A series of explosions tore through the greenery, blowing palm trees apart, setting fire to the foliage, filling the air with flames and smoke between the houses dotting the hills, as the planes, their machine guns still chattering viciously, ascended gracefully and circled back toward the sea.

'No,' Marisa said. 'I'm staying right here.'

'And so am I,' Joan said.

'Then stay indoors,' Admiral Paris said. 'And you better stay with them, Mike.'

'I'll drive you down to the fleet landing,' Bradley said, 'then come straight back. Marisa might need your car.'

'Right,' Paris replied. He hurried into the house and came back out with his naval jacket, still buttoning it even as he kissed his wife's cheek and slipped into the car. Bradley also kissed Joan, then got into the driver's seat, turned on the ignition, and screeched away from the house.

The Japanese planes were still attacking, whining above the explosions and gunfire. Bradley drove past men and women, sometimes even children, who were standing on their lawns or porches, wearing only pyjamas, dressing gowns, or even underwear, gazing up in disbelief at the boiling, black, flame-filled smoke and diving Japanese aircraft.

'Christ!' Paris exclaimed. 'They even caught us with our aircraft on the ground. Ford Island must be a scrapyard!'

Certainly the fleet landing was a nightmare.

Even before he had braked to a squealing halt, Bradley saw the columns of water spewing up between the boats and ships of the fleet, many of which were on fire, pouring black oily smoke, breaking apart and sinking, while the barrels of the guns of the anti-aircraft batteries and surviving ships spat yellow flames. Balls of fire ballooned brilliantly over sinking ships. Sailors in flames were jumping overboard. Japanese Zeroes were bursting into flames and falling into the sea between the ships and boats, where in a haze of gray,

black and crimson-tinged smoke more sailors were trying to clamber into lifeboats or swimming or drowning.

Admiral Paris jumped out of the car as it shuddered to a stop, slammed the door behind him, looked, appalled, at what was happening, then leaned back down to the window and said, 'Thanks, Mike. Now get the hell back to the house and look after our women.'

'Will do,' Bradley said.

As the admiral hurried off to find a boat to take him to Ford Island and Bradley reversed the car, sailors with blistered faces and limbs, their scorched, blackened flesh hanging in strips from blood-smeared bone, were being helped out of whaleboats and carried away on stretchers to the waiting ambulances and hospital trucks. Bradley drove off to a concerto of wailing sirens, blasting ships' horns, whining planes, dementedly chattering machine guns, pounding anti-aircraft batteries, exploding bombs, and bawling or screaming men. Japanese Zeroes were still winging in low overhead, strafing the base, as he drove through the streets of the officers' quarters.

Hardly believing what was happening, Bradley was further shocked when he stopped in the driveway of Admiral Paris's house. Bullets had smashed the concrete paving and stitched a line up the front wall, broken the windows, and peppered the roof.

Mesmerized for a moment by the sight of the broken windows, Bradley finally raced into the house. Then he stopped in his tracks when, just inside the living room, he saw Marisa rocking Joan in her arms and trying to wipe the blood from her soaked clothing as she wept over her.

'Oh, God!' Marisa choked out between her sobs. 'Oh, God, please! Oh, God, Please!'

In one hideous second Bradley took in the bullet-stitched walls, smashed picture frames and furniture, glass-strewn floor, and Joan in Marisa's arms, both covered in blood. Going down on one knee, he saw that the blood was Joan's, heard an anguished groan, realized it was his own, then reached out to touch Joan's forehead. It was icy cold.

'Oh, Jesus!' he said.

Her breast and stomach were covered in blood and her breathing was harsh.

'Call *an ambulance*!' he heard someone screaming hysterically – then realized it was actually his own voice and shuddered convulsively.

‘I’ve already called for an ambulance, Marisa said, sobbing, ‘but they’re all so damned busy. But they’re coming. *They’re coming*!’

‘Joan!’ Bradley hissed despairingly. ‘*Joan*!’

She opened her eyes. ‘Oh, God,’ she whispered, ‘it hurts.’ Her eyes were dazed, but she gradually recognized him and gave him a weak smile. ‘My man,’ she said. ‘My ever-loving, handsome husband. What a fine face you have.’

‘Thanks,’ Bradley said.

‘I’m all right,’ Joan said. ‘Aren't I?’

‘Sure,’ Bradley lied, ‘you’re okay. No problem at all. It’s just a matter of _ ’

‘The children, Mike. Look after the children. And our grandchildren too.’

‘Shut up,’ Bradley said. ‘Don’t talk that way. Jesus, Joan. Oh, my God!’

‘Hey, there, don’t be…’

But her final words didn’t make it; only blood escaped from her lips. Then she coughed and spluttered, choking on that blood, sighed, as if too weary to be bothered, and closed her eyes for the final time.

Bradley was stupefied. He couldn’t believe that she was gone. He kept glancing around him, as if time would move backward, and when it didn’t, he just clung to her, holding her tightly, refusing to let go, and shedding all the tears he had held in since the days of his childhood.

The Japanese planes left and returned, then left for the final time. Bradley accompanied Joan’s body to the morgue and held her hand in the silence.

The only sound was his sobbing.

CHAPTER TWENTY-TWO

Joan was flown home and buried back in Connecticut, near the house where she and Bradley had shared so much together. Mark and Miriam attended the funeral, bringing their children with them, and even though that made Bradley feel older, it also encouraged him.

Life went on and Joan still lived through her children and grandchildren, all of whom had loved her as much in life as they missed her in death.

Yet it wasn't enough.

He felt broken up inside. He had Christmas with his children and grandchildren and some friends, but the love that they showered upon him

only made him hurt more. He saw the New Year in alone, in a house that now seemed too large, and shortly after, feeling lost in the house, he decided to sell it.

Mark and Miriam didn't need it: they now had their own homes and families. The house was only a morgue for his recollections of things won and lost, a graveyard for his past. Not a home any longer.

'I'm putting the house on the market,' he told Mark.

'Gee, Dad...'

'It's unbearable with your mother gone, Miriam.'

'Yes, Dad,' Miriam said. 'I can understand that.'

He sold it quickly enough, but the contents were a problem, because so much of what had seemed so necessary was now useless debris. He gave his children what they wanted, offered the rest to his friends, gave what was left to various charities, and took only his personal things.

On the last day, when he was sorting through the papers in his desk drawers, he came across the letters from Gladys Kinder in Europe, tied together in chronological order and looking well thumbed.

He sat down, feeling breathless, filled with love and guilt and heartbreak: his love for both women; his guilt over a betrayal that had taken place only in his thoughts; his heartbreak over the loss of both women, one living, the other dead. Feeling confused, he decided to burn the letters. But he couldn't bring himself to do it, so he packed them away with his other things and left his home for the final time.

Needing the bright lights of Manhattan, he took an apartment near his office, started working himself to exhaustion, drank too much, and stayed in at nights, wanting only the silence.

That silence was broken by General Taylor, who dropped in, uninvited.

'You look terrible,' he said.

'I guess I do,' Bradley replied.

'What you need is distraction,' Taylor said, 'and that's why I'm here. Do I at least get a drink?'

Bradley poured him a bourbon. Taylor carried it across the office, taking a seat under the window, in striations of pearly-gray light.

'I'm really sorry about Joan,' he said. 'I don't know what else to say.'

'Don't say anything, General.'

'We've counted the cost,' Taylor said. 'Apart from Joan, it was terrible.

In the first attack, the Japs capsized one battleship and completely destroyed three others. In the second attack, they sank three destroyers and badly damaged two others. Everything on Ford Island was destroyed, including our airplanes, and we had nearly three thousand casualties, most of them fatal. Luckily, they missed the entire aircraft carrier fleet – it was out to sea at the time – but no doubt about the damage they inflicted... And now the United States is at war. We've lost our virginity.'

'Right,' Bradley said, feeling drugged.

'Our almost total lack of knowledge about Japanese intentions,' Taylor said, 'due to the fragmentation of our intelligence gathering and lack of cooperation between those involved in it, has compelled us to do what you've been recommending for years: namely, form a centralized intelligence agency – the Office of Strategic Services, or OSS – which we hope to have running by the middle of next year. I want you to join the organization as an agent.'

'I don't want to,' Bradley said.

'Yes, you do,' Taylor insisted, sipping his bourbon and sounding determined. 'We've just been informed by British intelligence that according to various European resistance groups, remote-controlled bombs and flying rockets are being constructed at a Nazi research centre in Peenemünde, in the Baltic. Based on that information, British intelligence conducted further research and can confirm that in 1936, work did in fact begin on the construction of a secret proving ground in the vicinity of a small fishing village called Peenemünde and that it's since become one of the Nazis' most advanced experimental stations. Analysis of aerial photography taken in the past few weeks shows that the proving ground exists, that the southern part contains workshops where, we believe, the missiles are constructed, and an extensive settlement that has since been verified as being occupied by the scientists. A little farther on, near the village of Karlshagen, are barracks for soldiers and workers, plus a prisoner-of-war camp and concentration camp.'

'Sounds pretty cosy,' Bradley said, not wanting to know.

But Taylor persisted. 'Since we'd already informed the Limeys about your old friend, John Wilson, they're now working on the theory that the new weapons, while ostensibly being made at Peenemünde, may in fact be the indirect products of Wilson's genius in that field, since the rocket team was originally based in Kummersdorf, Berlin, at the other side of a former firing range where Wilson and some other German rocket scientists were working

at the same time.'

'That sounds logical,' Bradley said sourly.

Taylor was unmoved. 'So the British Secret Intelligence Service,' he continued doggedly, 'recently got in touch with us and asked us if we had any opinions about their latest theory. Naturally we agreed that in all probability their theory is substantially correct and that Wilson, the traitorous bastard, is largely responsible for the Peenemünde flying bombs and rockets. This has naturally led all of us to wonder just how advanced Wilson is and what other diabolical innovations he has up his sleeve. It has, in fact, convinced us that he has to be tracked down and taken off the stage – and that's why we want you. We want you to find that son of a bitch and terminate him.'

'I'm too old,' Bradley said.

'Bullshit,' Taylor responded. 'We need you because you were once an excellent pilot, have done unofficial intelligence work both for the US Army and as a civilian lawyer, know a hell of a lot about aeronautics, speak French and German, know Europe like the back of your hand, and are obsessed with John Wilson and what he's up to.'

'True, but I'm still too old,' Bradley said, feeling only the pain of his loss and the lack of enthusiasm for life that Joan's death had engendered.

'No, you're not,' Taylor said. 'You're just in a state of shock. And that's exactly why you need this kind of distraction – and why you'll be good at it. As for your general fitness, if you join OSS, you'll be put through a tough retraining program, with a special emphasis on espionage, self-defence and undercover, or guerilla, operations. So when the time comes, you'll be fit enough. And believe me, Mike, you need this job to help you forget Joan. You need it. So take it!'

Deeply moved by what his friend was trying to do for him, aware, also, that he really *did* need something to distract him from his anguish, Bradley said, 'And once I finish with the training... What happens then?'

'You'll be posted to London, to help the British Special Operations Executive track down Wilson and put an end to his activities. Now do you want it or not?'

Bradley leaned forward in his chair, covered his face with his hands, and accepted that he had to escape.

'I want it,' he said.

CHAPTER TWENTY-THREE

‘They’re perfect specimens,’ the white-smocked hospital surgeon informed Wilson and Ernst Stoll as he removed the guillotined human heads from the laboratory’s refrigerator and placed them into tin cans.

‘Jewish only?’ Wilson asked.

‘No,’ the orderly said, placing the last severed head in a can and putting the lids back on. ‘When we received a letter from Professor Hirt, the head of the Anatomical Institute of the University of Strasbourg, telling us that the number of skulls in the university’s collection was too limited, we started obtaining them from captured Russian troops, and these heads are mostly those.’

‘All undamaged?’

‘Of course! Once the heads of the living specimens are measured and selected, death is induced by injection, then the head is severed from the body and shipped in these cans, which will be hermetically sealed, to the Anatomical Institute.’

‘Good,’ Wilson said. Turning to Stoll, who was looking distinctly queasy, he said, ‘There’s a lot we can learn from these heads. There are ways we can use them: the psychological and physical creation of the Superman and a work force that has no free will. Himmler’s Institute for Research into Human Heredity, the *Ahmenerbe,* must not be wasted on quasi-mystical research, but utilized for a more practical purpose: medical and surgical experimentation of the most fearless kind. We must look at the human brain and learn how to control it, study the human body and learn how to change it. In doing this, we can create a new kind of man – any kind that we want. This is what we’re doing here.’

‘Can we leave now?’ Stoll asked.

‘Yes,’ Wilson said. After thanking the surgeon, he led Stoll out of the laboratory and back through the corridors of the SS hospital, taking note of the fact that Stoll was still looking queasy and understanding that he could use his moral qualms when the occasion called for it.

Right now, however, he was intent on preparing Stoll for the world he would inherit. To that end, as they passed the guarded doors of other laboratories and operating theatres, he said, ‘Our experiments are wide-ranging and in fact know no bounds, which is why we’re using human beings instead of just animals. It’s through our experimentation on these human

beings that we're learning about brain manipulation, limb and other bodily replacements, the causes, nature, control, and use of fear, even the effects of freezing and decompression, all of which will be useful when we move to our underground colony in Antarctica.'

Ernst nodded thoughtfully, trying to accept the unacceptable. Wilson knew, as they left the hospital, that he would in time do so.

The hospital entrance was heavily guarded by armed SS troops, with more troops placed strategically at the far side of the road. Wilson glanced along the street of this suburb of Berlin, quiet and almost empty in the gray light of August, and thought of how the whole of Germany had become a huge armed camp in which fear, torture, and death were commonplace. It was a prototype for the kind of colony he envisaged in the Antarctic; but the world he would create would be controlled by scientists and dedicated to the advancement of knowledge. It would not be controlled, as Himmler thought, by his blond young gods of war and dedicated to his mystical notions of a world of ice and fire.

'I haven't seen much of you lately,' he said to Stoll, as the chauffeur-driven SS car carried them around the outskirts of Berlin, through the outlying villages, past columns of troop trucks, and on toward the research centre at Kummersdorf, south of the city. 'What have you been up to?'

'My work with the *Lebensborn* organization,' Ernst replied, rolling the window down to let air in, then lighting a cigarette.

'Which many Germans still think are maternity homes.'

'Yes.'

'And this work keeps you busy?'

Ernst sighed. 'It's all for Projekt Saucer, Herr Wilson. As you know, the real aim of the institutions is the controlled breeding of the perfect Aryan, a Nordic super-race, through the disciplined mating of men and women selected in accordance with the racial principles defined by the *Ahnenerbe.*'

'Yes,' Wilson said, feeling impatient, 'I already know that. But are you exploiting the *Lebensborns* for our purposes?'

'Yes,' Ernst said, sounding weary. 'For the past eighteen months, when not actually at Kummersdorf, I've been organizing the kidnapping of thousands of racially valuable children from all over Europe, as well as the Soviet Union, and shipping them to the many *Lebensborns* now spread throughout the Reich, where they undergo special training to Germanize

them. The past records of such children are erased and their parents, if not exterminated, are not told where they are. Within weeks of arriving at the *Lebensborns,* the children can remember little of their past, have been given new names – which also helps them to lose their former identity – and have been taught that they haven't descended from the apes, but from the SS. Given their political indoctrination and total devotion to the Reich, these children, when they become of age, will voluntarily take part in our human stock breeding and go on to create the racially perfect, totally loyal, new breed of man, to be controlled by our Nazi élite in our SS colonies under the ice. You should be proud of me, Wilson.'

It was a slight attempt at levity, so Wilson smiled at him, then glanced up at the bombers heading for England. 'How are things going in Neuschwabenland?'

'Progress is slow and painful, but at least it's being made. Many workers have already been shipped out from the camps and are digging out their underground accommodations in terrible circumstances. The death rate is high – from cold, exhaustion, and often hunger – but the first underground area will soon be cleared. More men and materials will then be shipped in, and by the end of next year, we should be able to start shipping in the scientists, as well as the first children from the *Lebensborns.* It is your side of the work, Herr Wilson, that is now moving slowly.'

'Time is of the essence, I know, but this thing can't be hurried.'

'You must understand,' Ernst said, 'that since the defeat in Russia, our beloved Reichsführer is becoming even more concerned that we perfect your flying saucer, which he views as the ultimate weapon, and also ensure that the underground space in Neuschwabenland is completed and fully manned before the present war comes to an end.'

'The *present* war?'

'As you know,' Ernst replied rather stiffly, almost offended, 'this war is merely the prelude to a thousand-year war – the one that will turn the German soldier into the Superman.'

'Ah, yes,' Wilson said, amused by Stoll's passionate sincerity, '*that* war.'

'Yes,' Ernst echoed him, 'that war. And ever since Stalingrad, which marked the beginning of the end of this war, the Reichführer has become almost desperate to ensure that everything is prepared for our escape to Antarctica.'

‘But everything *is* being prepared, as you’ve just so vividly demonstrated.’

‘Not fast enough,’ Ernst said. ‘That’s why he wants another test flight of the flying saucer. He views it as the most vital part of our operation – an undefeatable weapon, as well as a means of flying in and out of there with impunity – and he’s growing worried that it will not be completed in time.’

‘I’m sure it will be,’ Wilson said, ‘though nothing under the sun is guaranteed.’

‘It has to be,’ Ernst replied, ‘so let’s hope that this test flight is successful. Otherwise there’ll be trouble.’

‘From Himmler?’

‘Yes.’

Wilson had to force himself not to grin. The car had reached Kummersdorf, and as the driver slowed down on the approach road to the research centre, where high barbed-wire fences surrounded flat, windblown fields, he tried to imagine the expression on Rudolph Schriever’s face when the flying saucer, which he was claiming as his own, failed to fly. Wilson knew it wouldn’t fly. He had ensured that it would not, because its failure would give him what he needed to get rid of Schriever and place Stoll on his side.

He had it all worked out.

When their papers had been checked at the heavily guarded gate, they were waved through and proceeded along the road, past the old firing range, now overgrown, to the research centre’s collection of ugly, corrugated-iron and concrete hangars, which also were protected by heavily armed SS troops.

On Stoll’s instructions, the driver took them between two of the hangars and parked at the far end. There, in an open space between the firing range and an overgrown hillock, the latest version of the so-called ‘Schriever’ saucer was sitting on its lowered steel platform, prepared for takeoff. The gas turbine rotors that had been housed in the previous model’s four hollow legs had been replaced with a series of variable jet nozzles arranged all around the outer rim, just below the saucer’s centre of gravity. Combined with the machine’s lack of rudders, ailerons, or other protruding surfaces, this gave it a more graceful, seamless appearance.

Looking eerily beautiful in the fading mist of late morning, the saucer appeared to tower over the men who were either working around it or simply

observing it from behind the concrete bunkers and heat shields placed across the hangar's open doors. Even as Wilson and Stoll clambered out of the car, Himmler was being escorted from of the hangar, his pince-nez reflecting the sunlight. He was accompanied by his usual bodyguards. Schriever, again in his flying suit, walked proudly beside him. Himmler stopped advancing when he saw Wilson and Stoll coming toward him.

'Ah!' he said softly. 'Captain Stoll and our American genius! I thought we had lost you.'

'No, Reichsführer,' Ernst replied, stopping with Wilson in front of him. 'We were checking the progress of the medical and surgical experiments at one of the *Ahnenerbe* hospitals.'

'Impressive, are they not?'

'Yes, sir.'

'And many of them were suggested by Herr Wilson, here, who is nothing if not fecund in many fields.'

'Thank you, Reichsführer,' Wilson said, then nodded coolly at Flugkapitän Rudolph Schriever, whose darkly handsome, saturnine features were illuminated with the glow of his newly found arrogance. 'Are you looking forward to the test flight, Flugkapitän?'

'Yes, Herr Wilson, I am. I have the confidence that the saucer will fly this time.'

Wilson smiled. 'I hope so.'

'I am always a little confused,' Himmler said in his quietly probing, slightly sardonic manner, 'as to who is responsible for what regarding this saucer. According to certain sources, including yourself, Flugkapitän Schriever here is mostly responsible for the machine; according to others, the credit should go to you. Who, then, do I praise or blame should this machine fly or crash?'

'I am willing to take the blame if it crashes,' Schriever said too quickly, thus demonstrating an unexpected slyness at taking the credit for the machine. However, while Wilson had previously let him take most of the credit, in the hope that he would not attempt to bite the hand that fed him by badmouthing him to Himmler, he now had good reason for taking the blame for what was about to happen.

'No, Reichsführer,' he said. 'I can't let Schriever do that. I must confess that I'm responsible for the latest innovations in this model – particularly the

multidirectional jet-propulsion system – and if anything goes wrong, and I pray it won't, the blame is all mine.'

Convinced that the machine would work and that Wilson was trying to steal his credit, Schriever turned red and was just about to retort when Stoll, after giving Wilson a puzzled glance, said diplomatically, 'I think we'd better begin the test, gentlemen, while conditions are excellent.'

'Of course,' Himmler said.

Schriever saluted and marched off, upright and determined. He was climbing the ladder up the side of the saucer even as Wilson retreated behind the concrete bunker with Ernst, Himmler, and the bulky SS bodyguards. Staring through the protective, reinforced glass viewing panel of the bunker's wall, Wilson watched Schriever lowering himself carefully into the raised, centrally located pilot's cockpit. When he was strapped in, Habermohl and Miethe replaced the Perspex canopy, locked it into position, then climbed back down to the ground and pulled the ladder away. When they also were safely behind a concrete bunker and a waving flag had indicated that the test could begin, Schriever switched on the saucer's electrical system. Wilson heard the bass humming sound and saw the variable jet nozzles around the rim turning down toward the ground. When the jet nozzles were facing the earth, the engines roared into life.

The noise was extraordinary, an earth-shaking clamour, and the red and yellow flames spitting out of the downturned jets formed a circle of fire that was obscured and distorted by the smoke and dust billowing up from the scorched, hammered ground. The saucer vibrated violently, sank down on its collapsible legs, then bounced back up, swayed dangerously from side to side, and eventually lifted slightly off the steel platform, borne up on a bed of spitting flames, the smoke swirling around it.

It hovered tentatively in the air, its silvery body tinged with crimson, the yellow flames and black smoke forming a river of light around it. Then it rose even higher, thirty metres, then fifty, and hovered uncertainly again, tilting slightly from left to right. Then the jet nozzles moved and the flames shot out horizontally. As they did so, half of the nozzles cut out and the saucer was thrust forward instead of upward, in a sudden, brief, horizontal flight.

Very brief, indeed – as Wilson had known it would be – because just as it shot forward, heading toward the old firing range, the side not spitting flames tilted dramatically toward the earth and the flaming nozzles, now aiming at

the sky, increased its downward momentum.

‘Oh, my God!’ Ernst exclaimed.

Schriever turned on the other jet nozzles in time to make the saucer level out just as it was about to hit the ground. It bounced along like a spinning top, out of control, turning wildly, shrieking and sending up great curving waves of soil and debris even as the engines cut out and the smoke streamed away from it.

‘Get him out!’ Ernst bellowed at the engineers.

Habermohl and Miethe ran like the wind, carrying the stepladder between them, and threw it onto the sloping side of the saucer and climbed up to the cockpit. They unlocked the cover, let it fall to the ground, hurriedly helped a shocked Schriever out, and ran back to the bunker, practically dragging the pilot between them. They had just hurried behind the concrete wall when the saucer exploded.

It shuddered and collapsed, its legs giving way. Then it lay there, tilted on one side, some of its metal plates blown off, the flames shooting out from inside it and licking over the cockpit.

Himmler stared at Wilson, his cheeks pale, his lips tight, then he glared at Ernst and stalked off, saying nothing at all.

‘We’re in trouble,’ Stoll said.

CHAPTER TWENTY-FOUR

'We can no longer depend on the American genius or Projekt Saucer,' Himmler said in his quiet, chilling manner from behind his desk in SS headquarters in Berlin. 'Whether or not an actual workable saucer can be achieved is beside the point, since clearly this war won't last as long as we'd hoped and the time required to complete the flying saucer will not be available.'

'With all due respect, Reichsführer,' Ernst said, relieved to have found Himmler so calm after the disastrous test flight but wondering why his throat was still dry, 'we must give Schriever and the American more time. If we wish to populate Neuschwabenland, we will need something more advanced than our finest airplanes.'

Himmler held up his hand in a rather lordly gesture of rejection. 'Yes, yes,' he said, 'I know that. I'm not a fool, after all. But since the American's saucer has failed again – and he *did* admit that he was responsible for it – I'm convinced that we can no longer depend on it as our final weapon, but must instead turn our attentions to Wernher von Braun's V-1 and V-2 rocket projects at Peenemünde. All the tests there have been highly successful. Indeed, I witnessed two tests myself, as well as others, at my own rocket centre at Grossendorf. Given the excellent results, it is anticipated that remote-controlled rockets will soon fall on London. Since our beloved Führer also believes in the rockets, that's what we should concentrate upon.'

'Yes, sir,' Ernst said, not wishing to contradict his increasingly distracted Reichsführer, though he knew that Himmler's real reason for concentrating on the so-called secret weapon program was based on his desire to take control of the whole of Germany's military production.

Indeed, to this end he had recently tried to talk Wernher von Braun into working under his command at Grossendorf. After failing to do so, he had persuaded General Fromm into letting him reinforce the *Abwehr* security net around Peenemünde with his SS, which actually was his first step in removing the hated *Abwehr* from his path. His next move, then, as Ernst well knew, would be to gain total authority over the V-I and V-2 rocket projects,

despite the protests of the *Abwehr's* army generals – and he would surely succeed.

'So, Kapitän,' he continued, 'I will leave you in charge of Projekt Saucer, for what it's worth, while I personally supervise the more successful activities of von Braun and his rocket team. I hope this makes sense to you.'

'Naturally, Reichsführer.'

In fact, Ernst was secretly delighted. Ever since the humiliating surrender at Stalingrad, followed all too closely by the reverses in Africa and catastrophe in Italy, Himmler had shown increasing signs of emotional instability – finely suppressed hysteria, a slight quavering in his voice, the constant blinking and rubbing of weary, dazed eyes. Ernst, who sensed that Himmler was growing mad, was more wary of him. Not that Himmler was alone. Berlin was now filled with rumours that Adolf Hitler was going mad, or was at least in bad health and frequently doped with the drugs supplied by his quack, Dr. Theo Morell. If that was true, it would do Himmler little good because, as Ernst knew, when Himmler gazed upon his beloved Führer, he looked into a mirror.

Ernst still believed in the SS, in the promise of the New Order, but he could no longer trust his once-beloved Reichsführer. Therefore he was pleased that Himmler had lost interest in him and Projekt Saucer, and was, instead, going to turn his attentions elsewhere.

He almost sighed with relief.

'There is this other little problem,' Himmler said, clasping his hands under his babyish chin and looking severe.

Ernst suddenly felt nervous. 'A *problem,* Reichsführer?'

'Yes, Kapitän, a problem. I believe you had a similar kind of problem in Poland – one concerning a woman.'

Suddenly remembering Kryzystina Kosilewski in Cracow, deeply shocked that Himmler should have found out about her, Ernst could only swallow with a dry throat and let his heart race.

'Poland, Reichsführer? If you mean…'

Himmler waved his hand and smiled, like a father to his son.

'A Jew bitch, I believe,' he said.

'Yes, sir, but I assure you, I…'

Himmler waved his hand again and kept smiling, as if amused by Ernst's discomfiture. 'It's all right,' he said. 'That's all in the past now. We can but

hope that you've learned your lesson from it and will not repeat the mistake.'

'Definitely not, sir!'

'How is it, then, Kapitän Stoll, that according to a report received this day from one of your fellow officers – '

Ritter, Ernst thought bitterly.

' – your wife has been seen to fraternize with a Wehrmacht officer whose sympathies, it is known, are no longer entirely with our beloved Führer. Even worse, your wife has also been reported as drinking too much lately and, apparently, making loud, drunken pronouncements in public about what she deems to be the failings of our glorious Third Reich. Do you have an explanation for this, Kapitän Stoll?'

'I swear to you, Reichsführer, I didn't know,' Ernst said, caught between humiliation and outrage to learn what Ingrid was doing behind his back. Of course, she had told him that she was quietly living a separate life and he had tried to deal with it by forgetting about it. Now he had not only been reminded of her other men, but been informed that her separate life was not being lived too quietly. He felt like murdering the bitch.

'You didn't know she was seeing another man?' Himmler asked in his oddly pedantic manner.

'No, sir,' Ernst lied.

'Are you having marital problems, Kapitän?'

'To be frank, Reichsführer, yes. Though I'd hoped they wouldn't interfere with my work.'

'Most admirable, I'm sure. Unfortunately, we cannot have the wife of one of our finest officers making a fool of herself in public, much less offering insulting remarks about our glorious Third Reich while cavorting with a potentially traitorous officer.'

'No, sir, of course not. What do you suggest, sir?'

'The officer in question is Wehrmacht Lieutenant Eberhard Tillmann. Formerly a fine officer, he took part in the blitzkreig against Poland and was also one of the first to enter Paris. Unfortunately, since the reversal of our fortunes at Stalingrad and in Africa, he has taken to making subversive comments to those who will listen. What do *you* suggest, Kapitän?'

Already incensed that the man was his wife's lover, Ernst was even more outraged to hear that the bastard had been given what he had been denied: a part in the blitzkreig against Poland and the subsequent, magnificent advance

across Europe and right into Paris.

'With your kind permission, Reichsführer, I will have this man transferred to the Eastern Front to take charge of a penal regiment. I will also ensure that my wife keeps her peace in the future.'

'Excellent,' Himmler said. 'I respect a man who knows when to place his duty before personal feelings. You are dismissed, Kapitän Stoll.'

Ernst saluted and left the office, choking up with fury, and marched to the exit, not looking at his fellow SS men. He noticed only the usual collection of pale-faced, frightened people waiting to be interrogated, standing along the corridors, huddled pitifully on the wooden benches, ignored by the SS guards with the pistols and submachine guns who, in their black uniforms and leather boots, looked decidedly ominous.

A nation living in fear, Ernst thought, is a disciplined nation. We will need that when we move underground to forge a strong, fearless Aryan race.

In the meantime, before that happened, he was being assailed by mundane problems, the main one being the wife he had once loved so dearly.

He walked out of the building, into rain and a cold wind, and waved at one of the SS cars parked in the road. The driver moved up to him, let him in, and then drove off. Sinking into the rear seat, Ernst looked out at the ruins that had been caused by the Allied bombing and thought of the night Hitler had become the Chancellor of Germany and he and Ingrid had gone to bed in the Adlon Hotel. They had loved one another then with the innocence of idealism, but now both of them were older than their years and had become bitter enemies. Human relationships were treacherous, ephemeral, without substance, so he was glad to be involved with the SS and what it represented: an ideal state beyond petty, individual considerations; the subordination of the self to the whole in order to create a new, better man in an orderly world.

This was something to cherish.

He slapped Ingrid's face as soon as he walked into the apartment.

'Don't look so shocked,' he said quietly. 'You know what it's for.'

She covered her stinging cheek with her hand. 'No,' she said, 'I don't know what it's for. And you have no right to – '

'Eberhard Tillmann. A Wehrmacht lieutenant, I believe. Presumably as good in bed as he was on the march to Paris, but now joining my wife in publicly insulting the Fatherland. *Now* do you understand?'

Ingrid removed her hand from her face and stared defiantly at him. ‘Yes, Ernst, now I understand. As I also understand why we won Paris – he *is* that good in bed!’

Ernst slapped her again and she fell against the sideboard, straightening up as some decorative plates fell off and smashed on the floor. The children’s bedroom door opened and two faces appeared: Ula, now nine years old, and Alfred, now six. Ernst, who saw so little of them these days, was shocked by how mature they looked, how quickly time passed.

Ashamed that they should have heard him smacking their mother, he covered it with a display of cold anger.

‘Stay in your room and close the door,’ he said. ‘Your mother and I are talking.’

‘Yes, Papa,’ Ula said, her azure eyes emphasized by the golden hair that fell on her blushing cheeks. Then she pushed the gawking Alfred back into the room and gently closed the door .

‘A nice thing for the children to see,’ Ingrid said, again rubbing her stinging cheek. ‘Their father striking their mother.’

‘Not as bad as eventually learning that their mother’s been behaving like a whore.’

‘Please note that I don’t charge him, Ernst. I do it for love.’

He wanted to strike her again, but refrained because of the children. ‘Do you know how I learned about it?’

‘No.’

‘From Himmler! You understand, you stupid bitch? I learned about my wife’s public infidelities from the Reichsführer himself! Can you imagine my shame?’

‘The Reichsführer?’ At least she had the decency to look shocked. ‘How did *he* learn about it?’

‘Your damned boyfriend, this Lieutenant Eberhard Tillmann, is known to have made comments against the Third Reich in general and the Führer in particular, so the SS had him placed under surveillance, which means they also watched you. Reportedly you’re just like him now. You drink too much and talk in public. Your own insulting remarks about the Reich – borrowed from him, no doubt – have been overheard by the SS officers conducting the surveillance, one of whom, I’m sure, was Franck Ritter, who can’t stand my guts. *Do you know what you’ve done, you whore*?’

He had hissed his last words with explosive, pent-up fury and now grabbed her by the lapel of her blouse, jerking her close to him.

'You could have ruined me,' he whispered heatedly. 'You could have had me stripped of rank. You could have had me transferred as a guard in one of the camps. *Damn it, didn't you think of that*?'

She jerked away from him, looking at him with frightened eyes. 'No,' she said, 'of course I didn't think of that! I'm in love. I just – '

He stepped up to her again, leaned over her, wanting to crush her. 'Don't tell me you're in love. I don't want to hear those words. You said you would live your own life *quietly*, and I agreed to let you do it, then you turned it into a public performance for the whole world to see and hear. Drunk in public with your traitor! Parroting his traitorous words! And then I'm called into the office by the Reichsführer – *by Himmler*! – and told to put my own house in order. Damn you, I could kill you!'

'*Don't hit me again*!'

He had indeed raised his hand, but remembered the children and lowered it, then moved away from her, a safe distance, where his temper could cool.

Studying her, he was startled by how little she had changed, by the realization that she looked almost as young today as she had the day he'd proposed to her, ten years ago. God, how *he* had aged since then, yet this bitch had remained unchanged: still the same short-cropped blonde hair, the same green eyes, the same pale-faced beauty. He realized then, with deep bitterness, that in some helpless, torturous manner he still loved her and wanted to have her.

She *deserved* to be punished.

'I won't hit you again,' he said. 'You won't make me stoop to that. But you must put an end to this affair and keep your mouth shut in public.'

'I promise to be more careful in public. I give you my word.'

'And your affair with Lieutenant Tillmann?'

She shook her head. 'I can't... I can't possibly stop seeing him. I don't think I can do that.'

'You must!'

'I'm sorry, Ernst, but I can't. If I said I would, I'd be lying.'

'Then, my dear, I'll make it easy for you – with my Reichsführer's agreement.' Her gaze turned from confusion to dread as he savoured his own words. 'As soon as I return to barracks, I'll arrange the transfer of your

beloved Lieutenant Tillmann to a penal regiment on the Eastern Front. Do you know what that is, dear? A penal regiment is composed of soldiers who've been found guilty of some offence and given the choice between military prison or serving in a regiment used solely for the most dangerous missions. The chances of survival for the regiment's members are therefore slim, though they *do* have a chance. So Lieutenant Tillmann, your traitorous lover, will be gone within the week and is unlikely to ever return. Don't worry about trying to keep yourself away from him: you won't have a choice.'

Ingrid threw herself at him, beating at him with her fists. He grabbed her wrists and pinned them behind her back and forced her into the wall. She didn't look so pretty now, for her face was streaked with tears, and he held her until she stopped struggling and sagged in his arms. When he released her, she slid to the floor, took a deep breath, then eventually calmed down.

'I'm leaving home,' she said, 'and I'm taking the children with me. I'm going back to live with my parents in Wannsee. If you want to see the children, you can visit them there, but that's *all* you can do. We'll be man and wife only in name. That should keep your superiors happy. Then as soon as this war ends, I'll apply for a divorce. Believe me, I'll do it.'

'That's fine by me, Ingrid.'

He went in to see his children, embraced them passionately and kissed them, then quickly left the bedroom and went to the front door. He passed Ingrid who remained kneeling on the floor with her head bowed, and left without looking back, not even slamming the door.

It was a dignified exit.

'My handsome Kapitän!' Brigette exclaimed with throaty sensuality, tugging him into her embrace and pushing the door closed behind him. She was wearing only her dressing gown, through which he felt her animal heat, and he was instantly aroused by her full breasts and sly, pressing loins. Yet even as he pressed his lips to her neck, she pushed him gently away from her. 'Greedy little boy,' she said with a mocking smile. 'Did you bring me a present?'

'Yes,' he said, his ardour dimmed a little as he handed the wrapped gift to her. 'A diamond necklace – a very *expensive* necklace – from that shop on Tauentzienstrasse.'

‘Ah!’ Brigette exclaimed with a bright, greedy smile as her long, painted fingernails tore the paper open. ‘Then it *must* be expensive!’ She threw the paper on the white carpet, held the diamond necklace on high, let it dangle from her fingers, turned it around, and studied it in the wintery light slanting in through the window. ‘*Wunderbar*!’ she said softly.

‘Put it on,’ Ernst said.

‘You sound rather hoarse, my dear Ernst.’

‘Put it on!’ he repeated, with emphasis.

She stared thoughtfully at him, eventually gave a knowing smile, then placed the necklace between her breasts and clipped it behind her neck. ‘What now, my love?’

‘Take the dressing gown off.’

Brigette did as she was told, but slowly, seductively, like the professional stripper she was, and then stood before him in a lazily sensual pose, curvaceous and marble-pale, naked except for the necklace glittering on her full breasts.

‘Was I worth it?’ she whispered.

‘Yes,’ he said.

‘Then come and take what you paid for.’

He had her right there on the floor, on a carpet as soft as eiderdown, not worrying about love or its loss, surrendering himself to pure lust. Brigette wrapped her legs around him, writhed under him, rolled above him, trailed her wet tongue down the length of his heaving body and then over his lips and eyes. He wanted that and nothing else, a loveless coupling, her expertise, and his pleasure was increased by the knowledge that she cost only money. She did not demand his loyalty or arouse his emotions just to poison them; she gave him what he wanted for a price that he could easily afford. He wanted that now – his only commitment was to the Fatherland – and so he took it and revelled in his freedom and orgasmed with pleasure.

Later, when he had bathed and dressed, Brigette made him a meal that he washed down with wine and followed with cognac, after which, though it was still only afternoon, he felt drunk and self-pitying.

‘Ingrid’s leaving me,’ he confessed, ‘and she’s taking the children with her. She had a lover and now she’s leaving me! Such is feminine reasoning.’

Brigette licked at her glass of cognac. ‘*You* have a lover,’ she teased. ‘You have a mistress: me.’

‘That’s different. I’m a man. And it wasn’t until Ingrid and I were growing apart that I took up with you.’

Brigette chuckled. ‘Such is *male* reasoning, my pet! And as I recall it, Ingrid only took on a lover when she found out about you and me.’

‘She’s a whore,’ Ernst said.

‘No, darling, *I’m* a whore. Ingrid is only a wounded woman who’s now taking revenge.’

‘I don’t care,’ Ernst said. ‘I’m not interested in her motives. I only know that our marriage has been poisonous on both sides and I don’t want any more emotional involvements as long as I live. I have my work and it costs me no emotion while giving me great satisfaction. That’s all I want now.’

Brigette smiled and sipped some cognac. ‘There speaks a true man,’ she said. ‘In the end, all men turn to their work for the satisfaction they lack at home. Soon you won’t even need me: you’ll make love to the SS.’

‘You’re being sarcastic,’ Ernst said, ‘but there’s a certain truth in what you say. My allegiance to the SS, to the Fatherland, is now stronger than love or blood. The Reich towers above personal concerns and is founded on discipline. That’s what I want now – discipline – not wasteful emotions. Yes, thank God for a man’s work.’

He left shortly after, having sobered up sufficiently to drive, and went directly to the research centre at Kummersdorf, to have words with Wilson.

It was growing dark when he arrived there, the buildings swept by restless spotlights. He parked and hurried into the main hangar, past the stone-faced SS guards. Wilson was in his glass-walled office, studying drawings of a flying saucer prototype, but he raised his head when Ernst entered, to look at him with that unblinking, disconcerting gaze.

He had been in the hospital recently for some mysterious operations, and certainly they seemed to have been successful, for now, though he was gray-haired and lined, he looked otherwise remarkably youthful. And his eyes, even though he was smiling faintly, had the brightness of ice.

‘Captain Stoll!’ he exclaimed softly in his oddly glacial, polite manner. ‘This *is* a surprise! I was just about to finish up and go home. What brings you here so late?’

‘Some news,’ Ernst replied.

‘Regarding the failed test flight?’

‘Yes.’ Ernst glanced through the windows at the hangar beyond and saw the scorched, gutted saucer on the metal platform, some metal plates hanging loose. ‘Himmler was most upset – ’

‘I gathered,’ Wilson interjected dryly.

‘ – and claims that he now has more faith in the V-I and V-2 rocket project at Peenemünde than he has in our project. So, he’s going to switch his attention to that and leave us to struggle on without support, with me in charge, until he decides what to do about us.’

Ernst was startled when he saw what he thought was the beginning of a smile on Wilson’s lips, but the American, as if realizing what he was doing, retreated instantly back into a solemnity that showed not the slightest trace of concern.

‘So what’s going to happen to me?’ he asked in a surprisingly calm, almost academic manner.

‘He didn’t mention you personally,’ Ernst said. ‘I think he’s just going to forget you. You’re safe for the moment, but your time here could be limited. We’ll just have to wait and see.’

Wilson nodded. ‘Yes, Captain.’

Ernst realized instantly that Wilson was actually pleased with what he had heard.

He just wanted to be left alone.

Perplexed, Ernst said, ‘Good night, Wilson,’ then turned away and walked out.

He had a miserable three weeks, living mostly in the SS barracks, feeling depressed, and returning only occasionally to his apartment, which, having been vacated by Ingrid and the children, simply depressed him even more. However, his feeling of being in limbo regarding Projekt Saucer was resolved when, in early September, he was called back to the Reichsführer’s office.
Trying to sound as casual as possible, Himmler said, ‘You have heard, have you not, of the recent bombing of Peenemünde by the RAF?’

‘Yes, sir,’ Ernst replied.

‘Exactly *what* have you heard, Kapitän?’

‘That Peenemünde was seriously damaged,’ Ernst said, deliberately understating the case, knowing full well that on the night of August 17, Wernher von Braun’s rocket research centre on the Baltic had been bombed

by a mass of RAF Lancasters and Halifaxes, which dropped thousands of tons of explosives and incendiary bombs, reportedly almost totally destroying the complex.

'And that's all you know, Kapitän Stoll? That Peenemünde was *seriously* damaged?'

'Yes, Reichsführer.'

'Then let me give you the full facts,' Himmler said in an unusual display of frankness. 'Fifty of the important development and test buildings were destroyed, including Wernher von Braun's laboratory. Not one of the hundred-odd buildings used to house the scientists was left standing. The foreign workers' settlement was a heap of rubble. The concentration camp suffered greatly. And, finally, included among the dead were several hundred German girls from the women's auxiliary service, one hundred and seventy-eight scientific workers, Dr. Walter Thiel, and senior engineer Helmut Walther. A total loss of seven hundred and thirty-five people, plus the destruction of sewage and power lines, water mains, railway tracks, and the road running down the middle of the complex. In short, Kapitän Stoll, it was for us an unprecedented disaster.'

'I'm sorry, Reichsführer.'

'We will recover, Kapitän' Himmler insisted, sounding unusually passionate. 'We *will* recover!'

'Of course, Reichsführer. Naturally.'

As if satisfied with Ernst's confirmation of his own faith, Himmler nodded solemnly, adjusted the pince-nez on his nose, then became more relaxed.

'I'm sure I don't have to tell you,' he said, 'of my conviction that Peenemünde could not have been bombed had some disgusting traitor not betrayed us.'

'Yes, Reichsführer,' Ernst replied, despising himself for this grovelling.

'So,' Himmler said, 'because of this conviction, and also because of the subsequent air raids on the Zeppelin and Henschel-Rax works, I insisted to our beloved Führer that everything connected with the rockets should be put under the care of my SS.'

'He agreed?'

'Naturally, Kapitän. And I have since decided that the experiments involving the rockets will be moved to central Poland, the development

works to caves in the mountains near the Traunsee, in Austria, and mass production to our underground factories in Nordhausen, in the southern Harz Mountains. Meanwhile, the eastern side of Peenemünde will be rebuilt and camouflaged from the air in a way that makes it look like a deserted battlefield. You agree with this, yes?'

'It's brilliant, Reichsführer. But if we move the development works to Nordhausen, we will need to expand the labour force there.'

'That has already been arranged,' Himmler retorted, in the testy manner of a man whose judgment is being questioned. 'Three thousand prisoners from Buchenwald will be used as slave labour and housed in a new subcamp named Dora, which also will be underground. We will then expand Dora until it has approximately fifteen thousand prisoners, which should be enough.'

'Excellent, Reichsführer. I will be proud to take command of – '

But Himmler cut him short with an impatient wave of his hand, which was, as Ernst had long noted, rather effeminate. 'No,' he said. 'You will not be in command. Since I have already put you in charge of Projekt Saucer – which, I must confess, I now have grave doubts about – I am placing General Hans Kammler in charge of the transfer and, subsequently, the whole mass-production plant, which will now be known as the Nordhausen Central Works.'

'Yes, sir!' Ernst said, trying to hide his shock.

'Do you have any further questions, Kapitän?'

'No, sir.'

'Then you may leave.'

Realizing that he had just been removed from his position of authority over the SS secret weapons program and relegated to what Himmler now viewed as a relatively minor Projekt Saucer, Ernst left the SS headquarters in a state of confusion.

He took the news straight to Wilson.

CHAPTER TWENTY-FIVE

Arriving in London in February 1944 as an OSS colonel, Bradley was completely unprepared for the full extent of the city's devastation. Having remembered London from his many pre-war trips to Europe, he was shocked by the scorched, blackened ruins and debris-strewn rubble, the ugliness of the barrage balloons at the end of their steel cables, the gun emplacements in the parks, the sandbagged doorways, blackout curtains, and reinforced walls of even the city's most elegant buildings.

When he impulsively mentioned this observation to British Lieutenant Colonel Mark Wentworth-King, shortly after meeting him in the headquarters of the Special Operations Executive at 64 Baker Street, the raffishly good-humoured SOE officer told him that much of the devastation was fairly recent, because London was in fact suffering its heaviest air raids since the Blitz of May 1941.

'The blighters are coming over practically every night,' the lieutenant colonel told him, 'so keep your head down, old chap. Take a chair. Have some tea.'

Weary after his night flight from Washington but otherwise feeling unusually healthy because of his weeks of intensive OSS training in physical fitness, espionage, self-defence, and guerrilla operations, Bradley pulled up a chair at the other side of Wentworth-King's desk and appreciated the hot tea that was poured for him.

'I've never seen so many troops in my life,' he said, 'as I've seen in the streets of London today. And not only English. Also Irish, Scottish, Welsh, French, Hungarian, Polish, Australian, Canadian, and American. They formed a regular flood out there. Just how soon do you expect the big push?'

'Fairly soon,' Wentworth-King said.

British reticence. Bradley knew it and was used to it. 'Just how soon is "fairly soon," Colonel?'

‘In good time,’ Wentworth-King said.

Bradley sighed. ‘This is a pretty damned good cup of tea,’ he said.

‘Naturally,’ Wentworth-King replied. ‘It *is* English, after all.’

‘Three cheers for the English.’

Wentworth-King smiled, lit a cigarette, then glanced down at the papers on his desk and turned some of them over. ‘Mmmm ... Quite a record.’

‘Thanks,’ Bradley said.

‘The Distinguished Service Cross, the Distinguished Service Medal, and the Medal of Honour for exploits in the battlefields in France in 1918,’ Wentworth-King insisted upon reading aloud, as if he hadn’t read the documents before. ‘Unlikely member of the Republican Party in New York – ’

‘Why unlikely?’ Bradley interjected.

‘One naturally assumes that those of Irish extraction will be Democrats.’

‘I’m sorry I missed the boat.’

‘On the contrary,’ Wentworth-King continued with a slight, amused smile, ‘you didn’t miss the boat at all, but travelled far and wide on it... A successful lawyer with offices in Wall Street. Specialist in international law and used your knowledge to assess, on behalf of the US secretary of state, the military aims and capabilities of Europe, particularly Nazi Germany, before the outbreak of war. Encouraged by boredom and the fact that you were too old to take active part in this war to perform other unofficial services for General Dwight Taylor of US Army Air Force intelligence. Eventually, through him, and with the blessing of President Roosevelt, you were given the job of laying the groundwork for some kind of centralized intelligence agency, rather like our own. Worked at this in a purely unofficial, civilian capacity whilst trying to establish a more formal intelligence organization to deal with the European situation. When OSS was finally established, based on the Office of the Coordinator of Information, or COI – which ironically was based on your unacknowledged recommendations – you were invited by General Taylor to join the new intelligence organization, did so, then underwent retraining, and, as a much fitter, hopefully more dangerous man, ended up at the other side of my desk. Why, Colonel Bradley?’

‘Why *what?’*

‘Why have you ended up at the other side of my desk? Our intelligence man in Washington requests that we bare our breasts to you, though does not

tell us why. What are you *after*?'

'The benefit of your experience,' Bradley said diplomatically. 'OSS is a relatively new organization – '

'Established two years ago,' Wentworth-King interjected with the air of a man who likes to get his facts right and wants you to know it.

' – and while we're proud of our track record so far, we're willing to admit that compared to the British Secret Intelligence Service, we're pretty raw meat.'

'I beg your pardon?'

'Compared to your organization, Lieutenant Colonel, OSS is badly lacking in real know-how. I've therefore come here for two purposes: the first is to learn all you can teach me; the next is to make use of that learning for a particular mission.'

Pleased with the compliments, Wentworth-King smiled, inhaled on his cigarette, then blew a cloud of smoke. 'Exactly what would you like us to teach you that you don't know already?'

'I've already had basic intelligence training by your fellow Brits at a COI training school on a farm in Toronto. It was tough, but not enough. I'd now like to be trained in code-breaking by one of your signals intelligence units at Bletchley Park. I'd also like to be briefed on British propaganda and psychological warfare methods, including the so-called Doublecross or XX system in which, I'm informed, you use captured German spies as counteragents and playbacks.'

'Informed by whom, Colonel Bradley?'

'By your intelligence man in the White House.'

'I am reassured to hear that. Anything else?'

Bradley shrugged and spread his hands in the air. 'Anything you can give me. I'm hoping to parachute into Europe, so obviously I'll need extensive training in that. I also need to perfect my otherwise excellent French and German – and I need to know what to watch out for when I'm in Nazi-occupied territory. You get the picture, I'm sure.'

'Are you sure you're up for this, Colonel?'

'I'm an exceptionally fit forty-nine, Lieutenant Colonel, recently trained by the US Marines and some of your own boys. I think I can handle it.'

Wentworth-King nodded and offered a half smile. 'And what exactly is your mission, Colonel Bradley? Do we help you with that as well?'

‘You already have,’ Bradley said. ‘We’re after an American rocket scientist named John Wilson, who is, according to your reports, working under a false passport at a Nazi research establishment at Kummersdorf, near Berlin.’

‘Ah, yes,’ Wentworth-King said. ‘I remember him well. An interesting chap, your Mr Wilson. Not exactly patriotic, but bright, and well looked after by Jerry.’

‘We think he may be contributing more than rocket research to the Nazis.’

‘Oh?’

‘Yes. In the States, as far back as the early 1900s, Wilson was already experimenting with a crude form of atomic propulsion. When, after the Tunguska explosion of 1908, the US government attempted to take over his project, he ruthlessly destroyed most of the evidence of his work, then went underground. After working anonymously in America for a good thirty years, he fled the country and went to work just as ruthlessly for the Nazis. Since it’s also believed that he’s contributed to the Peenemünde rocket program, we’re seriously concerned about what else he’s up to and think he has to be stopped. That’s why I have to be parachuted in as soon as humanly possible.’

The lieutenant colonel sighed, tapped his teeth with a pencil, and looked decidedly sceptical. ‘Germany?’ he queried. ‘Berlin? You actually think that’s possible, Colonel? And how far do you think you would get if you *didn’t* get captured? Kummersdorf is an SS research establishment – top secret, well guarded. You wouldn’t stand a hope in hell, old son. It’s just not in the cards.’

‘It has to be,’ Bradley said.

The lieutenant colonel sighed again, as if dealing with a child, then dropped the pencil and raised his hands in the air in mock defeat.

‘I am here to serve,’ he said. ‘I’ll do all I can. In the meantime, let me take you to your lodgings and then, while you’re waiting for decisions, I’ll ensure that you learn all you need to know. Okay?’

‘Okay,’ Bradley said.

He was pleasantly surprised to find himself located nearby in a small but cosy private apartment in Shepherd Market, Mayfair. After unpacking, he lay fully clothed on the bed and tried to sleep, but instead, as he often did these days, fell in and out of troubled reveries, in which he vividly relived his happier

days with Joan, then their mutual pleasures and triumphs, and finally that ghastly day at Pearl Harbour, when she had died in his arms.

He still cried at remembering that.

Bradley wept. The tears rolled down his cheeks. Lying there on his back, he was consumed by a dreadful anguish, a grief that was mixed up with guilt because he, who had been with Joan at the time, had actually survived. He knew to think this way was senseless, an aberration of wounded emotions, but the thought that he hadn't deserved to live when Joan had died was one that never quite left him. It also brought back the memories, waves of love, pits of guilt, making him see the good and bad in their marriage dreadfully magnified... Yes, the two years since her death would have been hell had it not been for OSS.

General Taylor had rescued him, inviting him into the organization, ensuring that throughout the year immediately following Joan's death, Bradley was worked to exhaustion and distracted relentlessly. He'd been reacquainted with marine training, introduced to new weapons, taught espionage, self-defence, and guerilla operations, turned into the kind of fighting machine that murders quietly in darkness. He had become someone else, someone busy, never alone, and when it was finished, when he was fit and highly skilled, Taylor had put him to work. He had spent another year in America, tying up the loose ends on Wilson, and only then had he been shipped out to London... to find himself in this comfortable, private apartment, weeping tears for the dead.

Thank God, he had work to do.

He slept through the afternoon and awakened in darkness, when he remembered to pull his blackout curtains across before turning the lights on. Then he had a bath, put on his army uniform, poured a drink, and took Gladys Kinder's letters out of his kit bag. There were a great many of them – she was a prolific writer – and he spread them out in separate years on the bed and then started reading them.

She was part of his guilt.

Her letters formed a vivid picture of the life she had led over the past decade: the Spanish civil war, then Czechoslovakia and Italy, then the fearsome days of the Blitz and London as a city at war, at once defiant and tragic. The letters had told him about all that, but also about her private life – the numerous men she had known, her good and bad affairs, her fear of

losing her independence combined with the fear of growing old alone – and they had told him, in racy jokes with a serious subtext, that she had fallen in love with him the minute she met him, had never quite forgotten him, and even now cherished the memory of him and wrote to him to touch him.

They were extraordinary letters.

It wasn't surprising that his throat became dry when he picked up the telephone.

She answered immediately.

'In my letter I told you to call me at eight-thirty p.m.,' she said, 'and you called on the dot. It can only be Mike Bradley calling. Welcome to London, Mike.'

He was smiling already.

They agreed to meet an hour later in a famous pub in Soho, in the West End, and when Bradley left his apartment, he felt like a nervous schoolboy going on his first date.

With the blackout in force, he found himself in moonlit darkness, walking along with the aid of a torch beamed down at the pavement. He went along Half Moon Street, turned into Piccadilly, and walked toward the Circus, passing the Ritz Hotel and the elegant facade of Fortnum & Mason, also passing inky black doorways surrounded by sandbags and often filled with the shadowy figures of men and women in intimate contact. He heard chuckling and ecstatic groaning, voices calling invitingly to him, and saw cigarettes glowing in that darkness where other women were waiting.

At first he was disbelieving, then shocked, then amused and touched, and soon accepted that a city at war was a place like no other.

This was more evident in Piccadilly Circus, where cars, taxis, tramcars, and buses, all with their headlights dimmed, crawled through a flood of soldiers, sailors, airmen, and their women, as they poured around Eros, mostly drunk and in good cheer, then swept along Shaftesbury Avenue, to tumble, with much shouting and laughing and giggling, between piled-up sandbags and through blackout curtains, into the countless pubs and clubs that were spread liberally, noisily, around the network of packed side streets that led into Soho.

Bradley too eventually slipped between piled-up sandbags and through blackout curtains to find himself in a smoky, old-fashioned pub jam-packed

with servicemen of every nationality. Having been warned about this by Gladys, he tried to find her in the jostling mass of noisy revellers, failed to recognize her, so fought his way through to the bar and tried to order a whiskey. He failed at that also, because the barman was too busy, but then a hand fell on his shoulder and squeezed it affectionately as a woman's voice called out to the barman, 'John! Get my friend here a Scotch! And be quick about it!'

Mike turned and saw Gladys Kinder smiling at him in that vividly remembered, still laconic manner. She was ten years older and had gray in her auburn hair, but otherwise she seemed just the same and he was instantly drawn to her.

'Well, well,' he said, finding himself bereft of better words. Then, feeling ridiculously formal, he offered his hand.

Gladys looked down at his hand, grinned in amusement, then took hold of it and vigorously shook it.

'You're too much,' she said. 'You're more formal than the English. I didn't expect to find you tearing my clothes off, but to not even get a kiss on the cheek – '

'You're right,' Bradley said. 'Sorry.' He leaned forward and kissed her cheek, feeling childishly embarrassed. Then he was given his glass of whiskey by the barman and raised it to Gladys. She touched her glass to his and they both drank, then smiled at one another in a silence that was awkward only on Bradley's side.

'God,' Gladys finally said, 'it's good to see you again after all these years. You're still the most attractive man on earth, though I know you'll hate me for saying it.'

'No, I won't,' Bradley said, even though he was blushing. 'I'm embarrassed, but I can't help feeling pleased. All men are boys in the end.'

'How right you are, Mike.'

'You're looking good.'

'That's a pleasing white lie. I'm forty-eight this year and I don't like it, though I'm learning to live with it. In London, in this war, that's much easier to do, since there's nothing like the constant threat of death to make you appreciate life, regardless of age and a spinster's traumas.'

'I can't imagine you suffering such traumas.'

She grinned and shrugged. 'Well, not really. Reporting this war keeps me

busy, as well as giving me the chance to meet a lot of people. As for men, since I'm always interviewing those fighting the war, I know more men than I can count, and in that sense have a pretty good time. Still, I needed to write to you, Mike. I only met you twice, but I really missed you and that's something I can't ignore. I hope you missed *me* a little bit.'

'Yes, Gladys, I did. And that took me by surprise. I didn't know how much I'd miss you until you left and then I couldn't believe it. I mean, after only two meetings...' He shrugged. 'It seemed unbelievable.'

'Romantic?'

Bradley blushed again. 'Yeah, I guess it was, in a way. And I really loved getting your letters, and that seemed odd as well.'

'Love at first sight, Mike.'

'I can't believe in that, Gladys. Some people, they just meet and hit it off – and I guess we were two of them. It's a rare kind of friendship.'

'Can men and women be friends that way?'

'Yes,' Mike said doubtfully, 'I think so.'

'Nothing sexual? Not even a little bit?'

'You're teasing me, Gladys.'

She chuckled at that, finished her drink, ordered two more. 'Anyway,' she said, 'I'm sorry about your wife. That must have been hard on you.'

'It was. I even stopped reading your letters for a while. They just made me feel guilty.'

'I teased you a lot in those letters.'

'That's right, Gladys, you did.'

'And you never knew when I was joking or not?'

'No.'

She chuckled again, this time in a throaty, sensual manner. 'I'm a regular bitch that way.'

'I used to get disturbed.'

'And now?'

'We're here as two old friends.'

'Anything you say, pal.'

Yet her broad grin got to him, drawing him into her warmth, and he knew that he was lying and was not just her friend: that he had been attracted to her from the start and felt that way right now. It was ridiculous (they were too old for such nonsense) but there it was, plain as day. There was something lasting

between him and Gladys Kinder, and he couldn't deny it.

He felt that he'd known her forever.

'So what are you actually in London for?' she asked him as they sipped at their fresh drinks.

He glanced around the crowded pub, saw sweaty faces through clouds of smoke, the uniforms of many different nationalities; heard a piano pounding in the far corner, voices singing a bawdy song.

'Are you asking as a friend or as a journalist?'

'Take your pick,' she replied.

Bradley grinned at that. 'It's too noisy to talk in here,' he said. 'Can we go for a walk?'

'Sure, Mike. Let's go.'

They finished their drinks and left the pub, wandered through Soho, which was packed, then crossed Charing Cross Road, took some dark side streets, and ended up in Covent Garden Market. They kept their torches turned down, making their way through moonlit darkness, passing the empty vendors' carts, which were covered in canvas for the night, and then crossing the much busier Strand and on down to the Embankment, where the moonlight and stars shone on the River Thames and streaked the water with silver. There were whores along the Embankment as well, negotiating with the servicemen, and Bradley felt a little embarrassed when he passed them with Gladys.

'I love it,' she told him, as if sensing his embarrassment. 'The less violent, more human commerce of war: a pound of flesh for some silver. You can't keep human nature down. So,' she added, getting back to her last question, 'why *are* you in London?'

'I'm a member of OSS,' he said. 'Have you heard about it?'

'Of course, Mike. The Office of Strategic Services. A fairly new intelligence agency. Are you somehow linked up with the invasion?'

'No. I'm still after Wilson. That's why I'm here.'

Taken by surprise, she stopped walking and stared at him, then she shook her head and gazed across the river, to where the warehouses of the docks were silhouetted against the clear, starlit sky.

'I'd forgotten all about him,' she said. 'That old man who was great in the sack. Good God, he must be over seventy by now! Is he still alive?'

'We think so,' Bradley said, standing beside her, shoulder to shoulder.

‘We receive reports from European resistance groups and he still features in them. At least an American scientist does, so we assume that he’s Wilson. We think he helped the rocket scientists and is working at a research establishment near Berlin. The Brits aren’t concerned about him – they’re willing to wait until the invasion – but our government still wants to talk to him about a few things, notably the Tunguska explosion that you told me about and, even more worrying, about what he’s creating for the Nazis. We have reason to believe he’s creating an extremely powerful weapon that could be turned against us when we attempt the invasion. That’s why I want to go now.’

‘*Go* now? You mean parachute into Germany?’

‘Right.’

‘Goddammit, Mike, that’s crazy. It’s plain suicidal.’

‘I think I can make it.’

‘You think wrong, believe me.’

‘I still want to go.’

‘Why not wait until the invasion and follow the troops into Germany?’

‘They may not get there.’

‘They will. And in the meantime you could have a good time in London, the world’s finest city.’

‘I can’t wait that long.’

‘It won’t be long.’

‘You don’t know that.’

‘I know it’s going to be this year. *Everybody* knows that.’

‘I don’t care. I want to go as soon as possible. I’m frightened that he’s going to create something unbeatable before we get there to stop him. If he can invent something more powerful than the rumoured rockets, he could prevent us from winning the war.’

‘The secret weapons are only rumours.’

‘I’m not too sure about that.’

‘And that’s why you can’t wait to get to Wilson?’

‘Yeah, right.’

‘I’m sorry, Mike, but I don’t believe that. I think it’s something much more than that.’

‘Such as?’

‘You tell me.’

Bradley sighed. ‘I’ve got a bee in my bonnet about this Wilson. He’s haunted me for years. I have to meet him, face to face, and find out exactly what makes him tick. He appears to have few normal feelings – you confirmed that when we first met – but he’s clearly a genius, he wants anonymity, and his ruthlessness appears to know no bounds. The man’s like a ghost: he exists and yet he doesn’t. I dream about, or imagine, the things he’s invented and they keep me awake at night. I know all about him, yet know nothing. I have to study his face.’

‘You’ll see nothing but the face of pure logic: a void that transcends morality. You’ll see the end of the world.’

‘Maybe that’s what I’m after.’

Gladys was just about to reply when a distant siren wailed, then another, and another, until the very air seemed to vibrate with that terrible sound: a high, nerve-shattering wailing.

‘What the hell…?’

‘Those are the air-raid sirens,’ Gladys said. ‘That means the Germans are coming. Have you ever seen an air raid, Mike?’

‘No.’

‘Then let’s stay right here.’

‘Aren’t we supposed to take shelter?’

‘They come over nearly every night,’ Gladys said, then reached out for his hand. ‘Let’s just stay here and watch.’

Glancing left and right along the Embankment, Bradley saw men and women hurrying in every direction, heading, as Gladys explained to him, for the concrete-and-brick air-raid shelters, the platforms of the underground train stations, or the more comforting confines of pubs, clubs, hotels, or even the rooms of prostitutes. Even as he was watching them, he heard a distant, muffled rumbling emerging out of staccato explosions, and he looked along the river to where clouds of black smoke were bursting under the stars and being criss-crossed by phosphorescent lines of tracer bullets that formed a web around the rise and fall of shadowy shapes flying in from the sea.

He was looking at an immense fleet of German bombers – too many to count.

‘God almighty!’ he whispered.

Gladys squeezed his hand and the wind beat at his face as more ack-ack guns opened fire. The beams of searchlights swept the sky. He heard the

distant explosions, felt the ground beneath him shaking, and saw clouds of black smoke billowing up from sheets of yellow flame and spreading out to cover the rooftops in a sky turning crimson.

'They're pounding the docks,' Gladys said. 'God help the poor bastards there.'

She squeezed his hand again and he appreciated the gesture, being almost overwhelmed by the spectacle along the river, by the knowledge that the fabulous mixture of fire and smoke and light was being created by destruction and death on a terrible scale. Over there, where the bombs were falling, people were dying in flame and smoke, being crushed and suffocated and incinerated and blown apart, while the buildings were collapsing into rubble and hot ash and choking dust.

Yet from here it was beautiful.

Bradley choked up with emotion, feeling torn by awe and shame, then raised Gladys's hand to his cheek and pressed her knuckles into his skin in mute affirmation. Then the bombers were overhead, suddenly roaring like ravenous beasts, and he actually saw the bombs falling, turning lazily in the moonlight, and then the river erupted in a series of mighty explosions, the water geysering up and fanning out and raining down over the debris of the boats that had been hit and blown apart while he was blinking.

Icy water poured over him and he pulled Gladys down, held her tight behind the wall, and looked up to see the British fighter planes, the famous Spitfires, descending on the German bombers like birds of prey, their guns spitting fire as they dove and climbed and returned, until one of the bombers exploded, shuddered in mid-air, erupted in fire, and went down through a black pall of smoke that obscured its last seconds.

The rest of the bombers passed on, heading toward the East End, still dropping their bombs, their guns firing at the attacking Spitfires. Gladys tugged at Bradley's hand. Looking at her, he saw her pointing toward the city. The dome of St Paul's Cathedral, majestic in its halo of criss-crossing searchlights, towered over the rubble that burned and smoked far below, protected, as if by a miracle, from the destruction surrounding it.

Bradley's heart was racing. He wanted to cry with joy. He felt Gladys' hand, her fingers slipping between his, then she raised his hand to kiss his fingers one by one as the ground shook and bellowed. Bradley took a deep breath, tasted smoke, heard more bombing. Then he saw Gladys' face,

erratically illuminated in flickering crimson and white light, moving in toward him, her eyes wet, until her lips touched his. They kissed there, on the Embankment, kneeling behind the protective wall, then clung to one another, exploring each other like children, and stood up only when the bombers had returned and flown back to the sea, leaving silence and a pall of black smoke that was streaked with red flames.

'I love you,' Gladys Kinder said.

Bradley was speechless.

Of course, she laughed about it later. She had meant it, but she laughed about it. She told Bradley that the expression on his face had just made her want him more. Yet they didn't go to bed together. They talked around it, but didn't do it. Bradley wanted to do it, but felt foolish, too old, and Gladys said that to do it would probably spoil a beautiful friendship.

'Right,' Bradley said. 'I agree.'

He loved being with her, loved her flirting and teasing, and was enthralled by her conversation, her stories of politics and war, and was jealous when she mentioned the many men she had known over the years. She showed him the city, always kissed him good night chastely, and in letting him know she loved him and simply wanted to be with him, she raised him out of the grave of his grief and turned him into a new man.

Yet he still wanted to complete his mission, to find Wilson before it was too late. After five unparalleled days with Gladys, he tried to get back to work.

'I'm sorry,' Lieutenant Colonel Wentworth-King said after pouring Bradley a cup of tea in his cramped office in the busy SOE headquarters, 'but your request to parachute into occupied Europe has been denied.'

'*What*?'

'I think you heard me.' Wentworth-King sat behind his desk and lit one of his awful British cigarettes. 'You will not be allowed into occupied Europe until after D-Day.'

'What the hell!'

But Bradley's intended protest was cut off by an airy wave of the hand and a rather chirpy, British public-school grin. 'Fear not,' Wentworth-King said, holding up a bulging, official envelope. 'You have not been forgotten. I have here, in this envelope, enough detailed instructions to keep you busy for

the next year or so – and certainly busy enough until the invasion.' Still grinning, he handed Bradley the envelope while asking, 'Did you know about this when you first came to see me?'

'No,' Bradley said, staring at the bulky envelope. 'Whatever it is, I don't know a damned thing about it.'

'Operation Paperclip,' Wentworth-King explained. 'You were concerned with the Peenemünde scientists, I believe?'

'Yes,' Bradley said.

'Well, OSS has decided to mount an operation, code-named Paperclip, to seize the German rocket teams and prevent them from falling into the hands of the Soviets, who will also be greatly interested in them.'

'And what about Wilson?' Bradley asked.

'According to reports recently received from the same European resistance groups that originally informed us about the Peenemünde rocket project, the rocket teams have recently been moved from the Baltic to underground sites in Nordhausen, and possibly nearby Bleicherode, in the southern Harz mountain ranges of Thuringia. Since those establishments are top secret and under the control of Himmler's most trusted SS troops, and since we're no longer talking about an occupied country, where you might expect assistance, but about Germany itself, it's felt that a parachute drop into Thuringia would be suicidal. It's therefore been decided that your time would be spent more profitably in mounting, staffing, and planning the specific aims of Operation Paperclip, which will come into effect once Europe has been breached.'

'That may be too late,' Bradley said in growing frustration. 'If Wilson's already helped the Nazis to build remote-controlled rockets, God knows what else he has in the pipeline. We have to stop him *before* the invasion commences, since he might come up with something even worse than the reported Peenemünde rockets.'

Wentworth-King simply shrugged. 'Can't be helped, old chap,' he said. 'For a start, we simply can't have anyone parachuting into Germany at this particularly sensitive point in time. Second, it's believed that Wilson, whilst contributing to the V-1 and V-2 rocket projects, was never actually a member of von Braun's team and is therefore probably still at Kummersdorf – which makes it even more sensible for you to follow the invasion troops into Berlin, once the invasion is underway. Either way, you're staying here, old son, until

Operation Overlord commences.'

'And when will that be?'

'It's all down to the tides,' Wentworth-King said, 'and here in England they *can* be unpredictable. In the meantime, I suggest you collect who you want for Operation Paperclip and otherwise enjoy your time in London. Anything else?'

'Go to hell,' Bradley said.

He stormed out of the lieutenant colonel's office with the bulky envelope under his arm, on the one hand bitterly disappointed and even outraged, on the other hand surprisingly, helplessly relieved that at least he could see more of Gladys Kinder, who had given him back the will to live.

She was a huge consolation.

CHAPTER TWENTY-SIX

'We *must* talk to them,' Wilson said as Ernst drove him from the BMW plant in the Berlin suburb of Spandau, back around the dreadful ruins caused by increasing Allied bombings, and then south toward the research complex at Kummersdorf. 'As you've just seen, the new multidirectional jet propulsion system for the flying saucer works beautifully and can be installed any day now. Once we do that, we can arrange a test flight of the saucer, but we must sort this business out first.'

'It's dangerous to go behind Himmler's back,' Ernst insisted, glancing out at the bombed suburbs, the skeletal houses and mountains of rubble, and deciding that he must persuade Ingrid, who was living with her parents in the nearby suburb of Wannsee, to move out of Berlin before it was too late. 'No one can be trusted these days. If they talk, we'll be shot.'

'They won't talk,' Wilson replied, looking straight ahead, thinking, his eyes bright with that icy intelligence that seemed not to know fear. 'Like you, they're now wary of Himmler's state of mind and think he's becoming unpredictable. They're also worried about how he'll react when the end finally comes – and they know it's coming.'

'*No one* knows that,' Ernst insisted, clinging stubbornly to a vain dream. 'The Allies haven't yet launched their invasion and might never do so.'

'They will and you know it.'

'We can use the rockets against them.'

'The rockets won't be enough to stop them. Now nothing can stop them.'

'Don't sound so pleased,' Ernst said.

'I *am* pleased,' Wilson confessed. 'Not because of my countrymen, nor because of the British, but because I want to go where I can work without feeling threatened.'

'Does *nothing* else matter to you?'

'No,' Wilson said flatly.

Ernst glanced to the side as they passed some blackened ruins. He saw a

one-legged child hopping along on crutches, surrounded by other children, all of whom were looking for valuables in the high mounds of rubble in which broken glass and twisted metal glinted in the light of the sun. The ruins were extensive, surrounding him on all sides, and he thought of the awesome power of modern technology and then glanced at Wilson.

He was seventy-four years old but looked perhaps sixty.

Ernst knew that it was due not only to a lifetime of strict dieting and the ruthless application of mind over matter – Wilson's will was unyielding and he used it to recharge his energy – but also due to the surgical operations that he'd recently been having in various SS hospitals. Operations on the stomach, on his varicose veins and joints, reportedly even on the heart, perhaps more than that. The experimental work had been done on humans, on the inmates of the camps, and then Wilson, when he thought the risk reasonable, had them performed on himself, so far with remarkable results. Indeed, at seventy-four years of age he was more vigorous than Ernst.

And Wilson was different from other men in more ways than one.

Exactly what was he?

Ernst thought of him as a mutant, a creature not quite human, someone who had transcended normal emotions to embrace the god of pure logic, beyond kindness or cruelty. Ernst had tried to find out why – what childhood trauma had perverted him – but every record indicated that he'd had a lonely childhood, his parents strict but decent, so the only explanation for his unique personality was his extraordinary intelligence. Such intelligence is beyond pity, feeding on logic, not emotion, and Ernst was now convinced that Wilson was an evolutionary accident, the product of pure reasoning, a human being for whom emotions were no more than unwelcome distractions. He was neither cruel or kind, good or bad, right or wrong: He was a creature impelled by the inhuman force of his mind: a mutant, without emotions, the personification of man's evolutionary drive toward mathematical absolutes.

His was the face of the future.

Ernst shivered involuntarily, gripped the steering wheel tighter, and was feeling decidedly uneasy when the ruins of Berlin gave way to open fields and eventually, as clouds covered the sun, to the barbed-wire fences and heavily guarded main gate of the research complex at Kummersdorf.

Waiting for them in Wilson's office in the main hangar were Hans Kammler, the blond, blue-eyed, former head of SS construction programs,

now a brigadier and in charge of the Nordhausen Central Works in the Harz Mountains of Thuringia; and Artur Nebe, former commander of one of the notorious Action Groups in Russia, head of the dreaded *Kriminal Polizei,* or Kripo, the Prussian intelligence service, and now a full general of the SS, though his allegiances shifted with the wind and his actions were shadowy. Both men were wearing their SS uniforms and looking slightly annoyed.

'You're late,' Kammler said.

'I'm sorry, sir,' Ernst replied. 'We were observing a test at the BMW plant at Spandau and it took a little longer than expected.'

'I'm not interested in excuses,' Kammler said. 'My time is limited and I resent waiting for anyone, much less for an officer of lower rank.'

'Yes, sir, I understand, but – '

'How are things at Nordhausen?' Wilson asked, deliberately changing the subject in an unusual display of tact.

'Livelier than they are here,' Kammler said.

'The rockets are still being produced?'

Kammler practically sneered. 'Of course, American,' he said. 'A total of one hundred and forty V-2s were produced in January and February alone. Another hundred and seventy were produced in March, and a further three hundred in April. With luck, we'll soon be aiming them at London, and then – '

'They won't stop the invasion,' Wilson said. 'They'll just cause a nuisance.'

'And your flying saucer will do better?' Nebe asked sceptically.

'Yes,' Wilson said.

'So far it hasn't even flown,' Kammler said.

'The saucer we've been openly testing is Rudolph Schriever's adaptation of my work. The saucer I'm talking about, the *Kugelblitz,* is the one we've constructed at Spandau without Schriever's knowledge. We've just tested the new jet engines today and now know it will fly.'

General Nebe, who was a lover of intrigue, leaned forward in his chair to say, 'What's the difference between your saucer and Schriever's? And why haven't you told Schriever about yours?'

'Because I don't trust Himmler,' Wilson said boldly, 'and Schriever is Himmler's man.'

Ernst felt a tremor of fear, but willed himself to show nothing, He caught

Kammler's searching glance and looked away, too nervous to meet it.

'We are *all* Himmler's men,' Nebe said softly.

'Himmler's not the man he once was,' Wilson replied. 'It's rumoured that he sees the end in sight and is starting to crack up ... just like the Führer.'

There was a long, dreadful silence, as if everyone was in shock, then Kammler, coughing into his fist, said, 'Continue, American.'

'As you know, it was Himmler's dream to create a colony of SS élite under the ice of Neuschwabenland in the Antarctic and protect it from the world with highly advanced weapons, including my saucer.'

'Yes,' Nebe said, 'we *do* know.'

'Then you must also know that the first of the underground accommodations has been constructed, that some of the finest SS troops, some scientists, and the necessary slave workers have already been shipped there, and that an escape route has been organized for those of us who wish to avoid imprisonment or even death here in Germany.'

'Yes,' Nebe said, 'we do. And we also know that your flying saucer is supposed to be the ultimate weapon, but now you tell us these stories. I repeat: I want to know about you and Schriever. Why the deception?'

'Because it's my belief that Himmler's forgotten the Antarctic and thinks only of using the saucer to fight the Allied invasion, when it comes.'

'And if, as you say, your saucer works, what's wrong with that?'

Wilson turned his gaze upon Kammler, who had spoken with icy sarcasm. 'Because to stop the invasion we'd need a great number of flying saucers and there's no way we can construct them in time. And that in turn means that if Himmler's paranoia keeps him in Germany, the war, the Antarctic colony, and the saucer will all be lost to the Allies. And then all of us – me and Captain Stoll here, you, Brigadier Kammler, and you, General Nebe – will undoubtedly be tried as war criminals, found guilty, and hanged.'

There was another uneasy silence, a brief trading of questioning glances, then Kammler, his blue eyes clear beneath the blond hair, said, 'So we make our escape to the Antarctic... with your flying saucer... without Himmler... Which gets us back to Schriever.'

'You're a clever man, Brigadier.'

'I don't need your compliments,' Kammler said. 'Just tell us your plan.'

Awed by Wilson's icy control, but also terrified of where it was leading, Ernst glanced across the large hangar and saw Schriever's saucer on its

platform. Yearning for a cigarette but frightened of lighting one, he returned his gaze to the men in the small, spartan office. Kammler and Nebe were an odd couple, one blond and blue-eyed, the other dark and unreadable. Wilson, with his silvery-gray hair and lined face, was as unfeeling as stone.

None of these men is truly human, Ernst thought, *and I have sold myself to them.*

It was a dreadful admission...

'If Himmler gets any worse,' Wilson said, speaking softly, seductively, 'he'll change his mind completely about the Antarctic and refuse to let us go there. He'll want us to make a last stand in Germany – to go down with the Führer.'

'Yes,' Nebe said. 'He will.'

'Our first task, then,' Wilson continued, 'is to make him forget Projekt Saucer and turn his attentions elsewhere.'

'Understood,' Kammler said.

Wilson nodded. 'Since for the past couple of years I've only been testing the Schriever saucer – which will fly, but not much – and letting Schriever take most of the credit for it, Himmler now trusts Schriever more than he trusts me. However, he's already turned away psychologically from the project and instead is pinning most of his hopes on the V-2 rocket program.'

'Which is exactly why he placed me in charge of it,' Kammler noted.

'Correct,' Wilson said. 'Which is all to the good. We can't trust Schriever, who knows nothing about the Antarctic, so we have to get rid of him while keeping Himmler happy and giving us the freedom to prepare our escape without interference.'

'We are listening,' Nebe said.

Ernst sucked his breath in, feeling tense, and saw Wilson's quick glance. Then, to his amazement, Wilson smiled, almost victoriously, before turning back to Kammler and Nebe.

'The prototype for the real flying saucer,' he said, 'is a small, saucer-shaped, remote-controlled anti-radar device, which I've dubbed the *Feuerball* because, when it flies, it turns white hot and becomes a ball of fire.'

'I know nothing about this,' Kammler said, looking upset.

'No,' Wilson said, 'you didn't, but now you do... Because now is the right time.'

'Please explain,' Kammler ordered icily.

‘The *Feuerball* is an armoured object powered by a special turbojet engine that’s radio-controlled at the moment of takeoff. Then, attracted by the enemy aircraft’s exhaust fumes, it will automatically follow that aircraft, automatically avoid colliding with it, and automatically short-circuit its radar and ignition systems. During the day this device looks exactly like a shining disc spinning on its axis – or a silver ball – but by night it looks like a burning globe. This is actually a fiery halo around the armoured device, caused by the exceptionally rich chemical mixture that over-ionizes the atmosphere in the vicinity of the target and so subjects it to extremely damaging electromagnetic impulses.’

‘And if this *Feuerball* is faced with the guns of the aircraft its pursuing?’ Kammler asked.

‘It will fly away automatically,’ Wilson replied.

‘How come?’

‘A thin sheet of aluminium has been inserted under the armoured plating of the *Feuerball,* and this acts as an automatic defensive switch. A bullet piercing the armoured plating will automatically establish contact with that switch, trip a maximum acceleration device, and cause the *Feuerball* to fly vertically out of range of the enemy aircraft’s guns.’

‘Sounds wonderful,’ Kammler said. ‘But what’s the difference between the small, so-called *Feuerball* and your large flying saucer, the *Kugelblitz*?’

‘Schriever’s saucer is in fact a crude form of flying saucer, constructed from ordinary metal and using a primitive propulsion system. The *Kugelblitz,* on the other hand, is a piloted version of the *Feuerball.* It has the advantage of being constructed from a special metal and also using the most advanced form of jet propulsion that’s yet been invented.’

‘I’m not an engineer,’ Nebe complained.

‘The *Feuerball*,’ Ernst explained, directing his words to Kammler, who like him was an engineer, ‘is a perfectly symmetrical disc, devoid of all surface protuberances. Nevertheless, even with the *Feuerball*, the boundary layer limits its speed. In order to get rid of the boundary layer completely – and in order to make use of the dead air, not only for acceleration, but for manoeuvring as well – what Wilson required was a porous metal that would act like a sponge, remove the need for air intakes altogether, and create what our famed engineer Schrenk called *frictionless airflow.* Such a metal was recently created by our scientists at Gottingen and Volkenrode: a compound

of magnesium and aluminium, called *Luftschwamm,* or aerosponge. Wilson used it for the construction of all his flying saucers, thus solving the problem of the boundary layer and, thus, all previous limitations on speed and manoeuvrability. The *Feuerball* and the *Kugelblitz*, then, are extraordinary aircraft.'

'You've already described the *Feuerball*,' Kammler said, looking more interested. 'So apart from its size, why is the *Kugelblitz* even better?'

'The *Feuerball*,' Wilson said, 'not only spins around its vertical axis, but automatically follows its target, makes its target's radar and ignition malfunction by filling the immediate vicinity with a gas that, when burning, creates a damaging magnetic field, and also flies away automatically when attacked. Yes?'

'Yes,' Kammler agreed.

'Now let us enlarge this flying fireball,' Wilson said, as if giving a lecture in a classroom. 'The larger disc, *the Kugelblitz*, will also spin on its own axis, but with the addition of gyroscopic stabilization, a pilot's cabin can now be placed on that axis, with the main body, or engine, of the disc spinning around the fixed cabin. We then add to the enlarged, pilot-carrying disc a form of radio that can cancel at the pilot's discretion the return signals, or blips, from the enemy's radarscope and so render our flying saucer undetectable. Next, we have electromagnetically or electroacoustically controlled firing weapons, we have cannons that spit ignition-damaging gas instead of shells, we possibly have various laser or pulse-beam weapons – in development right now – and we have devices that ensure that our flying saucer will automatically retreat from enemy attacks. Add to all this the fact that the disc is made of an alloy – courtesy of the Riva del Garda complex – that can withstand enormous pressure and a temperature of one thousand degrees Centigrade and that, being porous, can take the air in like a sponge and then use it to increase its own propulsion to almost unbelievable speeds.'

Still an engineer and unable to hold in his excitement, Ernst found himself leaning forward in his chair to say excitedly: 'Add it all up and what have we got?'

'The *Kugelblitz*,' Nebe said quietly.

'Yes!' Ernst exclaimed. 'The enlarged and enhanced offspring of the *Feuerball.* A *piloted* machine in which a single mass of wing, tail, and fuselage has been formed into the one gyroscopically stabilized, vertical-

rising, soon-to-be supersonic flying disc.'

'That's our strength,' Wilson said.

'So how do we protect it?' Kammler asked.

'We're back to Schriever,' Nebe said.

Yes, Nebe enjoyed intrigues – they were food and air to him – and Ernst looked into the dark light of his gaze and saw the blood that had formed it. Nebe would take new life from this conspiracy and become its strong arm.

'Yes,' Wilson said, 'we're back to Schriever. Now that Himmler trusts Schriever more than he trusts me, we must confirm him in his faith by telling him that I'm trying to impede Schriever's progress, that for that reason we should be parted, and that Schriever should be given his own research centre elsewhere – somewhere less accessible either to me or to the Allies – to enable him to continue his work without interference.'

'Which in fact means that *you'll* be able to continue your work without interference,' Nebe said, enjoying this, 'and that the escape route to the Antarctic can be organized out of sight of Schriever's spying eyes.'

'Precisely,' Ernst said, surprised to hear himself sounding so enthusiastic, but unable to help himself. He had wanted to be a scientist, after all, and this was pure science.

However, Kammler simply stared coldly at him, before turning to Wilson. 'I'll do it,' he said. 'Clearly there's no choice. It will be your task, over the next few weeks, to let Schriever steal – for want of a better word – the credit for the *Feuerball* and to convince him that its basic principles can be used to enhance his own saucer. When you've done that, he'll undoubtedly take the *Feuerball* to Himmler and I, being in charge of the project, will be informed. I will then do as you've suggested and recommend an area near Prague, in Bohem, as the new location for Schriever's project. This will ensure that he's not in Berlin when the Allies arrive here.'

'And if the Allies arrive here,' Wilson said, 'they'll also get me.'

'Correct,' Kammler said. 'So, since I'm also in charge of the rocket program at Nordhausen, I will also request that your project be transferred to Kahla, a small village near there, where, as I'll tell the Reichsführer, I can keep my eye on it, ensure that any innovations you may come up with are passed on to the more important rocket program, and protect both projects more easily from the Allies as they advance. I think he'll fall for this.'

'So do I,' Wilson said.

‘And from there, in the Harz Mountains,’ Nebe said, ‘we can make our escape when the time comes.’

‘So be it,’ Kammler said.

Ernst glanced at Wilson, saw the shadow of a smile, and knew in that instant, beyond doubt, that he would get what he wanted.

A few hours later, when darkness had fallen, as Allied bombs fell from the sky and Berlin blazed and crumbled, Ernst made loveless love to Brigette, burying himself in her slick thighs, and accepted that any future he might have would be mapped out by Wilson.

Berlin burned all around him.

CHAPTER TWENTY-SEVEN

Bradley awakened late in the morning to the familiar sound of broken glass being shovelled out of the gutters in the street below. Slightly hungover from the previous evening's pub crawl with the indefatigable Gladys Kinder, and not helped by a restless night in which new, disturbing sounds had been added to the German bombings, he groaned melodramatically, rubbed his eyes, then sat up on the bed.

It was nearly eleven o'clock. Sunlight was slanting in between the curtains, illuminating the empty space beside him in the bed, where he wanted Gladys to be, though he sometimes said otherwise. She had been there for drinks and he had often walked her back to her room in the Savoy Hotel, but beyond good-night kisses and the silent touching of foreheads, he and the notoriously bold-tongued Gladys had done nothing at all.

It made him feel like an adolescent, which was not a bad feeling.

Slipping out of bed, he pulled the curtains back and looked down into the street just off Shepherd Market. A bomb had fallen nearby, a few streets away. While the buildings opposite had been untouched, the blast had shattered the windows and the broken glass was being shovelled up into a garbage truck by men in navy-blue overalls.

That familiar sight made Bradley think of the previous night's air raid – which seemed to have lasted throughout the early morning – and reminded him that in his restless, drunken state of semi-consciousness, he'd been convinced that the sounds of the raid were different from normal.

I'm hallucinating, he thought ruefully, shaking his head from side to side.

He was about to go into the kitchen to make some coffee when the telephone rang.

'Hi,' Gladys said. 'It's me.'

'Who's me?' he asked, teasing her.

'Don't even bother trying,' she responded. 'Are you at least out of bed?'

‘Just about, Gladys. I don’t think I can keep up with you. All those years mixing with hard-drinking service guys have made you immune to hangovers.’

‘You have a hangover?’

‘Yep. And that air raid didn’t help me, either.’

‘It wasn’t an air raid,’ she said.

‘Pardon?’

‘It wasn’t an air raid. Not one German plane was seen. We were attacked by the long-rumoured German secret weapons: pilotless planes or remote-controlled rocket bombs, depending on which report you accept. Either way, those pilotless things were buzzing down on London and the south of England all night and exploding all over the goddamned place.’

‘Jesus Christ!’ Bradley whispered, hardly believing what he was hearing. His thoughts turned instantly to the rocket program at Peenemünde and Wilson’s unofficial involvement with it and other unknown projects.

‘A shock, eh?’

‘Yeah,’ Bradley replied. ‘It’s a shock, all right.’

‘Wanna join me for breakfast, Mr Bradley?’

‘I’d love to, but I think I should go straight to Baker Street and have words with my stubborn British controller.’

‘You think you can use this to make him send you to Europe?’

‘I don’t see how he can refuse now.’

‘He’s British: that’s how he can refuse. They’re pretty good at refusing. Quietly... always politely... but not budging an inch.’

‘He doesn’t have a leg to stand on now.’

‘The Brits are notoriously good at balancing acts.’

‘You’re such a goddamned pessimist, Gladys.’

‘I don’t want you to go, that’s all.’

‘That’s nice to hear, Gladys, but you know I have to do this.’

‘Yeah, Mike, I know. So what about lunch before you leave?’

He chuckled at that. ‘I won’t be leaving today, that’s for sure, so lunch sounds great.’

‘There’s a Lyons Corner House near Piccadilly Circus. Let’s meet there.’

‘Terrific. Twelve-thirty?’

‘Don’t get lost.’

‘I’ll try not to.’

‘My day’s made,’ she said with a throaty chuckle, then the line went dead.

Putting the phone down, Bradley checked the calendar. It was June 13, 1944, exactly one week after D-Day, the invasion of Europe, which he’d bitterly regretted having missed. The thirteenth, he thought as he cast off his pyjamas and hurried into the bathroom. Unlucky thirteenth. He ran the water in the old-fashioned bath, climbed in, and thought of the progress of the invasion as he hurriedly bathed himself.

He had wanted to go with the troops, to be one of the first to step onto the soil of Europe, but the urbane Lieutenant Colonel Wentworth-King had refused him permission, insisting that he remain in London until the Allies had overrun Germany. Bradley had been furious, but there was little he could do about it, other than keep track of the known movements of the German scientists, contact European resistance groups regarding Wilson’s whereabouts, and, when not thus engaged, spend his time with Gladys Kinder, with whom he was now undoubtedly in love in a pleasantly gentle, middle-aged way that so far was devoid of *angst.*

Nevertheless, while he would dearly miss Gladys if and when he left London, he was becoming increasingly excited by his conviction that now Wentworth-King would be unable to refuse him permission to travel to Europe and begin the real search for Wilson.

If remote-controlled rocket bombs were already falling on London, God knows what other secret weapons the Germans, doubtless with Wilson’s help, were about to use against Britain and, possibly, the Allied troops in Europe.

After letting the water out of the bath, he dried himself, dressed quickly and carelessly, then hurried out of the apartment and headed for Baker Street. By now he was used to the broken glass on the pavements, the fresh piles of smouldering rubble, and the scorched, jagged holes in the walls of the buildings, revealing the rooms inside, like stage sets, some untouched, some in chaos, all somehow naked and pitiful. The barrage balloons were still overhead, swaying like beached whales, and anti-aircraft gun emplacements stood in the many small parks and squares, the gun barrels being polished by the crews while they waited for night to fall. Yet normal life continued. The roads were filled with buses and taxis, and, as usual, the newspaper vendors shouted out the day’s headlines, which today were about the ‘miracle’ weapons.

Bradley thought of Wilson, hidden somewhere in Germany, and

wondered what he would spring next.

‘Ah ha!’ Lieutenant Colonel Wentworth-King said brightly when Bradley entered his cluttered office in SOE headquarters in Baker Street. ‘Our American friend!’

‘Morning,’ Bradley greeted him, then pulled up a chair and faced the soles of the lieutenant colonel’s boots, which were up on the desk.

‘Can I order you up some tea?’

‘No, thanks,’ Bradley said.

‘I don’t suppose I have to ask why you’re here,’ Wentworth-King said with a slightly mocking smile.

‘No, I don’t suppose you do. What have you learned so far?’

‘As we suspected, the rockets are V-1s, being flown, as far as we can ascertain at this point, from bases in the area of Pas de Calais. They’re not pilotless aircraft but flying bombs, powered by petrol and compressed air, coming in at low altitude at an approximate speed of four hundred miles per hour, steered by a gyroscope and designed to explode on impact. So far, our anti-aircraft guns are proving to be fairly ineffective against them, though hundreds of ack-ack units are being rushed to the south coast, where even more buzz bombs, or doodle-bugs, as they’re already being called by the populace, are falling.’

‘Christ! ’ Bradley exclaimed.

‘Here, in London, the flying bombs have scored direct hits on a church, a convent, a hospital, and a house in South London, with considerable loss of life. Outside of London, the situation is even worse, with a veritable deluge of bombs falling on Southampton, Kingston, Sevenoaks, and Bromley and, indeed, still falling this very minute. Apparently the ground of southern England is shaking as if in an earthquake, and whole areas are now covered in a pall of smoke. Are you sure you wouldn’t like a cup of tea?’

‘No, thanks,’ Bradley said. ‘It doesn’t settle my nerves. Any comment on the bombs from across the water?’

‘German radio is describing the flying bomb as a, quote, *miracle weapon*, whereas Dr Goebbels is repeatedly using the name “V-1,” which suggests that other secret weapons are in the pipeline and about to be unleashed.’

‘Wilson,’ Bradley said.

‘I beg your pardon, Colonel?’

‘That son of a bitch Wilson’s behind them.’

‘I really don’t think so. They’re part of the Peenemünde project, headed by Wernher von Braun. Wilson has nothing to do with it. We’re convinced he’s still at Kummersdorf.’

‘Wilson was working at Kummersdorf when von Braun’s rocket project was also located there. I’m not saying the rockets are all his. What I’m saying is that he doubtless contributed to them – and God knows what he’s working on right now. If Goebbels is hinting about *other* secret weapons, we should take him seriously.’

‘Dr Goebbels *is* a genius at propaganda.’

‘But I don’t think he’s lying in this instance. The V-1s are a sign of that. We also know that they wouldn’t keep Wilson on at Kummersdorf if he wasn’t working on *something* valuable. And if the V-1 rockets are going to be followed by something worse, it could come from him.’

Wentworth-King pulled his feet off the desk and began to tap his perfect teeth with a pencil while smiling knowingly at Bradley.

‘I know what you’re going for,’ he said. ‘You’re going to use the flying bombs as leverage to force me to let you parachute into Germany.’

‘Right. Even *you’ll* have to accept that the flying bombs are a sign that our time may be running out. If they use those bombs, or something even worse, against our troops, the tide could be turned against us.’

‘If we survived the Blitz, we can survive the buzz bombs, I’m sure.’

‘But what if they follow them up with something worse?’

Wentworth-King simply shrugged. ‘We’ll take our chances,’ he said. ‘Meanwhile, since the invasion is still in its early stages, I’d rather not let you, or anyone else, parachute into Germany.’

‘Then let me go to France now, to at least follow the troops into Germany.’

‘No, I can’t do that either. I don’t have the authorization. My only brief, regarding my own organization as well as OSS, is to wait until Germany is almost captured before moving over there.’

‘Shit,’ Bradley said.

‘Orders, dear boy,’ Wentworth-King responded. ‘And unless you can come up with someone higher than me, I’m afraid you’re doomed to remain here.’

‘So what about the OSS project to track down the German scientists?’

‘That also has to wait until the ground forces get there first. I’m afraid I

can't budge on this, old son.'

'You're just keeping it all for your goddamned British Secret Intelligence Service buddies. You want it all for yourself, bud.'

'You said it yourself, Bradley: we're more experienced. So please let us handle it.'

'I'm going to get around you somehow,' Bradley said, standing up and not hiding his frustration.

But Wentworth-King just sighed. 'Unless you get someone with more authority than I have, I'm afraid you'll be staying here.'

'You goddamned Brits!' Bradley exclaimed in disgust, then turned away and stormed out.

He heard Wentworth-King laughing.

'That son of a bitch,' he said to Gladys in the Lyons Corner House by Piccadilly Circus, where it was business as usual. 'He's gonna make sure his SOE buddies get all the glory and leave us out in the cold. So much for the OSS pursuit of the Nazi scientists – Wentworth-King has that tied up.'

Gladys lit a cigarette, inhaled, and blew a cloud of smoke.

'Why the hell should you care?' she said. 'You only want Wilson.'

'Yes,' he admitted, 'that's true enough; but I think Wilson's more important than the rocket scientists, if only because we *don't* know what he's up to.'

'And what do you *think* he's up to?'

'You know I can't tell you that, Gladys,' he said, thinking of the extraordinary, saucer-shaped machine he had found in that hangar near Mount Pleasant, Iowa.

Gladys grinned laconically. 'No, of course not. All the officers say the same when I ask what's going on, though I often know more than they do.'

'How?'

'They all talk when they're drunk.'

'Or in bed?'

'Yes,' she said, blowing a cloud of smoke in his face and staring steadily at him. 'There as well, Mike.'

'Recently?'

He was shocked to hear himself say it, as he certainly hadn't planned to, but she responded with the same steady gaze and slight, mocking smile.

‘Maybe,’ she said. ‘Maybe not. Why? Would it bother you?’

‘Yes,’ he said, taken aback by his sudden, fierce jealousy, and thinking of her life in war-torn London with a resentment he had not felt before. She had led a good life here, he knew, ever since she left New Mexico, first writing a European column for her old newspaper in Roswell, then becoming more well known when her work became syndicated nationwide. Her list of contacts, mostly high-ranking officers of the armed forces, had grown with her reputation, and she had certainly not been short of male company throughout the frantic, sexually liberated war years. She had told him all about it and he had previously enjoyed the stories, but today, for no reason at all, he felt quite the opposite.

‘It didn’t bother you before,’ she reminded him.

‘Maybe I just didn’t show it. And besides, I had no reason to lay claims on you.’

‘You still don’t,’ she said. ‘We’re just good friends, after all, as we constantly remind ourselves.’

He recalled his first air raid, when she had told him she loved him. He’d been too shaken to reply and hadn’t reminded her of it since, but he knew that what he was feeling was more than friendship, though he was frightened of saying so.

‘Yes,’ he said, ‘we’re just good friends.’

She smiled and blew some smoke rings. ‘Come on,’ she said, ‘you know it’s more than that. Why don’t you admit it?’

He shrugged helplessly. ‘I don’t know. I’m not sure of what I feel. I feel foolish even talking like this, because I’m practically fifty.’

‘That’s not old.’

‘It’s not young.’

‘It’s young enough for an adult relationship.’

Amused by that, he replied, ‘Adult relationships can often be childish, and I don’t trust myself that way.’

‘You don’t trust what you feel?’

‘No – at least not always. I’ve spent a lot of years thinking about us, about your letters, and while I always enjoyed getting them and kept them and reread them, I felt guilty about the situation – before Joan’s death and after – and also felt that we couldn’t possibly be in love after only two meetings. In other words, I sometimes felt that I was kidding myself; that maybe both of

us were romancing. And having thought of myself as a mature man, that made me feel foolish. I know how I feel about you, Gladys. I'm just not sure why.'

Gladys propped an elbow up on the table, cupped her chin in her hand, blew a smoke ring in his direction, then shook her head ruefully.

'God, I love you,' she said. 'I've never doubted it for a second. And I knew it when we first met, inside about ten minutes. I knew I was in love with that wonderful combination of maturity, common sense, and inhibition. I knew it when I sensed that you were startled by what you were thinking.' She chuckled and shook her head again. 'And what were you thinking, Mike? You were thinking I was attractive and attracted to you – oh, yeah, you saw that! – and you were excited and scared all at once, as well as hopelessly guilty. A real married man, right? And one with morals and principles. Yeah, that's what I saw inside minutes when we first met, and I loved it and it made me love you… and I did… and I do. Now what do you say, Mike?'

He glanced around the crowded tea room, at all the women in their wide-brimmed hats, the men in drab suits, the waitresses hurrying to and fro in their black skirts and white aprons. He studied them too intently. It was something to do. His heart was racing and he was blushing like a kid, and that rendered him speechless. Then he looked out the window, at the statue of Eros, and had to smile. He lowered his gaze to the traffic crawling around the central island. There the bobby was blowing his whistle and waving his arms as the citizens of this beleaguered, majestic, defiant city went about their daily business in a perfectly normal manner.

'The goddamned Brits,' he said, turning back to Gladys. 'You really have to admire them.'

She raised a sceptical eyebrow. 'Is that your answer, Mike?'

'Dammit, Gladys, you know damned well I love you. I just can't say these things.'

'You've just said it.'

'Have I?'

'Yep. You've just said it. I've certainly heard more *passionate* declarations of love, but I've never felt happier.' She reached across for his hand, kissed the back of his wrist, squeezed his fingers, and refused to let go. There were tears in her eyes. 'You're going to leave me, aren't you?'

'I have to go, Gladys. I have to stop that son of a bitch Wilson before he

goes too far.'

'What do you think he wants?'

'I don't know. You tell me.'

'I will,' she said, drying the tears from her eyes and gazing down at the table. 'I don't believe he was after power. At least not for personal gain. I believe he'd made science his god and worshipped it blindly. He didn't care about human beings and despised their most common feelings; he was convinced that our only purpose on earth is to serve evolution. Not mere *procreation* – no! even the animals can do that – but to form a bridge between our irrational past and a perfectly rational future. He hated irrationality and mistrusted all emotions. For him, what divides man from the beast is intelligence – not emotion, not *feelings.* He believed only in the mind, the application of logic, the quest for absolute knowledge, which he seriously confused with truth.'

'I'm not sure I understand.'

'That's why you're frightened of loving me – which you do, God bless you. Because love is an emotion that flies in the face of logic, yet it endures while one scientific absolute after another is disproven and replaced with something new. Wilson didn't understand that. Not the Wilson I knew. He was convinced that what we value, our dreams and feelings, belong to the caves. He doesn't believe in human beings. He only believes in science. And because science is the sole road to truth, it's all that concerns him. What he wants, then, isn't power – at least not as we know it – but freedom to do what he wants without normal restrictions.'

'The son of a bitch is working for the Nazis,' Bradley said.

'Yes,' Gladys replied, unconcerned by his flash of anger. 'But not because he's a Nazi or believes in the Third Reich. Probably because they were the only ones willing to finance his work, whatever that is. He'll use them – just as he used me and everyone else – and in the end he may go down with them. But whatever it is he's doing with the Nazis, he's not doing it *for* them.'

'How could you be his mistress?' Bradley asked, before he could stop himself. 'If he's that bad, if he's really as cold as ice, how could you sleep with him?'

'Does that thought hurt you?'

'Yes, dammit, it does!'

‘Then you really *do* love me!’ she exclaimed.

‘That isn’t an answer.’

She picked his hand up again, stroked his fingers, kissed his wrist. ‘Because I was wounded,’ she explained. ‘Because I’d recently lost my husband. Because I didn’t want emotional entanglements and he was perfect that way. He wanted only my body and I wanted only to lose myself, so we literally climbed into bed together and had few disappointments. To be truthful, it was perfect – we both got what we needed – but in the end, like most women, I confused satisfaction with love, and was mortally wounded when he left me without looking back. That’s in the nature of woman – it’s in the nature of *human beings* – but it’s nothing that Wilson would understand, which in the end made me loathe him more.’ She kissed his hand again, stroked his fingers, and stared steadily at him. ‘And now you loathe me, don’t you? For confessing my sins. You loathe me for sleeping with the man who’s taken over your life.’

‘No,’ he said without a moment’s hesitation. ‘I just love you more. But that Wilson…Goddammit, he’s like a man without a centre. And he’s brilliant and totally mysterious and I have to look in his eyes. Do you understand that?’

‘Yes, I think so... And so you’re going to Europe.’

Which brought Bradley back to the real world and plunged him into gloom. ‘Not according to Lieutenant Colonel Wentworth-King. As far as *he’s* concerned, I’m here for the duration, probably until the war ends.’

‘Go around him,’ Gladys said.

‘I can’t. That’s not allowed.’

‘What if someone with more authority approaches you?’

‘That’s allowed, but unlikely.’

‘Do you love me?’

‘Dammit, yes.’

‘Without doubts?’

‘You know that now.’

‘I don’t know why I’m doing this. I really don’t. I don’t want to lose you.’

‘What the hell are you talking about, Gladys?’

‘I’m going to get you to Europe.’ She stubbed her cigarette out, waved at the waitress, then said, ‘Okay, you pick up the check. It’s the least you can do.’ When he had done so, she led him out of the cafe and headed toward

Leicester Square. ‘Can you meet me in the bar in the Savoy this evening?’ she asked.

‘Yes,’ he said. ‘Sure.’

‘About…?’

The question hung in the air, because at that moment they both heard an awful roaring, buzzing sound, a nerve-jangling sibilance that passed overhead and suddenly cut out, leaving an abrupt, unnatural, chilling silence.

Bradley saw everyone in the street looking up at the sky, as if frozen where they stood, then, in that fifteen seconds of eerie silence, they threw themselves to the ground.

The V-1 rocket, the buzz bomb, the doodle-bug, exploded in the next street just as Gladys pulled Bradley to the ground. He felt the ground shake, heard the explosion, and rolled into Gladys. He clung to her as more rockets buzzed overhead and lay there as they went silent – the sound everyone already dreaded – then exploded fifteen seconds later, some nearby, some faraway. The attack didn’t last long, but it seemed to take forever, and when it ended, Bradley helped Gladys up and then glanced about him.

A pall of black smoke was rising above the rooftops. When Bradley heard the sirens of the fire brigade, he knew that more fires were burning and more people were dying.

‘About nine this evening?’ Gladys asked him, as if nothing had happened.

‘Sure,’ he said. ‘I’ll be there.’

Gladys kissed him fully on the lips and gave him a hug. ‘Right,’ she said, then waved good-bye and hurried off, heading straight for the ominous pall of smoke that now hung over Soho, to remind him, as so many things did these days, that Wilson was still somewhere out there, being far too creative.

The buzz bombs continued to rain down all day on the southern parts of England and were still falling on London that evening when Bradley made his way to the Savoy Hotel. As he walked along the Strand, he saw a pall of black smoke hanging over St Paul’s Cathedral and the rooftops of the city, and even as he turned into the hotel, more bombs exploded.

Though most of the servicemen were now fighting in France, the party in the American Bar was in full swing and packed with army, navy, and air force personnel from Britain, America, Canada, France, Belgium, Czechoslovakia, and even Poland. Most of them were either working in operation centres in

London or preparing to join the advance through France. The men and women, most in uniform, were spilling out of the bar and into the lobby in a haze of cigar and cigarette smoke, red-faced and in good cheer, while a large group near the bar, obviously drunk, was singing in ragged chorus, ‘We’re gonna hang out our washing on the Siegfried Line...’

Gladys was seated near the entrance, well away from the noisy singers, beside a US army major-general, and she waved Bradley over as soon as she saw him. Bradley wasn’t going to kiss her in front of the unknown officer, but she jumped up and embraced him and kissed him full on the lips.

‘You didn’t get a doodle-bug on your head, then?’ she asked jokingly, though with visible relief.

‘No,’ he replied. ‘They’re falling mostly over the City, so I was okay.’

‘Here, pull up a chair,’ Gladys said, then, when he had done so, continued, ‘This is a dear friend, Major General Ryan McArthur, who’s about to take off for France and could be of help to you. Ryan, this is the guy I told you about, my fine man, OSS Colonel Mike Bradley.’

Bradley and the silver-haired, sophisticated McArthur shook hands.

‘No relation, I take it,’ Bradley said with a grin, ‘to General... ?’

‘No,’ McArthur replied, anticipating the question. ‘No relation at all. Can I get you a drink, Mike?’

‘Scotch on the rocks.’

‘Right.’

When McArthur was at the crowded bar, Gladys, who was sitting beside Bradley, took hold of his hand. ‘Still love me after all these hours?’

‘Damned right,’ he said.

‘Okay, Mike. If you truly love me, I’ll put your mind at ease. While it’s true that I’ve had a good time in London, I haven’t been involved with another man since you turned up. I’ve been faithful and living on hope – and you’re my only man now.’

A lump came to his throat and he covered her hand with his own, then squeezed her fingers.

‘You didn’t have to tell me that,’ he said.

‘Yes, I did, Mike. As for McArthur, he’s just an old friend – and I *do* mean a friend. No more and no less.’

‘Okay, Gladys. Thanks.’

‘Do you love me just a little bit more for that?’

‘I can’t possibly love you more than I do.’

She grinned and winked. ‘That’s my man.’

Bradley released her hand when McArthur returned to the table, carrying three glasses of Scotch between his two hands. When they had taken their drinks from him, he sat down, sipped some Scotch, grinned at Bradley.

‘So,’ he said, ‘you’re with the OSS.’

‘Right.’

‘You’re working here with the British Secret Intelligence Service?’

‘I wouldn’t exactly call it working. I’m supposed to be trying to track down a renegade American scientist – ’

‘Wilson.’

‘Right. How did you know that?’

‘I work for General Groves, director of the Manhattan atomic bomb project, and since we’re also keen to track down the German scientists, we got in touch with the OSS and found out about Wilson. Naturally we then found out, through your filed records, that Gladys had also known him, which is how I came to know Gladys.’

‘Wilson appears to have a talent for introducing a lot of people to one another.’

McArthur grinned at that, then turned serious again. ‘You want Wilson in particular?’

‘Yes.’

‘Any special reason?’

‘I have reason to believe he’s been working on projects far more advanced than the German rocket program.’

‘And you think he might be trying to complete it in time to use it against the Allies?’

‘I’m not too sure *what* his intentions are, but I sure in hell want to find him.’

‘So why aren’t you in Europe?’

‘According to my controller at the SOE, I’m not allowed into Europe until the Germans have practically surrendered.’

‘By which time Wilson, as well as a good many rocket scientists, might have disappeared or been captured by the Soviets.’

‘Or captured by the SOE, which is what my controller wants.’

‘Lieutenant Colonel Wentworth-King?’

‘Right.’

McArthur was amused. ‘A regular British public schoolboy – and pretty smart with it. Yes, he’ll want the Brits to get there first. That’s why he’s holding you back.’

‘Can you do anything for him, Ryan?’ Gladys asked.

‘Sure.’ McArthur turned back to Bradley. ‘On behalf of the director of the Manhattan atomic bomb project, I’m sending a bunch of ALSOS agents into Europe, to stick with the advancing Allied troops and go all the way with them into Germany. When I say *stick* with the advancing troops, I mean just that: The ALSOS agents will be with the fighting troops, right in the thick of it, to ensure that they’re present when anyone of value to us, mainly scientists, is captured. Would you like to come with us?’

‘Damned right, I would, Major General.’

‘Okay. In this matter I happen to overrule the bright son of a bitch, so I’ll get in touch with Lieutenant Colonel Wentworth-King and tell him I’m grabbing you.’

‘Terrific. When do we leave?’

‘This Friday. Which gives you a couple of days to tidy up here. We’ll be in touch tomorrow with details of our departure, but right now, since you two are obviously keen to be alone, I’m off in search of debauchery.’ He stood up to take his leave. ‘I’ll see you on Friday, Bradley. As for you, Gladys, I’ll see you when I see you.’

‘In Paris.’

‘Let’s hope that’s the case.’ He touched his fingers to his peaked cap in a mock salute, grinned and then made his way out of the bar, through the packed, noisy revellers.

The drunks near the bar were now singing the maudlin ‘We’ll Meet Again,’ made famous by the British forces’ favourite lady, Vera Lynn, who certainly sang it much better. Yet the words, which Bradley already knew, struck straight to his heart.

Another lump came to his throat when he turned back to Gladys.

‘Thanks,’ he said.

‘Not at all, Mike. I don’t want you to go – I want you here – but I know how important this is to you.’ She shrugged forlornly. ‘So go.’

‘We still have a couple of days,’ he said.

‘Tonight and tomorrow night,’ she corrected him. ‘You’ll be *leaving* on

Friday. Goddammit, I think I'm gonna cry. Goddamn you, Mike Bradley!'

She pushed her chair back, stood up, and rushed out. Bradley followed her, forcing his way through a sea of bobbing heads and flushed faces, all of which were hazed in smoke and exuding aromas of alcohol. Gladys didn't look back, but instead hurried across the lobby and straight up the stairs. Bradley went in hot pursuit, thinking of how familiar this great hotel must seem to her, as she had now lived in it for so long. It was an odd thing to think, but it was based on pure jealousy, for he also thought of all the men she had met here throughout the war years. He felt a spasm of pain, a flash of resentment for all those men, as he hurried up the stairs. He eventually caught her in the corridor, right outside her room, and tugged her around, into his arms, as she was opening the door.

Gladys Kinder was crying.

Bradley kissed her tears away, surprised to find himself doing so, and rocked her trembling body in his arms and eased her into the room. He kicked the door closed behind him, licked her eyelids, kissed her cheeks, stroked her spine as he kissed her on the lips, and then held her away from him. She was shaking and the tears had streaked her cheeks and made her look a lot younger.

It was a small room and the bed was right behind her, but he didn't know what to do.

'It's been so long,' he said. 'I don't know where to begin. I'm too old for this. I don't have the knack. I hardly know where to start.'

Gladys smiled through her tears, wiped the tears away with one hand, tried to control her heavy breathing, and said, 'You've already started, Mike, and you did it well. For God's sake, don't stop now.' And she put her hands on his shoulders and pulled him to her and kissed him, then let him press her back onto the bed where it would happen or not.

Bradley lost his senses then. That was God's blessing upon him. He somehow managed to strip Gladys and remove his own clothes and get under the sheets of the bed without thinking about it. When they made love, which came naturally as well, they were tuned into the cosmos – and Bradley, nearly fifty years old, was returned to his youth.

Her bed felt like home to him.

The next day, satiated with love, Bradley reported to the SOE headquarters in

Baker Street, where Lieutenant Colonel Wentworth-King frostily informed him that orders from above had removed him from the jurisdiction of the SOE and were placing him under the command of the director of the Manhattan atomic bomb project, for which he would implement Operation Paperclip immediately.

'Here are your marching orders,' Wentworth-King said, pushing across a thick envelope. 'Good-bye and good luck.'

That night, all night, Bradley made love to Gladys in his bed in the small apartment in Shepherd Market while doodle-bugs rained from the sky and exploded all over the city. He found new life in the midst of death, saw the light of hope in darkness, slept the sleep of the blessed, and awakened just after dawn.

The space beside him was empty. Gladys was gone. When he went into the bathroom, he saw her message on the mirror, scrawled in lipstick by a shaky, emotional hand.

'I can't bear the thought of seeing your eyes when we have to say goodbye, so I'm saying it now. I love you. I...'

But the writing ended there, tapering off in a jagged line, and he knew that she had then started crying and hurried from the room. He put his hand out, gently touched the lipstick, traced the words with his fingertips.

'Take care,' he whispered.

CHAPTER TWENTY-EIGHT

Wilson awakened, as he had planned, at six in the evening and found himself thinking about himself.

He had slept through the afternoon because the journey to Thuringia was going to be made under cover of darkness. Now, as he lay in bed, rubbing the sleep from his eyes and hearing the news on the radio in the living room, doubtless turned on by Greta, he wondered if this thinking about himself, which was unusual, had been caused by the temporary change in his sleeping habits.

He hadn't thought about himself in many years and was very surprised. He had always looked outward, not inward, and this introspection was troubling.

He was remembering Iowa, the days of his childhood, the parents whose decency he had always viewed strictly as weakness. Now, when he closed his eyes, he saw himself as a blond-haired boy, his skin bronzed from the sun, and the sun itself an immense, silvery orb in a dazzling blue sky. He had stood alone in the field of wheat, the stalks shoulder high around him, and looked across that yellow sea to where green fields met blue sky, then squinted into the sun's striations, which were silvery and ravishing. He had looked but not been ravished, been blinded but not dazzled, and responded to it, even at ten years old, with one simple question:

When would the sun die?

That single question had turned him into a scientist. His religion became the pursuit of knowledge. He realized that the sun would die eventually, taking with it Earth's heat and light, and that long before it happened every form of life on Earth would be extinguished. Man's time on Earth, then, would be short if he simply followed nature's course. Still an animal, he would die off like the dinosaurs as his life-giving sun died. Something had to be done.

Thus Wilson, at ten years of age, had found something to live for: the changing of man's destiny through science and, incidentally, the creation of a new kind of man as a means of continuance.

He had never strayed from that path.

Even then, as a boy and adolescent in Iowa, born of religious parents but unable to accept God, he had been convinced that mankind would eventually have to leave Earth and inhabit another, less endangered planet. To do so, he would have to create an extraordinary technology; he would also have to transcend his still-primitive nature and escape the physical limitations of his weak, mortal body.

Man would have to turn himself into Superman and then reach for the stars.

Now, many years later, as he sat up in the bed in his apartment in Berlin, Wilson was made aware of his own frustrating mortality, but also reminded that he had at least begun the process of turning Man into Superman.

He had the beginnings of the technology in the shape of his flying saucer, a protected base from which to operate in Neuschwabenland, Antarctica, and a demented ideology that, if not to his personal taste, could be used to give him the work force necessary for survival in an inhospitable terrain, isolated under the ground from the rest of mankind.

He would use Himmler's disillusioned followers to get him to the Antarctic and there, over the years, let science gradually transform them into his kind of people: neither dedicated soldiers nor fanatical mystics, but men ruled by the desire for knowledge as an end in itself, supported by a docile work force deprived of freedom and will, and all living together in perfect, enforced harmony, well away from the corrupting influences of a still-primitive, self-destructive mankind.

And eventually, when the technology used for the *Kugelblitz* saucer had advanced enough, his successors would leave the dying Earth behind and fly to the stars.

Those chosen to make that epic voyage would have to be Supermen – but he, who had made it all possible, would not be one of them.

He would die before that came to be.

Mortality was what prevented men from becoming Supermen: life was too short for real achievement. Although Wilson had begun experiments on organ replacement, prosthetics, and general longevity, and had already

delayed his own death with the recent operations on his heart and stomach, he knew that the medical and surgical experimentation begun in the camps would not be advanced far enough, soon enough, to prevent him from dying of old age. Nevertheless, his successor, whomever he might be, would benefit from the experiments, and eventually the more valued members of his Antarctic colony would have a much longer life span. Because of that, they would gain the time needed for their biological and mental transformation into Supermen.

In that sense, Wilson thought as he stood up and stretched himself, my life will not have been wasted and my death will have meaning.

From here he could hear the radio announcer blandly informing the citizens of the Third Reich that the Allied invasion of Europe, initiated sixteen days ago with a bloody assault along more than a hundred miles of the French coast, was being successfully resisted by the valiant soldiers of the Thousand Year Reich.

The announcer did not mention the Allied liberation of Rome, the US bombing of the Japanese mainland, the loss of the Cotentin peninsula, the increasingly hopeless position of General von Schlieben's surrounded troops, General de Gaulle's triumphant return to the liberated areas of France after the capture of Bayeux, General Montgomery's inexorable advance on Caen, or the fact that only yesterday the Allies had seized two German V-1 launch sites on the Cherbourg peninsula and were closing in on the historic town itself. Nor did he mention that Berlin, suffering Allied bombing raids every night, was being razed to the ground.

He was carefully silent on those facts.

It will soon be over, Wilson thought, no matter what we're told. No wonder we're fleeing to the Harz Mountains. It's just a matter of months now...

Not wishing to face Greta until he was ready to leave, he went straight from the bedroom to the bathroom, had his bath, dried himself and put on his civilian clothing, then returned to the bedroom. He had packed his suitcase the previous evening, when Greta was out with friends; now he pulled it out from where he had hidden it under the bed. Then, feeling little emotion, he entered the main room.

Greta was anxiously turning the dial on the radio, trying to pick up a British station. She was smoking a cigarette, scratching her auburn hair with

her free hand, and looking as worldly as ever, though she had aged greatly recently. Since the bombs had started dropping on Berlin she had not been the same.

Looking up when he entered the room, she saw the suitcase.

The news on the radio was replaced by Wagner as her eyes started widening.

'I'm leaving,' Wilson said, anticipating her question, 'and I probably won't be coming back. The apartment is yours to keep.'

'What?'

He knew she had heard him but did not want to believe him. The average person's unwillingness to face facts had never ceased to surprise him.

'You heard me,' he said, setting the suitcase on the floor and noting the shocked light in her eyes. 'I said I'm leaving and probably won't be coming back. However, the SS always look after their own and in this case are treating you like my wife. In other words, you can keep the apartment and they'll provide you with a decent monthly income. They'll soon be in touch with you.'

She was still smoking her cigarette, a habit he despised, and this time, when she sucked in the smoke, she did so as if drowning.

'I'm not sure I understand,' she said, glancing at his suitcase and letting the smoke drift out between her lips. 'I mean, we've been living together for so long, and now you just...'

'You always knew this would come eventually,' he said, as he had said to so many. 'Our arrangement was always based on the knowledge that it would end sooner or later. Now that time's come.'

'Just like that? Without warning?'

'I couldn't give you any warning. The SS swore me to secrecy. I wasn't allowed to tell you until I was leaving – and that's just what I'm doing.'

'I don't believe that for a second.'

'Believe it. It's the truth.'

'You're going to leave me here all alone?'

'I'm being moved out, with the other scientists and engineers, but I can't tell you where.'

'Why can't I come with you?'

'It's not permitted, that's why.'

'You mean, the others are all going without their wives? Is that what

you're telling me?'

'No, I'm not saying that. The others *are* taking their wives and children. But the others are Germans married to Germans, whereas I happen to be a foreigner, here by their good graces and living with a woman not my wife. I asked if I could take you along, but they refused absolutely.'

'I don't believe that either.'

'It's true. And who knows their motives? This war's coming to an end, the Third Reich's going to fall, and when that happens, they may decide to execute me. Maybe that's why you can't come with me.'

It was a deliberate lie, offered simply to keep her calm, but he knew, when he saw her brightening gaze, that she hadn't believed him. She was an experienced woman, after all, particularly wise in the ways of men, and what he now saw in her normally hard eyes was a mixture of rage and fear.

'So I'm just being left here?'

'I repeat: you have the apartment and will get an allowance. Believe me, you'll be better off than most. I'd count my blessings, if I were you.'

'Blessings?' she retorted. 'Being left here in Berlin? A city being bombed night and day, and soon to be conquered! What good's this apartment if it's bombed? What good's the allowance when the war is lost? What happens to me if I manage to survive the bombings, but the Soviets get here first?'

'I'm sure you'll do fine,' he said. 'You're not a child, after all.'

He had said something similar to that other woman – Gladys Kinder? – about twelve years ago and now, as the memory of her passed briefly through his thoughts, thus reminding him of Goddard and those early rockets in the desert, Greta's mounting fear and rage set fire to her eyes.

'You can't do this,' she said, sounding strangled and shaky. 'You owe me more than this! You just can't pack up and walk out and leave me here in this hell. You've got to take me with you. You've *got* to! *For God's sake, don't leave me here*!'

'You're an experienced woman,' Wilson said, taking note of her rising hysteria and therefore picking up his suitcase. 'You should manage okay.'

But she jumped to her feet, grabbed his shoulders, shook him violently, crying, 'No, Wilson! For the love of God! I'm too old now! The Soviets might… *Don't leave me, Wilson*!'

Suddenly she looked old, her face ravaged by shock and dread. Disgusted by her naked, primal emotions, he pushed her away from him. She stumbled

back into the fireplace, shaking her head, her gaze dazed. He left without saying another word, not looking back.

An SS car had been assigned to take him to Kummersdorf, and the driver was waiting for him when he emerged. Darkness had fallen and when the car had moved off he gazed out the window, saw the dreadful ruins and hillocks of rubble silhouetted against a starlit sky, and knew, given the clarity of the night, that the Allied planes would soon be flying overhead to drop more bombs on the city.

Closing his eyes, he recalled Greta's outburst, and considered once more, as he had done so often, how the glory of man's mind could be perverted with primitive emotions. He had never felt such emotions, though he knew that most people did, as he also knew that there were many who thought his lack of so-called normal feelings was inhuman.

Was this so? He didn't think so. Instead, he took it for a sign of genius. He had always felt himself to be different from his own kind – even from his good parents, other children, his women – and had viewed the blatant emotions of others as the aberrations of weakness. Man's emotions belonged to the cave; his mind was his glory.

And he, this individual named John Wilson, was ruled by his brilliant mind.

It had always been so. Behind his closed eyes, he relived it. He saw his parents in the fields, their backs bent under the sun, then himself, a mere stripling, kneeling beside them in the church of Montezuma, where he kept his eyes open. They were decent, simple folk, introverted, even distant, and although they had always treated him well, he viewed their virtue as weakness. They made him read the Bible, but he thought it a book of myths. When they prayed, either at home or in church, he translated their worship as a form of awe no more rational than the primal fears and superstitions of cavemen.

He felt that man was not made to worship gods, but to attain godlike stature.

He was not like his parents. Nor was he like other children. His parents didn't notice the difference, for they were too involved with themselves, but at school he was considered odd, because he didn't like playing games and was ferocious at studying. He always wanted to be alone, to live through his

books, and that made him different.

Then he decided to become a scientist and devoted himself to that. At twelve, he was practising vivisection and was caught by his parents. They were shocked by his cruelty, which he viewed as pure research, and they punished him by sending him to his room for a whole week, which merely gave him more time for his reading and intense contemplation. It didn't stop his experiments – he just continued them in secret – and by the age of fifteen, when at high school in Des Moines, he knew more about biology and science than his teachers could teach him.

He was also convinced, by then, that the only thing dividing man from the beast was his ability to think – not the heart, but the mind; not emotions, but reasoning. Once he had accepted this as truth, he learned to distrust what were widely regarded as man's 'finer' feelings.

Man was but a tool of evolution; the human mind was its instrument. And because most human emotions were dead weight, Wilson, from an early age, took pride in not having them.

He was a genius, a completely rational being, and that made him unique.

Nothing else mattered.

When the SS car slowed down, he opened his eyes again and saw the beams of the searchlights criss-crossing one another as they swept over Kummersdorf, erratically illuminating the tall hangars, prefabricated offices, wooden huts, barbed-wire fences, and high, ugly watch towers, where the helmeted troops sat behind machine guns and kept guard all night. Though normally empty, the compound in front of the experimental centre was now filled with troop trucks, all bathed in the steady glare of overhead lamps. A lot of the troops were carrying equipment and papers from the hangar to the parked vehicles, while other trucks roared into life and headed toward the main gate.

After leaving the car and entering the hangar, Wilson saw the Schriever saucer still sitting on its raised steel platform. It looked enormous in that enclosed space, its smooth surface giving off a silvery glint in the overhead lighting. Looking in vain for Flugkapitän Schriever, he crossed the floor and entered his own office, which was now bare of its filing cabinets and wall charts. There he found Ernst Stoll, SS Brigadier Hans Kammler, and the dark-eyed, dangerous SS General Artur Nebe sitting up in hardbacked wooden chairs, all smoking, drinking what looked like brandy, and clearly

waiting for him.

'So,' Wilson said, 'the move's begun already.'

'Yes,' Kammler said. 'The first trucks are already at the station and you can leave any minute now.'

'What are the arrangements?'

'I have to remain here to oversee the V-1 and forthcoming V-2 rocket launchings against England. However, General Nebe and his finest troops will accompany you throughout the journey, for protection, and Captain Stoll will also go along, to ensure that you settle into Kahla without problems. Once things are running smoothly at Kahla, which will be administered jointly with the nearby Nordhausen Central Works under the jurisdiction of Captain Stoll, General Nebe will return to Berlin to organize the eventual time and means of escape from Germany. Meanwhile, Stoll will divide his time between Thuringia and Berlin. This will enable him to look after your project *and* keep his eye on our increasingly unpredictable Reichsführer.'

'What about Rudolph Schriever and that…' Wilson paused to glance through the window at the flying saucer in the middle of the hangar. 'That *thing* out there?'

'A week from today,' Ernst Stoll solemnly informed him, 'the remaining staff of Kummersdorf, with Schriever in charge, will be moved, with the saucer, to a secret location near Prague. Thus, while Schriever's progress will be watched closely by Himmler, you'll be able to complete your *Feuerball* and *Kugelblitz*, protected by General Kammler, under my jurisdiction.'

'What reason have you given Schriever for the move?'

'The same as we gave Himmler. Namely, that your work has become erratic, you can no longer be trusted, and so you're being moved to Nordhausen, to be placed under our supervision, now that Wernher von Braun has been moved back to the rebuilt factories in the development works, on the old site of Peenemünde East.'

'Excellent,' Wilson said.

'And now we'd better go,' General Nebe said softly, his face as unemotional as a rock, which gave Wilson comfort. 'We want at least to get out of the station before the Allied bombers come again.'

'Good thinking,' Kammler said.

The day before, Wilson had supervised the dismantling and packing of the separate parts of his *Feuerball* and *Kugelblitz* in the BMW plant at Spandau

for transportation to the railway station. Today he was pleased to follow the others out of his office for the last time. Just as they were leaving, Schriever, Habermohl, and Miethe emerged from the former's office and stopped right in front of them. Schriever, thinking he was now in charge of Projekt Saucer, gave Wilson a broad, superior smile.

'So,' he said, 'you're going to Nordhausen.'

'Yes,' Wilson replied.

'Naturally, I'm sorry to be losing you.'

'I'm sure you are, Flugkapitän.'

'I have naturally recommended your work to Himmler – '

'Thank you.'

' – and while obviously he appreciates your contributions to Projekt Saucer, he feels it's now time that we Germans take it over completely.'

'I understand,' Wilson said.

'Once we get to Prague, I'll have the saucer flying in no time, I can assure you, Herr Wilson.'

'I hope so, Flugkapitän.'

Schriever offered his hand. Wilson took it and shook it, then Schriever gave the Nazi salute and led his two men away. Stoll smiled thinly at Wilson, nodded toward the exit, then led him and the other two Nazi officers out of the hangar.

Wilson didn't look back. There was nothing there to interest him. He took his seat in the SS car, made room for Stoll beside him, and kept his eyes open as they drove out of Kummersdorf, heading in the direction of Berlin. The night sky was bright with stars, the moon gliding behind thin clouds, but he soon saw a red glow in the sky, far ahead in the darkness. Then he heard the sound, the distant *crump-crump* of explosions, and knew instantly that the glowing in the sky was from the flames of an air raid.

'They come nearly every night now,' Ernst said. 'The swine never stop.'

'Remember the Blitz on London,' Wilson replied, 'and you won't expect them to stop.'

'My family live in Berlin, Wilson.'

'I'm sorry,' Wilson said, though he didn't give a damn.

'My wife left me,' Ernst continued like a man in a trance, 'but she's living with the children in her parents' house in the district of Wannsee, which they bomb all the time.'

‘Not good,’ Wilson said, bored.

‘I worry about them more when they’re elsewhere – and now we’re off to Thuringia.’

‘It’s important, Captain Stoll. Very important.’

‘Yes,’ Ernst said. ‘I know. I just can’t help but worry.’

Luckily, they did not have to return to Berlin, but instead turned away from it, to a station in a small town that Wilson didn’t recognize, though he knew it was on the route to Brandenburg.

The station was heavily guarded, surrounded by armed SS troops, and the midnight silence was broken by the barking of Alsatian dogs and the awful sound of men bawling through megaphones. Torches shone on white faces, searchlights swept across packed trucks, and Wilson had to follow Stoll through massed ranks of armed troops, none of whom looked too happy, and into a small railway station that was the stage for a nightmare. Prisoners from the camps were there, under-nourished, terrified. They were forced to run the gauntlet of snarling dogs and cracking whips, then herded up into the box cars, where they were packed in like sardines. There were not many left – most of the box cars had been closed already – but Wilson saw enough to have a clear picture of what was happening.

It seemed chaotic, but it wasn’t – it was well organized – and when Wilson saw General Nebe near the last of the open box cars, his face impassive but his dark eyes always restless, he understood why.

Nevertheless, Wilson was glad to get out of it and into his carriage, which, as he discovered when the train pulled out shortly after, he was sharing with Stoll, Kammler, Nebe, and their most favoured officers. Nebe let them all relax, smoking and drinking, playing cards, and soon the distant sounds of the bombing of Berlin had faded away with the crimson sky, leaving only dark flatlands outside and the train’s clickety-clacking.

‘We’re on our way at last,’ Ernst Stoll said. ‘Thank God for that at least.’

‘Yes,’ Wilson replied. ‘The sooner we get there, the sooner you can return to Berlin and your family.’

‘*If* they’re still there,’ Ernst said.

‘If they’re not,’ Kammler said icily, ‘you’ll have made your personal sacrifice for the Third Reich. Would you not consider that an honour, Captain Stoll?’

‘Naturally I would, sir.’

‘You seemed a little bitter, Captain.’

‘No, sir. I’m just tired, that’s all.’

‘We *all* are.’ Kammler sneered, then lit a cigarette, blew a cloud of smoke, and engaged Nebe in whispered conversation, which only served to make Ernst more nervous, as Wilson carefully noted.

Turning his attention to Kammler and Nebe, sitting together on the seat opposite, he wondered at the calibre of human being he’d been forced to deal with.

General Kammler, he knew, had been responsible for the planning of various concentration camps; had personally supervised and confirmed the plans for the enormous subcamp at Birkenau, part of Auschwitz, with its four gas chambers and crematoria; was impatient, ruthless, completely amoral, and, though Himmler’s present favourite and ostensibly devoted to him, was consumed by no more than self-interest. General Nebe, on the other hand, was a more shadowy figure, one of shifting allegiances, someone known to be a practised survivor and no stranger to bloodshed. He rarely smiled, fondled his pistol a lot, and kept his conversation to the bare minimum. A good man to have on your side; a man to dread if your enemy. To Wilson, such men were animals, but they had to be used.

It was a truly depressing thought.

Closing his eyes, he tried to sleep, but instead thought about how divorced he was from his fellow men, unable to share their petty concerns and narrow ambitions. They wanted the here and now, the love of woman, man’s esteem, but failed completely to see just how short life was and, therefore, how important. Though born to be the tools of evolution, they still lived like cavemen.

Their evolution would not come naturally. At least not in time to save them. The continuation of the human species could be guaranteed only if men took matters into their own hands and recreated themselves. And as most men could not even conceive of that, the exceptional few, like Wilson, would have to lead the way.

I will do it, he thought, trying to sleep, but failing dismally. I will recreate myself, with my willpower and surgical assistance, and in so doing become the first of that race that will fly to the stars.

I will become a biological mutation with my mind unimpaired. I will not find immortality – no, it’s too late for that – but the operations I’ve had,

which have so far been successful, are merely the first steps on the road to man's transformation, physical and mental. Those who follow me, on the operating table and with my philosophy, will evolve, as their regressive fellow men die off, into the Superman.

This will be my achievement.

Thinking about it, he smiled. He was still travelling, after all. He had left his home in Iowa, left his friends, then his country, and now he was on the road out of Germany.

He was going to where the air was clean and mankind could be reborn.

Not immediately, however. He was still in the real world. He was reminded of this fact when the Allied bombers returned, growling low overhead, and the darkness outside the noisy train became a fabulous tapestry. There were ballooning balls of white light, jagged yellow flames, clouds of black smoke, then the luminous, scorching heat of the explosions lent the darkness a crimson hue. Sparks fountained to the sky, decorating moon and stars, and the buildings of the town outside the train collapsed into more beauty. It was the singular beauty of death, the awesome radiance of destruction. Wilson saw the walls exploding, the smoke billowing up from the flames, and knew, even as the noise erupted and clawed through him, that the beauty and horror of life on earth were one and the same.

When the train screeched and shuddered, then ground to a halt, the SS officers crowded up against the windows to look out at the night.

'Why are we stopping?' Kammler asked, glancing at Nebe.

'I don't know,' Nebe replied. He stood up and crooked his finger at Ernst Stoll. 'Come with me, Captain.'

The train had stopped on the outskirts of town. The darkness outside was filled with sheets of yellow flame and geysering sparks. Smoke billowed up from the buildings, obscuring the moon and stars, and the steady droning of the Allied bombers seemed to make the air vibrate. Nebe stopped and glanced out, started forward, then stopped again when an SS sergeant hurried into the carriage and gave the Nazi salute.

'Why have we stopped?' Nebe asked.

'Some of the prisoners are panicking, sir. They're hammering on the doors of the box cars and might start a riot. We don't know what to do.'

'What we do is set an example,' Nebe said softly. 'Captain Stoll, come

with me!'

Wilson watched them departing, followed closely by Kammler, then he pulled his window down enough to stick his head out. The noise of the air raid was deafening, hammering at him like a huge fist. He saw collapsing buildings, more showering sparks, billowing smoke, and glanced backward along the train to where armed troops were covering one of the box cars, the dogs straining at the end of their leashes, barking and snapping.

Nebe, Kammler, and Stoll were there, standing in front of the box car. Nebe was removing his pistol from his holster as his troops opened the door. Bombs were exploding nearby, the ground roaring and erupting, and even as earth and debris showered back down, Nebe took aim with his pistol. The first prisoner was dropping. Nebe shot him and he fell. Another prisoner jumped out as Kammler and Stoll unholstered their pistols and also started firing. The prisoners were shot as they jumped out, screamed and jerked and collapsed. Then the women inside started wailing as the SS troops, encouraged by their leader, fired into the box car.

The noise was atrocious, a savage, staccato roaring, adding to the crescendo of the aircraft growling overhead, the bombs exploding on all sides, and the sibilance of the tracer bullets criss-crossing the sky above the boiling black smoke.

No more prisoners jumped down, but Wilson heard the women wailing. That dreadful sound was shut off when the box car doors were closed again, locking in the subdued prisoners, then Nebe led Kammler and Ernst Stoll back to the carriage.

The train moved off again as they returned and took their seats, Kammler and Nebe facing Wilson, the pale-faced Stoll beside him.

Wilson noted Stoll's shocked appearance. It was something worth remembering. Stoll obeyed orders, but not without distaste, and that virtue, which Wilson viewed as his weakness, was what would make him useful.

Wilson closed his eyes again. He fell in and out of sleep. The train rumbled through the night, through more air raids and long silences, passing smouldering ruins and columns of troops on the roads and villages still remarkably untouched and silhouetted in moonlight. The ruins gradually disappeared, giving way to pine forests, The forests rose and fell over the hills of Thuringia, shielding picturesque villages, nineteenth-century houses, and the remains of fortified castles that stood majestically on the crest of the

hills, overlooking the babbling brooks and rivers that crossed lush valleys.

The train climbed up through the forests. There were no air raids here. The sun rose beyond the hills, a pearly light through starlit darkness, then the gray light turned into silvery striations that gave the trees back their colour.

The trees covered the hills and mountains, hiding the great caves hacked out of them. The train, which had been climbing more slowly by the hour, finally stopped in a cleared area by the old walled town of Kahla, in the region of the southern Harz Mountains, on the same line that led on to the underground Nordhausen Central Works.

Wilson looked out. The pine trees soared all around him. The old walled town of Kahla could not be seen from here, but the train lines branched off into a tunnel that led inside the forested hills.

In there lay his destiny.

CHAPTER TWENTY-NINE

After spending a nightmarish week in the Harz Mountains, supervising the resettlement of Wilson and his flying saucer project, Ernst returned to Berlin to do the same for the ungrateful and increasingly arrogant Flugkapitän Rudolph Schriever, though in this case the move was to Prague, Czechoslovakia.

Having settled Schriever, his two trusted engineers, and other assistants and slave workers in the research complex just outside the city, where the naive scientist had been looking forward to testing the flying saucer before the Soviets advanced too far, Ernst returned to a bomb-shattered Berlin. He felt older than ever and was no longer able to sleep at night. When he made his report to Heinrich Himmler, the Reichsführer, who had once seemed so icily calm, now was oddly distracted. His eyes behind the glittering pince-nez roamed restlessly left and right.

'Four days ago,' he said, before Ernst could utter a word, 'the Soviets took Minsk and captured one hundred thousand German soldiers. One hundred thousand,' he repeated slowly, like a man in a trance. 'It is something to think about.'

Embarrassed, Ernst didn't know what to say, so he simply remained standing in front of Himmler's desk, looking down at his chubby, pale face and surprised by the change in him. Eventually, as if remembering what Ernst was there for, the Reichsführer looked up and said, in a less distracted manner 'So, you have completed the resettlements. I myself have recently visited the new site at Prague, but haven't been to Nordhausen since last there with you. What's it like there?'

'Very good, Reichsführer. The Nordhausen Central Works are, as you know, hidden deeply in the Kohnstein Mountain. As of this moment, more than three thousand prisoners from the concentration camp at nearby Buchenwald are being used as slave labour and housed in a new subcamp

named Dora. It's anticipated that by October this year, the whole of the Dora subcamp will have been transferred underground and also increased to a total of over thirteen thousand slave workers. Another camp for the prisoners is being set up in a mountain valley to the south, less than a kilometre from the entrance to Nordhausen's tunnel B.'

'The prisoners are disciplined and work well?'

'Yes, sir,' Ernst said, thinking of how the unfortunates were driven to work with whips, worked exceptionally long, exhausting hours, and were not allowed to rest for a single moment.

'How are they disciplined?' Himmler asked, for such matters always interested the bureaucrat in him.

'Naturally they're supervised at all times by SS guards armed with pistols, automatic weapons, bullwhips, and sticks. When not working, many of them are shut up in the tunnels of the underground complex. When they refuse to work on the V-1 or V-2, they're shot or hanged in full sight of the other prisoners, either in the underground corridors or in the roll-call ground of the open camps.'

'Excellent, Captain. It's always best to carry out disciplinary measures in full view of the other prisoners. It's always good to remind them of the consequences should they, too, commit an infraction.'

'Yes, sir,' Ernst said. The nightmares generated by his week in Nordhausen and the other underground factories in the area, including the one at Kahla, were the cause of his inability to sleep.

'And the underground factories are definitely invisible from the air?'

'Yes, Reichsführer.'

'Good.' Himmler offered a smile that seemed to be turned inward upon himself. 'As you know,' he said, clasping his hands under his double chin and returning to his former distracted manner, 'as early as 1941, I personally set up an SS proving ground near Blizna, a small village located by the confluence of the rivers Vistula and San, in southern Poland.'

'Yes, sir, I remember it well.'

Himmler nodded again and smiled in a dreamy manner.

'Toward the end of 1941,' he continued, 'after the villagers had all been evicted, Soviet prisoners-of-war were sent there and killed off almost to a man by hard labour and starvation, in order to get the proving ground completed. When they had all died off, we replaced them with political

prisoners and eventually built a concentration camp for them. Since then we've razed the original village to the ground, camouflaged the whole area, and built a new, mock village over the proving ground, to fool Allied aircraft and their photographers. Cardboard cottages and outbuildings were sent there from Germany; dummies of men, women, and children stand around; and even flowers and other shrubbery have been planted. From the air, the illusion of an inhabited village is complete – and I like to think of it, Captain,' he continued, looking up at Ernst and smiling frostily, 'as the prototype for all the camouflaged, underground factories built since then... My personal creation.'

'And an excellent one, Reichsführer.'

'Thank you, Captain.'

Ernst, feeling weary and slightly unreal, did not think it wise to mention the fact that according to recent intelligence reports, Polish partisans were already moving in on Blizna, with a view to capturing it and holding it until the Soviet army arrived, as it surely would any day now.

'And a similar situation exists at the Schriever complex near Prague, in Bohemia?'

'Yes, Reichsführer. Exactly the same. And Flugkapitän Schriever is hoping to test his flying saucer later this year.'

'Good. We need all the secret weapons we can get, if we're to defeat the Allied advance. What is the American, Wilson, doing in this respect?'

'Not much, I'm afraid,' Ernst lied, knowing that in fact Wilson was already planning to test his small *Feuerball* in the guise of an anti-radar weapon and, if successful, then implement the same ideas in the larger flying saucer he was intending to construct in Neuschwabenland. 'He's making various small contributions to the V-2 program but has otherwise turned out to be disappointing.'

'If the Soviets or Americans even get close, I want that man shot.'

'He will be, Reichsführer. In the meantime, I agree that it's wise to pin most of our hopes on the V-2 rocket program and, possibly, Flugkapitän Schriever's flying saucer.'

Himmler nodded, accepting Ernst's compliment, then unclasped his hands. 'So, Captain,' he said, 'when are you returning to Nordhausen?'

'As soon as I see my wife and children, Reichsführer.'

'Ah, yes,' Himmler said, 'Now living with your mother-in-law, I believe.'

‘Yes, sir.’

‘I do not approve of the separation, but am pleased to note that you did, at least, do something about her lover. I assume he’s now one of the hundred thousand German soldiers captured at Minsk. It’s all he deserves.’

‘Yes, sir. I agree.’

Himmler stood up behind his desk and stared sombrely at Ernst. ‘These are terrible times,’ he said, ‘and we must all remain courageous. I wish to thank you, Captain, for all you’ve done so far. Believe me, I’m proud of you.’ Then, to Ernst’s amazement, he offered his hand. Ernst shook it, found it oddly clammy, then saluted and walked out.

Berlin was barely recognizable, with once-familiar areas now razed to the ground, blackened ruins and piles of rubble as far as the eye could see, and a constant smell of fire in the air, instead of the summer flowers. There were few soldiers about, only old men, women, and children, a good many of them crippled, and Ernst became even more depressed and longed for escape.

He went straight to Brigette’s apartment, wanting to have her one last time. Relieved to find the building still standing, though the one beside it had been bombed, he hurried eagerly up the stairs to ring her door bell. However, before he could do so, the door opened, a Luftwaffe flight lieutenant stared at him in surprise, then grinned sheepishly, finished buttoning up his jacket, called ‘*Auf Wiedersehen*!’ back over his shoulder and left by the stairs. Brigette appeared in the doorway, her red hair dishevelled, a cigarette between her lips, still wearing her dressing gown. She was just about to close the door when she saw Ernst.

Startled, she froze for a moment, then grinned, stepped back, and waved him inside, saying ‘Ah! My pretty Kapitän! Come inside and be warmed!’ A little shaken, Ernst stepped in, pushed the door closed behind him, and just stood there, feeling foolish, until Brigette pressed her lips to his and ran her hand down his spine. ’Did you bring me a present, my beauty, from wherever you’ve been?’

‘Not this time,’ Ernst said.

She stepped away from him and pouted, blowing smoke in his face. ‘Nothing? Not one little thing? Is this how you treat the girls who suffer at home?’

Ernst was not amused by her flippancy, assuming she was trying to make

light of the man who had just left.

‘You don’t seem to be suffering too much,’ he said. ‘You still have your boyfriends, I see.’

She grinned, adjusted the dressing gown to cover her breasts, then waved her hand in an airy manner, indicating the once-elegant apartment. ‘Not suffering?’ she asked in a theatrical manner. ‘But darling, just *look* at this place. It’s not what it once was.’ Which certainly seemed true enough; the furniture faded and dusty, the drinks cabinet bare. ‘No Russian vodka,’ she continued. ‘No cognac from France. No more pasta and salami from Italy. No more dairy products from Denmark. No more jewellery and furs from handsome officers flushed with victory and pride. Only *angst*, my darling, and the air raids and the long queues for food. So why *not* the odd boyfriend?’

Her mockery angered him, but he tried not to show it, as he still hoped to get into her bed before visiting Ingrid.

‘I suppose I’ve no reason to complain,’ he said. ‘It was just a shock, that’s all.’

‘Why, darling? You’ve always known about my other men. You’ve always known that I like my little presents and can’t bear to be lonesome.’

He wanted to slap her face, but managed to restrain himself, because what she had said was perfectly true. Indeed, she had often teased him with talk about her other men, and in those days, when Berlin was rich and he a golden young conqueror, he had taken the teasing in good part. That he couldn’t do so now was a sign that things had changed radically. He was no longer a conqueror, she had visibly aged, and both the city and this faded, bare apartment reminded him of the forthcoming defeat. He felt that darkness descending...

‘So what are you doing here, Ernst?’ Brigette said, inhaling and exhaling cigarette smoke while turning away to take a seat on the worn sofa, where she crossed her long, still-elegant legs and swung one invitingly.

‘You know what I came for,’ he said, feeling a choke in his throat.

She smiled, then stubbed her cigarette out, and stretched both arms along the back of the sofa, thus forcing her breasts out. ‘But you didn’t bring me my little present, dear Ernst, and you *know* I expect that.’

‘I know you like your little presents, but I didn’t realize they were mandatory. I mean, I never thought of them as absolutely vital. It was my

pleasure to give them.'

'You gave them *in return* for pleasure.'

'That's beside the point.'

'The point, dear, is that I never lend myself unless I'm offered a present.'

'I didn't know you were for sale.'

'Yes, you did,' she said calmly. 'I charged more than a common whore would charge; it just wasn't money.'

'Presents,' Ernst said bitterly.

'Exactly,' she said. 'Some men, they can't admit that they're buying it, so one asks them for presents. *Little* presents. *Expensive* presents. Ones with high resale value.'

'You're a mercenary whore.'

'No, Ernst, darling, I'm a survivor. I've learned not to depend on men for anything, so I take what I can from them. To save for a rainy day, darling – which means when Berlin falls.'

'That's the talk of a traitor.'

'Are you going to report me, darling? After all, that's what you often said you were: no more than a policeman.'

The remark humiliated him, reminding him of his failures, but the thought that he might not have her this last time made him desire her all the more and forced him to swallow his pride.

'I'm going away,' he said, despising the plaintive tone in his voice. 'I'm being posted away and don't know what will happen after that. I just thought...'

'One last time?'

'Yes,' he said, almost whispering. 'For old times sake, at least.'

'For old times sake,' she echoed sardonically.

'Yes,' he said, stepping toward her. He stopped directly in front of the worn sofa and gazed down at her swinging leg. It was exposed up to the thigh and it made him suck his breath in; then, when he raised his gaze, he saw her breasts thrusting against the silk of the dressing gown, the skin above bare and marble-white. When he raised his gaze higher, he saw her sensual lips curved in a mocking smile.

'So you're going away,' she said, 'and leaving me to the tender mercies of the Allied troops or the Soviets – and *still* you want your little pleasure for old times sake. Well, my dear, a girl has to survive and, when the city falls,

will need more than her fading looks. So since we've always had a particular relationship, let's keep it that way... Which means that if I don't get my present, you won't have any fun.'

'I've been away for weeks,' he said, loathing the piteous tone in his voice and feeling his anger rising out of his humiliation. 'I've been worked night and day. I didn't have the opportunity to buy presents – not even for my wife and children, let alone you.'

'You're *separated* from your wife and children.'

'I still see them – and will this evening.'

'Well, perhaps they no longer expect presents, but I do, my dear.'

'I don't have one, Brigette. For God's sake, don't be – '

But she stopped him short by leaning forward on the sofa, taking hold of his wrist and turning it over to examine his watch.

'A gold Rolex,' she said.

He jerked his hand away. 'If you think – '

She leaned back on the sofa and stretched her arms along it, simultaneously exposing her full breasts and swinging that long leg. 'A gold Rolex is worth a lot,' she said, smiling. 'And I still want my present.'

Ernst exploded, hardly knowing what he was doing. He grabbed her by the collar, jerked her to her feet, slapped her face, and threw her back down. He saw the torn dressing gown, a bared breast, blood on her lips, then bent over and slapped her again and dragged her onto the floor. She cursed and clawed at him, tried to roll away but failed, and writhed beneath him when he straddled her body and ripped the dressing gown off her.

He didn't feel lust – only violent, blinding rage – but when the dressing gown was lying in shreds around her, he tried to force her legs open. She didn't scream, but she cursed him loudly, trying to jerk her wrists from his hands, and when finally he let go to hold her legs apart, she frantically tried hitting him with her fists.

Surprised, he released her thighs and took hold of her wrists again. He jerked her hands away from his face and, still straddling her and breathing in spasms, looked at her as she stopped writhing beneath him and glared fiercely at him. When she stopped struggling, when her body became motionless, he released her hands and rolled off her, then stood up and straightened his jacket, feeling foolish and beaten.

'The Soviets will know what to do with you,' he said with as much

contempt as he could muster, looking down at her, where she still lay on the floor, too careful to move. ‘Good luck, Brigette. You’ll need it.’

He made a point of not slamming the door in anger when he left for the last time... but her mocking laughter pursued him.

The lines for the tramcars to Wannsee had been blown up in an air raid, so he took a taxi through the darkening light of the early evening, trying not to look out at the crippled children and old people who were clambering over the piles of rubble or exploring the charred ruins, hoping to find something they could barter for money or food.

Yes, Berlin was unrecognizable, the gaunt remainder of a lost dream. He was glad when the worst ruins disappeared from view and were replaced with the relatively less devastated areas overlooking the Havel River. Not that there were no ruins here, but they were fewer and more spread out, and he was even more relieved to find his in-laws’ elegant old house still standing in its gardens overlooking the waters of the Wannsee. He asked the taxi driver to wait for him, then rang the doorbell.

Ingrid’s mother answered the door, looking shockingly aged. Her hair was now completely gray and the skin of her handsome face, though tight on her cheekbones, was webbed with lines of tension and possibly hunger.

She stared in a confused manner at Ernst, then, recognizing him, murmured a greeting and pulled him into her arms. When they embraced, he kissed her cheek, which seemed cold, then followed her into the house. She walked ahead of him, her body heavy and ungainly, saying over her shoulder ‘The children will be so glad to see you. How long has it been now?’

Noting that she hadn’t included Ingrid in her first comment, Ernst said, ‘About eighteen months. Maybe two years. I’m not sure. How have things been?’

‘Not so good,’ she said vaguely. ‘All the air raids... food shortages... the anxiety... Ingrid!’ she called out as she entered the living room. ‘You have a visitor, dear!’

She stepped aside to let him enter, hugged him again impulsively as he passed her, whispered, ‘I think I’ll leave you two alone,’ then hurried away. Ernst stepped into the living room and saw Ingrid looking up from her armchair, an open newspaper lying across her lap, her face still exceptionally pretty, but drawn, as if sleep had eluded her.

‘Hello, Ingrid,’ he said, crossing the room, which was, he noted, still filled with excellent furniture, international bricabrac, and the fine paintings that her father had collected before he died.

‘What do you want?’ she asked coldly.

Startled, he stopped in front of her, looked down at her, then glanced at the sofa opposite. ‘Can I sit down?’

‘Are you planning to stay long?’

‘No. I have a taxi waiting.’

‘Then you can sit down.’

He hadn't expected a warm welcome, but her coldness was truly shocking. He sat on the sofa and smiled at her, hoping to warm her.

‘What do you want here?’ she asked him, clearly not warmed at all.

‘I’m being posted out of Berlin, he said, ‘and I don’t know when I’ll be coming back. I came to say goodbye. I also came because I was worried about you and the children.’

‘Were you, indeed?’

‘Yes.’

‘Why?’

‘Because of the air raids, for a start.’

‘They’ve been bombing Berlin for a long time and you didn’t worry before.’

‘I did. It was *you* who left *me*. You *do* remember that, don’t you?’

‘Yes, Ernst, I remember. And I also remember why. It was because I found out about your whoring and so turned to another man. A good man, Ernst, a *very* good man, whom you sent to Russia.’

‘At the insistence of the Reichsführer,’ Ernst lied. ‘He thought it best you were parted.’

‘Damn the Reichsführer! And damn you for being a liar! Eberhard wasn’t sent to Russia on the word of Heinrich Himmler. It was *you*, Ernst, who came up with that idea. You. You alone. You had him sent to Russia because you knew he probably wouldn’t survive – and I haven’t received word from him since the Soviets captured our troops. So either he’s dead or he’s rotting in a Russian prison camp. Either way, I won’t see him again. You’re a bastard! *I hate* you!’

She turned away from him, picked up a packet of cigarettes, tipped one out into her hand, then reached for the matches.

‘You’re exaggerating the whole affair,’ Ernst said, though he knew that she wasn’t.

‘Please leave,’ she responded, then struck a match, lit her cigarette, and exhaled a thin, nervous stream of smoke from shivering lips.

‘No matter what you think of me,’ Ernst said, struck by her beauty, cut by her vehemence, ‘I’m seriously worried about you and the children. You’ve survived the air raids so far, but they’re going to get worse, and sooner or later either the Soviets or the Allies, maybe both, will march into Berlin. What happens then...’ He tried to put it into words, but could find none, so just shrugged. ‘I simply don’t know.’

Ingrid blew a cloud of smoke, watched it intently, then turned unhappy green eyes upon him and said, ‘You haven’t told me anything I don’t know – except that if the Allies or Soviets come, you probably won’t be here.’

‘I can’t tell you where I’m going, but it’s safer than here. We’re still married, so I can probably take you with me, and I think you should come.’

‘No, thanks.’

‘*Please*, Ingrid. For the sake of the children, if not yourself.’

‘You murdered the man I love – if he’s not dead, he might as well be – so I’m not going to share my future with you for the sake of the children. You’re not the man I once loved. You’re not the father I wanted for them. You could have been that man – you almost were – but then you threw it away. Now look at you, Ernst! A leading light of the SS. A man who fornicates with whores, collects the victims for the torture chambers, rounds up the unfortunates for the concentration camps, and generally lends his support to the bloodiest dictatorship on Earth. And a man who once wanted to be a scientist, or, at least, an engineer! No, Ernst, you’re not the man I married – and you’re not the man for my children. I’d rather they died in an air raid than grow up with you. If you want to say good-bye to them, you may do so. But that’s *all* you can do. After that, you can leave.’

Ernst drank her in, recalling what she had once meant to him, then filled up with unutterable grief at what he had lost. Though drawn and anguished, she was still attractive to him, but he’d lost her as well... Ingrid... the children... his whole world. How had it happened?

He sighed. ‘All right. Where are they?’

‘Upstairs in their bedroom.’

‘Can I go up now?’

‘Yes, but don’t make your departure sound definite. As far as they’re concerned, you’re just off on another trip. Is that understood?’

‘I *do* hope to be returning to Berlin,’ he told her.

‘Nothing’s certain these days.’

He went up the stairs and found the children in the bedroom they shared, Ula still blonde and lovely, though now ten years old, Alfred nearly seven years old and no longer chubby. They greeted him warily, as they always did on his odd visits, but he welled up with emotion and clung to them so long he embarrassed them. Eventually he let them go, gave them some money, kissed them on the cheek. Then, regaining his composure, he returned to the living room to say goodbye to Ingrid.

Her mother had come back in and Ernst was shocked when he saw them together. Ingrid now looked like her mother had looked only ten years ago. There were streaks of gray in Ingrid’s blonde hair. Her formerly bright-green eyes had darkened. She still had a good figure, but it had filled out in the wrong way, and Ernst noticed, with a shock, that she was wearing one of her mother’s old dresses. Her face, though still attractive, was closed against him.

‘Will you reconsider?’ he asked her.

‘No,’ she replied.

‘For the sake of the children. For your mother’s sake – ’

‘Don’t bring them into this.’

Her mother looked embarrassed, staring down at the floor, and Ernst, not feeling angry but dead, walked up to the old woman, embraced her, formally kissed her cheek. Then, as her tears started falling, he simply nodded at Ingrid.

‘I promise, I’ll make it back,’ he said.

‘Don’t make rash promises, Ernst. None of us can make promises these days. We take each day as it comes.’

‘I’ll be back.’

‘Goodbye, Ernst.’

He turned away and walked out. The taxi was still there, making a small fortune in these otherwise bleak days, and even as Ernst walked toward it, his boots kicking up gravel, he heard that distant, familiar rumbling and the eerie wail of the sirens. Looking toward Berlin, at the large moon in the starlit sky, he knew that the Allied aircraft were returning for another night of destruction.

There’s nothing left for me here, he thought forlornly. Now I only have Wilson.

Then he slipped into the rear of the taxi and was taken back to the city, which, even as he was driven toward it, was turning into a furnace.

Hell is on earth, he thought.

CHAPTER THIRTY

Bradley was in church. He was, to be precise, in an annex of the shell of the Church of St Pierre in the ruined old town of Caen, France, to which he had driven, one week after its fall to the Canadian and British troops, from the town of Saint-Lo, which had been captured by the US 1st Army.

Bradley had driven in a jeep from Saint-Lo to Caen through a landscape devastated by bomb craters, burned-out barns, collapsed houses, mountains of rubble, and putrefying dead animals, mostly cows. He had arrived in Caen, at the invitation of the British SOE, which was now being more agreeable to him, after the lovely old cathedral town, eastern bastion of the German defence forces, had been reduced to ruins by relentless Allied artillery and air bombardment. He had then been directed by some weary British 2nd Army infantrymen to the Church of St Pierre, which he had found simply by heading for the tower that was visible above the ruins of what had once been prosperous streets.

The tower had been damaged and was surrounded by more rubble, but luckily the interior of the church remained intact. It had become a refuge for hundreds of the townspeople who had lost their homes in the artillery and air bombardments. The refugees were still there when Bradley arrived, but within days they had been moved out to more hospitable quarters. Bradley, at the invitation of the British Secret Intelligence Service, had set up a temporary office in this annex, where, with the assistance of members of the Manhattan atomic bomb project's ALSOS and the OSS's Project Paperclip, he had begun an intensive interrogation of resistance members and local townsfolk as well as less cooperative collaborators, suspected and otherwise.

While the members of the ALSOS concentrated on tracking down details of all German V-1 and V-2 rocket projects, Bradley and his fellow OSS sleuths were attempting to trace the whereabouts of those scientists and engineers known to have been involved in the construction of rockets and other secret weapons, including any aircraft remotely saucer-shaped and relating to Wilson.

Bradley was not having much luck.

What he had learned so far was that the Germans had built a frightening number of V-1 and V-2 rocket launching sites, most of them in the Pas de Calais area and the recently captured Cherbourg peninsula. What he had also learned is that after the devastating RAF bombing raids of 1943, Wernher von Braun's rocket team had been moved out of Peenemünde to an unknown destination, had been returned when the damage had been repaired, but reportedly was about to be moved again. Unfortunately, no one knew more than that... and no one seemed to know Wilson.

The American.

Goddamn him!

The more Bradley saw of the war's awesome devastation, the more he wondered how much Wilson had contributed to it and the more he wanted to find him and put a stop to him. He was still haunted by the memory of that saucer-shaped aircraft in the barn near Montezuma, Iowa, where Wilson had been born and returned to work in secret, and he was convinced that the V-1 rocket program could not have been so advanced without Wilson's help. Now, more than anything else, he had to find out.

Sitting behind his makeshift desk in the annex of the damaged church, he had come face to face with the best and worst faces of the war: female collaborators with heads shaved by their liberated former friends; male collaborators bruised and scarred from beatings by their fellow countrymen; the pitiful victims of Nazi torture; old and young members of the French resistance, whose features had been shaped by deprivation and constant fear. He was feeling overwhelmed and exhausted when finally he came up with something.

The man who sat facing him across the old, cluttered farm table in the morning of July 20, 1944, was wearing the clothing of a French peasant – black jacket and baggy pants, open-necked white shirt and beret – but had strikingly handsome features and brown eyes filled with passionate conviction. He had not been brought in, but had specifically asked to see the investigating officer. According to his papers, he wasn't French but Polish, and his name was Andrzej Pialowicz.

'I'm surprised,' Bradley told him, 'to find a Polish citizen in the French resistance.'

'I am a leading member of the *Polish* resistance,' Pialowicz replied in surprisingly good English, 'but am forced to flee the country when the

Gestapo and SS round up and murder my group. When you finally get to Poland, and if you get your hands on the Nazi secret service's documents, no doubt you will find me listed there.'

Bradley nodded. 'Why did you not just go underground in Poland?'

'It is becoming too difficult in Cracow, where I operate, and when my group is captured and my lover tortured and then sent to a concentration camp, I know that the last people I can trust are all gone, and if I stay in Cracow, it will only be a matter of time before I am caught.'

'Good thinking,' Bradley said.

'Also, Major Riedel of the SS is becoming obsessed with capturing me, which is a further motive to leave the country and go underground, where even my name will not be known. So, convinced that the Allies will invade Europe eventually, I come here and join the French resistance.'

'How did you get out of Poland?'

'I travel by night, usually cross-country, keeping well away from the roads. I also cover great distances by train, hanging under the carriages for hours.'

'That's a hell of a thing to do,' Bradley said. 'One hell of a thing.'

'When we have to, we can do surprising things. You should know this by now.'

Bradley was certainly learning it. He was gradually getting used to the fact that many of the people he interviewed, who often looked so young and inexperienced, had lost their families and loved ones, been tortured by the Nazis, lived under the threat of death for as long as they could remember, and treated adventures such as that described by Pialowicz as perfectly normal.

He was getting used to it, but sometimes it still amazed him, though he tried not to show it.

'So you've been in France since...?'

'June 1940.'

'Have you heard anything about your lover since?'

'No.' Pialowicz showed the merest flicker of emotion, then became stone-faced.

'You don't know which camp she was sent to?'

'No.'

'If you give me her name, I'll put her on the file. If she's found, we'll get in touch with you.'

‘This I would appreciate. Also, she is the reason I come to see you.’

‘Oh? Who is she?’

‘Her name is Kryzystina Kozilewski.’

Bradley wrote the name down in his notebook, after asking Pialowicz how it was spelt.

‘So,’ he said, looking up again. ‘What’s the relevance of Kryzystina Kozilewski?’

‘One of my functions here in France,’ Pialowicz responded, ‘is to liaise between the French and Polish underground groups. It is one of those Polish groups that conveys to you through the French resistance, in 1942, that the Nazis are testing remote-controlled rockets near Peenemünde, in the Baltic.’

‘The V-1 rocket.’

‘Yes. Anyway, since I am the person liaising between that Polish resistance group and the Frenchmen who pass the information on to you, through the SOE, London, I naturally know about your interest in the American scientist, John Wilson.’

Feeling his weariness slipping away from him, Bradley leaned across the table and prompted Pialowicz with, ‘Yes?’

‘This is where my former mistress, Kryzystina Kozilewski, comes into the picture,’ Pialowicz said, keeping his features carefully composed to mask any pain he might be feeling. ‘When the Nazis overrun Poland in September 1939, I form a Polish resistance group and enlist the help of Kryzystina. Kryzystina has had a hard life, is experienced in the ways of men – I say this without rancour – and on behalf of the resistance, uses her charm and experience to gain the trust of German officers, obtain valuable gossip from them, and pass the information on to us.’

‘Is that why she’s in a concentration camp?’

‘I think so, yes,’ Pialowicz said.

At that moment, a great armada of Allied aircraft passed overhead, heading for Germany. Pialowicz glanced up at the ceiling of the annex, then lowered his gaze again.

‘Early in 1940 the Germans requisition the boarding house owned by Kryzystina and send its residents to a concentration camp. Kryzystina saves herself from this fate by engaging in an affair with the commander of the troops involved in the requisition: an SS captain named Ernst Stoll, who is under the command of my worst enemy, Major Riedel. And it is through her

affair with Stoll that Kryzystina learns about the American, John Wilson.'

The noise of the aircraft passing overhead had reached a crescendo and Pialowicz stopped talking for a moment, waiting for the bombers to pass on... for the noise to die down. Bradley thought of the ruins of Caen, of all the other ruins he had seen in his journey, and shuddered to think of what that mighty armada of bombers would soon do to Germany. The awesome power of modern technology was now ever present... and if Wilson had progressed even further, God knows what would be coming.

When the noise of the aircraft had passed, Pialowicz said, 'To return to Kryzystina... According to what she tells me in 1940, this German who becomes her lover, this SS Captain Ernst Stoll, is a former rocket engineer, deeply embittered at being denied membership of the VfR, or German Amateur Rocket Society and, later, General Dornberger's rocket program, which is placed under the command of Wernher von Braun, one of Stoll's old school chums, while Stoll is turned into a mere technical administrator. Disgusted, Stoll lets himself be persuaded to join SS intelligence, which at least gives him the opportunity to supervise certain secret weapons research programs at Kummersdorf, south of Berlin – and it is there that he becomes involved with the American, Wilson.'

'He actually worked with Wilson?'

'Yes. Wilson does not actually work with von Braun's rocket teams, but with a much smaller group at the other side of an old firing range at Kummersdorf West. However, according to what Stoll tells Kryzystina, while Wilson is to work on secret weapons other than remote-controlled rockets, many of his remarkable innovations are passed on to the rocket team, which certainly hastens the development of the rockets.'

Now Bradley was feeling really excited. At last Wilson's continuing existence had been confirmed. At last he'd been given shape, even if, for now, he remained faceless.

'Did Kryzystina find out what Wilson's project actually was?'

'Yes. One night when Stoll is drunk and particularly bitter, he lets slip that the program is called Projekt Saucer and involves the construction of a saucer-shaped, vertical-rising aircraft. How far it has progressed, he doesn't say, but he does also let slip that the project is highly secret, that it is Heinrich Himmler's personal passion, and that even Hitler is unaware of its existence.'

‘What was this Wilson like?’ Bradley asked, desperate to put a human face on his faceless quarry.

‘Apparently a lot older than he looks,’ Pialowicz replied. ‘About sixty-five years old.’

‘In 1940.’

‘Yes.’

‘Which makes him about seventy now,’ Bradley observed.

‘Yes.’

‘Anything else?’

‘Yes. This Wilson is very strange. According to Stoll, John Wilson is a man obsessed. He cares for nothing but his work and has few scruples when it comes to doing it. That is one obsession. There are others.’

Pialowicz glanced around him, at the ruins of the church, saw nothing that he hadn’t lived with for a long time, so returned to the subject at hand.

‘He does not smoke, does not drink, and claims that his exceptional youthfulness is due to some kind of lifelong diet. Also, he is obsessed with extending his life span and, according to Stoll, is convinced that any kind of extreme emotionalism, such as love or sexual passion, encourages the aging process. Regarding his own sexual drives, he claims to relieve them as functionally as humanly possible. And, finally, while not sharing Heinrich Himmler’s insane notions of an Aryan Super Race, he certainly believes and is striving for the creation of a race of geniuses, devoted to science – of which he will naturally be the leader. For this reason, he treats his own health and his work as the base material for research, medical and scientific. In other words, he is a man so objective, he is scarcely human at all... Very strange, yes?’

‘Yes,’ Bradley said. ‘*Very* strange.’

He glanced back through the arched doorway of the annex and saw other intelligence officers at other tables, interviewing other suspects, collaborators, and allies. The sunlight outside was beaming in through the stained-glass windows, which had remained unharmed, casting striations of many colours over worn, harassed, and sometimes jubilant faces. Big guns thundered in the distance and some people looked up. The battle for Europe had moved on from this ruined town, but was continuing elsewhere.

‘So in 1940,’ Bradley continued, ‘Wilson was still located in Kummersdorf, south of Berlin. Do you know if he’s still there?’

‘No,’ Pialowicz said, ‘he is not. About three weeks ago Wilson’s team are split up for reasons we have not yet ascertained. But according to our informants, Wilson and some others are moved by a train filled with SS troops and concentration-camp prisoners to somewhere in the southern Harz Mountains. Alas, we do not know where, though we *do* have reason to believe that the area around Nordhausen, in Thuringia, is littered with large, well-disguised underground factories where the Nazi secret weapons are produced with the help of slave labour from nearby camps. We believe Wilson is destined for one of those hidden factories.’

‘And the rest of his team?’

Pialowicz shrugged. ‘About a week after Wilson is moved out, the rest of the team, including Schriever, Miethe, and Habermohl, is put on a train heading for Prague, in Bohem, in Czechoslovakia. We have no idea why. Nor do we know their final destination.’ Pialowicz shrugged again, then raised his hands in the air. ‘This is all I can tell you.’

‘It’s a hell of a lot,’ Bradley replied. ‘More than you realize.’

Pialowicz smiled for the first time, then stood up and said, ‘For me you will please find Kryzystina?’

‘We will,’ Bradley said.

He watched the young man walk out of the annex, sat there for a few minutes in silence, trying to calm his excitement, then followed him out of the church.

Too excited for coherent thought, he walked around the shattered town, letting the sun shine on his face, observing the appalling ruins and the troops and civilians moving around them, passing tanks buried in rubble and overturned, scorched trucks, eventually arriving at another church, which also was damaged. Stepping inside, he had to adjust to the gloom. Then he saw hundreds, maybe a thousand or more, refugees on the floor, lying on mattresses, surrounded by bits of furniture, making coffee and soup on small paraffin burners, and attending to the wounded and the dying, for whom there was still no room in the remains of the hospital. Light beamed obliquely on them, illuminating motes of dust, covering them in a silvery haze that made them look slightly unreal.

It was a dream of life and death, of suffering and self- sacrifice, and Bradley had seen it too many times on his journey through France. Nevertheless, he was shaken, torn between faith and despair, and he turned

away from it, from man's stupidity and nobility, and hurried back to the Church of St Pierre, to continue his work.

CHAPTER THIRTY-ONE

Ernst's growing conviction that hell might be on earth was made concrete when, after his painful farewell to Ingrid, he returned to the Harz Mountains. For a week that seemed like a year, he divided his time between the nightmarish daily routine of the underground factories in Nordhausen and Wilson's flying saucer construction plant nearby, just outside the old walled town of Kahla.

Desperate to avoid the daily whippings, public hangings, and shots to the back of the head in the bunkers of Nordhausen, all designed to keep the V-1 and V-2 assembly lines rolling, he spent most of his time in the underground factory at Kahla, pretending to supervise Wilson, whom he knew had seen through his pretence and was quietly amused by it.

'You always seem so tense,' he said to Ernst. 'You must learn to relax.'

Ernst was fascinated by Wilson, fearing and admiring his old man's wisdom, but mostly drawn to his air of icy invincibility and fascinated by his plans and theories, which admitted to no human doubts. He was completing his *Feuerball*, the remote-controlled anti-radar device that looked like a flying saucer but was only three feet wide and was, so he said, a flawless prototype for the larger, pilot-controlled saucer still on the drawing board.

'If the *Feuerball* flies,' Wilson said, 'and responds to its commands, then the *Kugelblitz* will also fly when we have the time to complete it. In the meantime, every test that needs to be done can be done with the *Feuerball*. Very soon now I'll try it against the Allied planes and see how it performs. I don't doubt that it will work admirably.'

Humiliated by Brigette, deprived of Ingrid and his children, rarely able to forget that he had once been an engineer and now was merely observing the great achievements of Wernher von Braun and Wilson, Ernst leaned toward the latter, was ensnared in his web, and began to see his only hope for redemption in the dream of Antarctica.

‘Not with Himmler,’ Wilson confided. ‘We can’t trust him anymore. Personally, I never did for a second, but now I know I was right. Kammler and Nebe are talking. They see Himmler a lot. They say he hasn’t been the same since the first great defeat in Russia, and like Hitler, he’s losing control and falling back upon fantasy. Astrologers and occultists, quack doctors and mesmerists – Himmler and Hitler, soulmates, will eventually go down the same way.’

‘I could have you shot for saying that.’

‘But you won’t,’ Wilson said, ‘because you too have witnessed Himmler’s changing moods and know what he’s like these days.’

Which was true enough, after all. Ernst thought Himmler was going mad. The more the Allies advanced, the more distracted and crazy Himmler became, albeit in his quiet way. The Reichsführer, the bureaucrat, the chicken farmer, was quietly falling to pieces. He had forgotten Neuschwabenland, had lost confidence in Wilson, and now pinned all his hopes on Rudolph Schriever’s abortion of a flying saucer, on other obscure ‘secret’ weapons, and on his own demented plans for making a ‘private’ peace with the advancing Allies.

He was not the awesomely remote Reichsführer of the past, but a pitiful creature.

Not a man to trust.

‘Yet I steal from him,’ Wilson said. ‘I steal the gold from his mind of mud. I don’t believe in his mysticism, in his blond young gods of war, in his anthroposophy and theosophy and Rosicrucianism, in his bizarre dreams of Atlantis and Lemuria and the undefiled Aryan. These are the dreams of madmen, the visions of the demented; yet they *do* hold a kernel of truth: the transformation of man. I too believe in this, though not in the same sad way. I believe in man’s evolutionary drive toward the Superman. And I believe in biological mutation and mental enhancement.’

They sometimes walked out of the tunnels, into the day’s clear light, and gazed over the forested hills of Thuringia to the summer’s horizon. There were no whippings there. No hangings. No beatings. But somewhere out there, beyond the horizon, the world was at war.

‘Forget Himmler,’ Wilson told Ernst. ‘He’s just another Nazi lunatic. He’s raised muddled philosophy and primitive dreaming from the slime to the tortured blood and bone of an insane ideology. Blood and bone are acceptable

– we're here, after all, only to feed evolution – but his philosophy of ice and fire, his pitiful dependence upon Hörbiger, is enough to show us that he doesn't belong to the real world. We *will* go to Antarctica, but not to further an idiotic SS élite. We will go to further what you once had and lost: the belief in science as an absolute, the one hope for mankind. You can recapture that dream, Ernst, but only through me. Forget Himmler. Betray him – yes, you must! – and regain your faith where it matters: in a colony devoted to science and unimpeded by ephemeral, earthly concerns. It has already begun, Ernst. The factories and accommodations under the ice have been completed and already a few hundred people have been shipped there, to prepare for our coming. Cast off your past, come with me, and get back what you lost. All the rest is lost anyway.'

Which Ernst knew was the truth, because the truth was undeniable: the Allied advance through France, the Soviets forming a pincer movement, Berlin crumbling in flame and smoke, his wife and family endangered; even his mistress, his whore, defeating him and laughing at his retreat. Yes, everything now defeating him and mocking his youthful dreams. And so Wilson, who had once seemed so distant, now seemed very close to him.

'We need an escape route,' Wilson said, back in his workshop, over the *Feuerball,* his steady gray gaze focused on the three-foot disc gleaming beneath him. 'We need to get from here to Kiel in the Baltic, and from there to our friends in Argentina, then from there to Antarctica. Nebe can help us in this. He's a vulture, but reliable. But to do it, he has to disappear, and that makes things difficult. You must do this for us, Ernst. You must help him disappear. When he disappears, when no one is looking for him, he can lead us to freedom. Do you understand, Ernst?'

'Yes,' Ernst said. 'I understand.'

'Arrange this and you can travel with me to Antarctica and become an even better engineer – no, a scientist! – than you'd ever imagined you could be. Do this and... *you're free*!'

Ernst left Wilson in Kahla and returned to Nordhausen where, in the great tunnels, while the conveyor belts rolled, the SS guards cracked their whips, spines snapped at the end of ropes, gunshots ricocheted in the bunkers, and the German genius for organization was completely perverted. He had chosen this life – at some point he had decided – and so he swallowed his remaining guilt, cast shame aside for all time, and travelled back to Berlin by train and

car for another meeting with Kammler.

He returned to a nightmare.

'There's been an attempt on the Führer's life,' Kammler told him in his office in SS headquarters. 'Lieutenant Colonel Claus Schenk von Stauffenberg, the chief of staff to the commander of the General Army Office in Berlin, planted a bomb in a briefcase during a meeting in Führer Headquarters in Wolfsschanze. Miraculously, the Führer escaped with minor burns, but now all hell has broken loose. A planned military revolt in the city by Stauffenberg's co-conspirators has already been put down, Stauffenberg, generals Beck and Olbricht, and their two adjutants have been executed by firing squad in the courtyard of the Bendlerstrasse, other conspirators have committed suicide, and Himmler has already set up the machinery for an investigation of the uprising and is drawing up a death list containing hundreds of names.'

'They were all involved in the attempted coup?'

'Highly unlikely,' Kammler replied. 'But in situations such as this, guilt or innocence is often a matter of luck. Hundreds of men are going to die, Captain Stoll, and General Nebe may be one of them.'

'Nebe?'

'Yes, He has no alibi. At the time of the assassination attempt, you were in Nordhausen and I was in the Pas de Calais area, supervising the rocket launchings – but Nebe was right here in Berlin, and since Himmler has never trusted him, he's gone down on the death list.'

'Does he know this yet?'

'No. I caught a glimpse of the list in Himmler's office only an hour ago. He was still filling in names.'

'What do we do now?' Ernst asked, feeling nauseous with fear.

'It's the perfect excuse for Nebe to disappear,' Kammler said with a self-satisfied air. 'In order to plan our escape route from Kahla to Kiel and collect troops trustworthy enough, and willing, to be our armed escorts during the journey, Nebe was always going to have to go underground. Our problem before was that his disappearance would have raised too large a question mark. However, now, if he disappears, it'll be assumed that he simply fled in fear of his life, as so many will. So now he'll disappear. He'll go underground in Thuringia. We'll protect him there until all this fuss has died

down – if necessary, I can confirm that he was executed by my men – and then, when the dust has settled, he can surface with new papers and quietly start organizing what we need for our escape before the Soviets or Allies reach us.'

'Excellent,' Ernst murmured, his thoughts clogged with dread. 'But who will... ?'

'I personally will arrange it,' Kammler said. 'I have the required freedom of movement. Meanwhile, you'll report directly to Himmler and become his right hand, thus ensuring that you remain above suspicion.'

Still haunted by the memory of the infamous Night of the Long Knives, and aware that a similar nightmare was about to be put into motion, Ernst, feeling sick to his stomach, said, 'I really would rather not – '

But Kammler stepped up to him and stared icily at him. 'You will do it, Captain Stoll. You will do whatever he asks of you. You will be his right hand, his loyal subject, no matter what he demands. Do you understand, Captain?'

'Yes, sir,' Ernst said.

He reported to the Reichsführer. The nightmare closed in upon him. The death list was completed and the rounding up began and the days and nights after were filled with beatings and entreaties and roaring guns and blood-soaked, riddled corpses. They were shot in their homes, in floodlit courtyards, in their beds and in cars and in fields where the wind howled and bent the grass.

Ernst had to be part of it, prove his worth, show his loyalty, and he managed it by denying it, by pretending it wasn't happening, or by convincing himself that those begging and sobbing deserved what they got. The innocent died with the guilty, the same way, without mercy; and the ghastly climax was held in the great courtroom of the Kammergericht, where, for the cine-cameras, the most notable of the defendants were humiliated even as they were sentenced.

They were brought in wearing old clothes, haggard, unkempt, some deprived of their false teeth, all forced to hold their beltless trousers up, and then, when sentenced, were led out of the courthouse and into Plotzensee Prison where, in a small room, they were stripped to the waist and hanged from meat hooks with nooses made of piano wire.

Ernst and his fellow officers were obliged to look on, all sweating in the

bright lights required for the cine-cameras that were taking moving pictures of the stripped bodies writhing in agony.

That's when it ended, when Ernst was reprieved, and he returned to his bed in the SS barracks and slept the sleep of the damned, haunted by nightmares.

Meanwhile, the western front had collapsed, the fate of France had been sealed a few days before when General Patton's divisions poured through the gap at Avranches, and the Allied bombing of Berlin was now reaching new heights of appalling efficiency. The ruins stretched as far as the eye could see; the sky was a constant pall of smoke.

Ernst was called to Kammler's office and went dazed from lack of sleep. He was informed that General Nebe had gone underground in Kahla, in Thuringia. Nebe had been listed officially as missing, possibly dead in the recent mass executions, when many bodies had been buried unnamed. Ernst was to return to Kahla, to keep a close eye on Wilson. He was to leave the next morning.

Feeling haunted and lost, dispossessed of his soul, he returned to the barracks and started packing... and then heard the wailing of the air-raid sirens.

The noise seemed to cut through him, lacerating his stripped nerves, and something collapsed inside him: the final, sad remnants of his will. He lay on the bed and closed his eyes and begged the planes to turn back. Naturally, they ignored him, were soon above him, making the room shake, and then the darkness outside erupted and filled up with hellish noise. He covered his ears with his hands. It didn't help at all. The noise seemed to fill his head, a vast symphony of destruction, and his bed shook and rattled as a brilliant light washed over him and the men in the other beds cursed and jumped up and ran for the door.

Ernst hurried out through clouds of dust, felt waves of heat, saw fire and smoke, then was struck by a dreadful premonition that could not be cast off. He thought of Ingrid and the children, of that old house in Wannsee, and sensed, even as he visualized it, that something had happened.

It was there and would not budge – the conviction that they were dead – and he commandeered an SS car and drove out of the barracks and raced through the blazing, erupting city, heading for Wannsee. This time he found no respite – the pattern of bombing was widening – and a cloud of smoke and

dust covered the river and the houses around it. Ernst glanced up at the sky, saw the criss-crossing searchlights, the Allied bombers as thick as flies in the paler light of the full moon and stars. It was a lovely August night – only mankind had made it hellish – and as he drove through the gateway of the house in Wannsee, he knew that he had been part of it.

He squealed to a halt in a cloud of smoke, climbed out into scorching heat, and rushed toward the flames that licked up from the rubble. It had been a direct hit – most of the house had collapsed – and he was beaten back by the heat. He fell to his knees in hot ash and looked up at the flames licking over the exposed beams and beating at the broken walls. Then he screamed like an animal, out of the deep well of his old self, as another wall collapsed, causing more geysering sparks and smoke, and then he covered his face with his hands and shed the last of his tears.

Ingrid and his children were dead.

Now, truly, he had only Wilson.

CHAPTER THIRTY-TWO

A V-1 rocket had been found intact. It lay near an enormous bomb crater in a field not twenty yards from the southern wall of the immense main building of the launching site in Pas de Calais in liberated northern France.

'It's nearly twenty-six feet long,' explained US Army Major General Ryan McArthur, 'has a wingspan of about seventeen point five feet, a body diameter of approximately two point five feet, and a launch weight of four thousand eight hundred and sixty pounds. Its warhead weighs eighteen hundred and seventy pounds and its fuel, twelve hundred pounds. She's some baby, right?'

'Right,' Bradley said, suitably impressed. He had not seen McArthur since being introduced to him by Gladys Kinder in London, three months ago. Now, as he followed the major general across the bomb-cratered field near the launch site and its silos, he couldn't stop thinking of her.

'And this,' McArthur said, stopping where an even bigger rocket, approximately twice the size of the V-1, was being hoisted into the air by a British-controlled Straho crane, 'is, we think, one of the enormous sons of bitches that devastated parts of Chiswick and Epping a few days back.'

'The V-2,' Bradley said.

'Yeah, we think so. And this mother is nearly fifty feet long, has a body diameter of five point five feet, a weight, *empty,* of seven thousand-odd pounds, and a fuel weight of twenty thousand one hundred and fifty pounds, compared to the V-1's meagre twelve hundred. How'd you like *that* on your head?'

'A homburg hat will do fine, thanks.'

McArthur laughed and slapped Bradley on the shoulder. They stood side by side on the cold, windswept field, watching the enormous rocket being hoisted up off the ground by the crane, prior to be taken somewhere safer for

a thorough examination by a team of Allied scientists.

Bradley had driven here from Caen, after the recent capture of Antwerp. Major General McArthur's invitation had surprised him.

In fact, while Bradley had been interrogating people in Caen, McArthur's ALSOS agents had been swarming all over the liberated areas of France, particularly Pas de Calais and the Cherbourg peninsula, where, it had been discovered, most of the V-1 and V-2 rocket launch sites were located. Over the past two days, then, since Bradley's arrival, McArthur had been taking him on a tour of the major captured rocket sites, which were, in their sheer size and design, something more than impressive. This particular site was located on the edge of the forest of Eperlecques, three miles north of the village of Watten, on the canal network between the sea and the Belgian border.

'It's our belief,' McArthur now said as he walked Bradley away from the V-2 rocket and back toward the site's huge main building, 'that this was intended to be one of the largest rocket sites of all. Mercifully it was put out of action by the repeated bombing raids of the B-17 Fortresses of the Eighth Air Force of the good old US of A.' He stopped a good distance from the towering, concrete-bunker-styled building in front of them. 'Just look at it,' he said. 'That was the reception building for V-2 trains arriving from Germany. It contained offices and staff accommodations. Over there,' he said, waving his right hand, 'is the railway station, with the lines two feet below floor level and the roof five feet thick – though it *has* been penetrated by one of our bombs that didn't explode. Over there,' he continued, pointing past the damaged wall of the enormous bunker to a tower rising out of the windblown grass, 'is the launch control, approximately sixty-three feet by seventy-three feet and fifteen feet high – no small silo, believe me – and the launch silo, which is thirty by fifty, though now filled with water.'

He led Bradley into the enormous main building. Constructed from reinforced concrete, it was three hundred feet long, one hundred and thirty-eight feet wide, and had work levels going two hundred and sixty feet below ground.

'We believe it was their intention,' McArthur said, 'to construct a building that could be demolished only by a bomb so large that it'd be impossible for an airplane to carry it. That's why the ceiling above you,' he said, pointing up to the eighty-foot-high roof, 'is made from reinforced

concrete twenty-three feet thick. Theoretically speaking, to pierce it you'd need a bomb weighing about twelve tons and striking the ceiling at Mach One, the speed of sound – but we don't have that yet.'

Bradley looked up. Above the northern entrance, at the junction between the ceiling and the north wall, an explosion had blown off a large piece of concrete and forced out a mess of steel reinforcing bars. A second explosion, near the centre of the roof, had detached another large piece of concrete and caused a fine web of cracks.

'*Something* obviously damaged it,' he said.

But McArthur shook his head. 'Not our normal bombing raids. In fact, what you're looking at is minor damage, right?'

'Right.'

'Well, it wasn't caused by our beloved Flying Fortresses during the course of normal operations. In fact, to test the strength of the structure, *after* we'd captured it, we deliberately tried to destroy it with a couple of twenty-two thousand-pound Grandslam bombs – and this is all the damage we managed to inflict. This place is damned near impregnable – and so are most of the others.'

'How was it constructed?' Bradley asked him as they walked around the enormous, empty, silent building, looking up at its towering walls and high ceiling.

'Forty-nine-thousand tons of steel were needed to build that roof alone,' McArthur said. 'According to intelligence reports, based on the interrogation of locals, hundreds of jacks were used to raise the roof slowly, inches at a time, with the walls being built up beneath it, as it was raised. The enormous amounts of steel, cement, sand, and gravel needed were brought in from Watten on that standard-gauge railway track you saw outside. So far we've estimated that the site took six months to construct and used about thirty-five-thousand slave workers, who came from the two prison camps located about a mile and a half from here. At any one time there were always three to four thousand men at work, which went on around the clock on twelve-hour shifts. The slave labour, or *Sklavenarbeiter,* was controlled by armed members of the black-shirted SS *Totenkopfverbande,* who didn't hesitate to execute anyone too ill or exhausted to work. This place, then, is an extraordinary achievement... but the price... Jesus Christ! You don't want to even think about it! Come on, let's get out of here.'

They went outside again, into the shadow of the towering wall, and were whipped by the wind howling across the bleak, bomb-blasted fields, where once livestock had roamed. Now the fields were covered with soldiers, British, French, Canadian, and American, as well as concrete silos and the usual debris of war: armoured half-tracks, overturned trucks, the blackened remains of burned-out tanks, melted tires, and scorched earth.

'I *have* to think about it,' Bradley said as McArthur led him toward his parked jeep. 'I have to fix firmly in my head just what they were capable of.'

'The Nazis?'

'Right. When you hear the stories you can't believe them. They're too incredible to be true – vast underground factories hidden deep in the mountains; the assembly lines run night and day with slave labour – and then you see places like that, the sheer enormity, the work behind it, and you have to accept that they could do it and that he must be part of it.'

'Wilson?'

'Yeah. He's always been a man to hide things. He hid his own past, hid his work in Iowa, hid his hangars in the wilds of Illinois, then went to hide himself in Nazi Germany, to create God knows what. We saw those rockets, right? We know how advanced they are. And even though that's frightening enough, they're just the tip of the iceberg. Wilson's in the Harz Mountains. We don't know exactly where. We only hear about vast underground factories and the use of slave labour. Was it possible? I didn't think so. Not until I came here. Now, having seen what you've shown me, I know that it is... The Harz Mountains... Factories hidden *inside* the mountains... Yes, they could do it... And that bastard is using it.'

'Why?'

'I don't know... and that's exactly what frightens me.'

McArthur smiled gently, patted him on the shoulder, then climbed onto the driver's seat in the jeep and cocked a finger invitingly. When Bradley had climbed up beside him, he turned on the ignition, drove carefully around the bomb craters, and said, 'Thank God Paris has been liberated. A few days there will do you good.'

'I don't want to go there,' Bradley replied. 'I don't have the time.'

'I think you'll *make* the time,' McArthur said with a lopsided grin, 'because Gladys Kinder is there. Now, do we go there or not?'

'Faster!' Bradley said. '*Faster*!'

Almost convulsed with laughter, McArthur manoeuvred around the last of the bomb craters, bounced off the high verge, then drove along the straight, tree-lined road that would take them to Paris.

The bar in the Ritz Hotel in the place Vendôme was packed with British Tommies, American GIs, young men and women wearing armbands of the French Forces of the Interior – FFI – or Red Cross, and more than a few journalists, including the famous, and famously loud, bearded American novelist who, five days before Paris was freed, had entered Rambouillet where he had, according to what he was now loudly stating to those crowded around his bottle-strewn table, acted as an unofficial liaison officer between the 5th Infantry Division and the French partisan patrols. The roar of the conversation that came out of the swirling cigar and cigarette smoke was punctuated by the tinkle of glasses, the popping of champagne corks, the metallic clatter of M-1 army rifles, tommy guns, joggling hand grenades, and other weapons; and Gladys Kinder, looking flushed, was leaning sideways in her chair to take hold of Bradley's hand and tell him, 'It'd be a lot cheaper in the correspondents' mess in the Scribe Hotel, but this is, after all, a once-in-a-lifetime event and the Ritz is the *only* place to experience it.'

In this atmosphere of celebration, Bradley was almost sorry to have missed the previous day's victory march from the Arc de Triomphe and along the Champs-Élysées and on to Notre Dame, but being here so unexpectedly with Gladys was doing his heart good.

'I'll never forget yesterday as long as I live,' Gladys continued while stroking Bradley's sweaty palm. She wasn't embarrassed by the presence of Major General Ryan McArthur, who in any case was looking around the crowded bar with a broad grin on his face. 'There were thousands of people lining the Champs-Élysées all the way up to the Place de l'Étoile. General Leclerc's division, including elements of the US 82nd Division, marched between the cheering thousands, to repeated shouts of "*Viva la France*!" De Gaulle, on the reviewing stand in the Place de l'Concorde, surrounded by other dignitaries and a couple of US generals, was stiff as a board and proud as punch. And after that, when the parade disbanded, it was hugs and kisses all afternoon, with God knows how many glasses of Calvados and champagne and wine – and I'm *still* not hungover!'

'It's the excitement,' Bradley said. 'You'll probably be as high as a kite

for days, then come down with a bang.'

'We'll *all* come down with a bang when this war ends. That's a terrible truth.'

'It sure has its excitements,' Bradley replied with no great deal of pride, thinking of the death and destruction he had witnessed on the march through France, yet unable to deny that he had never felt more alive than he had felt these past few weeks. 'I can't deny that. But right now, the most exciting thing in the world is seeing you again, Gladys.'

'Aw, shucks,' she said, beaming, then kissed him on the cheek. 'You sure know how to please a gal!'

McArthur turned back to them, raised his glass of Calvados, and said solemnly, 'Ladies and gentlemen, lovebirds, a toast to the liberation of Paris.'

'I'll drink to that,' Bradley said, raising his glass.

'And so will I,' Gladys said, touching his glass with hers.

'You've been drinking to it for two days solid,' McArthur reminded her, 'but you're looking good on it. So, let's drink!'

They all emptied their glasses. As McArthur was refilling them from the bottle on the table, a drunken young member of the FFI kicked his chair back, stood up, and raised his glass above his flushed face. '*Vivent les Americains*!' he declared in a ringing tone. He tossed down his champagne in one long gulp while the others at his table cheered and various British, Canadian, and Dutch troops booed and catcalled. The young FFI man, with a broad, sweaty grin, bowed theatrically to the packed room and fell back into his chair.

'Victory is sweet,' McArthur said, 'but can lead to more fighting.'

'Let's hope not,' Gladys said. 'So what have you two been up to since we last saw each other? Still in pursuit of rocket-bombs and mad American scientists?'

'We're not allowed to discuss it,' McArthur said, 'particularly to journalists.'

'This journalist has a personal interest in the case. Besides, this conversation's off the record. I just wanna know, kids.'

Bradley grinned. 'McArthur here's been showing me the V-1 and V-2 rocket launch sites, which have already been photographed for the newspapers. So no big secrets there.'

'And what did you think?'

'I think the Krauts are more advanced than we'd imagined – and in more

ways than one. I think that no matter how big the project, they'd know how to hide it.'

'Such as Wilson's project, for instance.'

'You got it, Gladys. Bright girl. If Wilson's trying to build a new kind of aircraft, we're talking about a big project, but no matter how big it is, I now think the Krauts could keep it well hidden.'

'Where?'

Bradley glanced at McArthur, who simply smiled and nodded. 'Underground,' Bradley said, turning his gaze back on Gladys. 'In great tunnels and factories hacked out of the interior of mountains. I think that's where our man is.'

'Where?'

'You've already asked that.'

'I mean, precisely.'

Bradley shrugged. 'We don't know exactly, but we think it's somewhere in the Harz Mountains, probably south, in the area of Thuringia.'

'And is that where you plan to go, Mike?'

'Yep,' Bradley replied.

'You're going to follow the advance?'

'Yep. As far as I can go.'

'With the fighting troops?'

'Yep.'

'I don't want you getting yourself killed.'

'I'll try not to,' Bradley said.

Gladys stared steadily at him, her face showing concern. He was touched and wanted to kiss her lips, but was too shy to do so, because McArthur, filling up their glasses again, was grinning broadly at both of them.

'Ladies and gentlemen,' he said, 'let's drink up and fall down!'

They touched glasses and drank as a combo started playing a Cole Porter medley. The American novelist, all belly and beard and drunken bellowing, stood up and lurched out of the bar, trailed by his admirers. A French woman crossed the room, giving address cards to the men. She stopped in front of Bradley, glanced at Gladys and McArthur, smiled and gave McArthur a card and said, 'Call anytime,' then gracefully passed on. McArthur studied the card thoughtfully, slipped it into his shirt pocket, and said, 'A night of love in Paris at a price. To the victor the spoils.' Gladys chuckled and McArthur

grinned, his eyes scanning the noisy room, then he raised his eyebrows and said, ‘Well, well! We have an unexpected visitor!’

Bradley looked up in surprise as his urbane, friendly adversary, Lieutenant Colonel Wentworth-King of the SOE, London, emerged from the crowd around the bar, holding a glass in his right hand, a swagger stick under his left arm, looking dashing in his British army uniform and peaked cap. He stopped at their table, grinned, and said sardonically, ‘I *thought* I recognized you, Bradley! What on earth are you doing here?’

‘Just celebrating the liberation of Paris. Nothing more, nothing less.’

‘I’m sure... And in the presence of Major General Ryan McArthur, of the Manhattan atomic bomb project. Accidentally, no doubt.’ He smiled guilelessly at McArthur and said, ‘Good to see you again, sir. Mind if I join you?’

‘Pull up a chair,’ McArthur said. ‘It’s party time in the Ritz.’

When Wentworth-King had taken a chair, Bradley introduced him to Gladys. ‘Ah!’ he exclaimed softly, shaking her hand. ‘Gladys Kinder, the well-known American journalist. I’ve read your articles in *Collier’s* and elsewhere. Your work is spread far and wide.’

‘What I write is widely syndicated,’ Gladys explained. ‘I don’t really write that much.’

‘I enjoyed your regular London column,’ Wentworth-King said. ‘It made me feel quite heroic. Not that you mentioned me *personally,* but you were kind to the British.’

‘I’ve won a heart,’ Gladys said to Bradley. ‘Where have you been hiding this lovely man? You must invite him more often.’

Wentworth-King beamed and McArthur chuckled while Bradley tried to hide the spasm of resentment that unexpectedly shook him. Wentworth-King was charming his lady and he didn’t like it one bit.

‘So what are *you* doing in Paris?' he asked Wentworth-King, after throwing an angry glance at Gladys.

‘I came in this morning,’ Wentworth-King replied, ‘to set up a base of operations and grill a few Frogs. Still chasing your rocket engineers, are you?’

‘Yes,’ Bradley said tersely.

‘Then you might be interested in knowing that the Soviets have captured Blizna, in Poland, including Himmler’s mock village and disguised rocket

proving ground.'

'Any reports on anything unusual?'

'So far, no. But then the Soviets don't talk a lot. We only know that since it's a proving ground, they certainly found a few rockets.'

'A great help,' McArthur said.

Wentworth-King grinned, unperturbed, then smiled charmingly at Gladys. She returned his smile, and then, catching Bradley's accusing glance, hid her face behind her glass.

'Can I take it,' Wentworth-King said, returning his attention to Bradley and McArthur, 'that you chaps are still convinced that Wilson is working on something more advanced than the V-1 and V-2 rockets?'

'I'm convinced of it,' Bradley said.

'Well, just to prove that I'm a decent chap at heart – no hard feelings and so on – you might be interested in knowing that the most *unusual* reports have recently been coming into the SOE headquarters in London.'

'Unusual?'

'Yes. A few days before I left to come here, we started receiving reports from Allied pilots, saying that when flying over Germany they were harassed repeatedly by strange lights that tailed their aircraft and appeared to make their engines malfunction.'

'Strange *lights*?' McArthur asked.

'Yes,' Wentworth-King said, 'Lights... or balls of fire. One report described an encounter with a, quote, *enormous ball of fire*, unquote, that made his aircraft's engine cut out. Another report talked about ten small balls of reddish fire that were, according to the report, flying in formation, at amazing speed. In both cases, the so-called balls of fire, or *Foo fighters*, as they've been dubbed, reportedly flew away when fired upon, but usually returned afterward. The lights, or balls of fire, the *Foo fighters*, appear to have been systematically tailing the aircraft.'

'What areas?'

'All over Germany, but mostly in the vicinity north of Nuremberg.'

'Have the reports been analysed yet?' McArthur asked.

'Yes,' Wentworth-King said. 'And according to analysis, if the so-called Foo fighters weren't some kind of atmospheric or electrical phenomenon, they could have been solid objects that were glowing red-hot. And if that's the case, they'd have been no more than three or four feet in diameter,

remote-controlled, and, most oddly, shaped like discs or...' He paused to shrug his shoulders and raise his hands in a gesture of disbelief. 'Like saucers... *flying* saucers.'

To contain his excitement Bradley stared stonily at Gladys, who simply smiled back sweetly, then turned to Wentworth-King and said, 'Isn't this information confidential? Or is it just *me* you trust?'

Wentworth-King was amused. 'The information's already been published in the British press, so I think it's okay to discuss it now. Not that I have anything else to add. I merely pass the information on to my American friend here, Bradley, whose imagination is clearly more vivid than mine. And now, alas, duty calls and I have to be off.' He finished his drink, stood up, and offered Gladys his hand. 'It was an absolute pleasure meeting you,' he said. 'We must do it again sometime. You'll find details of our Paris HQ tomorrow in the correspondents' mess in the Scribe Hotel. *Do* give me a call.'

'I will,' Gladys said.

'*Au revoir*,' Wentworth-King said, kissing her hand and letting it go with what seemed like great reluctance. 'And to you, Major General,' he said finally. 'And you as well, Bradley. No doubt I'll see you when I see you. Travel safely. And good luck.'

'Same to you,' Bradley said curtly. He didn't look at Gladys again until the urbane lieutenant colonel had left the room, skipping around a uniformed member of the French 2nd Armoured Division and a British lance corporal who were arguing heatedly about something or other. When he had gone, Bradley turned to McArthur. 'Well, what do you think?'

'I think it's Wilson. What's north of Nuremberg?'

'Thuringia... the Harz Mountains,' Bradley said, feeling even more excited, though still angry with Gladys.

'Exactly,' McArthur said. 'We'd better run a check on those reports and see what we come up with. Right now, however, I have to get back to the ALSOS office and see what's cooking there. My departure should make you two lovebirds happy, though you don't look it right now.' He stood up with a broad grin on his face, finished his drink, then gave them the thumbs-up and left the bar.

'Alone at last with my man,' Gladys said, 'but he's no longer smiling.'

'I'm fine,' Bradley said. 'I'm just surprised you didn't go chasing after that upstanding British officer, Wentworth-King, who so clearly charmed

you.'

'Oh, ho,' she responded, grinning. 'The fires of jealousy! I'm having a wonderful day!' She reached out for his hand, squeezed it affectionately, and said, 'A lady my age is easily charmed, Mike, and I *do* like to flirt. But come on! I was only doing it to tease you – because I want you to want me. *Do* you want me, Mike? Do you want me right now? Here and now, in this grand hotel?'

'What's your room like?' Bradley asked her.

'Come up and see,' she said.

They made love under the pink satin coverlet of the twin bed in a dove-gray room filled with elegant Empire furniture and overlooking the rear gardens of the Ministry of Justice. They no longer made love with the vigour of young people, but with the tenderness of two souls united as one, bonded by common experience and a lack of illusions. Bradley took to her body like a lemming to the sea, returning to that place he could fondly call his own, and received all the pleasure he could obtain by simply giving her pleasure. All his love for her returned, pouring out of him like a river, leaving him cleansed and renewed, at peace in her arms. He then slept in those arms, as she slept in his, and when they awakened they made love again, even less vigorously, though as tenderly, as before, then dressed and went for a walk through the darkening city.

'I love Paris,' Gladys told him. 'It's a city made for lovers. I loved it before the war, when I used to visit it a lot from London, and I nearly always thought of you when I walked its streets – my married man, my secret, platonic lover, far away in America. Finally I've got you here with me. Isn't it nice?'

'Yes,' Bradley said. '*Very* nice.'

Already familiar with the city, Gladys led him by the hand down the passage that ran alongside the Ritz, from the place Vendôme to the rue Gambon, pressing her nose to the elegant shop windows, which she could see in the moonlit darkness, and showing him all the things she would buy before leaving Paris. She took him into the rue de Rivoli, around the Place de l'Concorde, then along the broad, tree-lined avenue of the Champs-Élysées, which in the moonlight was wonderful.

'It'll all be over soon,' Bradley said.

‘Yeah, I guess so,’ Gladys replied. ‘Do you think you’ll be able to find Wilson?’

Bradley sighed. ‘I don’t know.’

‘If you don’t find him, you’ll go crazy.’

‘I just might at that. Of course now that I’ve got you, it won’t be too bad, but I *do* want to finish it.’

Gladys chuckled softly and slid her arm around his waist. ‘You’ve only got me for the moment,’ she said. ‘When will you move on?’

‘Tomorrow,’ Bradley said. ‘I have to find myself an army. Probably General Bradley’s 1st Army, since they’re heading for the Rhine. And you?’

‘I might see you in Berlin.’

‘And when it ends? Will you return to America or stay here in Europe?’

‘I’m not too sure. I mean, I’ll have to think about it. I love living here – I mean in London, of course – and I don’t really have anything to go home for. I’ve been gone a long time, Mike. Maybe too long now.’

She had led him off the Champs-Élysées, down past the Grand Palais, and now they were coming to the river Seine, its water stippled by moonlight, curving away toward the distant Eiffel Tower, silhouetted against the sky. Allied bombers were crossing the sky above the tower, heading for Germany.

‘More bombs on Berlin,’ Bradley said. ‘Now they’re learning what the British suffered during the Blitz.’

‘I still sympathise with them,’ Gladys said. ‘Those bombs will be falling on innocent women and children as well as on soldiers. The women and children are too often the real victims of war.’

She smiled and tugged at his hand, leading him across the Cours la Reine, then back along the river, toward where they had come from.

‘Hey, Mike, do you really love me?’

‘Sure, Gladys, you know I do.’

‘Then how can you even *think* of giving me up? What kind of man are you?’

‘What do you mean, Gladys?’

‘Give me a reason for going back.’

‘What reason?’

She sighed in exasperation. ‘Goddammit, Mike, you’re dumb!’

‘You think so?’

‘Yeah.’

‘Would you marry a dumb man?’

‘Yeah.’

‘And would you let him take you back to America?’

‘Yes, dammit, I would. Have you just proposed to me?’

‘I think so.’

‘I accept. Yes, I do!’

She turned into him, her hair blown by the river’s wind, and he kissed her, clung to her, choked up and inspired. Then she stepped away, gave him a smile, and raised his hand to her lips… But she didn’t quite make it.

Before she could raise his hand, the river rushed up to swallow her. Bradley saw the geysering water, a flash of light, a stream of smoke; then heard the muffled explosion, the car roaring past behind him, the shouting of drunken French youths. He glimpsed what he thought was a hand grenade falling toward him, then he was picked up and slammed down into silence.

The silence became a ringing – a jarring sibilance in his ears. His lips were pressed to the pavement, so he rolled onto his back and saw Gladys covered in the blood that was spurting out of her head. He tried to sit up and collapsed, looked at Gladys, saw more blood, groaned aloud, not in pain, but in despair, then passed out again.

He was awakened by the sound of a siren and the screeching of brakes. Then someone, speaking French, told him he was going to be okay and helped him sit upright.

They were rolling Gladys onto a stretcher and her head was all bandaged.

‘Oh, God!’ Bradley groaned.

He clambered to his feet, swayed dizzily, found his balance, then hurried forward as the men with the Red Cross armbands hoisted Gladys up on the stretcher to put her into the ambulance. Her head was bandaged, her leg was in a splint, and she was covered in blood.

‘Jesus, no!’ Bradley said, then reached out to touch her, but was foiled when the Red Cross men slid the stretcher into the ambulance. Bradley, shocked in more ways than one, clambered up after her. When he was in the back, kneeling beside the stretcher, Gladys looked up and smiled at him.

‘Hi, partner!’ she said.

Bradley picked up her hand, passionately kissed it, his tears flowing, then one of the medics clambered in beside him and said, speaking French-accented, but otherwise perfect, English, ‘She’ll be all right.’

‘What?’ Bradley asked, stupidly.

‘She’ll be all right,’ the French medic repeated. He looked about eighteen years old and had the smile of an angel. ‘She was struck on the temple with a piece of the exploding boulevard wall; she also fractured her leg. Apart from that, she’s okay.’

Bradley looked down at Gladys. The bandage around her head was bloody and she was as white as the sheet they’d wrapped around her.

‘But the blood...’ he began, fascinated and frightened by the sight of it, though Gladys was smiling.

The medic slammed the ambulance door closed, then placed his hand on Bradley’s shoulder. ‘Steady on there,’ he said. ‘We’re taking off. I don’t want you to fall on her.’ The ambulance roared into life and moved off with a jerk. The medic grinned and kept Bradley steady, then also studied the blood covering Gladys.

‘She was struck on the temple with flying debris,’ he explained. ‘Such wounds always cause a lot of blood loss. But it’s deceptive, believe me. She’ll only need a few stitches and then her head will be fine. As for the leg, it’s only fractured. It will hurt, but it isn’t serious. She’ll be in hospital for a week or two, then she’ll be up and about again. Meanwhile, let me apologise for the disgusting behaviour of my drunken countrymen.’

‘Pardon?’

‘The police have found the culprits already. Luckily, a gendarmerie car happened to be parked just up the road and the gendarmes in it saw the whole incident. A stolen car being driven by teenagers wearing FFI armbands, mindlessly drunk – having been celebrating the liberation of Paris – and forgetting who the real enemy was. They saw your uniform and, being high on drink and freedom, threw two stolen hand grenades. One exploded as it fell into the Seine; the other exploded on the pavement right beside you. Truth is, you’re both lucky to be still alive.’

Bradley almost wept with relief, then was filled with exultation. He bent over to kiss Gladys on the forehead, on the bloody bandage, then held her hand in his lap and smiled like a happy fool. Gladys, quickly regaining her colour, smiled broadly and winked at him.

‘You two are married?’ the young medic asked.

‘Yeah,’ Bradley lied. ‘Right.’

He stayed with Gladys all the way to the hospital, all the way to her bed,

ensured that she was tucked in like a baby, then kissed her goodbye.

‘I love you,’ he said. ‘It’s as simple as that, Gladys. If I don’t see you in Berlin, I’ll catch you in London. I still have your address,’

‘You take care,’ she told him.

He nodded and kissed her again, then walked out of the ward, treading lightly and not looking back because his tears would embarrass her.

‘Hallelujah!’ he whispered.

CHAPTER THIRTY-THREE

Wilson awakened at dawn as he had planned, immediately switched on the light, then looked around his spartan room. Apart from clothing and technical books, it contained no personal items. Like the rest of the complex, his room was located underground, but it had at least been built into the breast of a hill and therefore offered a magnificent view of the forested valley. Wilson lay on for a brief while, letting himself feel slightly excited, then swung his legs off the bed, worked his bare feet into his slippers, and walked across to the desk. A red circle had been drawn around today's date: February 16, 1945. Wilson picked up a pen and scored through the date, then dropped the pen and went to the window to look over the valley. At the other side of the valley was the old walled town of Kahla, but Wilson's modest research complex, really an underground launching site, was well hidden in this hill, within its sheltering pine trees. Here, today, he would supervise the first test flight of the *Kugelblitz*, which had progressed much quicker than expected.

He did not feel nervous, because he had nothing to fear.

The Kugelblitz was merely an enlarged version of the anti-radar *Feuerball* – and the latter had been tested last year, to everyone's satisfaction.

From August to December, Wilson had sent the three-foot wide, saucer-shaped, remote-controlled *Feuerballs* hurtling skyward from this underground launching site near Kahla, to harass the Allied aircraft, cause their engines to malfunction, and fly out of range before they could be attacked. Some of the *Feuerballs* had blown up in flight, others had malfunctioned in various ways, but each failure had been examined as minutely as possible and its causes corrected in the following prototype. Eventually, by November, Wilson had conducted nightly launches for a month without any failures. Then, confident that his design was foolproof, he

had cancelled further launches, ordered the destruction, by high explosives, of the remainder of the prototypes, and begun applying the same principles and designs to his nearly completed, pilot-controlled larger model, the *Kugelblitz.*

But now his time was running out.

According to what Ernst Stoll had told him, news of the relentless Allied advances on all fronts had even reached the ears of the inmates of the concentration camps that were supplying Nordhausen Central Works and Kahla with forced labour. Now sabotage by the prisoners was a very real threat. Indeed, only three months earlier, in November, a large number of prisoners from the Nordhausen underground camp had been arrested, shut up in the bunkers, and forced by torture to confess to sabotage. A group of those who had confessed had even made a failed bid to escape, which only hastened their deaths. All in all, according to Stoll, about three hundred prisoners had been executed: some hanged in the roll-call grounds, some in the factory corridors, and some shot in the back of the head while still in the bunkers.

A foul business, Wilson thought, and one not likely to encourage the prisoners to be merciful when the Allies came to their rescue.

Thinking of that possibility only reminded him again that his time was running out. Even more pleased, then, that the *Kugelblitz* was to be tested this morning, he pressed the bell to call his breakfast and went for his shower in the adjoining bathroom. He returned to find his meal on the table, placed there by his servant who, like all the rest of the workers, came from one of the camps. It was his usual frugal breakfast of cereal and fruit juice, and when he had finished it, he left his room and went down to the hangar.

Ernst Stoll, who now had the eyes of the walking dead but otherwise looked handsome in his SS uniform, was already waiting for him in his glass-walled office, gazing out at the hangar.

‘You’ve come straight from Berlin?’ Wilson asked, surprised. ‘You must have travelled all night!’

‘No, Herr Wilson, I didn’t. I arrived here yesterday evening with General Kammler, but spent the night in the Nordhausen Central Works.’

‘Kammler’s still at Nordhausen?’

‘Yes. He’s just checking things out. He’ll be here on time.’

‘I haven’t been to the Central Works since Christmas. How are things

there?'

'Busy,' Ernst said. 'There are now about forty thousand political prisoners and civilians working there. And Camp Dora and the many other subcamps in the area are expanding tremendously. Production of the rockets proceeds at full speed, the underground passages are being enlarged, as requested by Himmler, and four new factories are being undertaken: one as a refinery, another for liquid oxygen, and two for Junkers jet engines.'

'So much ambition at the end of the road!'

'It keeps Himmler happy. Bear in mind that the original plans were drawn up in much better days, and if we don't stick to them now, we'll arouse suspicion. Besides, it's good experience for where we're going. For instance, in the town of Bleicherode, about twenty kilometres from the Kohnstein Mountain, there's an old potassium mine where we'd already begun to bore new tunnels, galleries, and accommodations at a depth of seven hundred meters, with the idea of reaching sixteen hundred metres. The plan was to tunnel through to another potassium mine nearby, in Neubleicherode, and there install more factories for work on the V-2 and smaller anti-aircraft rockets. Not far away, in a cliff face near the town of Lehestein, a tunnel is still being bored, intended to end in a large cave in which we were going to install a liquid oxygen plant and quarters for rocket crews... and so forth. Naturally we no longer have use for these places, but they keep the work force busy, allay the suspicions of Himmler's Nordhausen spies, and incidentally prove that what we're planning for Neuschwabenland can actually be accomplished.'

'And today, after testing the *Kugelblitz,* we'll start preparing to leave. How much time do we have left?'

'Not much,' Ernst replied, gazing out of Wilson's glass-walled office at the large, pilot-controlled flying saucer that was resting on a hydraulic steel platform in the centre of Kahla's biggest underground hangar.

The saucer looked exactly like the Schriever saucer, except for the smaller, less visible, but infinitely more powerful, adjustable jets around its rim, as well as its more seamless surface. This was made from *Luftschwamm,* porous metal, thus allowing the saucer to fly at least as fast as the much smaller *Feuerball*, and probably faster. The saucer's top body rose up to the central pilot's dome, made of unbreakable Perspex.

'The war is being lost and a lot of our leaders are breaking down,' Ernst

continued. ‘The Führer’s permanently on drugs supplied by his quack, Dr. Morell, and is also rumoured to be suffering from syphilis and going insane. Himmler spends most of his time in his sanatorium in Hohenlychen, a hundred and twenty kilometres north of Berlin, where he talks to his astrologer and discusses the possibility of arranging a private surrender to the Allies. I myself was visiting the rebuilt Peenemünde in October when Marshall Goring was shown a successful launching of a V-2 rocket. Goring’s eyes were tired and his face was very puffy. During the rocket launching, he swallowed a lot of pills; then he pulled his pistol from his holster and kept tossing it in the air and catching it, as if in a trance, until his aide-de-camp gently took it away from him.’

Never before had Wilson heard Stoll talk with such weary contempt about his masters. Now he knew that he could finally get the SS Kapitän to do whatever he wanted.

Wilson was pleased. Disillusioned romantics always made the most fanatical converts.

‘And how goes the war?’ he asked.

‘Most of France and Belgium are liberated. Soviet divisions have taken Warsaw. Italy is virtually lost. Most of Germany is in ruins. Our air force has no fuel. Our industry has been wiped out by Allied bombs. Our rocket attacks came too late.’

‘It’s only a matter of months, then?’

‘Yes, Herr Wilson. No more than that.’

‘And Kammler?’

‘Since last July, when the attempt on the Führer’s life turned him against the Wehrmacht and encouraged him to place the whole rocket program in the hands of the SS, meaning Kammler, our recently promoted brigadier has been making an admirable public display of criss-crossing the country to take charge of the rocket firings – which means he has freedom of movement and is above suspicion. I still don’t like him, but he’s certainly no fool and knows just what he’s doing, though now that most of the launching sites have been captured, he has less to do there.’

‘Do you think he’s still dependable?’

‘Yes. His sole desire is to avoid being captured and hanged as a war criminal – which means he wants to go with us.’

‘When is he coming here?’

‘Any minute now,’ Ernst said. ‘He wants to witness the test flight of the *Kugelblitz.* It’s not something he’d miss.’

Glancing across the hangar, the doors of which would soon open to reveal the southern Harz Mountains of Kahla, Wilson saw that the German workers, under the supervision of the engineers, were already starting to raise the hydraulic platform under the saucer.

In that gloomy space, the saucer looked even larger than its seventy-five metres in diameter. It was resting on retractable shock absorbers, had an almost seamless, perfect aerodynamical shape, and even the pilot’s cockpit, located at the machine’s centre of gravity, could be retracted during high-speed flight, thus making the machine look like a perfect disc, with no surface protuberances of any kind.

It was, to Wilson’s way of thinking, something worth seeing.

Just as the whining, clattering steel platform came to rest on its adjustable wheels and went silent, Kammler and Nebe entered the hangar by the rear door and marched past the saucer into Wilson’s office. Looking as handsome and cold as ever, Kammler sat on the edge of Wilson’s desk. Nebe, as dark and unreadable as always, stood near the door of the office with his hand on his pistol.

He feels naked without that pistol, Wilson thought. The man is a predator.

‘Welcome,’ Wilson said, addressing his words to Kammler. ‘How are things going?’

‘Excellent,’ Kammler said. ‘At the end of January, Himmler placed me in complete control of the rocket program. I’ve just returned from the Hague, from where the V-1s and V-2s are being fired. We’ll keep firing them from there until Antwerp falls, which it surely will, and then we’ll be firing them no more, since we’ll have run out of launching sites. When that time comes, it will be time to move from here, let’s say March or April, certainly not much longer, since, as from yesterday, Allied troops were massed along the Rhine on a sixteen kilometre front, preparing to launch themselves into Germany. In other words, our time is running out, so let’s hope this test flight succeeds and we can start making arrangements in the knowledge that we have a workable saucer to take with us.’

Even as he spoke, the large doors at the far end of the hangar were being opened. Sunlight poured in to reveal an immense open space that ran out to the base of a steep, densely forested hill. The smooth, metallic-gray surface

of the *Kugelblitz* took on a brilliant, silvery sheen that clearly reflected the images of the men around the platform. Then the engine of the hydraulic platform roared into life and the platform, now on its raised wheels and manipulated by a combination of remote-control console and jib-and-crane, started moving slowly out of the hangar, into the open air.

'Oh, my God!' Ernst murmured, awe making him seem more alive. 'It's absolutely superb!'

Wilson could not resist a smile, then, nodding at Kammler and Nebe, led them, with Stoll, out of his office and across the concrete floor of the hangar, toward the open doors and the still moving *Kugelblitz*.

'Has the escape route been organized yet?' he asked of Nebe, who had fallen in beside him.

'Yes,' Nebe said in his flat, passionless manner. 'The matter of when and how we leave will be complicated by the Russian offensive, which is moving rapidly toward Peenemünde. Because of that, Wernher von Braun and five thousand of his workers are being moved this week to the new research station still under construction in the Bleicherode mine. Because the technicians and their families are going to be housed in the surrounding villages, as requested personally by Himmler, we're going to have to keep this place secret and leave at night, when we won't be observed.'

'When the time comes to evacuate,' Kammler said, 'I'll ensure that von Braun and his team don't know about it. In the meantime, while they're living in the Nordhausen area, I'll keep them under close guard and make sure that none of them comes this far. In short, they won't know you exist.'

'Excellent,' Wilson said as he led them out of the hangar and into the freezing wind of the cleared area, 'but how will we go?'

'The same way von Braun and his team are coming here,' Nebe replied. 'By train, truck, private cars, and even barges. To ensure that at least some of us get through, we'll be split up into groups and make the journey on three separate nights by different routes. The first will go to Rostock, then round the coast of the Baltic Sea; the second also to Rostock, but then on to Lubeck; and the third and last to Hamburg, via Hanover, then on to Kiel from there. A meticulous schedule has been arranged for each group. Each journey will be made by a combination of vehicles to confuse anyone trying to track our movements; and each stop, or change-over point, along the way will be in a secret location heavily guarded by my most trusted SS men, all of whom, like

me, had to go underground after the failed July plot against Hitler. In other words, they're all men who've everything to gain and nothing to lose by coming with us. In that sense, at least, they'll be trustworthy and reliable.'

'It all sounds well organized,' Wilson said.

'It is,' Nebe replied.

The engines of the mobile platform in the clearing went dead, the wheels were raised to let the platform rest on the flat earth, and the *Kugelblitz* bounced lightly on its shock absorbers, then steadied again.

Out there, in the open air and sunlight, it was a thing of great beauty.

Wilson walked up to the pilot, who was waiting by the concrete observation bunker in the shadow of the high wall of the hangar. The man was wearing a Luftwaffe flying suit and seemed totally fearless.

'Are you ready to go?' Wilson asked of him.

'Yes,' he said.

'Good. Then let's do it.'

Wilson escorted him across the clearing and up onto the steel platform, finally stopping at the curved rim of the *Kugelblitz*, their heads in line with its ring of tiltable jet nozzles. From there, the raised pilot's compartment seemed to tower high above them, at the top of the ladder sloping up to it. The pilot climbed up and Wilson followed to help him in. When the pilot was strapped in, Wilson checked that all seemed well, then scrambled down and let an engineer climb up to secure the Perspex hood. When that was done, the engineer climbed back down, pulled the collapsible ladder after him, gave the thumbs-up to the pilot, then marched with Wilson back to the concrete bunker in front of the open doors of the hangar.

Kammler, Nebe, and Stoll were already there, staring through the protective, tinted glass in a long slit in the wall of the bunker. Because the *Kugelblitz* was being flown by a pilot, there was no remote-control panel, as there had been with the *Feuerballs*, though there was a man sitting by a radio console, prepared to talk to the pilot.

'All set?' Wilson asked him.

'Yes, sir.'

'Then there's no point in waiting.'

The man at the radio console relayed Wilson's permission to take off to the pilot. Kammler smiled and crossed his fingers. General Nebe remained impassive. Ernst took a deep breath and licked his lips, then bit his index

finger. Wilson heard the birds singing, the wind moaning through the forest, the babbling of a brook beside the hangar, where the land rose protectively. He thought of his first prototype, the *Flegelrad,* or Wingwheel, which had been a crude affair based on the principles of the wheel, with its many wings radiating out to the rim and revolving around the pilot's cockpit at the centre of gravity. Impossible to control, its balance destroyed by its vibrations, it had been superseded by a later model, in which balance was achieved with a new stabilizing mechanism and the earlier Rocket-motor was replaced by an advanced turbojet engine. That second model flew, but not much better than a helicopter, so Wilson had experimented with his smaller, remote-controlled model, the *Feuerball*. Finally, this, the *Kugelblitz,* the perfect aeronautical machine, would allow for frictionless air flow and defeat the former limitations imposed by the boundary layer. Thus, he was giving the world a saucer-shaped, jet-propelled aircraft of extraordinary speed and manoeuvrability.

And at last it was taking off.

Tilted downward, the adjustable jet engines roared into life, spewed searing yellow flames at the earth, and created a circular wall of fire around the saucer, between its rim and the ground. The flames beat at the blackened earth, roaring down, shooting up and outward. The saucer shimmered eerily in the rising heat waves and then took on a crimson glow. It shuddered violently for a moment, swayed from side to side, bounced up and down on its shock-absorbing legs, then lifted tentatively off the ground.

It hovered in mid-air, floating magically on a bed of fire, then roared louder and ascended vertically, thrust upward by the flaming jets, and was distorted in the shimmering heat waves. It turned to a silvery jelly, then became a lava flow, red and yellow and glaring white, then hovered magically once more, about ten metres up, before roaring demonically, the noise shocking, almost deafening, and suddenly disappearing, though in fact it had shot vertically skyward, to be framed by the rising sun.

It stopped there, bouncing lightly in the sun's shimmering, oblique striations, then shot off again, this time flying horizontally, to disappear beyond the horizon in the wink of an eye.

Wilson heard the applause around him, then the pilot's voice on the radio, distorted by the static but obviously exultant, confirming that he was flying beyond the limit of his air-speed indicator, higher than the upper limit of his

altimeter, and already could see the Elbe River, winding toward Hamburg. He soon saw the curved horizon, the Baltic Sea, the port of Rügen, then he turned back and was soon crossing Magdeburg and reappeared as a flash of light above the green, forested hills of the majestic Harz Mountains. That flash of light became a silvery coin, a flying saucer, a glowing disc – then, abruptly, the *Kugelblitz* was right above them, hovering high up in thin air, again framed by the rising sun. It descended vertically, perfectly, on pillars of yellow flame. The flames scorched the earth and flew outward in all directions and formed a bed of fire and smoke, then the *Kugelblitz* settled down on the steel platform, which its flames had made red-hot. It subsided onto its shock absorbers, bouncing lightly, swaying gracefully, then its engines cut out, leaving a sudden, shocking silence, and the flames died out and the smoke drifted away and the flying saucer was visible.

It was resting on its shock-absorbing legs, gleaming silvery in the sunlight, a technological object of rare beauty, an extraordinary achievement.

'We've won,' Wilson said with quiet pride. 'Now let's blow it to smithereens.'

CHAPTER THIRTY-FOUR

The landscape that Ernst drove through on his way to Himmler's unofficial headquarters in Dr. Gebhardt's sanatorium at Hohenlychen, 120 kilometres north of Berlin, resembled the interior of his own mind: a place of ruins and mounting rubble, a cold, bleak terrain.

He had felt this way since the death of Ingrid and the children – first grief, then guilt, then despair, then a feeling like death – and he now sensed that he would never feel better as long as he lived. He understood that this was why he'd decided to throw in his lot with Wilson. He needed the American's icy confidence, his air of calm invincibility, but he also needed to hide away in a place like the Antarctic the way other men, disillusioned with or frightened by life, hide themselves in isolated monasteries, wanting only the silence of the day and the night's lonesome wind.

He wanted escape.

Reaching the sanatorium, he wasn't surprised to find it surrounded by trucks and heavily armed SS troops, just as the Führer's bunker in the Chancellery had been. Even though wearing his uniform, Ernst had to show his papers to an unsmiling guard at the main gate, then was escorted inside the building, past other guarded doors, and into Himmler's personal study. The Reichsführer was at his desk, leaning slightly forward to look down through his pince-nez at a large astrological chart, but he looked up when Ernst entered and offered a wan smile. Ernst saluted and murmured 'Heil Hitler!' – because this ridiculous formality was still being kept up – then Himmler, who rarely invited his guests to sit, actually told him to do so.

Ernst sat in the chair facing the desk as Himmler was saying, 'You have come from Berlin, Captain Stoll?'

'Yes, sir,' Ernst replied. 'After flying in from Nordhausen, I was expecting to find you in the Chancellery, so naturally I went there first.'

'I'm not feeling too well,' Himmler said testily, 'so I came here for a

much needed rest.'

Ernst did not choose to argue, though he knew that Himmler had in fact come here to get away from the bombings and the general madness overtaking Berlin, now that his envisaged Thousand Year Reich had shrunk to the area confined between two rivers, the Rhine and the Oder, and was about to be annihilated completely with enemy attacks from the east and west. Also, since January, when he had been given the responsibility of stopping Marshal Zhukov's advance to the Oder River but failed lamentably to do so, his position of trust with Hitler had been lost. Now, along with Goring and Speer, he was a rejected former favourite, forced to watch the fanatical Martin Bormann gain the trust of an increasingly paranoid Führer and become arrogant with it.

'And how were things in Berlin?' Himmler asked, as if he had not been there for months.

Ernst sighed and shrugged. 'The same. There are air raids every day and night. Our courageous Führer insists on staying in the Chancellery bunker and refuses to give in.'

'Most admirable,' Himmler said.

'Yes,' Ernst replied. 'Indeed.' Not mentioning that Hitler's bunker, deep beneath the Chancellery garden, had more than once been badly damaged by Allied bombs and was a most depressing sight, with air vents covered in cardboard, the rooms now barren of their former paintings, tapestries, and carpets, rubble on the floors, planks thrown across gaping holes filled with water from burst mains, and an almost daily breakdown of water and electricity. Hitler himself had appeared to be in a dreadful condition, with a limp left arm, an incapacitated right hand, a general lack of muscular coordination, obvious breathing problems, and an embarrassing tendency to absent-mindedness and outbursts of paranoid anger. Because of this, there were armed SS troops standing guard at every door, in every corridor. The bunker was rife with rumours about suspected plots, coups, and assassination attempts that, if nothing else, distracted everyone from the bombs raining down almost non-stop. In short, a nightmare.

'Did you speak personally to our beloved Führer?'

'No, sir. I only saw him in the Chancellery air-raid shelter, when he was conversing with some of his officers.'

'Did you hear my name mentioned?' Himmler asked anxiously, twisting

his snake ring around on his finger.

'No, Reichsführer,' Ernst lied.

'You don't think he's heard about...?' But his voice trailed off into an uneasy silence, as if he couldn't even mention the subject that was, even more than his recent rejection, gnawing away at him.

Ernst knew what his deeper anxiety was about.

The past couple of months had seen the disaster in the Ardennes, the terrible bombing of Dresden, the Soviet crossing of the Oder River, and the Allied advance to the bank of the Rhine, where they were, this very day, massing for their advance into Germany.

Not oblivious to this dreadful turning of the tide, and encouraged by his masseur, Felix Kersten – a dubious character and doctor without a medical degree – as well as by his chief of espionage, General Walter Schellenberg, Himmler had earlier in the month held a secret meeting right here with Count Folke Bernadotte of the Swedish Ministry for Foreign Affairs, in an attempt to negotiate a separate peace. The attempt had failed, but now Himmler was terrified that the Führer would find out what he had been up to behind his back – even more so because his former personal adjutant and current SS chief in Italy, General Karl Wolff, had also been negotiating behind the Führer's back, first with Allen Dulles, the OSS representative in Switzerland, then with two Allied generals in Ascona, Switzerland.

Himmler was convinced that if Hitler found out, he, Himmler, would be executed without further ado. No wonder he was a dramatically changed man, his pale face now sweaty.

'No, Reichsführer,' Ernst replied, keeping his face composed. 'I don't think he's heard anything at all. In fact, I don't think he hears much about anything except the war's progress, which of course is disastrous.'

'That's the talk of a traitor!' Himmler snapped with a sudden, surprising burst of energy.

'I apologize, Reichsführer,' Ernst said quickly. 'I meant no disrespect. I merely point out that even the Chancellery is being bombed every day and the enemy is closing in from east and west and will soon be entering Berlin.'

Visibly sagging again, Himmler looked down at the ring he was twisting neurotically on his finger, studied it for a moment, then looked up again with a hopeful gleam in his normally distant gaze. 'We might still be able to stop them,' he said, 'with our new, secret weapons.'

‘I’m afraid most of the rocket launching sites have been captured,’ Ernst informed him. ‘So even if we produced more advanced rockets, we could not _ ’

But Himmler waved his hand impatiently to cut him short.

‘I don’t mean the rockets,’ he said. ‘I know all about the rockets. I’m thinking, instead, of Flugkapitän Schriever’s flying saucer, which he insisted he would be testing soon. Have you been to see him in Prague?’

‘Yes, Reichsführer. I was there a week ago. Schriever is still confident that he can have the saucer flying before the Soviets get that far. I was certainly impressed with what I saw there, and I think he can do it.’

‘Good,’ Himmler said.

Nonsense, Ernst thought. He had indeed visited Schriever in his research complex outside Prague. Although his saucer might fly, it would be of little help. It was an obsolete model, using Wilson’s old gas-turbine rotors, not much more advanced than a helicopter, and without decent weapons. In truth, it was a joke, designed to keep Schriever engaged and Himmler’s mind off Wilson. Even if Schriever *did* get it flying before the Soviets got to him, it would hardly do much damage to the Soviet or Allied advance. In fact, it would probably be shot out of the sky as soon as it took off.

‘I knew I was right in depending upon Schriever,’ Himmler said. ‘He’s a German, after all. I only wish I’d had the sense to do it a lot sooner, rather than waste all that time on Wilson. How *is* the American?’

Ernst had been waiting for the question. Though prepared for it, he could not stop a tremor of fear from passing through him. He had rehearsed this many times, with Wilson, by himself, and though he knew it would probably work, the thought of failure was frightening. He was going to lie to his Reichsführer – a major lie, and a dangerous one – and when he recalled those high-ranking officers hanging from piano-wire nooses strung from meat hooks in that small room in Plotzensee Prison, he didn’t relish what would happen to him if he made a mistake.

‘I’m afraid you were right about Wilson,’ he said. ‘We put him to work in Nordhausen, helping the rocket engineers, but he was clearly too old and senile to be of much use to them. As for his so-called flying saucer, it was a poor imitation of Schriever’s. When test-flown, it hardly got off the ground before blowing up.’

It had indeed been blown up, but deliberately, by Wilson, after having

performed superbly during its test flight. Wilson had done it with no flicker of emotion. He didn't want to risk flying it until the war had ended (he didn't want it to be observed) and, also, the components for many models had already been shipped to Antarctica. He himself would take the drawings for this final, successful prototype there, when they sailed out from Kiel.

Wilson, then, was still very much alive... but well hidden in Kahla.

'Naturally that failure,' Ernst continued, 'combined with Wilson's increasingly senile behaviour in the Nordhausen Central Works, encouraged us to do what you had suggested – and we shot him. He was executed in one of the bunkers and his body then burned as part of the mass cremations at Buchenwald. Then all the papers regarding his Projekt Saucer were set to the torch.'

'You did the correct thing,' Himmler said. 'Good riddance to bad rubbish. We should have known that an American would not have served us well in the end. And now all of our resources can be directed toward the Schriever saucer, which *must* be successful.'

'It will be, Reichsführer.'

Himmler nodded, scratched his nose beneath the pince-nez, then glanced down at his astrological chart and spoke to the desk. 'Wernher von Braun and his five thousand technicians are now safely housed near Nordhausen?'

'Yes, sir. The new research station has almost been completed in the Bleicherode mine. Von Braun and his technicians have been accommodated there and in other villages in the general vicinity of Nordhausen.'

'They discovered nothing about Wilson and his Projekt Saucer?'

'No, Reichsführer. After executing Wilson, we destroyed all evidence of his project. That was a few days before von Braun and his team arrived.'

'Excellent,' Himmler said. 'The Allies and the Soviets will both want our scientists, so failing all else, we can use them as bartering points if it comes to surrender. Make sure they are kept under guard and be ready to move them at short notice.'

'Yes, sir,' Ernst said.

Himmler nodded thoughtfully, still gazing down at the astrological chart, which had, Ernst knew, been given to him by his 'masseur,' Felix Kersten.

How the mighty have fallen, Ernst thought. This pit has no bottom.

'Nevertheless,' Himmler said distractedly, 'I have good reason to believe the tide will turn again and leave us victorious.' He looked up at Ernst,

smiled in a dreamy manner, and tapped the astrological chart with his knuckles. ‘My charts,’ he said. ‘I study them often. The charts tell me that we’ll be saved at the last minute with some secret weapon. Perhaps our new jets or the atom bomb project... But most likely Flugkapitän Schriever’s flying saucer... I place my faith in my stars.’

‘Yes, Reichsführer,’ Ernst said, too embarrassed to say anything else, but standing up and getting ready to take his leave. ‘I’m sure that’s the case.’

‘You are returning to Nordhausen now?’

Ernst nodded.

‘Good. When do you next plan to visit Schriever?’

‘When he calls me for the test flight of his saucer, which should be within the month.’

‘According to my astrological charts, that should be enough.’

‘I hope so, Reichsführer.’

Himmler stood up, adjusted his jacket, then straightened his spine and gave the Nazi salute. He waited until Ernst had returned it, then said, ‘Thank you, Captain Stoll. These are trying times, but you’ve behaved commendably so far. I trust you won’t let me down in the future.’

‘No, Reichführer, I won’t.’

‘Goodbye, Captain. Heil Hitler!’

‘Heil Hitler!’

The words had a hollow ring in the large, gloomy study, reminding Ernst of the life he had wasted for the dreams of such madmen. He walked out with relief, as if escaping from prison, and drove back to Berlin through the evening’s descending darkness, reaching Reinickendorf airport as the bombs started falling.

He saw the fires all over Berlin as he climbed out of his car, heard the explosions growing louder as they came closer to the airport, and strapped himself into the seat in the plane as the darkness just beyond the airport became a hell of explosions. The plane took off through a brilliant web of languidly looping tracers, flew through exploding flak, and managed to make its escape without being damaged.

Ernst settled into his seat, feeling nothing, not even fear. He thought of how everywhere he went these days there was only destruction. Then the young navigator emerged from the pilot’s cabin, stopped in front of him, and handed him a written message.

Reading it, Ernst learned that earlier that morning Britain's General Montgomery had launched his assault across the Rhine; that two airborne divisions, one British, the other American, had dropped on the German side of the river to support the infantrymen; and that 240 kilometres upriver, General Patton's US 3rd Army had done exactly the same. Fully aware that the news signified the beginning of the end of the Thousand Year Reich, Ernst simply crumpled up the message and let it fall to the floor.

All he felt was relief.

CHAPTER THIRTY-FIVE

Bradley was so tired, he thought he was dead. He was sitting behind another makeshift desk surrounded by rubble and four broken walls, with no roof, in the remains of what had once been an elegant house in what was now left of the city of Cologne, which had been bomb-shattered and torn by the dreadful fighting of the past few days.

The ruined building in which Bradley was sitting was being guarded by filthy, weary, armed soldiers from the 104th Infantry Divisions of General Omar Bradley's US 1st Army, with whom Bradley had made the bitterly won advance from Aachen, on the Siegfried Line. When he glanced at them, which he could do with ease, because few of the building's walls still stood completely, he was reminded of just how hard they had fought and how far they'd come.

Sitting at his makeshift desk , the ruined house's kitchen table, and waiting to begin what he thought would be his most important interrogations on behalf of Project Paperclip, he could hear the continuing sounds of battle from beyond the battered city, as the Germans were pushed back to the Rhine. Nevertheless, irrespective of the constant noise, he still managed to fall in and out of a delirious half sleep, in which he thought of nothing but what he had experienced over the past couple of months.

'The pilot's on his way,' his assistant, Sergeant Lew Ackerman of the US 3rd Armoured Division, whispered into his ear. 'He'll be here any second.'

'Thanks,' Bradley said.

He had meant to open his eyes and smile, but instead drifted into another half sleep and recalled the Hürtgen forest, snow and mud erupting around him, the infantrymen moving forward through that hell of exploding shells, swirling smoke, chattering machine guns, and screaming wounded, their blood splashing on the muddied white of the snow, their bodies crumpling into it. Bradley had survived it (he had hugged the ground a lot), but then

found himself farther south, advancing toward the heavily fortified village of Schmidt and the Roer reservoirs. The resistance was fierce and many men died in the mud, but the village was taken, followed by the west bank of the Roer. Then the Germans flooded the river by blowing up the dams and Bradley found himself helping to form a bridgehead in the early hours of the morning. The men of the US 1st and 9th forced a difficult crossing and assembled a temporary bridge for the others to follow. The moon was bright and many of them died, but Bradley survived again, soaking wet but not with blood, and helped drag some of his dead friends from the river before moving on.

It wasn't excitement that stuck in his mind, just constant noise and permanent exhaustion, and Bradley remembered it while sitting at his table in this ruined house in the ruined heart of the city of Cologne, now one great heap of rubble.

He remembered being deaf and cold, being exhausted and cold, and then recalled, more specifically, the march eastward to Duren, the city's complete destruction, another river crossing (someone said it was the Erft) and finally, in a hell of noise and smoke, the outskirts of this city. Allied aircraft bombed it constantly, the big guns levelled what was left, then the US 1st Army moved in, taking the town street by street.

Bradley was right there, with the 104th Infantry divisions, clambering over the rubble, choking in dust and smoke, firing his M-1 rifle at those murky figures in the dust-wreathed ruins, throwing his hand grenades into rubble-filled basements, running forward and ducking and running forward again, and dragging dead, bloody bodies out of his way to start all over again.

He had played his small part in the capture of Cologne and couldn't help feeling proud of himself. He was too old for this, after all, and was not obliged to do it. The function of the OSS was intelligence gathering – to follow the advancing armies and set up headquarters in their wake – but Bradley had wanted this last adventure, a final testing of his courage, and he had to confess that doing it had made him feel young again. It was confirmation of that awful truth – that men throve on risk-taking – and it helped him to understand what drove Wilson on his weird personal journey: the need to risk everything he had to create his own world.

What would be most frightening about Wilson, Bradley suspected, would be the world he was hoping to create: clearly one in which normal human

feelings had little weight.

It helped to think about Wilson. It made Bradley feel more alert. He rubbed his eyes and yawned and stretched himself on the wooden chair. He was pleased to note that a jeep had just pulled up outside and his ALSOS assistant, Major Arnold Grieves, was leading a US Air Force pilot through the remains of the front doorway, past the armed guards, along the rubble-strewn passageways to his open-air office. A cold wind was whipping up the dust and forcing Bradley to shiver.

'Hallelujah!' he whispered as Sergeant Ackerman stepped over a broken wall, holding a tray containing what looked like four mugs of steaming coffee.

'I brought us all coffees,' he confirmed, placing the tray on the table. 'It'll help keep you warm.'

'You're a treasure,' Bradley said. 'I will never forget this simple display of kindness. Look me up after the war and I'll give you a kiss.'

'No, thanks,' Ackerman said, taking the chair beside Bradley and raising his steaming mug to his lips as Major Grieves, small and portly and reportedly brilliant, stopped in front of the table with the pilot beside him. The pilot was in his flying uniform, was roughly handsome and unshaven, and was actually puffing on a cigar, just like in Hollywood films.

'Hi, Mike,' Grieves said informally. 'This is Lieutenant Edward Schlesinger of the 415th Night Fighter Squadron. Eddie, this is Colonel Mike Bradley of the OSS and his administrative assistant, Sergeant Lew Ackerman of the US 3rd Armored Division.'

'Hi,' Schlesinger said, exhaling a cloud of smoke and pulling up a chair without being asked. 'Howya doin'?'

'Fine,' Bradley said, as Arnold pulled up the last chair. An enemy shell came screeching in toward them and fell in the ruins of a house in the adjacent, debris-strewn street. The explosion threw up more debris and a ballooning cloud of smoke, but neither Bradley nor anyone else at the table took any notice. Instead, Bradley glanced down at his notes and said, 'You're a pilot with the – '

'He's just told you,' the pilot said, nodding in the direction of Major Grieves. 'The 415th Night Fighter Squadron, flying bombing raids over the Rhine.'

'Originally out of England?'

‘Right. But now out of a French airbase near Paris. One hell of a city.’

‘I agree,’ Bradley said with a grin, amused by the pilot’s lack of respect for rank. ‘But the incident you’re going to tell me about actually happened when you were flying out of England.’

‘Yeah, right. Aston Down, Gloucestershire. A Limey base.’

‘How’d you get on with the Brits?’

‘That’s a joke, isn’t it? They thought we were overpaid, oversexed, and over there to steal their women.’

‘Which you were.’

‘I guess so, Colonel. No argument there. Are those coffees for us?’

‘Yeah,’ Ackerman said.

‘Terrific.’ Schlesinger picked up one mug, Grieves picked up the other, they both drank, then Schlesinger inhaled on his cigar and exhaled more smoke. Because the smoke from the last explosion was drifting over them, the cigar smoke was barely noticed.

‘Apparently this incident occurred on the night of November 23, last year, during a bombing run over the Rhine.’

‘Right. November 23, 1944. I have the date branded in my brain and won’t ever forget it.’

‘What happened, exactly?’

‘It was a pretty normal bombing run,’ Schlesinger said, ‘with nothing out of the ordinary until we got to about twenty miles from Strasbourg.’

‘When you say “nothing out of the ordinary,” what do you mean?’

Schlesinger spread his hands in the air. ‘Nothing!’ he said. ‘Just another routine bombing raid. No problems over France, a bit of flak over the Rhine, then another untroubled period until we started getting near Strasbourg. That’s when it began.’

‘You were harassed by some kind of flying object?’

‘A Foo fighter,’ Schlesinger said.

‘That’s the word you guys are using for this particular kind of unidentified flying object?’

‘Right. We call them Foo fighters.’

‘Why?’

‘Just a joke name. It comes from the Smokey Stover comic strip. You know? The popular phrase, “Where there’s foo, there’s fire.” It’s as simple as that.’

Bradley chuckled and shook his head in amusement, then returned to business. ‘So you’d heard about the Foo fighters before you made that particular flight?’

‘Yeah, right, but that doesn’t mean I imagined the sons of bitches. Everyone in the crew saw the same objects – and one of our B-25s went down because of the harassment. No, sir! They were real, all right!’

‘So what happened?’

‘We’re just approaching Strasbourg with not a thing in the goddamned sky – no enemy aircraft, no flak, no tracers – nothing! Then, without warning, these goddamned Foo fighters appeared – about a dozen of them – and started tailing certain of our aircraft, mostly the bombers. They ascended from the ground – most of us saw them coming up. They looked like balls of fire – an orange-yellow fire, sometimes flaring white, with a tail of fire streaming out behind it – but when they flew beside my plane, a B-25, I could see that they had a dark inner core, which was probably solid. That core was shaped like a disc, or saucer, and most of us agreed it was no more than three or four feet wide.’

‘And you believe they were actually tailing your aircraft?’

‘No doubt about it, Colonel. Those goddamned things were *controlled*. With that orange-yellow fire around them and their unusual shape and size, they certainly seemed a bit weird and even unreal – but they were under control.’

‘What makes you think that?’

‘Because they flew right at our airplanes as if about to crash into them, then turned away abruptly and just tailed us, sticking really close to us. Then, each time we fired our guns at them, they flew out of range at incredible speed and in every direction.’

‘How fast?’

‘Faster than any plane I’ve ever seen.’

‘Why did you fire at them? They were only *tailing* you, after all.’

‘Because as soon as they started tailing us, or at least flying in formation with us – since they were usually right beside us – they appeared to cool down a bit, giving us a clearer impression of the dark inner core. Then they definitely looked saucer-shaped, probably made of metal – at times they *glinted* – and they seemed to be spinning rapidly on their own axis. When they were spinning like that, they made a whipping, whistling sound, like

they were whipping up the air around them. And when *that* happened, our radar *and* engines malfunctioned and our planes started failing... It was weird. Really frightening.'

'And you're sure that the malfunctioning of the engines was directly related to the spinning of the fireballs?'

'Absolutely. I'm sure. We were *all* sure. Because as soon as we fired on the Foo fighters, they flew away from us – the instant we started firing, in fact – and as soon as they flew out of range, our engines kicked in again. So that's what was happening, see? When they came close to us, our engines malfunctioned and we started going down; when we fired at them and they flew away, our engines kicked back into life and we were able to level out and keep flying. So they came at us and were chased away, returned and were chased away again, and our engines were cutting in and out, and we were falling and then levelling out again. This happened repeatedly until we gave up and turned back to England... Which we only did when Tappman's B-25 went down for the count.'

'Lieutenant Victor Tappman... the fatality.'

'Right. Good old Vic. Out of Denver, Colorado. One of the best pilots we had – but even he couldn't handle it.'

Another shell fell nearby, exploding a few streets away, but Schlesinger merely turned his head to glance at the rising smoke, then inhaled on his cigar and shook his head ruefully.

'His B-25,' he continued, 'like all of the others, had been cutting in and out, going down and levelling out again; but then it cut out for too long, fell too far to be levelled out, and then went into a nosedive that he couldn't control. I think his engines came on again, but by then the aircraft was in that spin, and so the plane was forced quicker toward the ground and eventually crashed. I heard Tappman on the intercom, shouting about the goddamned fireballs. "*They're killing our engines*!" he shouted. "*They're not planes*!" I heard his gunner cry out. "*They're balls of fire*!" The gunner also emphasized that the balls of fire were *ascending* – so they weren't natural phenomena – and then Tappman screamed, "*We're going down*! *Pull her up*!" Then he gave one, long drawn-out cry of the word "*Foo*!" which is where it all ended.'

'You mean, the Foo fighters flew away after Tappman crashed.'

'No,' Schlesinger said, taking another drink of his coffee and then putting

the mug back down. ‘We all turned back when we saw Tappman crashing – and only *then*, when we were actually heading home, did the Foo fighters fly away... And those sons of bitches *did* fly away, Colonel, they didn’t just disappear. They ascended vertically above our aircraft, stayed above us for a short while, then, when they were certain we were heading home, they flew away horizontally and finally, when a good distance away, descended *in formation* toward the ground. They were controlled, Colonel. *Definitely*!’

‘It could only have been remote control,’ Bradley said.

‘Like the V-1 and V-2 rockets,’ Grieves added, ‘so it’s certainly possible.’

There was silence for a moment. Bradley heard the distant battle.

‘This is some office you got here,’ Schlesinger said. ‘Real cosy, in fact.’

Bradley smiled. ‘We make do with what we have.’

Schlesinger nodded, straight-faced, and said, ‘Can I go now?’

Bradley also nodded. ‘Sure. And thanks a lot. You’ve been a great help.’

Schlesinger grinned, pushed his chair back, and stood up.

‘Anytime. No sweat.’

Grieves stood up with him. ‘Are you going to that hospital right now?’

‘Yes,’ Bradley replied. ‘I want to catch up with the 1st Army. I can’t hang around too long.’

‘Any messages for HQ in Paris?’

‘Not yet,’ Bradley said.

‘Okay, Colonel, I’ll see you in Berlin.’

‘I sure as hell hope so.’

Grieves grinned at him and left, taking the pilot with him. Bradley stood up and stretched, then said to Sergeant Ackerman, ‘I’ll take the jeep and be back in an hour or so. Can you hold the fort?’

‘I’m not expecting many visitors,’ Ackerman replied laconically, his gaze taking in the ruined walls and missing roof of the house.

‘I’ll bring you back a hot blonde,’ Bradley said.

‘You do that, Colonel.’

Bradley left the ruined building, passing the armed guards, then climbed into his jeep and drove through Cologne, or what was left of it. The devastation was appalling. No street was untouched. He drove past skeletal buildings, imposing hillocks of rubble, the blackened remains of exploded tanks, overturned trucks, and mangled half-tracks. People still lived in the ruins, their pitiful possessions grouped around them, and children kicked up

clouds of dust as they clambered over charred wooden beams and jumped off the remains of walls. Occasionally shots rang out – the army was cleaning out German snipers – and Frenchmen with FFI armbands and women armed to the teeth were kicking collaborators, the men bruised, the women with shaved heads, along the streets and into basements and rubble-strewn rooms to mete out rough justice.

Bradley tried not to see that, because although he strongly disapproved, he could do little to stop it. He was therefore undeniably relieved to arrive at the hospital. Though it was still standing, it had also been severely damaged and was surrounded by rubble.

He parked as some Flying Fortresses growled overhead, heading for the Rhine and the German cities beyond it, and thought of the balls of fire, the so-called Foo fighters, that had been harassing and sometimes destroying Allied bombers for months now.

Saucer-shaped objects, he thought. *It could only be Wilson.*

And he had to admire Wilson, while also feeling a touch of dread. Bradley was more determined than ever to find him as he entered the hospital.

There was a jagged hole in the roof just above the reception desk and the floor below it was covered in broken plaster and a dirty white powder. Uniformed MPs were on guard, checking for malingerers, but they snapped to attention and saluted when Bradley stopped at the desk. He asked for Major General Saunders, the OSS officer who had called him there. When Saunders arrived, he forgot to salute, but offered his hand instead.

'Major General McArthur told me about you,' Saunders said with a casual, relaxing smile. 'He told me what you were after. This woman, we think she knew the man you want, and she's eager to talk. No love lost there, I think. Come on, Colonel, this way.'

'How is she?' Bradley asked as Saunders led him through the nearest door and into a corridor.

'Not too good,' Saunders replied. 'She copped a bomb in this very hospital. She was working here as a nurse for the Germans when we bombed it to hell. She was buried in rubble, had a lot of bones broken, and will possibly be paralysed for life. But she can talk. She's coherent. She came here from Berlin, where she'd lived in the Kürhessen district with an SS engineer named Helmut Kruger. According to her records, which we found in

the hospital files, she came here to work under the auspices of the SS and was otherwise being favoured with all the privileges of an SS dependant, or wife. Since, according to those same records, she and Kruger had not been married, we wondered why this was so and decided to ask her about it. We were surprised, then, when she told us with some bitterness that the name "Kruger" was a pseudonym for an *American* engineer, John Wilson, who'd worked at the rocket research centre at Kummersdorf, just fifteen miles south of Berlin. I conveyed this information to Major General McArthur and he told me to contact you. Your special baby, he said.'

He led Bradley along some more corridors, few of which were undamaged, then into a ward where the beds were crammed tightly together and the roof, which had collapsed, was temporarily covered with canvas sheeting. Most of the windows were also covered in canvas, and the wind drummed against it.

Saunders led Bradley to the bed of a woman whose steady, fearless gray gaze emerged from a swathe of bandages that covered her head and hid most of her features. Her arms and legs, protruding from a white sheet, were in plaster casts.

'Mrs Bernecker,' Saunders said, 'this is Colonel Bradley, from the American intelligence service. Mike, this is Mrs Greta Bernecker.'

'Hi,' Bradley said, feeling awkward because of the woman's injuries.

'Hello,' the woman replied in good English. 'You wish to know about Wilson?'

Taken aback to hear Wilson mentioned so casually, like a living person, Bradley took a deep breath and said, 'Yes.'

'So... ask your questions.'

Bradley took another deep breath, surprised by his nervousness. He glanced at Saunders, who smiled back and said, 'I don't think you'll need me anymore, but if you do, you can find me through our temporary office right here in Cologne – and you know where that is. Okay?'

'Okay,' Bradley said. He watched Saunders take his leave, passing the other beds, sometimes nodding and waving at the patients he knew. When the OSS officer had gone, he turned back to Greta Bernecker.

'You were living with Wilson in Berlin, is that right?'

'Yes.'

'He was called "Kruger" at the time?'

‘No. He was only listed officially as Kruger. The SS confiscated his American documents and gave him those of a dead German named Kruger. I gather it was because they didn’t want uninformed government clerks and administrators learning that an American, Wilson, was working for, and being supported by, the Third Reich. Officially, then, he existed as Kruger, but those who knew him, or worked with him, called him Wilson.’

‘He was working at Kummersdorf at that time?’

‘Yes. He was actually working at Kummersdorf West, at the other side of the old firing range, well away from the real rocket research centre.’

‘The one run by Wernher von Braun.’

‘Correct, Colonel.’

‘And when Wernher von Braun left to go to Peenemünde?’

‘Wilson took over the larger hangars at Kummersdorf.’

‘Do you know what he was working on?’

‘Some kind of highly advanced, radical aircraft.’

‘Did you find out anything about it?’

‘No. He sometimes talked about it, but I didn’t understand what he was saying. He was an engineer, an aeronautical scientist, and such talk just bewildered me. I only understood that he was after an aircraft that could go straight up and down, like a helicopter, but could fly a lot faster. He said it was shaped like a saucer – I remember that much. In fact, the research program was called Projekt Saucer, which confirms what I say.’

Bradley thought of the hangar in Iowa, then of the Foo fighters, and knew he was heading in the right direction. ‘Did von Braun know anything about Wilson’s project?’

‘I don’t think so. It’s possible, but I doubt it. I know from what Wilson told me that he’d contributed considerably to von Braun’s rocket program by passing on certain of his technical innovations. And I think that because of that von Braun believed that Wilson’s experiments were related solely to the V-1 rocket program.’

‘Who *did* know about Wilson’s work?’

‘The people who worked with him: an old Italian, Belluzzo, two German engineers, Habermohl and Miethe, and a Luftwaffe engineer, Flugkapitän Rudolph Schriever, who was obsessed with pleasing Himmler and tried stealing the credit for Wilson’s work. While at Kummersdorf, they were all under the supervision of an SS officer, Lieutenant Ernst Stoll – now a

captain, I think.'

'Is Wilson still at Kummersdorf?'

'No. Conflict between him and Flugkapitän Schriever, with Schriever gaining Himmler's trust, led to the research team being split into two groups. One group, headed by Schriever, Habermohl, and Miethe, was sent to somewhere in Bohem, in Czechoslovakia, and the other, headed by Wilson alone, went to the Harz Mountains.'

'Whereabouts in the Harz Mountains?'

'I don't know exactly. He mentioned a place called Nordhausen, though I don't think he was actually going there, but to somewhere close to it.'

That made sense to Bradley. British and American aerial reconnaissance and local resistance intelligence had already confirmed that some kind of huge rocket production centre was located underground, near Nordhausen, in Thuringia. As that area was also part of the Nazis' planned Last Redoubt, it was logical that anything related to secret weapons would be transported there.

Trying to hide his excitement, he forced himself to look at the heavily bandaged Greta Bernecker and asked, 'Is that when you and Wilson separated? When he was moved to Thuringia?'

'Yes,' she replied bitterly. 'We weren't married and only SS wives could go, so I was left in Berlin.'

'Yet ended up in Cologne.'

'Yes,' she said, still sounding bitter. 'The SS offered me a pension or the chance to work in one of their hospitals. Since the pension was laughable, I accepted their offer of work here. This was an SS hospital, Colonel, before you people came here.'

Bradley studied the woman carefully – or what he could see of her. Her visible features were hard, the lips sensual, slightly cruel, and her gray eyes, though hardly filled with warmth, were admirably fearless. She might be paralysed for the rest of her life, but she was not seeking pity. Bradley had to admire that.

'How did you come to be living with Wilson?' he asked.

'I was working at the time as a nurse in a secret, experimental hospital just outside Berlin, and Wilson went there more than once to have some operations.'

'What do you mean by an "experimental" hospital?'

‘It was devoted to Himmler’s so-called anthropological experiments, mostly under the auspices of the *Ahnenerbe*, the Institute for Research into Heredity. Normally, the experiments were carried out – often under appallingly crude conditions and without aesthetic – on inmates from the concentration camps; but Wilson was obsessed with extending his life, and as soon as an experiment produced results, he made personal use of it, no matter how painful. He used himself a lot, in fact: gave his blood and urine and shit and even semen; underwent numerous tests and experiments. He had operations on his failing heart, on his stomach and joints; he even had some basic plastic surgery to make him look younger. He was a man obsessed, Colonel.’

‘And no longer like a seventy-five-year-old.’

‘No, the pig looked much younger.’

The vehemence was startling, but Bradley knew he could use it. ‘Why did you move in with him,’ he asked, ‘if you detested him so much?’

‘Because he asked for me,’ she said. ‘It was an SS hospital and he had a lot of influence. I wanted to have a few small luxuries, so I moved in with him.’

‘Why did he want a woman at his age?’

Greta Bernecker, swathed in her bandages, actually managed a smile. Bradley didn’t like her, but he had to admire her guts. The combination of bandages and courage reminded him of Gladys in the ambulance in Paris. Thank God, she was now back in London – and writing letters again.

‘It wasn’t romance,’ Greta said, ‘if that’s what you’re thinking. No, he needed a trained nurse, one who understood his needs, and since I’d been looking after him for so long, I was an obvious choice... He was a vigorous man, Colonel – those operations had done him good – but he wasn’t interested in normal sex. What he wanted was his own semen – for the experiments, nothing more – and since I’d already done it for him, he wanted me to masturbate him and then bottle his semen and arrange for its delivery to the hospital. I did the same with his piss and shit and blood. It was a job and I did it.’

‘Did he treat you well?’

‘Yes. In the sense that he wasn’t cruel. He was neither cruel nor kind – he simply didn’t have such emotions – and as long as I did what he asked, he let me have what I wanted. But I thought he cared for me at least a little... It’s a

human conceit.'

'But he didn't care.'

'No. Not a bit. When the order came for him to move out, he just moved out and left me. I meant nothing at all to him.'

'Did *anyone* mean anything to him?'

'Not that I noticed. I think he was dead from the neck down. He had no heart, no soul. He was all brain – a mathematical machine, above human emotion. I've never met a man like him.'

'Is there anything else you can tell me?'

'No. I don't think so. He left me and went to the Harz Mountains and is probably still there. I want you to find him and hang him. It's all he deserves.'

'Yes, Frau Bernecker.'

'Now I'm tired and wish to go to sleep. Goodbye, Colonel.'

'Goodbye.'

Unable to move anything else, Greta Bernecker closed her eyes. Bradley, elated and disturbed at once, walked out of the ward.

By nightfall, Bradley had left his makeshift office in the ruins of Cologne and was resting on one knee, like Davy Crockett, with an M-1 rifle in his hands. The sky above him was filled with black clouds of bursting flak, phosphorescent streams of tracers, descending parachutists, and fat-bellied Allied bombers and gliders. All combined to make a noise that could strip the senses bare.

Bradley gazed across the river, along the length of that enormous bridge, and saw the water geysering up all around it and roaring dramatically. There were infantrymen bunched up all around him, behind him, in front of him, and as the ones in front jumped up and yelled obscenities and rushed forward, the distance between him and the bridge decreased all too rapidly.

He moved forward at a crouch, holding his M-1 like a woman. He heard the shouting and the roaring and the rumbling of tanks and half-tracks and thought that he was living a dream too intense to be borne. Then he was all alone there: not one soul in front of him; just the river and geysering water and that enormous length of bridge, plus a dizzying drop down into the river, where dead bodies were floating.

American bodies, he thought, and started shaking. I can't do this. It's too

much.

‘Go, dammit! *Get going*!’

Someone grabbed him by the shoulder, shook him violently and threw him forward. He jumped up and ran like the wind, straight onto that damned bridge. The wind was worse out in the open, carrying all the noise to him, and the German shells were looping down around him and the water was roaring. He was drenched, but kept going; now he simply had no choice. When he glanced around him, he saw geysering water and more men falling off the bridge. Shocked, he looked away, raising his eyes to the heavens, where he saw the bombers and bursting clouds of flak and tracers painting the night. Death in war could be so beautiful, always lighting up the darkness, but it was still blood and broken bones and burning and it made him feel nauseous.

‘Keep going, goddammit!’

Which he did, as he had no choice. Running above death and destruction. Advancing beneath a night sky rendered exotic by modern technology. He ran and fell down, jumped up and ran again, while the water splashed over him, then fell away again, and bawling men, some of whom were his friends, jerked frantically and fell down. He couldn’t stop to check their pulses. Once you started, you couldn’t stop. You just had to keep going, through the hellish noise and chaos, and pray to God, as Bradley was doing right now, that you’d somehow get through it.

‘*Goddammit, fuckin’ German sons of bitches*! *Goddammit, we’ve made it*!’

Bradley didn’t know who was shouting. All the voices seemed the same. They were filled with exultation and dread and a childish defiance. He just followed the other men, still running, crouched low, his M-1 bouncing off his chest, and raced through raging water into more hellish noise and emerged to a stretch of solid ground that was erupting in flame and smoke. He jumped off the bridge, bringing his M-1 up, taking aim, but the wave of men filing up behind him forced him onto the scorched ground.

It was earth and it was black and torn asunder by bomb and shell and his buddies were spreading out across it and heading into the darkness.

Bradley stopped for a moment, briefly blind and deaf, drenched, and then realized that he was standing on the soil of the Thousand Year Reich.

He held his rifle at the ready and marched forward, into Germany.

To Wilson.

CHAPTER THIRTY-SIX

The move began on the first day of April. Kammler had arrived back from the Hague at the end of March, after firing the last of his 1,050 V-2 rockets on London. He had immediately informed Ernst that as the American army was rapidly approaching Nordhausen, the whole complex was to be evacuated forthwith.

'As you know,' he said, seated in his office in the Nordhausen Central Works, his back turned to the panorama of forested hills and sky framed by the large window behind him, 'it is Himmler's intention to use Wernher von Braun and his five thousand technicians as pawns in a possible trade-off with the Allies. While I personally disapprove of this, I cannot argue with the Reichsführer, who is increasingly neurotic. I therefore had to agree to personally move them to a safe place in Oberammergau, in the Bavarian Alps. I plan to do that in four days' time. While I am thus engaged, I expect you personally to supervise the evacuation of the labour force from Camp Dora and back to Buchenwald, Bergen-Belsen, Neuengamme, Ravensbruck, and similar camps around Brunswick and Hanover. Brook no resistance. Execute those who either cannot or refuse to go. Make sure the evacuation is completed by the fourth of April, when the evacuation of the Kahla complex is due to begin. Understood?'

'Yes, sir,' Ernst replied. Although he had formerly detested Kammler's icy efficiency, he had to admire it now. 'But I fail to see how you can make it back here from Oberammergau by April 4.'

'I won't be coming back,' Kammler said. 'As soon as I've settled von Braun and his men there, where they'll be placed under guard, I'll take a plane to Kiel and join you there. Once there, I'll remain with Wilson and his team until you return to Berlin to pacify Himmler.'

A tremor of fear passed through Ernst at the thought of returning to Berlin, let alone seeing the increasingly demented Himmler.

‘*Pacify* Himmler?’ he asked tentatively.

Kammler smiled with cold, mocking amusement. ‘When I saw Himmler yesterday in that quack’s sanatorium in Hohenlychen, he expressed his concern that the much discussed Schriever saucer be test-flown as soon as possible and insisted that I send you to see him, to give him a full report. To avoid any kind of suspicion, you must do just that.’

Knowing that escape from the besieged Berlin was becoming more difficult every day, Ernst did not feel too happy. He was ashamed of the tremor in his voice when he said, ‘But I may not get out of Berlin in time to rejoin you in Kiel before you leave for Argentina.’

Kammler chuckled maliciously. ‘You’ll get out, all right,’ he said. ‘I’ve personally arranged for an SS plane to fly you out of Reinickendorf Airport on the night of April 10, which should give you plenty of time to see Himmler, sort out what he wants you to do regarding that idiot Schriever and his saucer, and make your escape before Berlin falls. Any more questions?’

‘No, sir.’

Ernst saluted and left Kammler’s office; then he went to work with no great enthusiasm, but considerable efficiency. No longer revolted by what he had to do, he arranged for the first of the Camp Dora inmates to be moved out that evening. He personally supervised the movement of some groups to Bergen-Belsen. Some were driven there by truck or train; others were made to go on foot, forced along by the snapping dogs and cracking whips, usually without food or water. If they lacked the strength to go on, they were shot, their bodies dumped in the ditches. Even here, Allied aircraft flew constantly over the roads and railway lines, bombing the lengthy columns of prisoners and increasing the chaos. By normal standards, it was a nightmare, but Ernst took it in his stride. He was disgusted not because of any moral outrage, but because he was risking his own life to escort this ragged column of Jewish scum and other useless human rubbish to what would be their final destination.

Yes, he knew that they were marked for extermination before the Allies arrived.

He went to bed late and awoke feeling groggy. He was more alert later when Kammler’s special train, with its sleeping cars and dining car and many well-armed SS guards, left with Wernher von Braun and about 500 of his V-2 experts and their families, on the first leg of the journey to Oberammergau.

Once they'd gone, Ernst paid a visit to the Kahla complex, where he found Wilson, silvery-haired but lean and remarkably fit, supervising the packing of the last of the components and drawings for the *Kugelblitz*. Because the workable model had been blown up a few weeks before, the hangar outside Wilson's office looked vast and cold.

'Will you soon be finished?' Ernst asked of Wilson.

'Yes. Today, I think. Most of the components have already been boxed. Copies of the drawings and notes have been placed in three separate, portable safes and will be taken with each group, to ensure that if one lot is lost, the others will make it. Those in charge of the papers have been instructed to destroy them if there's the slightest chance of Soviet or Allied forces capturing them. And since the *Kugelblitz* itself has been blown up, there'll be no evidence left here regarding what we were doing.'

Ernst smiled. 'Excellent,' he said. 'Wernher von Braun's men did something similar with their papers. I gather that two of his engineers, Dieter Huzel and Bernard Tessman, hid the archives of the Peenemünde research station in the disused iron-ore mine near the village of Dorten, not far from Bleicherode. All over Germany, in disused mines and evacuated caves, the Third Reich is hiding its scientific secrets. We're the only ones who are burying ourselves with our secrets – hopefully in the Antarctic.'

'We're not burying ourselves,' Wilson corrected him. 'We're creating our own world.'

'I hope so,' Ernst replied.

He didn't see Wilson for the next two days; he was too busy supervising the continuing evacuation of Camp Dora and ensuring that those in charge of the ragged columns of prisoners would not be merciful to anyone too ill to march. As before, they were moved out at night, by truck and train or on foot. Driving back and forth in his jeep, between the trucks and the trains, along the roads filled with those marching, he heard the snarling dogs, cracking whips and gunshots, and saw bodies in the ditches or sprawled beside the railway tracks, their crumpled forms illuminated by moonlight and stars, or by the incandescent flashing of the exploding bombs from the planes growling overhead.

On the horizon, where the starry sky met black earth, the Allied big guns also flashed constantly, moving forward inexorably.

By the fourth day, both Camp Dora and the Nordhausen Central Works

had been cleared of all prisoners. Then Ernst could begin moving out the technicians and troops. By nightfall the caves were empty, the great tunnels echoing eerily, the railway tracks leading into a darkness in which nothing stirred. Ernst drove back to Kahla, leaving Nordhausen to the Allied troops, and found Wilson, his technicians, and the SS troops ready to leave. They went in three groups, one on each successive night. On the third night, Ernst joined Wilson and his team on the last train from Kahla.

The Allied guns sounded much louder as the train pulled away.

General Nebe was in charge and shared a car with them. His face was impassive, but his dark eyes were restless, first studying his fellow officers, then examining his pistol, then gazing out of the window at a darkness fitfully illuminated with distant explosions.

'The Americans are rich and have an endless supply of aircraft and bombs,' he said. 'No wonder they're winning.' After that rare observation Nebe contented himself with his restless roaming, from one carriage to another, going outside when the train stopped, checking the box cars containing the components or the workers they had decided to take with them to help with unloading.

Occasionally there was trouble – usually a prisoner in revolt. At such times Nebe moved with calm efficiency, invariably by dragging the recalcitrant, ragged figure from the box car, making him or her kneel by the tracks, then putting a single bullet through the back of the victim's neck and kicking the body down the incline or into the brush.

That night brought another problem, near the station of Wolfsburg. A group of resistance fighters or possibly escaped prisoners attacked the train where it had stopped to change tracks. There were perhaps a dozen men, all wearing civilian clothes, firing rifles and pistols through the windows as they leapt up from the dark field and ran alongside the train. Nebe knew what they were doing: trying to capture the engine. While his men fired at them, he hurried though the linked cars to the engine and personally protected the driver until the train had pulled out again. When it did so, Ernst saw many of the resistance men sprawled dead in the dirt.

None of this bothered Wilson, though he said, 'Nebe enjoys the smell of blood in his nostrils. I'm glad he's on our side.' Other than that, he kept to himself, snatching sleep when he could and spending his waking hours with his notebook and pen, playing with mathematical formulas to distract him

from the smouldering ruins of Germany outside the train.

They were bombed before dawn, just as Ernst was about to sleep. The sudden roaring almost split his eardrums as he dived to the floor. The bending tracks shrieked and he thought of Wilson and his crates. The whole car climbed up and crashed down and then rolled onto its side. The noise was deafening. Ernst slid along the floor, struck a wall, and rolled over Wilson. He turned around and saw the windows above him, glass shattered and glinting. Men screamed or bellowed curses as Wilson crawled toward the nearest door. A bloody corporal formed a stirrup with his hands, Nebe planted his boot in it, then the corporal heaved him up through a window. More bombs fell and exploded around the train as Ernst found a cleared space. He pulled himself up through the window. The night roared and spewed flames. He crawled away from the window, rolled off and crashed down to the ground outside.

'Get the crates!' Wilson bawled.

He saw Wilson hurrying alongside the car, which was practically on its side. Men were dropping through the windows and crashing down and rolling away from him. Ernst followed Wilson, crouched low. A silhouette was bellowing orders. Ernst clawed two or three men from his path and then saw the box car. General Nebe was already there. Six or seven trucks were near the train, and a dozen men were labouring under Wilson's crates with smoke billowing over them. Another bomb fell nearby. Nebe stepped forward and barked an order. The men heaved the crate up into the truck, then some knelt down to rest. General Nebe's jackboot glistened. He kicked one of the lolling men. All the men jumped up, grabbed at their weapons, and climbed into the truck. Wilson was in there with the crates, so Ernst climbed up beside the driver. Nebe slipped in beside him, barked an order, and the truck started moving. The bombers passed overhead. A gray dawn began to break. Ernst saw a truck ahead, another behind, and was surprised to be still alive.

The dawn that broke over the devastated land was smoke-filled. All that remained were charred trees, smouldering buildings, and dusty columns of refugees, the latter heading in the opposite direction, away from the Soviets. They were gone soon enough, and the countryside became anonymous. Eventually the trucks stopped on a hill just outside Kiel, offering a view of the Baltic Sea beyond a broad, windblown field.

They were at a military station, surrounded by SS guards.

An enormous bunker, half buried in the ground, its sloping roof covered in earth and grass, dominated the middle of the field. Presumably it could not be seen from the air.

'That's where we'll stay until the U-boats arrive,' Nebe explained with a shrug. 'It's as safe as we'll find.'

The remaining workers from the concentration camps unloaded the train and carried the crates and boxes into the bunker. When they were finished, Nebe said to Ernst, 'Now we have to get rid of them. My SS men will help us load the submarines, but we've no room for this scum. Take care of the men in the bunker and leave this lot to me.'

Ernst did as he was told, glad to wash his hands of the matter, and merely looked on as Nebe's men forced the prisoners up onto the waiting trucks and then drove them away, to another field well away from the sea. He caught Wilson's glance, but the American said nothing. When they heard the distant, savage roar of the machine guns, they turned away from each other. The trucks came back empty, and when Nebe climbed down, stroking his pistol, he simply nodded at Ernst.

Another day passed. Ernst had to wait for Kammler. The SS troops passed the time by playing cards and reading magazines, while their leader, General Nebe, sat in a chair all day to breathe in the fresh sea air. The docks could not be seen from there, only a gray swathe of the Baltic, but Nebe seemed to be content to just sit there and let events take their course. Wilson, on the other hand, was as restless as ever, didn't like being in the bunker, and as usual passed the time by solving mathematical equations and toying with scientific formulas.

'Don't you ever just relax?' Ernst asked him.

'I *am* relaxed,' he replied.

Beyond the noise of the sea, it was quiet. The Allied bombers hadn't come this far yet. It was the first peace and quiet Ernst had known for a long time, but he was still glad when Kammler finally showed up to give him something to do.

'It all went well,' he said. 'The rocket team is now off our hands. Von Braun and his men were housed in army barracks in Oberammergau, behind wire and under SS guard, and will soon be joined by General Dornberger. Now you'd better get back to Berlin and keep Himmler happy. I'll expect you back here on the tenth. Goodbye – and good luck!'

Ernst was driven from the hidden bunker to a small, heavily guarded SS airfield nearby, where he boarded a plane. He spent the whole flight scanning the sky for Allied aircraft, but his luck held that day and soon, when he cast his gaze down, he saw the ruins of Berlin.

A pall of black smoke covered the city and was thickened with dust. The devastation was boundless.

'It's the end of the world,' Ernst said aloud, to no one in particular.

The plane touched down in hell.

CHAPTER THIRTY-SEVEN

The sheer size of it was overwhelming. Bradley and Major General Ryan McArthur were inspecting the Nordhausen Central Works in the Harz Mountains, occupied the day before by the US 1st Army. The rocket production works, consisting of a series of tunnels, each approximately one mile long and joined together at regular intervals by other corridors, were located in the base of forested hills around a verdant valley; but where Bradley and McArthur were walking, in the middle of one of the gigantic tunnels, they could see only the railway tracks glinting dully in the overhead lamps and gradually disappearing into a darkness that led to a pinpoint of light, the outside world, a good half-mile away.

The tunnels were not quiet, because the army's engineers had already moved in, but Bradley's voice still echoed eerily when, stopping beneath the enormous shell of a V-2 rocket, he said, 'There's no doubt about it. Wilson had a lot to do with them. These bastards have been based on the rocket designs of our very own, shamefully neglected Robert H. Goddard, whom the German rocket engineers revered. And we both know who worked with Goddard just before he came here.'

'Wilson,' McArthur said.

'Wilson,' Bradley agreed. He ran his hand wonderingly along the base of the enormous rocket above him – it was hanging from a jib-and-crane – and said, almost reverently, 'The most notable features of this baby's propulsion unit are the shutter-type valves in its fixed grill, the fuel-injection orifices incorporated in the same grill, the combustion chamber, spark plugs, and nozzle – all of which are to be found in a Goddard patent, issued on November 13, 1934, and reproduced in full in the German aviation magazine, *Flugsport*, in January 1939. The Germans copied the designs for their early

Peenemünde rockets, then Wilson came along and contributed his own, much wider knowledge of Goddard's work to the subsequent V-1 and V-2 rocket program. Eventually the rockets attained about a hundred times more thrust than Goddard's reached back in New Mexico, when Wilson worked with him.'

'That's some achievement,' McArthur said. 'The V-2s that fell on London are believed to have had a thrust of fifty-five thousand pounds, attained a velocity of six thousand four hundred feet per second, and could soar to an altitude of sixty-eight miles.'

'Right,' Bradley said. 'Practically on the way to the moon! And just think of the other similarities we've found so far between this baby and Goddard's original rocket. Both rockets have the same motor-cooling system; the same pump drive; the same layout front to rear; the same stabilizer; the same guidance and fuel-injection systems. The only differences are that Goddard's rocket motors used gasoline and oxygen, whereas the V-2 uses hydrogen and peroxide; Goddard's rocket fuel was liquid oxygen and gasoline, whereas the V-2 uses liquid oxygen and alcohol; and, finally, Goddard's rockets were a lot *smaller* than the V-2. So the Nazis, with Wilson's help, simply did what the US government refused to do: they took Goddard's work seriously.'

'And you think Wilson's taken it even further.'

'Yeah,' Bradley said. 'Definitely.' He stroked the V-2 one last time, then started walking McArthur along the tunnel, toward that dime-size circle of light that represented the outer world. 'The war's not even over yet, but already we've discovered a hell of a lot about what the Krauts were up to, scientifically speaking. So far, Germany's scientific papers have been found hidden in tunnels like this, plus caves, dry wells, ploughed fields, riverbeds, and even cesspits. And we know that the weapons we've found so far – not only these rockets, but a lot of heat-guided ground-to-air missiles, sonic-guidance torpedoes, Messerschmitt jet planes, rocket planes that fly even faster, highly advanced electrical submarines, and even the beginnings of an atom bomb project – yes, we already know that these weapons are more advanced than any *we've* got. Also, for the most part, they're based on the work of Robert H. Goddard and, in my estimation, on the furtherance of that work by Goddard's pupil, that goddamned traitor, John Wilson.'

'You've never called him that before,' McArthur said. 'I thought you almost admired him.'

‘Yeah,’ Bradley confessed. ‘I do. Though I hate myself for it.’

‘A genius,’ McArthur said. ‘A perverted genius. A mutant... No wonder you can’t give up the chase. It’s like pursuing an alien.’

‘Right. He’s not real. He’s a part of my dreams. And to shake him loose, to get back to the real world, I’ve just got to face him.’

‘You’ll have to face something else soon,’ McArthur said. ‘And I don’t think you’ll like it.’

Bradley was going to ask him what he meant, but was distracted when they emerged into the light at the end of the tunnel. There they viewed the grandeur of the valley below: lush green, ribboned with sparkling streams, surrounded by the densely forested hills of Thuringia, and, rising above them, the majestic, rolling peaks of the Harz Mountains.

It was certainly beautiful, a pastoral vision... but one scarred by spiralling columns of smoke, great fleets of Allied aircraft, marching troops and advancing trucks and tanks, and pale-brown clouds of dust: a victorious army on the move.

‘You don’t believe it,’ Bradley said, ‘but it turns out to be true. All over Germany there are places like this: great factories and laboratories and camps hidden underground, immense, but invisible from the air, their existence once unknown. This place here, it’s vast, but it’s only one of many. And what I want to know is, where was Wilson? Where is he now? And what has *he* hidden?’

‘Let’s talk to someone,’ McArthur said.

He led Bradley across the cleared area in front of the immense tunnel, past tanks and half-tracks and trucks disgorging more troops, under the great rockets hanging from cranes directly above, and into his jeep, which was parked by the road that led back to Erfurt. When Bradley had climbed in beside him, he drove down to the valley, past columns of marching US troops. All the troops, Bradley suddenly noticed, looked terribly young.

God, he thought, for the first time in years, I sincerely want this business to be over. I want Wilson to disappear...

What he wanted, he then realized, was to be what Wilson was not: an involved human being.

‘Where are we going?’ he asked impatiently. ‘I’ve no time for joy rides.’

‘It’s no joy ride,’ McArthur replied. ‘You’re going to hell.’

He drove Bradley through Erfurt, a picturesque Renaissance town,

dominated by its cathedral and fish market and old quarter, with its quaint burgher houses, Gothic alcoves, and timber-framed walls. Then on to the fields beyond, lushly green, though not sweet-smelling, then into the Buchenwald concentration camp, which was not quite so pretty.

The dead lay in neat rows, staring skyward, emaciated, and the living, though sometimes on their feet, did not look much better. Some of the living were dying – they had lived too long to want life – and the stench of the dead and the dying permeated the smoky air.

Bradley saw the raised gallows, the delousing rooms, the crematoria, and steeled himself to get out of the jeep and walk through hell's basement. He stuck closely to McArthur, feeling cowardly, and was glad when they had stepped up from the mud and entered a clean, cluttered office. A US Army captain was sitting on the edge of his desk, staring out through his window. He was smoking and drinking a glass of something and looked drained and haunted.

'Hi, Cap'n,' McArthur said lightly. 'How are things in the funny farm?'

'Not funny at all.'

The captain turned to face them, his eyes crimson from lack of sleep, and when Bradley saw the way he gazed at McArthur, he knew they shared the same grief.

'I've only been here two days,' the captain said, 'and it seems like two years... A goddamned, motherfucking, two-year nightmare. I just can't believe this shit.' He shook his head from side to side disbelievingly, then looked up at Bradley. 'You're the guy wants to talk to my man,' he said.

'What man?'

'The man from Kahla. The one who worked for your Wilson. An *American* was involved in all this shit? I just don't believe it!'

He shook his head again.

'Involved how?' Bradley asked him.

'Your Wilson used a lot of the people from this camp. All these scarecrows, they swear to it. Hold on, I'll go get my man. McArthur said you were coming.'

The man he brought in was rag and bone inside striped pyjamas. His eyes, which seemed too big for his head, were disconcertingly bright.

'This is Colonel Mike Bradley,' McArthur's friend, Captain Shaw, said to the apparition who stood meekly by the desk. 'He wants to talk to you about

Kahla. Here, take a seat.' When the corpse-like individual had sat down, Shaw lit a cigarette and said, 'Colonel Bradley, this is Alex Overbeck. He's been in Buchenwald for two years and somehow survived it. He already knows who you are. Fire away, Colonel.' Then he gave the cigarette to Overbeck and kicked a chair toward Bradley. 'Sit down, Colonel.'

Bradley felt that he had to. He opened his mouth to speak, glanced despairingly at McArthur, received only a forlorn shrug of his shoulders, then looked back at Overbeck, whose eyes, which still seemed too big and too bright, were steady upon him.

'I understand,' Overbeck said, his voice as light as a feather. 'It is difficult to talk when I look like this, but it's not your fault, Colonel. I worked for the American at Kahla. Shall we take it from there? What would you like to know?'

Bradley coughed into his fist and said, 'I didn't even know that Kahla existed. You'd better...'

The gaunt creature smiled. 'Oh, yes, sir, it exists. It is an old walled town, approximately halfway between Erfurt and Nordhausen, and the Nazis constructed another underground factory there, using forced labour from this camp, the closest to it.'

'We don't have a damned thing on it,' Bradley said, gradually getting used to Overbeck's appearance and feeling less ashamed.

When Overbeck inhaled on his cigarette, his cheekbones looked devoid of flesh.

'I had the impression,' he said, 'that even those at Nordhausen didn't know about it. The complex at Kahla was constructed in great haste, at a great cost in human life, and guarded by the SS Death's Head élite. The man in charge of it was SS General Hans Kammler. Next in charge was an SS captain, Ernst Stoll. When Himmler visited Nordhausen, he never came near Kahla – and it's widely believed that the other scientists, from Peenemünde, didn't even know that it existed. It was a *special* place, Colonel.'

'Are you suggesting that even Himmler might not have known about it?'

'I cannot confirm that fact, sir, but I certainly suggest it. That belief was widely held among the Buchenwald inmates who worked at the Kahla complex.'

'And the American, Wilson, was there?'

Overbeck, having survived a living death, was still able to smile – and to

make it sardonic. ‘Yes,’ he said, ‘the American was working there. I was amazed, but there he was. At first I couldn’t believe it – it just didn’t seem credible – but though occasionally, sometimes jokingly, he was referred to as “Kruger,” those who worked most closely with him addressed him as Wilson. I noted, further, that though his German was grammatically perfect, it retained the trace of an American accent. Also, though he often wore an SS uniform, it was clear to anyone but a fool that he wasn’t a military man - and never had been. Besides, he was too old. That was the biggest joke of all. He looked about sixty – an extremely healthy, vigorous sixty – but there were rumours that he was much older than that, maybe even by fifteen years. Whether or not there was any truth in those rumours, he was certainly no German soldier, let alone a member of Himmler’s SS Death’s Head.’

‘What did you do in Kahla?’ Bradley asked.

Overbeck just shrugged. ‘What we all did. I worked.’

‘Doing what?’

‘Anything they ordered me to do.’

‘Let me rephrase the question: What work was the *American* involved in? What was he constructing?’

‘A secret weapon,’ Overbeck said, as if it was self-evident. ‘Not much different from the work going on at Nordhausen. Rockets, submarines, jet planes... All sorts of highly advanced weapons.’

‘And Wilson’s? Specifically?’

‘A disc-shaped aircraft. Jet-propelled, I think. We all made jokes about eating off the saucer – we were so poorly fed, you know. Anyway, that’s what he was working on, this saucer-shaped, jet-propelled aircraft that ascended straight up in the air. I hated him – to me, he was just a Nazi – but his machine was breathtaking.’

‘You saw a test flight?’

‘I helped wheel it out of the hangar.’

‘And it made a vertical ascent?’

‘Yes. Then it hovered in the air – not moving, just hovering – then shot off horizontally – so fast, I hardly knew where it went.’

‘How fast?’

‘Too fast to calculate. And since I can’t judge even an aircraft’s speed, I wouldn’t hazard a guess.’

Bradley smiled. ‘What did you do before the war, Mr Overbeck?’

‘I was a priest,’ Overbeck replied.

Bradley didn’t know where to look. The man’s strength made him feel weak. He coughed into his fist again, felt foolish, then cleared his throat. ‘No wonder you can’t judge the speed of aircraft.’

Overbeck blew a cloud of smoke and smiled again, his cheeks prominent. ‘Anything else?’ he asked.

‘Yes. Is Wilson’s flying saucer still at Kahla?’

‘No,’ Overbeck said. ‘It was blown up a few days later. I think they destroyed it to keep you or the Soviets from getting your hands on it. Which is why, when they evacuated the site, they executed everyone who’d worked there and took everything with them. I’m a lucky man, Colonel.’

‘Sounds like it. How did you escape?’

Overbeck spread his hands in the air and glanced up at the ceiling, as if speaking to God. ‘I wasn’t at Kahla that day,’ he said, returning his gaze to Bradley. ‘I normally worked there, but not that day. One of the wives here – the wife of an SS officer – wanted help in the house, and since the prisoner who normally did it fell ill and was therefore shot, I was dragged out of the queue waiting for transport and given to her instead. It was as simple as that.’

Bradley studied the floor. It had the look of something solid. He needed it because his head was swimming in a whirlpool of madness.

‘When did they leave?’ he asked.

‘Early this month,’ Overbeck replied. ‘Apparently Kammler went first, taking the scientists from Nordhausen – ’

‘Who?’

‘The scientists from Peenemünde.’

‘But not Wilson?’

‘No. Then Camp Dora was evacuated and the prisoners returned to their former camps. And finally, on the fourth, fifth, and sixth, the scientists from Kahla departed, one group each night.’

‘Do you know where they went?’

‘Prisoners working at the railway stations can confirm that the three trains, one each night, were all heading for different destinations: the first one marked to terminate at Rostock, the second for Lübeck, via Rostock, and the third and last for Hamburg, via Hanover. Since all of those places were in the line of the Allied advance, it can be assumed that they were only halfway houses and that the final destination would be on the Baltic.’

‘Peenemünde?’

‘No,’ Overbeck said, stubbing his cigarette out with obvious unhappiness, then breathing deeply, as if yearning for another. ‘Since the Soviets are advancing at great speed toward Peenemünde – and were even then – the only other possible destination would be a port of escape, most likely Kiel.’

Bradley straightened up in his chair. This priest who looked like death was pretty smart.

‘Can you tell me anything else?’ he asked.

‘Just go to Kiel,’ the priest said.

Bradley glanced through the window, saw the gallows and streaming smoke, shivered, and pushed his chair back and stood up to leave.

‘Thank you,’ he said.

‘My pleasure,’ Overbeck replied, his smile exposing his pain.

Bradley nodded at McArthur and they both left and walked back through Buchenwald. Bradley kept his gaze focused on the ground and prayed to God for deliverance... deliverance from hatred.

His new hatred for Wilson.

‘I’m going to Kiel,’ he said.

CHAPTER THIRTY-EIGHT

Berlin was hell on earth. The black-charred ruins stretched away as far as the eye could see, the air was thick with smoke and dust, people were queuing hopelessly for food and even water, bombs fell constantly from the Allied planes overhead, and from a mere thirty-two kilometres to the east, the guns of the Soviet army roared ominously.

Ernst's final visit to the Führer's bunker made him feel that he had entered an insane asylum. Goebbels had encouraged his unfortunate wife and six children to come and die with him and his beloved Führer when the city fell. Goring had fled to Karinhall, where his butler was waiting with fourteen

carloads of treasures and expensive clothing. Bormann, after demanding the execution of Goring as a traitor, had telephoned his wife at Berchtesgaden, to inform her that he had found a hiding place for them in the Tyrol, that she was to pose as a director of refugee children, and that he had kidnapped six youngsters from the kindergarten in Garmisch to make their escaping group look more plausible. And, finally, the Führer was still babbling about secret weapons, accusing everyone of trying to betray him, ordering the arrest of that traitor, Goring, discussing the distribution of cyanide tablets with his frightened mistress, Eva Braun, veering wildly between chalk-faced exhaustion and outbursts of paranoid anger, and hoping to prolong the battle for Berlin until at least May 5, because he could then die on the same day as Napoleon.

All of this was taking place beneath the garden of the Chancellery, upon which Allied bombs were falling with the consistency of rain.

Himmler had been to the bunker that very morning to pay his respects to the Führer on his birthday, but had then left to return to Dr. Gebhardt's sanatorium. Ernst made the 120-kilometre drive to Hohenlychen, passing columns of marching German soldiers and trucks and tanks that were being bombed relentlessly by Allied aircraft.

Eventually he found himself in Himmler's study, which was practically dark. The Reichsführer was tapping his front teeth with his fingernails and looked glassy-eyed.

'I have not given up on negotiating peace,' he babbled without prompting from Ernst. 'I have instructed my masseur, Felix Kersten, to fly to Eisenhower's headquarters and discuss an immediate cessation of hostilities. I myself braved the pouring rain to meet with Norbert Masur, the representative of the World Jewish Congress, in an attempt to solve the vexing Jewish problem, explaining that I have already turned the camps at Bergen-Belsen and Buchenwald over to the Allies, have arranged the evacuation of nearly forty thousand prisoners from the camp at Sachsenhausen, and have authorized the release of another one thousand Jewish women from Ravensbruck – and *still* the *Schweine* was not impressed!'

He glanced wildly around the room, as if expecting to see Soviet troops bursting through the walls, then tapped his front teeth with his fingernails again and took a deep breath.

‘Nor have I forgotten Count Bernadotte, of the Swedish Ministry for Foreign Affairs, with whom I am still having consultations regarding a peace-making formula. I met him yesterday and will be meeting with him again. Failing that, I will arrange a personal meeting with Eisenhower, who may be more reasonable.’

He removed his pince-nez, rubbed his glassy, dazed eyes, blinked and put the spectacles on again, and glanced nervously about him.

‘It’s not fair,’ he whined. ‘Everyone wants something from me. Kersten and Schellenberg want me to overthrow the Führer with a coup d’etat. Von Krosigk has begged me to seek peace through the Pope. Meanwhile, I’m supervising secret negotiations elsewhere – and now the Führer and those *Schweine* surrounding him in the bunker suspect me of treason. Have they arrested that imbecile Goring yet? I hope so. They should shoot him!’

He pushed his chair back, paced the floor, stopped to tap his front teeth with his fingernails, then sighed and sat down again.

‘All hope is not lost,’ he said. ‘We still have our secret weapons. My stars tell me they’ll be ready just in time to turn the tide in our favour.’

Ernst heard the Soviet guns. They were only sixteen kilometres from here. He wondered how Himmler could have managed to convince himself that his secret weapons, even if they existed, could be produced in time, and in sufficient quantities, to hold back the Soviet and Allied advance, let alone turn the tide.

‘I’m afraid, Reichsführer,’ Ernst began, hoping to offer some common sense, ‘that the secret weapons – ’

‘Schriever’s saucer! He said it was almost finished! What news do you have of it?’

Himmler’s eyes gleamed with hope – the forlorn hope of the truly mad – and Ernst, who had once feared this man, now almost pitied him.

‘I’m afraid, Reichsführer, that Schriever’s flying saucer won’t help us now. Even if it works, it’s come too late to do us much good.’

‘Nonsense!’ Himmler exploded, almost jumping out of his chair. ‘The very sight of it will terrify the Soviets and make them turn back! As for the Allies, though they clearly aren’t so primitive, they’ll most likely do the same. I want that flying saucer to be finished! *I want to know if it works*!’

He stared wildly at Ernst, who hardly knew what to say, then drummed his fingers on the desk and took a few deep breaths.

‘According to my astrological chart,’ he said, sounding calmer, ‘something extraordinary will occur toward the end of this month, just in time to turn the tide in our favour. I believe that’s a reference to Flugkapitän Schriever’s flying saucer, so I want you to go straight to Prague and find out what’s happening.’

‘The Soviets are advancing on Prague,’ Ernst reminded him.

‘You can get there before the Soviets do. So do it, Captain. For me! Do it for your Reichsführer.’

‘Yes, sir,’ Ernst replied, as he had in fact been planning to go there to complete Wilson’s plot, but preferred to do it with Himmler’s permission, to avoid suspicion. ‘But what if the Soviets reach Prague before Schriever escapes with the completed saucer and his technicians?’

‘In such circumstances you must destroy the flying saucer and hide all the papers relating to it. Then, when the tide turns in our favour, we can rebuild the saucer.’

‘Very good, Reichsführer,’ Ernst said, now having permission to do what he had planned to do anyway.

‘However, that shouldn’t happen. The Soviets are still a good way away. I see no reason why you cannot get to Prague and back here again before the end comes – and I expect you to bring me good news.’

‘I will, Reichsführer. I promise.’

‘Goodbye, Captain. And good luck. Heil Hitler!’

‘Heil Hitler!’

Ernst saluted, then walked to the study door. He opened it, started out, then glanced back to take a last look at his once frightening, all-powerful Reichsführer. He was already slumped over his desk, studying his astrological charts, neurotically tapping his front teeth with his fingernails and sighing despairingly. He was all alone in that gloomy room, a shadow-figure, a mirage, a man disappearing into himself, to be lost in his own dream. He was covering his face with his hands when Ernst quietly closed the door.

The drive to Prague took nearly eight hours, was further hindered by more Allied bombing raids and roads filled with columns of troops, and was not without a great deal of tension. Bypassing Dresden in the dead of the night, Ernst saw the darkness illuminated by the flashing of the Soviet guns, where

they were firing from the Oder River. The Soviet army was very close indeed. It had already captured most of Pomerania, Poland, and Hungary, and Ernst was thankful that it was closer to Berlin than to where he was going.

He arrived at Prague in the early morning. It smouldered just like Berlin. Ernst heard bombing and the continuing roar of the Soviet guns, and realized that it was only a matter of days before Prague fell also.

The war was practically over.

Indeed, the first news he received upon reporting to the SS officer in charge of security at the BMW plant on the outskirts of the city – placed in charge, as he was soon informed, because of fears that the plant would be overrun by groups of Czechoslovak patriots – was that by dawn that very morning, Berlin had been completely encircled and its last free airports overrun by the Red Army.

Now there was no way in or out. The fate of the city was sealed.

'You can't go back there,' the SS commander, Lieutenant Günter Metz, informed him. 'You might as well stay here. Wait until we see which way the Soviets are moving, then make your escape.'

Ernst had no intentions of remaining in Prague, but he complimented the officer on his keen thinking and then asked to be directed to Flugkapitän Schriever. He was escorted to the well-guarded East Hall of the great factory. There, remarkably, with a lack of realism fully the equal to that of Himmler and the rest of them, Schriever was still racing to complete his flying saucer, which was resting on its mobile steel platform and surrounded by engineers.

When Schriever saw Ernst approaching, he could not hide his frown.

'Captain Stoll!' he exclaimed, trying to recover, though not being too successful at it. 'What a pleasant surprise!'

Still smarting, even after all these years, from the knowledge that he had been passed over by the German scientific fraternity to make way for second-raters like Schriever, Ernst realized that he was going to enjoy doing what he now had to do – which was to check that Schriever had not, by some combination of luck and thievery, made any unexpected advances with his design and ensure that what he *did* have was destroyed before the Soviets reached here.

'I've been sent by Himmler,' Ernst said without preamble, 'to check on the progress of your flying saucer. Is it actually flying yet?'

'Unfortunately, no,' Schriever replied, wiping his oily hands on a rag, 'but

we should have it ready any day now – and then we will test it.'

'You *do* realize, do you not, that the Soviet Army is advancing on a front that extends from Görlitz to Vienna and will soon be marching right into Prague?'

'Yes, Captain, I know; but a drastic shortage of components – ball bearings for the ring plates, new heat-resistant wing discs – led to a bigger delay than anticipated. And then the Soviets captured Breslau, where Habermohl was working, and since we then had to do his work as well, we were held back even more. Nevertheless, we've replaced the original gas-turbine rotors with jet engines, and the saucer you see before you, if test-flown, will not let us down.'

What Ernst was looking at was one of Wilson's crude, earlier models: a wide-surface ring that consisted of adjustable wing discs that could be brought into the appropriate position for vertical or horizontal flight while rotating around a fixed, cupola-shaped cockpit. Now powered by Schriever's addition of adjustable jet engines, it would, in Ernst's judgment, rise vertically a few metres, but then, once the angle of the jets was adjusted, go out of control – just as Wilson had said it would.

Although pleased that Schriever had made no unexpected progress and was still deluding himself with this piece of aeronautical rubbish, Ernst still knew it was imperative that the Soviets did not learn about any aspect of Projekt Saucer, at least not until Wilson wanted them to know, which would be in the future. He therefore said what had to be said – and took pleasure from doing so.

'It has to be destroyed,' he told Schriever, 'before the Soviets arrive here.'

'*What*?' Schriever exclaimed, shocked.

'You heard me the first time,' Ernst said, thinking, *How sweet is vengeance*! 'We have to destroy it.'

'But it hasn't even been test-flown yet!'

'We still have to destroy it.'

Schriever's assistant, Miethe, arrived, also wiping his hands on an oily rag. Schriever glanced at him with widening eyes, then turned back to Ernst.

'Why?' he asked.

'To prevent it from falling into the hands of the Soviets, of course,' Ernst told him as flatly as possible.

'But we can arrange a test flight almost immediately!'

‘You may be too late. The Soviets are advancing fast. We’re also concerned about Czechoslovak patriots who already are causing trouble in Prague and may have men planted here, just waiting for the Soviets to get close.’

Schriever was looking desperate. ‘But without even a test flight...’

‘I’m sorry. We can’t think about that now. We must destroy the saucer.’

Looking increasingly suspicious, and even aggressive, Schriever glanced automatically at Miethe, who was cleverly keeping his mouth shut. Schriever turned back to Ernst. ‘I’ve been receiving instructions direct from Himmler’s office – not from Nordhausen – so why are you suddenly taking over?’

‘Nordhausen was evacuated and Himmler sent me to arrange the same thing here.’

‘We’re evacuating *now*?’

‘Do you wish to shake hands with the Soviets?’

‘Why can’t we take the saucer with us?’

‘The risk is too large. We might get captured. We don’t want them to get it.’

Schriever looked even more suspicious. ‘Do you have written authority, Captain Stoll?’

‘No. Of course not. Officially, this project doesn’t exist. No project, no papers.’

‘Then why did Himmler’s office not contact me?’

‘Berlin was being encircled,’ Ernst lied blandly, ‘and Himmler’s phones were cut off. The city, as you know, has since been sealed off completely, so you can’t ring through to them. Now please do as I say, Flugkapitän Schriever, and stop all this nonsense.’

‘Himmler may have ordered the saucer to be destroyed, but not without a test flight. I *insist* on a test flight!’

‘When can it be arranged?’

‘Tomorrow morning. Ten sharp.’

‘Fair enough,’ Ernst said.

He went straight to the commander, the young lieutenant, and gained his trust by sharing confidences with him, as if with an old friend.

‘He can’t be trusted,’ he told Metz. ‘We’ve had problems with him before. The Reichführer asked me to ensure that this project was obliterated, but Flugkapitän Schriever, if his test flight is a failure, will insist on more

time. We have to destroy it, no matter what, so I need you and your men. Will you help?'

'Of course, sir!'

Ernst did not sleep well that night. He rarely slept well anymore. His sleep was haunted by nightmares of death and destruction, by dreams of Ingrid and his children and all his other failures and betrayals.

It was dreams and nightmares, but also constant noise: the bombers growling overhead, the exploding bombs, the wailing sirens, the Soviet guns belching in the distance, but sounding closer each hour.

You couldn't tell how close they were – you never saw them; you just heard them – and Ernst, who had once dreamed of glory, was glad to get out of bed.

It was just after dawn. He wandered around the East Hall. He saw the sun burning through mist and the pall of smoke from the bombing raids, the smoke drifting from the city to the fields that were pockmarked with shell holes. He tried to think of another world, a normal world, without war, but every image in his head contained violence, destruction, blood and tears, flame and smoke, all created by a dream of omnipotence, the perversion of science.

He had helped to create it.

He was hungry but couldn't eat, so he lit a cigarette instead, and smoked it while gazing across the destroyed fields at the ruins of Prague. He smoked a lot that morning, just kneeling there, waiting, and then stood up when the doors of the East Hall opened and the engineers walked out.

Ernst went to a telephone in the hall and phoned SS Lieutenant Günter Metz.

'Bring your men down,' he said.

Schriever arrived with Miethe, nodded at him, then ordered the saucer to be wheeled out of the hall. While this was happening, Lieutenant Metz arrived with a demolition team and a squad of seasoned SS troopers, all heavily armed. They spread themselves around the sunlit clearing outside as the retractable wheels of the steel platform were being withdrawn to let it become the saucer's launching pad.

Schriever, when he saw the demolition team, flushed brightly with anger.

He climbed into the saucer and strapped himself in, then Miethe replaced the Perspex lid on the cupola and made sure it was locked. Then he climbed

back down the ladder and pulled it away. Schriever started the saucer when Miethe had returned to the safety of the concrete bunker.

The saucer roared into life. Yellow flames spat at the platform. The flames shot back up and spread out obliquely to form a great fan of fire. The flying saucer roared and shuddered. It lifted off the platform, hovered just above it, making the steel turn red-hot, then it ascended a few more feet and swayed dangerously from side to side. It roared even louder, belching flame and smoke in a fury. Then, unable to go higher, Schriever tried to fly it horizontally, but the instant the jets on one side were raised, the machine started tilting. It hit the ground and rocked wildly like a dropped coin, then its engines cut out. There was a brief, shocking silence.

'Destroy it,' Ernst said.

Miethe ran to the saucer, clambered up its tilted side, released the locks holding down the canopy, and helped Schriever out. Looking shocked and angry at once, Schriever slid down the body on his backside, dropped to the ground, rubbed his chin with the palm of his hand, then saw the SS demolition team advancing on his beloved creation.

'No!' he bawled. 'Damn you, *no*!' He hurried across to Ernst, fists balled, eyes blazing, while Miethe and the other engineers fanned out behind him,

They were going to protect the saucer, to keep the demolition team at bay, but when Ernst unholstered his pistol and aimed it at Schriever, Lieutenant Metz's squad of SS troopers raised their submachine guns and took aim on the hapless engineers.

Schriever froze where he stood, about four feet away from Ernst, and the engineers behind him did exactly the same.

'Let the demolition team through,' Lieutenant Metz said, 'or suffer the consequences.'

The engineers looked around them, at that circle of submachine guns, then parted to let the demolition team approach the saucer. Schriever glanced over his shoulder, saw them unwinding the plunger cables, then looked back at Ernst, his dark eyes appalled.

'My life's work! We have to at least have the chance to correct what's wrong with it. One more day... a few days at most... It's too important to... No, y*ou can't do this*!'

'Shut up,' Ernst snapped. 'You damned fool.' Then he cocked his raised pistol.

We want no witnesses of any kind, Wilson had said, *unless they're in the Antarctic...*

That meant Schriever and Miethe and all the rest of these engineers. When the Schriever saucer, relatively useless, was blown up, they would all disappear as well.

Schriever's eyes became wider. 'You wouldn't!'

'We would and we will. The whole business ends here.'

He glanced over Schriever's shoulder at the demolition team and saw the man in charge of the plunger preparing to lean on it.

'Goodbye, Schriever,' Ernst said.

The flying saucer exploded. No, it didn't – something else did – an eruption of silvery light, boiling smoke and geysering earth... right *beside* Schriever's saucer.

Confused, Ernst hesitated. He saw Schriever ducking, squeezed the trigger, fired too late, and saw the Flugkapitän running away as the ground erupted around him.

The shells were whistling in from the east: Soviet shells, from the big guns. Then the soldier fell on the plunger – was thrown forward, in fact, on a wave of erupting soil – and Schriever's saucer disappeared in a ball of fire that spat debris everywhere.

'Damn!' Ernst hissed as the engineers scattered and the SS guns started chattering. Then he sprinted straight into the chaos, trying to take aim at Schriever as he made his escape.

The SS troopers were spreading out, firing wildly from the hip – not at the engineers, who were running across the field past the smouldering debris of the saucer, but back in the direction of the East Hall, to which Schriever was running. They were not firing at him but at the other men pouring out, most of them wearing civilian clothes but returning the gunfire.

Schriever saw them as well, since he was running toward them, and he turned left and cut across the hangar doors and just about made it.

A Soviet shell saved him, exploding right behind him, between the men who were running out of the East Hall and the SS troops firing at them.

Ernst managed one shot but missed. He was blinded briefly by flying soil, cursed and rubbed his stinging eyes, then saw the men who were wearing civilian clothes still running at him and firing on the move.

Czechoslovak patriots! he thought. *Coming out of the factory*! *The Soviets*

must be in Prague!

Then he caught a glimpse of Schriever cutting back across the field, heading with the other engineers in the general direction of Prague. The ground was erupting between them, shells exploding around the factory, but Ernst went after him anyway, because, given the Czechoslovak patriots, it was the only direction left to him.

The SS troops were holding their ground, spreading across the remains of the saucer, firing their submachine guns at the advancing resistance men while being cut down by bullets or blown apart in explosions.

A burning light erased all of it. An appalling roaring filled the world. Ernst was slapped by a wave of heat, the breath was sucked from his lungs, he was picked up and spun wildly in the air, and then grass and earth rushed at him. He plunged into darkness and silence, losing his senses.

Later, he heard a ringing sound... Eventually he opened his eyes to find himself on the ground, lying on the rim of a smouldering shell hole near a parked SS truck.

The battle had moved away from the East Hall. It was ending in the shell-torn field with the SS troops being massacred by the greater number of Czechoslovak patriots. The engineers, including Schriever and Miethe, were still running, much farther away, toward Prague.

Let Schriever talk about his flying saucer, Ernst thought, sitting upright and shaking his head from side to side to clear it. *It will become just another red herring. Another aid to confusion. It will suit us just fine.*

He glanced carefully around him, looking for other resistance fighters, but saw only a clearing filled with the bodies of dead Czechs and Germans. After climbing to his feet, he checked himself for broken bones, found nothing to worry about, so clambered up into the troop truck, which, he was pleased to note, still had the key in the ignition. Turning the engine on, he drove across the grassy field to get away from the factory, which by now was almost certainly overrun. He managed to get to the road without being stopped.

From there he drove to the nearest Luftwaffe airfield, which luckily was still held by Germans. He pulled rank in order to commandeer a light plane, then ordered the reluctant pilot to fly him to the SS airport near Kiel.

When the plane had ascended, he looked down through the clouds at the pall of smoke hanging over Prague. Moving in on the city, like ants advancing in numerous lines toward their anthill, were long columns of

Soviet tanks and men.

It was something to see.

CHAPTER THIRTY-NINE

Bradley was scared. He had been well trained for this by the OSS, had rehearsed it so many times, even making the goddamned jumps, but now that it was real and he was doing it with the professionals – worse, in pitch darkness and in the middle of a war zone – he was not as confident as he had been during his training.

He glanced at his watch. Five minutes to go. His heart missed a beat and he looked along the aircraft, through that dim light, and saw the men of the 82nd Airborne Division facing one another in the belly of the plane, looking bulky with their parachutes and helmets, not frightened at all.

Well, certainly not showing it, as he was convinced he was doing. His heart was racing and he was sweating, though his hands felt too cold, and he knew that the urge to have a piss was also due to his fear.

He was fifty years old, for Chrissakes, and shouldn't be doing such things!

He tried to forget what was going to happen by thinking instead of Gladys, who had continued to write her wonderful, witty letters from her sickbed in a hospital in London. Apparently she had been shipped back to London from Paris, was making a good recovery, and would soon be walking again, but she badly missed having him in bed beside her. She had also informed him, by letter, that she had scribbled his name about fifty or sixty times on the plaster cast on her broken leg and all the nurses, doctors, and visitors now knew who he was.

Goddammit, he loved her. She certainly made him feel good. Thinking about her made his heart race. It raced even more when he looked again at his wristwatch and realized that the jump would soon be starting.

Closing his eyes, he breathed deeply, trying to steady his racing heart, and saw, as he had so often since that one visit, the gallows and crematoria of Buchenwald, the priest's gaunt, haunted face.

He had gone back to the priest, feeling trapped in a web of horror, and had learned a lot more from him about life in the concentration camps and underground factories. The priest had told him about the beatings, about the all-too-public hangings, about the shots to the back of the neck and the daily gassings and burnings. He had also told him about worse things, most notably the medical and surgical experiments, performed on men, women, and children, often without aesthetics.

Apparently the Nazi doctors had been trying to learn what could not be gleaned from experiments on animals – the limits of human suffering; the effects of extreme heat and cold, of starvation and sleeplessness; the possibility of survival without certain vital organs; artificial insemination; the swopping of healthy limbs; the potential for extending the human life span by medical, biological, and mental mutation – all of which meant unimaginable pain and horror for the unfortunates used... And Wilson, whether or not he had been involved directly, had not only shown an interest in the dreadful experiments, but had willingly used the people in the camps as part of his work force.

The man was a monster.

Or, as Major General McArthur had said, some kind of mutant.

Bradley shivered in his harness, then checked his wristwatch again. When he saw that he had one minute left, his stomach almost turned over.

What the hell was he doing here, with the 82nd Airborne Division, about to parachute into the darkness?

He was searching for Wilson.

He had left Nordhausen with the US 1st Army, with which he had travelled so far and seen so much action. He had gone as far as Paderborn with them, but there they had parted company, because he was intent on reaching Kiel before the Soviets took it. He had commandeered a jeep and driven himself through a landscape of appalling destruction, along roads filled with advancing Allied troops and fleeing refugees, past enormous open-air prison camps that stretched as far as the eye could see, to the town of Minden on the Weser, which had recently been occupied by the US 9th Army. There Bradley had attached himself to the British 2nd Army, which, reinforced by the US 82nd Airborne Division, was about to launch itself on the drive toward Lübeck, the doorway to Kiel.

Just before the attack was launched, Bradley had learned that a British

SOE headquarters had been set up in Weser. When he paid them a visit, he found himself face to face with his old friend Lieutenant Colonel Mark Wentworth-King.

'Kiel?' Wentworth-King said in reply to Bradley's query. 'Difficult to say who'll get there first, old chap: General Montgomery's 2nd Army, now closing in on Hamburg, the 1st Canadian Army, now closing in on Oldenburg, or the bloody 2nd White Russian Army, now spreading right along the Baltic Coast. If the Soviets get there first, you won't get your man, so you'd better move sharpish. I suggest, dear boy, if you have the heart for it, joining a contingent of your very own 82nd Airborne Division, which, to avoid our own guns, is about to parachute down just beyond Neumünster, near Kiel's ship canal. From there, they're hoping to fight their way into Kiel. *What* age did you say you are?'

Now here he was, fifty years old, preparing to jump out of this plane and parachute down into Germany... Maybe because Wentworth-King had goaded him into it, the smart son of a bitch.

Goddamned Brits! he thought.

'Hitch up!' someone bawled. '*Hitch up*!'

The door was pulled open and an angry wind howled in. The paratroopers connected their ripcords along the length of the plane. Bradley did the same, standing up like all the rest of them, feeling shaky and not sure if he could make it, but trying to hide that fact.

With the hatch open, the noise was dreadful, a combination of rushing wind and the roaring engines and whipping canvas flaps, but the men shuffled inexorably toward the opening, taking Bradley there with them. The flight sergeant was bellowing instructions laced with obscenities – and Bradley thought he heard other noises outside, though he couldn't be sure. The plane was shaking badly, as if about to fall apart, and he fought the urge to sit down again. Then the flight sergeant bellowed once more, a man ahead shouted, the queue moved, and Bradley realized that the first man had jumped out and the others were following,

'Jesus Christ!' he whispered.

The men went out one by one, some bellowing just like the flight sergeant. Bradley swallowed, licked his lips, and wanted to be sick – and was shocked at just how loud the noise was three men away from that open hatch.

Two men.

One man.

The man in front disappeared through the hatchway, leaving Bradley exposed. The wind almost floored him, roaring at him, beating around him, but he stepped forward, was *jerked* forward – yes, the flight sergeant had grabbed him by the shoulder – and he saw his open mouth, the glint of fillings, heard him bellowing. 'Fucking jump!' were the words he heard as the roaring wind sucked him out.

He was swept back and up, his stomach somewhere in his throat, and saw spinning lights, maybe stars, perhaps the moon, and heard the roaring of engines and the magnified rush of wind and then plunged down. He was falling! His parachute hadn't opened! Then he was jerked up violently, a puppet on a string, and suddenly fell through a black well of silence and saw darkness around him.

Darkness? No. He was falling through clouds. He saw other figures falling all around him on the end of their parachutes. They looked ghostly in the clouds, silhouetted in a gray mist, above and below and all around him as if in a dream.

Then he dropped down below the clouds and was dazzled by dawn light.

More than that... the whole world.

Or so it seemed to him. He thought he could see its curved edge. It was actually the horizon, far away, beyond land's end, a strip of gray stippled by rays of sunlight and spitting fountains of water. It was the Baltic Sea. The fountains of water were explosions. The sky above the sea was filled with black dots – Allied bombers – and the land, now below him, all around him, racing upward, was divided by streams and roads and endless, shifting black lines that, he realized with a shock when he saw the tracers and billowing smoke, were columns of refugees and soldiers passing each other, going in opposite directions, while the war raged about them.

The ground rushed up at Bradley as he fell down through the streaming smoke and noise of the continuing battle.

He braced himself for the landing.

Wilson saw the parachutists through his binoculars and knew they were at least an hour's march away. He turned away from them, scanning east and west, and saw the smoke of battle in both directions as the Soviets and Allies advanced. Then he looked at the Baltic Sea beyond land's end, a few miles

away, and saw that the sky was filled with Allied bombers now pounding the port of Kiel.

'We have to leave right now,' he said to General Nebe.

'I know that,' Nebe replied. 'We've already loaded the trucks. I'm taking just enough men to help us unload at the harbour and the rest are being left here to hold off the enemy.'

'Do they know what you're asking of them?'

'These are SS troops. SS troops are trained to obey and take pride in doing so.'

'Lucky us,' Wilson said, then glanced at Ernst Stoll. The SS captain had made it back from Prague in the nick of time, bringing with him the news about Schriever and the latest troop movements. Now, because over the past few days he had actually seen what was happening, he was obviously keen to get on the move.

'Let's go,' he said.

Wilson nodded. Stoll led them out of the bunker, away from the officers' quarters and past the troop accommodations, along bleak concrete corridors with reinforced, low ceilings and machine-gun crews at each open window, then around the weapons room and ammunition dumps and storage huts, up the sloping ramps, and outside. There the trucks were parked in the covered, camouflaged garage, with the troops that were actually guarding them clambering up inside.

One of the trucks was special, because it carried the crate containing the remaining components of Wilson's saucer. Wilson insisted upon riding in that, instead of in Nebe's staff car. Shrugging, Ernst Stoll climbed in beside him, saying 'Why not indeed?' They sat side by side, the large wooden crate looming over them, then the trucks coughed into life and moved out in column.

'I've thought about it,' Wilson said.

'About what?' Ernst asked.

'This Schriever business. The fact that he's still alive. I don't think it matters that much – and it may even help us. If, after the war, Schriever starts talking about his flying saucer, it will lead everyone in his direction. They'll check out his drawings and conclude, correctly, that the saucer he constructed was unworkable. After that, if anyone reports seeing our flying saucers, almost certainly they'll be treated as cranks. Once that happens, we can create

a smokescreen of confusion and fly our own saucers with impunity. What do you think?'

'I think you're right,' Ernst said.

Wilson smiled and patted him on the shoulder. The German had lost everything in the world and now only had him.

'Good,' Wilson said.

The trucks travelled down to Kiel. A fine mist veiled the dawn. Aircraft growled overhead, shells exploded on land and sea, and the big guns were thundering in the east, west, and south. Wilson pressed his hand against the rocking crate and then they came to the docks.

The truck squealed to a halt. The crate shook and then was steady. General Nebe's eyes emerged from the drifting mist and he motioned them out. Wilson clambered down first and was surprised at how dark it was. The black water reflected the lamps beaming down on the submarines. He glanced toward the warehouses. Nebe was murmuring to his troops. The men formed up in a neatly spaced line against the wall of a warehouse.

'I'm going to take a demolition team,' Ernst informed him, 'and get them to lay a trip-wire across the road we've just come down, to blow up anything coming after us.'

'Very good,' Wilson said.

He almost felt proud of Stoll – this new Stoll was his own creation – but as pride was a destructive human weakness, he concentrated elsewhere.

Some men were unloading his precious crate, slowly, with extreme care, and eventually, when they had it out of the truck, they hitched it up to a crane.

The crane started groaning.

Wilson glanced at the submarine anchored just below him: *U-977*. There were men on the deck, arranging themselves around the hold. Chains rattled and Wilson saw his precious crate dangling over the water. There was a moment's hesitation. The crate jerked up, then started spinning. Hands reached up and guided it down and then it dropped out of sight.

General Kammler appeared on deck, accompanied by the commander of the submarine, Captain Heinz Schaeffer, whom Wilson had previously met in the Harz Mountains when Schaeffer was inspecting the new XXI electric submarines. Both men climbed up the ladder to the quay and approached General Nebe.

Kammler talked in a low voice, glancing repeatedly along the docks. His shadow trailed out along the wet stones and touched Wilson's feet. Nebe turned away and murmured something to his sergeant. Kammler took a torch from his pocket and flashed it three times.

Wilson glanced along the dock, where another truck was approaching. The truck shuddered as it started to slow down. Kammler walked up to Wilson and introduced him to Schaeffer. They shook hands as the truck driver changed gears and turned in toward them.

The SS troops remained silent: a line of men along the warehouse, all of them with their weapons in their hands slanted over their chests. They were as still as they were silent. Their discipline was remarkable. The sergeant stepped back and bellowed an order, and the troops performed a precise about-turn and froze facing the wall. Wilson heard their guns rattling. Their snapping boot heels left an echo. The truck stopped, overlooking the harbour, and its ramp was thrown down.

A shocking noise split the silence, almost deafening Wilson. The soldiers lined up along the warehouse wall were suddenly jerking and screaming. Wilson glanced up at the truck and saw a barrel spitting flame. The machine gun was roaring and rattling as the men died and fell. When Wilson blinked, there was silence. A dense smoke drifted lazily. The high wall of the warehouse was filled with holes and splashed with fresh blood.

All the men lay on the ground, sprawled across one another, their pupils reflecting the lamps beaming down on their faces.

Schaeffer turned away, but Kammler looked almost bored. Nebe took his pistol from its holster and then cocked its hammer. He nodded to his sergeant and they both approached the pile of bodies. Nebe fired the first shot. His sergeant fired the second. They took turns, bending over the bodies, the gunshots reverberating eerily while the morning light brightened. The coup de grace seemed to take a long time, though it didn't take long at all. When it was finished, Nebe turned away and gently waved his free hand.

Some men jumped out of the truck. The machine-gun barrel clanged. Nebe returned his pistol to its holster and walked away from the bodies. There was no sweat on his brow. His dark eyes were unrevealing. He simply nodded at Kammler and Schaeffer, and they walked along to the submarine.

Wilson waited until Ernst Stoll had returned, wanting to check his reaction. Stoll glanced at the pile of bodies, at the blood on the walls and

ground, then said, unemotionally, ‘Now there are no witnesses to the number of the submarine. We’ve also wired the road leading onto the quay. I think we should go now.’

‘We *are* going,’ Wilson said, ‘but you have to destroy the evidence. The submarine’s leaving now, since the light will show us up, but we’re going to wait just outside the harbour until you get to us. Will you do that?’

‘Yes,’ Stoll said.

Wilson, who knew a disciple when he saw one, just nodded and turned away, then climbed down the ladder to the submarine.

Having landed in one piece, Bradley marched for an hour with the 82nd Airborne Division and arrived at the camouflaged SS bunker as sunlight bled through the mist. He ran across a windblown field, crouched low, a survivor – then all hell broke loose. German machine guns and bazookas opened up, and he found himself right in the thick of it.

It was a brief but bloody battle, because the Krauts refused to give in, but eventually the paratroopers succeeded by sheer dint of numbers to take control of the bunkers.

Bradley was still with them, greatly relieved to be alive, but he didn’t forget what he had come for and asked to question the prisoners. There weren’t all that many – the fields and bunkers were strewn with corpses – but that simply made it easier to find out what he wanted to know.

‘I don’t know what we were guarding,’ the first SS prisoner said. ‘I can only state that I was disgusted to be asked to risk my life to protect an American scientist. I felt that was too much.’

‘And where did the American scientist go?’ Bradley asked.

‘With all the others,’ the SS sergeant said in disgust. ‘With all the runaway generals and traitors – to the harbour of Kiel. To the submarine dock.’

‘When?’

‘Half an hour ago.’

‘Oh, my God!’ Bradley exclaimed, then turned to the commander of the 82nd Airborne Division. ‘We have to get down there right away. That son of a bitch is escaping.’

‘My orders were to capture and hold this bunker,’ the commander told him. ‘I haven’t been authorized to go to Kiel. Sorry, Colonel. Can’t help

you.'

'I could go out there and steal a goddamned jeep.'

'I'm not looking, Colonel.'

Bradley hurried outside, feeling as if he was going mad, impelled by the need to fit a face to the man who had haunted him. It had been nearly fifteen years: so long that he'd turned gray and lost his wife and found Gladys... and fought a war that he was too old to fight, and become an obsessed man.

Yes, obsessed, just like his quarry, though in a different way. As he climbed into the jeep and turned the ignition on, he was convinced that he'd go out of his mind if he didn't get to the end of this.

He had to fit a face to the man whose dreams had made him inhuman.

A genius.

A mutant.

Bradley still could not accept it. As Gladys had said, he was a moral man. He believed that man was both good and evil, a creature of moral choice, and he had to know if someone like Wilson could be as natural as air.

He had to know if Wilson's lack of humanity had been formed in the womb, perhaps by his intelligence; if Wilson's inhumanity, his extraordinary lack of feeling, was as innocent as sunlight or rain, as helpless as a child being born, as alien as Mars.

He had to know if Wilson mirrored his own darker side.

'Goddamn you!' he said aloud as he drove away from the bunkers. 'I won't let you stay invisible any longer. I'm gonna make you real.'

Then he drove down to Kiel, down that steep, narrow road, seeing the boats out at sea, the water geysering up around them, the bombs falling from the fat-bellied planes flying out of the clearing mist. It was the same everywhere – the whole world was at war – and the beautiful Earth, its clean air, was being ruined for all time. Death and destruction, smouldering ruins and flame and smoke: Man's genius, his creativity, his science, had sowed what was now being reaped. Not Man, but men, individuals, those like Wilson, and the rubble of Europe, the conflagration of this mighty conflict, was the product of scientific genius used without moral constraints or commonplace feelings.

This was Wilson's inheritance.

Bradley had to see his face, to know if evil was innocent, and so he drove like a lunatic into the docks.

He only saw the wire stretched across the road when it was too late to stop.

The wire snapped and flew past him on a sheet of scorching flame as the distant Baltic Sea turned upside-down and his body exploded. He saw whirlpools of light, heard his heartbeat in silence, returned through a sibilance, a ringing, and saw the world turning over. The sea, which had been the sky, became the Baltic Sea again, and he saw the wrecked ships, the other debris of the many air raids, then rolled onto his belly and felt the pain devouring his body.

'Oh, God.' he groaned. 'Jesus.'

He was hurt pretty badly, but refused to give up. Black and blistered, burning hot and cold, in anguish, almost crying, he crawled away from his upturned jeep, from the fierce, scorching heat, toward the water glittering blackly in morning light. The smoke billowed around him, stung his eyes, choked his lungs, and each time he coughed, he was whiplashed by a spasm of pain. He was hurting so bad he wanted to die, but he just couldn't stop. He simply had to see what he had come for and that kept him going.

'Goddammit!' he gasped, keeping himself aware, fighting the urge for oblivion. 'Think of Wilson! *Remember*!'

So he managed to crawl forward, along the quay, by the docks, the stones covered in expelled shells and reeking of cordite – and wet, as he suddenly realized, not with rain, but with blood.

Whose blood?

What the hell...?

He shuddered and gasped and put his head down, trying to think, listening to the bombers rumbling overhead, the gunfire in the distance. The war was still raging, coming closer to its bloody end, and he couldn't believe how far he had travelled to arrive at this nightmare.

The stones beneath him were wet with blood.

Whose blood?

'Goddammit,' Bradley whispered to the wet stones. 'Gimme a break here!'

The pain whipped him again and he sobbed and then gritted his teeth. When he raised his head, he turned slightly to the side and looked out to sea.

He saw a submarine out there.

At first he thought he was imagining it, but then he saw it more clearly,

still on the surface, just outside the harbour, obviously preparing to go to sea but not yet submerged. Bradley knew who was on it.

He sobbed with frustration, clenched his fist, and hammered the wet stones.

Then, when he heard approaching footsteps, he looked up again.

An SS officer was coming toward him, holding a pistol in his right hand, his shadow stretched obliquely across the quay in the morning's pale light. He stopped by Bradley's head, looked down at him, then knelt beside him and took hold of his hair to jerk his head up.

He placed the barrel of his Luger pistol against Bradley's temple.

'Who are you?' he asked.

'Mike Bradley. An American.'

'It's an American uniform, I grant you, but your German is excellent.'

'I'm an American. Believe me. I'm a member of the OSS.'

'The Americans haven't reached this far yet, so what are *you* doing here?'

Bradley started to reply, almost blacked out with pain, recovered and pointed weakly at the distant submarine. 'Is he out there?'

'Who?'

'You know who. That son of a bitch, Wilson.'

'Your compatriot.'

'No!'

'Your friend. Your national hero. The man we Germans now revere. You want Wilson. You've come here alone for him? You must want him a lot.'

'I do.'

'Tell me why.'

Bradley didn't know what to say. There was no way to explain it. Besides, this handsome, civilized SS officer was going to blow his brains out.

'He's a traitor,' Bradley tried.

'Not enough,' the German replied. 'You have the look of someone obsessed, so tell me why you want Wilson.'

Bradley, who thought he was dying, felt the need to confess.

'I have to see his face,' he said. 'I've wanted to see it for years. I have to fit a face to the man to know what he's about. It's as simple as that.'

He thought he heard the German sighing. He looked up and saw him smiling. The German removed the pistol from Bradley's temple and aimed it at the warehouse.

‘You want to know what Wilson’s about?’ he said. ‘Then look in there, my friend.’

Bradley managed to raise his head. He looked into the warehouse. At first he couldn’t see – it was pretty dark in there – but then his eyes adjusted to the gloom beyond the doors, and he saw an open-topped German truck, piled high with rubbish.

No, not rubbish. Piled high with the bullet-riddled, bloody corpses of uniformed SS troopers.

‘Jesus Christ!’ Bradley whispered.

He shuddered with revulsion and a touch of disbelief, then the German jerked his head up again and waved the Luger in front of him.

‘Bradley?’ he asked, confirming the name. ‘Mike Bradley of the OSS?’

‘Yeah,’ Bradley said. ‘Right.’

‘And you’ve been pursuing Wilson for a long time?’

‘Nearly fifteen years,’ Bradley said.

The German gave a low whistle. ‘That’s a long time, Mister Bradley. And although you’re in a very bad way, you still look determined.’

‘I am,’ Bradley told him. ‘I won’t give up on this, believe me.’

‘We’ll remember that, Bradley.’

‘Goddammit,’ Bradley said. ‘I’ve got to see that bastard. Take me out there, then throw me overboard. I want to see him that bad.’

‘Your tenacity is admirable, Bradley. You will not be forgotten.’

The German holstered his pistol, released Bradley’s head, then stood up and walked away a few feet and knelt down again. He took a cigarette lighter out of his tunic pocket, lit something on the ground, and when he stood up, Bradley saw the fuse cable running back to the warehouse. Set alight, it spluttered and sparkled as it started its journey.

‘Oh, my God.’ Bradley groaned.

The German walked back, knelt beside him, and smiled at him. He looked handsome in his SS uniform, but his smile was a dead thing.

‘I have to go now, Mister Bradley. Herr Wilson awaits me. My name is Ernst Stoll – Captain Stoll, of the SS – and if you manage to survive the explosion, I hope you’ll remember me. Naturally, I’ll tell Wilson about you... and he has a long memory. *Auf Wiedersehen.*’

Captain Ernst Stoll stood up and walked casually across the quay, where four other SS officers, all lieutenants, had been waiting for him. They let him

climb down the ladder, obviously to a boat below, then they followed him down, one by one, leaving Bradley alone.

He glanced at the burning fuse. It was racing toward the warehouse. He looked back at the harbour, saw the submarine in the distance, then noticed a rubber dinghy heading toward it, carrying five men.

Obviously Stoll and his officers.

Bradley almost wept with frustration. He was so close, yet so far. He thought of Wilson and cursed, thought of Gladys and nearly smiled, then turned his head to look at the burning fuse. It reached the warehouse, then the truck piled with corpses.

My last memory on earth, Bradley thought. Wilson's truckful of corpses.

He held his breath and prayed silently.

Wilson stood with Nebe and Kammler on the deck of the submarine and thoughtfully watched the men on the distant quay. Apart from Stoll, there were only four men. They worked long and very hard. They piled the bodies of their comrades onto the back of the truck and then drove the truck into the warehouse. The docks seemed very quiet. The lamps beamed down through the mist. There was an explosion near the road at the end of the docks, and a man who was most likely Stoll walked along there to check. He knelt down for some time, stood up, walked back and forth. Allied planes rumbled overhead as Stoll's four men emerged again.

They were not in the truck, because they had left it inside the warehouse. Stoll joined them and they clambered down the ladder and dropped into the dinghy. The oars splashed in the water. The distant lamps showed desolation. After what seemed like a very long time, the men arrived at the submarine. They were all helped aboard. Stoll seemed steady as a rock. Wilson stared across the water at the docks and saw the clouds of mist thinning. The explosion was catastrophic. The whole warehouse disintegrated. The flames shot up in jagged yellow lines that made the thin mist look silvery. The noise was demonic. A black smoke billowed up. The flames swirled and turned into crimson tendrils that embraced one another. Then the smoke drifted sideways, revealing great piles of rubble. The flames leapt across the charred, broken beams and stained the quay with great shadows.

The flames burned a long time. The harsh wind made them dance. They were still burning brightly when Stoll nodded at Wilson and they went below

decks. The hatch above them was closed and the submarine, with much moaning and groaning, submerged in the Baltic Sea.

The real journey began.

EPILOGUE

Roswell, New Mexico
July 2, 1947

‘The space age is beginning,’ Bradley told Gladys. ‘It began when we shipped the first captured German V-2s to New Mexico in 1945 and when, in March the following year, the first US V-2 launches began at the White Sands Proving Ground under the direction of our old friend, Wernher von Braun, now under contract to the United States. Since then, about fifty V-2s have been launched, most of them successfully. Meanwhile, the Soviets, who got Peenemünde and to whom we kindly handed over Nordhausen shortly after capturing it, have started a similar rocket development program and are preparing to launch their first V-2 from a range near Volgagrad, better known to us as Stalingrad. And apparently, back here in the good old US of A, improved rocket motors, using liquid self-igniting fuels and based on the V-2 research, are about to go into production with civilian aviation organizations given USAF contracts... And all that in two years!’

‘Give it a rest, Mike,’ Gladys said. ‘Let me fill up your glass.’

‘A man’s gotta have a hobby,’ Bradley replied. He handed Gladys his glass and glanced out of the window at the desert, flat under a starlit sky. They were living not far from the late Robert H. Goddard’s Mescalero Ranch and his old rocket launching site, Eden Valley. Bradley often felt inspired by the location, given what he was doing.

They’d moved here when they were married, shortly after Bradley’s release from the hospital, and now, when he was not involved in the drafting of contracts between the many US Air Force and civilian aeronautical establishments in the area, he was conducting his own investigations into Wilson’s whereabouts and his possible connections with the recent spate of sightings of so-called UFOs, or flying saucers.

It kept him busy. It helped him forget the pain. As they had told him in the hospital, he would have to live with the pain for a long time. He owed Wilson that as well.

Gladys handed him the refilled glass, kissed his forehead, then took the chair facing him. Her hair was turning more gray every day, but her smile was still radiant. He loved her and loved being married to her; he'd gained that much, at least.

'Feeling okay?' she asked him.

'Sure.'

'When are we going to New York to see your kids? I sure enjoy those visits.'

Bradley shrugged, then winced. Even shrugging could hurt like hell. 'Christmas,' he said, remembering the submarine in the harbour of Kiel, the icily sardonic SS captain, the fuse spluttering toward the truck piled with corpses, then the stupendous explosion... 'We'll go see them at Christmas. They're looking forward to seeing you again. We'll have a real family holiday.'

He'd awakened hours later, pulled back to life by pain, and found himself half buried under rubble with a lot of bones broken. He'd been rescued, of course – the Allies and Soviets had met in Kiel – but he'd spent the next six months in a US Army hospital in Frankfurt, then been shipped home, to New York, for a long and painful convalescence.

All that, and he still hadn't seen Wilson, didn't know what he looked like. It was hard to take.

'What are all those notes?' Gladys asked him, indicating the pile of papers on his desk.

Bradley had a sip of whiskey. 'I'm just finishing off my research on the members of Projekt Saucer... on what happened to them.'

'Anything interesting?'

'So-so. It's known that Rudolph Schriever and his team were trying to construct a flying saucer in the BMW plant near Prague, were hoping to test it in 1945, but had to destroy it in the face of the Soviet advance. When the Soviets took Prague, the saucer team all went their separate ways. As far as I can gather, Habermohl was captured and has disappeared into the Soviet Union; Miethe surrendered to the Allies and now works for the A. V. Roe Aeronautical Company in Malton, Ontario; and Schriever managed to make

his way back home and has recently, from the safety of his abode at Hokerstrasse 28 in Bremerhaven-Lehe, been telling the press that the flying saucers now being seen all over the place are based on his original Projekt Saucer designs.'

'Schriever doesn't mention Wilson?'

'Nope. Not a word.'

'And the others have vanished from the face of the earth?'

'More or less,' Bradley said. 'My only clue is that damned German submarine, *U-977*, which docked at Mar Del Plata, Argentina, on August 17, 1945. According to its commander, Captain Heinz Schaeffer, it put out from Kiel harbour in late April 1945 and arrived in Argentina after an epic voyage of nearly four months. According to the Argentine authorities, their inspection of the submarine revealed nothing unusual. However, given Peron's fondness for Nazis, we have to treat what they say with some scepticism. Captain Schaeffer was later handed over to an Anglo-American commission for intensive interrogations, during which he was asked if anyone of, quote, political importance, unquote, had been aboard his submarine during its final voyage. Naturally he denied all knowledge of everything.'

'But you have your doubts.'

'Well, we certainly know that an awful lot of fanatical Nazis have been given sanctuary in Argentina and Paraguay. So if Wilson was on that submarine – which he certainly was, *if* it was the same submarine that I saw leaving Kiel harbour – it's possible that he disembarked at Mar Del Plata and went on to his final destination, wherever that might be, under the protective cloak of the Argentine government. And certainly there are rumours that a former Nazi named Ernst Stoll is currently living in seclusion in Paraguay.'

He glanced out the window again, at that flat, dark desert stretched out under a starlit sky, and thought of Goddard's first rocket tests all those years ago, not too far from there. He shook his head, mystified by his own questions, then drank some more bourbon.

'You know,' he said, 'it sometimes really scares me. In April 1945 Wilson disappears with his designs for a highly advanced saucer-shaped aircraft; then, on June 24 this year, a part-time pilot, Kenneth Arnold, reports seeing nine saucer-shaped objects flying over Mount Rainier in Washington State. Since then, similar UFOs have been observed all over the place, but

mostly over New Mexico, right here where we live. Why?'

Gladys gave that familiar, laconic grin. 'One theory is that they're of Soviet origin,' she said.

'Well, the Soviets *did* capture the Peenemünde facility and a lot of its documentation and products – and they *did* ship more than six thousand German technical specialists of all kinds to various research centres throughout the Soviet Union – so we certainly know that they're working with the V-2 rockets and other advanced German secret projects.'

'So the theory,' Gladys continued, 'is that the flying saucers originate in the USSR and have been sent here to spy on our top-secret installations.'

'Which theoretically explains the preponderance of UFO sightings in New Mexico.'

'Exactly,' Gladys said. 'Right now, New Mexico contains more of our postwar defence installations than any other part of the United States, including atomic research, aircraft, missile and rocket development, and a lot of highly advanced radar-electronics and stratospheric flight experimentation. The top-secret Manhattan atom bomb project is in Los Alamos. The White Sands Missile Range and Proving Range at Alamogordo is the most important of its kind in the United States. And we even have the only combat-trained atom bomb group in the world at this time: the 509th Bomb Group of the US Army Air Force Base, right here in Roswell, where Goddard flew his first real rockets. So, yes, if those flying saucers are spying on us, they'd certainly want to come here.'

'The Soviets or Wilson's group,' Bradley said dreamily. 'It sure as hell makes you think...'

He was just about to have another sip of his whiskey when the telephone rang. He picked it up and gave his name.

'Bradley,' a familiar voice said tersely, 'you'd better get your ass over here.'

Bradley instantly recognized the voice as that of First Lieutenant William B. Harris, Flight Intelligence Officer of the Roswell Army Air Base.

'What's up?' he asked, glancing automatically at Gladys.

'We've just been informed that a saucer-shaped aircraft crashed on the plains of San Augustin, between Magdalena and Socorro, New Mexico, about forty minutes ago.'

Bradley glanced at his wristwatch. It was just going on 10.30 p.m.

‘It’s probably just a Rawin weather balloon.’

‘No,’ Harris said firmly. ‘There are none up tonight. Besides, we tracked this thing on radar until it went down – and it was certainly no weather balloon. Also, the flight controller at the private airfield at Carrizozo, about thirty-five miles southwest of the crash site, called a few minutes before the crash to inform us that a saucer-shaped aircraft had flown over at an altitude of approximately four to six thousand feet, at a speed of about four hundred miles per hour. Some goddamned farmer’s already been out there and called from his home to say that what crashed is some sort of metallic, saucer-shaped object about twenty-five or thirty feet in diameter. He also said that there are dead bodies in the wreckage.’

‘Jesus Christ!’ Bradley whispered.

‘And right now,’ Harris continued, ‘at the insistence of General Hoyt Vandenburg, deputy chief of the air force, an intelligence team from the 509th Bomb Group of the Eighth Air Force is on its way to the crash site to pick up the pieces. Once they get it, you can rest assured that it’ll be flown out to either Carswell AFB, Forth Worth, or Wright-Paterson AFB in Dayton. So if we want to see what the hell it was, we better get out there fast.’

‘Where will I meet you?’

‘Right outside the main gate.’

‘I’m on my way,’ Bradley said. Excited, he put the phone down and stood up, saying to Gladys, ‘It’s too good to be true. Something saucer-shaped has crashed near Socorro. I’m meeting Bill Harris at the main gate of Roswell Army Air Base, then we’re going to drive the hell out there, so don’t wait up, honey.’

‘But I can’t sleep without your battered bones beside me.’

Bradley grinned. ‘Glad to hear it.’ He bent over and kissed her full on the lips, then straightened up and looked down at her. ‘I owe that son of a bitch Wilson one thing,’ he said. ‘I found you when I was trying to find him. That’s a pretty good trade-off, right?’

‘I’m glad you think so,’ she said.

He grinned and waved his hand, then left the living room, grabbed his coat, and hurried out to his car and drove into the night.

The land was flat and featureless, windblown, with the dust swirling eerily, but the sky above it held an enormous moon and a spectacular display of stars. There were very few clouds, just some candy floss here and there,

but enough to cast shifting shadows on the desert floor.

Bradley drove fast, too excited to be careful, and enjoyed the feeling of power, of magical omnipotence, that came with being isolated from the world and moving through it at great speed. He loved the desert at night, its stark, lunar beauty; loved the play of shadow and light on its barren floor, which made it seem like a living thing.

So, he was enjoying the drive and feeling excited... Then he began to feel odd, no longer alone... aware of some unseen presence.

'What the hell...?'

He spoke aloud to break the silence, or the silence contained within the beating wind, and automatically glanced at his rear-view mirror.

He saw only a cloud of billowing dust churned up by his wheels.

Nothing else... just the darkness... the stars seeming to move away... the sky unfolding radiantly in his wake as the car barrelled forward. Nothing else in the mirror.

Yet his heart started racing.

He glanced left and right, convinced that something was out there. He saw nothing and glanced up, where there was nothing unusual, and so concentrated on the road straight ahead, aware that he was sweating.

'Dammit, Bradley,' he said. 'Imagination…That's a dangerous thing.'

Talking to himself... talking aloud to calm his nerves.

There was nothing out there but moonlit darkness, starlit sky, shifting shadows...

No, something *was* out there… What was *that?* Something moving. A flashing light. Growing bigger. Approaching... Yes, dammit, *approaching*!

He saw the light, then it was gone, though it hadn't flashed on and off. It had flown from east to west at tremendous speed, then maybe shot upward – so fast it just disappeared.

Where was it now?

Bradley felt his skin crawling. His fear was an embarrassment. He was aware of something out there, couldn't see it, but could *feel* it, and his hands became slippery on the steering wheel when his heart raced in panic.

He tried to convince himself that he was imagining it... but then, as his helpless fear deepened, something flashed in his eyes.

He almost swerved off the road, but blinked and straightened out. He squinted into the darkness, trying to see between the headlights. A pool of

light brightened on the road beside the car, keeping abreast of it, speeding along and growing brighter and wider until it covered the whole road.

Bradley glanced up and was blinded by dazzling light.

Then he lost control.

'Shit!' he exclaimed, his voice reverberating in his head as he fought with the steering wheel. The car swerved off the road, out of the light, then back onto the road and into the light again. 'Jesus Christ! What the…?'

The light disappeared abruptly. The car barrelled into the darkness. Its headlights had gone out and Bradley frantically worked the switch. Then a bass humming sound, an infrasound, almost *physical*, filled the car and tightened around his head as the engine cut out.

Bradley slammed on the brakes, went into a skid, straightened out and was slowing down when something passed above, shot into the darkness ahead, then became an enormous, burning globe that froze right in front of him.

The car came to a halt. It just rolled to a stop. Bradley sat there, hardly believing what he was seeing, but too stunned to move.

He was looking at an enormous, glowing, saucer-shaped object that was hovering in mid-air along the road, almost as wide as the road. It had a silvery, metallic appearance, showed no surface protuberances, and seemed to possess a perfectly seamless surface beneath that eerie green glowing.

Bradley sat in the car, too stunned to move, mesmerized by that *thing* out there. Then that thing, the flying saucer, sank lower and settled on the ground. It didn't appear to have any legs – it just settled down on its base – then the bass humming sound increased, tightening around Bradley's head, and he saw a panel opening up in the base of the saucer.

First one, then two, then three black-clad figures dropped down and spread out across the road and walked steadily toward him.

Bradley was terrified.

He didn't know why: they were just people, after all. As they advanced deliberately upon him, he saw only that they were dressed completely in black, looked otherwise human, but were possessed of a frightening, calm intensity that seemed terribly unreal.

He wanted to get out of the car and flee, but he felt paralysed.

Then the infrasound faded away and the tightness left his head. He immediately reached for the ignition key and turned it, but heard only a dead

click. He withdrew his fingers as if he'd been scorched. His heart was still racing dangerously. He licked sweat from his upper lip and shifted his gaze, taking in the three men.

One stopped right in front of the car, the other went to the far side, and the third walked around to stop by Bradley's door.

When he bent down to look through the window, Bradley wanted to scream.

'Roll the window down, Mr Bradley.'

The man's voice was very soft. It was also oddly flat. It was the voice of a man with few feelings and a lot of authority. Bradley did as he was told. He didn't seem to have a choice. That voice, though quiet and unemotional, would brook no disobedience. Bradley rolled the window down, his hand shaking, then stared at the man.

He had silver-gray hair, unnaturally smooth white skin, coldly handsome features, and hypnotic blue eyes.

'You're Mike Bradley,' he said.

'Yes,' Bradley replied.

'You were with the OSS during the war.'

'That's right,' Bradley said.

The man smiled without warmth. 'I believe you wanted to see me, Bradley. I'm told that your need to see me was an obsession that would not let you rest. Why was that?'

Bradley felt calmer now. Not too good, but in control. He felt paralysed, but the fear was less intense and allowed him to think.

'You're Wilson?'

The man smiled again, this time as if amused. 'Why did you go to such lengths to find me? What did you hope to find?'

'An answer,' Bradley said.

'An answer to what?'

'I had to know if such a genius could be human or was some kind of mutant.'

'Observe – I am human.'

'No, you're not. You're not like us. You exist on some plane beyond humanity, where feelings don't count.'

'Feelings aren't important. They belong back in the caves. Where we're going – where the human race must go – only logic prevails. Science, Mr

Bradley, not emotion, is what will lead us to glory.'

'You're evil.'

'No, I'm not. To be evil, one must have feelings. *Extreme* feelings, I grant you, but feelings nevertheless, and since my mind has taken me beyond those, I cannot be evil. I am what I am, that I will be. I am nature's child also.'

'Nature can be brutal.'

'Nature *is.* There's no good or bad in it.'

Bradley studied Wilson's face. He wanted to find the evil in it. He saw nothing but blue eyes that were brilliant with intelligence; handsome, unrevealing features; skin too smooth to be natural.

Otherwise, there was nothing.

'Your world is dying, Mr Bradley. The world of pointless emotions. The new world, my world, is approaching and can't be held back. It's a world of pitiless logic, of truth, and that's the way we must go. Science will take us there.'

He reached into the car and pressed his fingers to Bradley's forehead. 'Stop pursuing me,' he said. 'It will do you no good. You will only be treated as a crank and have a very unfortunate life. Think of your wife, Bradley. I know her, I believe. Consider your married children and don't make them endure your humiliation, since you can't stop me anyway. My flying saucers won't be hidden. They'll fly the world with impunity. Those who report seeing them will be ridiculed and, where necessary, silenced. Retire, Bradley. Think of your children. Enjoy your retirement. Now relax... *Auf Wiedersehen.*'

Bradley felt that he was dreaming. In his dream the fear returned. He kept thinking of his children, of that warning, and he knew he would stop here.

He would not go to Socorro. He would burn all his research. He knew, even as Wilson departed, that his search had come to an end. He would retire to guarantee his family's safety and let others do what they would.

Wilson walked from the car, between the other two men in black, and disappeared back into his flying saucer while Bradley just sat there. The hatch in the base moved up again, became part of the seamless body, then Bradley heard the bass humming sound, almost *felt* it, and as his head started tightening and his skin became numb, the flying saucer started glowing, its silvery body brightening magically, then became encased in a cocoon of

pulsating white light and rose off the ground.

Bradley heard the noise, felt it, was surrounded by it and became part of it, as the saucer ascended slowly, gracefully, even majestically, then suddenly shot upward, but stopped again, as if by magic, to hover above him.

The infrasound cut out abruptly, allowing Bradley to move, and he clambered out and stood beside his car and looked directly above him. The saucer was high up, about the size of a dime, and it seemed to be spinning on its vertical axis and filling the sky with light. Then it shot up even higher, shrinking rapidly, but still shining, until eventually it merged with the stars and suddenly blinked out.

Bradley saw the moon and stars, the vast web of the cosmos, and he thought of Gladys and his children and grandchildren, feeling fear for their future. Determined to protect them, he returned to his car, turned it around, and headed back in the direction he had come from, through the dark, windblown desert.

He had the feeling that the flying saucer was still somewhere out there, gliding eerily through the night, keeping him under surveillance... and he knew that this feeling would haunt him for the rest of his days.

It was best to be silent.

PROJEKT UFO

The Case for Man-Made Flying Saucers

W. A. Harbinson

W.A.Harbinson's groundbreaking non-fiction work, *Projekt Saucer: The Case for Man-Made Flying Saucers*, details the extraordinary facts behind his bestselling novel, *Genesis.* Widely regarded as one of the most detailed and level-headed books ever published on this controversial subject. *Projekt UFO* is also considered by many to offer the definitive explanation for a mystery that has haunted the Western world for over sixty years. Now this revelatory book about 'the world's most fearsome secret', first published in 1995, is again available to a worldwide readership.

This new edition has been updated by the author.

'A fascinating account of the history of UFOs, but from the perspective of their being man-made, not extraterrestrial craft... Forget ETs and invasions from space; the terrestrial scenarios Harbinson speculates are already frightening enough!'
-Nexus

'For sheer content and quantity, this book must score ten out of ten. It covers a multitude of topics including biblical encounters, airship scares, spinning disks, World War II sightings, UFO landings, UFOnauts, and much more. A very worthwhile addition to your stack of bedtime reading.'

PHOENIX

Projekt Saucer, Book 2

THE ULTIMATE CONSPIRACY CONTINUES…

W. A. Harbinson first exposed the nightmarish truth about UFOs – a truth so terrifying that it could only be presented as fiction – in his international bestseller *Genesis*. Now he has taken the themes and many of the characters from that groundbreaking work and developed them into further dimensions of cosmic horror with other astounding novels in the PROJEKT SAUCER series.

Phoenix, the second self-contained *Projekt Saucer* epic, takes the story on from the end of the Second World War and through the postwar years of humankind's first tentative explorations of space. During this historic period, the sinister earthly forces behind the UFO conspiracy begin to show their hand more openly –and start to exert a deadly stranglehold on the destiny of the whole Earth…

'A gripping plot of global conspiracy based on actual historical sightings of UFOs over the last century.'

GENESIS

Projekt Saucer, Book 3

The international bestseller that started it all…

More than a gripping, enthralling novel of brain-searing excitement, ***Genesis*** is a reading experience you will never forget…

In these pages you will enter a world of nightmarish global conspiracy and perverted super-science that will both horrify and fascinate you. You will see the hidden forces of technological evil massing to obliterate those who threaten to reveal their appalling existence. And, in the totally unexpected and chilling climax, you will witness one of the most powerful testaments to the strength of the human spirit in adversity ever to appear in a work of fiction…

‘A Herculean conspiracy epic… superbly written, crammed with food for thought.’

The Writing Game

Recollections of an Occasional Bestselling Author

THE WRITING GAME is an autobiographical account of the life and times of a professional writer who has managed to survive the minefield of publishing for over thirty years.

Unlike most books on the subject, ***The Writing Game*** does not try to tell you how to write, or even how to get published. Instead, it focuses with gimlet-eyed clarity on the ups and downs of a unique, always unpredictable business.

On the one hand, a compelling look at a life lived on the edge, under the constant threat of failure, both artistic and financial, on the other, an unusually frank self-portrait enlivened with colourful snapshots of editors, fellow authors and show business celebrities, ***The Writing Game*** succeeds, as few other books have done, in showing how one professional, uncelebrated writer has managed to stay afloat in the stormy waters of conglomerate publishing.

Here, for the first time, a working author tells it like it really is.

Chapter One

SOCORRO, NEW MEXICO
JULY 2, 1947

When that thing flew overhead Marlon Clarke could hardly believe what he was seeing. As he had been doing too often lately, he was sitting out on his porch, in his old rocking chair, slugging beer from the bottle, muttering under his breath and gazing out over the parched lands of his failed farm, flat and eerily desolate in moonlight. He was just a small farmer who'd had a bad few years and he liked to sit out there in the evenings, feeling bitter and murmuring angry words to himself, getting drunk enough to sleep without too much anxiety. Tired and thinking of bed, he had just glanced at his watch and noticed that it was ten-thirty when the whole porch shook a little, his last bottle of beer fell over, and he heard an exploding noise right overhead.

Shocked back to the real world, his heart racing too fast, he looked up to see a glowing, saucer-shaped object screeching, wobbling, spinning and pouring steam or smoke as it flew at tremendous speed across the night sky on a descending trajectory.

Before Marlon had a chance to get a grip on himself, the glowing object fell towards the Plain of San Augustin, between Magdalena and Socorro, about five miles from his farm, then turned into a growing fan of white and red flames in a billowing cloud of dust. The explosion came a second later, as the fan of flames grew bigger, illuminating the rising cloud of dust and obliterating the stars.

The blast rocked Marlon's house.

Startled into a state of near sobriety, he got out of his rocking chair as the fan of flame shrank back to a tiny flickering that soon disappeared, letting the star-studded night sky return.

'Kee-rist!' Marlon exclaimed softly. Instantly, on an impulse, both fearful and curious, he grabbed a bottle of whisky from the floor of the porch,

hurried down the steps, clambered unsteadily into his battered old truck, and tore off towards the scene of the crash.

As he drove across the moonlit plain, through pale moonlight and the shadows of cacti and sagebrush, he controlled the steering wheel with one hand, held the bottle in the other, drank too quickly and felt his heart racing. It was the whisky, he guessed, but it was also what he had seen: that glowing, saucer-shaped flying object of the kind he'd heard so much about lately.

'Jesus!' he whispered to himself as the old, battered truck growled and rattled across the flat, windblown plain. 'Jesus H... I don't believe...'

He kept glancing outside the truck, growing more apprehensive, half expecting to see another of those objects gliding under the moonlight. He even thought of turning back, but his curiosity kept him going, and he convinced himself, even as his fear was growing, that it had just been an airplane.

He was wrong.

On the broad, flat plain near the town of Magdalena, about halfway between the road and the distant Black Mountain, he saw a dark pile of still smouldering debris. Driving off the road, he bounced over the rough, sage-strewn plain until he came to the location of the crash. Stopping the truck, he had another drink of whisky, wiped his lips with the back of his hand, then looked out at the smouldering debris.

It was the wreckage of a large, saucer-shaped craft, about half of it smashed to hell, the remainder a dull grey in the moonlight.

What looked like three scorched corpses were still strapped into the central cockpit of the crashed object.

'Lord Almighty!' Marlon exclaimed softly.

He was too scared to get out, but he had a good look, making sure that his eyes were not deceiving him. The object was round all right, shaped like two plates, one inverted and placed on top of the other. It was about twenty-five to thirty feet in diameter, obviously made of a metallic substance, and had smooth sides that rose gracefully, seamlessly to a smashed-up, transparent, domed cockpit. The charred bodies were still strapped to their seats.

That's when Marlon grew really scared. Blinking, rubbing his eyes, he looked out again.

The three corpses were burned beyond recognition. They were wearing grey-coloured one-piece suits, or coveralls, which were charred black, in

tatters and still smouldering like the pieces of metal scattered widely around the broken, circular craft.

Nauseated by the smell of roasted flesh, Marlon looked beyond the crashed object to the distant mountain range. It was black in the night, but covered with stars, its sides streaked with moonlight that also fell across the flat Plain of Magdalena. Marlon looked around him, expecting to see something else, but there was nothing out there but empty land and the wind's constant whispering.

Taking a final look at the charred bodies in the crashed flying saucer, he shivered with revulsion and fear, then turned the truck around and burned back to his ranch.

When the men from the Roswell Army Air Base came to see him, Marlon was surprised by how many there were. They arrived in a jeep and troop truck as the sun was rising over the horizon to flood the flat plain with light. Marlon was still sitting in his rocking chair, more drunk than ever, when the armed troops jumped out of the truck to form a semi-circle around the yard, some with their backs turned to the house, others facing the empty plain, all holding their weapons at the ready.

More frightened than he had been by the sight of the crashed saucer, Marlon was wiping his dry lips with the back of his hand when a man in a plain grey suit, accompanied by a uniformed Air Force officer and two others in plain clothes, descended from the jeep and approached him. Stepping up onto the porch, the two in plain clothes hurried past Marlon and entered his house without his permission, slamming the mesh-wire door behind them. As Marlon was about to get out of his rocking chair and protest, the Air Force officer removed his peaked cap, revealing stark black hair and warm brown eyes in a slightly plump, friendly face. He offered a natural, easy smile.

‘Mr Clarke?’

‘Darn right,’ Marlon said. ‘And when I called, I didn't expect...’ He nodded back over his shoulder, indicating the two men who could now be heard noisily searching his home.

‘I’m sorry, Mr Clarke, but it’s necessary. I’m First Lieutenant William B.Harris of the Eighth Air Force, stationed at Roswell Army Air Base. The two men in your house are members of the intelligence team of the 509th Bomb Group, also at Roswell. And this… ‘ he indicated the unsmiling man in the plain grey suit... ‘is CIA agent, Jack Fuller, who’s flown here all the way

from Langley, Virginia.'

'You called about a crashed saucer, I believe,' Fuller said in an oddly threatening tone of voice.

'Right. It crashed last night, about ten. I was expecting you people a lot sooner. I've bin sittin' here all night.'

'I'm sorry about that,' First Lieutenant Harris said, 'but I had to wait for Mr Fuller to arrive.'

'All the way from Langley, Virginia,' Marlon said, glancing at the unsmiling Fuller who was, he noted, still under thirty, but had eyes as grey and wintry as Antarctica. 'You musta taken me serious.'

'It's strictly routine,' Fuller informed him, sounding as cold as he looked. 'It's just one of the rules. All the flying saucer scares we've had since last month – '

'The Kenneth Arnold sightings.'

'Right. They're mostly false alarms, but they have to be checked out. That's why I'm here.'

'This is no false alarm.'

'You actually saw the saucer?'

'Sure did. It's out there on the Plain of Magdalena with three dead bodies in it.'

Fuller glanced at Harris, then down at Marlon's whisky bottle. 'Have you been drinking, Mr Clarke?'

'What do you think?'

'I think you were drinking last night - you have a reputation for it - and just *imagined* you saw those dead bodies. I think you saw a crashed weather balloon, related it to all the flying saucer stories that have been in the papers since the Kenneth Arnold sightings, and let your imagination get the better of you.'

'The hell with that,' Marlon said, outraged. 'I know what I saw there last night - and it wasn't any goddamned weather balloon. It was big and made of metal and had three dead bodies in it. They were burnt all to hell.'

'Come with us, Mr Clarke.'

Before Marlon could protest, Fuller took him by the shoulder and tugged him to his feet. Marlon jerked his head around, indicating the noisy search still going on in his shack, but Harris told him not to worry and walked at his other side as Fuller led him between the armed troops to the jeep and coaxed

him up into the rear seat. Fuller sat beside him, Harris sat up front, then the driver took off along the road that ran as straight as an arrow across the flatlands, towards Magdalena.

Marlon's stomach was churning. The sight of the armed troops had scared him, the people searching his house more so, and now he was confused as well as frightened, not too sure if he had done the right thing in making that phone call. Jack Fuller, the CIA agent seated beside him, was only half Marlon's age, but had a cold-eyed, obscurely threatening manner, never smiling, just watching. He was making Marlon feel as guilty as hell, though he didn't know what for. He had simply tried to behave like a responsible citizen - reporting the crash and what he had seen - and now this Fuller was making him feel like a criminal, or even a madman. Thinking of all the stories he'd read about UFOs in the past few weeks (ever since the June sightings by Kenneth Arnold, the papers were full of them), he started wondering if he *had* imagined the whole thing.

Marlon desperately wanted another stiff shot of whisky, but the bottle was back on the porch where it could do him no good.

They covered the five miles in about ten minutes and soon were bumping over the flatlands, towards the crash site, which was, Marlon noted, now surrounded by armed troops just like his house. The sun was up and the heat made Marlon sweat; he was also sweating with nervous tension when the jeep braked to a halt, its wheels churning up a cloud of dust that spiralled around him and the others to be carried away on the moaning wind.

Marlon didn't have to get out of the jeep to express his surprise.

Fuller turned unyielding eyes upon him. 'Is this what you saw, Mr Clarke?'

It was not. Now, in the centre of that large circle of armed troops, where the flying saucer with the three dead bodies had been, Marlon saw only some white-smocked technicians picking up a thin scattering of silver-foil and narrow balsa-wood beams. There was no sign of the large flying saucers. No dead bodies. No ambulance.

'This isn't what I saw,' Marlon said. 'What I saw was – '

'This is what we found,' Fuller told him. 'The remains of a crashed Rawin weather balloon. Easily mistaken for flying saucers, Mr Clarke. We sometimes see what we want to see.'

'What do you mean by that?'

Fuller glanced at First Lieutenant Harris. 'One of the worst lightning storms

we've had in a long time,' Harris explained with a gentle smile, 'took place about seventy-five miles south-west of here last night, about the same time as this weather balloon crashed. Since then, we've had lots of reports of unidentified flying objects in the vicinity. Most turned out to be natural phenomena caused by the storm. In other words, false alarms.'

Marlon felt more confused, but he knew what he had witnessed. No way were those pieces of silver-foil and balsa wood part of what he had seen here last night.

'That thing I saw last night was big - very big - and it had dead bodies in it.'

'It was night,' Fuller told him. 'You were drinking. You saw what you expected to see. Did you get out of your truck?'

'No, but...'

'So you'd been sitting out on your porch, drinking half the evening, then you saw this saucer-shaped object falling from the night sky about five miles away. Remembering all the stories you'd read in the papers this past few weeks, about so-called flying saucers, you assumed that's what you'd seen, drove out here to find it, and maybe got scared when you *did* find it and imagined the rest.'

'With all due respect, sir, that's bullshit. I know what I saw.'

'You were drunk and frightened.'

'I'm more drunk now than I was last night, but that don't mean I'm imagining all this.' Marlon waved his hand to indicate the ring of armed troops and the white-smocked men picking up pieces of silver-foil and balsa beams to load them into the army truck nearby. 'And I'm telling you that what I saw last night was no weather balloon. It was at least twenty-five feet wide and it had – '

'Dead bodies in it.' Fuller sighed. 'So where are the dead bodies, Mr Clarke? Where's the large, presumably metallic, flying saucer?'

'That's right. It was metallic.'

Fuller smiled in a mocking way and pointed to the men carrying the debris of the weather balloon. 'Silver-foil,' he said. 'It would look metallic in the dark. The moonlight, the drifting dust, your state of mind, the drink, combined could have made you see all the rest. Enough said, I think.'

'Well, maybe...' Marlon felt confused and nervous, no longer sure of his senses, and wished he could have a stiff drink to put his thoughts in some order. Okay, so he was drunk, but he wasn't that dumb... and when he noticed

a lot of tyre tracks leading away from just beyond this much smaller area of wreckage, heading towards Roswell, he was convinced that another team of men from the Roswell Army Air Base had cleared away the real wreckage and taken it back to the base.

Frightened, he decided to keep his nose clean and get involved no further. After wiping his dry lips with the back of his hand, he deliberately shook his head from side to side, as if chastising himself. 'Dammit, I guess you must be right. I sure as hell hung one on last night. I guess that *could* explain it.' He glanced again at the tyre tracks that started beyond the perimeter of armed troops, then at the truck into which the white-smocked men were putting the last of the debris from the weather balloon. 'A weather balloon?' Harris nodded and smiled at him. 'Well, I'll be damned,' Marlon said like a real country yokel. 'It's amazin' what a man sees when he's drunk. I feel a right goddamned fool now.'

'No need,' Harris said, raising the peak of his Air Force cap to offer a genuine, friendly smile. 'You'd be surprised at what people think they see at nights - and these weather balloons, they fool a lot of people.'

'Sure fooled me. Say, you haven't got a drink in that there jeep?'

Harris smiled more broadly. 'Nope, I'm afraid not. But you've still got that bottle on the porch and we're going back now.'

'Yeah, let's do that.' Pretending to be more drunk and tired than he was, Marlon glanced at the CIA agent, Jack Fuller, whose grey gaze was coolly searching, then at the white-smocked men who were still placing pieces of debris into the truck. Comparing the size of the craft he had seen last night and the much wider area of scattered debris with what he was seeing now, he was more convinced than ever that his senses had not deceived him as Fuller had suggested.

No, those tyre tracks clearly visible beyond the ring of armed troops belonged to the trucks that had taken the debris of the flying saucer, as well as its dead occupants, back to the Roswell Army Air Base. This coldly handsome young CIA agent, Fuller, and the friendlier Air Force First Lieutenant Harris were undoubtedly covering up the real crash. Convinced of this, Marlon became even more determined to keep his mouth shut. He was therefore relieved when the driver turned the jeep around and headed back to the ranch.

See no evil, hear no evil, Marlon thought, keeping his gaze fixed resolutely

on the road ahead.

It was best to be silent.

Marlon awoke in the early hours of the morning, haunted by the remnants of bad dreams and frightening realities. At first confused about where he was, hardly remembering going to bed, he saw his bedroom in darkness, stars framed by the window, then recalled that crashed flying saucer and the three strange, scorched bodies. He groaned aloud, hearing something - *feeling* something - then remembered waving goodbye to Fuller and Harris as they drove away from his house, having grimly warned him to forget flying saucers and accept that what he had seen was a crashed weather balloon.

'Shit,' Marlon said, hearing something - *feeling* something - then realised that he'd been awakened by a strange bass humming sound that seemed physical and made his head hurt. 'Shit!' he said. 'What the hell...?'

The sound was growing louder, as if descending on his roof. As it did so, the whole house shook to the pulsations of a dazzling light that had suddenly obliterated the stars as it poured in through his window.

The house shook more violently as the pulsations became more rapid and the light blinded Marlon. The bass humming sound grew louder and more... *physical*, threatening to crush his skull.

He jerked upright on the bed and covered his ears with his hands, letting out a scream of anguish and terror.

The noise cut out abruptly and the pulsating light disappeared, leaving normal darkness, and... unnatural silence.

Marlon lowered his hands, staring fearfully at the window. Hearing and seeing nothing other than starlit darkness, he jerked the sheet from his sweating body and slid off the bed. He put his pants on, picked up his shotgun, then went to the window and looked out. Still seeing nothing unusual, he padded back to the front door and stepped out onto the porch.

A large, silvery, saucer-shaped craft was resting on the ground at the end of Marlon's moonlit yard. It appeared to be seamless and had no protuberances other than four retractable legs.

It looked just like the crashed flying saucer that Marlon had seen on the Plain of Magdalena.

Even as a wave of fearful disbelief swept over him, making him drop the shotgun, which made a godalmighty clattering, the saucer suddenly gave off a bass humming sound that shook him to his bones, vibrated slightly, and

became surrounded by an aura of pulsating white light. A transparent dome rose up from the saucer's raised centre to reveal three human-shaped silhouettes inside. Then a beam of dazzling light shot from the saucer, almost blinding Marlon.

Crying out and covering his eyes with his hands, he fell back against the wall of the house. The light shone through his fingers, showing the blood beneath the skin, and the bass humming sound pressed in on his skull. Marlon slid down the wall, whimpering in pain and terror, until he was resting on the porch with his chin on his raised knees. Then the light faded away, the bass humming sound cut out, and he looked up as a trap door opened silently in the bottom of the saucer, tilting down to the ground.

Three men, all dressed in black to match the night, dropped out, one after the other.

They spread out across the yard to advance upon Marlon.

Something about those three men in black told him that they had come to take him away and that he could not escape.

Marlon just sat there, paralysed by terror, until the men stepped up on the porch and closed in around him. Then something exploded in his head and he sank down through spinning stars.

Chapter Two

Captain Dwight Randall, of the Air Technical Intelligence Centre, or the ATIC, was not feeling too happy when introducing himself to First Lieutenant William B. Harris, Flight Intelligence Officer of the Roswell Army Air Base. Back in Wright-Patterson AFB, in Dayton, Ohio, Dwight's wife, Beth, nursing their first child, Nichola, was also nursing her resentment because again he was on a trip away from home. She knew that he had no choice, being compelled to obey orders, but that hadn't helped him when he waved her goodbye for the third time in the four weeks since Nichola had been born. Dwight had optimistically promised her that he would be at home a lot more, at least during the first few months of their new baby's life, but unfortunately the recent, unexpected spate of UFO sightings had taken precedence over domestic matters. Now, as Dwight returned the salute of First Lieutenant Harris, then shook his hand, he felt guilty that he was here instead of in Dayton, looking after his family.

'Please, Captain,' Harris said, indicating the chair at the other side of his desk, 'take a seat. Can I get you a coffee?'

Dwight glanced out the window at the distant aircraft hangars, then shook his head and sat in the chair. 'No, thanks. I've drunk gallons since leaving Wright-Patterson, so I'll beg off for now. Do you mind if I smoke?' Harris just spread his hands in the air and offered a natural, charming smile, so Dwight lit up, inhaled, blew a smoke ring, and watched it drifting away... like a flying saucer. 'So,' he said, 'I've been sent by the ATIC to investigate the so-called Socorro sighting of last week. Do you resent my intrusion?'

'No, sir,' Harris said. 'My intelligence training didn't include flying saucers, so any help I get will be appreciated. It's also good to know that the Air Force, which has so strenuously denied the existence of the phenomenon, now has some tangible evidence.'

'One of the functions of the Air Technical Intelligence Centre is to gather

data on Unidentified Flying Objects. The fact that most of them turn out to be natural atmospheric phenomena may explain our former reluctance to accept the reality of the UFOs.'

It was a disingenuous statement. What Dwight could not tell Harris was that contrary to the Air Force's own publicity it was in a state of near panic over a whole series of recent UFO sightings, particularly those over Muroc Air Base - the top secret Air Force test centre in the Mojave Desert - on July 8, just two days ago and six days after the Socorro sightings.

The first UFO flap had actually occurred in 1946 when, throughout the summer and fall, thousands of 'ghost rockets' appeared in the skies over Scandinavia and Western Europe. Mostly seen at night, they were reported as being 'cigar-shaped' and with flames issuing from the tail. Estimates of their speed ranged from that of a 'slow airplane' to 500 miles per hour. In the month of July alone, the Swedish military received more than 600 reports, which encouraged the Swedish general staff to declare the situation 'extremely serious.' Then, when sightings of the unidentifieds spread out from Sweden to Finland and close to the Soviet border, the Americans also took the phenomenon seriously - certainly enough to express their fear that the rockets might be secret weapons developed by the Russians with the help of the captured German technical specialists and material.

Their fears were in no way eased by the knowledge that whereas the mysterious 'Foo fighters' had not shown up on radar, the ghost rockets certainly had, and therefore could not be classified as hoaxes, misidentifications or the products of mass hallucination.

The Soviets denied any knowledge of the rockets, but US suspicions remained unabated while the rockets continued to fly and be reported from as far afield as Greece, Turkey, French Morocco and Spain, before gradually fading away the following year.

However, on June 21, 1947, only a couple of weeks ago, a harbour patrolman, Harold Dahl, accompanied by his fifteen-year old son and two crewmen, was on harbour patrol near Maury Island in Puget Sound, off Tacoma, Washington, when he observed six objects shaped like 'inflated inner tubes' hovering about 2,000 feet above his boat. Five of the objects were circling about the sixth as it descended to about five hundred feet above the boat, where, appearing to hover magically, it was seen more clearly. The object appeared to be about a hundred feet in diameter, metallic, with no jets,

rockets, wings, or propellers, but with a ‘hole’ in the centre, or base, symmetrically placed portholes around the perimeter, and observatory windows on its underside. After discharging what appeared to be a cloud of aluminium-coloured debris, which littered the sea, where they gave off clouds of steam, suggesting that they were hot, the circular craft ascended to rejoin the others, then they all flew at high speed toward the open sea and soon disappeared.

Three days later, on June 24, an American businessman, Kenneth Arnold, reported that when flying his private Piper Club airplane near Mount Rainier in the Cascades, Washington, searching for the debris of the Marine Corps C-46 transport that had crashed against the south shoulder of Mount Rainier the night before, he observed nine disk-shaped, apparently metallic objects flying in ‘a diagonal chain-like line’ and making an undulating motion ‘like a saucer skipping over water.’ According to Arnold's report, the objects performed impossible manoeuvres in the sky, before flying off at supersonic speed to disappear in the direction of the Canadian border.

As Arnold had been a deputy sheriff and was a reputable businessman, as well as an experienced mountain air-rescue pilot, his story was taken seriously and the term ‘flying saucer’ came into being. It was therefore used widely over the next few weeks when the media spread Arnold’s story nation-wide and encouraged a spate of similar sightings, many of which were hoaxes, some of which were by trained observers and seemed highly credible.

By this time the US military authorities, while publicly ridiculing the reported sightings, were secretly in a state of panic over their own plague of UFO sightings: the first, on June 28, over Maxwell Air Force Base in Montgomery, Alabama; the next, on June 29, near Alamogordo, New Mexico, right over the top-secret White Sands Proving Ground; then, on July 8, a whole spate of sightings of spherically shaped, white aluminium-coloured objects flying over Muroc Air Base, the supersecret air force test centre in the Mojave Desert. Because those particular sightings were made by trained technicians and pilots, and because the reported objects were appearing increasingly over top-and-supersecret military research bases, a growing suspicion in intelligence circles was that the men and material deported from Nazi Germany to Russia had led to a dangerous Soviet lead in space technology. And now one of the damned things had crashed and all hell had broken loose.

‘Anyway,’ Dwight continued, ‘the so-called Socorro sighting has caused a hell of a stir in the media and placed us in an uncomfortable position. I believe you're the one who compiled the first official report on it.’

‘Yes, sir. I take it you’ve read it.’

‘About a dozen times,’ Dwight told him. ‘I kept re-reading it because I couldn’t believe my own eyes.’ He withdrew Harris’s report from the briefcase on his lap, leafed through it, then looked up again. ‘You say the UFO appeared to have suffered damage in a lightning storm near Roswell, but managed to fly on to Magdalena, where it crashed. It was a real flying saucer - or at least a disc-shaped aircraft – and the wreckage contained three dead bodies. Naturally the report came as a shock. Are you sure...?’

‘I stand by that report,’ Harris said, brushing a lock of dark hair back from his brown, candid gaze and offering a slight, nervous smile. He looked like an honest, reliable officer, but clearly he was uncomfortable over this matter. ‘What that farmer told me, I was able to confirm with my own eyes: a crashed flying saucer with three dead bodies in it.’

‘Marlon Clarke was the farmer.’

‘Yes, sir.’

‘A known drunkard who was drinking at the time.’

‘Not that drunk - and I confirmed with my own eyes what he’d told me when he phoned us shortly after finding the wreckage.’

‘You say the bodies seemed human.’

‘They were burnt beyond recognition and I couldn’t examine them thoroughly, but they certainly *seemed* like human beings.’

‘This is quite a story, lieutenant, but not one I’d want public. How the hell did it get out to the press?’

‘Not guilty. The story was picked up by Johnny McBoyle, reporter and part owner of Radio KSWS in Roswell. McBoyle personally investigated the case and found that a lot of people had reported seeing the UFO flying overhead. Others reported hearing a loud banging sound as the object flew through that lightning storm over Corona - presumably when it was first damaged. Others reported hearing an explosion from the Plain of Magdalena - when the object crashed. As soon as I heard that McBoyle was going to put the story out on the teletype, I blocked the message with one of my own - sent anonymously, of course - telling him not to transmit. That scared him enough to make him cancel his transmission. Unfortunately, the following day, our enthusiastic

young public information officer, Lieutenant Walter Haut, acting on odd bits of information coming into Roswell, issued a press release without the authorisation of myself or the base commander. His vague story of a crashed saucer - no mention of the dead bodies – was subsequently published in the Roswell *Daily Record* of July 8 - the day after the crash. Hunt has been reprimanded and will probably be posted out of here.'

'Alas, too late to kill the story.'

'I'm afraid so.'

Dwight turned over another page in the report, then looked up again. 'The saucer wreckage and dead crew members have been removed from the scene of the crash?'

'Yes, sir. We did that immediately. At the insistence of no less than the Deputy Chief of the Air Force, General Hoyt Vandenburg, the three charred bodies and the debris from the crash were picked up by an intelligence team from the 509th Bomb Group and transported in strict secrecy to Carswell AFB, Fort Worth, Texas. There's no trace of it left at the crash site.'

'Subsequently you paid Clarke a visit.'

'Yes, sir. On the instructions of CIA agent Jack Fuller, we scattered the pieces of a Rawin weather balloon around the crash site and went through a charade of picking them up for examination when Fuller and I took Clarke back out there. We insisted it was the balloon that had crashed and that Clarke had simply imagined the dead bodies. Clarke finally pretended to believe us, but I don't think he did.'

'I better have another talk with this Clarke.'

'You can't. He vanished the day after the crash and hasn't been seen since.'

'*Vanished?'*

'Completely. We've searched high and low, but we can't track him down. Neither could the Roswell *Daily Record*. He's vanished into thin air.'

Dwight leaned forward in his chair, suddenly feeling cold and frightened. 'Christ, you must have *some* idea of what happened to him. This is a small, intimate community, Lieutenant. Someone must know *something*.'

Harris simply shrugged and raised his hands in a gesture of defeat. 'No-one knows anything. When we checked Clarke's shack, we found his bed unmade - suggesting he'd slept in it the night before. His old truck was still parked out the back. The only clue to his disappearance was what might have been a group of footprints in the earth, leading from the steps of the porch to just

outside the front yard, where they stopped abruptly. There were no signs of tyre tracks, but a circular patch of brush, about twenty-five feet wide, was flattened and slightly singed in an odd way - I mean, not from the sun. A real mystery there.'

'A circular patch of brush, about twenty-five feet wide - approximately the same size and shape as the crashed saucer.'

'Right. It bears thinking about.'

'What's the story on Bradley? It says here that as soon as you received word of the crash, you invited former intelligence officer, now UFO authority, Mike Bradley to go with you to view the crash. Bradley, normally obsessed with flying saucers, surprised you by not turning up and by later refusing to discuss his reasons. Has he talked to you since?'

'I haven't been in touch with him since.'

'Can we drive out and see him right now?'

'Yes. He lives out in Eden Valley, near Robert Goddard's old rocket-launching ground. It's not a long drive.'

'Okay, let's go.'

Dwight slipped the report back into his briefcase and got to his feet while Harris phoned through for a jeep to come around and pick them up. The jeep was waiting for them by the time they got outside. Dwight glanced up as three F-86 jet interceptors roared over the great semicircular hangars along the edge of the runway, under a cloudless blue sky. He did it automatically, perhaps looking for a flying saucer, and felt instantly foolish when he realised what he had done.

Sitting beside First Lieutenant Harris in the rear of the jeep being driven by a U.S. Air Force corporal, Dwight put his head back, closed his eyes, and let the beating wind cool his face as they left the base and headed for Eden Valley, just outside Roswell. Opening his eyes again, he saw the El Capitán Mountain rising from the foothills near the southwestern horizon and, to the east, the sunlit slopes of the Caprock where, within living memory, the Comanche Indians, Spanish explorers, and even Billy the Kid had roamed. It therefore seemed incredible that this same area was already filled with highly advanced defence installations, including atomic research, aircraft, missile and rocket development, and a lot of highly advanced radar-electronics and stratospheric flight experimentation. Not far away, in Los Alamos, was the top-secret Manhattan atom bomb project. The White Sands Missile Range

and Proving Range, at Alamogordo, was the most important of its kind in the United States. Also, the only combat-trained atom bomb group in the world was the 509th Bomb Group of the US Army Air Force Base, located right here in Roswell and given high prominence in Harris's report. This area was also, incidentally, the one producing the most UFO reports in the whole country, most of them by professional pilots and military observers.

Dwight sighed, thinking of the recent spate of saucer sightings that had overturned his life in the past month: first the Harold Dahl and Kenneth Arnold sightings in Washington State, then the spate of sightings over various top-secret military establishments right here in New Mexico. Recalling those sightings, he realised that he was getting into something truly unknown, perhaps even dangerous.

He was also working too much for his own good, which was upsetting Beth. Imagining her back in their small house in Wright-Patterson AFB, Dayton, Ohio, breast-feeding baby Nichola, he swelled up with love and concern for her. Then, to distract himself from his feeling of loss, he went back to reading First Lieutenant Harris's report.

Harris had included a brief resumé of Bradley's career, so Dwight knew he was about to meet an impressive man. Bradley had been a biplane pilot during World War I, spent a good many years as a successful Wall Street lawyer, became a member of OSS during World War II, and was known to have been involved in a major intelligence operation in occupied Europe. The exact nature of that operation was still top secret, though it certainly concerned German secret weapons. Badly wounded in an explosion at Kiel harbour during the last days of the war, Bradley had recovered, been discharged from OSS, married a former Roswell *Daily Record* reporter, Gladys Kinder, and moved back to Roswell with her. Now, when not making a living by the drafting of contracts between the many US Air Force and civilian aeronautical establishments in the area, he was conducting his own investigations into UFO sightings.

Bradley's interest in UFOs, Dwight was convinced, related directly to what he had discovered during his intelligence gathering in Germany during the war. Why he had rejected First Lieutenant Harris's invitation to check out the Socorro UFO crash site was therefore a matter for some concern.

'Apart from the formal resumé contained in your report,' Dwight said as the jeep crossed the sun-scorched flatlands between Roswell and Eden Valley,

‘what do you know about Mike Bradley?’

‘He’s been to the base a few times to discuss UFO sightings with me. He’s intelligent, good humoured and, given his background, unpretentious. A lot of experience in his face, a kind of air of quiet authority, but also something guarded, even secretive. He never talks about the war. Says his work is still classified. I wouldn’t call him the obsessive type, but he’s certainly obsessed with UFOs. That’s what keeps us in touch.’

‘And his wife?’

‘A terrific lady. Bit of a local character. Used to be a reporter on the Roswell *Daily Record* and was known to be as tough as any man. Still is, in fact. Likes to wear Stetsons and high-heeled boots. Pretty sharp with her tongue, too.’

‘How did she meet Bradley?’

‘He was out here in 1931, trying to run down a physicist – called Wilson, as I recall – who’d worked for Robert H. Goddard on his rocket experiments in Eden Valley. Reportedly, Gladys was briefly involved with Wilson and Bradley went to see her about him. I don’t know if anything occurred between them here in Roswell, but certainly they met up in London, England, during the war, after Bradley’s wife had been killed at Pearl Harbour. Bradley and Gladys seem unusually close and are popular locally.’

‘When did Bradley’s obsession with UFOs begin?’

‘For him it’s more specific than unidentified flying objects – it’s flying saucers. He’s been interested in them as long as I’ve known him. We first met a few weeks after he arrived here with Gladys, which was about four months after the war, about November or December, 1945. I met him at a welcome home party given for Gladys by her old buddies on the Roswell *Daily Record*. As soon as Bradley learnt I was the Flight Intelligence Officer at Roswell, he pinned me to the wall to enquire if I ever received reports of saucer or disc-shaped aircraft. This, mind you, was about twenty months before the first sightings by Harold Dahl and Kenneth Arnold. Of course I’d never had reports of any such thing - at least not until last month - and when I asked him why he wanted to know about them, he just murmured vaguely about his interest in unusual airplane configurations. After that, he regularly asked me if I’d received any unusual reports, but until last month, I’d nothing to give him.’

‘Then, remarkably, when you had that report on a crashed saucer, he failed

to show.'

'Right,' Harris said. 'Damned amazing - and he won't tell me why.'

'Maybe this time we'll be lucky,' Dwight said as the ranch-style house on the edge of Eden Valley came into view.

'Yeah,' Harris said. 'Maybe.'

The driver braked to a halt by the gate of the front yard, causing a cloud of dust to boil up around the jeep. Dwight slipped out his side of the vehicle, waving the dust from his face, then was dazzled by sunlight as he walked up the yard path, beside First Lieutenant Harris. When Harris rang the bell, a woman came to the door. She was tall and lean, wearing a long belted dress with high-heeled boots, and had a head of short-cropped, greying brown hair, which made her seem slightly mannish. Her grey eyes were disconcertingly steady over a full-lipped, sardonic smile.

'Bill Harris!' she exclaimed as her gaze flicked inquiringly to Dwight. 'What brings you here?'

'We've come to see Mike.'

'Who's your friend?'

'This is Captain Dwight Randall, of the Air Technical Intelligence Centre, based at Wright-Patterson AFB, in Dayton, Ohio. He's here to investigate the Socorro sighting.'

'Mike doesn't know anything about that.'

'Dammit, Gladys,' Harris said, smiling with considerable charm, 'stop giving us a hard time and at least invite us in for a coffee.'

'It isn't coffee you want, Bill.'

'Okay, it isn't coffee we want. But can we at least step inside and talk to Mike?'

'What about? He knows nothing about the Socorro sighting. As you know, he didn't go to the crash site with you.'

'Yeah, I know,' Harris said. 'And what I now want to know is - why? He's been hounding me about saucer-shaped aircraft since he came to live here - and then, when one actually crashes, he doesn't turn up when he's invited. Why?'

'Who is it, Gladys?' The man asking the question appeared in the doorway behind Gladys. In his early fifties, he was short but muscular in an open-necked sky-blue shirt and denims. Though grey-haired, he was handsome, but the skin on the right side of his face was livid from severe burning caused by

the explosion at Kiel harbour in 1945. ‘Bill!’ he said, sounding pleasantly surprised. ‘Hi! Come on in.’

Gladys rolled her eyes, but opened the door and stepped aside. ‘This,’ she said, indicating Dwight, ‘is - ’

‘Captain Randall, of the Air Technical Intelligence Centre,’ Dwight said, holding out his hand. ‘Call me Dwight.’

‘Dayton, Ohio?’ Bradley asked, shaking his hand.

‘Correct.’

‘Welcome to Roswell.’ He started leading them into the living room, but when Gladys mentioned that they were here about the Socorro sighting, he stopped in his tracks, blocking their way. ‘The Socorro sighting? Why come to see me? I know nothing about it.’

‘That’s the point,’ Dwight said. ‘First Lieutenant Harris here tells me you’re fascinated by disc-shaped aircraft, or flying saucers, and yet you didn’t turn up at the crash scene when you were invited. Why was that, Mister Bradley?’

‘I just didn’t feel inclined.’

‘You hound First Lieutenant Harris for a year-and-a-half about disc, or saucer-shaped, aircraft and then, when he tells you one has crashed, you don’t feel inclined? Do you expect us to believe that, Mister Bradley?’

‘Why not? I just lost interest in the subject.’

‘But when I rang you,’ Harris said, ‘you didn’t sound like you’d lost interest. In fact, you sounded real excited and said you were going to meet me at the main gate of the air base to join me on the trip to the crash site. So what stopped you, Mike?’

Bradley glanced at his wife, then turned a closed gaze back to Harris. ‘I’m sorry, Bill, but I just changed my mind. The reasons are personal.’

‘You must have changed your mind shortly after he rang you,’ Dwight said. ‘What kind of personal reason could make you change your mind so quickly?’

Now Bradley wasn’t smiling. ‘That’s my business, Captain.’

‘And you still insist you’re no longer interested in UFOs?’

‘You’re not deaf,’ Gladys said aggressively. ‘You heard what he said.’

‘I heard, Mrs Bradley, but I find it hard to believe.’

‘That’s your problem.’

Dwight turned back to Mike Bradley as Harris became embarrassed.

‘Would you mind at least telling me what stirred your interest in UFOs in the first place?’

‘Like a lot of folks, I was intrigued by the Kenneth Arnold sightings.’

‘Which took place a month ago. First Lieutenant Harris tells me you’ve been interested in disc, or saucer-shaped, aircraft from the moment you first came to Roswell, at the tail end of 1945 - about twenty months before the recent sightings.’

‘Okay, I’ll admit that.’

‘Long before there was any talk of so-called flying saucers.’

‘Right,’ Bradley said, looking uncomfortable.

‘Which means you picked up the interest during, or just after, the war. Is that also correct?’

‘I can’t answer that question.’

‘Because the job you did for OSS was classified?’

‘Correct,’ Bradley said. ‘Now, I think - ’

‘You better leave,’ Gladys said. ‘My husband doesn’t want to discuss this any further.’

Dwight ignored her. ‘What happened on the night of July second, Bradley, after First Lieutenant Harris called you about that crashed saucer. What stopped you from turning up to see what you’d been so desperate to find?’

‘I’ve nothing more to say,’ Bradley responded, his face more flushed than the livid flesh on his right cheek.

‘Whatever it was that stopped you, it also made you give up your UFO investigations. Isn’t that the truth, Mr Bradley?’

‘Goodnight, gentlemen. Goodbye.’ Bradley turned away and disappeared back into the house as Gladys, with a grim, no-nonsense expression, pushed them out through the front door. ‘You heard the man,’ she said harshly. ‘Now get the hell out of here.’

‘Does the name “Wilson” ring a bell, Mrs Bradley?’ Dwight boldly asked her.

She looked startled, then blushed.

‘Back in 1931, when you first met your husband, he was investigating a physicist called Wilson, who’d worked right here, in Eden Valley, with Robert H.Goddard. I believe you knew Wilson, Mrs Bradley.’

‘I don’t know what you’re talking about,’ Gladys said, then slammed the door in their faces.

Dwight stared at the closed door in amazement, then at the uneasy Harris.

'Well, I'll be damned,' Harris said. 'I knew Bradley wouldn't be keen to talk, but I've never known him or Gladys to be *that* unfriendly.'

'They're both frightened,' Dwight said. 'They're just trying to cover it up. Come on, let's get out of here.'

They stepped down off the porch, climbed into the jeep, and let the corporal drive them away, back across the parched flatlands on the edge of Eden Valley. Dwight thought of the rockets that Robert H. Goddard had launched from this desolate area, then tried making the connection between Goddard, whom Bradley had visited once or twice with regard to the mysterious Wilson, and Bradley's later obsession with disc-or-saucer-shaped flying objects. He came to a blank wall.

'Bradley was obsessed with UFOs,' Harris said like a man in a trance of bewilderment. 'I just can't figure what's scared him.'

'*You're* scared,' Dwight informed him. 'First a flying saucer crashes, then it's spirited away to Carswell, then the only civilian witness to its existence disappears, and now Bradley and his wife have clammed up and won't discuss UFOs. So you're scared... with good reason.'

'Yes, sir, that's right, I'm scared. What about you?'

'Yeah,' Dwight confessed, glancing up to be dazzled by the brilliant, vast, empty sky. 'I'm scared too, I guess.'

Chapter Three

Wilson, Ernst Stoll, Hans Kammler and Artur Nebe were together in the underground viewing bay as the *Kugelblitz II*, a twenty-five-foot diameter, piloted flying saucer, descended at hovering speed through the deep well formed by a circle of soaring, ice-capped mountain peaks. Its lights were flashing kaleidoscopically around its sharp outer edge, but its bass humming sound, the infrasounds of its power source, which could tighten a human skull at a certain intensity, was blocked off by the thick plate-glass window of the viewing bay. Eventually, the saucer started settling gently on the steel-plated landing pad constructed at ground level in the cavernous space hacked out of the snow-covered Antarctic rock.

The base seemed to be underground, but was actually at ground level and hidden from the view of pilots flying overhead by an umbrella of soaring, snow-capped mountain peaks. However, working from this valley floor, beginning during World War II, Wilson's *Sklavenarbeiter*, or slave labour, under the ruthless supervision of the former SS officers, Stoll, Kammler and Nebe, had worked night and day at hacking their way into the base of the mountain to create aircraft hangars, workshops, laboratories, the first two of what would be many landing pads for the flying saucers, offices, staff accommodations, and underground quarters for the slave labour.

The slaves had originally been shipped out from the occupied territories of Nazi Germany and, more recently, abducted from various countries and flown here in Wilson’s flying saucers. Only two were operating right now, but more were being constructed. Within five years there would be a whole fleet of them, each one better than the last, with no end to their technological evolution in sight. If not feeling pride (a redundant emotion) Wilson certainly felt satisfied as he watched the saucer rocking lightly on its base before finally settling down.

Its bass humming sound receded into silence, then its flashing lights winked

off one by one. The arc lights powered by self-charging generators and fixed high up on the walls of solid rock, to illuminate the gloomy, cavernous landing area, gave the saucer's metallic grey surface a silvery sheen. It looked alien and beautiful.

The other saucer was at rest beside it, but covered in a tarpaulin. Both were surrounded by white-coated technicians and slaves, men and women alike, dressed in identical, dark grey coveralls that just about kept out the biting cold. It was not the Antarctic cold, since that had been reduced by the installation of phase-change solar-heat pumps that could store enough energy to also get the colony through the long Antarctic night; but it remained cold enough to be uncomfortable for the unfortunate labour force.

Now, as the *Kugelblitz II* settled down on the landing pad on its four retractable hydraulic legs, the technicians, armed guards and *Sklavenarbeiter* moved in to surround it. As the latter placed steel stepladders along the sloping sides of the saucer, to begin checking and polishing its seamless sides, a trap-door opened in the base, sloping downwards, and a slim man dressed in a pinstripe suit lowered himself to the landing pad and looked around in a dazed, disbelieving manner, before the armed guards closed in upon him. A second man emerged from the saucer almost immediately, this one big, bulky and wearing dirty bib-and brace coveralls. He, too, looked around him as if dazed, until he was surrounded by the armed guards and led away with the first man.

'Good,' Kammler said. 'They caught both of them.' Blond and blue-eyed, he glanced at the dark-eyed Nebe, who merely nodded solemnly and stroked the pistol strapped around his waist. Both men, like Wilson and Ernst Stoll, were wearing heavy roll-neck pullovers under thick coats and trousers. All of their clothing was coloured black.

Wilson nodded and smiled. He was feeling good today. He needed advanced prosthetic replacements for his artificial elbow joints and the man they had captured could do the job - that and many others. Sometimes it all seemed so simple. Faith could move mountains.

The two men surrounded by guards moved out of view far below, approaching the lifts that would carry them up to the upper level of the colony, occupied by Wilson and his most senior staff, including those now grouped around him. He glanced at Ernst Stoll, once an enthusiastic rocket engineer, then an SS policeman, now an embittered, therefore malleable,

administrator responsible for the collection and welfare of the slave labour. Stoll was looking down at the parked flying saucer, showing little emotion. He had left his heart and soul in conquered Germany; now he lived for this colony. Wilson was satisfied.

'Let's go and greet them,' he said, turning away from the window and leaving the viewing bay through doors that led into a gloomy corridor hacked out of the inside of the mountain. The corridor led into a larger, brighter room, which also overlooked the landing area for the saucers, but contained comfortable armchairs and settees on an Italian-tiled floor partially covered by large Moroccan carpets. The wall overlooking the landing area was mostly thick plate-glass framed by ugly reinforced concrete. The back wall had been hacked out of the mountain and was simply the original rock covered in concrete and damp-proofing black paint. The two side walls were also of reinforced concrete, but contained steel-plated doors, one of which was for the lift, with a row of indicator lights above it. As Wilson entered the room with his entourage behind him, the lights came on one by one, indicating that the lift was ascending. The light stayed on at the marking for the fifth level.

When the lift doors opened, the two captives emerged, being prodded by the automatic weapons of two guards wearing old SS uniforms. The slim, grey-haired man in the pinstripe suit and tie was, Wilson knew, Dr Paul King, of the Powered Limbs Unit of West Hendon Hospital, London, England. The bigger man in the dirty brace-and-bib coveralls was the farmer, Marlon Clarke, who had witnessed the crashed flying saucer near Magdalena, New Mexico. The sophisticated Dr King, while clearly bewildered and frightened, was in control of himself; the other one, Clarke, was terrified and practically dribbling.

'Dr King?' Wilson said, as if this meeting and the circumstances were routine.

'Yes,' King replied, his voice admirably calm, though his eyes betrayed confusion and fear. 'Who are you? Where am I?'

'My name is Wilson. You will address me as that. You're in a colony located inside a mountain in Neu Schwabenland, or Queen Maud Land, in Antarctica. You are here as my prisoner.'

Clarke started sobbing, uncontrollably, like a child, wiping the tears from his cheeks with a grubby hand as he stared down at his own feet.

'Oh, Christ,' he said. 'Oh, Jesus, I don't believe... Oh, God help me, I'm

dreaming.’

‘No, Mr Clarke, you’re not dreaming. Nor are you imagining things. This is real. We are real. What’s puzzling you, Dr King?’

‘Something about your face.’

‘I’m seventy-seven years old, doctor, but look fifteen years younger. My face lacks a certain mobility due to crude plastic surgery. I also need improving in other ways, which is why I need you.’

‘Oh, Jesus,’ Clarke sobbed. ‘Why me? What the hell am I doing here?’

‘You’ve been brought here,’ Wilson informed him, ‘because you were unfortunate enough to witness the debris of a crashed flying saucer and its three dead crew members. We can’t permit you to talk about it, so you’re here to be silenced.’ Clarke burst into tears again as Wilson turned to the other man. ‘As for you, Dr King, you’re fortunate enough to be one of the world’s leading specialists in research into the myoelectric control of external prosthetics, or artificial limbs. You’ll therefore be invaluable to this community and need have no fear if you co-operate.’

‘Co-operate?’ King asked as Marlon Clarke sobbed hysterically beside him. ‘What do you mean?’

‘This is a secret community devoted to science,’ Wilson explained, ‘with no moral impediments to progress. We’ll do anything necessary, no matter how ruthless, for the advancement of the technology we’re creating. We’re a society of masters and slaves, scientists and their servants, and we live beyond the reach of so-called civilisation and its antiquated moral constraints. You are either for us or against us, Dr King - willing worker or slave. The choice is all yours.’

‘I think I’m dreaming,’ King said. ‘I just can’t accept this.’

‘Don’t be as foolish as him,’ Wilson warned, indicating the sobbing Clarke, ‘by putting this down to imagination or dreaming. This is real, Dr King, and it cannot be stopped. Outlawed by the world we may be, but we’re well out of reach. The saucers are my creation and just the tip of the iceberg. My ultimate purpose is a new kind of man, both physically and mentally: the mythical superman made real in a world based on logic, not emotion. We’re a unique community, Dr King, and you will be part of it.’

‘What if I refuse?’

‘You don’t have a choice. Either you do it willingly or we compel you to do it. We have our ways, Dr King, and you can’t escape from here. Outside this

mountain is the Antarctic wilderness. Where would you go?'

As the full implication of what Wilson was saying struck home to Clarke, he sobbed more profusely and visibly started shaking. When Wilson nodded, one of the guards took hold of Clarke's elbow and managed to steady him. Dr King, though clearly frightened, remained in control of himself and stared about him in wonder.

'I take it you're human beings,' he said, turning back to Wilson, 'and not creatures from outer space.'

Wilson smiled coldly. 'Alas, yes, we're all too human.'

King glanced at Stoll, Kammler and Nebe, then nodded, indicating the armed guards. 'You look like a bunch of Nazis to me.'

'I'm an American,' Wilson said, 'but one without political allegiance. These men, it is true, were in the SS, but all that is behind them now. There are no nationalities here; we've all disowned that. Here, our only religion is science. We don't worship false gods.'

'I know I'm not dreaming,' King said, 'but I still can't accept this. I don't know who you are or how long you've been here, but you won't be able to stay. Sooner or later, the West will learn about you and put a stop to your madness.'

'Some of them know we're here,' Wilson said, 'but they can't get us out. No one can get us out of here. No one has the technology.'

'I don't believe that,' King said.

'It's true,' Wilson insisted. 'The US government knows we are here, but they can't get us out.'

'You mean they've already tried?'

'Yes. Last January they launched the biggest Antarctic expedition in history, Operation Highjump, led by the explorer and naval officer, Rear-Admiral Richard E.Byrd. The resources of the assault force, which was disguised as an exploratory expedition, included thirteen ships, two seaplane tenders, an aircraft carrier, six two-engine R4D transports, six Martin PBM flying boats, six helicopters, and a total of 4,000 men. When this supposedly invincible assault force reached the Antarctic coast, it docked, on January 12, near Queen Maud Land, or Neu Schwabenland, then divided up into three separate task forces. When the expedition ended, in February, a lot earlier than anticipated, there were numerous stories in the press about Rear-Admiral Byrd's references to enemy fighters that came from the Polar regions and

could fly from one Pole to the other with incredible speed. The machines to which he was referring are the kind that brought you here and were created by me in Nazi Germany. As for Admiral Byrd's mission, it was deemed a disaster and the United States has since declared that it's withdrawing from the Antarctic for at least a decade. They know they can't get us out of here. They don't have the technology.'

Dr King did not reply, but he licked his lips and glanced about him, still in a state of disbelief, trying to accept the reality of this nightmare as the farmer, Marlon Clarke, sniffed back his tears and looked frantically around him, his eyes stunned by dread.

Ever curious about human emotions, since he had so few himself, Wilson decided to take the confused, disbelieving Dr King and terrified Marlon Clarke on a tour of the colony.

'Come,' he said. 'Follow me.'

Confident that neither King nor Clarke would try to escape, since there was nowhere to go, Wilson nodded at the armed guards, who put up their weapons and left the room through the door leading to the corridor. Wilson then entered the lift, followed by Dr King and the dribbling Clarke, then Stoll, Kammler and Nebe. Stoll pressed the button for the third level. When the lift had descended and the doors opened again, Wilson led the group out into a clamour of hammering, pneumatic drilling, and echoing voices.

Another tunnel, being hacked out of the mountain, was being walled and roofed with reinforced concrete and steel wiring. As Wilson led King and Clarke through churning dust in the arc-lit gloom, it was clear that the work was being done by the filthy men and women who slaved under gunpoint and to the cracking of the whips of other guards.

'This all started in Nazi Germany,' Wilson explained. 'Contrary to popular belief, the Antarctic continent has many unexplored, ice-free areas, many of which are well hidden from view by vast ice sheets and mountains. In other words, Dr King, we are not quite underground, though we're hidden by high mountain peaks. We're carving the rest of the space we need from the interior of the same mountain.'

Gradually accepting that all of this was real, Dr King was glancing about him, with awe as well as fear, at the many unfortunates slaving in this dust-filled, arc-lit, rocky hell.

'Nazi Germany,' Wilson continued, 'had a genius for the construction of

immense underground production plants and factories, most completed with the ruthless use of captured slave labour. Indeed, most of the underground research centres of Nazi Germany were gigantic feats of construction, containing air-shafts, wind-tunnels, machine-shops, assembly plants, launching pads, supply dumps, accommodation for all who worked there, and adjoining camps for the slave workers - yet few German civilians knew that they existed.'

A whip cracked and someone screamed. Dr King twitched but walked on, though Clarke, growing ever more terrified, released an audible groan.

'Take Peenemünde, for instance. The full enormity of that research complex can only be gauged from the fact that apart from its wind tunnel - the most advanced in the world, containing its own research department, instrumentation laboratory, workshops and design office - it also had its own power station, docks, oxygen plant, airfield, POW camp for specially selected prisoners who provided cheap labour, and social and medical facilities associated with a town of 20,000 inhabitants. It was therefore the prototype for the even larger underground factories to be built secretly in Germany and Austria, notably at Nordhausen in the southern Harz mountain range of Thuringia, which is where I created my first piloted flying saucer, the *Kugelblitz*. Do you know about Nordhausen, Dr King?'

'No, I'm afraid not.'

'It was an immense rocket research and construction facility, consisting of a series of linked tunnels carved out of the Kohnstein Mountain, near the town of Nordhausen. The parallel tunnels were 1,800 metres long. Leading off them were fifty side-chambers, a main work area of 125,000 square metres, and twelve ventilation shafts that had been bored down from the peak of the mountain. Work at converting the tunnels into a mass-production facility for rockets began in September 1943 with the use of 2,000 engineers and 15,000 inmates from the nearby concentration camps. The slaves were kept in a separate camp located in a hidden mountain valley, less than a kilometre from the entrance to the tunnel. A new underground complex, to be linked to Nordhausen by another network of tunnels, was in the process of being built sixteen kilometres under the ground around the town of Bleicherode, twenty kilometres distance. Between them, Nordhausen and Bleicherode constituted the first of the SS underground factories - virtually living towns - and what the Nazis were doing there, under the earth, we are now doing here, in the

Antarctic.’

‘I can’t imagine how you managed to get so much equipment and so many of these unfortunate wretches here,’ King said, glancing around him at the sobbing, sweating captives now slaving in abominable conditions.

‘The labour force and equipment were shipped in submarines, in the course of many voyages, over a period of years, throughout the war, when other Nazi boats and submarines were protecting the South Atlantic coastline of Antarctica. Bear in mind that the normal U-boat of that time could cover 7,000 miles on each operational cruise. Also, the Germans had submarine tankers spread across the South Atlantic Ocean at least as far as south of South Africa, and any one of those tankers, which had a displacement of 2,000 tons, could supply ten U-boats with fuel and stores, thus trebling the time that those submarines could stay at sea. It took a long time, but we managed to get enough men and equipment here before the war ended. We should have enough to last a couple more years, by which time we will have more and bigger saucers to fly in what we need.’

The tunnel led into another large viewing bay in which the plate-glass windows had yet to be inserted. Far below was a workshop of massive dimensions, with jibs and cranes, whining machines, and sheets of a metallic substance, dull grey and different shapes, being swung to and fro. There were many workers down there, also, as well as long work benches, steaming vats, blast furnaces, screeching electric drills, and the ribbed bodywork for other, larger saucers. The walls of the workshop were solid rock, hacked out of the mountain's interior, but the vast ceiling was reinforced concrete, as was the floor.

‘The workshop’s 300 feet long and 138 feet wide,’ Wilson explained. ‘Its roof is eighty feet high and made from twenty-three-feet thick reinforced concrete. To pierce it, you’d need a bomb weighing about twelve tons and striking the ceiling at a speed of Mach 1, the speed of sound. In order to construct it, we needed 49,000 tons of steel and concrete for the roof alone. Hundreds of jacks were used to raise the roof slowly, inches at a time, with the walls being built up beneath it, as it was raised. The enormous amounts of steel, cement, sand and gravel needed were brought in by U-boat and airplane over a period of years, like the rest of the material and the labour force. The site used about 5,000 workers, who were shipped here from the occupied territories, mostly from concentration camps. At any one time there were

always at least a thousand men at work. This went on around the clock in twelve-hour shifts, and my guards had no hesitation in executing anyone too ill or exhausted to do it. For this reason, we managed to complete the construction of the workshop in a year. With logic, Dr King, and not emotions, men can do the impossible.'

Dr King gazed down on the skeletal saucer prototypes and the great steel plates being swung to and fro. 'So it was one of your flying saucers that crashed at Socorro, New Mexico.'

'No,' Wilson said. 'Not one of ours.'

King started to respond, obviously wanting to know about the other saucer, but before he could do so Wilson waved him into silence and led him and the others across a catwalk, through another, shorter tunnel, eventually entering a steel-plated room which had rows of frosted glass cabinets on the shelves and naked, dead bodies inside them.

Clarke stopped walking when he saw the bodies, letting out another groan, but the dark-eyed Artur Nebe, who still had his hand on his pistol, roughly pushed him onward. Dr King merely gave a slight shudder, but continued walking behind Wilson. They soon emerged from the tunnel to another room, a laboratory, its steel-plated walls climbing to a ceiling of chiselled rock that was part of the interior of the mountain.

Here, the members of staff looked perfectly normal, men and women in white smocks, reading and writing, peering down through microscopes, checking printouts, gauges and thermometers, working quietly, intently. More appalling, however, were the specimens in the cages and glass jars: human heads, artificially pumping hearts, floating brains and intestines. There were also cabinets containing artificial joints and various prosthetics.

'Oh, Jesus!' Clarke groaned. He covered his face with his hands, started shaking even more, and became so weak that he had to be propped up by Ernst Stoll. Clarke started sobbing again.

'Take him away,' Wilson said. 'Might as well prepare him immediately. Stoll, come and see me in five minutes. I'll be in my office.'

'Yes, sir,' Stoll said. He and Kammler then slipped their arms around Clarke and practically carried him out of the laboratory, leaving only the dark-eyed, expressionless Artur Nebe with Wilson and Dr King. The latter was gazing around him in amazement, but not shock, as prosthetics were what he had been working on in the hospital in England.

‘A familiar sight?’ Wilson asked, pleased to see that Dr King was in control of himself.

‘The prosthetics, yes. The rest of it, no. We work under certain moral restraints, as you’ve already noted.’

Wilson smiled thinly. ‘The work that goes on here,’ he explained, ‘is not only for the production of advanced prosthetics and organs. Its ultimate goal is life extension, first through the transfer and replacement of bodily parts, eventually by discovering the secrets of longevity. Right now, we need primitive life extension through prosthetic replacement, which is where you come in. Your work will involve human prosthetics and the creation of cyborgs: half man, half machine. I’m sure you’ll find it highly satisfying.’

‘You realise I think you’re insane.’

‘I’m not. I’m just logical.’

Dr King was not swayed by Wilson’s brand of logic. ‘I’m fifty years old. I have a family and friends. Even were I to accept that I can’t escape from here, I’d still find it psychologically impossible to adjust to the loss of everything I’ve known, loved and need. In short, even if I tried to co-operate, I don’t think I’d succeed.’

‘You worry unnecessarily. We have ways of indoctrination. Drug therapy, combined with psychological persuasion, will aid your adjustment while letting you retain all your faculties. That process of indoctrination begins today.’ Dr King just stared at him, blinking too much, turning pale. ‘Are you frightened?’ Wilson asked.

‘Yes, I’m very, very frightened.’

‘You won’t be for long.’

Wilson nodded at Artur Nebe, who removed his pistol from its holster and indicated the nearest doorway with it. Dr King licked his lips, then walked out, followed closely by Nebe. Wilson sighed, then stepped into another lift and ascended to the level directly above - the highest level so far, though others were planned.

Emerging from the lift, he entered a sunlit, dome-shaped room, its white-metal walls gleaming, enormous windows running around the walls, framing the dazzling sky and snow-capped mountain peaks of the Antarctic wilderness. Between the windows were doors, steel-plated, all closed, computer consoles jutting out just above them, their lights flashing on and off. The room was fifty feet wide. There was a desk in the middle. On the

desk was an intercom, a microfilm viewer, a pile of books, notepaper, pens and pencils, a panel of switches. There were chairs in front of the desk, all leather, deep and comfortable; there was no other furniture in the room. The floor was laid with plain tiles which, in combination with the steel-plated walls, made the room cold and sterile.

Wilson walked across the floor, his footsteps reverberating, passing the desk and stopping at the window, to look out over his kingdom of snow and ice, the impossibly blue sky. He only turned away from that view when the door opened and Ernst Stoll entered. Stoll stopped by the chairs at the desk, but he didn't sit down.

'You wanted to see me, sir?'

'Yes.' Wilson remained at the window, gazing steadily at Stoll, aware that he wouldn't like what he was about to hear. Stoll was in his middle thirties, but looked older, no longer handsome, ravaged by the loss of his family and idealism during the war. Now loathing the outer world, having nothing to return to, he was devoted to Wilson and his work with this Antarctic colony. He would not want to leave.

'The colony is expanding rapidly and requires more workers,' Wilson said. 'The original labour force is dying off and for that reason, also, we need more workers. We also need human specimens for our laboratory experiments. Finally, we need smaller people for use in the saucers, either in human form or, given time, as cyborgs. We can find a plentiful, constant supply of the small Ache Indians of Paraguay. That country remains sympathetic to the Nazis and will welcome your overtures.'

'I'm to go to Paraguay?'

'More than that, Ernst. Not for a mere trip. You must give up direct participation in the running of this colony and instead take up residence in Paraguay. There you will cultivate a close relationship with General Stroessner, organise the purchase, collection and shipment of the Ache Indians, and keep constantly vigilant for signs of betrayal by Stroessner or his government. In other words, you will leave here for good and settle in Paraguay.'

Stoll was dismayed. 'I don't want to leave here, sir, and I certainly don't want to settle in Paraguay. While it's true that the country has become a haven for Nazi refugees, most of them live in protected enclosures in the jungle and go mad with boredom.'

‘You won’t be bored, Ernst. I promise you that. You’ll be busy rounding up Ache Indians and liasing between the Paraguayans and me. You’ll be in frequent contact with us here; and will receive regular visits from myself and others. You’ll also be our main contact with the rest of the world, which will include a lot of travelling and meetings. So I’m certain that you’ll find it far from dull and might even enjoy it. This work is important, Ernst.’

‘I’d rather stay here, but if you insist...’

‘I insist. I don’t trust anyone else, Ernst. Kammler and Nebe are men who like intrigues and live by betrayal. I want them here, where I can keep my eyes on them. You’re the only one I’d trust outside the colony, so it has to be you.’

‘I’m honoured,’ Ernst said, as stupid about Wilson as he had been with Himmler during the war. ‘When do I leave?’

‘Not immediately. Right now, that country is in the middle of a minor revolt, which I believe will be defeated by President Morínigo. While this is going on, and causing great confusion, we’re having long and frustrating negotiations with that corrupt army general, Alfredo Stroessner. We don’t expect to have matters resolved too soon. I’d think in six or seven months from now. Say early next year. Is that satisfactory?’

‘Yes, of course.’

Wilson smiled thinly and shook his hand. ‘Good, Ernst. I’m pleased.’

Ernst nodded solemnly and left the office, having foolishly believed everything Wilson had told him.

Yet what Wilson had told him was essentially correct - at least regarding the work required. Where he had misled Ernst was in telling him that life in the jungles of Paraguay would not be dull. In fact, it would be hell, which is why Wilson had chosen Ernst. Kammler and Nebe would both have refused to go. Ernst, then, with his perverted idealism, was the natural choice.

Pleased with himself, Wilson took the lift from his office back down to the third level. Once there, he made his way to the steel-plated laboratory with the ceiling of chiselled rock and gruesome collection of human heads, artificially pumping hearts, floating brains, intestines, and all kinds of prosthetics. Passing the men and women in white smocks, he entered the operating theatre, where the unfortunate Marlon Clarke, now almost mindless with terror, even though slightly sedated, was strapped by his legs, arms and forehead to a surgical bed and surrounded by silent, white-smocked surgeons.

‘Oh, please,’ Clarke whimpered tearfully. ‘*Please*!’

Wilson leaned over him, to smile coldly at him. ‘We wish to remove your head while you’re still fully aware, in order to check if we can preserve it in its conscious state. Your neck has been anaesthetised, so you shouldn’t feel a thing, though you’ll be aware until the very last moment of exactly what’s happening. Treat it as an experience.’

He then stepped back to observe as the leading surgeon switched on the electric guillotine and moved it on its pulley into place over the throat of the pop-eyed, sweating, violently shaking Marlon Clarke. As the surgeon proceeded to surgically remove Clarke’s head, Wilson calmly looked on, curious to see how the unfortunate man would react before death blotted out his mind.

Chapter Four

This place is the pits, Fuller decided as he parked his jalopy in front of the hospital annex in Fort Bliss, New Mexico, which was now being used to house the German rocket scientists under contract to the US Air Force. Fuller was an urban man who hated the country, and having driven the eighty miles from the White Sands Proving Ground, located between Alamogordo and the site of the first atomic explosion, across eighty miles of desert relieved only by endless sagebrush, he was convinced that he had passed through a world inhabited only by mountain lions, coyotes, wildcats, and rattlesnakes. He was therefore relieved to be in Fort Bliss, El Paso, within sight of the Organ Mountains (which, he had been informed, reminded the German scientists of the Bavarian Alps), though was *not* thrilled to step out of his car into more dust and scorching heat.

How he longed to be back in Langley, Virginia, with his CIA pals.

As he walked up to the door of Count Werner von Braun's rooms in the wood-frame building, an Army Stinson L-5, a small liaison plane, flew overhead, reminding him that this was a military base and that the Kraut scientists housed here, including von Braun, were reportedly conducting, in collaboration with the Americans, a highly secret research project for the government.

Things sure change quickly, he thought with unsullied cynicism.

Ringing the doorbell located beside the mesh-wire screen, he reminded himself that the man he was about to meet was not an American, but a former Nazi scientist who had created the V-2 rocket that had devastated London and Antwerp during the war. Now classed as a civilian with civilian staff, von Braun remained in charge of 117 of his own German scientists, engineers and technicians, albeit under the supervision of US Army Major James P. Hammill, a physicist and German-speaking Fordham graduate. The Germans had come into America in 1945 as so-called Wards of the Army, thus requiring no entry permits, all signing one-year contracts with the Army.

These were soon changed to five-year contracts, and now the Krauts, while still quartered in this hospital annex, were acquiring automobiles, wearing sombreros and cowboy boots, going to movies and night-clubs, and sending their kids to schools in El Paso.

A better life than we're having, Fuller thought as the front door opened and a well-fleshed, handsome face appeared behind the mesh-wire screen. Defeat has its rewards.

'Yes?' Count Werner von Braun asked.

'Sam Fuller, from Langley, Virginia.'

'Ah, yes, the CIA. You're expected. Come in.'

He opened the mesh-wire door to let Fuller enter. Inside, the house, or conversion, was neat, if rather spartan and obviously not meant to last. Soon, as Fuller knew, von Braun would be moving to Redstone Arsenal, Huntsville, Alabama, as director of research-and-development projects of the Army Ordnance Guided Missile Centre.

Another reward, Fuller thought as he and the imposing German shook hands.

'Please,' von Braun said, indicating a soft chair in the living room. 'Be seated.' Fuller sat. 'I'm afraid my wife isn't here at present. A drink. Some tea? Lemonade?'

'Beer?'

'This I have,' von Braun said, his great bulk looming large over Fuller, casting its shadow upon him. 'One moment, please.' When the German disappeared into the kitchen, Fuller had a good look around. No TV set yet, but the radio was on: Benny Goodman's orchestra and a lady singing the swinging 'Bei Mir Bist du Schön', which made Fuller want to snap his fingers and dance. A copy of *Forever Amber* was on the table, in the shadow of a vase of fresh flowers. Clearly someone was perfecting his or her English with popular music and fiction. Von Braun soon returned with a tall glass filled with beer, which he gave to Fuller, and a bottle of Pepsi Cola for himself. 'I am sorry it's not German,' he said. 'American beer is not good, no?'

'No,' Fuller said. He sipped his lousy American beer. Von Braun sat in the sofa directly facing him, his thick legs outspread. He had the build of a wrestler and the ease that came with huge egos. He would not be pushed easily.

‘Nice place,’ Fuller said.

‘You know that’s not true. It is adequate, but better than we deserve - and, of course, temporary. I look forward to moving on.’

‘You like it in America? Apart from the beer, I mean?’

‘At first I was lonely. A lot of us, we were lonely. But recently we were joined by our parents, wives and children. Three hundred in all. Included in these were my parents, the Baron and Baroness Magnus von Braun - whose ancestral estate in Silesia has been confiscated by the Russians - and I have also been joined by my bride. I was given leave to marry her in Landshut and bring her back here. The Americans are generous.’

Damn right, Fuller thought. And an eighteen-year-old bride, a second cousin, at that. ‘We’re not so generous with our own citizens,’ he said without the trace of a smile.

Von Braun smiled for him, though his gaze remained cool. ‘No, I suppose not.’

‘Where’s your wife now?’ Fuller asked.

‘I thought our conversation would bore her,’ von Braun said, ‘so I sent her out for a walk.’

Which means she can’t say the wrong thing, Fuller thought. Some fat pumpkin we have here.

He sipped some more beer. His throat felt dry in this dusty hole. ‘What do you most like about America, Count von Braun?’

‘American sport. Joe DeMaggio and Rocky Graziano.’ Von Braun shrugged. ‘Apart from that, I only like my work. Now what do you want to know, Mr Fuller?’

Fuller smiled, admiring von Braun’s bluntness. A 28-year old hard case from Brooklyn, New York, Fuller was the child of moderately wealthy, uncaring parents, a clear-eyed product of Harvard, and a veteran of many relationships and one failed, childless marriage. Not a man for finer feelings, he admired those who were nimble on their feet and ruthless in pursuit of what they wanted. This von Braun, though built like a wrestler, clearly had those attributes.

‘I’ve come to enquire about your rocket construction programme. The V-1 and V-2.’

Von Braun sighed. ‘I’ve been over this so many times. There is nothing secret about it anymore. It is all in the files.’

‘It’s easier for me to talk to you than try to get at the classified files. I have clearance for this, but not for your records. That’s why I’m here.’

Von Braun sighed again, sipped some Pepsi Cola, then rested the dripping bottle on his lap. ‘So what do you want to know?’

‘You were, I believe, one of the founder members of the German amateur rocket society, also known as the Spaceship Travel Club.’

‘Yes. The *Verein für Raumschiffart,* or VfR. It came into being in 1927 when a group of space-travel enthusiasts took over an abandoned three-hundred-acre arsenal, which they called their *Raketenflugplatz,* or Rocket Flight Place, in the Berlin suburb of Reindickerdorf. From there they actually shot some crude, liquid-fuelled rockets skywards.’

‘When did you join it?’

‘About 1930, as I recall. By then the VfR included most of the rocket experts of the day, including Rudolf Nebel, Hermann Oberth, Willy Ley, Max Valier, and Klaus Riedel. I was very proud to gain admittance to that august company.’

‘How did you end up in the German army?’

‘I know what you’re implying, but it’s not true,’ von Braun said with no sign of anger. ‘I was never a Nazi. In April 1930, the Ordnance Branch of the German Army’s Ballistics and Weapons Office, headed by General Becker, appointed Captain Walter Dornberger to work on rocket development at the army’s Kummersdorf firing range, approximately fifteen miles south of Berlin. Two years later, after many experiments to find the most promising method of propulsion and the most stable means of flight, the VfR demonstrated one of their liquid-fuelled rockets to Dornberger and other officers at Kummersdorf. In 1933, when Hitler came to power, the VfR was taken over by the Nazis and become part of the Kummersdorf programme. Many of the German engineers, including myself, were therefore conscripted in a very real sense. We were, and remain, scientists - not soldiers.’

‘You ended up in Peenemünde, working on the V-1 rocket programme.’

‘Yes, but the prototype was known as the A-2.’

‘Is it true that much of the German rocket research was based on the work of the American rocket scientist, Robert H.Goddard?’

‘A genius shamefully ignored by his own country. Yes, it’s true. We all revered Goddard and based our work on his brilliant theories. While in the United States those theories were being received with indifference and even

contempt, we in Hitler's Germany was spending fortunes on rocket research that was, by and large, based on Goddard's work. As early as December, 1934, two highly advanced A-2 rockets, constructed at Kummersdorf, gyroscopically controlled, and powered by oxygen-and-alcohol fuelled motors, were launched from the island of Borkum in the North Sea and reached an altitude of one-and-a-half miles. Those stabilised, liquid-fuelled rockets were, at the time, the only known, serious challengers to the rockets of Robert H.Goddard.'

'But the work didn't end there.'

'No. In March 1936 we demonstrated some more motors at Kummersdorf, including one with an unprecedented 3,500 pounds of thrust. Those demonstrations so impressed the German Commander-in-Chief, General Fritsch, that permission was given for us to build an independent rocket establishment in a suitably remote part of Germany, where research and test firings could be carried out in the strictest secrecy. The chosen site was near the village of Peenemünde, on the island of Usedom, off the Baltic coast. The rest is now history.'

'According to an Operation Paperclip report, when the V-2 rockets were inspected by Allied scientists in the captured Nordhausen Central Works at the close of the war, they were found to be remarkably similar to the rockets of Robert H.Goddard.'

'Of course. The most notable features of the propulsion unit were the shutter-type valves in the fixed grill, the fuel injection orifices incorporated in the same grill, the combustion chamber, spark plugs and nozzle. We stole those from a Robert H. Goddard patent that was reproduced in the German aviation magazine, *Flugsport* - in January 1939, as I recall.'

'In 1944 many Allied pilots were being harassed by what appeared to be balls of fire which were under some kind of remote control. The pilots called them "Foo Fighters". Were they connected in any way with your work or Goddard's early experiments?'

'No, I don't believe so. I had heard that they were some new kind of German secret weapon, radio-controlled from the ground, and designed either to foul the ignition systems of the bombers or act as pyschological weapons, to confuse and unnerve Allied pilots. Certainly they were not designed or constructed at Peenemünde. However, given that they might have utilised some of our technical innovations, it's possible they were created by rocket

engineers other than my own.'

'Such as?'

Von Braun shrugged. 'We were scattered far and wide.'

'What about Kummersdorf or Peenemünde?'

'Not at the latter; possibly at the former. There were actually two rocket research centres at Kummersdorf, separated by an old firing range. We were transferred from the original site to the new site at the other side of the firing range, then another development team took over our old site.'

'Anything unusual about it?'

Von Braun smiled knowingly. 'You mean the reports about a traitorous American physicist?'

'Wilson. You know about him?'

'Not much,' von Braun said, shaking his head. 'I never met him or saw him. I only heard reports about his extraordinary presence as part of a research team involved in a top-secret project. I never found out what the project was, but certainly ideas and innovations were swapped across the firing range. The other establishment was even more heavily guarded than ours.'

'Do you think Wilson had anything to do with the so-called Foo fighters?'

'There were rumours about disc-shaped aircraft. Frightened whispers. No more than that. Certainly nothing of that nature was tested while I was at Kummersdorf.'

'Do you believe disc-shaped aircraft were on the German agenda?'

'Yes. I myself didn't believe that such a craft could be made workable - I believed in rockets, not flying discs - but certainly Germany has a long history of research into vertical-rising, spherical or disc-shaped aircraft. In fact, the idea itself was first conceived by a German: the 19th century mathematician and aeronautical theorist Wilhelm Zachariae.'

'A theorist,' Fuller said impatiently, now listening, also, to the Glen Miller orchestra on the radio and wondering what had caused the famous band leader's unexplained disappearance over the Atlantic. 'Were his ideas ever put into practice?'

'Yes. As early as 1939 Dr. Alexander Lippisch, at Messerschmitt, Augsburg, was developing his Delta-Rocket Jet ME 163 and testing its circular wing in the wind tunnel of the AVA company at Göttingen. Meanwhile, Arthur Sack, of Machern, near Leipzig, had for years been obsessed with the idea of disk-shaped aircraft. He tested various models at

the model-airplane competition at Leipzig-Mockau in July 1939, with disastrous results. A larger, piloted model, the AS 6, was constructed at the Mitteldeutsche Motorenwerke factory in Leipzig and failed to fly during its test flight at the beginning of February, 1944, on the airfield at Brandis, near Leipzig. He tried again at Brandis in April 1944, but the airplane barely lifted off the ground. Shortly after, the Allied advance brought Sack's experimentation to a halt for all time.'

'Any more?'

Von Braun sighed, obviously finding the subject tiresome. 'Not much. Viktor Schauberger claimed to have designed and constructed a small, remote-controlled flying saucer in 1940 in the Kertl aircraft company in Vienna. Reportedly, during a test conducted three years later, the saucer went through the ceiling, but by and large it was otherwise unworkable - like most of the other prototypes. Then there were the so-called flying wings, or all-wing airframes, of the Horten brothers, which excited the interest of your intelligence, but which in fact were of value purely for research into wind velocity and drag. Finally, as you doubtless know, by the closing months of the war there were many rumours in German aeronautical circles about the imminent appearance of radically different airplanes, without wings, tails, rudders or other surface protruberances, and powered by special turbines or jet engines. I think it unlikely that such projects were completed - if indeed they ever existed in the first place.'

'Which gets us back to the rockets.'

'I'm afraid so,' Von Braun said.

'What about Nordhausen, towards the end of the war? Were there other rocket engineers in that area?'

'You mean Wilson again.' Von Braun was sourly amused by Fuller's interest. 'More rumours,' he said. 'We heard that another group, heavily guarded by Artur Nebe's most ruthless SS troops, had been shipped in from Kummersdorf to Kahla, which was not very far from Nordhausen. There were also rumours that a jet-propelled aircraft of unusual configuration, but possibly spherical or disc-shaped, had been test-flown over Kahla in February 1945. The results of that test, if indeed it took place, were not known, but in early April the Kahla complex was evacuated, as was Nordhausen, and that was the last I heard of Wilson.'

Fuller knew the rest. At the end of the war, Germany's scientific papers

were hidden, and eventually found, in tunnels, caves, dry wells, ploughed fields, river beds and even dried-out cess pools. Also found across the length and breadth of Nazi Germany and its occupied territories were the well known V-1 flying bombs and V-2 rockets, as well as lesser known, but equally formidable, heat-guided ground-to-air missiles, sonic-guidance torpedoes, the highly advanced U-XX1 and U-XXIII electrical submarines, ME-262 jet-fighters, rocket planes that flew even faster than the Messerschmitts, the beginnings of an Atom Bomb project, and the prototypes for other, vertical-rising jet aircraft. Because of this, there was a race between the Allies and the Russians to capture as many of the rocket scientists and engineers as possible, as well as the invaluable technical documentation. Deals were thus struck between the conquerors and their former enemies, particularly with regard to those involved in rocketry and other advanced weaponry.

Along with 150 of their best men, General Dorberger, Walther Riedel, and Werner von Braun came to the United States to work on secret government projects. The Russians, however, also gained a wealth of documentation and material, including the V-2 rockets, buzz bombs, ocean-spanning surface-to-surface and surface-to air missiles found in Peenemünde; about seventy percent of the 12,000 tons of technical equipment stranded on the docks at Lübeck, Magdeburg, and the Gotha plant. They also captured 6,000 German technical specialists, including Dr Bock, Director of the German Institute of Airways Research; Dr Helmut Gröttrup, the electronics and guided-missile expert; and a particular aeronautical engineer, known only as ‘Habermohl’ and reported to have worked under the American, Wilson.

‘Why are you so interested in this Wilson?’ von Braun asked while glancing impatiently at his wristwatch. ‘Has he vanished completely?’

‘Yes.’

‘He was probably killed by the Nazis.’

‘That’s what was reported, but we don’t think it’s true. We have reason to believe that Wilson, when in Nazi Germany, was indeed working on highly advanced, supersonic aircraft of unusual configuration, possibly spherical or disc-shaped, and that he might still be doing so in a location I’m not allowed to disclose.’

‘You mean the Soviet Union? The V-2 they launched recently?’

‘No. Somewhere else. I can’t say where it was. But I *can* tell you that my

government is seriously concerned with what Wilson might be constructing at the present time. Which is why we were so keen to place you and your rocket scientists under contract, irrespective of negative public opinion.'

'I'm not sure I get your drift.' Von Braun's command of English was admirable, as was his gift for casually easing people out of his house. He simply sighed, glanced again at his wristwatch, then stood up and stretched himself, which made him look even bigger than he was. 'But I'm sure you know what you're about,' he added. 'Your intelligence is thorough.'

Fuller stood up as well, then walked to the front door. Von Braun, acting as if he had been shaken out of a trance, said, 'Oh, I see you're leaving! Please, let me.' He held the door open until Fuller had stepped outside and turned back to face him. 'So why did you risk negative public opinion to put me and my men under government contracts?'

'It's imperative,' Fuller said, 'that we get into space before Wilson does. Do you think you can do that?'

'Chuck Yeager has already broken the sound barrier,' von Braun said. 'So the answer to your question is "Yes".'

'Good,' Fuller said, then he nodded goodbye, walked down to the car, climbed in and drove out of Fort Bliss.

Chapter Five

Nichola Randall, already blonde and beautiful, was covered in mushy food and hammering the rim of her high chair with a rattle as if beating on a tin drum. At least that's what it sounded like to her dad, Captain Dwight Randall, who winced as he ate his Cornflakes, even though he could not be angry with her, not even this early in a bleak morning in January, 1948.

'Honey,' he said, 'I know you're just seven months old, but couldn't you quieten it down just a little bit? Between you and those damned airplanes taking off, I can hardly think straight.'

'Don't blame my daughter,' Beth said. 'Blame the US Air Force and their planes. Always making a racket.'

'*Your* daughter, I note,' Dwight said with a grin. 'I don't get a look-in. You'd think I'd nothing to do with her.'

'Stop fishing for compliments.'

'As for the US Air Force, don't forget it's our bread and butter. Here we are in a tract house in Dayton, Ohio, secure as little bunnies in their burrows. What more could we ask for?'

'A house outside Wright-Patterson Air Force Base. A little home of our own.'

'Time will bring us everything.' Dwight finished his Cornflakes and pushed his plate aside as another F-51 jet interceptor roared overhead. Nichola gurgled happily in her high chair, banging away with the rattle and smearing food over her face, but Beth rolled her eyes as if she couldn't bear it another minute. Still as slim as an adolescent in loose sweater and slacks, she had short-cropped auburn hair and the face of a lovely urchin, full-lipped and round-cheeked. They had only been married a year and were still in love, Dwight hoped, but Beth was increasingly frustrated by life on the base and by Dwight's heavy workload with the ATIC, the Air Technical Intelligence Centre, located here in Wright-Patterson AFB. If anything, his workload had become even heavier since the start of the UFO flap, last year. In the seven

months since then, he had virtually worked around the clock and it was giving them problems. Now Beth, ironing the clothes by the window, was looking disgruntled.

'When are you going to get a few days off?' she asked.

'Soon.'

'You've been saying that for months.'

'Our new boss is arriving this morning, so I can't ask immediately, but as soon as he's settled in, I'll put in my request for some leave.'

'Promise?'

'I promise.'

The telephone rang. Carrying his cup of coffee, Dwight leaned across the table, kissed Nichola on her messy cheek, then picked up the phone.

'Captain Randall,' he said.

'Hi, Dwight, it's Bob,' said his friend and sidekick at the ATIC, Captain Robert Jackson. 'Are you awake yet?'

'I'm just about to leave.'

'I'm at the office already.'

'Bully for you.'

'I'm gonna make your day, Cap'n.'

'Oh, how?'

'We've just received a classified Memorandum for the Record from our Commanding General. It states that last September General Nathan Twining, Chief of Staff of the United States Army, wrote to Brigadier General George Schulgen, Commanding General of the Army Air Force, expressing his belief that the UFO phenomenon is something real, that it is not, quote, visionary or fictitious, unquote, and that the objects are disc-shaped, as large as aircraft and... wait for it... *controlled*.'

Dwight whooped with delight, making Beth stare at him, surprised. He couldn't contain himself because for too long he had been working on a project that many thought was a waste of time, if not downright idiotic. Twining's letter would give the project validation, as well as priority, and Dwight felt good about that. He therefore grinned like a schoolboy and gave a puzzled Beth the thumbs-up.

'According to the memo,' Bob continued, 'the letter wasn't intended to support the extraterrestrial hypothesis, but came about because US military fears that the UFOs might be Russian have been exacerbated by the

knowledge that the Soviets tested their first A-bomb last November.'

'Right,' Dwight said. 'I *thought* that might get them jumping.'

Bob chuckled. 'Anyway, because of Twining's letter, the Army Air Force is going to establish an official UFO investigation unit with a 2A classification. Called Project Sign, it'll be located right here, in Wright-Patterson, with you in charge and me remaining as your sidekick. We're to start it as soon as we can, but no later than next month, so you better get your ass over here, Cap'n.'

'I'm on my way,' Dwight said. Exultant, he hung up the phone, gulped the rest of the coffee, put the mug back on the table and tightened his tie. As he slipped on his jacket and reached for his peaked cap, he saw Beth's sulky face.

'Whoops!' he softly exclaimed.

'What's up?' Beth asked. When he told her, she said, 'There goes our vacation. A 2A classification is second only to top priority. You'll be working night and day with this new project. I'll hardly see you at all.'

'I won't, I promise.' He placed his peaked cap on his head.

'Send me a postcard,' Beth replied. 'Let me know how you're keeping.'

Dwight smiled uneasily, then gave her a hug and kissed her. 'Don't worry, I'll be back in time for dinner. Have a good day.'

'Yeah,' Beth said flatly.

She was already returning to her ironing when he left the house and walked quickly, too eagerly, to the ATIC offices, located at Wright Field. Saluting junior and senior officers en route, he looked fondly at the aircraft flying overhead, under grey clouds being pierced by weak sunlight. Recalling Beth's sulky face, he was ashamed of his own eagerness, but knew that it could not be helped. The truth of the matter was that he was too easily bored and, though still loving Beth, was having problems adjusting to the domesticity of marriage and fatherhood.

During the Second World War he had been a B-29 bombardier and radar operator, flying to India, China and the Pacific with the original B-29 wing. Though returning to college after the war, he had kept his reserved status, flying as a navigator in an Air Force Reserve Troop Carrier Wing. This had only increased his low-boredom threshold for normal life, so immediately upon receiving his degree in aeronautical engineering, he married Beth, whom he had met at college, then went back on active duty. He was posted

straight to the ATIC, which was responsible for keeping track of all foreign aircraft and guided missiles, and he and Beth moved into married quarters here at Wright-Patterson.

Beth was the beloved only daughter of Joe McGinnis, an amiable car salesman and his good-humoured wife, Glenda, both Dayton residents. Their benevolent parenthood had turned Beth into a fine woman, a loving, loveable wife, but one not familiar with life on an air base. They had been here for a year now. During that time, Nichola had been born, but Beth was increasingly desperate to kick off the shackles of Air Force protocol and be nearer her parents in Dayton.

Like Mr and Mrs McGinnis, Beth was good-humoured and quick-tempered, which had made for some tempestuous moments when the first small, inevitable disillusionments of marriage were setting in. Unfortunately, Dwight's growing fascination with the UFO phenomenon, which he found more intriguing than the tracking of foreign aircraft and guided missiles, had revitalised his flagging interest in the peacetime air force, even as it increased Beth's frustrations by keeping him away from home more often. Trouble was brewing, he realised, and he didn't know how to deal with it.

His sidekick, Air Force Captain Bob Jackson, was in the operations room of the ATIC with their only assistant, a pretty blonde WAC corporal, Thelma Wheeler, from Huntsville, Alabama. Bob, in his late twenties like Dwight, was a recruiting officer's dream in his Air Force uniform, with short-cropped dark hair, a sleekly handsome face, and a ready smile that always made Thelma squirm with pleasure. When Dwight entered, Bob was sitting on the edge of the WAC's desk, obviously flirting with her while leafing through the morning's mail, but he looked up and grinned when he saw Dwight.

'Lo!' he said. 'Our supervisor has arrived! I *thought* that phone call would get you of bed.'

'I *was* already out of bed.'

'Tell it to the marines.'

Thelma touched her piled-up hair with exploratory fingers and asked, 'Would you two like a cup of coffee?'

'Yes, thanks,' they replied in unison.

Thelma pushed her chair back, stood up, and went into the small kitchen, looking attractive at this hour of the morning in her standard WAC skirt and blouse. Dwight thought there was something going on between her and Bob,

but he couldn't be sure of it. Right now, Bob was removing his admiring eyes from the door through which Thelma had disappeared and instead casting a more thoughtful gaze around the one room that constituted the operational centre of the ATIC.

It was a spartan office, with a few desks, lots of filing cabinets, typewriters, phones and a mountain of paperwork, most of it technical information sheets for official UFO reports. The walls were covered with incident maps, charts and graphs showing most of the reported UFO sightings, including the Foo fighters of World War II, the Scandinavian sightings of 1946, and the wave of American sightings that had started with the two famous incidents in Washington State in July the previous year.

So far, the coloured pins on the maps revealed no definite, or linking pattern, to the flight paths of the reported UFOs, apart from a general northerly direction of retreat. It wasn't much to go on.

Grinning, Bob lifted a couple of sheets off the desk and waved them at Dwight, who immediately snatched them from him and started reading. The papers included a copy of General Twining's original official letter, dated September 23, 1947, to the Commanding General of the Army Air Force; another letter from Major-General L. C. Craigie, Deputy Chief of Staff of the Air Matériel Command, dated December 30, 1947, instructing the Commanding General of Wright-Patterson AFB to form a project, to be codenamed Sign and classified 2A, for the serious evaluation of UFO reports; and finally, a Memorandum for the Record from the Commanding General of Wright-Patterson to Dwight, ordering him to set up the project forthwith from his present office in Wright Field.

Reading the letters with increasing exhilaration, Dwight saw all the words he had longed to hear from his superiors: 'the phenomenon reported is something real... not visionary or fictitious... appear to be disc-shaped... as large as aircraft... controlled either manually, automatically or remotely... might be of foreign origin... possibly nuclear... collect, collate, evaluate and distribute all information... of concern to national security...' These words had finally come from the very top to cast the UFOs out of mythology and bring them into reality. Dwight was overwhelmed.

'Here's your coffee, Cap'n.'

Dwight looked up with a start. Thelma was smiling at him and holding out a cup of coffee. When he took it, she gave the other cup to Bob, who was

grinning wickedly at him.

'Feels pretty good, right?'

'Right.'

'Christ, where do we start?'

'Let's go through all the reports.'

'*All* of them?' Thelma asked in dismay.

'Yes, Thelma,' Dwight confirmed, glancing sideways at her as she sat on the edge of her desk, hitching up her skirt to reveal her perfect knees, and looked despairingly at the thick files piled up on it. '*All* of them.' He turned back to Bob. 'Now, at last, the top brass will be taking an interest, so we better make sure we're prepared.'

'By isolating the major sightings from all the others and trying to find some pattern in them.'

'Exactly.'

'You're the boss,' Bob said.

The day passed so quickly, they hardly knew it was fading. While Thelma fed them on a constant diet of black coffee and, at lunchtime, sandwiches from the PX, Dwight and Bob went through most of the files of UFO reports, or technical information sheets, whittling out the weakest cases, selecting the strongest, and then exchanging those selected and going through them again. By 5.30pm Thelma was suggesting that it was time to finish work. By 6.30pm she was complaining that she didn't get paid overtime. An hour later she was pouring them more coffee and insisting that she was going to miss dinner. At 8.00pm she was finally allowed to leave, waving at Dwight as she did so, but smiling more meaningfully at Bob. By 9.00pm Dwight and Bob were facing each other over a mountain of reports and through a haze of cigarette smoke, summarising what it was they had to go with.

'Okay,' Bob said, puffing smoke from yet another cigarette, but now sipping whisky instead of coffee, 'the basic scenario is this... The UFO scare didn't really start last July. It appears to have started before it, during World War II...'

On December 13, 1944, Marshall Yarrow, then the Reuters special correspondent to Supreme Headquarters in liberated Paris, syndicated an article stating that the Germans had produced a secret device, thought to be an air defence weapon, which resembled the glass balls used on Christmas trees. According to Yarrow, they were coloured silver, seemed slightly

transparent, and had been seen hanging in the air over German territory, sometimes singly, sometimes in clusters. A second article by another reporter, published in the New York *Herald Tribune* of January 2, 1945, described the devices as 'weird, mysterious "Foo fighter" balls' that raced alongside the wings of Beaufighters flying intruder missions over Germany. According to the reports of Allied pilots, the 'balls of fire' would appear suddenly and accompany the planes for miles. They seemed to be radio-controlled from the ground.

'Either because of the famous line from the popular Smokey Stover comic strip, "Where there's foo, there's fire",' Bob explained, reading from his notes, 'or simply because the French word for "fire" is *feu*, those eerie weapons soon became widely known as "Foo fighters".'

Official Foo fighter reports were submitted by pilots Henry Giblin and Walter Cleary, who stated that on the night of September 27, 1944, they had been harassed in the vicinity of Speyer by 'an enormous burning light' that was flying above their aircraft at about 250 miles per hour; then by Lieutenant Edward Schluter, a fighter-pilot of the US 415th Night-Fighter Squadron based at Dijon, France, who, on the night of November 23, 1944, was harassed over the Rhine by 'ten small reddish balls of fire' flying in formation at immense speed. Further sightings were made by members of the same squadron on November 27, December 22 and December 24.

'In a report published in the New York *Times* of January 2, 1945, US Air Force Lieutenant, Donald Meiers, claimed that there were three kinds of Foo fighter: red balls of fire that appeared off the aircraft's wingtips, other balls of fire that flew in front of them, and "lights that appear in the distance - like a Christmas tree in the air - and flicker on and off." Meiers also confirmed that the Foo fighters climbed, descended or turned when the aircraft did so. The Foo fighters were witnessed both at night and by day, yet even when pacing the Allied aircraft they didn't show up on radar screens.'

Allied intelligence was concerned enough about the reports to establish a classified project in England, under the direction of Lieutenant General Massey, to examine them. Massey was able to confirm that the Foo fighters were balls of fire that flew in parallel formation with the Allied aircraft, often pacing them for great distances, at speeds exceeding 300 miles an hour, frequently causing their engines to malfunction by cutting in and out. While a few reports of crashing Allied aircraft suggest that Foo fighters caused the

crashes by making the aircraft's engines cut out completely, most reports indicate that this was unlikely: that the Foo fighters merely tailed the planes and caused psychological harm, rather than physical damage. They also flew away when fired upon.

'But in the end, no official designation of the Foo fighters was given,' Dwight said.

'No,' Bob confirmed. 'Unable to solve the mystery, both the RAF and the US Eighth Army Air Force concluded that they were the products of mass hallucination. Subsequently, they did no more about them. In any event, sightings of the Foo fighters tailed off and ceased completely a few weeks before the end of the war.'

'But the first post-war UFO flap came in 1946 with the appearance of so-called "ghost rockets" over Scandinavia and western Europe: cigar-shaped, with flames issuing from the tail, and mostly seen at night, often by airline pilots and radar operatives.'

'Which led to speculation that both the Soviets and the Americans, utilising the men and material captured in the secret research plants of Nazi Germany, including those at Peenemünde and Nordhausen, were developing advanced saucer-shaped aircraft.'

'That could have been possible,' Dwight said. 'Certainly, when World War Two ended, the Germans had several radical types of new aircraft and guided missiles under development. The majority of such projects were in their infancy, but they were the only known craft that could even approach the performance of the objects reported by UFO observers.'

'Right,' Bob said. 'And it's worth noting that whereas the mysterious Foo fighters didn't show up on radar, the ghost rockets certainly did - so they couldn't be classified as hoaxes, misidentifications or the products of mass hallucination.'

'The Soviets denied any knowledge of the rockets.'

'Sure, they did. But US suspicions remained unabated while those things continued to fly. They only faded away the following year.'

'Then came the first known American sightings.' Dwight said, glancing down at the notes he had taken from his own research. 'Pilot Richard Rankin's sighting of ten discs, about thirty to thirty-five feet in diameter, over Bakersfield, California, on June 14, 1947; the Maury Island sighting of six larger discs by Harold Dahl on June 21, 1947 over Puget Sound, off Tacoma,

Washington; and three days later, Kenneth Arnold's famous sighting of nine disc-shaped, apparently metallic, objects flying in formation and making an undulating motion, near Mount Rainier in the Cascades, also in Washington. In the latter two cases the UFOs flew off and disappeared in the direction of the Canadian border.'

'Thus strengthening the belief that they could be American secret weapons, also based on captured German designs.'

'In other words, both the Soviets and the Americans could be producing secret weapons, or aircraft, from designs and material captured during the war.'

'Which would lend credence to the reality of the original Foo fighter.'

'Right,' Dwight said. 'Then came last year's plague of UFO sightings over top-secret military bases.' He glanced down at his notes again. 'The first, on June 28, was over Maxwell Air Force Base in Montgomery, Alabama. The next, on June 29, was near Alamogordo, New Mexico, right over the White Sands Proving Ground. Finally, on July 8, there was a whole spate of sightings of spherically shaped, white aluminium-coloured objects flying over Muroc Air Base, the supersecret air force test centre in the Mojave Desert.'

Bob nodded assent. 'And because those particular sightings were made by trained technicians and pilots, and as the reported objects were appearing increasingly over top-and-supersecret military research bases, a growing suspicion in intelligence circles was that the men and material deported from Nazi Germany to Russia had led to a dangerous Soviet lead in space technology.'

'Either them or extraterrestrials.'

'Yeah, right,' Bob said. 'Little green men.'

'Either way,' Dwight summarised, 'what we're dealing with is a combination of small, fiery, probably remote-controlled discs and large, aircraft-sized, obviously piloted, so-called flying saucers.'

'I guess so,' Bob said.

Dwight sighed, put his feet up on the desk, then lit yet another cigarette. 'It's now probably too late to investigate the Maury Island and Kenneth Arnold sightings, but I certainly think we should re-examine the ones that took place over our own military establishments, particularly those at Muroc Air Base.'

‘That may be easier said than done,’ Bob pointed out. ‘I reckon we’ll have to be careful. I mean, even though we’ve now been given official sanction to go ahead with Project Sign, I don’t think we should forget that a lot of the personnel involved in UFO sightings, either reporting them or investigating them, have got into hot water with their superiors, often for no apparent good reason.’

‘Yeah,’ Dwight said thoughtfully. ‘That’s always baffled me. Given that UFOs have been classified as a threat to national security, it’s strange how much resistance there’s been to investigating them - particularly from our own intelligence services. I mean, even that famous Socorro sighting of last year... Remember that?’ Bob nodded that he did, but Dwight went on anyway, talking, really, to himself. ‘First the Roswell Army Air Base public information officer, Lieutenant Walter Haunt, was reprimanded and posted to some shit-hole for releasing the story to the press; then First Lieutenant William Harris, the flight intelligence officer who helped me with my investigations, went the same route. To that you can add the disturbing fact that the major civilian witness to the actuality of the crashed saucer, local farmer Marlon Clarke, has disappeared completely. Last but not least, the former, highly decorated, OSS member and local UFO authority, Mike Bradley, refuses to even discuss the matter, which suggests that he’s pretty frightened of something - or *someone*. So, yes, I think we’ve good reason to be concerned.’

‘I don’t wanna sound paranoid,’ Bob said, pushing his chair back, placing his hands on his hips and stretching his spine, ‘but we’ve already had two officers killed under suspicious circumstances while involved in UFO investigations. Only four months ago. August 1, 1947. Captain William Davidson and Lieutenant Frank Brown, both members of A-2 Military Intelligence of the Fourth Air Force. Engaged in an investigation of Harold Dahl and the Maury Island mystery. They were flying back to the Fourth Air Force, Hamilton Field, California, with a box containing the debris that had fallen from the damaged UFO into Puget Sound, when their B-25 malfunctioned and crashed, killing both of them. Even more surprising is that the only other two passengers on board, Technician Fourth Grade Woodrow D. Mathews and Master Sergeant Elmer L.Taff, neither experienced flyers, both of whom had, reportedly, cadged a lift at the last moment, managed to parachute to safety while our two highly trained intelligence officers failed to

do so. That anomaly still hasn't been explained.'

'You think it was rigged?'

Bob shrugged. 'All I know is that two experienced intelligence officers died - and the only physical evidence for flying saucers we've had so far was lost in that crash.'

Dwight shivered, feeling cold. He glanced out the window, saw that it was dark, looked at his wristwatch and lowered his feet to the floor as if they'd been scorched. 'Shit!' he exclaimed. 'It's thirty after nine already! I should have been home for dinner three hours ago. Beth's gonna kill me!'

'The joys of marriage,' Bob said, putting on his peaked cap and buttoning up his jacket. 'I think I'll go and have a drink with a friend.'

'I hope it's not the delectable Thelma,' Dwight said, pushing his chair back, getting to his feet, and likewise preparing to leave. 'A good officer doesn't get involved with his staff, no matter how much he's tempted.'

'I think I get the message, Dwight.' Bob grinned and patted Dwight on the shoulder, then they turned out the lights and left the office, locking the door behind them. Once outside, Dwight looked across at the huge hangars, parked planes and silent airstrip of Wright Field, thinking of the other kinds of aircraft now haunting the skies. Now, when he saw a shooting star, his heart gave a leap. It was almost instinctive.

'Project Sign,' he said. 'It sounds good. I think I'll enjoy it.'

'You will,' Bob replied, 'but Beth won't. Good night and good luck, my friend.'

'Tread carefully,' Dwight said.

They walked off in opposite directions, Bob to have a drink, probably with Thelma Wheeler, no matter what Dwight said, and Dwight to return and face the music for being late to dinner again. As he headed away from Wright Field, the silence was broken by the deep rumble of an RB-29 coming in to land, reminding him that the air base never slept. Glancing up at the sky, which was a mosaic of cloudy patches and stars, he contemplated the possibility of equipping some RB-29s with the latest aerial cameras and using them to photograph unusual phenomena by day and by night. The Air Matériel Command laboratories at Wright Field, he was convinced, would be ideal for the processing of such photos. Determined to put his idea into immediate practice, he turned into the silent streets of the married officers's quarters, then entered his temporary home.

As anticipated, Beth was not amused. Dwight's meal was sitting untouched on the table. Beth was reading a book, smoking a cigarette, and listening to Arthur Godfrey on the radio at the same time. She did not look up when Dwight entered.

'Sorry,' he said. When she didn't reply, he crossed the room and kissed the top of her head. 'Really, I'm sorry.'

'Your dinner's cold.'

'I noticed.'

'Nichola's in bed.'

'I guessed.'

'I didn't get my postcard,' Beth said, 'and you seemed to be gone that long.'

'Okay, Beth, that's enough.'

'Your work.'

'Yes, my work. We have to set up this new project and we don't have much time.'

'No time for us, obviously.'

'That's not an issue, Beth. I was only a ten-minute walk from here. It shouldn't be a big deal.'

Beth stubbed her cigarette out, closed her book, turned off the radio. Standing up, she said, 'Maybe not to you, but I know what it means.'

'What?'

'More UFO investigations. Even more than before. Since those first sightings, last July, you've been travelling all over the place. Now that you're in charge of the whole thing, it's bound to get worse.' She headed for the bedroom, then turned back to face him. 'And you like it,' she accused. 'That's what maddens me the most. It's not that you have to do it, it's that you enjoy it so much. You'd rather be travelling and investigating UFOs than be at home with me and Nichola. I could hate you for that.'

'That isn't true, Beth.'

'It is. And damned well you know it. Goodnight, Dwight.'

'Goodnight.'

When she disappeared into the bedroom, Dwight poured himself a stiff drink, neat bourbon, and had it while sitting by the window, looking up at the night sky. He felt guilty because he knew that Beth was right, so the drink went down well. He was just finishing and contemplating bed when the

telephone rang. It was Bob, sounding shocked.

'When I left you,' he said, 'I went back to the office – '

'What for?' Dwight asked, realising instantly that the office was the only place on the base where Bob and Thelma Wheeler could get together.

'I forgot something... Anyway, what the hell's the difference? What I'm saying is that I was back in the office when I received a call from a buddy at Fort Knox, Kentucky, informing me that Captain Thomas F. Mantell, an experienced pilot and Air Force hero during the Normandy invasion, was killed in a crash today - reportedly when trying to pursue a UFO over Godman Field.'

'Oh, my God!' Dwight blurted out, hardly able to believe his ears. 'What made them think it was a UFO?'

'I don't have the full facts yet. Godman have promised a detailed report, but in the meantime all I've got is what I was told over the phone.'

'Yes?' Dwight demanded, feeling breathless.

'There were a series of sightings this morning all over the area, beginning in Maysville, Kentucky, less than a hundred miles east of Louisville, where Godman AFB is located. The object was also sighted over Owensboro and Irvington, located in northwest Kentucky. The cumulative sightings, called in to the local police, indicated a circular, metallic object about 250 to 300 feet in diameter, heading in a westerly direction, towards Godman Field. Early that afternoon, the state police contacted Godman, but the control tower operators could confirm no similar sighting at that time. However, half an hour later, the assistant tower operator picked up the object, which was subsequently observed by the operations officer, the intelligence officer, the base commander, his executive officer, and a band of other ranking personnel.'

'Christ!' Dwight exclaimed.

'A flight of four F-51 fighter planes, headed by Cap'n Mantell, was sent in pursuit and was observed disappearing in the southward wake of the UFO. According to the control-tower operators, by the time the four planes reached 10,000 feet, Mantell was well ahead and far above them. He reported to the control tower: "I see something above and ahead of me. It looks metallic and it's tremendous in size. Now it's starting to climb." He then said that the UFO was above him, that he was gaining on it, and that he intended going as high as 20,000 feet. Those were his last words before he crashed. Losing

contact with him, the other pilots returned to base, where they were informed that Mantell was dead. The UFO wasn't seen again.'

Bob went silent, though Dwight imagined he could hear him breathing heavily. He then realised that he, too, was breathing heavily and that his heart was racing. Taking a deep breath, he glanced up at the clouds and stars, then he let his breath out again.

'Make sure you get the full report,' he said.

'Sure,' Bob said. 'Goodnight.'

The line went dead and Dwight put his phone down. He thought of Beth in their bed, already concerned for him, and wanted to lie quietly beside her and press himself into her. Instead, he poured himself another drink and let it last a long time. He drank it while gazing up at the night sky, until it seemed to press down upon him, threatening to crush him. That sensation, he knew, was caused by fear. He would have to get used to that.

Chapter Six

‘They weren’t ours,’ Wilson said as he gazed out from his office of steel and concrete near the summit of the mountain to the vast, white desolation of Antarctica. ‘Neither the Maury Island sightings, nor those made by Kenneth Arnold over the Cascades, were of our saucers. The ones that flew back towards Canada belonged to someone else. Not to me. Not from here. We must look to America.’

He sipped his mineral water and placed his glass back on the table by the panoramic window. Hans Kammler, still blonde, handsome, and cold-eyed, gazed over Queen Maud Land, his beloved Neu Schwabenland, and smiled thinly, bleakly, to himself.

‘Ah, yes,’ he said, ‘the Americans. Perhaps the Soviets as well. Our captured V-2 rockets were shipped from Germany to New Mexico in 1945. The launch of American V-2s commenced at the White Sands Proving Ground in March the following year, under the direction of that traitor, Count von Braun. We have since received a report confirming that North American Aviation are planning to go into the production of rocket motors under a USAF contract and will be basing their work on the original V-2 motor.’

‘How ironic,’ Wilson said, smiling, ‘that the V-2 in turn was based on the rocket motors of America’s own, badly neglected Robert H. Goddard, with whom I also worked when he was located in Roswell, New Mexico, now the location of the White Sands Proving Ground. It has all come full circle.’

‘It’s nothing to be pleased about,’ Kammler said testily. ‘The Russians have Habermohl and the Americans have Miethe, who also worked on Projekt Saucer. Miethe was formerly stationed with von Braun at Fort Bliss, New Mexico, but is now located at Alamogordo, the centre of American rocket development. God knows what he’s constructing there.’

Wilson glanced at the launching pad far below, carpeted thinly with snow and shadowed by the encircling rock face soaring high above it. The

Antarctic sunlight beamed down upon the latest 300-foot flying saucer like a torch shining into a dark well, making the machine's metallic grey take on a silvery sheen. The many men in black coveralls, who had been swarming all over the saucer, were removing the ladders and hurrying behind the shock-proof protective shields located in small caves hacked out of the rock. From this high, behind the thick, plate-glass window, Wilson could not hear the saucer, but he could see it rocking slightly from side to side, its heat turning the thin snow into steam as it prepared for lift-off.

'Yes,' he said, 'the original Projekt Saucer team are a problem. Now that pompous fool, Schriever, who managed to escape from Prague, is living back in his hometown of BremerHaven, West Germany, telling all and sundry that the Allies are building flying saucers based on the one he constructed during the war. Though the press is viewing him with scepticism, he is in fact correct. The Canadians and Americans are both working on a flying-saucer development programme based on designs found in Germany at the end of the war. The Canadian project is being undertaken by the A.V. Roe Company in Malton, Ontario; the American one is hidden somewhere in the White Sands Proving Range, reportedly Holman AFB.'

Far below, the *Kugelblitz* Mark III lifted off the ground, swaying gently from side to side, then ascended silently, growing wider as it came up to Wilson's level. The higher it climbed, the more sunlight it caught, which turned it from dull, almost invisible grey to dazzling silver.

It looks alien and beautiful, Wilson thought. Or beautifully alien. We have done a good job this time.

'If their work is based on the Schriever designs, we have little to fear,' Kammler said.

'Not at the moment, but time could change that. Already the Americans and Canadians are more advanced than they should be. While grossly exaggerated versions of what Harold Dahl and Kenneth Arnold saw over the Cascades have enthralled the world, both men *did* in fact witness the test flights of a series of remote-controlled, pilotless discs, based on our original *Feuerball* and constructed at the A.V. Roe Company in Canada. A larger, piloted saucer is also being constructed there, as well as by a US Naval Laboratory team in that hidden location in the White Sands Proving Range. While reportedly neither machine is very good, both have had satisfactory test flights.'

'Witnessed by various pilots and other trained military personnel,'

Kammler noted.

'Yes. As have ours,' Wilson said. 'Which means that the US and Canadian saucers have been mistakenly credited with the kind of capabilities that only our machines possess so far. This, at least, is to the good. The Americans think the more efficient saucers have been made by the Russians, who believe that the Americans made them. Thus, we can fly our own saucers with impunity, not having to worry if we're seen. By attempting to build their own saucers, based on our old designs, the Soviets, Americans and Canadians have actually given us greater freedom of movement. They should get an award.'

His smile was not returned by Kammler, a man of limited humour, so he concentrated on the 300-foot saucer as it reached the level of the window and hovered there, swaying gently from side to side, as if in salute. In fact, it was just testing itself. The steel covers on the raised dome were open, revealing the transparent pilot's cabinet with six crew members inside, but they would close when the saucer actually took off on its long flight to Paraguay, making it look like a seamless spinning top in flight. Now, as if obeying Wilson's instinctive nod of approval, the saucer dropped out of sight below the window, descending back onto its landing pad.

'Is Stoll ready to leave?' Wilson asked.

'Yes,' Kammler replied. 'Not too happy, but prepared to do his duty. I better go down and say *Auf Wiedersehen.*'

'Tell him I'll be down before take-off, after I've visited the laboratory and talked to Dr King.'

'He responded well to his indoctrination. Particularly after hypnotic-drug treatment, which helped in changing his mind - for the rest of his life, I trust.'

'He's a man of considerable will power. He'll serve us well in the end. So, Hans, let's go.'

Pushing his chair back, Wilson glanced again across that vast, spectacular panorama of Antarctic wilderness, then stood and walked across the immense, dome-shaped room, with Kammler behind him. They took the lift down to Level 3. Leaving Kammler in the lift, to continue his descent to ground level where the flying saucer was parked, Wilson walked through a short tunnel hacked out of the rock and entered the laboratory containing its ghoulish collection of human spare parts and artificial replacements. By now, some larger glass cabinets had been built into the walls of bare rock and

contained drugged, unconscious, and frozen human beings who had been abducted by Wilson's flying saucer crews. Wired up to machines that showed their declining heartbeat and brain waves, they would eventually freeze to death, though not before providing valuable information for the ongoing researches into longevity.

Surrounded by other white-smocked physicians and surgeons, Dr King was at a long table, examining a drained human torso which had a prosthetic replacement attached to the stump of one of its amputated arms. The interior of the prosthetic arm had been left open to reveal a complex of electric wiring that ran from the shoulder down into the artificial hand. A white-smocked assistant was applying electric charges to the prosthetic while Dr King checked the mobility of the twitching artificial fingers. He looked up and stopped what he was doing when Wilson approached him.

'Good day, Wilson,' he said, sounding calm enough, but not smiling.

'Good day. How's it going?'

King glanced down at the prosthetic arm fixed to the drained human torso. 'Not bad,' he said. 'I think we'll get there eventually. Working with human cadavers, instead of animals, short-circuits a lot of otherwise time-consuming experiments and aids progress tremendously. It's really quite exciting. I think we'll have working, myoelectric limbs before the year's out. They won't be all that good, but once we've got a working model, the rest of it will come even more quickly.'

'What about head transplants?' Wilson asked. 'Or even partial replacement of the face and head: the mouth, throat and jawbone. I mean for the development of cyborgs. For survival in outer space and on the seabed. To man the saucers indefinitely.'

King glanced at the guillotined human head now frozen in a small glass case on a nearby table; it was wired up to an EEG machine recording weak, dying brain waves. The eyes of the head were open, staring wildly, seeing only God knows what. It was the head of the unfortunate Marlon Clarke.

'A long way off yet,' Dr King said, 'but we'll get there eventually. At the moment, we're concentrating simultaneously on many different aspects of the problem and discovering the biological and physical interrelationships between them. Experiments already undertaken in the animal laboratory have convinced us that animal gut, intestines and even skin can eventually be transplanted successfully into humans. Similarly, the heart and lungs might

be used, but this will take longer. Regarding artificial bones, joints and sockets, it's my belief that the main alloys required will be of the cobalt and chromium variety: tantalum, titanium, niobium and molybdenum. Limited success has already been attained in the preservation of human heart valves, bone, blood and even the cornea of the eye.'

'Very good,' Wilson said. 'Have you been able to make any advances on what you were doing in the Powered Limbs Unit of West Hendon hospital?'

'Yes.' The doctor spoke precisely, but rather like one of the automatons he was hoping to create. 'In external prosthetics, the myoelectric control of limbs is racing ahead.' He waved a hand, to indicate the prosthetic arm joined to the limbless human torso on the table. 'As you can see.' Wilson nodded. 'Already we've perfected a hand-arm prosthesis in which all five fingers are capable of closing around objects of variable shape, though not yet with the precision of a human hand. We're also working on other advanced prosthetics, including myoelectric arms with interchangeable hands. From there, I hope to progress to a more sophisticated myoelectric arm that will be able to move at any angle, speed or force simply by being *thought* into action. Such an arm will pick up muscle signals generated to the natural stump, transmit them to a small amplifier, and use that to drive a compact electric motor. The machinery for all of this will be housed inside a flesh-coloured, fibre-glass casing that resembles a real arm.'

'Like the one on the table.'

'Correct.'

'But the head,' Wilson insisted, glancing at the wide-eyed head of Marlon Clarke, which may or may not have been aware of its own existence, though it wasn't likely to be sane any more.

Ignoring the head, Dr King pointed at the large glass cases containing unconscious, frozen human beings. 'Our biochemists and mechanical, electrical, chemical, and biomedical engineers are already exploring the possibility of collecting healthy human specimens, rendering them unconscious, and freezing them to just under the point of death for as long as possible. If we can perfect a workable form of cryonic preservation, even though the brains of these living cadavers will have ceased functioning, they'll still be respiring, pulsating, evacuating, and excreting bodies that could be maintained for many years as a source of spare parts and for medical experimentation of all kinds.'

‘But the head,’ Wilson said impatiently, glancing at the staring eyes of Marlon Clarke. ‘Can we ever transfer the entire head from one human being to another?’

King nodded affirmatively. ‘I think it can be done. In the other laboratory isolated animal brains are being kept in cold storage and others, less lucky’ - here the doctor smiled bleakly – ‘are functioning, warm brains kept alive by hook-ups to blood machines or to live individuals of the same species. Right now we can’t speculate as to what’s going on mentally inside those disembodied brains, but our latest two-headed dog has survived for a week now and is eating, sleeping and performing its physiological functions normally, as if nothing has happened. In other words, it appears to accept itself as perfectly normal.’

‘And longevity?’

‘We’ll require a steady supply of live foetuses. The heads will be cut off and then injected with radioactive compounds to enable us to study brain metabolism. We also need mature adults who can be injected with various diseases, including live hepatitis virus and cancer cells, to determine if the diseases can be so induced and suitable antidotes found.’

‘We conducted similar experiments in the Nazi concentration camps,’ Wilson informed him, ‘but they didn’t prove much.’

‘You lacked knowledge and proper facilities,’ King replied. ‘I’m expecting much more here.’

‘I think you’re beginning to enjoy this, Dr King.’

‘It’s more exciting than my work at Hendon,’ King said without the slightest trace of irony. ‘Here, the possibilities are limitless. The mysteries of longevity will eventually be solved here - and the cyborgs will come even before that. You have no cause to worry.’

‘I’m not the worrying kind,’ Wilson said. ‘Thank you, Dr King.’ After casting a final, curious glance at the wide, staring, unreadable eyes in the guillotined head of Marlon Clarke, Wilson left the laboratory, crossed a catwalk, and glanced down a dizzying drop to the mass of men in black coveralls working on skeletal saucer structures in the immense, arc-lit workshop with walls of solid rock. He then entered a tunnel still being hacked out of the mountain’s interior with the sweat of slave labour. Reminded, by the gloom, bedlam, dust and cracking whips, of the Nordhausen Central Works in the Harz mountains, he was glad to get through

the nightmarish tunnel and emerge to the viewing bay overlooking one of the multiplying landing pads for the saucers. As this one was located directly below his office, located near the summit of the mountain, he found himself looking down on the 300-foot saucer that had ascended to his level during his discussion with Kammler - the one that was transporting Ernst Stoll to Paraguay.

Taking the lift down through the interior of the mountain, Wilson emerged to the cleared area that had become a landing pad, now covered in a film of powdery snow. The saucer was resting on its four hydraulic legs, with its exit door tilting out from the base to form a short flight of steps down to the ground - a recent, much welcomed innovation. As the raised, transparent dome was uncovered, Wilson could see the crew inside. Ernst Stoll and Kammler were standing near the front edge of the saucer, talking with the artificial smiles of men who secretly despise one another. They drew apart when Wilson approached them.

'Well,' Wilson said, 'the day has come at last. It's been a long wait. No regrets?'

'No regrets,' Stoll said. 'Naturally, I'd rather stay here with you, but I'll do what I have to.'

'I'm glad,' Wilson said, looking into Stoll's dulled gaze and realising just how much he had changed since first they had met in Berlin in 1938. Since then, Stoll had lost his dream of becoming a rocket engineer, lost his faith in the Nazis, lost his wife and child - lost everything. Now he only had Wilson, who cared little for him but was all too willing to use him. Wilson glanced at Kammler, then nodded at the flying saucer. 'Is it ready to leave?'

'Yes,' Kammler said. 'We were just waiting for you.'

Wilson shook hands with Stoll. 'Enjoy your work - and good luck.'

'Thank you,' Stoll said, releasing Wilson's hand, shaking Kammler's hand less readily, then ducking low to slip under the base of the saucer and clamber up the ladder into the machine. The ladder was drawn up electronically behind him, sealing the exit, then Wilson and Kammler moved back with the other men to take their positions behind transparent protective shields in the small caves hacked out of the rock. Artur Nebe, the deadly former SS officer, now in charge of Wilson's security, was already there with some of his armed guards. He looked at Wilson with dark, inscrutable eyes, resting his hand, as always, on his holstered pistol.

‘Do you think he can be trusted?’ Nebe asked.

‘Yes,’ Wilson replied. ‘At least until he goes insane. Until then, just to be sure, we’ll visit him on a regular basis and check what he’s up to. I’m sure he’ll do the job well.’

‘Let’s hope so,’ Nebe said.

A high-pitched whistling sound came from the saucer, then it changed into an angry roaring. A cloud of steam caused by melting snow swirled around the glittering machine as it lifted off the ground, swaying from side to side, bobbing gently up and down. The saucer remained like that for a few seconds, swaying and bobbing magically, roaring angrily, turning the swirling snow into great clouds of steam that made the light from the arc lamps bend and quiver to form a dazzling web. The saucer ascended slowly, vertically, as if on invisible strings, until it had cleared the snow-capped peaks of the mountain, just above Wilson’s office. There it roared even louder and seemed to quiver like a bow-string, until suddenly it went silent, became motionless for a second, then shot vertically into the azure sky and almost instantly vanished.

‘Perfect,’ Kammler said.

‘And here comes the other one,’ Nebe said, his dark eyes glinting watchfully.

The other saucer, also 300 feet in diameter, had appeared out of nowhere to hover just above the snow-capped peaks and then begin its descent. It came down as gracefully as the first one had ascended and landed as lightly as a feather on the same launching pad. When it had whined back into silence, its trap door opened and angled down to the ground to form steps. A middle-aged man emerged, wearing a black coverall and boots. He was followed by the five crewmembers, all dressed in grey coveralls. When Kammler stepped forward to receive the flight records from the crewmembers, the man in black walked up to Wilson and gave a slight, formal bow.

‘Well?’ Wilson asked him. ‘Did it go well?’

‘Yes, sir,’ the man, Flight Captain Friedrich, replied. ‘We flew over a few air bases without much success, but finally, at Godman Field, near Louisville, Kentucky, we were pursued by four F-51 fighter planes. One of them was more foolhardy than the others and pursued us to nearly twenty thousand feet. We let him catch up with us. When he was still climbing and just below us, as close as he dared come, we used your new laser weapon against him. It

worked, sir. Beautifully. The F-51 cut out, went into a spin, and was splitting in two even before it crashed. We later heard on the radio that the pilot was killed. Air Force pilot Thomas F. Mantell. A World War Two hero. A good choice, don't you think?'

'You didn't exactly choose him,' Nebe coldly corrected him, 'but certainly, for our propaganda purposes, you couldn't have come across a better victim. Now the US Air Force will be very frightened indeed, which is what we require.'

'It's also good to know that the laser weapon developed in Kahla actually works,' Wilson said. 'We're pleased, Friedrich. You've done well.'

He squeezed Friedrich's shoulder, glanced at Kammler and Nebe, then turned away and walked back into the mountain.

Chapter Seven

Fuller made good use of his time before interviewing the former Projekt Saucer scientist, Walter Miethe. Forced by his assignment to return to New Mexico, he decided to learn as much as he could about the V-2 rockets before discussing them, and more important related matters, with the Kraut scientist now working for the Army's First Guided Missile Battalion, located in White Sands.

Driving out of town at dawn, past the bright orange-and-white signs saying ALAMOGORDO: HOME OF THE ATOMIC BOMB, CENTRE OF ROCKET DEVELOPMENT!, Fuller headed for White Sands, where a V-2 launching was to take place later in the morning. The drive took him across desert filled with nothing but sagebrush, past isolated gas stations charging twenty-five cents a gallon, to the 3,600 square miles of even more parched desert, sand dunes, and cattle-grazing land, which encompassed the White Stands Proving Ground, surrounded by the distant, closely bunched peaks of the aptly named Organ Mountains.

Not particularly fond of ranchers, rattlesnakes, mountain lions or coyotes, Fuller was glad to reach the government's first rocket centre. He knew he was getting close when he hit Highway 70 and found it clogged with motorists trying to find a good vantage point for the launching. Rather than being classified, the V-2 launchings (or 'shoots' as they were commonly called), which took place every couple of weeks, were treated as gala occasions and used as military PR exercises on the local populace. Fuller was therefore not surprised, when he approached White Sands in the morning's dazzling light, to find himself in the thick of cars and buses coming in from Las Cruces, Alamogordo, and El Paso, bringing farmers, cowboys, housewives, young mothers with new-born babies, schoolchildren, Boy Scout troops, students from the international rocket school, ROTC men, National Guardsmen, and members of the Chamber of Commerce and civic clubs. Many of these would tour an assembly hangar and the White Sands Proving Ground Museum,

housed in a long Army van, where a V-2 rocket was on display, see a movie about guided missiles, visit the launching site, then scramble for a good position in the camp viewing area, located approximately seven miles away.

American know-how, Fuller thought proudly.

He was even more impressed when he entered the White Sands camp and found it swarming with state and municipal officials, retired and active Mexican generals, ordinary GIs, naval ratings, Air Force engineers, and top brass from the Pentagon, West Point, and Annapolis.

'It's like the goddamned Fourth of July,' he said to Captain Edward 'Ed' Gunderson of the First Guided Missile Battalion, in his office near the Proving Ground museum. 'I thought all this would've been top-secret, but these folks are having a party.'

'It's kind of a festive day,' Ed said. 'The rocket shoots are still exciting. You can't keep a shoot secret - I mean the rockets are so damned visible - so everyone's invited to come along. The real secrets are the payloads in the rockets - and the public don't see those.'

'What kind of payloads?'

'The permanent personnel of the Proving Ground are both civilian and military, so it depends on who's financing and sharing the individual rocket. In this instance, General Electric has thermometers on board because they're interested in the problems of heat transfer; the Naval Research Laboratory is sending up a spectrograph to measure the spectral qualities of light at high altitudes; and the University of Michigan is contributing an air-sample bottle, to suck in a sample of the atmosphere and then seal itself. Even Harvard University, would you believe, is sending up a packet of seeds to learn how cosmic radiation effects them. So while the rocket shoot isn't secret, the results of the tests certainly will be.'

'Who's most interested in the rockets?'

'Military men and scientists are equally interested, but for different reasons. The scientists are mostly interested in pure scientific research - an orbital satellite for the checking of weather and other atmospheric data is their long-term aim - but the military men – wouldn't you know it? - are after an atom bomb transported by guided missile. That says it all, doesn't it?'

Fuller's instinct was to say: 'Why not? We've got to protect ourselves from the Commies and other enemies.' But realising that this might antagonise his new friend, he said, instead, 'Yeah, I guess it does, Ed. So when do I get to

talk to the Kraut?'

'Dr Miethe?'

'Yeah.'

'Right after the launch. He's out in the desert right now with one of the Recovery Officers, waiting to pick up the rocket's scientific instruments at the point of impact. You can see him right after that.'

'Can you take me out to the launching site?'

'Sure,' Ed said. 'No problem.'

They left the First Guided Missile Battalion HQ and drove in Ed's jeep to the launching site, burning along the camp's only paved road, which ran through seven miles of sagebrush and dunes, with the organ-pipe peaks of the mountains to the west, on the far edge of the otherwise flat terrain. The journey only took ten minutes, but the wind was hot and filled with sand, making Fuller feel dry-throated and sun-scorched by the time the V-2 appeared as a patch of glinting white in the distance. A minute later, the jeep was close enough to let Fuller see that the rocket, painted white but with a pointed, silver warhead, now raised into a vertical position, was being planted on a portable launching platform by a specially equipped truck. Ed drove on to where the rocket was and they got out of the jeep.

The V-2 looked lonely in the desert waste, even though about a hundred men, civilian and army, were gathered around it. The rocket was now straddled by a sixty-foot tall crane, which had platforms at different levels, where the launch crew were working like beavers while GIs climbed up and down ladders, opening and closing the instrument panels, and, on the ground, the surveyors checked the vertical alignment. It looked like organised chaos.

'Come on,' Ed said to Fuller. 'Let's check out the blockhouse.'

'What's that?'

'Headquarters for the shoot.'

The blockhouse was an expansive, low concrete structure located about a hundred yards west of the launching platform, reminding Fuller of the pillboxes he had attacked as a marine during the war. Inside, it was blessedly cool and contained only instrumentation relating to the V-2, with lights flickering constantly on the consoles and other equipment making rhythmic clicking sounds. The thick, protective walls of the blockhouse contained three narrow viewing windows of thick laminated glass which, when Fuller looked, showed only the fins at the bottom of the V-2 being prepared for launching.

There were also oxygen masks and bottles hanging on the walls.

'The rocket could keel over and fall into the blockhouse,' Ed explained reassuringly, 'cutting off our exit. The walls of the blockhouse are so thick they probably wouldn't cave in, but the masks would be needed to protect us from the toxic gases that could seep out of the rocket and fill this place before we could escape. Come on - only twenty people are allowed in here during a shoot and you're not invited. You can come with me as part of a field crew. They're stationed right across the Proving Range, in the desert and mountains. Their job is to keep track of the rocket's flight and phone their reports in to the blockhouse. You wanna come?'

'Hell, yes,' Fuller said. He hadn't enjoyed himself so much since fighting the Japs at Iwo Jima and was glad to get out of the packed, gloomy blockhouse. Once outside, he noticed that the GIs were no longer swarming over the raised V-2, but had been replaced by a lot of civilians, all on the third platform, about fifty feet up.

'The guys in charge of instrumentation,' Ed explained. 'Let's get in the jeep.'

They drove away from the blockhouse, heading into the desert, arriving a couple of minutes later at Radar Station D, an encampment of half-a-dozen trailers, containing radar and other equipment, located a mile east of the launch area. When Fuller got out of the jeep and looked back where he had come from, he saw heatwaves rising off the plain in front of the rocket.

Wiping sweat from his face, he followed Ed into one of the trailers. It contained the telemeter, which would transmit data on temperatures, wind pressures and cosmic rays during the rocket's eight-minute flight, and three special cameras, which would make a pictorial record of the flight. Men stripped to the waist and wearing shorts, their muscular bodies sweat-slicked, had taken up positions behind the cameras. As this meant that the shoot was imminent, Ed led Fuller back outside, where they could get a good view.

As zero hour approached, more people poured into the encampment, including a lot of full colonels. Instructions were being broadcast from a PA system that linked up all the field stations. Shortly after, a pair of Stinson L-5 observation planes appeared in the sky, the countdown began and continued until it reached X-minus One. Then the seconds were counted off: 'Ten, nine, eight, seven, six, five, four, three, two, one - *Fire*!'

A distant, bass rumbling sound soon became a mighty roaring, then flames shot out around the base of the rocket and turned to boiling black smoke. From where Fuller stood, it looked as if the rocket was on fire, about to explode, yet remarkably it didn't move immediately. Instead, the 1,900 pounds of explosive fuel built up beneath it, only gradually lifting it off the launching tower. The rocket rose slowly, dramatically, as if about to fall back again, but kept climbing in that leisurely manner out of spewing yellow flame and boiling smoke. When it broke free from the launching tower, spitting a red flame from its tail, the roaring washed over Fuller like a wave and the ground shook beneath him. He covered his ears with his hands and put his head back, looking upwards, feeling tremendous, almost sexual excitement as the roaring turned into the loudest noise he had ever heard and the rocket started putting real distance between itself and the Earth. Fuller's neck could bend no further when the rocket became no more than a flickering flame, curving up and away, until it disappeared altogether, leaving Fuller to squint into nothing but the vast, empty sky.

When he straightened his neck to look about him, he saw Ed's grin and raised thumb. Fuller felt extraordinarily alive, completely physical, and at last had a very real sense of the world that was coming.

No wonder they're scared, he thought.

Fuller didn't like Commies, Japs or Germans, but he tried to be civil when he interviewed Walter Miethe later that afternoon in the headquarters of the First Guided Missile Battalion. The office was small and spartan, containing a desk and three chairs. There was nothing on the desk. Two of the chairs were at one side of it, with Miethe in one of them. Fuller, at the other side, had a good view of White Sands, its chapel framed by the window, which was open. The bawling of GIs playing on the basketball court came in loud and clear.

'Cigarette?' Fuller asked. Miethe shook his head, indicating refusal. He had black hair and eyes as dark as pitch, though they still revealed wariness. He was a man who had been asked a lot of questions and didn't want to hear more. 'Do you mind if I do?' Fuller asked, lighting up before Miethe could answer. 'No,' Miethe said. 'Of course not.' Fuller grinned. 'You don't smoke at all.' Again Miethe replied by shaking his head in a negative gesture. 'Filthy habit. Never start,' Fuller said, puffing smoke rings and watching

them drift away, pretty close to Miethe's face. 'So you know why I'm here, right?'

'I can guess,' Miethe replied.

'You worked for an American called Wilson and we're trying to find him.'

Miethe sighed wearily. 'I'm sorry, I can't help you. I can tell you what I know about Projekt Saucer, but I don't know anything more about Wilson. He's probably dead.'

'What makes you think that?'

'There were two saucer construction programmes: one by *Flugkapitän* Rudolph Schriever, the other by Wilson. The two saucer teams were separated in 1944. Wilson's team was placed under the command of SS Brigadier Hans Kammler and transferred under the supervision of Captain Ernst Stoll to Kahla, near the underground rocket construction plant at Nordhausen, in the Harz Mountains. I went with Schriever and his team to Prague, so I never saw Wilson after that. My closest associate on Projekt Saucer, Habermohl, was sent by Schriever to work on part of the programme in Breslau, where he was captured by the Soviets. As for Schriever, the last I saw of him was when he was running away from murderous Czechoslovak Partisans at the BMW Plant in Prague, when the Russians were advancing on that city. However, just before that happened, we received unofficial notification that Wilson's team had been evacuated from Kahla in April 1944 and that Wilson had been shot by General Kammler, to prevent him falling into the hands of the advancing Americans.'

'But you had no proof of his death.'

'No.'

'And you've heard nothing about him since?'

'Absolutely nothing.'

Fuller gazed steadily at Miethe's dark, wary eyes and wondered if he was telling the truth. Maybe, maybe not. Wilson was a shadowy figure, a teasing conundrum, but what Fuller had learnt about him so far had convinced him that the man was cunning and dangerous, with a long, deadly reach. Lots of people had reason to be scared of Wilson and Miethe might be one of them.

'Your recent boss, Werner von Braun, was in charge of the Nordhausen Central Works about the same time Wilson was in Kahla. Did he and Wilson co-operate?'

'I don't know. I wasn't there. I was with Schriever in Prague. However, I

doubt that they had anything to do with one another. Indeed, I don't believe von Braun even knew that Wilson was in Kahla. Ernst Stoll, who was in charge of Nordhausen and Kahla during Kammler's many absences - Kammler was then overseeing the firing of V-1 rockets from The Hague - kept Wilson's presence in Kahla a tight secret. No one got in or out of Kahla, other than Stoll and Kammler, so I doubt that von Braun knew they were there.'

'What about the early days? You worked directly under Wilson in Kummersdorf, when von Braun was on the other side of the firing range. Did they co-operate then?'

'No. Von Braun knew about the American, but only through gossip. Though Wilson was compelled to pass on certain innovations to von Braun, this was not reciprocated and the two men never met. Then, of course, von Braun's rocket team moved to Peenemünde, leaving Wilson with the whole of Kummersdorf.'

'So how did you end up in Fort Bliss with von Braun?'

'When the Czechoslovak Partisans overran the BMW Plant in Prague, I managed to make my escape. Like Schriever, I just fled across the fields until I lost my pursuers. After that, like thousands of others, I made my way back to Germany, by foot and by begging lifts, until I was captured - luckily, by the Americans, not the Russians.'

'Lucky indeed,' Fuller said.

'By that time,' Miethe continued, ignoring the sarcasm, 'Brigadier Hans Kammler had transferred von Braun and his men to an army barracks in Oberammergau in the Bavarian Alps. There, they were held behind barbed wire and under SS guard, until joined by General Dornberger, when they were allowed to move into the village of Oberjoch. The Americans had since transported me to the town of Reutte, in the Austrian Tyrol, for lengthy interrogation. Shortly after the Führer's death, on the second of May, 1945, Dornberger and his men, including von Braun, surrendered to the American 44th Infantry Division in Reutte and I was placed in custody with them. By June, I was on my way to America with von Braun and many of his V-2 specialists. Now...' Miethe shrugged indifferently. 'Here I am.'

'You like America?' Fuller asked him.

'I like my work,' Miethe replied, 'and here I can do that.'

Don't do me any favours, Fuller thought, outraged that American

generosity could be treated with such contemptuous indifference. ‘What about the beer?’ he asked, grinning. ‘You like American beer?’

‘I don’t drink,’ Miethe replied.

Fuller lit one cigarette with the stub of the other, then sat back in his chair and blew smoke rings, watching them drift towards Miethe’s face before dissipating.

‘I’ve seen the drawings of Schriever’s saucer,’ he said. ‘It looks just like the real thing.’

‘The real thing?’

‘Yeah. The ones that have been causing such a stir over the past year or so. Do you think there’s any connection?’

‘Yes. I agree with Schriever on that. He’s been telling the West German press that the UFOs are man-made and based on our original German designs. I believe he’s correct.’

‘How good was Schriever’s saucer? The one you tested in Prague in 1945.’

Miethe offered a superior smile. ‘Not very good. It barely hovered above ground level, wobbling wildly, then it crashed back down.’

‘So what makes you agree with Schriever?’

‘Schriever was a pretender who always tried to get credit for ideas that he stole from the Americans. I don’t agree that the present UFO scare is caused by saucers constructed from Schriever’s designs, which in truth were incomplete; what I believe is that they’re saucers based on Wilson’s designs for a much better saucer known as the *Kugelblitz*. While even that saucer did not have the widely reported capabilities of the UFOs, it was highly advanced and could have been the prototype for the saucers now being sighted. Whether Wilson is alive or dead, it’s my belief that enough of his designs, if not the actual prototype, were captured by the Soviets or Americans - or both - to let them build more advanced models. It is my belief, then, that the UFOs are man-made saucers, constructed here or in Russia - maybe in both countries.’

Studying Miethe in silence for a moment, Fuller considered his options. One was to invite him for a drive into the desert, then slit his throat and bury him under the dunes. The other was to utilise his knowledge for the new saucer programme. Miethe knew too much already to be allowed to run loose, which meant that either he should be allowed to work for the US government or that he should be taken out totally - obliterated. Fuller had his

own preference – a quick burial in the desert - but unfortunately he was hampered by his superiors and the country's long-term needs.

'What I'm going to tell you,' he said, 'will commit you for life. If you listen to what I tell you, I won't be able to pretend you didn't hear it. That means I'll have to take strong action if you try going elsewhere. If you want to spend the rest of your days working on saucer projects, then you better listen to what I say; but if you're frightened of making that kind of commitment, you better tell me to shut up. You understand, Miethe?'

The German stared steadily, suspiciously at him, then nervously wiped his lips with his hand.

'What if I don't listen?'

'You'll be free to return to Germany,' Fuller lied, thinking of that burial in the desert, 'which may well be the only choice you'll have, as you'll find no work here. Either you work for the US government or not at all - at least not in this country. So what way do you want it?'

Miethe was silent for a considerable time, but his pitch-black gaze was steady and intense, searching Fuller's face for hidden meanings. Eventually, taking a deep breath and letting it out, he said, 'You believe Wilson's still alive, don't you?'

'Yes,' Fuller said.

'And the saucers?'

'We now have our own, but they're not that advanced. We based them on designs found in Nazi Germany and have reason to believe they were done by Wilson. We think we can advance on what we've already got, but it's gonna take a lot of time and money. In the meantime, we have the other saucers to contend with, and certainly they're too advanced to be our own.'

'The Russians?'

'We know they got Habermohl and a lot of rocket scientists, but even if they were constructing their own saucers, they'd have the same problems as us: not enough time or money. In other words, if the Russians have saucers, they're not likely to be much more advanced than ours.'

'Which leaves Wilson.'

'Right.'

Now Miethe looked frightened. 'Do you know where he is?'

'We think we know approximately where he is, but I can't tell you where that is just yet.'

‘Because I haven’t committed myself.’

‘You committed yourself by asking about Wilson. Now you can’t back out, Miethe.’

Shocked, Miethe straightened up in his chair, staring beyond Fuller’s head, doubtless recalling his early days in Kummersdorf with the Machiavellian American. Fuller saw that Miethe was now truly frightened and would want his protection.

‘If we’re right,’ he said, ‘Wilson is far away... but he has a long reach.’

‘With his saucers.’

‘Correct.’

Miethe nodded, rubbing his sweaty hands on his pants, then bit his lower lip. ‘So,’ he said, sounding as if he was sighing. ‘I am in. I am yours. What do you want with me?’

‘You have a wife and children in Germany,’ Fuller said. ‘A boy and girl, twelve and ten years old respectively. Hans and Irena.’

‘Yes,’ Miethe said, looking even more concerned. ‘Why do you - ?’

‘You’ll want them with you,’ Fuller said. ‘And you’ll want them out of reach. A new flying-saucer project, based on a combination of Schriever’s earlier designs and the more advanced designs found in Kahla, Thuringia - presumably Wilson’s work - is about to be financed jointly by the US and Canadian governments. The contract was won by the A.V. Roe Company and construction will take place at their plant in Malton, Ontario. That’s in Canada, not America, and we thought you might appreciate being there. Do you agree?’

‘Yes,’ Miethe said.

‘Good. I’ll make arrangements for your wife and kids to be flown out of Germany and you’ll all go to Canada shortly after. Any questions, Miethe?’

‘Not for now, Mr Fuller.’

Fuller nodded, stood up, and shook the German’s hand. He wiped his hand on his pants as he walked from the room.

Early that evening, Fuller phoned his wife from his temporary accommodation in the officers’s quarters of White Sands. The marriage between him and Belinda Wolfe had been a battlefield from the first day to the last and they had separated eighteen months ago, two years after the honeymoon. Belinda, the ravishing, brunette daughter of wealthy natives of Georgetown, Washington DC, had been unable to tolerate Fuller’s blatant

promiscuity, distaste for domesticity, love of danger, gratuitous cruelty with enemies and friends alike, and horror at the very thought of having children. Fuller and Belinda hadn't met since the acrimonious separation, though they had good reason to speak often by phone: the impending divorce. Now, when they spoke, Belinda told him that the divorce papers were coming through and she was thrilled to be rid of him.

'Thanks a million, Belinda.'

An hour later, Fuller was celebrating at a dance in the Rocket Room of the Officer's Club. High on a bellyful of lousy American beer, which he loved (those lousy, tasteless Krauts!), he enjoyed the live band, danced with a few ladies, then played the slot machines standing along the pine wall adorned with stag heads. Also playing was the wife of an Army Air Force captain who was on a two-week flying course at Nellis AFB, Las Vegas, Nevada. Fuller engaged her in conversation, bought her a few drinks, played Ping-Pong with her on the porch, then drove her out into the desert, where, under the dark-blue, star-filled sky, he fucked her brains out. When she recovered and was sobbing, filled with guilt and remorse, though displaying some confusion by saying she loved him, he dumped her well outside the base and told her to walk it off.

Ten minutes later, having packed to leave the next day, he fell into his bed in his room in the officers's quarters, went to sleep almost instantly, and dreamt about a V-2 rocket flying across the curved earth and being tailed by one of Wilson's flying saucers. He awoke with an erection that resembled the V-2, but his headache didn't permit him any pleasure, so he rolled out of bed. Wondering about the elusive thread that led obliquely from the V-2s to the UFOs, or flying saucers, he showered, put on his clothes, and left White Sands for good, gratefully heading back to the real world and its infinite mysteries.

Chapter Eight

Even in the desert of the Southwest, just north of Albuquerque, New Mexico, it was freezing at night. Squatting in the sand beside the other members of his UFO tracking team, looking up at the moon and stars, but seeing no unidentifieds, Dwight was torn between his excitement over what he was doing and depression caused by being away from home again, leaving Beth hurt and angry. It had been his own idea to send special patrols out into the desert around Albuquerque in a determined bid to resolve the mystery of the recent plague of green fireball sightings. A good idea from the point of view of the ATIC, not so good for the marriage.

The sightings had begun in November 1948, just three months ago, when a lot of folks around Albuquerque had reported seeing what seemed like green balls of fire flying across the skies. At first, because thousands of conscript GIs had recently been discharged from the army, taking souvenirs such as Very pistols, local Air Force Intelligence at Kirtland AFB had written the sightings off as flares. They were, however, forced to change their tune when, on the night of December 5, Air Force pilot Captain Goede and his co-pilot, flying a C-47 transport at 18,000 feet ten miles east of Albuquerque, observed a green fireball the size of a huge meteor flashing across the sky just ahead of them. Later, in their official report on the sighting, Goede and his co-pilot both insisted that it could not have been a meteor, as it had ascended from low altitude, near the slopes of the Sandia Mountains, then arched upward and levelled out, just like an airplane. A few minutes after that sighting, the captain of a Pioneer Airlines Flight also reported seeing a green ball of fire east of Las Vegas, New Mexico, when he was flying en route to Albuquerque. He, also, confirmed that the ascending flight of the green fireball proved that it could not have been a meteorite.

After that, the fireballs appeared practically every night and most of the reports landed on Randall's desk at the ATIC, in Wright-Patterson AFB. While analysing the reports with the help of Bob Jackson, Dwight arranged

for Dr Lincoln La Paz, head of the University of Mexico's Institute of Meteoritics, to look into the sightings. Subsequently, La Paz reported that he had personally witnessed the green fireballs both from the ground and from an aircraft, in the company of some distinguished scientists from the AEC Los Alamos Laboratory, and was of the opinion that the green fireballs were not meteorites. Their green colouring was too vivid, their trajectories were too flat, they were not accompanied by the sound and shock waves of natural meteorites, and, finally, they were simply *too big*.

The worst row of Dwight's marriage to date had erupted when, after ten more nights of green fireball sightings, he came under pressure to find out what was causing them. Not considering the time of year, he asked for permission to establish three cinetheodolite stations near Albuquerque, in hopes of ascertaining the altitude, speed and size of the UFOs. Unfortunately, permission came in the form of a formal, written order stating that the stations could only be set up and manned for a period of a fortnight, beginning in December and ending January - in other words, over the Christmas and New Year period.

Cursing his own stupidity, Dwight was then cursed out by Beth when he told her that he wouldn't be home for Christmas. Her Irish temper finally exploded and they had a dreadful row. Were this not torment enough, Beth then took Nichola to have Christmas with her folks in Dayton while Dwight and his three unhappy sighting teams set up their cinetheodolite stations in the desert around Albuquerque.

To make matters even worse, nothing was spotted.

In truth, Beth had never really forgiven him for their lost Christmas and New Year - particularly since no green fireballs or other UFOs materialised and it all seemed a waste of time. Now, here he was again, a mere four weeks later, in February 1949, in the middle of what he hoped was the most foolproof plan yet devised for the study of UFOs.

This time he had put together a dozen separate four-man sighting teams, with a radio operator, an instrument man, a timer, and a recorder. All the teams would be assigned a special radio frequency through which they could keep in touch with one another without being heard by outsiders. When a green fireball, or any kind of UFO, was spotted, the radio operator would immediately relay its presence to the other teams to enable them to track it simultaneously. While he was doing so, the instrument man would be

measuring the UFO's angles of elevation and azimuth, the timer would be calling out the time, and the recorder would be writing the details down. By then comparing the records of the many different teams, the speed, size, altitude and flight characteristics of the UFO could at last be accurately ascertained.

Dwight was pleased with himself.

Nevertheless, he was also cold and depressed. Cold because the desert, so hot during the day, was as chilly as Antarctica by night - or seemed to be so. Depressed because the stormy waters of his marriage had not been calmed by this latest trip and, even worse, because, yet again, they had been here four nights in a row and nothing had shown up.

Dwight was even more depressed because he was head of Project Sign and yet had never seen a UFO in his life.

Sensibly, once it became apparent to Dwight's team that nothing was happening, they decided to take turns at guard to ensure that all of them would at least get some sleep, even if only for short periods. Now it was Dwight's turn, it was four in the morning, and he had another two hours to go before he could waken one of the others.

There they were scattered around him, three men in sleeping bags, looking as dead as the flat plain of the desert and the vast, starry cosmos. Dwight's eyes felt like lead and he had to fight to keep them open, which he did by concentrating on the sky while praying for something odd or exciting to materialise.

It could be an eerie experience. The nocturnal sky played many tricks. You looked up at the stars, already dead, in the past, and you couldn't believe they weren't there, they seemed so damned real. Then, of course, the sky kept changing. Things were constantly on the move. Even a trained observer could be fooled by shooting stars, comets, meteors, lenticular and noctilucent clouds, dust and ice crystals, temperature inversions, corona discharges, plasmoids, ball-lightning, parhelia and paraselenae, or mock suns and sundogs, mock moons and moondogs, and even the ever deceiving planet Venus. In ancient times such phenomenon had been viewed as mystical visions or visitations by the gods of the sea or sky. In modern times they were often mistaken for UFOs, even by trained observers.

Just like me, Dwight thought bleakly.

Sighing, trying desperately to stay awake, he was just about to fall asleep

when he thought he saw something.

Rubbing his eyes, he sat up straight, preparing himself for another trick. What he saw was a streak of light, very low on the horizon... Impossible to tell the altitude from here, but it was definitely *moving*.

Left to right - no: up and down - a streak of white light, then two lights. Perhaps two lights blending into one and advancing towards him.

He rubbed his eyes and looked again. Maybe just a shooting star. No, it was too low for that, so it had to be something else. Perhaps a temperature inversion. Lights from somewhere far away. The headlamps of a car that was moving uphill, its lights beaming into the sky, hitting a temperature inversion, and being sent on for miles to another temperature inversion that bent it again and relayed it back to Earth to form what Dwight was seeing...

No, not that. Not mock moons or moon dogs either. The light, maybe two lights - sometimes two, sometimes one - was growing longer and thinner, stretching out like chewing gum, as it advanced across the desert floor at very low altitude.

'Jesus Christ,' Dwight whispered, wondering if he should waken the others. 'What the hell..?'

No, not low altitude. Not a single light either. Two separate lights, now bobbing erratically, beaming down on the desert floor.

Damn it, they were close. Too close to be high up. They were only a couple of feet above the ground, maybe not even that. Approaching. Coming towards him. Not accidentally at all. Not bobbing - bouncing - a sort of rattling in there, too... Then settling down and beaming over the track that led right to Dwight.

A car engine and squeaking springs.

'God damn it!' Dwight whispered.

His three companions sat up. 'What the fuck - ?' a dim voice queried. 'I'll kill the bastard in that jeep,' Corporal Mathers said. 'Thought we had us a UFO.'

The jeep took shape in the night, even blacker than the darkness, its headlights blinding Dwight as it turned off the road again and headed straight for him and the others. He was shading his dazzled eyes with his hand when the jeep squealed to a halt right in front of him, churning up clouds of sand.

His friend and sidekick, Air Force Captain Bob Jackson, waved at him and jumped down to the sand.

‘Hi,’ he said. ‘How’s it goin’?’

‘You came at four in the morning to ask me *that*?’

‘Not exactly,’ Bob said. He glanced down at the others, all sitting upright in their sleeping bags. ‘Okay,’ he said. ‘Go back to sleep. This is not for your ears. Happy bedy-bize, boys.’ When they had moaned and cursed and were settling back again, Bob looked directly at Dwight and said, more seriously, ‘I’m sorry, but this can’t wait.’ He took Dwight by the elbow and walked him away from the others, out of earshot. ‘You look cold,’ he said. Before Dwight could reply, Bob withdrew a hip flask from his flying jacket and unscrewed the cap. ‘Brandy,’ he said. ‘You’re going to need it... And not just for the cold.’

Grateful, Dwight had a good slug of the brandy and felt it burning down inside him. He had another slug, felt it going straight to his head, took note of the wondrous lustre of the stars and handed the flask back.

‘Okay,’ he said. ‘What the hell is this?’

‘Your official Estimate of the Situation,’ Dwight replied.

Dwight nodded his understanding. The UFO-related death of Captain Thomas F. Mantell over Godman AFB, Kentucky, in January last year, combined with the extraordinary UFO sighting made by Eastern Airlines Captain Charles S. Chiles and co-pilot John B. Whitted near Montgomery, Alabama, on the evening of July 24, had prompted Dwight, as head of Project Sign, to write an official, top-secret Estimate of the Situation. That Estimate had outlined the whole history of UFO sightings, including the fireballs, Scandinavian ‘ghost rockets’ and American sightings before 1947. It had concluded with Dwight’s earnestly held conviction that the UFOs were of extraterrestrial origin.

‘So why the brandy?’ he asked, gazing with instinctive, growing despair over the star-covered, dark, barren desert.

Bob sucked his breath in, then let it out again. ‘Our venerable Chief of Staff, General Hoyt S.Vandenberg, has rejected the report.’

‘*What*?’

‘On the grounds that it lacks proof.’

Dwight was stunned. ‘Lacks... *proof*?’

Bob shrugged and spread his hands in the air as if begging forgiveness. ‘That’s what he said. It’s on an official, top-secret memorandum. That... and something even worse.’

‘What could be worse?’

Bob took another deep breath and let it out slowly. ‘There’s to be a whole new policy at Project Sign. In the future, Sign personnel are to assume that *all* UFO reports are hoaxes. Not only that, but we’re to check with FBI officers, and with the criminal and subversive files of police departments, looking into the private lives of the witnesses to see if they're - quote, unquote - *reliable*.’

Dwight was livid with anger. ‘By doing that,’ he said, ‘we’ll be shifting the investigations away from the actual UFOs and on to the poor bastards who report them.’

‘You’ve got it, buddy. That’s absolutely correct. As for your official Estimate of the Situation, it’s going to be incinerated and our project will be renamed Project Grudge.’

‘Is that a sour joke?’

‘No, it’s not - though it may be a sign of General Vandenberg’s displeasure with us.’

‘What he’s saying in effect is that we’re to discourage further UFO reports and keep a low profile.’

‘Right.’

‘We now exist in name only - and that name is Project Grudge.’

‘How bright you are,’ Bob said.

He handed Dwight the hip flask. Dwight took it and walked out into the darkness and sat on the sand. He had a stiff drink, then another, trying to still his racing heart. Then he looked up at the vast, starry sky, which reduced him to nothing. Eventually, Bob came to sit beside him, trying to offer some comfort.

‘What the hell’s going on?’ Dwight asked him, unable to keep the bitterness from his voice.

‘It doesn’t need spelling out,’ Bob said. ‘It’s fair warning to us all that it’s no longer wise to open your mouth too wide about UFOs.’

‘Why?’ Dwight asked, feeling increasingly confused and nervous, looking up at the night sky.

‘You tell me,’ Bob said.

Chapter Nine

With some native guides and a modest contingent of General Stroessner's armed *Federales*, an unhappy Ernst Stoll had endured a seemingly endless journey from the dusty streets of Asuncion, along the Paraguay river by gunboat, to this jetty looming out over the muddy water. His guide, a young, gap-toothed Paraguayan called Juan Chavez, pointed proudly at the jetty and the cleared compound beneath it, as if that motley collection of thatched shacks and muddy enclosures would actually bring a smile to Ernst's face. Instead, Ernst removed his hat, wiped the sweat from inside it, spat on the deck near Chavez's feet, then put the hat back on and wiped his face.

'*Scheisse*,' he exclaimed, 'what a filthy hole!'

'Have a beer, *senor* Stoll. It will help cool you down. Do not let the sun dry you out. You need plenty of liquid.'

Juan Chavez was smiling, a sly, gap-toothed grimace, his dark, youthful eyes bright with mischief and the urge to be sly. Ernst nodded and took the beer, the bottle cold in his sweaty palm. He drank, wiped some beer from his lips and then glanced over his shoulder. A group of captured Ache Indians were at the aft end of the deck, all small, emaciated, their narrow eyes dulled by fear, dressed in rags and huddling close to one-another as if for protection. Two *Federales* were guarding them, wearing jackboots, holding rifles, both gaunt-faced and bored, chewing gum, their eyes hooded beneath tatty peaked caps, their uniforms threadworn. Ernst studied them at length, feeling only contempt, recalling his own disciplined, immaculate SS troops during the war. These *Federales* were not like that. They were a bunch of murderous morons. Corrupt and led by a corrupt leader, General Stroessner, they were men whose only purpose was survival in the most expedient manner. The scum of the earth.

'This is your first time in Paraguay, *senor*?' Chavez asked, smiling slyly to reveal his missing front teeth.

Ernst stared coldly at him. Chavez was still a teenager, but he looked

twice his age. This was due to his missing teeth, the scars on his cheeks, and the cunning in his old man's brown eyes. He would make a good pimp.

God, Ernst thought, these people!

'Yes,' he said. 'I have never been here before. This is the first time.'

'You will have to get used to it, *senor*. Strangers often go crazy here.'

Ernst had another drink, cooled his forehead with the bottle, and then surveyed the widening clearing as the boat inched towards it. This was a waterside village, its jetty thrusting out from the tangled shrubs and liana at the edge of the forest, where the banks of red mud angled down to the dark, muddied river. Some men were waiting on the jetty, wearing filthy shirts and pants, nearly all with cigarettes in their mouths, not one of them smiling.

'Heaven on earth,' Ernst said sarcastically. 'I'm sure I'll be happy here.'

'You are staying long, *senor*?'

'Unfortunately, yes.'

'A lot of Germans, former soldiers, live in the jungle, so you may find some company.'

'That's nice,' Ernst said, though he wanted no German friends, having been warned by Wilson to avoid them and keep to himself. What would happen here must remain a secret, no matter how much that cost him in emotional terms. His own regular company could only be the scum of this village; his only form of relief the occasional visit from those in Antarctica. He would live here as if in a monastery, though with some compensations.

'I trust there are some women here,' he said.

'Ah, yes,' Chavez replied, grinning lasciviously. 'You can take your pick, *senor*.'

The gunboat growled and shuddered, turning in towards the bank; it inched forward and then bounced against the tyres along the edge of the jetty. Ernst glanced back over his shoulder. One of the Ache women was wailing. A *Federale* slapped her brutally across the face and screamed a torrent of abuse. The woman's wailing became a whimper. Ernst yawned and turned away. One of the crew had thrown a rope to a man on the jetty and the latter was tying it around an upright, bending low, shouting inanely. The boat's engine cut out. A crewmember removed the gate. A plank was thrown across the space between the deck and the jetty, then tied to some uprights to form a crude gangplank. Ernst moved towards the plank, wanting desperately to get off, but Chavez

tugged at the sleeve of his shirt and motioned him back.

'No,' he said. 'First the Ache.'

Ernst stopped and stared at him, repulsed by that gap-toothed grin, but he stepped back as Chavez went to the *Federales* and bawled his instructions. The *Federales* were quick to move, venting their boredom on the miserable Indians, screaming abuse and kicking them to their feet, herding them towards the gangplank. The Indians were not so quick, weak from hunger, confused, so the *Federales* encouraged them along with vicious blows from their rifles. The women wailed and held their children, cowering from the swinging rifles, while their menfolk, uncommonly small and frail, tried in vain to protect them.

It was a familiar sight to Ernst. He recalled similar scenes from the war: the night they had left Kummersdorf and herded their slave labour, mostly wailing Jews, onto the trains in Berlin. He smiled at the recollection, feeling a stab of nostalgia, but managed to suppress it as the first of the Indians stumbled across the gangplank with their hands on their heads. Chavez was leading them down, his shirt unbuttoned and flapping loosely, his broad hat tilted over his eyes as he gave his instructions.

Ernst felt the sun's fierce heat as he studied the village, a drab collection of leaning huts made from palmetto trunks and vines, dogs and goats sniffing lethargically at the dust, babies lying on corn shucks. The poverty was total, the old and young emaciated, sunlight falling on scattered gourds, woven baskets and banana leaves, on the giant rat that raced across the clearing and vanished into the forest. Ernst looked along the jetty. The Ache Indians had just left it. They were now at the edge of the clearing with the *Federales* surrounding them. Chavez was waving his hands, telling Ernst to disembark; so Ernst finished his beer, threw the bottle overboard, watched it glinting as it bobbed along the river and was swept out of sight. Then he went to the gangplank, crossed without enthusiasm, above the muddy, oil-slicked water, and finally stepped onto the soil of what would be his new home.

God, he thought, what a piss-hole!

Chavez, an adolescent martinet, was standing beside an emaciated native in short pants and a torn, filthy shirt. Chavez waved Ernst forward. When he reached the pair, he noted that the man was elderly, had rheumy eyes, and seemed nervous.

'This is Salano Valentinas,' Chavez said. 'The head of the village. Anything you want, you ask him. He is here as your eyes, ears and hands.'

‘Welcome, *senor*,’ Valentinas said, his voice as rough as sandpaper. ‘I trust you had a good journey.’

‘Never mind my journey,’ Ernst said. ‘Just show me where I’ll be staying.’

‘Yes, *senor*, of course.’

He turned away to lead Ernst and Chavez across the clearing, past the captured Ache Indians, who were now being herded up into the backs of two trucks, the men being punched and thumped with the butts of rifles, the women and children wailing.

‘What happens to them?’ Ernst asked.

‘They will be sold as workers and whores to those living in compounds in the jungle - mostly Germans, of course. Some of them are being taken to your compound. You can do what you want with them.’

‘Does President Morínigo know about this?’

‘I don’t know. Maybe not. The *Federales* who collect them are controlled by Morínigo’s hatchet man, General Stroessner. General Stroessner knows everything.’

More than you can imagine, Ernst thought, as they crossed the clearing, surrounded by the huts of palmetto leaves and vine, scattering goats and chickens, passing Indians roasting sweet potatoes, eventually stopping at a small, badly battered, open-topped truck that was parked at the edge of the narrow track snaking into the forest.

‘I’m not staying here?’ Ernst asked.

‘No, *senor*,’ Chavez replied. ‘Your compound is ten kilometres away, hidden deep in the forest. There, even aircraft cannot see you. You will feel safe there.’

The headman, Valentinas, climbed up onto the open rear of the truck, Chavez took the driver’s seat, and Ernst clambered up beside the latter. Chavez turned on the ignition, accelerated inexpertly, and then the truck lurched off into the forest, where the trees kept the sun out. Imagining that it would be cooler in the interior, Ernst was shocked to find that it wasn’t: that the humidity was much worse, overwhelming him, almost making him gag. Feeling ill, he glanced about him, taking in the riot of vegetation, tangled vines and soaring trees in the chattering green gloom relieved only by shafts of sunlight beaming down on the steaming banana leaves. The narrow track was pitted with holes, coiling snake-like between the trees and disappearing ahead of them. Chavez was beaming with pleasure, clearly enjoying the drive; this made him look more like his

proper age, which was, Ernst surmised with disbelief, not much more than eighteen. The truck growled and coughed, bouncing roughly over potholes, racing through shafts of sunlight that beamed down through the trees and illuminated the steaming vegetation. Ernst was suffocating. He was sweating and felt feverish. Glancing over his shoulder, he saw the old man in the back, leaning forward with his chin on his raised knees, his rheumy eyes fixed on nothing.

My new companions, Ernst thought with revulsion. I'll go mad in this hellhole!

The drive seemed to take forever, an endless journey through heat and gloom, but eventually the truck burst into the sunlight of another cleared area. Lines of barbed wire formed a fence around an expansive wooden building, its sloping roof supported by tree trunks and covered in woven vines and banana leaves. Chavez drove the truck through the open gates in the fence and braked inside the compound, creating a cloud of dust.

'*Scheisse*!' Ernst barked, coughing to clear his throat of the dust as he climbed down from the truck. 'Are you trying to choke us, you fool?'

Chavez just laughed, then led Ernst and Valentinas across the clearing towards the big house with the open veranda running all the way around it, under a roof raised above the top rooms, which were open to the elements and obviously used only by the servants. The compound was busy, filled with men, women and children, most gathered around open fires, roasting sweet potatoes. Though watching Ernst's arrival with nervous curiosity, they made no move towards him.

'The barbed wire is electrified,' Chavez informed him. 'Make sure you don't touch it. So, *senor*, here we are!'

They climbed the steps of the veranda to stop under an awning of vine and leaves. A table and chairs had been placed near the entrance to the house. A native woman, too stout to be healthy, as ugly as a bat, stood by the table, wearing a white blouse and long skirt, a towel draped over her right arm. She bowed to Ernst. He simply grunted and glanced about him. On the table were two bottles of brandy, half a dozen empty glasses, and a cup filled with fat, white, wriggling worms.

Seeing what Ernst was looking at, Chavez grinned and picked up a worm. He watched it wriggling between his fingers for a moment, then bit off its head, spat

it out and swallowed the rest of it. 'Koro worms!' he explained, picking the cup off the table and holding it out to Ernst. 'Try one, *senor*!' When Ernst shuddered with revulsion, Chavez chortled and put the cup back down. 'You will soon learn to enjoy them,' he said. 'You will learn to enjoy many strange things here. Please, *senor*, take a chair.'

Ernst took one of the wooden chairs by the table, placing his pistol and holster upon it. The native woman then knelt in front of him, to laboriously pull off his boots and wipe his feet with the towel. When this was done, she shuffled backwards, still on her knees, until Chavez barked another instruction at her. Standing upright, she filled the two glasses with brandy and handed them to Ernst and Chavez. The latter offered his gap-toothed smile and held his glass up in a toast. Ignoring him, Ernst drank most of the brandy in one thirsty gulp. Casting his gaze over the compound, which resembled an untended farmyard, covered in smoke and filled with worthless human livestock, he realised that he was not thrilled to be here.

'So,' he said, not trying to hide his bitterness, 'this is it: my new home.'

'Yes, *senor*,' Chavez said.

'And this so-called headman – ' Ernst indicated Valentinas with a contemptuous wave of his hand – 'now works for me.'

'That is correct, *senor*. He will translate and tell you all you need to know. He will also take care of the supplies, which will be shipped in from Asuncion every month. He already has his instructions, *senor*, and will not let you down.'

'I hope not,' Ernst said.

Chavez finished his brandy and placed his glass back on the table. 'Now I must be off, *senor*. I go back to Asuncion. I work on the gunboat that sails regularly between there and here, so we will meet quite a lot. If you need me, just call. Goodbye… How you say it? *Auf Wiedersehen*! Until the next time, *senor*.'

Chavez waved, sauntered in a leisurely manner back to the truck, climbed in and drove out of the compound with a lot of rattling and banging.

'*Dreck*!' Ernst muttered, feeling tired and impatient. Pouring another stiff brandy, he ordered Valentinas to gather together on the veranda the women selected as potential household staff. Valentinas brought a dozen of them, some young, others old. After inspecting them, as he had often done in Nordhausen - pinching here, prodding there, checking their teeth - Ernst rejected the eldest and

most ugly, picking mostly the young to serve him, with one middle-aged crone to be in charge of them. Those chosen bowed solemnly, fearfully, and then were ushered by the old crone up the stairs at the side of the house, to sort themselves out on the open floor beneath the raised roof. Until Ernst decided otherwise, that's where they would live from now on, separated from family and friends, working only for him.

He had another drink of brandy, feeling marginally better for it, then strapped his holster on and stepped off the porch, followed by the obedient Valentinas. Disgusted by the seemingly disorganised state of the compound, he told Valentinas to get rid of the open fires and move the natives back into the ramshackle living accommodations located on both sides of the clearing. The natives so housed would then be used as the labour force required to dig out the centre of the compound and turn it into a reinforced, concrete landing pad for the flying saucers. Also, though the barbed-wire fence was already electrified, he wanted to erect watchtowers and have them manned at all times with machine-gun crews.

Ernst barked his numerous instructions with renewed, drunken vigour while Valentinas, always standing in his shadow, nodded affirmatively.

'Any mistakes,' Ernst informed him, 'and you'll be dealt with personally, harshly, by me. Understood?'

'Yes, *senor*.'

The sun had started sinking when Ernst returned to the house, this time letting Valentinas lead him inside to show him around. There were two floors beneath the open floor at the top, both with balconies overlooking the living room. The beds in the rooms located along the balconies were imported four-posters covered in mosquito nets, and the bedroom furniture, Ernst noted, was mostly imported German antique. The downstairs living room, however, was filled with well-cushioned bamboo chairs and sofas, bookcases of waxed pine, and low tables carved from local woods. All in all, it was surprisingly comfortable, if a touch too exotic.

Satisfied, Ernst tackled a light supper of bread, cheese and fresh fruit, all washed down with an intemperate amount of brandy. Now more drunk than he had been since leaving Germany, he thought of his homeland, grew unexpectedly maudlin, and had vivid recollections of the women he had known during the war: that lascivious stripper, Brigette, who had performed in the Französischestrasse; that Polish woman, Kosilewski, who had pleasured him to

betray him; even Ingrid, his wife, who had loved him but eventually came to hate him, before dying with his children in an air-raid. Those and the others, some willing, some not, some whores and some unfortunate camp inmates used in military brothels. Those women and many more. So many women. So many ways.

Ernst remembered and was inflamed, wanting to have them all back, and so barked for Valentinas to bring him a girl - the youngest and prettiest of those upstairs. His wizened servant soon did so, fetching one from the top floor, and then he beat a hasty retreat when Ernst glared fiercely at him.

'Yes, *senor*. Of course, *senor*! I will be on the veranda if you need me. I'll sleep out there, *senor*.'

Satiated with food and drink, Ernst tried to undress the young girl, a mere stripling, and beat her badly when she tried to resist. When even the beating failed to work, but simply reduced her to tears, he threw the sobbing creature onto the floor and stormed out to the veranda.

'I will show you what discipline is,' he said to Valentinas, 'and you can tell all the others. Bring in the girl's mother.'

When the girl's terrified mother was brought into the living room, Ernst again told the sobbing girl to remove her clothes. When the girl refused to do so, Ernst unholstered his pistol and placed it to the head of her mother, who was now also sobbing.

'Tell her that if she doesn't do as I say, Valentinas, I'll blow her mother's brains out.'

'Yes, *senor*. Of course.'

Valentinas relayed the message and the sobbing girl, staring at her fearful mother, finally nodded agreement. The mother, still crying, was led out by Valentinas, as Ernst ordered the trembling girl to strip and lie back on the floor. When she had done so, he removed his own clothes, then stood over her, legs outspread, and told her to raise herself to her knees. Trembling, her eyes as big as spoons, she did as she was told.

'You will do everything I tell you,' Ernst said. 'Do you understand what I'm saying?'

'Yes,' the girl whispered, speaking English, which Ernst understood.

'Your fear excites me,' Ernst told her. 'Your degradation is my joy. Now dry your damned eyes.'

Placing his hands on the back of her head, he pulled the girl towards him,

closing his own eyes in expectation, making the most of his new life. The days would be long here.

Chapter Ten

The saucer was one of the early models, a mere thirty feet in diameter, descending vertically, silently, towards a dark field in Virginia, its lights flashing on and off, the seamless surface a silvery white, gleaming in a vast sea of stars, parallel to a Gorgonzola moon. Reaching the ground, it didn't quite touch it, but merely hovered just above it, swaying slightly from side to side, until its four hydraulic legs emerged obliquely from its base and dug into the soft earth. The saucer's lights blinked out, its silvery-white sheen turned to grey, then its steps angled down from the base.

Two men in black coveralls dropped out, followed by Wilson.

Straightening up, Wilson glanced around him, taking in the grassy hills, the empty fields, the shivering trees, then he walked across the grass to the unfenced road, where a jet-black limousine was parked. Its windows were tinted and the headlights turned off, but its rear door opened as he approached. When he slipped into the car, the flying saucer in the field took off again. It rose slowly, almost silently, to a very great height, its lights flashing on and off around the rim to form a kaleidoscope. Eventually it became dime-sized, then a mere spot of white light. That light hovered in the air, as if just another star, then it suddenly shot away and disappeared.

Wilson took the rear seat in the limousine. Beside him, Artur Nebe was wearing a grey suit with shirt and tie, looking uncomfortable out of uniform.

Too many years in the SS, Wilson thought, with a pistol always holstered on his waist. He must feel naked without it.

'*Guten tag*, Nebe,' Wilson said. 'How is life in the real world?'

'I don't like all the politics,' Nebe said. 'I should be back in Antarctica.'

'You will be. Today. Once we get this meeting over with. After that, you'll have no reason to stay here. You'll come back with me.' He noticed that Nebe was staring intently at him. 'What is it? My face?'

'Sorry, sir. Yes, you look different. About twenty years younger.'

‘Not like an eighty-two-year old?’

‘More like sixty-two.’

Wilson smiled. ‘Plastic surgery and skin grafts. Dr King is doing a good job of preserving me in particular and researching longevity in general. I’ve also had certain joints replaced with artificial ones, steel and fibre, which King produced during his on-going cyborg research.’

‘He certainly seems to be doing well.’

‘The knowledge that he can experiment without restraints of any kind has sent his imagination soaring and filled him with energy. He’s become a man obsessed with his work and now cares for little else. He doesn’t have to be watched any longer; his love of work has enslaved him. He’s all ours, Nebe. Completely.’

‘And his other needs?’

‘We’ve given him total freedom when it comes to the comfort girls. The sex is all he really wants when he’s not working. The needs of most men are basic.’

Nebe offered a rare, chilling smile, being himself addicted to the abducted girls used as whores, or ‘comfort girls’, in the brothel in the Antarctic colony. ‘I’m sure he didn’t get sex like that in Hendon, England. That alone should enslave him.’

‘It’s certainly helped him forget his wife and children. Family love treads on thin ice.’ Wilson rolled his window down and gazed out at the moonlit fields. The trees were silhouetted against a star-filled sky; the wind scarcely stirred. ‘When is General Samford expected?’

Nebe checked his wristwatch. ‘He should be here in five minutes. He was told to be punctual.’

‘Who arranged the meeting?’

‘A CIA agent, Sam Fuller. I’d heard he was on your trail. He was in charge of disinformation regarding the Socorro crash, back in 1947, and he went to have a talk with Mike Bradley.’

‘The one who pursued me during the war?’

‘Yes. Wounded at Kiel harbour. The explosion set by Ernst Stoll. You paid him a visit the night of the Socorro crash and warned him off his UFO investigations.’

‘Ah, yes, I remember. Have you any idea what he told Fuller?’

‘According to Fuller, nothing. But just knowing that Fuller had been to see him made me suspicious. Then, when he also went to see von Braun and Miethe,

I knew it was us he was after.'

'So?'

'I contacted him in Washington DC. A meeting was arranged. Same place - right here - and same time. When we met, I told him I knew what he was after and that we were responsible.'

'Did you tell him where we're located?'

'I confirmed it. He already knew, of course, though not in too much detail. He'd interrogated Captain Schaeffer of U-boat 977, the one that took us to Plata del Mar, Argentina, and worked the rest of our route out from there. So he knows we're in Neu Schwabenland, though he still doesn't know the exact location. First US confirmation of the existence of our flying saucers came, he said, through the investigations of Operation Paperclip at the close of the war. Mike Bradley also worked on that, which is why he turned up at Kiel and later became obsessed with UFOs. That knowledge, as well as Bradley's turnaround after the Socorro crash, explain why Fuller went with First Lieutenant Harris to see him in Socorro. Now, a select few in the White House, the Pentagon, and the CIA, including Fuller, know we're hidden somewhere in Antarctica. They also know we have flying saucers more highly developed than those being constructed in the United States and Canada.'

'What made General Samford change his mind about meeting us? When I personally tried to set up this meeting, his minions said, "No deal".'

'Because you were using a pseudonym then - calling yourself Aldridge - and they didn't relate the name to Wilson, which is who they were looking for. Also, though they knew we were in Antarctica, they didn't believe how advanced our saucers were and assumed we were just a bunch of fanatical Nazis not much different, though possibly crazier, than those who had fled to Paraguay. Reportedly, Samford, protective of his position as US Head of Intelligence, was outraged that his minions would even consider such a meeting. I believe he described us as a bunch of escaped war criminals and demanded that an expeditionary force be sent to Antarctica to get us out and bring us back to the United States, to be tried as war criminals.'

'Rear-Admiral Byrd's Operation Highjump.'

'Correct.'

'Which we put to rout. Byrd's expedition was then cut short. The official explanation was hurricane winds.'

'Also correct. But Samford still refused to believe we were that advanced

technologically and asked for Byrd to be psychiatrically evaluated. He also demanded that all of Byrd's references to our flying saucers be removed from his official report.'

'So what made the morally outraged US Head of Intelligence change his mind?'

'I arranged for one of our saucers to hover over his house one evening, in the middle of a party he was giving in the garden of his home in Alexandria, Virginia. A lot of other top brass and their wives were in attendance and all of them saw the saucer. It was hovering right over them, casting its shadow on the lawn. *That's* what changed the stubborn General Samford's mind. He's a man who sees reason.'

Wilson smiled. 'It must have come as quite a shock to Samford's guests.'

'It sure did. All of those present were sworn to secrecy. When a couple of the wives gossiped about the incident, their husbands were transferred to Alaska. That was fair enough warning to the others. No one's talked since.'

'Who would believe them anyway? Project Grudge is now treating all those who report UFOs as cranks. Witnesses are afraid of public ridicule, so those best equipped to confirm the reality of the saucers - radar operators and pilots - are learning to keep their mouths shut. We have little to fear.'

'There they are,' Nebe said softly.

Looking beyond the driver's head, Wilson saw the headlights of another car approaching along the dark road. It slowed down and pulled into the verge, then stopped about twenty yards from the limousine. Another set of headlights appeared behind it, stopping further away. When the lights of both vehicles blinked out, Wilson saw that the other vehicle was an army troop-truck.

'Did you know about this?' he asked of Nebe.

'I told him he could bring some protection. I didn't mean a whole troop-truck.'

'No problem,' Wilson said.

He stepped from the limousine as the troops were spilling out of the truck to form a cordon across the road. All of the troops were armed. General Samford, in uniform, followed by a man in plain clothes, clambered out of the other car as Nebe joined Wilson. The two groups approached one another, stopping about three feet apart.

With his lean, almost ascetic face, General Samford did not look like a man to take fools lightly. Fuller, on the other hand, was darkly handsome, clearly

cynical, deceptively relaxed and slyly watchful. He looked like a man who could handle trouble and probably relished it.

Four of the armed troops came up behind Samford and Fuller, stopping a few yards farther back.

Nebe glanced at Fuller. 'So, we meet again.' Fuller just nodded. Nebe indicated Wilson with his finger. 'This is him,' he told Fuller. 'Herr Wilson, this is CIA agent Sam Fuller, and...'

'General Samford,' Fuller confirmed. 'Head of US Intelligence.'

'I believe you wanted a talk,' Samford said, sounding like a man suppressing anger. 'Well, here I am.'

'Are you nervous, General?'

'What?'

'You've brought a lot of armed troops to what I'd hoped would be an informal, friendly meeting.'

'I don't have friendly meetings with escaped war criminals. Nor do I like traitorous Americans and their Nazi cohorts.'

Wilson was amused. 'You wrong me. I'm not a man who changes sides. I've always been exactly what I am, which is a man on his own. I can't be a traitor, because I've never been a patriot. I go where my work takes me, General Samford, whether it's here, Nazi Germany, or the Antarctic. You're a soldier, General. I'm a scientist. That's the only difference between us.'

'You're just a goddamned Nazi,' Samford said. 'You and your whole bunch.'

'I am not, and never have been, a Nazi, General Samford. I have no political allegiances, no religion, no belief in any government, left or right. I live for my work, which is science, as you live for the army. You've chosen what you want to be, General, and I've done the same. We're two sides of the same coin.'

General Samford was obviously outraged by the very suggestion, but before he could explode, Fuller said soothingly, 'Okay, you've got us both here, Wilson. Now what do you want?'

'Can I take it you're both here with the full knowledge of the head of the Air Matériel Command?'

'General Vandenberg knows we're here,' Samford said, practically gritting his teeth. 'Now what do you *want*?'

'We want to trade,' Wilson said.

For a moment even Fuller looked dumbfounded, but General Samford could barely contain himself.

'*What*?' he asked, as if choking on a bone.

'You heard me,' Wilson said. 'As you clearly know, we're not the only ones with flying saucers, though ours are certainly the most advanced. The US and Canada are both involved in similar construction projects and have already had plenty of test flights. The Harold Dahl and Kenneth Arnold sightings of June 1947, over the Cascades, were actually of crude US-Canadian saucers being constructed in secret in the wilds of Canada. Your saucers, General Samford, not ours. But no matter how long you take or how much you spend, your saucers can never be that advanced without further knowledge of my technology. I, too, have certain needs, General, so I'm willing to trade.'

'I don't – '

'Why would you do that?' Fuller interjected, his gaze ever watchful and direct. 'I mean, that would be inviting our technology to catch up with yours, and then...' He shrugged and grinned. 'We'd be evenly matched. Then we'd come in and get you.'

Wilson was unperturbed. 'Not quite true, Mr Fuller. In return for what I need, I'll trade certain secrets of my technology, but I'll be doing it a little at a time and only when I've already surpassed what I'm offering to you. Though this will benefit you greatly, you'll always remain behind us, which ensures that we'll retain the technological advantages we have at this time.'

'A balance of power,' Samford said.

'You might call it that,' Wilson replied.

'A seesaw arrangement, right? A tricky manoeuvre.'

'That's right, Mr Fuller.'

'And just what are we supposed to hand over for all this?' Samford asked, still sounding choked.

'I'm in constant need of various mass-produced components and equipment, as well as food and other supplies. We shipped a tremendous amount of it in throughout the war years, but it's finally beginning to run out and our saucers are not yet large enough to bring in the bulk we need. You'll do that for us.'

General Samford was red-faced, clenching and unclenching his fists, but Fuller seemed merely intrigued. 'If we do that for you,' he pointed out, 'we'll find out exactly where you are.'

‘I don’t care,’ Wilson said. ‘That information won’t help you. You can’t get conventional aircraft anywhere near us and your saucers have a long way to go before they can be used to combat us, either with troops or with weapons.’

‘So if we can’t get in with conventional aircraft, how will we get the supplies to you?’

‘We’re located at the base of a deep, hidden gorge in Neu Schwabenland, or Queen Maud Land, which isn’t accessible by conventional aircraft. You’ll be given a location at the other side of that mountain range. There we’ve already hacked storage spaces out of the base of the mountain and will soon have them manned all year round. You’ll drop the supplies, and we’ll then pick them up and transport them back here in our saucers. As and when required.’

‘But eventually,’ Fuller said with a smile not reflected in his cold, steady gaze, ‘with the technological information you’ll be feeding us in return, bit by bit, our technology, if never quite matching yours, will be enough to give us saucers capable of flying down into your hidden base.’

‘By which time,’ Wilson replied, ‘we’ll have developed some highly advanced form of defence to keep out unwanted saucers - infrasound barriers or heat shields. We’re already working on those.’

‘You may not succeed,’ General Samford said hopefully, ‘in which case we could eventually get at you.’

‘That’s a chance I’m willing to take,’ Wilson said. ‘And I don’t take chances lightly.’

Samford and Fuller glanced at one another, the former outraged, the latter cynically amused.

‘What if we reject your proposal?’ Samford said. ‘Seems to me, we can just leave you in the Antarctic and forget your existence. A few saucers flying here and there aren’t going to give us much trouble. Most folks already think the saucers are piloted by Little Green Men or only witnessed by cranks. What can you do to us?’

‘Remember the Mantell crash?’ Nebe asked, breaking his icy silence. ‘The first US Air Force officer to die chasing a UFO?’

‘Yes,’ Samford said, ‘I remember. He either died chasing a Rawin weather balloon or because of a lack of oxygen when he foolishly climbed too high.’

‘It’s a well-known fact,’ Nebe said softly, chillingly, ‘that Mantell’s last words were about something metallic and tremendous in size. That was our saucer.’

Samford glanced at Fuller, then at Wilson. ‘I don’t believe you’re that far advanced,’ he said. ‘I think Mantell died from a lack of oxygen, maybe chasing Venus, so I’m calling your bluff.’

‘You reject my proposal?’ Wilson asked.

‘Yes.’

‘Then I’ll give you proof, General Samford. I’ll give you, the Pentagon and the White House the kind of proof you won’t readily forget. Later this month my flying saucers will surround Washington DC. Some will be piloted; others will be small, remote-controlled devices of the kind called “Foo-fighters” during the war. For your entertainment, we’ll even fly around the White House. We’ll cause chaos on every radar screen in the area. If your aircraft try pursuing us, we’ll play cat-and-mouse with them. Should that not make you change your mind, we’ll repeat the performance a week later. I think, General Samford, that your superiors, including the President, will think differently after this demonstration.’

‘I’ll believe that when I see it,’ Samford said. ‘Now go to hell, Wilson.’

Wilson merely smiled and then returned with Nebe to the limousine. As he was slipping into the rear seat, he glanced back over his shoulder and saw Samford in angry consultation with Fuller. Fuller was shaking his head, as if saying, ‘No,’ but Samford was obviously overruling him. As Wilson closed his door, Samford shouted at the armed soldiers. Instantly, they readied their weapons and raced forward to surround the limousine.

‘Too late,’ Nebe said.

Suddenly, a great pyramid of dazzling light beamed down over the advancing soldiers. A bass humming sound, shaking even the limousine, was accompanied by a fierce, swirling wind that bent the trees on either side of the road and bowled the advancing soldiers over. Their weapons fell from their hands as they were swept across the road, bellowing with fear and pain as what seemed like a tornado slammed them into one another or against the trees.

Wilson caught a glimpse of General Samford crouching low, holding his peaked cap on with one hand, shading his eyes with the other, squinting up at that dazzling, descending, pyramidal light as Fuller tugged him back to their own car, just outside the roaring whirlpool of wind, now filled with flying leaves, blades of grass, pebbles and dust.

‘Let’s go!’ Nebe snapped.

The driver of the limousine reversed away from the tornado created by the

descending saucer and then headed back across the field. There, a second saucer, thirty foot in diameter, had descended and was resting on its four hydraulic legs, gleaming silvery in moonlight. The driver stopped about twenty yards from the parked saucer, letting Wilson and Nebe climb out, then he reversed again and bounced back across the field to the road.

The first saucer was now visible, hovering high in the sky, its base spinning and emitting that great pyramidal light, creating the hurricane-like wind that was slamming the soldiers against the trees or causing them to roll between them, across the grass verge beyond the road.

The limousine raced away as the dazzling light blinked out, abruptly returning the night to darkness. The saucer ascended vertically, rapidly, until it was just a pinprick of light positioned high in the sky, a single star amongst many. Eventually, the swirling wind settled down, letting the bruised, dazed soldiers stand upright again. They all looked up in awe as the second saucer, containing Wilson and Nebe, also ascended vertically, hovered briefly in the sky, then shot off at unreal speed, heading south before blinking out.

'We have a problem,' Fuller said.

Chapter Eleven

The telephone call came during supper. Nichola, now four years of age, still blonde and cuter than ever, was no longer in her high chair, but sitting instead with Dwight and Beth at the table, having cookies and milk while her parents contented themselves with coffee. It was the month of July in 1952. Though it was pretty late in the evening, the sun hadn't sunk yet and the velvet sky was streaked with pink where the stars didn't show. When the telephone rang, Beth stared at it but made no move to pick it up.

'Okay,' Dwight said, feeling guilty and tense when he saw the look on her face. 'It's for me, right? I'll get it.' Though Beth was sitting beside the phone, he got up and walked around the table to pick it up, which placed him practically against her shoulder and made her lean away from him. 'Hi,' he said. 'Cap'n Randall.'

'Hate to call at this time of night,' Bob Jackson said, 'but you have to come over here. They want you right now.'

'Over where? To the ATIC?'

'Yeah, right. That's where I'm calling from. They want you immediately.'

'Who the hell are *they*?'

'Members of the Technical Intelligence Division, Air Matériel Command. They want to talk to you about what we've been doing since Project Sign was dissolved and replaced with Project Grudge.'

Even though now well prepared for the unexpected, Dwight was astounded to hear this. 'Now? At *this* time?'

'Yeah. They got me out of bed. They appear to have a very urgent need for some detailed case histories. They've also come to discuss your complaints about how they've been treating us.'

'Shit!'

'No shit, baby.'

'Okay,' Dwight said, 'I'm coming.' He dropped the phone and and stared at Beth, trying to hold her gaze, though he couldn't help shrugging forlornly. 'Top

brass. I swear, Beth, I wasn't expecting this. Apparently they want to interview me - right now, in the ATIC. They're waiting over there for me.'

'Right now? This evening?'

'Unbelievable, right?'

Nichola was breaking up a couple of cookies and spreading the crumbs out on the table.

'Why don't you tell them to go to hell? Tell them you have a right to your own life, even if in the Air Force.'

'I can't, Beth. It's top brass.'

'That doesn't give them the right. Lord knows, they're working you into the ground already; you have a right to your own time.'

'It must be something special, Beth.'

'Oh, yeah,' she replied. 'Something special. Every time we try to plan something, get together, something special comes up. This marriage won't last the course, Dwight.'

'Bullshit.'

'No, it's not. You work night and day for those people and get no thanks for it. They've even consistently denied you promotion, which is practically punishment. So what's the point, Dwight?'

Not knowing what to say, Dwight glanced down at his daughter. She was licking her index finger and drawing funny faces in the crumbs from the cookies, her brow wrinkled in deep thought. She was also whispering words he couldn't hear and perhaps wouldn't understand.

'Promotion's not the point,' Dwight said. 'I do this because it's my job and that's all there is to it.'

'Promotion may not be the point, but punishment is. They've consistently denied you promotion and you know why that is. It's the UFOs, Dwight. They don't approve of what you're doing. It's a pure PR exercise and someone had to be landed with it. You got the job, but they don't want you to succeed and so they're making it hard on you. God, Dwight, you're a fool!'

Dwight knew it was true. He just didn't know the reasons. On the one hand, the UFOs were treated as a threat to national security, on the other the reporting of them was discouraged. It just didn't make sense. No more than it made sense to establish a UFO programme and then block every move its members made. Beth was right - it was a goddamned PR exercise... and maybe he was the fall guy. He might find out tonight.

After kissing Nichola on the head, making her giggle and squirm, he went to the closet and pulled out his light jacket. He was wearing civilian clothes, his home clothes, and didn't intend changing into his uniform at this time of night. Let the bastards see that at least. Putting his jacket on, he went to the door, opened it, but then turned back to Beth.

'I used to count on your support,' he told her, 'but these days I only get flak. What happened, Beth?'

'You traded me in for your work.'

He stared steadily at her, feeling hurt, then stepped out onto the porch, letting the door snap shut behind him. The pink sky was turning darker, letting the stars come out, and he stood there for a moment, gazing across the airstrip, taking comfort from the aircraft hangars and the many parked planes silhouetted in the twilight. Seeing them, he was reminded of how much simpler life had been when he'd been flying the B-29s over India, China and the Pacific during World War II. Now the US was fighting a war in Korea. Dwight sometimes wished he could take part in it, instead of remaining here to chase UFOs and dodge flak that came from his superiors and Beth instead of the enemy. Sighing, still feeling wounded and hurt, he started down the steps to the yard.

The door opened and snapped shut behind him, then he heard Beth call out to him. When he turned back, she hurried down the steps to cup his face in her hands.

'Oh, honey,' she said, shaking her head in a woeful manner and letting her thumbs slide down to his lips, 'I'm so sorry. I really am. It's not you, sweetheart – it's what they're doing to us. To *us*. The three of us. We're a family, a good family, a team, and they could tear us apart. That's what frightens me, Dwight.'

'There's no need,' he replied. 'There's no danger of that, Beth.' He removed one of her hands from his cheek and pressed his lips to it, moved by a rush of emotion that brought tears to his eyes. 'We'll be okay. I promise.'

'I worry,' she insisted. 'There's more than one kind of danger. There's the threat to this marriage – that's one - but we're okay if we know that. What we can't fight, what I think we can't defeat, is what happens to so many of those who do the work that you do. That's what worries me most, Dwight.'

He knew what she meant and was troubled to be reminded of it. Too many Air Force officers involved in UFO investigations ended up with career problems, broken marriages and ill health. Too many were denied promotion,

punished for cooked-up misdemeanours, or posted to inhospitable climes, often separated from their families. Too many for comfort. Beth had cause for anxiety.

'I love you,' she said. 'You know that, honey. I'm just concerned for you.'

'I love you, too, Beth, but I can't help your concern.'

She sighed. 'No, I guess not. I'll just have to be stronger. We're a family, right, Dwight?'

'Yeah,' he said. 'A real family.'

'Then that's all that matters.' She embraced him and kissed him, clinging passionately to him, then let him go and wiped tears from her eyes. 'You hurry on, now. Take no mind of me. I'll be warming the bed, Dwight.'

'That sounds nice.' He turned away, wiping his own eyes, and hurried along the sidewalk, now deserted at this late hour, past the other houses of the officers quarters, heading for Wright Field, not looking forward to the meeting, but protected by Beth's love.

Chapter Twelve

The atmosphere in the ATIC operation's room was decidedly tense. Three US Air Force generals were sitting around Dwight's desk, all with thick wallet folders in front of them. Dwight's friend, Captain Bob Jackson, had placed a second chair beside Dwight's, behind the desk, and was sitting in it, facing the three generals. Seeing Dwight, he stood up and introduced him to generals Lamont, Conroy and Hackleman. After exchanging salutes, Dwight took the chair beside Bob, facing the generals over his own, paper-littered desk.

A brief, uncomfortable silence ensued, until General Hackleman, silvery-haired, deeply suntanned and lined, coughed into his clenched fist, clearing his throat, then said, 'Sorry to call you out at this time of night, Cap'n, but this matter is urgent.'

'Yes, sir,' Dwight said.

'It's come to our attention that contrary to air force policy, as laid down for Project Grudge, you've been openly supporting the UFO hypothesis and insisting that you have evidence for the physical reality of the phenomenon.'

'I think it's important, sir. And I should remind you that Project Grudge was replaced in April by Project Blue Book, for which there's a more positive policy.'

'I know all that,' General Lamont said testily, 'but we still want to hear what evidence you're basing your assumptions on.'

'Analysis of the photos of UFOs, done in the specialist Photo Reconnaissance Laboratory, here at Wright Field, have confirmed the saucer-shaped configuration of the sighted UFOs.'

'We know all that as well,' Lamont interrupted rudely. 'We've seen the photographic evidence. But what makes you think they're real, solid objects?'

Dwight refused to be bullied. 'With the saucer-shaped configuration and manoeuvring capabilities of the UFOs verified, what was needed was confirmation of what appeared to be their unusually large size and remarkable top speeds, as well as the fact that they appear to be able to hover, almost

motionless, in the air. Regarding this, we received a report from Navy Commander R.B. McLaughlin, who'd worked throughout 1948 and 1949 with a team of engineers, technicians and scientists on a classified Skyhook balloon project, located in the Navy's top-secret guided-missile test and development area in the White Sands Proving Ground, New Mexico.' Dwight took his time leafing through one of his wallet folders, before pulling out a report and speaking while glancing repeatedly at it. 'According to that report, on April 24, 1949, at ten hundred hours in an absolutely clear Sunday morning, when McLaughlin and his team were preparing to launch one of their big Skyhook balloons - a hundred feet in diameter - the whole crew saw a UFO which, though high up, was clearly elliptical in shape and had a whitish-silver colour.'

'Could have been another Skyhook balloon,' Hackleman said. 'Or maybe even Venus.'

'No, sir,' Dwight replied. 'Neither. With a theodolite, stop-watch, and 25-power telescope, Commander McLaughlin's team was able to track the UFO as it dropped from an angle of elevation of forty-five degrees to twenty-five degrees, then abruptly shot upward and disappeared. Even after putting a reduction factor on the data recorded on the theodolite, Commander McLaughlin estimated that the UFO was approximately forty feet wide and a hundred feet long, had been at an altitude of fifty-six miles, and was travelling at approximately 2,000 miles per hour.'

'That's impossible!' General Conroy snapped angrily.

'I'll admit, sir, that there's some legitimate doubt regarding the accuracy of the speed and altitude figures that Commander McLaughlin's team arrived at from the data they measured with the theodolite. This, however, doesn't mean much in the sense that even if they were off by a factor of one hundred per cent, the speeds and altitude of the UFO would be extraordinary. I'd also remind you that various members of McLaughlin's team studied the object through a 25-power telescope and swore that it was a flat, oval-shaped object.'

'And I'd remind *you*, Cap'n Randall, that Commander McLaughlin had no right to release that report, let alone write the article he published in *True* magazine in March the following year. Small wonder he's been transferred back to sea.'

'With all due respect, sir, matters of naval discipline are not my concern. I was sent the report to read and analyze, which is just what I've done. In my view it confirms that the UFOs, or flying saucers, can fly at

extraordinary speeds and reach remarkable altitudes.'

'You say these cinetheodolite cameras aren't always accurate,' General Conroy said. 'Just what are they and how do you use them, Cap'n?'

'A cinetheodolite is similar to a 35-mm movie camera, except that when a moving object is photographed with it, the developed photograph will also contain three readings that show the time the photo was taken, the azimuth angle, and the elevation angle of the camera. If two or more cinetheodolites photograph the same flying object, it's possible to obtain rough estimates of the object's size, speed and altitude. I stress *rough* estimates because cinetheodolites don't give accurate readings.'

'Nevertheless, you insist that the UFO tracked by McLaughlin's team was moving remarkably fast.'

'Yes, sir.'

'How fast?'

'A lot faster than any jet plane we know about.'

The generals glanced uneasily at one another, then returned their attention to Dwight.

'Okay, Cap'n, that accounts for configuration and speed. What's convinced you that these craft are real, solid objects?'

'Two incidents.' Dwight glanced at Bob, received a slight, knowing smile, then flipped over more pages in his folder and spoke as he read. 'On April 27, 1950, shortly after a guided missile had been fired from the White Sands Proving Ground in New Mexico and fell back to earth, the camera crews of Air Force technicians spotted an object streaking across the sky. As most of the camera stations had already unloaded their film, only one camera was able to catch a shot of the UFO before it disappeared. That photo showed only a dark, smudgy object - but it also proved that whatever it was, it had been *moving*. A month later, during a second missile test, another UFO appeared. This time, two members of the camera teams saw it and shot several feet of film as the - quote - bright, shiny object - unquote - streaked across the sky. That film was subsequently processed and analysed by the Data Reduction Group at White Sands. By putting a correction factor in the data gathered by the two cameras, they were able to calculate that the object was higher than 40,000 feet, travelling over 2,000 miles per hour, and was approximately 300 feet in diameter.' Dwight looked each of the generals in the eye. 'I concede that these figures are only estimates, based on the possibly erroneous correction factor. However, they

certainly prove that *something* had been in the air and it had been *solid* and moving very fast.'

'Enough to convince you of the reality of the phenomenon,' General Conroy said drily.

'Yes, sir. In combination with the two major flaps that came the following year: the Lubbock Lights and the Fort Monmouth sightings.'

Again the three generals stared at one another, this time even more uneasily. When General Hackleman turned back to Dwight, his hazel eyes were troubled.

'Ah, yes,' he said. 'We were informed that you'd investigated both cases personally. Kindly give us your report on both events. In precise detail, Cap'n.'

Dwight began to feel nervous. This was no casual interrogation. These three senior officers were concerned at what he knew and obviously not pleased with the extent of his knowledge. Nevertheless, they were demanding a detailed report, so, after glancing nervously at the equally concerned Bob Jackson, he picked up another file.

'The Lubbock affair,' he read, 'began on the evening of August 25, 1951, when an employee of the Atomic Energy Commission's supersecret Sandia Corporation – '

'Who?' General Lamont asked abruptly.

'I'm sorry, sir, I can't reveal that. I can only say that he had a top "Q" security clearance.'

The generals glanced uneasily at one another. 'Okay,' Lamont said. 'Continue.'

'This Sandia employee looked up from his garden on the outskirts of Albuquerque, New Mexico, and saw a huge aircraft flying swiftly and *silently* over his home. He later described it as having the shape of a flying wing, about one-and-a-half times the size of a B-26, with six to eight softly glowing, bluish lights on its aft end.'

General Lamont coughed into his clenched fist.

'That same evening,' Dwight continued, 'about twenty minutes after this sighting, four professors from the Texas Technological College at Lubbock – a geologist, a chemist, a physicist, and a petroleum engineer - observed a formation of lights streaking across the sky: about fifteen to thirty separate lights, all a bluish-green colour, moving from north to south in a semicircular formation.'

‘You can’t name the four professors either,’ Conroy said sardonically.

‘No, sir, I’m afraid not.’

‘Keep reading, Cap’n.’

‘Early in the morning of August 26, only a few hours after the Lubbock sightings, two different radars at an Air Defence Command radar station located in Washington State showed an unknown target travelling at 900 miles an hour at 1,300 feet and heading in a northwesterly direction. On August 31, at the height of the flap, two ladies were driving near Matador, seventy miles northeast of Lubbock, when they saw a pear-shaped object about 150 yards ahead of them, about 120 feet in the air, drifting slowly to the east at less than the take-off speed of a Cub airplane. One of those witnesses was familiar with aircraft - she was married to an air force officer and had lived on or near air bases for years - and she swore that the object was about the size of a B-29 fuselage, had a porthole on one side, made absolutely no noise as it moved *into* the wind, and suddenly picked up speed and climbed out of sight in a tight, spiralling motion. That same evening, an amateur photographer, Carl Hart, Jr., took five photos of a V formation of the same bluish-green lights as they flew over his back yard. Finally, a rancher’s wife told her husband, who related the story to me, that she had seen a large object gliding swiftly and silently over her house. That object was observed about ten minutes after the Sandia Corporation executive had viewed *his* object. It was described as – I quote – “an airplane without a body”. The woman said there were pairs of glowing lights on its aft edge - an exact description of the Albuquerque sightings made by the Sandia employee.’

‘Who cannot be named,’ General Conroy emphasised sardonically.

Dwight just smiled, then glanced down at his report. ‘Subsequent investigation by myself and Captain Jackson’ - he nodded in Bob’s direction – ‘confirmed that the Washington State radar lock-on had been a solid target - not a weather target. We then calculated that an object flying between that radar station and Lubbock would have been on a northwesterly course at the time it was seen at the two places - and that it would have had a speed of approximately 900 miles per hour, as calculated by the radar.’

‘Still doesn’t prove that much,’ General Hackleman insisted with what seemed like a glimmer of hope.

‘No,’ Dwight said. ‘But the five photographs taken by Carl Hart, Jr. were analysed by our Photo Reconnaissance Laboratory. The results showed that the

lights, in an inverted V formation, had crossed about 120 degrees of open sky at a 30-degree per second angular velocity. This corresponded exactly to the angular velocity measured carefully by the four professors from the Technical College at Lubbock. Analysis of the photos also showed that the lights were a great deal brighter than the surrounding stars and that their unusual intensity could have been caused by an exceptionally bright light source which had a colour at the most distant red end of the spectrum, bordering on infrared.'

'What does that mean, Cap'n?' Hackleman's hazel gaze, which was steady, was also too concerned for Dwight's comfort.

'As the human eye isn't sensitive to such a light,' Dwight explained, 'the light could appear dim to the eye - as many of the Lubbock lights did - but be exceptionally bright on film, as they were on the photographs. While according to the Photo Reconnaissance Laboratory, at that time there was nothing flying that had those particular characteristics, I was pretty startled to discover that the lights on the photos were strikingly similar to those described by the Atomic Energy Commission employee as being on the aft edge of the huge UFO that passed silently over his house.'

'So *did* something solid pass over Albuquerque, New Mexico,' Hackleman asked, 'and fly 250 miles to Lubbock, Texas, at an approximate speed of 900 miles per hour?'

'Yes, sir. According to the witnesses, and to the radar and visual-tracking calculations, it did. The Lubbock files were also studied by a group of rocket experts, nuclear physicists and intelligence experts, and they were all convinced that the sightings had been of an enormous, solid object, most probably with a highly swept-back wing configuration and a series of small jet orifices around its edge.'

There was silence for a moment while the three generals studied Dwight, none of them appearing too friendly, all looking concerned. Then General Hackleman let out a loud sigh. 'So,' he said. 'Who ordered you to personally investigate the Lubbock lights?'

'Major General C.P. Cabell, sir, representing the Director of Intelligence of the Air Force. In a matter of hours of receiving the order, Captain Jackson and I were on an airplane to Lubbock. Once there, we worked around the clock, interrogating everyone involved in the sighting - pilots, radar operators, technicians and instructors. What they told us substantiated the sighting reports.'

'We appreciate the thoroughness of the written report,' General Hackleman

said, though displaying impatience. ‘Who did you personally report to before writing it up?’

‘General Cabell - naturally - and other high-ranking intelligence officers in the Pentagon, where the meeting took place.’

‘You reported verbally?’

‘Yes, sir.’

‘That’s what we’d been told,’ General Hackleman said. ‘But we couldn’t find the recording of that meeting.’

Dwight glanced at Bob, who was looking uneasier every minute.

‘Every word of that meeting was recorded,’ Dwight insisted.

‘But the recording was destroyed shortly after,’ General Hackleman said. ‘At least, so we were informed by the CIA.’

‘But - ’

‘It doesn’t matter,’ General Conroy interjected. ‘Don’t bother asking, Cap’n. There are good reasons for everything, I’m sure. Now what about the replacement of Project Grudge with Project Blue Book in April this year, with Captain Ruppelt in command? Did you resent being downgraded to second-in-command?’

‘I wouldn’t be human if I didn’t, sir.’ Dwight was feeling hot and embarrassed. More so because this very subject had caused more friction between him and Beth, who was convinced that officers involved in UFO investigations always had a hard time from the Air Force and were often consistently denied promotion. Thus, when Project Grudge had been dropped and replaced with Project Blue Book, with Dwight reduced to second-in-command under Captain Edward J. Ruppelt, Dwight’s acute disappointment had only been exacerbated by Beth’s angry insistence that his ‘virtual demotion’ was another sign that he should ask to be transferred to another, less controversial, line of work. ‘But I should emphasise,’ Dwight now insisted to General Conroy, ‘that Captain Ruppelt and I have an excellent working relationship.’

‘So Ruppelt has confirmed,’ Conroy said with a slight, mocking smile. ‘However, to change the subject slightly, do you think the stir caused by the Lubbock sightings was responsible for the replacement of Grudge with Blue Book?’

‘The Lubbock sightings certainly helped, sir, but they weren’t totally responsible. Though those sightings certainly made the Air Force sit up and take notice, it was the ones that took place a month later that really led to the

formation of Project Blue Book.'

'The ones that took place at the Army Signal Corps radar centre at Fort Monmouth, New Jersey.'

'Yes, sir.'

'A top-secret establishment.'

'Exactly, sir.'

'Tell us about those,' General Conroy said.

Dwight opened another file. 'The flap began at 11.10 in the morning of September 10, 1951, when a student operator was giving a demonstration of automatic radar tracking to a group of visiting top brass – sorry: senior officers.' General Conroy gave a wintry smile, but said nothing, so Dwight, flustered, glanced down at his notes and continued reading. 'After spotting an object flying about 12,000 yards southeast of the station, the operator switched to automatic tracking, but failed to hold the object. In his confusion, he blurted out to the visiting officers that the object was going too fast for the radar set - which meant that it was flying faster than any known jet. After three minutes, during which the UFO continued to fly too fast for the automatic radar tracking, it disappeared.'

'The weather?' General Lamont asked.

'Checks with the weather department revealed that there were no indications of a temperature inversion.'

'Okay, Cap'n, continue.'

'Twenty-five minutes later, the pilot of a T-33 jet trainer, carrying an Air Force major as passenger and flying 20,000 feet over Mount Pleasant, New Jersey, observed a dull, silver, disk-like object below him. It was thirty to fifty feet in diameter. When the object descended towards Sandy Hook, the T-33 pilot went after it. As he approached the object, it stopped abruptly, hovered impossibly, suddenly sped south, then made a 120-degree turn and vanished out to sea.'

Dwight glanced up from his report, surprised at how breathless and nervous he was. 'The Air Force major in the T-33 confirmed that sighting.' When no one passed comment, he avoided the three pairs of eyes by looking back at his notes. 'At 3.15pm, back at the Fort Monmouth radar centre, a frantic call was received from headquarters, demanding that they pick up an unknown that was flying very high, to the north, roughly where the first UFO

had vanished. A radar lock-on confirmed that the UFO was travelling - I quote - *slowly*, at 93,000 feet - or eighteen miles above the earth - and it could also be made out visually as a silver speck.'

'No known aircraft of today can fly eighteen miles above the earth,' Bob said, speaking for the first time.

'Thank you for that observation, Cap'n Jackson,' General Conroy said dryly. 'Okay, Cap'n Randall, continue.'

Giving Bob a fleeting grin, Dwight said, 'Next morning two radar sets picked up another unknown that climbed, levelled out, dived and climbed again repeatedly, too fast for the automatic radar tracking. When the object climbed, it went almost straight up. The flap ended that afternoon when the radar picked up another slowly moving UFO and tracked it for several minutes, before it, too, disappeared.'

He looked up from his notes. 'Those sightings were witnessed by all the visiting VIPs and it was they who really got the ball rolling. So, it was the Monmouth sightings, even more than the Lubbock lights, that compelled Major Cabell to order the ATIC to establish a new, more serious UFO investigation project. Subsequently, in April, Project Grudge was renamed Project Blue Book.'

'And in contradiction to the policy of Project Grudge,' General Hackleman said, 'Project Blue Book is to work on the assumption that the UFOs, or flying saucers, are real, solid objects.'

'Yes, sir,' Dwight said, sweating too much, his heart beating too fast. When he closed the file, he noticed that his hands were shaking. Not much, but definitely shaking, which really surprised him.

There was a lengthy, tense silence, then General Hackleman leaned forward in his chair and said, 'Anything else, Cap'n?'

Dwight glanced at Bob and was given a nod of approval to state what they had both been frightened of reporting. 'Yes, sir,' Dwight said. 'The pattern and nature of a recent build-up of sightings of fiery discs, green fireballs, and large flying saucers, over the past month, along the East Coast, indicates something damned scary.'

'Oh?' The general's gaze was steady and intense. 'What's that, Cap'n Randall?'

Dwight took a deep breath, hardly believing he was going to say it, then let his words come out on a rush of air.

‘It seems like some kind of UFO invasion,’ he said, ‘and it’s closing in on Washington DC.’

The silence stretched out forever.

Chapter Thirteen

The sun was dying. Wilson knew this as he stood in a field of wheat in Montezuma, Iowa, the stalks shoulder-high around him, and gazed across that yellow field to where green fields met blue sky, then squinted up into the sun's striations, which were silvery and ravishing. Wilson was only ten years old, blond-haired and tanned, but even as the sun's heat scorched his face, he knew the sun was dying. It would take a long time, but die it surely would, and when it died, the earth would die with it, destroying the great hope of mankind. Wilson, though still a child, was overwhelmed by that knowledge and decided, there and then, without a moment's hesitation, that he had to do something to save mankind and ensure its continuance.

Man's destiny, he was convinced, could only be changed through science and the evolution of a new kind of man, one less prone to mortality.

Even then, as a boy growing up in Iowa, born of God-fearing parents, but unable to accept the idea of Him, Wilson had been convinced that mankind would eventually have to leave Earth and inhabit another, less endangered planet. To do so, he would have to create an extraordinary technology; he would also have to transcend his still primitive nature and escape the physical limitations of his weak, mortal body.

Man would have to turn himself into Superman and then reach for the stars.

Wilson realised this at ten years old as he squinted up at the sun over Iowa... Then he awakened, at eighty-two, to look out over the vast, snow-covered wilderness of Antarctica from his bed near the summit of a mountain in Neu Schwabenland.

Though still groggy from anaesthetics, the dream, or recollection, had filled him with the awareness of how fragile was mortality and how ephemeral each individual life. From childhood to old age had taken no time at all - the past was virtually in the present - and now he knew with more certainty than ever that no matter what he did to himself, his time would be limited.

Nevertheless, there was still a lot he could do before it ended, so he had to

keep that dark moment at bay as long as humanly, or scientifically, possible.

For this reason, he had become his own laboratory animal, experimenting constantly on himself, with the aid of his two specialists: Professor Adolf Eckhardt, a former Nazi concentration camp experimental surgeon, and the abducted Dr Paul Gold, formerly of the Powered Limbs Unit of West Hendon Hospital, London. Freed from the moral, ethical and religious constraints of Western surgical research, they were producing between them some extraordinary innovations in prosthetics, organ replacement and skin grafts.

After having some of the latter done successfully to his face and hands, thus making him look sixty instead of eighty-two, Wilson had recently had his weakening heart replaced with the first of Eckhardt's prosthetics and was already recovering from the operation.

Sitting upright on the bed and breathing deeply, letting the cold air clear his head, he called on the phone for Eckhardt and Gold to come up immediately. He also asked for Hans Kammler and Artur Nebe to come up thirty minutes later, in order to submit their latest reports.

Eckhardt and Gold entered together, both wearing white smocks, and stood one at each side of Wilson's bed, smiling down at him. Once devoted to his wife and children in London, Gold was now devoted only to his work in this Antarctic colony and content to take his pleasures with the 'comfort girls' abducted by the flying saucer crews from all over the Earth. He was completely reliable. Eckhardt, of course, being a fugitive war criminal, still wanted by the British, not to mention the Jews of Israel, for his so-called 'anthropological' experiments in the Nazi concentration camps, clearly had no place else to go. Nevertheless, he also was delighted to be able to continue his experiments without restraint in the colony's laboratories, using animals and the human abductees being held in appalling conditions in the dank, freezing underground cells. He, too, took his pleasures from the comfort girls and was obsessed with his work.

'So,' he said, lowering his stethoscope to examine Wilson's heartbeat, 'you look good. How do you feel?'

'Excellent,' Wilson said.

Eckhardt listened to Wilson's heartbeat, then straightened up. 'Perfect.'

'It doesn't feel perfect,' Wilson replied. 'It's a little uncomfortable.'

'We'll soon improve on it.' Eckhardt was unfazed by Wilson's cold stare, having known him since the early days in Nazi Germany, way back in 1940,

before the dream of the Thousand Year Reich had collapsed into ruins.

As Wilson well knew, Eckhardt and other Nazis were convinced that their Aryan dreams would be resurrected here, which is why they stayed on without persuasion. Wilson knew differently, but was not about to correct them, as he needed to use their insane faith for his own, infinitely more rational, purposes. He also needed them to help in extending his life, even if not indefinitely, as they were doing with his artificial heart and various joint and minor organ replacements.

Wilson's new heart, or pacemaker, was a highly advanced device which, utilizing a piezoelectric crystal and a small balloon filled with water, caused the heart's own pumping to stimulate itself. First created in crude form in Nazi Germany, but recently perfected here in the colony's laboratories, it was more advanced than the one inserted for the first time in a human being in Pennsylvania Hospital, Philadelphia, a few months ago. That recipient, a 41-year old steelworker, had only lived for eighty minutes after his heart replacement, but Wilson would survive a lot longer.

'The water-filled balloon,' Eckhardt explained, 'will be replaced with something smaller in a few months. Though the pacemaker is already maintenance free and doesn't require batteries, we'll eventually replace it with a plutonium power source, or nuclear battery, which will weigh practically nothing and last longer. As for the rest of you, that's up to Dr Gold here.'

Eckhardt smiled thinly, without affection, at Dr Gold, whom he viewed as a rival for Wilson's attention. Gold, who despised Professor Eckhardt, politely ignored his smile.

'Your arthritic problems have been cured with joint replacements,' he said, 'but already we have more advanced prosthetics, if you're willing to – '

'Yes,' Wilson interjected without a pause. 'I am. The operations don't bother me.'

'Good.' Gold smiled like a normal doctor with a normal patient, as if still in the West Hendon Hospital, London, not here in a hidden Antarctic colony from which he would never escape. 'At the moment we're experimenting with artificial knees and elbows of clear acrylic resin reinforced with stainless steel. As for the joints themselves, the main problems have always been corrosion and lubrication, but soon I'll be removing your relatively crude, temporary stainless steel prosthetics and inserting more durable, maintenance-free, one-hundred percent mobile joints made of a corrosion-free, easily lubricated, more durable

cobalt-chromium alloy. As most of the surgical work on your joints was done for the original replacements, the operations for the insertion of the new prosthetics will be relatively simple.'

'And the rest of me?'

Gold shrugged and raised his hands as if pleading for clemency. 'These are early days yet, but with human laboratory subjects instead of only animals we should certainly progress quicker than anyone else. That heart will buy you a few more years, but problems with your kidneys and lungs will come soon enough, which is why we're working on those right now.'

'Tell me.'

'Regarding your kidneys, we're experimenting with something first devised by a Dutch surgeon, Wilhelm Kolff, and tested, ironically, on a Nazi collaborator. This involves the use of cellulose acetate film as the filter membrane and heparin as the anticoagulant. Already we have an advanced version that we think will work, but we also need to find a means of circulating your blood from time to time through the artificial kidney. A cumbersome dialysis machine has been devised, but to avoid having to keep you plugged into it twenty-four hours a day we're working on a six-inch socket that can be permanently implanted in your circulatory system, between an artery and vein, then opened and joined to the artificial kidney. What we've come up with is a six-inch tube of silicone rubber, tipped with polytetrafluoroethylene - an unreactive plastic - with ends that penetrate the skin and are stitched to the adjoining artery and vein. While causing you little discomfort, this will allow you to leave the large dialysis machine for days at a time. Eventually, we hope to have a self-sustaining artificial kidney, but that, alas, will take longer to develop.'

'And my lungs?'

'As those are essentially mechanical, we're looking into prosthetic replacements. However, as the lung is also a membrane of unusually high permeability and, more complex, roughly the area of a tennis court, we need to find a means of imitating it within the confines of the thorax. We hope to do this with a membrane of exceptionally thin silicone - say, one-thousandth of an inch thick - and with a maximum area of one square metre. This will be placed in the thorax in concentric layers, kept apart and self-supported in a manner that forms minute channels, which in turn form the new blood capillaries. Unfortunately, in this case, the problems are many and the death rate during experiments is high.

This is due mainly to our inability, so far, to prevent the artificial membrane from becoming choked by coagulated blood. Nevertheless, I'm convinced that with time, patience, and unimpeded human experimentation, we can produce the required anticoagulant. Then the artificial, implantable lung will be within reach.'

'Good,' Wilson said. He spent a few more minutes discussing the various surgical and medical experiments going on with the abducted humans held in the underground cells, then dismissed his two professors and waited for the arrival of administrator Hans Kammler and chief of security Artur Nebe, both former members of the Death's Head SS. Kammler arrived first, wearing a black coverall, still blond and handsome, but no longer the golden young god of war, now visibly ageing. He took a seat by the bed and nodded at Wilson, not smiling at all.

'You're recovering well?' he asked.

'Yes, Hans. No problems at all. I'll soon be on my feet again. So how is Ernst Stoll settling into Paraguay?'

Kammler smiled frostily. 'With no great deal of joy, but with dedication - as you had expected. He's greatly increased the defences of the compound, constructed a landing pad for the saucers, and set up a line of communication between himself and General Stroessner, whom be believes will eventually take over as President. As Stroessner is infinitely corruptible, this is all to the good. We will certainly be well protected there.'

'Apart from that, is he doing what he's been sent there for?'

'Yes. The mass abduction of Ache Indians has begun with the aid of General Stroessner's *Federales*. For this, Stroessner is being well paid. Stoll claims that Stroessner is using the money to bribe senior army officers and seduce the heads of the Colorado Party. He's buying their support in his bid for the presidency and plans to make his move this year or next.'

'Excellent. We need a man like Stroessner in charge. We also need the Ache Indians - the females as comfort girls and servants, the males as conditioned pilots for the saucers and as experimental surgical fodder for Eckhardt and Gold. Since with even the abductions, we're running short of human material, a regular supply of the Ache will be truly invaluable.'

'I don't think Stoll will let you down.'

The door opened again and Artur Nebe entered, small and stout, as solid as a rock, with eyes as dark as his black coverall. His swarthy features, though

revealing no emotion, concealed the soul of a monster. As he crossed to stand at the other side of the bed, facing Kammler, Wilson glanced through the panoramic window at the far side of the room and saw the vast, Antarctic wilderness, its soaring ice-covered peaks and snow-covered valleys stretching out to a dazzling, blue horizon. While the sheer, untouched beauty of it denied the horrors taking place daily in the laboratories and underground cells of this hidden colony, Wilson did not see it that way. Dedicated to the pursuit of knowledge – which, in his view, separated Man from beast - he was embarked on a crusade to redirect the evolution of mankind and turn the thinly disguised beast into Superman. There was no room for emotion in his grand design. His notion of beauty was absolute knowledge and the pure truths of science.

'So, Artur,' he said, looking up into Nebe's dark, fathomless gaze and taking confidence from the murderous well of his nature, 'what do you have to tell me?'

'Everything has gone smoothly. Exactly as we had planned. The calculated spreading of disinformation about UFOs has had the desired effect and is leading to confusion, not only with the public, but with military intelligence on a worldwide basis. By now, public opinion is split between those who believe the UFOs are of extraterrestrial origin, those who insist they're misinterpretations of natural atmospheric phenomena, those who deem them the products of mass hallucination encouraged by too much talk about the subject, and those who believe they're the top-secret experimental craft of their own governments.'

'Official attitudes are equally confused?'

'Yes. The few government, military and intelligence heads who know of our existence here are so concerned about the possibility of public hysteria in the event that the news gets out, they've classified the subject top-secret. They've also classified as top-secret their own race to construct similar saucers in the vain hope of eventually getting us out of here. They're not only concerned with what they see as the new military threat represented by our technology, but by the fact that the Antarctic is Earth's last untapped treasure-house of oil, coal, gold, copper, uranium and, most important, water - the whole world will soon need water - and here we are, threatening to keep them out. So that's what concerns them most of all.'

'We can use that concern when we trade,' Wilson said. 'It's a strong card to hold. But apart from the stubborn General Samford, what do they think of our capability?'

‘Deliberately letting the top brass of Fort Monmouth see one of our large saucers finally convinced the Pentagon of our vastly superior capability, though the White House, and Samford, remain unconvinced.’

‘They soon will be,’ Wilson said.

Nebe didn’t return his smile, but continued speaking in his soft, oddly threatening monotone. ‘The so-called Lubbock lights, which were in fact the lights on the tail end of an American-Canadian experimental flying wing constructed in secret at the White Sands Proving Ground, has further convinced the American public that alien craft are exploring the earth. The Lubbock lights - that flying wing - also succeeded in further confusing those in military intelligence who don’t yet know of our existence and are baffled as to why their own superiors are trying to kill off the sighting reports, even as they insist that the saucers are a threat to national security.’

‘We couldn’t have done better ourselves,’ Wilson observed.

‘Finally,’ Nebe continued, ‘the concentrated build-up of flights of our mass-produced World War II *Feuerballs* over the east coast of the United States has been highly successful, leading to nationwide concern and numerous wild stories about green or orange fireballs and extraterrestrial flying saucers, as well as secret speculations in military circles about a forthcoming UFO invasion of the nation’s capital.’

‘Perfect,’ Wilson said. ‘We’ll now proceed to do just that. We’ll surround Washington DC in general and the White House in particular with a virtual armada of *Feuerballs*. If that doesn’t persuade them the first time, we’ll repeat the performance a week later with even more *Feuerballs* and some larger, piloted saucers. I think it will work.’

‘When will it begin?’ Kammler asked him.

‘Time is of the essence,’ Wilson said. ‘The invasion commences tomorrow.’

Chapter Fourteen

Just off a flight from Dayton, Ohio, Dwight and Bob Jackson were passing a newspaper stand in the lobby of Washington National Airport Terminal Building when they were stopped dead in their tracks by the headline: INTERCEPTORS CHASE FLYING SAUCERS OVER WASHINGTON DC. Shocked, Dwight purchased the paper and read that the capital was in the middle of the biggest UFO flap of all time.

'The bastards didn't even tell us!' he fumed, folding up the paper and jamming it into the side pocket of his Air Force jacket. 'If we hadn't come here on our own bat, they probably wouldn't have called us. The biggest UFO flap of them all and we weren't even informed!'

'Come on,' Bob said, swinging his briefcase from one hand to the other and heading energetically for the cab rank. 'Let's go and talk to Dewey Fournet.'

Instructing the cabbie to take them to the Pentagon, Dwight, still furious, opened the paper again and read the newspaper account of the present flap more carefully, tying the report to what he already knew. He was even more furious about not being informed because he had practically predicted that this flap would occur and, indeed, had informed generals Conroy, Lamont and Hackleman about it during his recent, unpleasant interrogation. The Air Force's Project Blue Book was now going strong under the leadership of Captain Edward J. Ruppelt and had received more official UFO reports than it had done in any previous month in its history. In fact, according to Ruppelt, the sheer number of reports was making Air Force officers in the Pentagon frantic.

By June 15, the locations, timing, and sequence of the reports had indicated that the UFOs were gradually closing in on Washington DC.

Throughout the afternoon of June 15, reports of 'round, shiny objects' and 'silvery spheres' had come in from all over Virginia, one after the other: 3.40pm at Unionville; 4.20pm at Gordonsville; 4.25pm at Richmond; then 4.43pm and 5.43pm at Gordonsville. At 7.35pm a lot of people in Blackstone, about eighty miles south of Gordonsville, had observed a 'round, shiny object with a golden

glow' moving from north to south. By 7.59pm the same object was observed by the people in the CIA radio facility at Blackstone. At 8.00pm a jet from Langley Air Force Base tried to intercept it, but five minutes later the object, moving too slowly to be an airplane, disappeared.

So inexplicable and disturbing were these reports that Captain Ruppelt was called to Washington DC to give a briefing in the restricted area of the fourth-floor 'B' ring of the Pentagon to General Samford, the Director of Intelligence, some of the members of his staff, two captains from the Office of Naval Intelligence, and some others whom Ruppelt had refused to name for security reasons. That meeting had resulted in a directive to take further steps to obtain positive identification of the UFOs.

Meanwhile, the sightings continued. By the end of June, it had become apparent that there was a considerable build-up of sightings in the eastern United States. In Massachusetts, New Jersey and Maryland jet fighters were scrambled almost nightly for a week, but always foiled when their radar-locks were broken by the abrupt, swift manoeuvres of the UFOs. On July 1, many UFOs were sighted over Boston, then began working their way down the coast. The same day two UFOs had come down across Boston on a southwesterly heading, crossed Long Island, hovered a few minutes over the Army's secret laboratories at Fort Monmouth, then proceeded towards Washington DC. A few hours later, the first report from Washington DC was submitted by a physics professor at George Washington University.

For the next couple of weeks, reports about Washington DC sightings poured in at the rate of twenty or thirty a day and, according to Ruppelt, unknowns were running about 40 percent. Finally, according to the *Washington Post*, last night, July 19, the greatest flap of them all had begun, with UFOs being tracked all over the capital and the restricted corridor around the White House filled with interceptor jets trying to chase UFOs.

Immensely frustrated and angry, Dwight finished reading the report, then passed the paper to Bob. By the time Bob finished reading it, he, too, was furious that the ATIC had not been informed about the event.

'Damned lucky we were coming here anyway,' he said. 'Otherwise they'd have kept us locked out. Why the hell would they do that?'

'Maybe it was just an oversight,' Dwight replied without conviction, staring up at the sunny sky in the vain hope of seeing his first UFO. 'The heat of the moment, and so on. They're probably all frantic by now and just forgot to put

the call through.'

'Yeah,' Bob said doubtfully, also glancing automatically at the empty sky over Virginia. 'Maybe you're right.'

When they were inside the Pentagon, that immense five-sided building in Arlington County, Dwight demanded an urgent meeting with Major Dewey Fournet, their UFO liaison man in the capital. Entering his office, located on the fourth floor, they found him in the company of Colonel Donald Bower, the intelligence officer from Bolling AFB, located just east of National Airport, across the Potomac River. Neither Fournet nor Bower looked pleased with this visit.

'Okay, okay,' a harassed Fournet said, waving his hands as if to defend himself. 'I know what you're going to say.'

'So, what happened?' Dwight asked.

'We've just been too damned busy,' Fournet replied. 'It was an oversight, gentlemen.'

Dwight glanced at Major Bower. 'I don't believe that. Seems to me, you just wanted to keep us out. Why is that, Major?'

'You'd have received a full report in due course,' Major Bower said, his gaze steady and hard.

'Your report, not ours, Major,' Dwight replied. 'It's not the same thing.' He removed his gaze from Bower and fixed it on Fournet instead. 'So what are the facts, sir? Is the report in the *Washington Post* correct?'

Fournet shrugged. 'Yeah, essentially correct. At 11.40pm the ARTC radars at Washington National Airport, about three miles south of the centre of Washington DC, picked up eight unidentified targets near Andrews AFB, Maryland, twenty miles east of National Airport and in direct line with National and Bolling. The objects were flying at approximately 100 to 130 miles per hour, then suddenly accelerated to fantastically high speeds and left the area. They soon returned, en masse. During the night, tower operators and the aircrews of several airliners saw unidentified lights in the same locations indicated by the radar. Before the night was out, and while interceptor jets tried and failed to catch them, the unidentified targets had moved into every sector covered by the radarscopes, including the prohibited corridor over the White House and the Capitol building. The climax came in the early hours of the morning, when the operators in the control tower at Andrews AFB, in response

to an ARTC traffic controller's query about a target directly over the Andrews Radio range station, located near their tower, reported that a large, fiery, orange-coloured sphere was hovering in the sky directly above them.'

'Weather?'

'An analysis of the sightings has completely ruled out temperature inversions. Also, the radar operators at Washington National Airport and Andrews AFB - plus at least two veteran airline pilots - have all sworn that their sightings were caused by the radar waves bouncing off hard, *solid* objects.'

'Oh, boy!' Bob said, glancing at Dwight. 'This sounds really good.'

'That's hardly the right word to use,' Bower said. 'It certainly didn't seem good to the top brass of the Pentagon. Nor did it seem good to President Truman, who personally witnessed a UFO skimming right around the White House. In fact, at ten this morning, the President's air aide, Brigadier General Landry, called me, at Truman's personal request, to find out what the hell was going on.'

'Oh?' Dwight said, amused. 'And what did you tell him?'

'I hedged my answers,' Bower replied, 'because, truthfully, I couldn't explain the sightings away.'

'On behalf of the Air Force,' Fournet said, 'public relations officer Al Chops has given the press an official "No comment" on the sightings, but the reporters are still massed down there on the first floor, all baying for more. In the meantime, we're investigating the affair. That's all we can tell you.'

'Fine, Major,' Dwight said, taking note of Bob's cynical sideways glance and deciding not to raise any awkward points. 'Have you any objections to me doing my own investigation for the ATIC?'

Fournet glanced uneasily at Major Bower, who did not seem too pleased. Nevertheless, he said, 'Of course not, Cap'n Randall. Why should we mind?'

'Here,' Fournet said, trying to look helpful as he handed Dwight a manila folder. 'Two of the first reports submitted. One is the unofficial report from the Andrews AFB tower operators; the other is from an F-94C pilot who tried to intercept unidentified lights. I should warn you that these are just off-the-cuff, preliminary reports. More detailed, more accurate versions will be drafted and signed at a later date. But you might find them helpful for the time being.'

'And as I said,' Major Bower added, 'you'll be receiving our official report when it's been completed.'

‘I look forward to it,’ Dwight said, then he and Bob saluted and left the office.

‘Bullshitter,’ Bob whispered as they walked along the spoke-like, windowless corridor in one of the five concentric rings of the building, heading for the small office used by the ATIC when visiting here. ‘That Bower’s the one who stopped us from being informed - maybe because the President is now involved. Whatever was flying around here last night, they sure as hell don’t want us to know about it.’

‘Well, we’re going to get to know about it,’ Dwight said determinedly as he unlocked the door of the office at the far end of the corridor. ‘We’ll complete a thorough investigation and find out just what the hell those interceptor jets were pursuing in the restricted corridor around the White House. No intelligence officer from Bolling AFB is going to stop me - not Bower and not anyone else.’ He and Bob entered the office, switching on the light and closing the door behind them. It was a small, square-shaped room with no windows and nothing on the walls. Outside was US Highway 1 and, beyond it, the Potomac River, but they couldn't see either from this gloomy cell. Dwight placed his briefcase on the desk and gazed at the bare wall. ‘I want to speak to the chief radar operator at Andrews AFB and the F-94C pilot who put in this report,’ he said, fanning himself with the manila envelope. ‘Get on the blower, Bob.’

As Bob took the wooden chair beside the desk and picked up the phone, Dwight kicked off his shoes and massaged his hot feet through his socks. Bob flipped open the manila envelope, checked one of the two reports, then asked for the senior traffic controller in the Andrews AFB control tower. After a short wait, he nodded and Dwight picked up the other line.

‘Captain Chapman? This is Captain Dwight Randall of the Air Technical Intelligence Centre, Wright-Patterson AFB, Dayton, Ohio. I’m here at the Pentagon with Captain Bob Jackson to check out yesterday’s UFO flap. We thought you might be able to help us out.’

‘I put in a report to Major Bower,’ Captain Chapman responded, sounding uneasy.

‘Yes, Captain, I’ve got it right here. I believe you were in charge of operations when that huge, orange-coloured sphere was observed over the Andrews Radio range station, located near the control tower.’

‘Oh, yeah... *that*.’ Chapman sounded even more uncomfortable. ‘It wasn’t huge; it was large.’

‘Says right here it was *huge*.’

‘We were all pretty excited at the time. It was large, not huge.’

‘You saw it?’

‘Well, yeah, I saw it... but when we checked the data later, we realised it was only a star.’

‘*What*?’

‘It was only a star.’

Dwight glanced at Bob who, holding the phone to his ear, merely shrugged his shoulders.

‘I don’t get this, Captain,’ Dwight said. ‘I have your report right in front of me and it clearly describes the object as a - quote - huge, fiery-orange-coloured sphere.’

‘It was a large star. I know it was. When I submitted that report, we were all pretty scared and excited. I now regret that description.’

‘Okay: it was large. However, I find it hard to credit that seven trained radar operators would mistake a large, fiery, orange-coloured sphere for a star.’

‘The heat of the moment, Captain. We all make mistakes. I’m going to change that description when I redraft the report. What we saw was an exceptionally bright star. That’s all there is to it.’

Dwight took a deep breath, glanced at Bob, who shrugged again, then let his breath out in an audible sigh. ‘The report also states that you and the six other traffic controllers on the shift saw this object, or star, hovering over the Andrews Radio range station, at precisely the same moment the radar operators at National Airport reported having a target over the very same location.’

‘I can’t account for that, Captain, except to say that the radars all over Washington DC were going crazy last night and a lot of atmospheric anomalies are suspected. What we saw was a star.’

‘Okay, Captain, thanks.’ Dwight pressed the phone-cradle down, cutting Chapman off, then said, ‘Get on to that guy in charge of the astronomical charts and ask him if there were any unusually bright stars in the sky last night.’

Bob leafed through his notebook, dialled a number and asked for Air Force corporal Alan Collins. After explaining what he wanted, he sat waiting, drumming his fingers nervously on the desk and studying the ceiling. Eventually he nodded, went, ‘Mmmmm, thanks corporal,’ and dropped the phone back on its cradle. ‘Nope,’ he said. ‘No exceptionally bright stars where that UFO was

seen. None at all, Dwight.'

'Damn! Is the pilot of that F-94C available?'

Bob tugged the second report out of the manila folder, checked it, and said, 'Yeah, he's located at Bolling AFB - where our good friend, Major Bower, also comes from. You want me to try him?'

'Damned right, I do.'

Tracking down the pilot took a lot longer, but eventually Bob nodded again at Dwight and the latter picked up the phone. After introducing himself, he said, 'I'd like to hear in your own words exactly what you thought you were pursuing last night.'

'It was a ground light reflecting off a layer of haze.'

'*What*?'

'A ground light reflecting off – '

'I heard you, Lieutenant, I just don't believe you. I have your report right here and it says that the lights were high up in the sky, in the restricted air corridor around the White House, and that they descended, ascended, hovered, and shot off at incredible speeds.'

'An optical illusion, Captain.'

'But the report – '

'I wrote it in the heat of the moment, right after landing. I was pretty nervous and excited, Captain, not too sure of what was happening, but when I'd settled down and spoken to Major Bower, I realised that I'd misinterpreted what I'd seen.'

Bob silently gave the thumbs-down.

'You spoke to Major Bower?' Dwight asked.

'That's right, Captain. Right after I landed. All of the pilots at Bolling were interrogated about what they had seen by the base intelligence officers.'

'And after interrogation, you were persuaded that what you had seen was not a lot of unidentified lights that made extraordinary manoeuvres over the White House, but simply a ground light reflecting off a layer of haze.'

'That's correct, Captain.'

'If you don't mind me saying so, Lieutenant, that seems a pretty ridiculous statement, given that this report – '

'I'm redrafting it, Captain, to make it more accurate.'

'Given that in this report,' Dwight insisted, 'you say that the lights repeatedly

disappeared and reappeared in the sky before eventually shooting away.'

'An optical illusion caused by the layer of haze.'

'No, Lieutenant, not possible. According to your statement, the disappearances and reappearances described by you were matched exactly by the radar readings - same location, same time.'

'According to Major Bowers, the radar operatives later said they'd been mistaken. Given that, I can only confirm what I saw.'

'A ground light reflecting off a layer of haze.'

'Exactly.'

'And that's what's going into your redrafted report?'

'Yes, Captain.'

'Thanks, Lieutenant.' Angry and frustrated, Dwight dropped the phone, then glared at Bob, who was shrugging and spreading his hands in the air, signifying defeat. 'Major Bower,' Dwight said.

'Intelligence chief of Bolling AFB. He also talked to the Andrews AFB radar flight controllers and radar operatives. Looks like a snow job.'

'Which confirms that they didn't call the ATIC because they didn't want us snooping around. They're putting the lid on this thing.' Dwight hammered his fist on the table. 'Well, damn them, I won't let them. Let's get a staff car and travel around a bit - Washington National Airport, Andrews AFB, airline offices, the weather bureau, and anywhere else we can think of. Damn it, let's *do* it.' Dwight picked up the phone and called the Pentagon transportation section.

'Hi. Captain Dwight Randall of the ATIC speaking. I need a staff car for a couple of hours and – '

'Did you say the ATIC?' the corporal at the other end of the line asked.

'That's right. The Air Technical Intelligence Centre. I need a staff car to – '

'Just a moment, sir.' There was a pause on the other end of the line, followed by whispering, then the corporal came back on. 'Sorry, sir. Did you say Captain Dwight Randall?'

'Yes, corporal, and – '

'I'm sorry, sir, but I'm afraid I can't help you. Regulations say that we can't make staff cars available to anyone other than senior colonels or generals.'

'Bullshit.'

'Sorry, sir, but those are the regulations.'

'Since when?'

‘Just recently, sir.’

‘Dammit, corporal, I want that staff car!’

‘Sorry, sir, I can’t help you. Not unless you get authorisation from a senior colonel or general.’

‘Alright, damn you, I will.’ Dwight pressed the cradle down. ‘Can you believe this shit?’ he said to Bob. ‘New regulation says we can’t have a car unless we’re senior colonels or generals.’

‘New regulation invented just for us,’ Bob said. ‘Why not try General Samford? He’ll be obliged to help you.’

‘Why not?’ Dwight said. When he tried to contact the general, however, he was told that Samford wasn’t in his office. When he asked the secretary to track him down, he was told that Samford couldn’t be found. ‘To hell with this,’ Dwight said, slamming the phone down and then putting his shoes on again. ‘Let’s go down to the finance office and charge a rented car to expenses. They can’t argue with that.’

But they did. When Dwight and Bob put their request to the heavy, grey-haired lady in the Pentagon finance office, she looked embarrassed, checked their names again, then said nervously: ‘Sorry, sir, but I can’t do that. Policy is that if you don’t have a staff car, you use city buses.’

‘Ma’m, this is a matter of extreme urgency and one requiring a lot of travelling. We don’t know the bus system and it would take us hours to get to all the places we need to visit.’

‘Sorry, sir, but I still can’t help you. If it’s that important, I suggest you use a cab and pay for it out of your per diem.’

‘I can’t afford to do that, Ma’m. This job is going to take a couple of days and requires travelling all over Virginia. At nine dollars a day per diem, I can hardly _ ’

‘Besides,’ the lady said, examining Dwight’s papers, ‘this travel order only covers a trip to the Pentagon - not Washington, and certainly not a trip around Virginia. In fact, according to this, you’re supposed to be on your way back to Dayton by now.’

‘Well, I’m not going. This work is more important, and I’m pretty damned sure - ’

The lady sighed and handed back his travel orders. ‘Unless you’re willing to go through all the red tape of getting these orders amended, you won’t be able to collect *any* per diem. Also, you’ll be technically AWOL.’

‘Are you kidding me?’

‘No, sir, I’m not. If you don’t head back to Dayton today, you’ll both be classified AWOL. I can’t help you, sir.’

Clenching his fist around his damned travel orders, Dwight stormed out of the finance office, followed by Bob. He was just about to head back to his office, when Bob stopped him by tugging at his elbow.

‘What?’

‘We’ve gotta leave,’ Bob said. ‘We can’t afford to be AWOL. If they’re really trying to stop us, they’ll use the AWOL as an excuse to tan our hides. We’ve got to go back, Dwight.’

‘No, damn it, I won’t let them give me the runaround this way. I have friends at Andrews AFB, so let’s go there and ask them to call Wright-Patterson for permission to stay in this area for another week or so. That’ll enable us to continue our investigations without the help or hindrance of the bastards in here.’

Bob puffed his cheeks out and blew a gust of air. ‘I think one of us should go back,’ he said. ‘Hold the fort, so to speak. The teletype machines are bound to be going mad at the ATIC, so one of us should be back there to help Captain Ruppelt. If you want to stay here, okay, and I’ll go back and clear it with Ruppelt.’

‘Great,’ Dwight said. ‘You smooth matters out with Ruppelt and I’ll call Beth this evening and explain things.’

‘One call I wouldn’t want to make, partner. Rather you than me.’

‘I’ll be fine,’ Dwight said.

He and Bob returned to the ATIC office, picked up their briefcases, switched off the light, locked the door and then left the Pentagon. They took a taxi to the Washington National Terminal Airport Building. There Bob was dropped off and Dwight, still boiling mad, took a bus all the way to Andrews AFB, twenty miles east, in Maryland.

On the evening of July 26, Dwight was having coffee alone in the almost deserted officer’s mess of Andrews AFB, thinking gloomily that he had been here for exactly one week to the day, sharing a room with three other officers, phoning Bob Jackson or Captain Ruppelt every afternoon and Beth every evening, when he was inclined to feel most miserable, and had received nothing valuable regarding the UFOs in return for his suffering.

In fact, he was gloomily pondering the ironic fact that he was second-in-command of Project Blue Book and yet had never personally seen a UFO. Every evening since Bob's departure, Dwight had been out prowling around the airstrip of Andrews AFB, scanning the night sky for UFOs, but so far he hadn't seen a damned thing. Nor had the radar operators or pilots - a fact that only increased Dwight's feelings of frustration and inadequacy.

Oddly enough, there had been a flurry of UFO sightings the previous day and evening, though none of them over Washington DC First, amber-red lights had been observed over the Guided Missile Long-Range Proving Ground at Patrick AFB, Florida. Next, a UFO described as 'a large, round, silver object that spun on its vertical axis' had been seen to cross 100 degrees of afternoon sky in forty-eight seconds. Then, in the late afternoon, interceptor jets had chased UFOs over Los Alamos and Holyoke, Massachussetts, losing them as they turned into the sun. Finally, that night, F-94s had tried in vain to intercept unidentified lights reported by the Ground Observer Corps in Massachussetts and New Jersey.

But nothing over Washington DC...

And not a thing over Andrews AFB, where Dwight, after a week on his own, was starting to feel that the whole business was some kind of bad dream that had almost broken up his marriage and might soon break him.

He was gloomily pondering this, at 10.30pm, when he heard his name being called out over the tannoy system, asking him to report urgently to the control tower.

Dwight jumped up and ran.

The Andrews AFB control tower was in pandemonium, with most of the traffic controllers, eerily shadowed in the night lighting, grouped around the 24-inch radarscopes and staring at rapidly multiplying targets.

'Same as last time,' the captain in charge said, jabbing his fingers at the screens, 'but this time they're not just over Washington DC. Those UFOs are spread out in a huge arc from Herndon, Virginia, to here. They're right above Washington National Airport - and also right above us. In other words, they have Washington boxed in.'

'Jesus Christ!' an Air force sergeant whispered.

With everyone else, Dwight glanced automatically at the sky above the darkened, lamplit airfield, but saw only the moon and stars. According to the radar, some of those UFOs were overhead, but they couldn't be seen by the naked eye. To confirm that they actually existed, you had to look at the

radarscopes... and there they were: all those white lights constantly on the move, forming a great arc around Virginia and Maryland, but closing in on Washington DC.

'God damn it!' someone else exclaimed softly, glancing up at the sky. 'Where the hell are they?'

A group of F-94s were already racing along the airstrip and taking off into the sky, in pursuit of the targets on the radar screens. Even as they disappeared in the direction of Washington DC, the telephone rang. The chief traffic controller answered it, nodded his head, then lowered the phone and said, 'The targets have just left the radarscopes at Washington National Airport, but already people around Langley AFB, near Newport News, as well as the radar operators in Langley Tower, are reporting weird lights that appear to be rotating and giving off alternating colours.'

'Jesus Christ!' the sergeant whispered again.

Increasingly excited, but also frustrated because he could actually see nothing other than the targets on the radarscopes, Dwight remained in the control tower as the drama unfolded.

By 11.30pm four or five of the targets were being tracked continually over the Capitol. F-94 interceptor jets tried and failed to catch them. Shortly after the UFOs left the sky over the Capitol building, more reports came in from Langley Tower, where the operators again described them as unidentified lights that were rotating and giving off alternating colours. Another F-94 was dispatched from Langley AFB and visually vectored to the lights by the tower operators. The pilot reported that as he approached one of the lights, it went out 'like somebody turning off a light bulb'. No sooner had this happened, than the targets came back on the radarscopes at Washington National Airport. Again, F-94s were dispatched to locate them... but each time they were vectored into the lights, the UFO disappeared abruptly from the radarscopes and the pilots simultaneously reported that they had visually observed the lights blinking out.

Eventually too frustrated to take it any longer, Dwight tried dialling the Pentagon. Unable to get through because the lines were tied up - or so the frantic switchboard operator informed him - he phoned an old reporter buddy, Rex Ginna, *Life's* UFO expert, operating out of the magazine's Washington News Bureau.

'I can't get through to the Pentagon,' Dwight said. 'What can you actually *see* there, Rex?'

‘Fantastic!’ Rex exclaimed. ‘A real light show here! They could be lights - or silvery discs – it’s hard to say what - but they’re racing to and fro across the sky right above us. They’re also above the Capitol and the White House.’

‘Oh, my God,’ Dwight groaned, ‘and I’m trapped here. What are they doing?’

‘They look like bright stars from here. Small lights... or high up. They’re like light bulbs, but sometimes they spin so fast, they become a silvery blur. They’re flying in all directions. Sometimes they stop and hover. They rise and descend vertically, shoot sideways, perform all kinds of tricks. Sometimes they’re so low, they actually circle the Capitol and the White House, then they shoot up again at incredible speed and then just blink out like light bulbs. Damned amazing, I’m telling you.’

That phrase again, Dwight thought. *They blink out like light bulbs.*

‘Anyway,’ Ginna said, ‘they must be taking it pretty serious. All the reporters were ordered out of the radar rooms of Virginia as soon as the interceptor jets went after the UFOs. They told us it was because the procedures used in an intercept were classified, but we know that’s bullshit. Most ham operators can build the equipment needed to listen in on an intercept. No, the real reason they threw us out is that some top brass are convinced that this is the night some pilot’s gonna get a good, close look at a UFO - and they don’t want the press to spread the word. So here I am in the news bureau instead, watching the whole show. Too bad you can’t see it.’

‘Go to hell, Rex!’ Dwight hung up on Ginna's chuckling, then tried the Pentagon again. Getting through this time, he asked for Dewey Fournet and was surprised to get him. Fournet sounded harassed.

‘Yeah,’ he said. ‘Right. No point in denying it. Those things are visible overhead and solid, *metallic* objects are causing the blips on the radarscopes. They can’t possibly be caused by anything else; and whatever they are, they can literally hover in the air, then accelerate to fantastic speeds.’

’And they definitely can’t be caused by temperature inversions?’

‘No way. We’ve just checked out the strength of the inversions through the Air Defence Command Weather Forecast Centre - and there’s no temperature inversion strong enough to show up on the radar. Finally, no weather target makes a 180-degree turn and flies away every time an airplane reaches it. Like I

say, those things are solid and *metallic*. They're also controlled.'

'Any indication of size?'

'We don't think they're that big. In fact, we think they're pretty small. Not big enough to be manned. Some of the ones our pilots are seeing seem much bigger, though we can't be too sure yet. It's the small ones that are coming down real low and winging around the Capitol and... Well, I might as well tell you... President Truman almost went apeshit when he saw them skimming right around the White House. This whole place is bananas.'

When Dwight put the phone down, he looked up at the sky and was again frustrated to see only stars. Looking at the radarscope, he saw that the screen was literally filled with the white dots, clearly showing that the UFOs were still high in the sky over Andrews AFB.

'Damn it,' Dwight whispered, 'where *are* they?'

Even as he spoke, the lights on the radarscope raced in towards one another, to form a single, bigger light that flared up and then went right off the screen.

'What the hell...?' the chief traffic controller said, as his men all bunched up closer around the radarscope, wondering where all the targets had gone so suddenly.

At that moment, the floor of the radar tower shook briefly.

Everyone looked outside, as if searching for an earthquake, but they saw nothing but the darkened, lamplit airstrip.

The floor shook a second time, settled down again, and then an eerie yellow light filled the control tower, beaming in from outside, and gradually changed to an amber-orange light that appeared to be beaming down from above. As everyone looked up, straining to see out through the windows, the floor shook a third time, a bass humming sound filled the silence, and the amber-orange light, now clearly beaming down from above, turned into a huge, fiery, orange-coloured sphere that was descending slowly, inexorably, upon the control tower, as if about to land on it and crush it.

With everyone else in the control tower, Dwight looked up at that dazzling apparition, paralysed by amazement and disbelief, his heart pounding dangerously.

Then everything went dark.

Chapter Fifteen

The so-called UFO 'invasion' of Washington DC led to a secret midnight meeting in the Oval Room of the White House between Wilson and President Truman, General Samford, Head of Air Intelligence, General Hoyt S. Vandenberg, USAF Chief of Staff, and CIA agent, Sam Fuller, through whom the first approach to Samford had been made.

Wilson, wearing civilian clothes and already almost fully recovered after his recent operations, was accompanied by the icy Artur Nebe. Truman was seated behind the ornate oak desk, framed by the Presidential flag and the flag of the United States, with Samford and Vandenberg, both in full uniform, at one side of him and Fuller, wearing a light grey suit, shirt and tie, at the other. All three men were standing just in front of the high French windows overlooking the West Wing's Rose Garden.

Taking a chair at the other side of the desk, with Nebe just behind him, Wilson studied Sam Fuller's cynical, sharp-eyed gaze and the wary faces of the two generals, then he offered President Truman an engaging smile.

'So, Mr President,' he said, 'how did you like our two UFO displays over Washington DC?'

'Very impressive,' President Truman replied, not returning the smile.

'I'm glad you think so, Mr President.'

'I'm sure you are,' Truman said with soft sarcasm.

'I assume you know that not *all* of the saucers were mine.'

'Weren't they?'

'No. During the second invasion some of your own saucers, the ones constructed in Malton, Ontario, attempted to intercept, but failed dismally and were pursued back to Canada.'

'We just thought we'd try it on,' Fuller said sardonically.

'Don't do it again,' Wilson told him, then turned his attention to generals Samford and Vandenberg. 'Can I take it that you gentleman are now convinced

of the superiority of our technology?'

Both men just stared at him, too speechless with rage to speak.

'I take your silence as reluctant agreement. Can I therefore also assume that you will now make no further attempts to thwart us, either in the skies or in Antarctica?'

'Damn it – ' Samford began.

'You can take it that for the time being, at least,' Vandenberg said, sounding choked, 'we accept that such moves would be pointless.'

Wilson nodded, acknowledging the oblique, temporary surrender, then he returned his attention to President Truman. The President did not avoid his gaze, but took his time before speaking.

'Just tell us what you want,' he said.

'Antarctica is now the most valuable piece of real estate in the world.'

'I'm well aware of that fact, Mr Wilson, and also of the fact that you control it simply by being there.'

'Antarctica is also the greatest natural laboratory on Earth and the West now needs to exploit it.'

'Correct,' the President said.

'You also desperately need its water and mineral wealth, which is why you need me.'

'I am all ears,' the President said when Wilson paused to let the import of his words sink in.

'If you wish to populate Antarctica with your scientists and research facilities without being harassed by my saucers,' Wilson calmly informed him, 'you'll have to agree to the trade previously discussed that night in Virginia. In return, I'll let those already in Antarctica remain unmolested to engage in reasonable scientific research.'

'What's your idea of reasonable?'

'I'll obviously monitor their activities and put a stop to anything that presents a threat to my colony.'

'You have no right – ' Samford began, but was waved into silence by the President.

'In return for the supplies I need,' Wilson continued, intrigued to see how quickly even men of great power and authority could be reduced to petty human behaviourial patterns, 'I will pass on valuable secrets of my technology, on a pro rata basis, though only after my own technology has superseded what I choose

to give you at any given moment in time. In this way, my technology will turn the US into the most advanced nation on earth, scientifically and militarily, while simultaneously ensuring that it will never become advanced enough to threaten our own existence in Antarctica.'

The President stared steadily at Wilson for a moment, then swivelled around in his chair to judge the reaction of his two generals. Samford looked enraged and helpless at once; whereas Vandenberg, though normally a man of immense authority, was revealing the first signs of shock and disbelief.

'What if we say no?' Fuller asked, his gaze direct and unafraid, his lips curved in a slight, sardonic grin.

This man is like Nebe, Wilson thought. He thrives on intrigue. Though the one in this room with the least authority, he's the one I must watch the most.

'Then I'll trade with the Soviets,' Wilson said, 'and maybe even the Chinese. The choice is entirely yours.'

Vandenberg opened and closed his fists, Samford turned a deep red, and the President swivelled back in his chair to face Wilson again.

'You're an American,' he said quietly.

'A goddamned traitor!' Samford exploded.

'Right!' Vandenberg added, almost choking with anger.

'Gentlemen, gentlemen!' the President admonished them, waving them into silence.

Observing the two outraged, high-ranking military officers, Wilson recalled how, all those years ago, the great, innovatory work of himself and Robert H. Goddard had been ignored consistently by the US government and military establishment. He also remembered how their negative reactions to his genius had forced him to destroy his great work, drop out of sight, and spend three decades of his life in lonely anonymity, until he saw his opportunity in Nazi Germany, where his work and that of Goddard was greatly respected, even if for the wrong reasons. Now this United States president and his generals and intelligence officers - the same breed of man who had previously tried to stop his work and failed to support Goddard - were accusing him of being a traitor to his country, even as they hypocritically bartered to obtain his technology.

'I'm a scientist,' he told them. 'Nothing more and nothing less. I'm not moved by your patriotism, which is merely self-interest, and I won't be a traitor to myself just because you accuse me of being a traitor to my country. You have more blood on your hands than I do - and for less admirable reasons. Now do

you agree or not?'

'No!' Samford exploded.

'We've no choice,' Vandenberg argued. 'We can't let the Russians or Chinese get their hands on this traitor's technology. I'm afraid we have to deal with him.'

There was silence for a moment while the President considered his options. Having previously met Samford and Fuller, Wilson took this opportunity to study General Hoyt S. Vandenberg. The general had been head of the Central Intelligence Group (later the CIA) from June 1946 to May 1947 and his uncle had been chairman of the Foreign Relations Committee, then the most powerful committee in the Senate. Clearly, Vandenberg still had great influence in those areas, as well as all the authority inherent in his position as USAF Chief of Staff. This man, once he had accepted defeat, would be particularly useful.

President Truman was studying Wilson at length, disbelieving, quietly outraged, helplessly intrigued, but eventually he too was forced to raise his hands in surrender. 'I agree with General Vandenberg,' he said. 'We have no choice in the matter. We must deal with this man.'

The ensuing silence was filled with dread and despair, until Nebe, finally speaking for the first time, said in his deadly soft, oddly threatening manner: 'This leads to the delicate matter of security.'

'Ah, yes!' Wilson exclaimed softly. 'I'd almost forgotten.' Studying Fuller, he saw Nebe's murderous double behind his urbane manner and knew that what Nebe was about to say would be understood by him. 'Go ahead, Nebe.'

'Since it's impossible to fly the saucers without being observed,' Nebe said, his voice as chilling as his demeanour, 'whether they be our own highly advanced craft or your crude US-Canadian prototypes, I suggest you implement the widespread use of ridicule, harassment and confusion of UFO witnesses, official and otherwise.'

'We've already done that,' Fuller told him.

'Correct,' Vandenberg added. 'When Project Sign was established in January 1948 it was given a 2A classification and placed under the jurisdiction of the Intelligence Division of the Air Force's Air Material Command at Wright Field - later renamed the Air Technical Intelligence Centre, or the ATIC. When Captain Dwight Randall of Sign submitted his official, top-secret Estimate of the Situation in July of that year, I personally rejected it on the grounds that it lacked proof, even though the proof was clearly conclusive. I then encouraged a whole new policy at Project Sign: in the future, Sign personnel were to assume that *all*

UFO reports were hoaxes. They also had to check with FBI officers and with the criminal and subversive files of police departments, looking into the private lives of the witnesses to check if they were reliable. Most of the Project Sign team took this as fair warning that it wasn't wise to raise the subject of UFO sightings. To encourage this fear, I first leaked the news that Captain Randall's Estimate of the Situation had been incinerated, then renamed Sign as Project Grudge. As anticipated, this was taken by all concerned as another indication of my displeasure.'

'Clever,' Nebe whispered admiringly.

'The function of Project Grudge,' Fuller explained, picking up where Vandenberg had left off, 'was to shift the investigations away from the actual UFOs and on to those who reported them. However, since a good twenty-three percent of their reports were still classified as unknowns, this wasn't easy. For this reason, Project Grudge launched a CIA-backed public relations campaign designed to convince the American public that UFOs did *not* represent anything unusual or extraordinary. As part of this debunking effort, we encouraged the *Saturday Evening Post* journalist, Sidney Shallet, to write a two-part article exposing UFOs as a waste of time; but when that backfired - by increasing public interest rather than diminishing it - we got the Air Force to counteract by stating officially that UFOs were either misidentifications of natural phenomena or the products of mass hallucination. Project Grudge issued its final report in August 1949 - only six months after its inception. Put simply, its conclusion was that while twenty-three percent of the UFO reports were still classified as unknowns, most had psychological explanations and the investigation was therefore a waste of time and should be downgraded even further. On December 27, the Air Force announced the termination of the project. Shortly after, the Project Grudge records were stored and most of its personnel were widely scattered.'

'You can do more,' Nebe said, 'to encourage widespread confusion and fear of ridicule when it comes to the reporting of UFOs. Your Air Force must be seen to be supporting UFO investigations with Project Blue Book, while actually hampering them behind the scenes and by otherwise making things unpleasant, or even dangerous, for UFO witnesses and investigators. This can be done through the introduction of some new, restrictive Air Force regulations. You should also form a supposedly secret panel of leading scientists to investigate UFOs. However, this panel will also include CIA representatives who will

ensure that its official report ridicules the whole phenomenon and then is leaked to the press.'

'You're asking us to turn our own, patriotic pilots and citizens into traitors,' Samford said angrily, 'and, even worse, to do so while we're fighting the war in Korea.'

'A small sacrifice,' Wilson said, 'and one you must make. Otherwise there can be no agreement between us.'

Samford was about to make another angry retort, but was cut short by the stern glances of President Truman and General Vandenberg.

'As Head of Air Intelligence – ' Nebe nodded at General Samford – 'and USAF Chief of Staff' - he nodded at General Vandenberg – 'you two are in an excellent position to do this, so please ensure that it's done.'

Vandenberg managed to keep his peace, if with visible effort, but Samford practically turned purple and even took a step forward. 'I'd remind you that the last time we talked you were relatively safe because we were in open countryside with your saucer hovering right above us. This time, however, we're in the Oval Room of the White House, so what the hell can you do to prevent us from arresting you right now?'

Smiling, Wilson told Samford to turn off the lights. When this had been done, the Oval Room was plunged into moonlit darkness. Wilson then removed a pocket-sized electronic device from his jacket pocket and whispered coded instructions into it. A few seconds later, a bass humming sound came from outside, seeming to fill the room, then the room shook a little, as if from an earth tremor, and a dazzling, pulsating, silvery-white light beamed in through the windows overlooking the Rose Garden.

When they all stared at the windows, they saw what appeared to be a row of portholes in a metal body, with the light beaming out of them to form the single, blinding brilliance that now filled the Oval Room.

The row of lights bobbed up and down, as if hovering just above the ground, while the bass humming sound filled the room to exert a subtle, almost palpable, disturbing pressure. Then the humming noise ceased and the silvery-white lights blinked out, plunging the Oval Room back into moonlit darkness.

General Samford switched the room lights back on as Wilson stood up, preparing to leave with Nebe.

'I'll be spending a few days in the capital,' he informed them with confidence, 'so please don't try any tricks while I'm here.'

‘We won’t,’ Fuller said.

General Samford glared at Wilson, General Vandenberg looked stunned, and President Truman simply stared at the windows as if in a state of shock.

Without another word, Fuller led Wilson and Nebe out of the Oval Room, then down to the White House garage, to drive them back to where they were staying, in the Hay Adams hotel.

Chapter Sixteen

Cold December winds were blowing dust across the desert when Fuller drove to the house of Mike and Gladys Bradley, near Eden Valley, Roswell, New Mexico. The sun was starting to sink when he got out of his car and walked up the steps of the modest ranch-style house in the middle of nowhere, with only the El Capitán Mountain visible in the distance, beyond the otherwise featureless flatlands.

They sure like their privacy, Fuller thought as he rang the doorbell.

Neither Bradley nor his wife was expecting the visit from Fuller and the latter gazed at him suspiciously through the mesh-wire of the outer door when she opened the main door.

'Gladys Bradley?' Fuller asked.

'If you're here, you must know that already, so why bother asking?'

Fuller had heard she was a tough old bird, so he wasn't too surprised by her tart response. Though now nearing her sixties, Gladys was still as thin as a whip and had a gaunt, suntanned face, under grey hair cropped as short as a man's. She was squinting at him through the smoke from the cigarette dangling from compressed lips.

'I want to speak to your husband, Mrs Bradley.'

'He may not want to speak to you, mister. Just who the hell are you?'

'Sam Fuller. CIA.'

'Oh, one of those.' She clearly disapproved. 'You got an appointment?' Fuller shook his head. 'No,' Gladys said, 'I didn't think so. Goodnight, Mr Fuller.'

She was just about to close the main door again when Fuller jerked the outer door open and used his foot as a doorstop on the other one. 'Don't close the door, Mrs Bradley. I might hurt my foot. If I do, I'm liable to get angry and that leads to trouble. You look like a woman of some perception, so you know I'm not lying. Now do I come in or not?'

Still a reporter to her fingertips, Gladys studied him for a moment, then nodded and opened the inner door. ‘Okay,’ she said. ‘I know trouble when I see it. You promise me none of that and I’ll let you in.’

‘No trouble,’ Fuller said.

Gladys nodded again, then stepped aside to let him pass. He entered a short hallway with doors on either side. Gladys closed the door behind him, then skipped ahead to lead him into the expansive living room, which had an open-beam ceiling, walls and floors of pine boards, and comfortable, old-fashioned furniture on Mexican carpets. As they entered, Mike Bradley looked up in surprise, then rose from his armchair in front of the flickering TV set.

‘Sam Fuller,’ Gladys said, waving a careless hand in Fuller’s direction. ‘CIA. He was very persistent. Wants to ask a few questions.’

Bradley nodded, understanding what she meant, then looked directly at Fuller. He didn’t extend his hand.

‘CIA?’

‘That’s right, Mr Bradley. I know you won’t want to answer my questions, but I’m afraid you’ll just have to.’

Just as Gladys had done, Mike Bradley studied Fuller carefully, then glanced inquiringly at his wife.

‘It’s been years now,’ Gladys said. ‘It can’t make too much difference. This one’s trouble and we don’t need that at our age. Just answer his questions, Mike.’

Bradley nodded, then held out his hand. ‘Hi,’ he said as Fuller shook it. ‘Can I get you a drink?’

‘I could sure do with a beer,’ Fuller replied.

‘I’ll get it,’ Gladys said.

As she disappeared into the kitchen, Bradley indicated that Fuller should take an armchair facing the TV. When Fuller did so, Bradley switched the set off - Milton Berle was hamming it up in the Texaco Star Theater - and took the comfortable armchair facing him. At fifty-eight years old, Bradley was still a handsome, well-built, silvery-haired man, though the skin on one cheek was slightly livid from what looked like an old burn.

The explosion at Kiel Harbour, Fuller thought. That’s what put him in hospital. Otherwise, the guy looks like Spencer Tracy. A dead ringer, in fact.

‘Nice house,’ Fuller said, glancing around the living room.

‘Yes,’ Bradley said, ‘we think so.’

The pine-board walls were covered with framed photos taken from the personal history of the two people who lived here. Apart from early family portraits, the photos of Gladys showed her as a reporter in Roswell in the 1930s, including some with Robert H. Goddard and his rocket team; then the Spanish Civil War, including some of Ernest Hemingway; plus London, England, during World War II; liberated Paris, France; then more journalistic encounters in Roswell after the war. Other photos showed Gladys and Bradley, both in uniform, also in London and liberated Paris during the war, or Bradley with other military personnel in France and Germany during the same period. Fuller assumed that the framed photos of a young man and strikingly similar young woman, sometimes alone, other times with children or Bradley, were of Bradley's son and daughter and grandchildren. There were no photos of Bradley's former wife, who had died at Pearl Harbour.

'You two have obviously lived a full life,' Fuller said.

'If you're in the CIA, Mr Fuller, I'm sure you know as much about us as we do.'

Fuller grinned. 'Yeah, I guess so.'

Gladys returned with his beer, handed it to him, then took the chair between him and Bradley. Fuller sipped the beer, which was ice cold, then he licked his wet lips.

'Well,' he said, 'times have sure changed since you two got together during World War Two. That was some damned explosion last week, right?'

'It sure was,' Bradley replied, his gaze steady and watchful. 'And so was the one the month before.'

He was referring to Britain's first atomic bomb test in Monte Bello Islands, off the northwest coast of Australia, which had taken place about eight weeks ago. Fuller, on the other hand, was referring to the obliteration of the whole island of Eniwetok, in the Pacific, by the US hydrogen bomb test of two days ago.

'An awesome sight,' Fuller said.

'Some would call it terrifying.'

'Yeah... And now we're being plagued by these damned flying saucers. The world's certainly changing.'

'We both know why you're here, Mr Fuller. You don't have to introduce the subject in this roundabout manner. You want to know why I didn't turn up at the Socorro UFO crash site on July 2, 1947, five years ago. You want to know what

I know.'

Fuller sighed. 'Yeah, that's it.' Glancing at Gladys, he met a measuring, grey-eyed gaze, so quickly turned back to Bradley. 'Okay, you know why I'm here. From the day you returned from the war in Europe, you were obsessed with UFOs, or flying saucers, and kept in constant touch with the Flight Intelligence Officer of Roswell Army Air Base, First Lieutenant William B. Harris, hounding him for information on any sightings. Yet that night in July, 1947, when Harris called to inform you that a flying saucer had actually crashed on the Plain of Magdalena, near Socorro, inviting you to go and view the crash debris with him, you didn't show up and ever since have refused to say why. You also stopped investigating, or even discussing, UFOs from that night on. What happened, Mr Bradley?'

'What do you know about my activities during the war?'

'You were trying to track down a brilliant American physicist who had once worked with Robert H. Goddard, right here in Roswell, before absconding to Germany and ending up in charge of a top-secret Nazi research project. He was called John Wilson. Born Montezuma, Iowa, in – '

'You know what that research project was, don't you?'

'We believe it was called Projekt Saucer. We also have grounds for believing that it involved the construction of a highly advanced, jet-propelled, saucer-shaped aircraft.'

'Correct. Then you also know that my reason for being at Kiel Harbour just before the close of the war was to try and capture Wilson before he made his escape.'

'By submarine?'

'You must know that as well.'

'No,' Fuller lied, wanting Bradley to reveal as much as possible from his own knowledge. 'The report on your World War Two activities has been heavily censored. I only know that you made it as far as Kiel, where you were badly wounded in an explosion on the dock. I wasn't sure if you knew what had happened to Wilson.'

'Yes, I knew. Wilson and some of his cronies were taken on board the Nazi submarine U-977, which I actually saw leaving Kiel harbour. Just before the submarine put out to sea, one of Wilson's Nazi pals, an SS lieutenant, found me lying hurt on the dock, after my car had been overturned. He introduced himself, saying his name was Stoll, and confirmed that Wilson was on board the

submarine. He also said that Wilson would remember my name. Then he blew up the nearby warehouses, which contained trucks stacked high with slaughtered SS troops: the only remaining witnesses, apart from myself, to Wilson's escape. As you know, I was badly wounded by that same explosion and spent many months in hospital, first in Germany, then back here. When I was released, I became obsessed with flying saucers - not mere UFOs - because I knew damned well that they existed and I wanted to prove it.'

'So why didn't you go with First Lieutenant William Harris when he invited you to the site of the Socorro crash?'

'Initially, I intended going,' Bradley confessed. 'In fact, I left here immediately and was heading for Roswell Air Base, to meet Lieutenant Harris, when I realised that I was being tracked by a flying saucer. It landed on the road ahead and made the engine of my car malfunction; then three men dressed in black dropped out of the base of the flying saucer and surrounded my car. One of them introduced himself as Wilson.'

'Christ,' Fuller exclaimed softly. Glancing at Gladys, he saw that she was still gazing steadily at him, not trusting him an inch. 'So what did Wilson say?' Fuller asked, turning back to Bradley.

'He told me that the world we know is dying - a world of wasteful emotions - and that the new world, his world, was approaching and couldn't be held back. His world, he informed me, would be one of truth, or pitiless logic, and his technology was going to take us there. He then told me to stop pursuing him. He threatened Gladys and my grandchildren. He explained that his flying saucers would fly the skies with impunity and that those who reported them - presumably including me - would be ridiculed and, where necessary, silenced. He told me again to think of my children. To enjoy my retirement. Then he bid me *Auf Wiedersehen* and took off in his saucer. I was frightened by the advanced capability of that flying saucer, by what Wilson had said, by the knowledge that he had managed to track me down, and so I stopped chasing UFOs.'

Gladys Bradley reached over to squeeze her husband's hand. When he smiled, she let his hand go and sat back again.

Fuller had another sip of beer, then put the glass down. 'The saucer made the engine of your car cut out?'

'That's right. A kind of bass humming sound, almost physical, head-tightening. Then the engine of my car cut out and wouldn't start again.'

'Why didn't you get out and run for it?'

‘I tried, but felt paralysed. It wasn’t fear, though I certainly felt that. It was some kind of paralysis.’

‘A kind of hypnotism?’

‘I was fully conscious, but it could have been something like that.’

‘How did you get back to your home when the saucer took off?’

‘I just turned the ignition key and the damned thing started up as if nothing had happened, letting me drive home. But no way, after what I’d seen, felt and heard, was I going to go up against that Wilson.’

‘Since then, have you ever felt you were being watched? Any contact with UFOs?’

‘Yes, on both counts. At least three or four times a year, always when driving at night, my car is paced by lights in the sky - either circular or in a long line, indicating a saucer shape. Also, though less frequently, Gladys and I will be awakened in the dead of night by lights beaming into the house from outside, often accompanied by that familiar bass humming sound. They’re keeping their eye on us, Mr Fuller, and they always will.’

‘Do you think they know we’re having this conversation?’

‘I really don’t think so. I suspect they keep paying me the unexpected visits just to remind me that they haven’t forgotten me. I’m taking a chance by having you here, but if they came tonight, it would just be a coincidence - an *unfortunate* coincidence.’

‘I’m sorry to put you in this danger.’

‘No, you’re not,’ Gladys said accusingly.

Fuller glanced at her, realised how tough she was, so just grinned and then wiped it from his face when he turned back to Bradley.

‘So Wilson knew who you were,’ he said, ‘and also knew that you were there at Kiel harbour.’

‘Absolutely,’ Bradley said.

‘Do you know where that submarine was taking him?’

‘I didn’t at the time, but I put it all together later, when I learned through the OSS organization that the submarine I’d seen in Kiel harbour, U-977, under the command of Captain Heinz Schaeffer, had docked at Mar del Plata, Argentina, a few months after the war.’

‘You think they’re in Argentina?’

‘No. Neither Wilson nor that SS lieutenant Stoll were found on board. Nor were any of the mechanical parts or drawings relating to Projekt Saucer - so my

guess is that they used Argentina as a springboard to the next stop.'

'Antarctica?'

'Yes. The Nazis were obsessed with building underground structures there - just like the enormous underground rocket complexes I saw at the end of the war in Belgium and Nordhausen, Thuringia. Documents found by Operation Paperclip indicated that virtually from the moment the Nazis illegally claimed Queen Maud Land in 1938, renaming it Neu Schwabenland, to the closing days of the war, they were shipping scientists, engineers, architects, builders, slave labour, and the material and plans for various highly advanced projects, including Projekt Saucer, to somewhere in Neu Schwabenland. So it didn't take much to put two-and-two together and come up with Antarctica. Then, when I read about Rear-Admiral Byrd's aborted Operation Highjump, in 1947, I was pretty much convinced that I was right. Wilson is somewhere in Queen Maud Land, either under or inside a mountain range, building flying saucers and god knows what else. It's a nightmare scenario.'

'Do you think he'd be able to produce flying saucers with the capability of those being reported?'

'Yes. My bet is that a lot of the saucers are small, remote-called machines that first evolved out of the German *Feuerballs*, better known during the war as Foo fighters. I certainly think they might be the ones involved in the so-called UFO invasion of Washington DC last July. Other saucers are bigger and piloted - just like the one that stopped me that night on the road to Roswell.'

'What do you think happened to the Projekt Saucer documents and parts divided between the Russians and the Allies at the end of the war?'

'I think it's likely that they now have their own saucers, though they certainly won't be as advanced as those created by Wilson and doubtless still being evolved in Antarctica.'

'One last question,' Fuller said, finishing his beer and preparing to leave. 'If we sent an invitation, would you be prepared to return to UFO investigations on behalf of the US government?'

'No, thanks, Mr Fuller.'

'Thank *you*, Mr Bradley.' Fuller stood up and turned to face Gladys, who hadn't moved from her chair. 'And thank you, Mrs Bradley.'

She just nodded, not trusting him an inch, letting Bradley walk him to the

front door. They shook hands on the porch.

'From what I've read, you're a hell of a guy,' Fuller said. 'I mean, you really did some things in your time.'

Bradley smiled in a modest manner, then released Fuller's hand. 'Not really,' he said. 'But I hope that what I've told you helps. I just don't want to be personally involved.'

'You won't be,' Fuller promised.

Walking back to his car, he climbed in and then looked out the window. Bradley was still on the porch, the wind blowing his silvery hair, handsome and clearly a decent citizen in his white shirt and trousers. He raised his hand in farewell. Fuller waved back, turned on the ignition, and then drove away from the house. When he glanced back, Bradley had disappeared from the porch. The lights of the house beamed out into the darkness, under a vast, star-filled sky. A real picture-postcard scene.

Fuller only drove a short way along the road. He stopped when he came to another car that was parked by the side of the road with its headlights off. The man in the other car rolled his window down.

'Well?' he asked.

'He knows all about Wilson,' Fuller said. 'Every damned thing.'

The other man nodded and then got out of his car, slinging a canvas bag over his shoulder. He walked back along the dark road, toward Bradley's house. Fuller got out of his car, lit a cigarette and silently smoked it.

When Bradley's house exploded and turned into a distant furnace that lit up the night, turning the sky a bloody red and erasing the stars, Fuller sighed, dropped the butt of his cigarette, ground it into the dust with the heel of his shoe, then climbed back into his own car and drove off.

'Too bad,' he murmured.

Chapter Seventeen

Dwight sometimes thought he would never work out just what it was he had seen that night in July 1952, hovering over the control tower of Andrews AFB as if about to descend upon it and crush it. In fact, the object, if such it had been, had merely hovered for a few seconds, dazzling them all with the radiance of what appeared to be its vast, swirling base, before it ascended again, making only a bass humming sound, almost an infrasound, then ascending abruptly and blinking out high above, plunging everyone in the control tower into a brief, blinding darkness.

Normal vision had returned soon enough, bringing the real world back with it, but from that day to this, Dwight had thought constantly about, and often dreamed about, that vision of luminous power, and wondered just what it was. Now, back in Washington DC, a year later but in the same month, he had to struggle to keep the memory of that night out of his thoughts and concentrate on what he was doing.

He was in the downtown office of the recently formed Aerial Phenomena Investigations Institute, or APII, a civilian UFO organisation, to give a clandestine 'deep background' interview to Dr Frederick Epstein, a 41-year astronomer and head of the institute, who had often been of great assistance to Project Blue Book in its evaluation of UFO reports.

Epstein was short and bulky, with a good thatch of hair, though there were streaks of telling grey in his dark Vandyke beard, which he tended to stroke a lot when deep in thought. He and Dwight were facing each other across a cluttered desk, in an office with walls covered by large charts showing the most commonly reported UFO shapes, the most commonly reported UFO formations and UFO manoeuvres, both singly and in formation, the worldwide locations and flight directions of the major UFO waves from 1896 to the present, major UFO events in the United States and overseas, and details of the world's major UFO organisations. The most common flight direction for the UFOs, Dwight

noted, was south to north and back again.

'It was the official reaction to the Washington sightings, more than anything else,' Dwight told Epstein, who was recording the conversation, 'that made all of us at Blue Book even more suspicious of the Air Force's stance on UFOs. Too many people were telling us one thing and then changing their stories for their official reports. Also, it became increasingly obvious that the top brass in the Air Force were trying to blind us with some dodgy manoeuvres. After the Washington sightings I became convinced that pilots reporting UFOs were being intimidated into changing their reports or simply remaining silent. I also suspected - and still do - that a lot of information was being withheld from us and that the CIA was stepping into the picture for unexplained reasons.'

Epstein stopped him there, in order to change the tapes. Dwight glanced at the window, but the curtains were drawn, even in broad daylight, and the door behind, he knew, was locked to prevent anyone coming in accidentally. It seemed a melodramatic thing to do and made him feel a little foolish, but when he thought of the mysterious deaths of Mike and Gladys Bradley, whose house had gone up in flames after an unexplained explosion about seven months ago - a tragedy that many thought had been caused by an act of arson - his foolishness was replaced with the fearful conviction that people investigating UFOs were putting themselves at risk.

Dwight was worried not only about himself, but about Beth and their daughter, Nichola. You just never knew...

When Epstein had changed the tapes, he looked up and said, 'Okay... The CIA was stepping into the picture for unexplained reasons.'

'Right. The person who most worried us was Chief of Staff, General Hoyt S. Vandenberg. It was Vandenberg who'd buried the original Project Sign Estimate, caused its incineration, and had the project renamed Project Grudge. We're still not sure just how much Vandenberg was influencing the Air Force or the CIA, but certainly he'd been head of the Central Intelligence Group, now the CIA, from June 1946 to May 1947 and his uncle had been chairman of the Foreign Relations Committee, the most powerful committee in the Senate. Clearly, Vandenberg still has great influence in those areas - and it's from those very areas that pressure's always coming to suppress the results of our UFO investigations.'

'So you weren't surprised,' Epstein said, smiling encouragingly, 'when you learnt that the CIA and some high-ranking officers, including Generals

Vandenberg and Samford, were convening a panel of scientists to analyze all the Blue Book data.'

'No. And I wasn't surprised, either, to discover that this panel was to be headed by Dr H. P. Robertson, director of the Weapons System Evaluation Group in the Office of the Secretary of Defence - and a CIA classified employee. The Robertson panel, by the way, was also convened against the objections of the Batelle Memorial Institute - the private research group used by the Air Force to carry out statistical studies of UFO characteristics and advise them on UFO investigations. Normally the Air Force bows to the Batelle Memorial Institute's every demand, but not in this instance.'

'Certainly sounds like they're determined to form that panel, come hell or high water.'

'They are,' Dwight said.

'What can you tell me about the panel?'

'This is strictly deep background. My name's not to be mentioned.'

'You have my word on it,' Epstein said.

Dwight took a deep breath, feeling nervous, but determined to let out what was troubling him, hopefully for future use by Epstein's invaluable organisation. Exhaling his breath in a sigh, he said, 'The Robertson panel was convened in great secrecy right here in Washington DC last January. While some insist that it opened on January twelve, it actually ran from January fourteen to eighteen. Apart from Robertson, the group's panel consisted of physicist and Nobel Prize-winner Luis W. Alvarez; geophysicist and radar specialist Lloyd V. Berkner and physicist Samuel Goudsmit, both of the Brookhaven National Laboratories; and astronomer and astrophysicist Thornton Page, Deputy Director of the John Hopkins Operations Research Office. Other participants included J. Allen Hynek, an astronomer consultant to the United States Air Force; Frederick C. Durant, an army ordnance test station director; William M. Garland, the Commanding General of the ATIC; our Pentagon liaison officer, Major Dewey Fournet; my Project Blue Book chief, Captain Ruppelt; two officers from the Navy Photo Interpretation Laboratory; and three high-ranking CIA representatives.'

Epstein gave a low whistle. 'That's some group,' he said. 'Almost impossible to argue with.'

'That seems to be the point,' Dwight said. 'The seriousness with which the subject was supposed to be treated is best illustrated not only by the calibre of

the men involved, but also by the fact that the group's report was to be given to the National Security Council, NSC, and then, if the decision was that the UFOs are of extraterrestrial origin, to the President himself.'

'Which may have been so much cotton wool,' Epstein said.

'I think it was.'

Epstein nodded his understanding. 'So what information was the Robertson panel given?'

'For the first two days of the session, Captain Ruppelt reviewed the Blue Book findings for the scientists. First, he pointed out that Blue Book received reports of only ten percent of the UFO sightings made in the United States, which meant that in five and a half years about 44,000 sightings had been made. He then broke the sightings down into the percentage that was composed of balloons, aircraft, astronomical bodies, and other misinterpretations, such as birds, blowing paper, noctilucent and lenticular clouds, temperature inversions, reflections, and so forth, and pointed out that this still left 429 as definite unknowns. Of those, it was clear that the most reported shape was elliptical, the most often reported colour was white or metallic, the same number of UFOs were reported as being seen in daylight as at night, and the direction of travel equally covered the sixteen cardinal points of the compass. Seventy percent of those unknowns had been seen visually from the air - in other words, by experienced pilots and navigators; twelve percent had been seen visually from the ground; ten percent had been picked up by airborne and ground radar; and eight percent were combination visual-radar sightings. Ruppelt also confirmed that many UFO reports came from top-secret military establishments, such as atomic energy and missile-testing installations, plus harbours and manufacturing areas.'

'That should have impressed them,' Epstein said. 'They always sit up when their own top-secret establishments are involved.'

'It *should* have impressed them,' Dwight said, hardly able to contain his lingering bitterness. 'Ruppelt and Major Dewey Fournet had completed an analysis of the motions of the reported unknowns as a means of determining if they were intelligently controlled. Regarding this, Major Fournet told the panel of how, by eliminating every possibility of balloons, airplanes, astronomical bodies, and so forth, from the hundreds of reports studied, and by then analysing the motions of the unidentifieds in the remaining unknown category, his study group had been forced to conclude that the UFOs were intelligently controlled

by persons with brains equal to, or maybe surpassing, ours. The next step in the study, Fournet explained, had been to find out where those beings came from; and since it seemed unlikely that their machines could have been built in secret, the answer had to be that they came from outer space.'

'Substantiating evidence?' Epstein asked, distractedly stroking his beard and studying the turning spools in the tape-recorder, as if they might reveal something Dwight hadn't told him.

'Yes,' Dwight said. 'The morning after Fournet's summary, the panel was shown four strips of movie film that had been assessed as falling into the definite-unknown category. The cinetheodolite movies taken by Air Force technicians at the White Sands Proving Ground on April 27, 1950, and approximately a month later; the so-called Montana movie taken on August 15 the same year by the manager of the Great Falls baseball team; and the Tremonton movie taken on July 2, 1952, by Navy Chief Photographer, Warrant Officer Delbert C. Newhouse.'

'Let's take them in turn,' Epstein said.

'Right.' Dwight removed a kerchief from his pocket and wiped the sweat from his face. The room, with its windows closed and doors locked, was unbearably hot. 'One of the White Sands movies showed a dark smudgy object that proved only that *something* had been in the air and, whatever it was, it had been *moving*. The second movie had been analysed by the Data Reduction Group at Wright-Patterson AFB, with results indicating that the object had been approximately higher than 40,000 feet, travelling over 2,000 miles per hour, and was over 300 feet in diameter.'

Epstein gave another low whistle and shook his head from side to side in a gesture either of disbelief or admiration.

'The Montana movie showed two large, bright lights flying across the blue sky in an echelon formation. The lights didn't show any detail, but they appeared to be large, circular objects. The Tremonton movie showed about a dozen shiny, disc-like objects fading in and out constantly, performing extraordinary aerial manoeuvres, darting in and out and circling one another in a cloudless blue sky.'

'Astronomical phenomena?'

'No. Any possibility that they might have been that was dispelled when the film clearly showed them heading in the same tight cluster toward the western horizon and, more specifically, when one of them left the main group

and shot off to the east.'

'Don't tell me the panel refused to accept *that* evidence!'

Dwight rolled his eyes in disgust, then nodded affirmatively. 'They haven't released their official report yet, but according to Captain Ruppelt they didn't seem impressed.' He wiped his forehead again, then studied the kerchief. It was soaked with his sweat. 'Yet the Montana movie had been subjected to thousands of hours of analysis in the Air Force laboratory at Wright Field and the results proved conclusively that the objects weren't birds, balloons, aircraft, meteors, clouds, or reflections - in short, they were unknowns. As for the Tremonton movie, it had been studied for two solid months by the Navy Laboratory in Anacostia, Maryland, and their conclusion was that the unidentifieds weren't birds or airplanes, were probably travelling at several thousands of miles an hour, and judging by their extraordinary manoeuvres, were intelligently controlled vehicles. In other words, the evidence was conclusive.'

'But the panel still wasn't impressed.'

'No, damn them. After going over the evidence for two days, the bastards concluded in their initial report that the evidence was *not* substantial, that the continued emphasis on the reporting of the phenomena was resulting in a – quote - *threat to the orderly functioning of the protective organs of the body politic* – unquote - and that the reports clogged military channels, could possibly precipitate mass hysteria, and might encourage defence personnel to misidentify or ignore actual enemy aircraft.'

'In other words: the real problem wasn't the UFOs - it was the UFO *reports.'*

'You've got it,' Dwight said.

Even talking about it could make him feel bad these days, bringing his buried fears to the surface and encouraging what he sometimes believed was his growing paranoia. Yesterday, watching TV, he had seen mud-smeared, weary American troops celebrating the end of the Korean war - a sight that had filled him with overwhelming nostalgia for his own fighting days in World War Two. It was a terrible truth that war had its attractions, but for Dwight it was something more than that: it was the desire to escape from the deepening darkness and dangers of his all-embracing UFO investigations.

The news of the death of the former UFOlogist, Mike Bradley, and his wife Gladys, possibly by an act of murder, had certainly filled Beth with fear and again made her plead for Dwight to get out of this business. In fact, he had tried,

but the Air Force had refused his request; and now, when he thought of Bradley's blazing house, he felt trapped and threatened.

'So what do you think their official report will recommend?' Epstein asked him.

'Nothing honest or realistic,' Dwight replied. 'I think the whole idea behind the Robertson panel is to convince the American public that the Air Force has made the definitive study of UFOs and come up with a negative evaluation. In other words, their job is to shaft us... and I think they'll succeed.'

'That's why you're giving me this information?'

'Yes. I think Project Blue Book is going to be restrained by the recommendations of the Robertson panel. If that's true, you'll be able to use this info more effectively than us.'

'Thanks,' Epstein said, turning off the tapes. 'Sadly, I believe you're right.'

Dwight was glad to make his escape from the airless office in Dr Epstein's Aerial Phenomena Investigations Institute, or APII, and step back into the uplifting sunlight of late July in Washington DC. He caught a cab to the airport.

Chapter Eighteen

Marlon Clarke was talking to himself. His guillotined head had been separated from its original body for six years now, but was still functioning in an insane, chaotic manner. Still enclosed in a glass casing with an inner temperature reduced to just above the point of freezing, the head was connected to the two amputated hands and the surgically removed, still beating human heart in the chilled glass case on the desk beside it. Clarke's eyes were still open, but were wide with terror or madness. His dribbling lips were moving rapidly to form a torrent of words that could not actually be heard because of the cutting of his vocal chords. Attached by the severed neck to a steel-clamp base enclosing artificial blood vessels and the wiring that connected it to the amputated hands and beating heart, the head was moving slightly, the eyes roaming frantically left and right, as the fingers of the severed hands opened and closed spasmodically, sometimes making the hands crawl across the boxed-in table like large, insane spiders.

'The main problem,' Dr Gold was explaining to Wilson, Kammler and Nebe, 'is not in perfecting the psycho-physical interaction between head and body, but in retaining the sanity of the severed head. As you can see, Clarke's head is successfully receiving the blood being pumped by the separate heart and has retained its power to agitate the amputated hands, though in a chaotic, useless manner. This suggests that while the head still has enough consciousness to send impulses to the severed limbs, it's in a state of delirium, or insanity, caused by disbelief and trauma. It's impossible to ascertain just what Clarke is thinking right now - if his thoughts still include self-awareness or not - but his wide-open, wandering eyes prove that at least he's still aware of *something*. We just can't tell how much.'

'So the main problem isn't physical, but psychological,' Wilson said. 'We have to find a way to minimise the shock and retain the severed head's sanity.'

'Exactly,' Dr Gold said. 'With regard to cyborg development, I believe

we can solve this with artificially induced amnesia - chemical or electric stimulation of the relevant areas of the brain. In this case, the severed head, or the beneficiary of a surgically rearranged face, part original, part prosthetic, will assume that it's always been what it is and not suffer trauma. This way, please.'

Leading them across the laboratory, which had walls hacked out of the interior of the mountain and therefore gave no view of the Antarctic wilderness outside, Gold stopped at a bizarre, headless figure strapped upright to an electric chair that was wired to a large computer console. From the waist down, the figure was a perfectly normal, naked male, though the blood had been drained from the legs, giving them a pasty-white, slightly blue, mouldy appearance. However, from the waist up, the torso was artificial, made from moulded steel plates, with one plate missing, exposing a ghoulishly colourful mass of electric wiring and a narrow glimpse of the original intestines. One arm was missing from the headless torso and the other, Wilson noted, was actually a cobalt-chromium alloy prosthetic.

'The prototype for our first cyborg,' Gold explained. 'The lungs, kidneys and original intestines will remain, but will be strengthened and supported by a two-chamber pacemaker. Working prosthetic joint replacements have already been perfected and will help defeat the rigours of supersonic flight and space travel. The psycho-physical interaction between brain and artificial limbs will be stimulated by the use of an electronic metal skullplate and the problem of speech for the lower-face prosthetic, including new chin implant, will be solved by using an electronic larynx. Control of the cyborg will be attained by a combination of chemical-electronic stimulation of the brain and computerised, remote-control interfacing between the cyborg and its activating machine, located here in the colony and in the saucers. These are early days yet, but I believe it can be accomplished relatively soon. If we can solve the problem of the sanity of the severed head, we're on our way to success.'

A severed human head was resting on a table beside the electric chair. One eye was missing. An odd-looking eye, rather like a glass marble, was resting on the table beside the one-eyed head.

Smiling, Gold picked up the loose eye and showed it to Wilson. 'An acrylic eye. We're trying various experiments with them. Unfortunately, so far, when we've implanted them in the heads of living subjects, they haven't worked well. When we replace only one eye, the living nerves of the remaining eye help the

replacement to see slightly; but when we replace both eyes at the same time, blindness results. Still, given time and a regular supply of living subjects, we'll get there in good time.'

'There'll be no problem with living subjects,' Kammler said. 'Stoll is doing a good job in Paraguay and the supply of Ache Indians is limitless. You need have no fears there.'

'Good.' Gold glanced with pride around his busy laboratory, filled with white-smocked surgeons, bio-engineers, dedicated scientists, headless torsoes, amputated limbs, and isolated, still pumping human hearts. 'Please, gentlemen, this way.'

He led them through the nearest door, along a short corridor, and into another, larger laboratory containing various chairs, some electric, others normal, all with buckled straps on the arms, and small, dark cells with leaded-steel doors containing narrow viewing panels.

There was a dreadful amount of noise in this laboratory - and the noise, by its very nature, was even more dreadful.

Gold introduced Wilson, Kammler and Nebe to Dr Eckhardt, formerly of an SS experimental medical unit. Eckhardt gave them a tour of his domain.

In a small side chamber, human subjects, male and female, were strapped to heavy chairs cemented into the floor, wearing headphones, bleeding profusely from their nostrils and ears. They were also, in some cases, vomiting into plastic bags taped to their mouths.

'Infrasounds,' Dr Eckhardt explained, raising his voice to defeat the agonised screaming of his victims. 'Sounds just below the level of human hearing - so condensed that they can create physical pressure on the human brain and the body's organs. At the moment, the particular infrasounds being used are bursting the blood vessels in the heads of the human subjects, with the results that you see. We're also experimenting with other infrasound levels to ascertain their potential as surgical tools and beam weapons, which we hope to incorporate in our flying saucers. For this reason, we're also experimenting with strobe lights. Please, this way, gentlemen.'

In one of the darkened cells, behind the closed, sealed door, a man was being subjected to flickering strobe lights. Viewed through the narrow panels in the leaded-steel door, in the rapidly alternating light and darkness, he appeared to be writhing and kicking in slow motion, while tearing frantically at his hair or clawing his own naked, bloody body.

‘The strobe lights,’ Eckhardt explained, ‘are flickering in the alpha-rhythm range, between eight and twelve cycles a second, thus causing an epileptic seizure in the human subject - as you can see. Other rhythms produce different results, inducing either drowsiness, full mesmerism, hunger, nausea, or various moods ranging from acute depression to uncontrollable violence. These, also, we are planning to incorporate into beam weapons for the saucers. Come, gentlemen, this way.’

A gaunt, pale-faced woman, wearing a one-piece black coverall, was strapped by her wrists and ankles to the arms and legs of an electric chair. A metal skullcap, wired to the console-control beside the chair, was being lowered onto her shaven head. The woman was sweating, trembling and weeping.

‘Please don’t,’ she whispered.

‘A stereotaxic skullcap,’ Eckhardt explained, ignoring the woman’s pleading as the metal device, containing hundreds of minute, hair-thin electrodes, was lowered onto her shaven head. ‘When we can hypnotise or otherwise control human beings by remote control - say, with the use of brain-implants – we’ll abduct those we want, implant them by means of a stereotaxic skullcap such as this, then return them to the world of ordinary men, to do our bidding as and when required. Eventually, in this way, we’ll be able to enslave the world’s most powerful men and women without resorting to war and with few aware that they’re in our control. In other words, they’ll become our brain-implanted robots.’

‘You’ve perfected this?’ Nebe asked.

‘No,’ Eckhardt confessed, ‘not yet. At the moment, most of those subjected to electronic stimulation from the stereotaxic skullcaps become vegetables - but some are keeping their minds longer than others, so we’re getting there gradually. The breakthrough will come soon enough.’

He nodded in the direction of the white-smocked technician at the control console. When the technician flicked a switch, the woman screamed in agony, writhed violently in the chair - or as much as she could with her wrists and ankles strapped - then urinated and collapsed into stillness. The technician turned off the power while a medic examined the woman’s pulse and heartbeat. Straightening up, he shook his head from side to side and said, ‘Her heart’s given out. I think we should try one of the adolescents; they have a much greater will to live.’

‘Bring one in,’ Eckhardt said.

‘The cyborg-and-other experimentation is excellent,’ Wilson told Gold when they had left Eckhardt to his work and were making their way back to Gold’s laboratory, ‘but what about human, non-prosthetic longevity? Are you making progress with that?’

‘There are still considerable problems, particularly regarding the liver, but eventually even that will be solved. I would remind you that even in the West, some remarkable discoveries and advances have recently been made, including the discovery of DNA, the basic structure of life; the first full chemical analysis of a protein; and the first impregnation of a woman with deep frozen sperm - so the secrets of longevity, and even of life, are now within the bounds of possibility. I would therefore suggest that you arrange for the abduction of some scientists and biologists specialising in those fields.’

‘I’ll see to it,’ Wilson said. ‘In the meantime, you’re doing invaluable work here. Keep it up, Dr Gold.’

Now back in Gold’s laboratory, Wilson glanced once more at the mad eyes and dribbling, silently gibbering lips of the severed head of Marlon Clarke. Impressed, he led Kammler and Nebe out, walking along a recently completed tunnel, past brightly-lit side chambers containing other laboratories, workshops, machine-shops, and rooms containing spare parts and supplies, all guarded by armed men in black coveralls. At the end of the tunnel, in a brightly-lit open space carved out of the rock, they took a lift up to Wilson’s office, located near the summit of the mountain.

Entering, Wilson was briefly dazzled by the vast, sunlit Antarctic as seen through the panoramic windows that stretched along the full length of one wall, just beyond his desk. He did not sit at the desk, but instead indicated the chairs grouped around a table placed right in front of the window, giving a magnificent view of the white wilderness. The table had been prepared for dinner, with a bottle of white wine being chilled in a bucket. The food, which already was on the plates, consisted of a simple green salad, wholewheat bread and cheese. Wilson liked to eat healthily.

‘Gentlemen,’ he said, pulling out one of the chairs and seating himself. ‘Let’s sort our differences out in a civilised manner, over good food and wine.’ When Kammler and Nebe were also sitting, both eyeing the healthy food with a visible lack of enthusiasm, Wilson removed the bottle of wine from the ice bucket and filled up their glasses. After toasting one another, they commenced eating, talking through the meal.

‘I believe you had a complaint to make,’ Wilson said, addressing both men.

‘Yes,’ Kammler replied. ‘While my direct responsibilities are for the scientific aspects of the colony, including labour management and discipline, I believe I should still have a say in other matters.’

‘Such as?’

‘It’s not my belief that we should be negotiating with the Americans in return for their cooperation regarding supplies.’

‘How else do you propose obtaining such supplies?’

‘The way we’ve always done in the past: by stealing them and bringing them in on the saucers.’

‘The saucers aren’t yet big enough and our supplies are running out.’

‘Nevertheless,’ Kammler insisted, glancing nervously at the watchful Nebe, ‘I don’t believe we should let the West stay in the Antarctic. Nor do I believe that we should give the Americans the slightest knowledge of our technology.’

‘We don’t have a choice, Hans.’ Wilson was being patient. ‘We can’t wait until we run out of supplies and then make our trade. Once we run out of supplies, the West will have us over a barrel. We can’t let that happen.’

‘And what if those in the West, particularly the US, use the knowledge we give them to actually catch up with our technology?’

‘That simply won’t happen.’ Wilson was starting to lose patience. ‘I’ll only pass on what we’ve already superseded, which means that no matter how far they advance, we’ll always be even more advanced – light years ahead of them.’

‘I don’t think we can take that chance,’ Kammler said. ‘One of your old Projekt Saucer team, Walter Miethe, is now working for the A.V. Roe aircraft company in Malton, Ontario, helping them to construct some crude flying saucers based on our early designs. Habermohl is doing the same for the Soviets. Werner von Braun is now working for NASA, reportedly on a long-term moon programme. As for Flugkapitän Rudolph Schriever, he’s now back in his home town of Bremerhaven, West Germany, from where he’s busily informing all and sundry that the Americans have their own saucers and constructed them from his designs, which is partially true. The United States now knows too much, so we shouldn’t barter with them.’

‘And I repeat,’ Wilson said, his patience running out, ‘that it can’t be avoided.’ Disgusted, he turned to the silent, always calculating Nebe. ‘And you, Artur, what do you think?’

‘I agree with Kammler. We can’t take such a chance. If we want supplies,

let's go and take them. With our saucers, we can bring the United States to it knees - and from there take over the whole world. Why wait so long?'

'You want power, Nebe.'

'Nothing else in life matters.'

Wilson sighed, despairing of base human nature. 'I'm not interested in power for its own sake,' he explained, 'but want only to guarantee the survival and continuing evolution of this apolitical, scientific community. Eventually, our technology will make us the dominant power anyway, without resort to pointless violence, and in the meantime, we can get what we want with minimum effort. Let the United States bring in our supplies; what we give in return will serve them well, but not enough to give them an advantage over us. We're safe from attack.'

'I'm a policeman,' Nebe said. 'That's what I'm reduced to here. I'm not a man cut out for peaceful work and long-term commitments. I'm being destroyed by boredom. I need something more to do. Let's go to war against the Americans, I say, and prove the worth of our saucers. We will soon rule the world, then.'

'You have the instincts of an animal,' Wilson said, 'and the mind of a caveman. This subject is closed.'

He saw the flash of anger in Nebe's dark, primal gaze and knew that he had struck through to a nerve that would make the man murderous. Glancing at Kammler, he saw that he too was angry, though trying to conceal it with a smile that did not reach his eyes. Wilson knew what they were after: the glory of immediate conquest. He also knew that they now wanted to get rid of him, divide the colony between them, and use the flying saucers to resurrect the Third Reich and ensure that it would finally become their beloved Thousand Year Reich.

It was a pitiful dream, one which filled him with contempt, making him realise that these Nazis had served their only useful purpose and that the time had finally come to put an end to them. He would do it this evening.

'Well, perhaps you're right,' he said. 'The gamble may be too great. Let me sleep on it tonight and make a decision tomorrow.'

'Excellent,' Kammler responded, smiling, all charm, while Nebe simply stared in a stony manner, which was normal for him. Wilson raised his glass of wine in the air and smiled falsely at both men.

'I can tell you both miss the war,' he said. 'Peace can often be boring. So - to

the war!' They toasted the war by touching glasses. When they had drunk, Wilson said, 'Ah, yes, they were indeed good days.'

As sunlight stroked the frozen peaks in the bright night of Antarctica, Kammler and Nebe nostalgically recalled the days of World War II while Wilson listened, pretending to be interested, but practically twitching with impatience. When, a few hours later, after brandy and cigars, they returned to the subject of how best to deal with the outside world, Wilson pretended to agree with them and promised to let them devise a strategy for war, starting with an immediate attack on the United States, initially targeting Washington DC.

Satisfied, Kammler and Nebe retired to bed.

Understanding that no matter what he agreed to, they would eventually turn against him, Wilson had no intention of doing what they wanted. Therefore, instead of considering their request, he sat at his desk and turned on the TV screens that showed them in their separate rooms, Kammler already sleeping, Nebe naked and straddling one of the comfort girls, his bloated body heaving up and down in a joining devoid of love.

Shaking his head in disgust at what they had forced him to do, Wilson pressed a button located under his desk, releasing jets of lethal gas into their rooms - killing them exactly as they had killed so many others in the gas chambers of the Nazi concentration camps.

Kammler didn't waken up. He died in his sleep. Nebe rolled off the girl, covering his mouth with his hands, tried to open the front door and failed, then attempted to climb through the window as the girl, also realising what was happening, started pounding on the door with her fists, obviously screaming for help. Nebe fell back from the window, rolled on the floor, clambered back up. He grabbed the girl by the hair, jerked her away from the door, then frantically tried to pull the door open until the gas overcame him. The girl went into convulsions first, writhing naked on the bed, vomiting. Nebe slid down the door, turned away, fell forward, started crawling towards the window on his hands and knees, then collapsed face down on the floor. He went into convulsions as the girl became still, then he too vomited profusely and shuddered his way into the final stillness of death. The dense gas had become a cloud of smoke that obscured his body and made it look like a bloated, hairy animal lying on its side. That carcass did not move.

Wilson picked up his phone and called the Rubbish Disposal Unit. He ordered them to remove the bodies from rooms 2 and 3 and incinerate them and

all their belongings. Then, immensely relieved and satisfied, he had a good sleep.

Chapter Nineteen

Dwight awakened from a restless, dream-haunted sleep in which he had been pursued by a flying saucer while driving from Wright-Patterson AFB to the town of Dayton. The saucer was immense, with a fiery orange-coloured base, and it came down on Dwight's car, blotting out the whole sky, to make the vehicle's engine malfunction and then swallow it whole. Dwight looked up in terror, his heart ready to burst, as the fiery orange-coloured base, now a bizarre, swirling furnace, spread out all around him and suddenly blinded him.

His scream of fear tore him loose, casting him back to the real world, and he jerked upright on the bed, opening his eyes to the morning sunlight, realising that he was covered in sweat and that Beth and Nichola were in the kitchen, having breakfast already. Breathing deeply, trying to still his racing heart, he slid off the bed, wriggled out of his soaked pyjamas, and gratefully went for a cold shower.

Feeling better after the shower, he put his uniform on and went into the kitchen. Beth and Nichola were facing each other across the dining table, having a breakfast of cornflakes, toast, orange juice and, in Beth's case, black coffee. Nichola was now six years old and as pretty as a picture. Beth, though no longer the young, longhaired beauty he had married, was still, with her short-cropped auburn hair, full lips and slim figure, an exceptionally attractive 27-year old woman. She was also a woman who spoke her mind, as Dwight knew only too well and was reminded of once more when he joined her and Nichola at the table.

'Groaning and tossing in your sleep again,' Beth said for openers. 'More nightmares, Dwight.'

Dwight sighed. 'Yeah, right.' He helped himself to some cornflakes. 'Sorry if I kept you awake. I wouldn't want to disturb you.'

'No need for sarcasm, Dwight. I was only making an observation. Those

nightmares are becoming more frequent and that can't be a good sign.'

'I hate nightmares,' Nichola informed them, 'but dreams are okay. Why can't we have ice cream for breakfast? I'm fed up with cornflakes.'

'I'm okay,' Dwight said, spooning his cornflakes up too quickly. 'Everyone has nightmares from time to time. There could be lots of reasons.'

'Like what?'

'What do you mean?'

'What else could be causing the nightmares? Is it *me*? Something I don't know about? Another woman, perhaps?'

Shocked, Dwight glanced at Nichola, but clearly she wasn't listening. She was running her finger around the inside of her upper lip while lethargically stirring the cornflakes into various shapes. 'A duck,' she said, addressing herself. 'A dog. A.... Mmmmmm.' Dwight turned back to Beth.

'Are you serious? Is that what you think?'

She gazed steadily at him, measuring him, then lowered her eyes. 'Well, you haven't exactly been *attentive* lately. Not yourself at all, Dwight.'

'I'm under a lot of pressure. You know that as well as I do. I wouldn't even have *time* for another woman, so it isn't an issue.'

Beth reached across the table to squeeze his hand. 'Get out from under that pressure, Dwight. Neither of us needs it. I know you tried before, but try again to get out of this work. If you can't, leave the Air Force.'

Flushed with guilt and wanting to hide it, Dwight glanced out the window. He was guilty because he understood why Beth would be worried, but when he looked outside, at the planes parked on the airstrip in the inky shadow of the great hangars, wing-flaps and hangar doors shuddering in the August wind, he knew that he couldn't live without the Air Force and become a civilian. Also (and the thought of this made him feel even worse), though Project Blue Book was certainly putting pressure on and giving him nightmares, it was also exerting a dreadful fascination that he couldn't resist. It wasn't ordinary work, after all.

'I can't eat what's left,' Nichola said. 'They're too mushy and messy.'

'That's 'cause you made them that way stirring them,' Beth retorted.

'I was drawing with my spoon,' Nichola explained.

Dwight placed his free hand on Beth's wrist. 'I can't leave the Air Force. What would I do out there? I'm in it for life. Besides, it isn't as bad as you think. Half the things you hear about UFOs are nonsense. Hysteria and wishful

thinking have a lot to do with it. You know? The planet Venus, comets, meteors, clouds, plasmoids, corona discharges, parhelia and paraselenae, the sun and moon and stars, even lightning and birds, can all look like bright, solid objects moving at high speed. So people see those, misinterpret what they see, then hysteria or wishful thinking comes into play. As for the UFOs being flown by extraterrestrial beings... well, maybe they're not. Maybe they're just some kind of extraterrestrial phenomena - a kind of mirage. We're frightened of what we can't understand, so we tend to exaggerate.'

'That doesn't stop your nightmares, Dwight. Also, you're losing weight. We hardly ever see you anymore, and when you're here, you're not here – you're at the ATIC in your thoughts, still beavering away there.'

'The nightmares will go away with time. I'm pretty damned sure of that.'

'Look, Dwight, I don't know if we're being invaded by flying saucers or not. I only know that my husband is having bad nightmares, is losing weight, and is often too exhausted and distracted to even make love to me. I'm worried about that and also about your future. You say you're an Air Force lifer - well, I agree with that - but that being so, what's going to happen to you if they consistently deny you promotion, as they seem to be doing,? We both know why that is, Dwight. It's nothing to do with your competence. It's because most of those who get involved with UFOs are given a hard time. You should have been in charge of Project Blue Book, but Ruppelt got it instead. Now there are rumours that Ruppelt's in trouble and may get pushed out. That's the way it runs, Dwight.'

'They're just rumours,' Dwight said, though he thought they might be true. 'Some folks talk too much. We all know that today the official recommendations of the Robertson panel will be released, and that knowledge has encouraged a lot of wild speculation, mostly to do with the fate of Project Blue Book in general and Captain Ruppelt in particular. They're just rumours, Beth.'

'It isn't a rumour that you've been repeatedly denied promotion from as far back as Project Sign. Before that you were everybody's darling; since then they've made all kinds of excuses to put other, less experienced officers in front of you. Those aren't rumours, Dwight. And it isn't just a rumour that a lot of people involved in UFO investigations have had even worse things to contend with, such as being posted to Alaska or even having bad, inexplicable, sometimes fatal accidents, like that World War Two hero and UFO expert, Mike Bradley, and his unfortunate wife.'

Dwight gulped the last of his coffee and then put on his Air Force captain's

tunic. ‘There’s no proof for that,’ he lied, looking guiltily from Beth to Nichola, secretly convinced that he was placing both of them in danger and feeling bad because of it. ‘It’s just more wild speculation.’

‘Oh, yeah? Then how do you explain the men in black?’

Dwight had been about to kiss Beth on the cheek, but her words stopped him, making him straighten up again, feeling a chill wind pass through him.

‘What do you know about the men in black?’ he asked.

‘Lots of gossip, Dwight. I prefer to call them stories. Folks are talking about people involved in UFO investigations receiving visits from groups of men dressed all in black. Some say they wear black suits. Others say they’re coveralls. Most agree that they’re not with the Air Force and though human seem strange. Unusually pale, folks say. Oddly inexpressive faces. They usually visit in twos or threes, generally arrive in a black limousine, and always warn those they’ve come to see to stop discussing or investigating UFOs. They tell them that if they continue to do so, they’ll find themselves in real trouble.’

‘More tall stories,’ Dwight said, though in fact he had been receiving an increasing number of such stories, many from reliable sources. ‘These tall tales spread like wildfire. You believe all that garbage?’

‘I’m only telling you what I heard,’ Beth replied cagily, though certainly not joking. ‘Most of these stories come from pretty reliable sources - mostly Air Force personnel - and some came from folk who had the visitors themselves, ignored what they were told, then got into serious trouble shortly after. In at least one case, the person who received the visitors and told Adele Walters about it - saying he thought it was a hoax - later vanished and hasn’t been seen since.’

‘If it was a friend of Adele’s, it could only have been Ben Little,’ Dwight informed her.

Little was an amateur astronomer and fanatical UFOlogist, resident right here in Dayton, who had frequently, perhaps too loudly, claimed that the flying saucers could be man-made secret weapons of the US and Canadian governments. After receiving a lot of local press coverage for a couple of days, Little had just upped and disappeared, leaving a wife and three kids. Adele’s husband, Ralph Walters, an Air Force Flight engineer, was a close family friend.

‘Yeah, that’s the one. Obviously, you heard about it, Dwight.’

‘Yes. And I also heard that the marriage was in trouble and that Ben Little may simply have fled the coop. I lean towards that hypothesis.’

‘I bet,’ Beth said. She had his number and he knew it. Though he simply

couldn't admit it even to himself, he believed that something bad had happened to the loud-mouthed Ben Little and that the mysterious 'men in black' had something to do with it. He now believed that the 'men in black' existed; he just didn't know who they were. Extraterrestrials? The CIA? Foreign agents? There was no way of knowing.

Trying to hide the shock that Beth's knowledge had given him, he leaned down and kissed her on the cheek. 'See you later,' he said. Then he kissed Nichola on the forehead, tickled her under the armpits, and left her giggling hysterically as he hurried out of the house, to walk the short distance to the ATIC, across the airstrip of Wright Field.

The ATIC operations room was not as spartan as it had been during Project Sign. Now, a lot of UFO photographs and drawings of their 'alien' occupants had been added to the many incident maps, charts and graphs on the walls. The two teletype machines hardly ever stopped clicking and the single secretarial assistant, WAC corporal Thelma Wheeler, was now a sergeant with a couple of other secretaries under her command.

Though putting on a little weight, Thelma was still blonde and pretty. She had eyes only for Captain Bob Jackson, who had somehow managed to carry on an affair with her for years without actually tying the knot, let alone becoming engaged. Even now, as Dwight entered the cluttered room, Bob was sitting on the edge of Thelma's desk, leaning towards her and whispering into her ear. Thelma burst into giggles and slapped Bob's knee, then turned away by swivelling around in her chair and went back to her expert typewriting. Bob looked up, saw Dwight and stopped smiling, so Dwight knew the news was bad.

'Morning,' he said, approaching Bob. 'I take it from the look on your face that the recommendations of the Robertson panel have come through.'

'Yeah,' Bob replied. 'I don't know what's in the report, but Ruppelt doesn't look happy and said we were to go straight in and see him as soon as you got here.'

'Then let's go in, Bob.'

Seated behind his desk, Ruppelt, in his Air Force uniform, still looked like a dark-haired adolescent whose slightly plump, smoothly handsome face showed decency and good humour. Nevertheless, gazing down at the thick folder on his desk, he was clearly not in a good-humoured mood and, indeed, looked decidedly troubled - so much so, in fact, that he didn't notice their arrival and was only distracted from the report when Dwight said, 'Morning, Cap'n

Ruppelt. I believe you wanted to see us.'

Ruppelt glanced up as if confused, trying to collect his thoughts, then he smiled as if it was something of an effort, indicating that Dwight and Bob should take the chairs at the other side of his desk. When they had done so, he glanced down at the Robertson panel report, then looked up again and spread his hands over the file as if casting a net.

'What can I say?' he asked rhetorically. 'Where do I start?'

'Just come out with it, Cap'n,' Dwight said. 'It'll be easier for all of us.'

'It's not good.'

'They've shafted us,' Bob said bluntly. 'Is that what you're saying?'

'Yes, Bob, I'm afraid it is.' Ruppelt massaged his forehead with his fingers, glanced distractedly at the file, and then looked up again. 'I should warn you that this isn't the full report. It's merely a summary of their major recommendations.'

'So when are we getting the full report?' Dwight asked him.

'We're not. We're only getting what they want us to know and this is it, gentlemen.'

'What...?' Dwight began, glancing at the equally shocked Bob.

'Don't ask me,' Ruppelt said wearily, then lowered his head again, to scan the document. 'First, despite the conclusive evidence offered by me and Major Fournet, the members of the panel have concluded that the evidence is *not* substantial, that the continued emphasis on the reporting of the phenomena is resulting in - I quote - *a threat to the orderly functioning of the protective organs of the body politic* - unquote - and that the continuing UFO reports are clogging military channels, could possibly precipitate mass hysteria, and might encourage defence personnel to misidentify or ignore actual enemy aircraft. In other words: the real problem isn't the UFOs – it's the UFO *reports.*'

'That much I knew already,' Dwight said. 'What bothers me is what they've recommended.'

'It's pretty startling,' Ruppelt said. He glanced at the many posters on the walls around his desk, mostly enlargements of frames from cinetheodolite movies or stills taken with amateur cameras, the UFOs mostly no more than blurred, round-shaped objects. He appeared to be trying to take some solace from them, though not with success. Sighing, he went back to the report. 'As I say, based on the assessment, the Robertson panel has made some unexpected, even startling, recommendations.'

'Ho, ho,' Bob whispered.

‘First, it’s recommended that the three major private UFO organizations - the Aerial Phenomena Research Organization, or APRO, the Civilian Saucer Intelligence, or CSI, and Dr Frederick Epstein’s Aerial Phenomena Investigations Institute, or APII - be watched because of what’s described as their potentially great influence on mass thinking in the event of widespread sightings. Included in this recommendation is the statement: “The apparent irresponsibility and the possible use of such groups for subversive purposes should be kept in mind”.’

‘Jesus Christ!’ Bob exclaimed.

‘Next, it recommends that the national security agencies take immediate steps to strip the UFO phenomenon of its importance and eliminate the *aura of mystery* that it’s acquired. The means will include a so-called *public education programme*.’

‘Mass brainwashing,’ Bob translated bitterly.

‘Finally, the panel has outlined a programme of public education’ - Bob snorted contemptuously – ‘with two purposes: training and debunking. The former will help people identify known objects and thus reduce the mass of reports caused by misidentification; the latter will reduce public interest in UFOs and thereby decrease or eliminate UFO reports altogether.’

‘Shove it under the carpet,’ Bob translated.

‘As a means of pursuing this so-called education programme,’ Captain Ruppelt continued sombrely, ignoring Bob’s outraged interjections, ‘the panel’s suggested that the government hire psychologists familiar with mass psychology, military training film companies, Walt Disney Productions, and popular personalities such as Arthur Godfrey, to subtly convey this new thinking to the masses. It’s also recommended that the sighting reports should *not* be declassified, but that security should be tightened even more while all so-called non-military personnel should still be denied access to our UFO files.’

Ruppelt stopped scanning the report and looked at Dwight and Bob in turn. After a tense silence, he said, ‘Interpreting these recommendations the only way possible, it seems clear to me that the whole purpose of the Robertson Panel has been to enable the Air Force to state for the next decade or so that an *impartial* body had examined the UFO data and found no evidence for anything unusual in the skies.’

‘Damn right,’ Bob said bitterly.

‘While this is an obvious distortion of fact, it means that the Air Force can

now avoid discussing the nature of the objects and instead concentrate on the public relations campaign to eliminate the UFO reports totally. In other words, Project Blue Book is finished. If it continues under that name, it won't be as we know it.'

'No,' Dwight said, 'it won't. Project Blue Book's going to become responsible for a policy of ridicule and denial that'll inhibit the effectiveness of any future study of the phenomena. It'll now be just another arm of the Robertson panel's CIA-backed propaganda campaign.'

'Those bastards,' Bob said.

Though clearly not happy, Ruppelt smiled at him, then he turned the report over, picked up some other pages, and spread them out on his desk as if they were dirt.

'I'm afraid, gentlemen, that while the deliberately leaked Robertson panel report recommends the dropping of all secrecy and the expansion of Project Blue Book's staff, in the official report, from which this summary has been extracted, they've actually recommended a tightening of security, a mass debunking of the phenomena, a subtle ridicule of witnesses, and... the virtual elimination of all the Project Blue Book staff.'

'Oh, my God!' Bob said, practically groaning.

Ignoring him, but sounding choked up, Ruppelt said, 'The following are being posted elsewhere.' Lowering his head and sounding even more choked, he read off the list of names of those being posted. The list included him. The only people left were Dwight, Bob, and Thelma Wheeler.

'The original three,' Ruppelt pointed out. 'You're now in charge, Dwight.'

'Of what? They've left me in charge of a pile of shit.'

'It sure smells that way,' Bob said.

Ruppelt stood up and put on his peaked cap. 'I knew this last night, so I've already packed my kit. They told me I had to leave immediately and that's what I'm doing. My bags are out in the jeep and I'm leaving right now. It was my pleasure knowing you, gentlemen. I'm just sorry it's ended this way.'

'So am I,' Dwight said.

He and Bob followed Ruppelt out of his office and into the main room, where the latter called the staff together and painfully read out the instructions for their postings. When the shocked staff had taken in the news, he walked around shaking hands with each of them in turn, clearly embarrassed when some of the girls shed tears. After shaking the last hand, he indicated that Dwight and Bob

should escort him to the front door of the ATIC building. Outside, on the veranda, with the planes taking off, landing, and roaring in low over the runway and hangars, he stared intently at both of them.

'They're trying to grind you down,' he said, 'and they might well succeed, but in the meantime, here are a few questions for you to answer.' He spread his hands in the air and started raising each finger in turn as he ticked off the questions. 'Why, when the Air Force was telling the whole world that the study of UFOs hadn't produced enough evidence to warrant investigation, did they secretly order all reports to be investigated? Why, when all of us had actually read General Twining's statement that the phenomenon was something real, did they deny that such a statement had ever been submitted? Why, when they themselves initiated Project Sign and received its official report concluding that the UFOs were of extraterrestrial origin, did they dissolve the project and then burn the report? Why, when Project Sign was changed to Project Grudge, did they go all out to ridicule the reported sightings and then disperse most of the staff on the project? Why, when the Air Force continued to claim that they had absolutely no interest in UFOs, did they insist that all reports be sent to the Pentagon? Finally, why did the CIA lie to us, why has the Robertson Report been kept from us, and why has Project Blue Book been destroyed? Those questions need to be answered, gentlemen, and you're the only ones left. Goodbye... and good luck!'

He saluted and walked down to his jeep and then drove out of their lives.

'I don't believe this,' Dwight said.

Chapter Twenty

Ernst Stoll was disgusted by the reflection in the mirror. He had aged since coming here, his features now gaunt, skin yellowish from bad food and lack of activity, eyes losing their lustre. Realising just how much the jungle was taking its toll, he cursed under his breath and called for his comfort girl, Maria, to bring him coffee. She did so quickly, padding towards him on bare feet, her face bruised from the beating he had given her last night when his latest sexual innovations had failed to produce the desired result. That, too, was disappearing - his potency, his damned manhood - and when he glanced again in the mirror to see Maria retreating nervously from him, leaving his steaming cup of coffee on the table just behind him, he realised that she knew this all too well and might be talking about it. Feeling even more humiliated, he decided to get rid of her, and started pondering how best to do it as he wiped his face with a towel.

Then the mirror shook a little, bouncing off the wall, making his already fractured image move out of the frame and back in again.

Steadying the mirror with his free hand, Ernst finished drying his face, then put the towel down and felt the floor shaking under his feet as a familiar bass humming sound filled the room, emanating from outside. Realising that they had arrived earlier than expected, he hurriedly buttoned up his shirt, slipped on his boots, and started across the room.

Maria was on her hands and knees, polishing the wooden floorboards with a waxed cloth. A local Indian girl, but the illegitimate daughter of a white man who had discarded her, she had barely turned seventeen, which was the age Ernst liked them. Right now, her naked body was clearly visible through the thin cotton dress, where it tightened over her raised rump and curved spine. Ernst felt a wave of the lust that was rarely satisfied these days, so he angrily pressed his booted foot on her spine and pressed her face down on the floor. The bass humming sound filled the room, making the floors and walls shake, but Ernst could still feel the trembling of the girl under his booted foot. He had the urge to crush her spine, thus releasing his frustration, but instead he took his pleasure

from the fear he could hear in her voice.

'Please, master,' she whimpered.

He pressed harder with his boot, heard her soft groan of pain, laughed and removed his boot from her spine, then left the house.

Outside, on the veranda, the bass humming sound was louder, almost palpable, an odd vibration that shook the building. He looked up to see a 300-foot-diameter flying saucer descending vertically, slowly, onto the landing pad that now took up most of the ground in the immense walled enclosure in front of the house.

The craft descending was an object of such beauty that it nearly brought a lump to Ernst's throat, reminding him of what he had lost when sidetracked from aeronautical engineering to become an SS policeman. Still high up in the air and viewed by Ernst from almost directly below, the saucer was spinning rapidly on its own axis, except for the central part, which was stationary. It was, he knew, constructed like a giant meniscus lens, or like two inverted plates, that were rotating around the dome-shaped, gyroscopically stabilised central fuselage containing the control cabin, passenger accommodations and supplies. Driven by an advanced electromagnetic propulsion system that ionised the surrounding air and created an electrical conducting field, the saucer was not hindered by normal heat and drag; it therefore had remarkable lift while being devoid of sonic booms or other noises, other than the infrasound that seemed almost palpable.

The rapid rotation of the great outer rings slowed down as the saucer descended, but its electromagnetic gravity-damping system - which also aided its lift and ability to hover almost motionless in the air - was creating violent currents of air within a cylindrical zone the same width as the saucer, making the grass and plants flutter, sucking up loose soil and gravel, and causing them to spin wildly, noisily, in the air as if caught in the eye of a hurricane.

The native workers who lived in the shacks located around the inner edge of the compound were standing outside their modest homes, untouched by the whirlpool of wind that did not extend beyond the cylindrical zone of the saucer, which made it seem magical. They were looking up in awe as the gigantic saucer descended, pointing and chattering to express their disbelief, even though they had seen it many times before.

Ernst felt a lump in his throat as the saucer descended to almost ground level, filling up most of the compound, its central dome as high as a two-storey

building. Composed of an electrically charged, minutely porous magnesium orthosilicate, it had a whitish glow caused by the ionisation, but it darkened to a more normal metallic grey as it hovered just above ground level, its hydraulic legs emerging from four points around the base to embed themselves in the soft earth. The saucer bounced gently on the legs, but eventually settled down and was still. Its rotating rings gradually slowed and then stopped altogether, as did the wind that had been created by its gravity-damping system. Silence reigned for a moment.

Still standing on his veranda, Ernst was deeply moved and embittered simultaneously. He should have helped to construct that saucer, flown it, been part of it, but instead he was condemned to this hellish jungle, rounding up Ache Indians and haggling shamelessly with *Federales* instead of using his engineering talents for work in the Antarctic colony. He had been chosen for this and must do it, but it still deeply wounded him.

With the outer rings of the saucer no longer rotating, the infrasound faded away and a panel in the concave base dropped down on hinged arms to form a ramp leading to the ground. Armed guards wearing black coveralls emerged to form a protective ring around the ramp, then Wilson appeared, dressed completely in black, followed by more armed guards, dressed in black also.

Ernst stepped off the porch and went to greet his master. When Wilson shook his hand, Ernst was startled by how youthful he looked. Though he was now over eighty, his silvery-grey hair was abundant, his skin was smooth on a handsome, ascetic face, and his eyes were as blue and icily clear as the Antarctic sky. The only giveaway, Ernst noticed, was in the slight rigidity to his features when he attempted to smile and, perhaps, a slight stiffness to his movements.

'How are you, Ernst?' he asked, his voice no warmer than his icy gaze.

'I'm fine, sir. And you?'

'All the operations so far have been successful. Doctors Eckhardt and Gold are making good progress. By having the courage to let them try things out on me, I've kept old age at bay.'

Though aware that the good doctors Eckhardt and Gold always tried things out on unfortunate live subjects before operating on Wilson, Ernst thought it wise to pass no comment.

'I'm afraid we can't stay for long,' Wilson continued. 'We'll simply collect the livestock, then be on our way again. You and I can have a quick talk while Porter' - he indicated the armed, black-uniformed brute behind him – 'sees to the

Indians. All right, Porter, get started.'

Realising that for the first time Kammler and Nebe were not with Wilson, Ernst waited until the burly Porter had marched off to the cages with a group of his armed thugs before asking about the whereabouts of his former, detested, World War II comrades.

'They're dead,' Wilson said indifferently, taking a seat at one side of the low table on the veranda. 'An unfortunate accident. They went together in a saucer to collect supplies left by the Americans at the other side of the mountain range. The saucer malfunctioned and crashed, killing everyone on board. Kammler and Nebe are no more.'

Even though he had detested Kammler and deeply feared Nebe, Ernst was shocked to hear of their passing. Nevertheless, after calling out for Maria to bring tea, he saw a ray of hope in his darkness. 'So what will you do now that they're gone? Surely you need someone experienced to replace them and help run the colony. Surely, I – '

'No,' Wilson said, instantly crushing his hopes. 'I know what you're going to suggest, Ernst, but it isn't possible right now. I can run the colony on my own. Your work here is more important. We can't do without a constant supply of Ache Indians, so we can't do without your presence here. You have done truly excellent work in opening up and maintaining lines of communication between General Stroessner and us. Those lines must not be broken. As Stroessner will almost certainly become the next President of Paraguay - probably within the next few months – it's important that you remain here to offer him support and strengthen the alliance between us. In time, I promise, you'll return to the colony, but right now your presence here is vital.'

Torn between pride and his suspicion that Wilson was lying and intended keeping him here forever, Ernst shifted uneasily in his chair. He compensated for his disappointment and deepening depression by barking angrily at Maria who, when she emerged from the house to pour their tea, spilt some onto the saucers.

'Her hands were shaking badly,' Wilson noted when Maria had backed nervously into the house. 'Is she frightened of you?'

'Yes,' Ernst said. 'During the war I learnt that fear could work miracles, so I make sure that everyone's frightened of me.'

'Very good,' Wilson said, though it was impossible to tell if he meant it or not, so unemotional, almost toneless, was his soft voice. 'And is the round-up of the Indians trouble-free?'

‘Yes,’ Ernst replied. ‘The *Federales* do it for me. I merely stay in touch with them, tell them what I want, haggle like an Arab about the price, then let them get on with it. They know the jungle; also, they’ve been hunting the Ache for years, so they know what they’re doing. Naturally, as you can imagine, they’re ruthless, which makes them effective.’

‘Any problems holding the prisoners in the compound?’

‘No. The *Federales* don’t bring the prisoners here until I give them a date, which is usually the day before you arrive. If the *Federales* round them up too early, they have to look after them for me and I’m sure they get certain benefits out of that - if you get my meaning.’

‘I do,’ Wilson replied, not mentioning rape or other forms of abuse, but registering a slight distaste for the low appetites of the still primitive human race. ‘So they’re only in your cages a short time?’

‘Correct.’ Even as Ernst spoke, Wilson’s black-uniformed troops were opening the gates of the bamboo cages at one side of the compound and starting to herd out the terrified Ache Indians, men, women and children, to march them at gunpoint across the compound and up into the saucer by another, wider ramp that had since been lowered from the base. Looking up at the towering saucer, some of the Indians were terrified, started gibbering or covering their eyes with their hands, then tried either to break out of the column or turn back. When they did so, however, Wilson’s men in black hammered them brutally with the butts of their weapons and forced them onward again.

I seem to have spent half my life watching people being herded at gunpoint from one form of imprisonment to another, Ernst thought, recalling the Jews in the cattle trucks in Poland and Germany, all fodder for another great dream. Masters and slaves, indeed.

‘The last time we spoke,’ Ernst said, ‘you were making a deal with the Americans in return for supplies. I take it from the fate of Kammler and Nebe that you now have an agreement with the United States.’

‘Yes, Ernst. They drop what we want at the far side of the mountain range and our saucers pick it up and bring it home. In return for this, I feed them titbits of our technology - though never enough to put us in any danger from them. They’ve also agreed to the late Artur Nebe’s suggestion for a long-term programme of disinformation based on a mixture of ridicule and intimidation of UFO witnesses, both civilian and military.’

‘I’ve been reading about that Robertson panel in American newspapers and

assumed that it might be a threat to you.'

Wilson gave one of his rare chuckles of pleasure. 'All part of a planned, CIA-backed programme of disinformation. Even though the Project Blue Book evidence on UFOs proved conclusively that the saucers exist, the panel stated in their report that the evidence *wasn't* substantial, that the continued emphasis on the reporting of the phenomena was resulting in a threat to the orderly functioning of the protective organs of the body politic, and that the reports clogged military channels, could possibly precipitate mass hysteria, and might encourage defence personnel to misidentify or ignore actual enemy aircraft. Naturally, as the United States has just finished fighting the war in Korea, the Soviets have exploded their first hydrogen bomb, and the Cold War is presently at its chilliest, the American public, and the top brass of the armed forces, swallowed that all too readily.'

This man is truly a genius, Ernst thought, helplessly swelling up with admiration. There is nothing he can't do.

'What will the immediate results of this be?' he asked.

'We've already had the results, Ernst. Last August, the Pentagon issued Air Force Regulation 200-2, which the civilian UFO organisations are already describing as notorious.'

'For good reason?'

'Of course. Drafted purely as a public relations weapon, AFR 200-2 prohibits the release of *any* information about a UFO sighting to the public or media, except when the sighting is positively identified as a *natural* phenomenon. In addition, while AFR 200-5, the previous regulation, stated that sightings should not be classified higher than restricted, the new regulation ensures that *all* sightings will be classified as restricted. Then, in December, the Joint Chiefs of Staff followed AFR 200-2 with Joint-Army-Navy Air Force Publication 146, which made the releasing of any information to the public a crime under the Espionage Act, punishable by a one-to-ten-year prison term or a fine of ten-thousand dollars. Even better, the most ominous aspect of JANAP 146 - at least from the point of view of those who might fall foul of it - is that it applies to anyone who knows of its existence, even including commercial airline pilots.'

'In other words,' Ernst said, 'to all intents and purposes, and contrary to public Air Force pronouncements, the UFO project has been plunged into secrecy.'

‘Correct.’

‘It’s nice to be protected by our enemies,’ Ernst said.

‘*Very* nice,’ Wilson replied with a slight, chilly smile, gazing out from the veranda to where the Ache Indians were being herded at gunpoint from the cages to the flying saucer. Often they became hysterical when they were actually under its wide base, at the foot of the sloping ramp, but they always scurried up the ramp when they were thumped by rifle butts or, as Ernst now noted, by small metallic devices strapped by the wrist to the knuckles of some of the troops. When the troops merely touched the Indians with such devices, the latter screamed in pain.

‘What are they?’ Ernst asked.

‘Experimental stun guns,’ Wilson replied. ‘At the moment, they do no more than give severe electrical shocks - not severe enough to kill, but certainly enough to burn and hurt. But soon we’ll be able to use them to stun, as well as merely hurt, and eventually, with fine tuning, they can be used as mesmerising devices when applied to certain points on the anatomy. Time will bring us everything.’

Ernst felt the great wave of his loss rolling over him to wash him away. Trembling, he finished his tea, placed the cup back on the saucer, and wiped his lips with the back of his hand.

‘I only wish I could be part of it,’ he said, secretly wanting to scream for release, but too frightened to do so. ‘I mean, being here... this jungle... these filthy natives... I feel like an outcast. I was trained to be an engineer, a scientist, and yet now...’

In a rare gesture of affection, Wilson placed his hand gently on Ernst’s wrist. ‘No, Ernst, never think that. Such thoughts are for common people. It’s vanity that makes you talk this way, and you should be above it. As individuals, we are nothing. Our desires are mere conceits. We only exist to serve the whole, which is past and future combined. You must suppress your own desires, cast off ephemeral needs, and learn to take pride from your small part in life’s grander purpose. Man is still essentially animal. His only true worth is in the mind. The mind is the doorway to immortality and the secrets of being. You are part of that, Ernst. What you do here has its purpose. Like a monk in a monastery, like a hermit in his cave, like a mystic contemplating in his mountain eyrie, you will learn to accept this. Discipline brings freedom. Self-sacrifice brings fulfilment.

What you lost in the past - your career, your wife and children, your hopes for the Third Reich - and what you feel you're losing now - the comradeship and esteem of your fellow engineers in Antarctica – you'll get back multiplied when what you are doing here has been completed and you see the results of it. Then, and only then, will I bring you back to the Antarctic. When I do so, you'll be twice the man you are now - ennobled by knowledge. Believe me, Ernst. Eventually this will come to pass and then you will thank me.'

Desperate to believe him, needing the healing hands of hope, Ernst tried to forget his lost wife, children, early ambitions and dreams - and all else in his dark, squandered history. Trembling, he picked the bell up from the table and violently rang it, calling for Maria.

'Yes,' he said, startled at how deeply he had been shaken by Wilson's softly spoken, unemotional, mesmeric monologue. 'As always, you're absolutely right. All else is vanity.'

When Maria appeared on the veranda, trembling as much as Ernst, he thought of how often he had forced her obedience by threatening to put a bullet into her mother - there and then, right in front of her. Naturally, it had always worked - a child's love knows no reason - but even that threat was unlikely to stop idle gossip. Vanity: yes, it was a dreadful human vice, but one he had not yet learnt to conquer when it came to his potency. To preserve her mother's life, Maria had submitted to every one of his vile demands - unimaginable sexual activities, not mere vice, beyond pornography - and yet none of it, certainly in the past weeks, had helped him to find release. Now, Maria was bound to talk - silence would be impossible for her - and when Ernst imagined the talk spreading around the compound workers, all of whom loathed and feared him, he could not bear the thought of the humiliation he would then surely suffer.

They would thrive on his failure.

'Yes, master,' Maria said, falling to her knees before him, lowering her head, and not daring to look at him without permission. Ernst thought of all she had done to protect her mother and finally knew what would pleasure him.

'Please take her with the others,' he said to Wilson. 'She cannot be trusted.'

'Of course,' Wilson said.

As Maria, sobbing and pleading, was dragged into the great saucer by

the armed men in black, and her mother, also sobbing and pleading, was dragged back into her shack by some other Indian women, Wilson stood up and squeezed Ernst's shoulder, then shook his hand.

'Don't worry, we'll put her to good use. Now I must be off, Ernst. Thank you. You're doing excellent work here. Take your pride from that knowledge.'

'I will.'

'Until the next time*, Auf Wedersehen*.'

'*Auf Wedersehen,*' Ernst said.

The lump returned to his throat when the great saucer took off, rising slowly, vertically, until it was the size of a silver coin, reflecting the sun. There it hovered for a moment, a silver coin spinning, then it suddenly shot off to the south and vanished in seconds, blinking out like a light bulb.

When the flying saucer had gone, Ernst looked around the compound, taking note of the shadows being cast by the soaring trees, the awe-struck eyes of the native workers, unwashed, in tattered rags, the pigs in their muddy pens, the chickens frantically flapping wings, the naked children rolling in mud and water silvered by sunlight, the guards at the machine-guns in the towers that looked out over the jungle. Choking up with despair instead of pride, he turned back into the house, desperately needing a drink.

Without Wilson, he took his strength from the bottle and yearned for escape.

He just couldn't admit it.

Chapter Twenty-One

On the evening of March 7, 1954, Jack Fuller drove along the ten-mile causeway that led from Patrick Air Force Base, Cape Canaveral, Florida, across the Banana River, Merritt Island and the Indian River, to the Starlite Motel in Cocoa Beach, located in the swampy lands around the original village and now a rapidly growing town of ten thousand souls. From here dozens of missiles, as well as *Explorer 1*, America's first earth satellite, had been fired into space. Many of the motels in the area had been given appropriate names - the Vanguard, the Sea Missile, the Celestial Trailer Court - but the Starlite had gone one better by having a flashing neon rocket as its roadside sign, which made it easy for Fuller to find it. Amused by the sign, he was further amused when shown into his room, where the floor lamp was shaped like a rocket with its nose cone balancing a globular satellite, the walls were decorated with celestial crescents, spheres and orbital paths, and even the towels were embroidered with the legend, 'Starlite Motel'.

'Oh, boy,' Fuller said as he tipped the crew-cut kid who showed him to his room, 'it's a whole different ball game here.'

'It sure is,' the kid said.

Fuller had a shower, shaved, changed his clothes and then went to meet Wilson in the Starlite motel's bar. He was not surprised when it turned out to be a dimly lit, L-shaped room with murals showing the moon as seen through a telescope and Earth as seen from the moon. Nor was he surprised to find that Wilson was already there, drinking what looked like lemonade. He had always been punctual.

Fuller ordered a whisky-and-water from the barman, waited until he had it, then joined Wilson at his table. He was startled to see how young Wilson looked. He seemed to get younger every year, though in this dim lighting it was difficult to ascertain whether or not he'd had more plastic surgery.

He was studying the drinks menu, but when Fuller joined him, he looked up

and smiled coldly.

'The town of Cocoa Beach,' he informed Fuller, 'has clearly become obsessed with space. What's that you're drinking?'

'Whisky with water.'

'I note that the drinks include a Countdown - ten parts vodka to one part vermouth - and a Marstini. Being here is like being in Disneyland, but it's all about space.'

'Yeah,' Fuller agreed, 'I know what you mean. They have a women's bridge club called Missile Misses, a Miss Satellite contest, a fishing boat called Miss L. Ranger, a settlement called Satellite Beach, and even a museum, the Spacarium, that has burned-out components of Cape Canaveral rockets on display. Also, not ignoring the launch of *Explorer 1*, the Chamber of Commerce is already accepting reservations for space aboard what it's describing as the first globe-circling satellite. That's American know-how.'

'It's always nice to meet a patriot.'

'I'm not ashamed of it,' Fuller said. 'The fact that I have to deal with you doesn't change that one jot. What name are you travelling under this time?'

'Aldridge,' Wilson said. He put the menu down, sipped some lemonade, then added, 'This is certainly an encouraging place for a patriot.'

'Sure is,' Fuller agreed. He had spent the previous night in Patrick Air Force Base, two miles from Cape Canaveral, and was still thrilled by the concept of dozens of Atlas, Thor, Titan and Snark missiles, as well as the orbiting satellite, being launched from that restricted military zone of about fifteen-thousand square acres, much of it in uncleared jungle where deer and puma still roamed wild. Now, the formerly untouched land of sand dunes, palmettos, orange groves and swamps had a rapidly swelling population, scores of new businesses, and many housing developments, containing the fourteen thousand people now employed at Cape Canaveral and Patrick Air Force base.

'Cocoa Beach,' Wilson said, 'was once a small village of a few dozen families, but it's presently in the process of becoming the US government's largest and most important rocket-launching site.'

'This bothers you?'

'Yes.' Wilson glanced at the cosmic murals on the dimly lit walls, then shook his head from side to side, as if baffled by the childishness of it all. 'Of course

for me there's a certain irony in the fact that most of the rockets being fired from here could not have been constructed without the assistance of Wernher von Braun and his other Nazi scientists, who in turn based their work on the theories of Robert H.Goddard and me - both neglected Americans.'

'Ah, gee, the man's bitter!' Fuller said. 'My heart's breaking for him.'

'I could break your mind and body,' Wilson rejoindered, 'and don't ever forget it.'

The icy remove in his voice made the threat even more chilling, but Fuller was not a man to be easily frightened, so he just grinned and sipped his drink. 'So,' he said, placing his glass back on the table, 'why are you here?'

'I thought I'd check on the progress being made here and, if necessary, slow it down.'

'I don't know why you're concerned. As you just said yourself, what we're achieving here couldn't have been done without your assistance.'

'I dole that out carefully. You know why I do so. If NASA moves ahead more quickly than I deem fitting, I'll take firm measures to slow them down. I won't let you trick me.'

Fuller couldn't suppress his pleasure. 'Boys will be boys and scientists will be scientists. You know that if you give us assistance, we're bound to try and exploit it. You've known that all along.'

'Never imagine that you're ahead of me,' Wilson warned him. 'If you do, I'll be forced to prove you wrong - and that could be expensive.'

'I know damned well how ruthless you can be,' Fuller said, keeping his gaze on Wilson's face, though relieved that his remorseless, icy eyes could not be seen too clearly in the gloom. 'You don't have to remind me.'

'I *would* remind you that your own organisation, the CIA, with or without the full knowledge of the government, can also be fairly ruthless - as shown by the murder of various American citizens, such as Mike Bradley and his wife, who knew too much about me, my base in the Antarctic, and the US-Canadian saucer projects. Those murders were not committed for my benefit. Nor did I commit them. How ironic that Mr Bradley was frightened of me... when it was you who murdered him in the end.'

'A casualty of war,' Fuller said, proud to have done his duty, 'and not one to give you cause for concern. You didn't come here to talk about that, Wilson - sorry, *Aldridge* - so what do you want?'

'A week ago the United States exploded a thermonuclear bomb over a lagoon

at Bikini Atoll, thus dangerously contaminating seven thousand square miles of land and sea, injuring people nearly a hundred miles away from the area, and, even worse, making the world fall-out conscious for the first time. That test explosion, combined with the unseemly haste with which you're expanding Cocoa Beach and Cape Canaveral, makes me suspect that certain people in the Pentagon or the White House are no longer taking my threats seriously. If you don't slow down your rate of scientific progress, particularly regarding the Apollo space programme, I may have to give you another demonstration of my own, still much greater, capabilities.'

'We must be catching up with you,' Fuller said calmly. 'Otherwise you wouldn't be so damned worried.'

'I don't worry, Fuller. I simply apply reason. And when that tells me you need some kind of warning, I'll make sure you get one.'

'Okay, I've been warned. I'll take your message back to those in charge and I'm sure they'll take heed. Anything else?'

'Not really. I take it that UFO witnesses are still being harassed, ridiculed and thwarted at every turn?'

'Correct.'

'What's the state of Project Blue Book?'

'Not good, you'll be pleased to hear. The project leader, Captain Edward J.Ruppelt, was transferred to Denver and has since left the Air Force in disgust. However, he's now working for the Northrop Corporation and is rumoured to be planning a book that will substantiate the reality of the UFOs, though siding with the extraterrestrial hypothesis.'

'I'm not keen on the idea of a UFO book written by someone with that kind of credibility. Keep your eyes on him.'

'I will.'

'And the others?'

'All of the staff, except for the original two officers, have been scattered far and wide, which others obviously view as a form of official punishment, or warning. As for the two remaining officers - captains Dwight Randall and Robert Jackson –we're keeping the pressure on them all the time and consistently denying them promotion. In fact, by deliberately putting Ruppelt in charge of the former Project Blue Book, instead of Randall, who rightfully should have had the job, we were clearly slighting Randall. By putting him back in charge of the project only when it's been decimated and rendered virtually

inoperative, the slight seems even more brutal. To Randall, as well as to those who know of his involvement with Project Blue Book, it must seem that UFO work is the kiss of death. I believe this is already having bad psychological repercussions on Randall. With him as an example, not too many others will be keen to investigate UFOs.'

'He still might need something, another little push, to tip him over the edge. I'll keep him in mind.'

'Yeah, you do that. Anything else?'

'No. Not for now.' Wilson stood up to leave. After studying the cosmic murals on the walls of the bar, he said, 'America is a nation of children - a gigantic nursery. There's nothing worth having here.'

'Rather here than the Antarctic,' Fuller responded. 'What kind of life can you have there?'

'A life of work,' Wilson said. 'And work is the true function of man - the use of the mind. All else is a waste of time.'

'You're not a real human being, Wilson.'

'Nor do I want to be. Now take heed of my warning, Mr Fuller. Tell your superiors not to try upstaging me.'

'I'll pass the message on,' Fuller said.

When Wilson left the bar, Fuller ordered another whisky. He took his time drinking it, distractedly studying the crescents, spheres and orbital paths on the walls, thinking of the great dream of space and Wilson's part in it. Fuller was no romantic - he had the instincts of a killer - but even he possessed certain human needs that could not be denied. Wilson was something else: a kind of mutant, without emotion, a creature driven by the dictates of the mind, unhampered by feelings. Even Hitler had been driven by resentment and hatred - recognisable human traits - but Wilson existed outside such emotions, which made him inhuman. Fuller, who was frightened by very little, was frightened by that thought.

He finished his drink, left the bar, and went to look for a whorehouse.

Even whores had feelings.

Chapter Twenty-Two

When Dwight entered the lobby of the airport at Albuquerque, New Mexico, after a commercial flight from Dayton, Ohio, he had been drinking again and was feeling a little drunk, but he knew that it would soon pass away, letting his depression and fear return. He didn't relish that much.

His old friend, Captain Andrew Boyle, was waiting for him in an air force uniform too tight for his expanding beer belly, but he seemed as energetic as ever, with a broad grin creasing his good-natured, sun-reddened face. Slapping his hand on Dwight's shoulder, he said, 'Hi, there, partner! Long time, no see. You look like you've lost a bit of weight and could do with some sunshine, but otherwise you're recognizably yourself. Hell, man, it's really good to see you. It's been too long, pal.'

'Yeah,' Dwight said. 'Too long.'

They embraced, shook hands, then walked to the car park, Dwight carrying his overnight bag in one hand, Andy dangling his car keys. 'Christ,' he said, 'how long's it been now? Eight, nine years?'

'Nine years, more or less, though it doesn't seem that long. Time moves like the wind these days. We're getting old too fast, Andy.'

'Yeah, and no better for it. Christ, those were the days, man! I still get a lump in my throat when I think of the old B-29s. We did a lot of crazy things in those days. You had to be young to do it.'

Dwight and Andy had flown in the B-29s over the Pacific during World War II, being shot at by the Japs and having more than one hair-raising escape. It all ended in 1945, when both were demobilised, and apart from a brief reunion when, a few years later, they served briefly with an Air Force Reserve Troop Carrier Wing, they had only managed to keep in touch through the mail and by phone, united by the kind of emotional bonds that could only be forged in war. They would both go to their graves, Dwight suspected, secretly relishing those dangerous years as the best of their lives. This was a shaming truth.

'Anyway,' Andy said, as they climbed into his well used 1947 Frazer

Manhattan in the car park, 'this work you're doing must be almost as exciting - I mean, searching for UFOs.'

'It's not quite the same,' Dwight confessed. 'It's more like a bad dream. Quite frankly, it's pushing me to the limit and I'm thinking of getting out.'

'Out of the Air Force?'

'Right.'

'You were *born* for the Air Force,' Andy told him, turning on the ignition. 'You're a natural lifer.'

'I used to think so. Not now.'

'I don't believe this,' Andy said.

Leaving the airport, he took the road away from Albuquerque, heading into the morning's brightening sunlight, past fenced-in hangars and a lot of warehouses and factories.

As a radar operative at Cannon AFB, Andy had regularly fed Dwight with information on UFO sightings. However, last night he had phoned with more urgency than usual to tell him that the previous evening he had personally witnessed the landing of a flying saucer in the restricted area of the base. That's why Dwight was here.

'I can't believe this business is driving you out of the Air Force,' Andy said, driving with the windows rolled down, letting cooling air rush in around them. 'You thrived on the dangers of the war, so what's happening now?'

'It's not the same as the war,' Dwight said. 'Not the same kind of danger. During the war, we were treated as heroes, doing what our country wanted, but chasing UFOs brings you nothing but flak.'

'What kind of flak?'

'Antagonistic interrogations. Lack of promotion. Postings to places like Alaska. Accusations of incompetence where clearly there was none. Midnight phone calls from irate superior officers. General harassment of every imaginable kind. Now there's talk of men in black paying visits to UFO witnesses, warning them off. UFO witnesses are also starting to disappear. Damm it, Andy, this isn't something you *see*. It's not a dogfight in clear sky.'

'How's Beth taking it?'

'Not much better than me. I'm drinking too much - I know it, but I can't stop - and Beth's frightened about the men in black, as well as about my drinking and my growing desire to get the hell out of it. It's been eighteen months since Captain Ruppelt's departure from Project Blue Book and, subsequently, the Air

Force. Since then, the organisation's been reduced to a mere three members - Captain Bob Jackson, a secretary, and me. To make matters worse, our investigating authority has been passed over to the inexperienced 4602d Air Intelligence Service Squadron; and most of our projects have been strangled systematically through a deliberate reduction in funds.'

'Jesus Christ,' Andy muttered as the engineering and canning factories on the outskirts of Albuquerque gave way to sun-drenched, pastoral farmlands.

'Obviously,' Dwight continued, 'I've been badly shaken and disillusioned by what's happened. I'm also unable to comprehend why the Air Force is supposedly concerned with UFOs, yet at the same time is ruthlessly discouraging a proper investigation of the phenomenon. Personally, I've been harassed constantly by my superior officers and passed over many times for promotion. Now I want to get the hell out - but ironically, given that she was the one who first suggested leaving the force, Beth says it's the drink talking and that there's nothing I could do as a civilian. She thinks I'm threatening our livelihood. She just wants me to transfer out of Blue Book, but I want to get out of the Air Force completely and she simply won't wear that. Frankly, Andy, I don't know *what* to do. I'm just running scared, I guess.'

'I don't blame you, old buddy, but are you sure you're not imagining a lot of this?'

'No, I'm not imagining it. Too many bad things have happened to those involved in UFO research. Also, I'm not imagining the harassment. Christ, Andy, even during that UFO invasion of Washington DC, I was hamstrung and practically ordered back to Dayton. As a matter of fact, I flew here on a commercial flight - at my own expense, Andy - because when I tried to charter an air force plane I was refused permission.'

'On what grounds?'

'They said the base was temporarily sealed off because a security exercise was taking place. A *routine* security exercise, they said.'

'This was yesterday?'

'Yes.'

'Then it was bullshit,' Andy said. 'There was no security exercise taking place at Cannon yesterday - and the base wasn't sealed off. Did you tell them why you wanted to come here?'

'No. I just announced myself as head of Project Blue Book. That was enough.'

‘But you’ve visited the base before.’

‘That’s right. So the only reason they could’ve had for their lies was the landing you saw. Tell me about it.’

Andy glanced in his rear-view mirror, a reflex action denoting confusion, then he concentrated again on the road ahead. ‘Weird,’ he said. ‘Kinda spooky. Problem is, I’d been drinking, a real bellyful of beer, and that made me keep my mouth shut about it - to everybody but you. It was about two in the morning. I was just returning to the base... What the hell! We’ll soon be there, Dwight. Let’s wait till we get there.’

They arrived at the sprawling Cannon Air Force Base a few minutes later. After driving past the guardhouse and barrier at the entrance, Andy kept going along the fenced-in perimeter lining the road until he came to a place near the outer limits of the base, well away from the airstrip. He slowed down and stopped. Dwight could see the corrugated iron roof of a large hangar beyond the high fence. Andy pointed at it.

‘Right there,’ he said. ‘About two in the morning. I was driving right past there, coming in the other direction - pretty loaded, as I said - when I saw that the lights on that hangar were still on. As I was passing, I thought how unusual it was for it to be lit up at that time in the morning. I also noticed that there was a series of arc lights forming a circle in the cleared area directly in front of it. Then, inexplicably, the engine of my car cut out and I rolled to a halt. Cursing, not too sure of what was happening, thinking that the drink had made me do something stupid, I tried to start the car again, but it just wouldn’t spark. Then I heard a weird noise, a high-pitched whining sound, coming from the other side of the fence... and I looked up and saw that... that *thing* coming down.’

He shook his head from side to side, as if still not believing it, and looked at the hangar beyond the fence, reliving the night before.

‘A domed, disc-shaped aircraft. It was landing about fifty yards inside the fence, in that area illuminated by the circle of arc lights, directly facing the open doors of the hangar. The aircraft, or flying saucer, had no lights – that’s why the landing area was illuminated. The circular part around the dome of the aircraft was shaped like two plates, one placed upside-down on the other, and the raised dome in the middle was just like a pilot’s nose cabin, made of what seemed like Perspex, with a single pilot in it. The circular plates were revolving around the dome, which seemed to be gyroscopically balanced and, though fixed, was swaying up and down a little as the saucer descended. The closer it got to the

ground, the slower the plates rotated and the quieter it became, until the high-pitched whining had become a low whirring sound. The saucer had ball-like landing gear, which I saw being lowered in preparation for touchdown. It was practically hovering in the air, just above the level of the perimeter fence. Then it disappeared below the top of the fence and the sound of it cut out completely. When it did, my car's engine started up again.'

Dwight was hearing all this clearly, but finding it hard to take in. He knew that Andy wasn't lying, but it still seemed incredible.

'Any insignia on the saucer?'

'None,' Andy said.

'And the hangar doors were open?'

'Yes. That hangar, I know, is used for secret aeronautical research projects, so I'm convinced that the saucer was being kept there. Certainly, it didn't take off again. I drove my car off the road, cut its lights and ignition, and sat there for a good couple of hours, sobering up and hoping to see the flying saucer ascending.' Andy shook his head from side to side, as if still finding it hard to accept what he had witnessed. 'But it didn't. At one point I thought I could hear muffled screeching sounds - like clamps or wheels needing oil - then, after a while, I heard the hangar doors closing. The arc lights above and in front of them were turned off. After that, there was silence.'

'That's a restricted area of the base?'

'Sure is.'

'So what do you think?'

'What do *I* think?' Andy unconsciously echoed Dwight's words as he glanced up and down the sunlit road that ran past the base. 'I'll tell you. You believe in the extraterrestrial hypothesis, right? Well, let me remind you that most of the best saucer sightings have been over top-secret military installations - in other words, mostly right here in New Mexico. So on the assumption that the saucers aren't piloted by extraterrestrials spying on our military secrets, what else could they be?'

'Soviet secret weapons.'

'Man-made?'

'Right.'

'But not necessarily Soviet. It's highly unlikely that the Soviets could have managed to fly their spy planes over our top-secret military installations without being brought down by us. On the assumption, then, that the saucers are neither

Soviet nor extraterrestrial, but are seen over our own top-secret establishments - and, as in this case, have even been seen to land – there's a growing belief among some of us that they're radical new US aircraft prototypes, developed by the Air Force or Navy.'

'I can't really accept this,' Dwight said.

'No? Then let's see if we can get you into the base.' Andy turned the car around and drove back to the main gate, stopping at the barrier. When he told the armed corporal in the gatehouse who Dwight was, the kid rang through for clearance, then put the phone down and shook his head, looking embarrassed.

'Sorry, sir,' he said, 'but I can't let you bring your guest in.'

'Guest? He's not a guest! He's the decorated US Air Force captain in charge of Project Blue Book. Now let us in, damn it!'

'Sorry,' the corporal repeated, straightening up, 'but I can't do that, sir.'

'Why not?'

'Because I have my orders.'

'What reasons were given?'

'No reasons were given, sir. I was just informed by my superior officer that Captain Randall wasn't to be allowed in.'

'And who's your superior officer?'

'Major Shapiro, the base intelligence officer.'

'Anyone else being denied permission to the base today, corporal?'

'I can't answer that, sir.'

'Okay, corporal, thank you.' Andy reversed away from the barrier, then took off in the direction they had come from, back to Albuquerque. 'Do you get the picture now?' he said. 'The flying saucer I saw last night was certainly no Russian spy plane, since its landing had clearly been prepared for and it certainly spent at least last night in that off-limits hangar. Therefore, it was either an alien spacecraft landing with the full permission of the Air Force or a top-secret Air Force - or even Navy - aircraft. But since it didn't look advanced enough to be an alien spacecraft, I'd opt for it being one of our own.'

'Oh, boy!' Dwight exclaimed softly. 'That would certainly explain why certain members of intelligence don't want us to find out too much.'

'Right. The extraterrestrial hypothesis is a smokescreen. In reality, they're defending their own secrets. Those saucers are man-made.' He glanced at Dwight and grinned. 'I've got some more news for you, but I'll let you have it over a drink. I think you'll need it, old buddy.'

They spent the rest of the drive in silence, allowing Dwight to think. He was having trouble putting his thoughts in order, but eventually he managed to do so. Now he saw, more clearly, the reason behind all the harassment, the smoke-screen of disinformation, the veiled threats from superior officers, the virtual destruction of Project Blue Book… the Air Force was protecting its own while pretending to be concerned with alien spacecraft.

Nevertheless, some nagging doubts remained, mostly to do with the extraordinary capabilities of the saucers reported. Dwight simply couldn't imagine that the Air Force had made such technological advances, not even in secret. Even for him, this was too much to deal with at the present time. It scared him to think of it.

In a roadside bar just outside Albuquerque, they settled into a dimly lit booth, both drinking large bourbons. When they were feeling more relaxed, Andy withdrew an air force folder from his briefcase, opened it, and squinted down through the gloom at the pages.

'These classified Air Force intelligence documents were leaked to me by a friend. I can't give you his name, but I can verify the authenticity of the documents.' Grinning, he raised his finger like a schoolteacher. 'Okay. Let's try presenting a case for the possibility of man-made flying saucers.' He dropped his raised finger onto the pages opened before him. 'Though it's not widely known, American intelligence has been interested in the possibility of man-made flying saucers for a long time. First indication of this is an old intelligence report - I have it right here in my file - stating that a patent for a so-called flying saucer with a circular fixed wing was taken out by an unnamed American citizen as early as March 22, 1932.'

'*Unnamed*,' Dwight emphasised, sighing with disappointment.

Andy smiled brightly, triumphantly. 'That unnamed citizen was probably Jonathan E. Caldwell. This would explain why, on August 19, 1949, at the height of the immediate post-war UFO flap, the Air Force Command of Baltimore called a press conference to announce that two different types of prototypes that might solve the mystery of the flying saucers had been found in an abandoned farm near Glen Burnie, Maryland. According to the Air Force spokesman, both machines had been designed and constructed before the war by Jonathan E.Caldwell, with the aid of a local mechanic, and one of the machines had actually been flown.'

'I have that on file as well,' Dwight said.

Andy ignored his disappointment. ‘The machines had been abandoned for years and were falling apart, but as they were a combination of airplane and helicopter, with round wings and contrarotating propellers, it was the belief of Air Force intelligence that in flight they’d have resembled flying saucers. So they could have been the prototypes of the more advanced UFOs seen in the skies over the past few years.’

‘Sorry,’ Dwight said. ‘That notion was squashed less than twenty-four hours later when, at another urgent press conference, a different Air Force spokesman announced that the Caldwell machines had absolutely no connection with the reported phenomena of flying saucers.’

‘Correct. But what the Air Force spokesman *didn’t* state is that Caldwell’s plane was a craft with a circular wing of the parasol type, or one raised above the fuselage like an umbrella. It was constructed in 1932 and tested the following year by Professor J. Owen Evans in a wind-tunnel in Los Angeles, then flown by the well known pilot, Jimmy Doolittle, displaying a top speed of 97 mph and a landing speed of 23 mph. In 1936, Caldwell produced a modified version of the prototype, but it crashed, killing the pilot, thus putting Caldwell out of business for good.’

‘All very interesting,’ Dwight said, ‘but you’re talking about a pretty crude aircraft.’

‘All early prototypes were pretty crude,’ Andy retorted. ‘Nevertheless, it’s clear from what I’ve picked up that US military intelligence continued to be anxious about the possibility of man-made flying saucers, particularly right after the war. They were, as you know, even more concerned because most of the saucer sightings in the US tended to cluster around key development stations such as atomic plants, guided missile areas, and your very own Wright-Patterson Air Force Base.’

Dwight grinned. ‘No argument there.’

Andy turned another page. ‘It’s also clear from remarks sprinkled liberally throughout these documents of the period that US intelligence findings seemed t o *exclude* extraterrestrial origin of the saucers. This in turn made them increasingly concerned with the possibility that the saucers were man-made.’ He looked up, nodding emphatically. ‘More intriguingly, although on the one hand they were concerned with Soviet advances in this field, they soon began suspecting that the saucers might be of US or Canadian origin.’

‘You think that’s possible?’

‘Yeah. As the Navy, Army and Air Force are always, and were then, in constant competition with one another, each would have been reluctant to inform the other of any secret projects in the pipeline. So even at the White Sands Proving Ground, used extensively by the Navy for their aeronautical and missile experiments, there are research projects so secret that even the CIA can’t learn about them - and given Navy interest in vertical-ascending aircraft, these could have included saucer-shaped aircraft.’

Dwight finished off his bourbon and called for two more. ‘I can tell you have something else prepared. So go on. Lay it on me.’

Andy waited until the waiter had brought their drinks and departed.

‘As far as I can tell, the first rumblings about Canadian flying saucer projects were made in a classified CIA memorandum dated August 18 last year - a year after the Spitzbergen flying saucer crash report. The CIA memorandum states: “According to recent reports from Toronto, a number of Canadian Air Force engineers are engaged in the construction of a ‘flying saucer’ to be used as a future weapon of war. The work of these engineers is being carried out in great secrecy at the A.V. Roe Company factories.” He looked up from his notes. ‘That report was correct - as were the widespread suspicions that the US Navy was conducting experiments on saucer-shaped, vertical-rising aircraft in secret hangars in the White Sands Proving Ground.’

Dwight gave a low whistle. ‘That could make sense,’ he said. ‘One belief widespread in intelligence circles is that the formation of the lights in the famous Lubbock sightings, and others, weren’t indicative of small glowing saucers, but of the many exhaust jets along the edge of a massive, boomerang-shaped aircraft, or advanced flying wing, that would, when viewed from certain angles, strongly resemble a flying saucer, or saucers.’

‘Good,’ Andy said, then went back to his leaked documents. ‘Evidence for United States’s involvement with disc-shaped aircraft projects surfaced with information about the US Navy’s Flying Flapjack, or Flying Pancake. Designed by Charles H. Zimmerman of the National Advisory Committee for Aeronautics and constructed in 1942 by the Chance-Vought Corporation, the Flying Flapjack, or V-173, was an experimental, vertical-rising, disc-shaped aircraft, a combination of helicopter and jet plane, powered by two 80hp engines and driven by twin propellers, with two fins, or stabilisers, on either side of its semi-circular, or pan-cake-shaped, configuration. Reportedly it had a maximum speed

of 400 to 500 miles per hour, could rise almost vertically, and could hover at thirty-five miles an hour. A later, more advanced model, the XF-5-U-1, utilised two Pratt and Whitney R-2000-7 engines of 1,600hp each and was reported to be about 105 feet in diameter and have jet nozzles - which strongly resembled the glowing windows seen on so many UFOs - arranged around its outer rim, just below the centre of gravity. It was built in three layers, the central layer being slightly larger than the other two. Since the saucer's velocity and manoeuvring abilities were controlled by the power and tilt of the variable-direction jet nozzles, there were no ailerons, rudders or other protruding surfaces. The material used was a metal alloy that had a dull, whitish colour.'

'In short,' Dwight said, 'a machine remarkably similar in appearance to those reported by so many UFO witnesses.'

'Exactly,' Andy said. 'Now do you remember the April 1950 edition of the *US News and World Report*?'

'Christ, now that I think of it, I do,' Dwight replied, feeling more excited every minute. 'Information about the Flying Flapjack was released to the public in that edition of the magazine!'

'Correct again, Dwight, and it touched off some interesting speculations. The first of these arose from the retrospective knowledge that the Navy had always expressed more interest in a vertical-rising airplane than the Air Force and had, up to 1950, spent *twice* as much money as the Air Force on secret guided missile research. Also, their top-secret missile-research bases were located in the White Sands Proving Ground, where the majority of military UFO sightings had occurred. Also, because they weren't involved officially in UFO investigations, they could conduct their own research in a secrecy unruffled by the attentions of the media and the public.'

'Right,' Dwight said, now genuinely excited. 'And according to the Project Grudge report for 1947, the UFOs viewed over Muroc AFB on July seven and eight of that year were oscillating objects that flew at remarkably low speed and had tactics unlike an ordinary airplane. Some witnesses, all trained Air Force personnel, observed two discs at an altitude of about 8,000 feet, both manoeuvring in tight circles with varying speeds - and oscillating. Also, just like the XF-5-U-1, both discs had two fins on the upper surface.'

'Go on,' Andy said, grinning with pleasure at what he had started.

'Well, another interesting point is that the measurements taken by Navy

commander R.B. McLaughlin and his team of Navy scientists of the UFO they'd tracked over the White Sands Proving Ground in 1949, two years after the Muroc sightings, corresponded closely, except for the speed, with the details of the original XF-5-U-1. It's also worth noting that initial reports of the extraordinarily high speeds recorded by McLaughlin turned out to be inaccurate and that later analysis of the data brought the speed much closer to that of an advanced jet-plane... or to the original expectations for the Flapjack.'

Nodding affirmatively, Andy, now as excited as Dwight, said, 'And the *US News and World Report* also pointed out that the Air Force had called off official inquiry into the UFO phenomenon the previous December, even in the face of overwhelming evidence that the saucers were real. This was seen by many as a clear indication that top Air Force officials actually *knew* what the saucers were and where they come from. Therefore, while still denying that the Air Force was involved, they were no longer concerned about the saucers. The article concludes: "Surface indications, then, point to research centres of the US Navy's vast guided-missile project as the scene of present flying-saucer development.""

'In other words, the White Sands Proving Ground and other secret locations right here in New Mexico.'

'Ding, dong! First prize!'

'So what happened to the Flying Flapjack?'

Andy glanced at his leaked documents. 'The production prototype of the Flapjack was due for a test-flight at Muroc AFB in 1947 - when the first flying-saucer sightings over that same base and at Rogers Dry Lake, adjacent to Muroc, were recorded. Whether such test flights were actually carried out has never been confirmed or denied by the US Navy. The only official statements given were to the effect that work on the Flying Flapjack ceased the following year... - but US involvement with saucer-shaped aircraft didn't end with that prototype.'

Andy had a sip of bourbon and lit a cigarette. After blowing a couple of smoke rings and watching them disappearing, he said, 'At this point it's worth reminding you of certain facts taken from your own Project Blue Book reports.'

'Always reliable!' Dwight quipped.

'Of course,' Andy responded, then turned serious again as he lowered his eyes to his notes. 'In the reports that started the modern UFO scare - the Harold Dahl and Kenneth Arnold sightings of June 1947 - both men observed the UFOs in the vicinity of Mount Rainier, the Cascades, in the state of Washington - which divides Oregon and Canada - and both stated independently that the

UFOs flew away in the direction of the Canadian border.'

'That's right - towards Canada.'

Andy nodded. 'Shortly after, during the first week in July, there were numerous reports of unidentified, luminous bodies in the skies over the Province of Quebec, Oregon, and New England. The next major UFO flap was the so-called invasion of Washington DC in 1952; and while the official flap started on July 19, there was a record, dated June 17, of several hundred unidentified, red spheres that flew at supersonic speeds over the Canadian Air Base of North Bay in Ontario and then crossed over some of the southeastern states. Finally, nearly all of the subsequent Washington DC UFOs were reported as flying away in a northerly direction; and when they returned, en masse, on July 26, their disappearance in a general northerly direction - towards the Canadian border - also applied.' He looked up from his notes. 'Given this, it's a matter of particular interest that on February 11 last year the Toronto *Star* reported that a new flying saucer was being developed at the AVRO-Canada plant in Malton, Ontario.'

Dwight gave another low whistle, then said, 'Christ, how did I miss that?'

'Because your research teams were only looking for UFO reports - not reports about official, saucer-shaped, experimental aircraft.' Andy puffed another cloud of smoke and looked back at his Air Force folder. 'Of course the US and Canadian governments both denied involvement in any such projects, but on February 16, after freelance photographer Jack Judges had taken an aerial photograph of a flying saucer resting outdoors in the Avro-Canada plant in Malton, the Minister for Defence Production, C. D. Howe, admitted to the Canadian House of Commons that AVRO-Canada was working on a mock-up model of a flying saucer, capable of ascending vertically and flying at 1500 miles per hour. By February 27, Crawford Gordon Jr., the president of AVRO-Canada, was writing in the company's house journal, *Avro News*, that the prototype being built was so revolutionary it would make all other forms of supersonic aircraft obsolete. That aircraft was called the "Avrocar".'

'Shit,' Dwight muttered. '*Now* I remember it!'

'I bet you do.' Andy was amused, but instantly went back to his leaked documents. 'Soon the Toronto *Star* was claiming that Britain's Field Marshal Montgomery had become one of the few people to view Avro's mock-up of the flying saucer. A few days later, Air Vice Marshal D. M. Smith was reported to have said that what Field Marshal Montgomery had seen were the preliminary construction plans for a gyroscopic fighter whose gas turbine would revolve

around the pilot, positioned at the centre of the disc. Confirmation that the craft actually existed came via last year's April issue of the *Royal Air Force Flying Review*, which contained a two-page report on the Avrocar - also dubbed the "Omega" - including some speculative sectional diagrams. According to this report, the building of a prototype hadn't yet commenced, but a wooden mock-up had been constructed behind a closely guarded experimental hangar in the company's Malton plant, near Ontario. The aircraft described had a near-circular shape, measuring approximately forty feet across, and was being designed to attain speeds of the order of 1,500 mph - more than twice that of the latest swept-wing fighters. It would be capable of effecting 180-degree turns in flight without changing altitude.'

'Just like a real flying saucer.'

'Exactly,' Andy said. 'And last November, Canadian newspapers were reporting that a mock-up of the Avrocar, or Omega, had been shown on October 31 to a group of twenty-five American military officers and scientists. To date, nothing else has been reported by the press, but according to these leaked intelligence documents, the US Air Force, concerned at Soviet progress in aeronautics, has allocated an unspecified sum of money to the Canadian government for the building of a prototype of their flying saucer. The machine's been designed by the English aeronautical engineer, John Frost, who once worked for AVRO-Canada in Malton, Ontario, and it'll be capable of either hovering virtually motionless in mid-air or flying at a speed of nearly 2,000 miles an hour.'

Dwight gave another low whistle.

'Last but not least,' Andy continued, 'according to these documents, the government's hoping to form entire squadrons of AVRO-Canada's flying saucers for the defence of Alaska and the far regions of the North - because they require no runways, are capable of rising vertically, and are ideal for subarctic and polar regions.'

Realising that he had been conned all along by his superiors, who wished to protect their own flying-saucer projects, Dwight filled up with rage. With that came the urge for revenge against those who had wronged him.

'All we need is solid proof,' he said.

'I've got that as well,' Andy responded, grinning like a kid as he withdrew a brown envelope from his Air Force folder. 'When that thing landed last night, I took a photo of it. Naturally, I'm going to keep the negative, but the photo's for

you. With my compliments, Dwight.'

Dwight took the photograph and examined it. His heart started racing when he saw the slightly unfocused photo of a flying saucer hovering just above the fence of Cannon AFB, gleaming in the light from the arc lamps forming a circle around it. His hand started shaking as he took in what he was seeing, but eventually, with his heart still racing too quickly, he slipped the photo back into the envelope and put it into his briefcase.

'Thanks a million,' he said. 'I don't know how to thank – '

'My pleasure,' Andy interjected. 'Now I've got to get home. Back to Cannon AFB, where you're no longer welcome. I'll keep my eyes and ears peeled.'

'Please do that,' Dwight said.

They left the bar together, shook hands on the sidewalk, then walked off in opposite directions. Andy clambered into his car while Dwight caught a cab.

He checked into a motel located near the airport, went straight to his room with a half-pint of bourbon, drank some of it while endlessly studying that photo of the man-made flying saucer, then lay down and fell into a dream-haunted sleep.

Dwight was dreaming of flying saucers that glowed magically in the night and, though serenely beautiful, filled him with fear. That fear deepened as a dazzling silvery-white light filled his vision, gradually surrounded him, and then, in an inexplicable manner, pressed in upon him.

The light seemed almost physical.

At first he thought the light was part of his dream, filling up an alien sky, but then he opened his eyes and realised it was real enough: a brilliant, flickering light that was beaming in through the window of the motel room to dazzle him and, in its oddly physical way, tighten his skull and fill it with pain.

Even as he was rubbing the sleep from his eyes, trying to adjust to the unusual, blinding light and the increasing pain in his head, he heard a bass humming sound, almost an infrasound, and felt the bed vibrating beneath him.

Fully aware that this wasn't normal and deeply frightened by it, he was trying to gather his senses together when the room door burst open and two men, both dressed in black coveralls, entered and rapidly approached the bed.

Dwight attempted to sit upright, but before he could do so, one of the men pressed something hard and metallic against the side of his neck. He felt an electric charge course through him, like being struck with a hammer, then he went numb from neck to toe.

Terrified, unable to move a muscle, he could only look on as one of the men picked the manila envelope off the bedside cabinet, tugged the UFO photo out, examined it briefly, then nodded at the second man. The latter leaned over the bed to stare at Dwight with cold, almost inhuman eyes.

'Stop pursuing us,' he said. 'It will only bring you grief. Not only for you, but for your family. You've been warned. *Auf Weidersehen*.'

The two men left the room, closing the door behind them, leaving Dwight propped up on the bed, completely paralysed and terrified.

That strange light still filled the room, pulsating, flickering, and at times he thought it might be a line of lights forming the whole. Accompanying the lights was the infrasound - something felt, rather than heard - and Dwight felt it pressing around him, relentlessly tightening his skull, almost making him black out with pain.

He remained conscious, however, tormented by what was happening. The sweat poured down his face, the visible results of his racing heart, and he felt the panic welling up inside him as he frantically tried to move.

Now his terror was absolute, engendered by the paralysis, and he had visions of the horror of Beth and Nichola should they find him like this. The panic ballooned into mindlessness, stripping his senses bare. He was just about to tip into madness when the pressure of the infrasound decreased and feeling returned to him.

First a tingling in his toes, then warmth in his fingers. He bent an elbow, then a knee, as the brilliant, flickering light outside the window appeared to rise slightly, deliberately, swaying slightly from side to side.

The pressure of the infrasound decreased and finally went away altogether.

Dwight bent and stretched his legs. He flexed his fingers and raised his arms. The dazzling light outside ascended to the top of the window-frame, hovered there for a moment, flared up briefly and then suddenly blinked out.

Dwight knew then that it was actually a line of smaller lights blinking out one after the other, but at very great speed, giving the appearance of one great light popping out.

Darkness rushed back into the room and the sky reappeared outside.

Dwight took a deep breath. He was trembling like a leaf. Sweating profusely, with his heart still racing dangerously, he glanced at the bedside cabinet to confirm that the men in black had actually been here.

The UFO photo was gone.

The men in black had been real, too.

Still in a state of shock, Dwight slid out of bed, hurried across to the window, opened it and looked up at the sky.

There were lots of stars up there. Look too long and they seemed to move. Dwight looked a long time and thought he saw one moving - that big one, almost directly above - but he couldn't be sure. He kept scanning the sky, looking for something unusual, but saw only the glittering lights of that sea of stars in the infinite darkness.

Shivering, though still sweating, trying to still his racing heart, he walked back to the bed, picked up the bottle of bourbon and drank too much of it too quickly.

Now, with his nerve cracking, fearful for Beth and Nichola as well as for himself, he was determined to leave the air force for good and put all this behind him.

It was best to be silent.

Part Two

Chapter Twenty-Three

'I think you all know why we're here,' President Eisenhower said. 'Yesterday, at Cape Canaveral, Florida, Project Vanguard's first rocket, which the American people had been led to expect would put up the first earth satellite in history, blew up on its launching pad. I want to know why.'

Richard Horner, assistant secretary of the Air Force for research and development, coughed nervously into his fist, glanced at the other men in the Oval Room in the White House, then said, 'We still haven't ascertained the exact cause of the explosion, but according to Mr Fuller, here, Wilson was responsible.'

Eisenhower was standing beside his vice-president, Richard Nixon, framed by the window overlooking the Rose Garden and hazed slightly in the incoming morning sunlight. Both men, Fuller knew, were fully aware of the political seesaw arrangement with Wilson. The 34th President of the United States stared directly at him.

'That's correct, Mr President.' Fuller was unfazed by Eisenhower's stern look, which struck him as being that of a bachelor schoolteacher, rather than that of the most powerful man in the country. While admiring Eisenhower as a West Point graduate, renowned World War II military commander, supreme commander of the North Atlantic Treaty Organisation, or NATO, and active anticommunist, Fuller viewed his support of desegregation and the Civil Rights Act as unhealthy manifestations of liberal soft thinking. Nor was he keen on Eisenhower's vice-president, Richard Nixon, whose support for the sleazy Senator Joe McCarthy and his self-serving witch-hunts had gained even decent anti-Communists, such as Fuller, a bad name. 'Wilson phoned me an hour before countdown to say the explosion would occur and he's arranged it as a warning that we were making progress too quickly for his liking.'

'Maybe he's displeased with our plans for the creation of a National Aeronautics and Space Administration,' said Major General Joe Kelly of the

Air Force Legislative Liaison, or SAFLL.

'He's not,' Fuller informed him. 'That's the first thing I thought of, but Wilson wasn't concerned about NASA. He's annoyed by what he described as our increasingly naked desperation to beat the Russians into space.'

'So he arranged the explosion on Project Vanguard's first rocket,' Eisenhower said, displaying anger for the first time.

'Yes, Mr President,' Fuller said. 'Of course, as soon as he'd phoned me, I passed the warning on to the launch team. A last-minute check on the rocket showed no faults at all, so it was decided that Wilson was bluffing and that the launching should continue. Then the rocket blew up – just as Wilson had said it would.'

'So how did he manage it?' asked Major General Arno H. Luehman, director of information services.

'With some kind of explosive device,' Fuller replied, shrugging.

'We can all assume that, Mr Fuller,' Nixon said disdainfully. 'What we want to know is how he got it on board.'

'It had to be one of our men,' Richard Horner admitted. 'But with so many working on the project – and nothing found in the debris that relates to any known explosive devices – we're having great difficulty in finding out who it was or how it was done.'

'But we do at least know that Wilson has one, or even more, of his men planted in our rocket research teams.'

'It certainly looks that way, Mr President.'

'Either he has some planted in our rocket research teams,' Fuller corrected him, 'or he used some kind of remote-controlled device. Whether one or the other, he proved his point... He's way ahead of us and we're still at his mercy.'

That statement led to a brief, uneasy silence and the rising anger of Vice-president Nixon. 'It's a public humiliation,' he said. 'Made even more obvious by the fact that it was the Russians, and not us, who inaugurated the space age with their recent launching of the first man-made satellite, *Sputnik 1*.'

'That's old news already,' Fuller responded, enjoying needling Nixon. 'Last month, they sent up that dog, Laika, which orbited Earth in a second Russian satellite, six times heavier than the first.'

'Right,' General Kelly said. 'And that *Sputnik* is also equipped to measure

cosmic rays and other conditions in space, a good one thousand miles above Earth.'

'That damned dog,' Major General Luehman said bitterly, 'is being tested for its response to prolonged weightlessness, so it's a precursor to future manned spaceflights.'

'They beat us into space,' Nixon said angrily, 'and now this Wilson has deliberately emphasised our humiliation and set the space programme back again. I thought we had a deal with that man!'

'We do,' Fuller said, 'but it's a seesaw arrangement. We give him a little, he gives us a little back, but whenever he thinks we've stepped out of line, he also gives us a warning.'

'Like the explosion on our Project Vanguard rocket,' Eisenhower said.

'Right, Mr President. We're only allowed to advance *behind* his technology. If he thinks we're coming close to catching up with him, he pulls these little stunts – and he's very good at it.'

'So we've learnt to our cost – as have others. I believe he was also responsible for the crash of the British Airways Viscount in March this year, for the fire in the Windscale atomic works in Cumberland in October – '

'The Windscale piles are used to make plutonium for military purposes,' Richard Horner interjected.

'Exactly,' Eisenhower said. 'He's also suspected of being responsible for the death of that Royal Navy Commander, Lionel Crabb, found headless in the sea near Chichester Harbour, England, in June this year. That was shortly after Crabb was accused of engaging in espionage activities against the Russians. There are even reports that he might have been responsible for exposing the spying activities of Burgess and McLean in 1955, in order to sour East-West relationships.'

'He doesn't like it when we talk to one another,' Fuller explained. 'He prefers us to be in conflict. We're convinced that this deal he has with us he also has with the British and the Russians. He's one real smart cookie. As for causing a little accident each time we advance too quickly for his liking – I believe the Brits and Russians have also had disasters caused by him – we'll just have to be more careful about what we're doing in our research establishments, particularly those in the White Sands Proving Ground.'

'You mean our own flying saucers,' Nixon said.

'Correct. However, it's even more important that we continue to keep

hidden the fact that the flying saucers most often seen, and also known to abduct people and animals, are in fact man-made by a highly advanced foreign power – which Wilson can now rightfully be called. If the public finds out about Wilson's flying saucers and Antarctic colony, we'll have mass hysteria to contend with.'

'I agree,' Richard Horner said. 'We must continue, as a means of disinformation, to encourage a widespread belief in the possibility of extraterrestrials. It's vital that we prevent the general public from learning that we're being threatened by a totalitarian regime using mind-control, laser-beam technology, and other highly advanced weapons and forms of parapsychological warfare. That knowledge would be more terrifying than the revelation that the saucers have an extraterrestrial source. Distance lends enchantment. The reality of the Antarctic colony could give the populace nightmares.'

'Unfortunately,' said Major General Luehman, director of information services, 'stopping speculations about UFOs won't be easy, as there have been more reports this year than any other.'

Fuller knew what he meant. In 1956, the ATIC had recorded 670 sightings, but this year, 1957, that figure had risen to over 1,000, with a gradual increase throughout the year, reaching a peak of over 500 for November alone. Remarkably, in this second week of December, those figures were continuing to climb, making this the biggest year for UFO sightings since 1952.

The sightings, Fuller knew, were due to a combination of Wilson's saucers, secret Air Force and Navy saucers, and wishful thinking, or mass hysteria, caused by the launching of the second Russian *Sputnik*. Nevertheless, their crucial factor was that Wilson was now flying more saucers than ever and doing it with impunity. In fact, Wilson controlled the skies.

'UFO speculation won't be lessened,' Major Kelly said, 'by the forthcoming Congressional hearings, brought about by relentless pressure from that former Air Force major, Donald Keyhoe, and his civilian UFO group, the National Investigations Committee on Aerial Phenomena. The problem of handling the hearings and answering Congressional enquiries about the UFO programme has fallen to us at SAFLL. So far, by using *Special Reader Report Number 14* for our information, we've been able to insist that there's a total lack of evidence for anything unusual in the skies.

However, I don't know how long we can support that claim if we're forced into open hearings on the matter.'

'Congressional hearings on flying saucers!' Richard Nixon exclaimed, aghast. 'I can't believe what I'm hearing!'

Turning to his assistant secretary of the Air Force for research and development, Eisenhower asked, 'Can you help?'

Horner nodded emphatically. 'I've already told subcommittee chairman Donald O'Donnell that hearings aren't in the best interests of the Air Force. He's trying to get the subcommittee to drop the issue, but it's early days yet. Meanwhile, I'll keep stonewalling Keyhoe and the NICAP.'

'Anyway,' Major Kelly said, 'if we *are* forced into Congressional hearings, we'll simply use the subcommittee as another tool of disinformation.'

'Very good,' Nixon said, flicking beads of sweat from his upper lip and looking as shifty as always.

'Meanwhile,' said Major General Luehman, 'my department is continuing the education of the public with the use of psychologists specialising in mass psychology. We're also using military training film companies, commercial film and TV productions, such as Walt Disney Productions, and popular radio and TV personalities, including Arthur Godfrey, to put over whatever we deem fitting. We're also continuing to disseminate negative literature about the civilian UFO organisations, including Keyhoe's NICAP and Dr Frederick Epstein's Aerial Phenomena Investigations Institute, based right here in Washington DC. Last but by no means least, we legally harass them on the slightest pretext. Similar treatment is being meted out to Air Force pilots and commercial airline pilots reporting UFO sightings.'

'Terrific!' That was Nixon.

'It all seems so sordid,' Eisenhower said, looking uneasy.

'But necessary,' Fuller insisted, amused when Nixon smiled encouragingly at him. 'We have to gradually kill off public talk about UFOs and trust that it then becomes a forgotten subject.'

'What about Project Blue Book?' Nixon asked. 'That damned project has done more to stimulate interest in UFOs than any other branch of the services.'

'It's now well under control,' Fuller said. 'Blue Book's been run down and is now under the supervision of the 1006th Intelligence Service Squadron,

which knows practically nothing about UFO investigations. As for the vastly more experienced Captains Ruppelt and Randall, both have been pressured into leaving the Air Force for good, ensuring that the UFO projects, our own and Wilson's, won't be discovered by either of them, accidentally or otherwise.'

'Let's hope they're not discovered by someone else,' President Eisenhower said. 'Gentlemen, thank you.'

Fuller was first to leave the Oval Room, pleased by what he had heard there.

You simply couldn't trust anyone.

Chapter Twenty-Four

Dwight was drunk again. He was in that state a lot these days, but it was always even worse at Christmas, which reminded him of the family that he'd lost after leaving the Air Force. Now, sitting at the dining table in his untidy clapboard house, by the window overlooking the rusty pumps of the gas station located on a desolate stretch of road just outside Dayton, Ohio, he was listening to the Christmas carols being sung on the radio, sipping from a dangerously large glass of bourbon, and staring out at the dark, dust-covered road.

He was really surprised when a battered Ford pulled up and Beth stepped out.

'Oh, Christ!' he whispered involuntarily, talking to himself, caught between pleasure and embarrassment that she should find him like this. Sipping more bourbon, trying to calm his agitation, he studied her as she closed the door of the car, smoothed down her hair, then glanced nervously across the yard at the house.

Dwight slipped a little sideways, to ensure that she couldn't see him, then watched her advancing up the path to the front door. Wearing a tightly belted overcoat and high heels, she looked as trim and attractive as always. When she reached the front door, vanishing from his view, a lump came to his throat. Then the doorbell rang.

Twitching as if whipped, Dwight was about to hide his bottle of bourbon, but realising instantly that he would not get through this meeting without a drink, he just shrugged, had another sip, then went to the door, carrying his still half-full glass. He took a deep breath, opened the door, and looked straight into his wife's girlish, solemn face. She seemed as embarrassed as he felt, but she gave him a nervous smile.

'Well, well,' Dwight said, 'what a surprise! Long time, no see.'

'Yes, Dwight, a long time.' The winter wind was howling across her, beating at her, making her seem touchingly fragile against the nocturnal sky.

‘Are you going to keep me standing out here all night or can I come in?’

‘Oh, sure, Beth, I’m sorry.’ He stepped aside to let her enter. When she brushed past him, the brief touch of her body sent a shock coursing through him. He closed the door and followed her into the living room. She was studying the awful untidiness, which embarrassed him even more. ‘I guess I’m not too good at housekeeping,’ he said. ‘And the gas station keeps me pretty busy.’

Beth stared at the glass in his hand. ‘That as well, so I’ve heard.’

‘Yeah,’ Dwight said, ‘that as well.’ He defiantly finished off his drink, then topped up the glass. ‘You want one?’

‘Why not? Just a small one. Let’s share a Christmas drink together. Can I sit in this chair?’

‘Sure, Beth. Anywhere.’

He poured her a drink as she unbuttoned her overcoat, letting it hang open, then took the easy chair near the fire. She was wearing a white sheath dress that showed off her fine figure, and when she crossed her long, shapely legs, Dwight wanted to stroke them. Instead, he handed her the drink and took the chair facing her. They raised their glasses in a toast, drank some bourbon, then gazed at one another in silence.

‘Who told you I was drinking?’ Dwight asked eventually, wanting to get the subject over and done with.

Beth shrugged. ‘It’s all over town. At least among our mutual friends. You’ve been seen and heard, Dwight.’

He grinned, though he didn’t feel good. ‘Yeah, I reckon I have. It’s surprising how these things get a hold. I’m not cut out for a bachelor’s life.’

‘It’s been three years, Dwight. I hear you don’t even have a girlfriend.’

‘We didn’t separate because of that, Beth. I don’t need a girlfriend.’

‘Just the bottle.’

‘That’s right, Beth. You’ve got it. It deadens all needs.’

‘And all fears, as well.’

‘Those, too, I guess.’

He soothed those fears now by having another sip of bourbon, then he held the glass unsteadily in his lap and studied his wife. He had seen her only occasionally since their separation, usually when visiting Nichola, but it seemed like he hadn’t seen her for years, and her presence consumed him.

‘You should never have left the Air Force,’ she said. ‘You *needed* the Air

Force.'

'Obviously, the Air Force didn't need me,' Dwight responded, unable to conceal his bitterness. 'You refused to accept it, Beth, but I *had* to get out. They pressured me until I had no choice. That's how they stick it to all of us.'

He meant the officers investigating UFOs. First, Flight Officer Harris of the Roswell Army Air Base, then Captain Ruppelt of the ATIC, then himself. All had been forced to leave the Air Force after receiving too much pressure from above, usually in the form of blocked UFO investigations, unwarranted criticism, midnight interrogations by intelligence officers, unwelcome transfers to bleak spots like Alaska, and even visits from the mysterious 'men in black'. In the end, you simply couldn't take it any more and just wanted out.

'Yes,' Beth said, 'I have to admit that's true. Did you hear about Captain Ruppelt?'

'Yep. After leaving the Air Force, he wrote a book, *The Report on Unidentified Flying Objects*, claiming that the UFOs were real, solid objects. I read it. It was good.'

Beth nodded. 'But have you heard the latest? Ruppelt's done an abrupt about-face. Later this year he's bringing out a new edition of his book, recanting on his former beliefs and insisting that the UFOs aren't real at all.'

'I've heard that,' Dwight said. 'I've also heard that he's not in good health. That isn't uncommon either. Just look at me, Beth!'

She ignored the sour joke, instead glancing around the untidy room. Her look of distaste reminded Dwight of his past three years as a bachelor, mostly spent in a fog of alcohol, filled with too many fears and nightmares. It was the drinking, he knew, that had led to the separation. In resigning his commission and leaving the Air Force, he had only given impetus to the break that had clearly been coming. It was hard to recall it clearly now, but he *did* remember the fear. It was the fear that had led to his drinking, as well as his nightmares. He had once loved the Air Force, lived for it, was proud of it, but when he became involved with Project Blue Book, the Air Force had turned against him, blocking him, chastising him, eventually humiliating him, until his life became a living nightmare from which there was no escape.

All of that had come to a head shortly after his visit to Cannon AFB, when he'd had his terrifying experience with the men in black in that motel room outside Albuquerque, New Mexico. That event, more than anything else, had

set the seal on his constant dread.

He had started dreaming about flying saucers, alien entities, men in black, and eventually, as his friends in the ATIC were attacked one after the other – transferred, demoted, charged with spurious offences, haunted by anonymous phone calls – he had become increasingly isolated and then started cracking up. The heavy drinking soon started, leading to many fights with Beth, and when he told her he was resigning his commission, that was the last straw. They hadn't actually divorced, but merely separated, with Beth taking an apartment close to her parents in Dayton, moving in with a deeply upset Nichola. Shortly after that move, Dwight left the Air Force, took this job as a gas station attendant, which included the use of this broken-down house, and embarked on the worst three years of his life, trying to deaden his fear and shame with regular drinking. It pained him just to recall it.

'Anyway,' he said, 'I don't think you came here, after all this time, just to tell me about Captain Ruppelt.'

'No, Dwight, I didn't.'

'So what is it? Sounds like something serious. You think it's time for a divorce, is that it?'

'Why, would you give me one?'

'I wouldn't want to, if that's what you mean.'

'Why not? Because you still love me?'

'As a matter of fact, Beth, that's exactly it. That's the pitiful truth of the matter. Maybe that's why I'm drinking. I can't get you out of my mind, no matter how hard I try. And believe me, I've tried hard. As for Nichola, not having her around is a night-and-day torment. God, I miss her. I really do.'

Beth blushed, lowered her head, sipped some of her drink, and then looked up again.

'I still love you, too, Dwight. I really do. It's because I loved you so much that I couldn't bear to watch you destroying yourself. That's why we separated, Dwight. There was no other reason.'

'I know that. But it's been three years, Beth. So why are you here?'

'Because I still love you. Because Nichola loves you. Because I miss you, but Nichola misses you even more and needs you as well. Every year, for the past three years, she's begged me to bring you back for Christmas. I refused her the first two years; I couldn't refuse her a third time. Also, I think it's time, Dwight. I think you should at least spend Christmas with us and see

what it's like. For me. For Nichola. Most of all, for yourself. Just Christmas to start with, that's all. What do you say?'

Dwight's instinct was to refuse because, in truth, he felt scared. He was frightened of being with them, of resurrecting buried feelings, but the very thought of being home released those emotions and brought a lump to his throat. He was also moved by Beth's presence, still loving her, wanting her, and though feeling awkward with her, embarrassed by his condition, he was moved by a desperate yearning to get back what he had lost.

'My pleasure,' he said.

During the drive to Beth's apartment near Carillon Park in Dayton, Dwight was increasingly nervous, but the instant Nichola threw herself into his arms, his problems were over. Now twelve years old, with an oval face and long dark hair, Nichola shared her mother's natural grace and beauty. After a light supper and long talk with his daughter – during which he lied blatantly about the joys of his job at the gas station and then discussed Nichola's progress at school – Dwight retired to the bed in the spare room. There, for the first time in months, he had a sleep undisturbed by dreadful nightmares.

The next morning, Christmas Day, they were joined by Beth's parents, Joe and Glenda McGinnis, whose customary good humour removed the last of Dwight's discomfort at being back temporarily with his wife and child. Thoughtful as always, Beth had made Dwight sign the labels on some of the presents she had bought for Nichola, and when Dwight saw the delight on his daughter's face, he was deeply moved. Later, when he received his own presents, some from Beth, some from Nichola, he had to turn away in order to hide his brimming tears; though he practically broke down when Beth kissed him lightly, tentatively, on the lips.

'God, Beth!' was all he could murmur, trying to catch his breath.

They shared a fine Christmas dinner, drank far too much, revived themselves with an afternoon walk through the park, then passed the rest of the afternoon in front of the TV set, which showed snow in many parts of the country while Bing Crosby, appropriately, sang 'White Christmas'. By the early evening, after Beth's parents had left, Dwight was in a mellow mood, perhaps dangerously sentimental, and had to wipe tears from his eyes a second time when he tucked Nichola into her bed and returned to the living-room.

‘God, I miss her,’ he said.

‘And me, too, I hope,’ Beth retorted. She was stretched out on the sofa, wearing slacks and a loose sweater, holding a glass of white wine in one hand, her gaze fixed on the TV.

‘Yeah, right,’ Dwight said, ‘you, too.’

He wanted to fall to his knees beside her, to thank her for bringing him home, even if just for Christmas, thus reminding him of what he had lost by giving in to his fears.

‘Beth…’ he began, about to pour out his heart... Then the front doorbell rang.

Beth glanced up, blushing guiltily, then swung her legs off the sofa and hurried past him, letting her hand slide over his shoulder, as if in encouragement.

‘I have a surprise visitor,’ she said. ‘I just hope you’ll be pleased.’

Though initially frustrated at the thought of this unexpected intrusion, Dwight was at first startled, then delighted, when Beth led former USAF Captain Bob Jackson into the living-room. Dwight hadn’t seen his old friend for three years, but Bob looked pretty much the same: still sleek-faced and sassy, if a little thicker around the waist. Wearing a plain grey suit with white shirt and tie, he was grinning from ear to ear and looking a lot healthier than the man who had been posted to Alaska just after Dwight had left the Air Force. He embraced Dwight, then vigorously shook his hand.

‘Hell, man,’ he said, ‘it’s good to see you. It’s been too long, buddy.’

Stepping away from each other, they both grinned in a kind of dumb disbelief, until Beth said, ‘Okay, you two, sit down and I’ll get you a drink.’

‘I’ve been drinking all day,’ Bob said, ‘so a beer will do fine. Christmas Day, don’t you know?’ He grinned at Dwight as he took a soft chair near the fire. ‘Had a good Christmas yourself, did you, Dwight?’

‘Terrific,’ Dwight replied, sitting on the sofa facing his old friend. 'My first Christmas with my family in three years.’

‘Yeah, I heard. I only got back from Washington DC yesterday and Beth told me when I called. She also said she was hoping to have you home for Christmas and told me to drop in. Said it might do you some good. Am I doing you good, Dwight?’

‘Feels just like old times, Bob.’ Beth handed Bob a beer, then joined Dwight on the sofa. He was still nursing a glass of white wine and letting it

last. ‘So obviously you know what happened to me. What happened to you?’

Bob sighed. ‘Life at the ATIC was hell after you left. They kept transferring me here and there, from one lousy place to another. Promotion was refused. I was repeatedly charged for petty infractions, so in the end I just got the hell out. Most of the others on Project Blue Book had similar experiences – just like you and Ruppelt.’

‘When did you resign your commission?’

‘Two years ago.’

‘So what have you been up to since then?’

‘Well, you know, Dwight, I just couldn’t forget this UFO business. Couldn’t get it out of my goddamned head. So after a couple of months just fooling around, including getting married to our former secretary, Thelma Wheeler – remember her?’ he asked, briefly changing the subject.

‘Hell, yes!’ Dwight responded, instantly recalling the sexy blonde WAC corporal from Huntsville, Alabama, with whom Bob had had a lengthy flirtation.

‘She was harassed as well,’ Bob continued. ‘Harassed until she couldn’t take it any more and packed it in, like me. Anyway, when we were married, we decided to get out of Dayton entirely, so I took a job as technical advisor for an aeronautical engineering company located in Greenbelt, Maryland. In truth, I was kind of a salesman, using my Air Force background to sell the merits of the company to the many military establishments in that area. The job was okay – it got me out and about a lot – but I still couldn’t shake off all those questions that Ruppelt had raised about the UFO phenomenon. They haunted me night and day. Finally, through one of my acquaintances, I was introduced to Dr Frederick Epstein, a former astronomer who’d become obsessed with UFOs and now heads the Aerial Phenomena Investigations Institute, a civilian UFO organisation located in Washington DC.’

‘I know him,’ Dwight said. ‘I interviewed him way back in 1953, shortly after he’d formed the organisation.’

‘That’s right,’ Bob said. ‘He reminded me of that interview the first time we met. Anyway, I went to work as an investigator for the APII, initially on a part-time basis, then full time. And that’s what I do now.’

Beginning to understand that there was more to this meeting than a casual Christmas visit, Dwight glanced at Beth. She merely offered a slightly teasing smile, sipped her drink, then said, ‘Bob’s come to Dayton to carry out some

investigations on behalf of the APII. Until this evening, I hadn't seen him for three years either.'

'That's right,' Bob said. 'I'm here to investigate the growing claims that there's a storage facility in Wright-Patterson AFB for corpses found in crashed UFOs.'

'There was no such room when *we* were there,' Dwight said.

'No, but the base has changed a lot since we left and the ATIC was virtually dissolved. There are lots of restricted areas in Wright-Patterson – more now than ever before – and one of them *could* contain a top-secret storage facility for crashed UFO parts, or even dead crew members.'

'This whole business of alien corpses at Wright-Patterson is based on the notorious Aztec case of 1948,' Dwight reminded him. 'It all began with a book by one Frank Scully, a former Hollywood *Weekly Variety* columnist who alleged that a flying saucer crashed east of Aztec, New Mexico, in 1948, and was found virtually intact, with sixteen dead aliens, or UFOnauts, inside. According to Scully, the flying saucer was dismantled and the pieces, along with the remains of the sixteen aliens, were transported in secret to Muroc Dry Lake, now Edwards AFB, California, then on to a so-called top-secret Hangar 18 in Wright-Patterson. Scully also alleged that there'd been three other flying-saucer landings during the same period and that a total of thirty-four dead aliens had been found and were also being held at Wright-Patterson.'

'But having been at Wright-Patterson at the time, you didn't believe it.'

'Right,' Dwight said emphatically. 'Precious little substantiation could be found for Scully's claims. In fact, two years later, an investigative reporter, J. P. Cahn, revealed that Scully had received most of his dubious information from Silas Newton and a Dr Gee, later identified as Leo A. Gebauer. Both men were experienced confidence tricksters who'd been arrested that very year for trying to sell worthless war surplus equipment as oil detection devices. They probably based their whole story on the Roswell Incident of 1947, which we both know so well.'

Dwight certainly knew that case well and could still recall virtually every word of his conversations with Flight Intelligence Officer First Lieutenant William B. Harris, who had compiled the official report on the Socorro sighting. He also recalled that at the insistence of General Hoyt Vandenberg, then Deputy Chief of the Air Force, the three charred corpses and the debris

from the Socorro crash had been picked up by an intelligence team from the 509th Bomb Group and transported under strict secrecy to an unknown destination, though rumour had it as Carswell AFB, Fort Worth, Texas.

'If Scully based his Aztec landing on the Roswell Incident, at least he picked a damned good case,' Bob insisted. 'You and I both know that the crash at Roswell was a real one – just as real as some of the reported landings.'

'What landings?' Dwight asked, becoming interested despite himself.

'One of our leading test pilots, Gordon Cooper, has claimed that while at the Edwards Air Force Base Flight Test Centre in California last year – the same place where Scully's crashed flying saucer and its dead occupants were reportedly taken in 1948 – a team of photographers assigned by him to photograph the dry lakes near Edwards AFB spotted a strange-looking craft hovering just above the lake bed. Then the object descended slowly and sat on the lakebed for a few minutes. According to the photographers, it was at least the size of a vehicle that would carry normal people. They also insisted that it was a circular-shaped UFO that took off at a sharp angle and rapidly flew out of sight.'

'Naturally they took photos.'

'Yep.'

'So what happened to their film?'

'According to Cooper, it was forwarded to Washington DC for evaluation, but no report came back and the film never resurfaced.'

'No film, no evidence – the same old story.'

Bob was unfazed by Dwight's cynicism. 'Dr Epstein has shown me the certified statements of two USAF pilots, confirming that UFO landings took place at Cannon AFB, New Mexico, on May 18, 1954, at Dewed Nike Base on September 29, 1957. He also has CIA-censored reports on another two UFO landings that took place at Holloman AFB. You might be convinced about Cannon AFB, since it was your own experience there, in 1954, that finally encouraged you to get out of the Air Force.'

Shocked to be reminded of that fearsome experience, Dwight glanced at Beth and was rewarded with an encouraging smile. Sipping the last of his wine, he recalled his visit to the road outside Cannon AFB, New Mexico, where his friend, Captain Andrew Boyle, had given him a good description of

his personal sighting of the landing of a saucer-shaped craft outside a hangar in a restricted area of the base. After showing him the specific hangar, Boyle had given him a photograph of the UFO as proof.

Even more vivid and frightening than this recollection was the memory of how, when Dwight had been lying on his bed in the motel room, located on the outskirts of Albuquerque, a dazzling pulsating light had filled the room, a bass humming sound had almost split his head, and three men dressed in black coveralls had entered. One of them had temporarily paralysed Dwight with some kind of stun gun, another had whispered a warning in his ear, and the third had stolen his invaluable UFO photograph. Shortly after the men in black left the room, the pulsating light and head-splitting noise went away and feeling returned to Dwight's body. What was not to go away was the fear that subsequently drove him to the bottle and out of the Air Force for good.

He felt that fear now.

'Okay,' he said, 'you've got me on that one. What about the other two?'

Grinning, Bob said, 'The first one took place shortly before 8.00am on an unspecified day in September, 1956, when a domed, disc-shaped UFO landed about fifty yards from US 70, about twelve miles west of the base. The ignition systems and radios of passing cars went dead and the peak-hour commuter traffic backed up as amazed witnesses – including two Air Force colonels, two sergeants, and dozens of civilian Holloman AFB employees – watched the UFO for over ten minutes, until it took off with a low whirring sound. Shortly after its disappearance, word of the sighting flew from Holloman to Washington DC and the area was soon inundated with Air Force intelligence officers and CIA agents. Base employees who'd witnessed the sighting were sworn to secrecy and the Pentagon's evaluation team wired a report stating that the UFO wasn't any type of aircraft under development by the US or any foreign terrestrial power.'

Bob sipped some beer, then took a deep breath and let it out again. He was clearly enjoying this.

'Then, just this summer, a mechanic at Holloman AFB was working on a grounded Lockheed F-104 jet interceptor when he saw a disc-shaped object hovering silently over the tarmac. After watching the object retracting its ball-like landing gear, he called another mechanic and both of them watched the UFO take off vertically at great speed. During a subsequent interrogation, both men identified the craft type they had seen from a book of over three

hundred UFO photographs. They were then informed that personnel in the base control tower had observed the same object for two or three minutes. They were also warned not to discuss the sighting and made to sign a statement swearing them to secrecy.'

'Very persuasive,' Dwight said, impressed by Bob's enthusiasm and responding instinctively to it, feeling more alive than he had done for three years. 'But I still don't believe you'll find a Hangar 18 in Wright-Patterson AFB, let alone alien corpses or crashed UFO debris. What *did* you find there?'

Bob grinned like a Cheshire cat. 'According to my informant, all requests to Wright-Patterson AFB for information regarding Hangar 18 are routinely given the reply that it doesn't exist. But he insists that Wright-Patterson's top-security Area B contains a building numbered 18-A. Indeed, he said he's personally seen it, though he's never been allowed in. It's a building – not a hangar – with a tall wire fence around it. All of its windows have been knocked out and replaced with concrete.'

'Anything else?'

'Yes. He was adamant that similar storage facilities would be found in the White Sands Proving Ground, Los Alamos, New Mexico, and Carswell AFB, Fort Worth, Texas.'

Dwight involuntarily sat upright when he heard the last named. 'And we both know what was shipped to Carswell AFB, don't we?' he asked rhetorically.

Bob grinned. 'Sure do,' he said. 'The corpses and debris from the Roswell crash of 1947. Your eyes are gleaming old buddy.'

Dwight realised that he had been set up, probably for his own good. Glancing sideways at Beth, he saw her widening smile as she reached out to hold his hand and squeeze it. 'Bob called me,' she confessed, 'to find out what you were up to. When I told him – about you working in the gas station and drinking too much – he was as upset as me and insisted that we somehow get together to persuade you to help him in his work for the APII. I believe it's what you need, Dwight, to get you off the drink and give you something better to do than pumping gas. Please think about it.'

Dwight thought about it, feeling frightened, but wanting to do it, soothed by the warmth of Beth's fingers around his hand, revitalised by her presence.

'You won't have to move to Washington,' Bob explained. 'You can be our

Ohio stringer. Naturally you'll come and visit us occasionally, all expenses paid, but in general you'll remain here in Dayton. You'll be our eyes and ears here.'

'I don't get it,' Dwight said. 'As far as I recall, Dr Epstein believes the UFOs are of extraterrestrial origin.'

'He's pretty open-minded about it, but so far he hasn't come up with any more rational explanation.'

'You know what Andy Boyle told me during my visit to New Mexico,' Dwight said. 'He presented me with the possibility that the crashed or landing UFOs might have been man-made – known to, and protected by, our own military intelligence. Have you told Epstein that?'

'No, I haven't. I don't think the time is right. It's a possibility I'd like you to pursue, but on your own, not through the APII. If what Boyle says is true, it'd be too big – and possibly too dangerous – for the APII to deal with. We'll have to keep the lid on that, Dwight, until we're sure of our ground.'

'So I investigate general UFO cases for the APII while surreptitiously gathering information on man-made UFOs.'

'That's it, exactly. We keep the lid on the latter cases. They're between you and me, Dwight. In this regard, I've no guilt about using the facilities of the APII, since I'll be helping them with what you uncover in other areas. I need you, Dwight, and you need this work. So what do you say?'

Beth squeezed his hand again. 'Please do it, Dwight. It'll help you to find your way back. Your home's here, in this apartment, with Nichola and me, not in that damned gas station. Work with Bob, Dwight. *Come home*.'

'Yes,' Dwight said, already feeling renewed and excited. 'Yes, damn it, I'll do it!'

Grinning from ear to ear, Bob shook his hand again, even as Beth, her eyes brimming with tears, turned into his arms, where she had always belonged.

'Welcome aboard,' Bob said.

Chapter Twenty-Five

Rocking nervously in his rocking chair on the veranda of his log-house in the enlarged compound buried deep in the jungle near the Paraguay River, Ernst was feeling like an old man as he looked at the moonlit sky to observe the majestic descent of the biggest flying saucer he had seen so far. Though an awesome 350 feet wide, this transport craft was otherwise like the others: two immense, inverted plates that were rotating around the dome-shaped, gyroscopically stabilised central fuselage. Though not hindered by normal heat and drag, thus giving off no sonic booms or other noises, other than an almost physical infrasound, the saucer was creating violent currents of air that were making the grass and plants flutter wildly, noisily.

As usual, the native workers who lived in the shacks located around the inner edge of the compound were standing outside their modest homes, untouched by the precisely edged whirlpool of wind, looking up in awe and fear as the immense craft descended.

Also looking up, and clearly terrified, were the many captured Ache Indians being held like cattle in the big bamboo cages located near the shacks of the compound workers. These unfortunates, who had never seen an aeroplane, let alone such a gigantic flying saucer, started wailing and shaking the bamboo bars of their cages, wanting to break free and run away. They only quietened down when threatened by Ernst's armed *Federales* and *contrabandistas*. Those who failed to respond to threats were hammered by rifle butts until either they shut up or collapsed, unconscious, to the ground.

Gradually the great flying saucer, still descending, covered most of the compound. Its central dome was as high as the craft was wide, about the height of a three-storey building. The whitish glow of its electrically-charged, minutely porous magnesium orthosilicate, which was ionising the air surrounding it, darkened to a more normal metallic hue as it hovered just above ground level, rocking slightly from side to side. Just before touching down, its thick hydraulic legs emerged from six points around the base to

embed themselves deeply in the soft soil. The whole craft bounced gently on the legs, then settled down and was still. Its rotating wings gradually slowed and then stopped moving altogether, as did the wind that had been created by its electromagnetic gravity-damping system.

Still sitting in his rocking chair on the veranda, Ernst was deeply moved by the sight of the magnificent craft, though he also felt embittered at being condemned to this hellish jungle, rounding up Ache Indians instead of being involved in the great scientific achievements of the Antarctic colony. His feeling of loss was in no way eased by the knowledge that in truth he could never return to engineering, because it was now too far behind him and the technological advances of recent years had rendered his old engineering knowledge redundant. Trained as a military policeman by the SS, that's what he would now remain as: a hunter of men and prison warden for Wilson.

Ernst's bitterness was like acid in his stomach, almost making him retch.

With the outer rings of the saucer no longer rotating, the infrasound faded away and a panel in the concave base dropped down on hinged arms to form a ramp leading to the ground. Armed guards wearing black coveralls emerged to form a protective ring around the ramp, then Wilson appeared, wearing his customary black shirt and pants, followed by some short, nightmarish creatures who had a jerky mechanical gait and were, Ernst assumed, the first of the promised cyborgs.

Surrounded by his own bodyguards of heavily armed *Federales* and *contrabandistas*, Ernst went to greet his master.

This time, when Wilson shook his hand, Ernst was no longer surprised at how youthful he appeared to be. Though nearing ninety, Wilson looked like a healthy sixty-year-old, with a good head of silvery-grey hair and smooth skin on a handsome, though oddly inexpressive, face, dominated by unusually piercing, icy-blue eyes. Like his facial muscles, his movements were slightly stiff, reminding Ernst that he'd had numerous joint and organ replacements, as well as extensive plastic surgery.

This man, Ernst thought sourly, is a prototype of the creatures gathered around him. Steel-and-cobalt joints, artificial heart and grafted skin. He only *looks* normal.

Ernst shook Wilson's hand and murmured words of greeting while studying the nightmarish creatures spreading out behind him. He realised immediately that they were Ache Indians, which explained their short stature, but that now

they were part man, part machine. Their hideous appearance was caused by the fact that their jawbones and mouths had been replaced with metal masks, they were also wearing metal skullcaps, and some of them were dressed in tight, one-piece, silvery-grey coveralls of a material resembling Thai silk.

They looked, Ernst thought, like extraterrestrials: creatures out of a bad dream.

'Your first cyborgs,' he said.

'Yes,' Wilson replied.

'Can they speak?'

'Not yet, but they function otherwise.'

'Are they still human in any sense that we'd recognise?'

'They still possess fragments of their former memories and reasoning, but their thoughts and actions, even their emotions, can be remote-controlled by the electrodes implanted in their heads through those stereotaxic skullcaps.'

'The metal caps.'

'Correct.' Wilson glanced approvingly at the nearest cyborg, then tapped his knuckles against the metal plate covering the unfortunate creature's lower jaw and mouth. 'Deprived of speech by the lower-jaw prosthetic,' he explained, 'they communicate via the stereotaxic skullcaps, which act like miniature radio receivers, operated by thought-waves. As an interesting side effect, their inability to speak is gradually producing in them what appears to be a primitive form of mental telepathy, which may soon make even skullcap communication redundant. This is an unexpected, novel development that we must follow through.'

Ernst nodded, intrigued despite his instinctive revulsion. 'And the metal hands?'

'Myoelectric prosthetics, developed by our excellent Dr King, formerly of the Powered Limbs Unit of West Hendon Hospital, London, England. They're really miniature versions of what we intend developing in larger form for the exploration of the seabed, the surface of the moon and, eventually, the planets: remote-controlled CAMS, or Cybernetic Anthropomorphous Machine Systems, of the kind presently being developed by NASA for space exploration. Naturally, we're already well ahead of NASA – indeed, we give them our obsolete prosthetics and CAMS as part of our trade with the US – and we've installed larger versions of these remote-controlled, steel limbs as handling devices in this particular transport craft.

Come, let's have a drink on the veranda.'

'But how can they stand being like that?' Ernst asked, as he and Wilson turned towards the log-house. 'They're so inhuman. So... hideous.'

'I told you. The stereotaxic skullcaps control even their emotions, so they're programmed to forget everything that went before and to consider themselves perfectly normal. The skullcaps also direct the impulses from the brain to the severed limbs, thus controlling the movements of the myoelectric, prosthetic hands. As we direct those impulses via the stereotaxic skullcap, we can control everything they remember, desire, and fear, as well as their every physical action. I know they look like creatures from another world, but they're highly effective as totally obedient slaves and ruthless bodyguards. In the latter context, their dreadful appearance is actually helpful, because it frightens the average human being to the point of paralysis.'

'I was abducted by aliens,' Ernst said, quoting from a host of recent articles about UFOs and their so-called extraterrestrial occupants.

'Exactly,' Wilson said with a rare, slight display of amusement. 'It's just what we need.'

They returned to the veranda and took high-backed chairs on opposite sides of a bamboo table containing a tall bottle of iced white wine and two glasses. A bare-footed servant girl, Rosa, dark skin gleaming with beads of sweat, poured the wine, then stepped back into the shadows of the awning while Ernst and Wilson touched glasses.

'*Skol*!' Ernst said by way of a toast. After drinking, he wiped sweat from his forehead – how he loathed this constant heat! – then cast his gaze over the immense flying saucer, which practically filled the whole clearing and towered above him like a cathedral of pure, seamless steel. He then studied the nightmarish creatures, the cyborgs, forming a protective cordon just below him, facing his armed *Federales* and *contrabandistas*. His native workers, he noticed, were also staring at the cyborgs, their eyes wide with fearful fascination.

'They're merely prototypes,' Wilson explained, noting Ernst's interest. 'Soon they'll be even more advanced. As far as these cyborgs go, what you see is what they are: restructured breathing and digestive systems, implanted skulls and myoelectric hands. They're fed intravenously, which gives us yet another hold over them. However, in later models, to be used for long-term

undersea and space exploration, while the kidneys, lungs and original intestines will remain, they'll be strengthened and supported by a two-chamber pacemaker. Advanced prosthetic joint replacements have already been perfected – indeed, I have some myself – and will help defeat the rigours of the ocean bed and extended journeys through outer space. Soon, with our latest innovation – an electronic larynx – they'll be able to speak as well, though we'll reserve that privilege for the few, as we wish to encourage the evolution of mental telepathy in the speechless. As for the larger CAMS installed in this particular transport craft – watch!'

Wilson aimed a small, hand-held device at the front of the enormous saucer, then pressed a button. A bass humming sound emanated from the craft and the ramp leading from its base to the ground was pulled up automatically to form a sealed door. As soon as the door closed, another section of the base was lowered on hydraulic supports to form a much wider, brilliantly illuminated ramp between the interior of the saucer and the ground. Two smaller panels hidden in the otherwise seamless upper surface of the saucer then opened to emit beams of an even more dazzling light that converged on Ernst's jeep, parked close to the saucer's nearest edge. The beams of light flickered so rapidly, they hurt Ernst's eyes, but then, to his amazement, the parked jeep was pulled forward, as if the beams of lights were chains. When the jeep was about ten yards from the wide ramp, a CAM consisting of extendable arms and steel platform emerged from inside the saucer to pick up the vehicle and draw it up the ramp, into the saucer. When the jeep had vanished inside, the beams of light blinked out, the panels closed, and the ramp withdrew until the base of the saucer was sealed again.

'A form of magnetism created by powerful electrical forces in the laser beams drew the jeep towards the remote-controlled grips of the CAMS,' Wilson explained, 'allowing it to take hold of the vehicle and draw it up into the saucer. When the uninitiated find this happening to their own cars, they assume it's some kind of miracle – or the highly advanced paraphysical activity of extraterrestrials. As with the appearance of the cyborgs, their terror makes them easier to handle if we wish to abduct them. Do you want your jeep back?'

'Yes, please,' Ernst replied, suitably impressed.

Wilson pressed a button on his remote-control and the previous process was reversed, with the base of the saucer dropping down to form a ramp and the

CAM pushing the jeep out on its extending arms and steel platform, to deposit it back on the ground. Then the ramp was withdrawn back up into the saucer and again became a sealed door in the base.

'We've made even greater advances in our strobe-light and laser-beam technology,' Wilson said, speaking academically, without the slightest trace of pride in his voice – just doing his job. 'Now we're using wave-lengths and rhythmic patterns that temporarily freeze skeletal muscles or certain nerves, thus producing either paralysis or a trance-like condition. Observe!'

Some of the captured Ache Indians were still wailing in terror in the cages near the shacks of the compound workers. When Wilson activated his remote control, another small panel facing the cages opened in the sloping top-body of the saucer. A dazzling beam of light shot out, like a spotlight, and wandered across the clearing until it illuminated the cage from which most of the wailing was coming from. Once caught in the beam of light, the captured Indians became even more vocal in their panic, but when the beam of light started flickering on and off rapidly, like a strobe light, turning the clearing into a bizarre, slow-motion movie, the Indians caught in it not only fell silent but began collapsing and falling against each other, until eventually all of them were unconscious. When Wilson then turned off the flickering beam of light, the Indians regained consciousness, picking themselves up off the floor of the cage and glancing around them as if in a daze.

'As we learn more about the wave patterns of the brain,' Wilson explained, 'so we learn that most emotions – fear and anger, docility, even self-hatred – can be released by exposing the subject to the stimuli of strobe lights flickering in one of the four basic rhythmic patterns: alpha, beta, delta, and theta. In doing this, we can induce just about every kind of condition, from drowsiness, dizziness, mesmerism, or psychological paralysis, to epileptic or other violent seizures. Indeed, by combining strobe lights flickering in the alpha-rhythm range, between eight and twelve cycles per second, with infrasounds, we can cause an epileptic seizure in the human subject – as you can see. Recently we perfected this to the point where we can force a subject to turn against himself in the ultimate manner. Observe, Ernst.'

This time, when the beam of light shot out of the saucer and began flickering on and off at a blinding, disorientating rate, while making what was, to Ernst, a barely discernible, though oddly physical, sound, it picked out one of Ernst's compound workers. The man, wearing only a loin cloth

and with a machete strapped to his waist, initially stepped back, dazzled, and started covering his eyes with one hand. However, before his hand reached his forehead, it started trembling violently, as did his whole body, then he screamed, clasped his head in his hands, and fell to his knees.

Trembling even more violently, shaking his head from side to side as if in terrible pain, he collapsed to the ground, went into a fit, then managed to clamber back to his knees and remove the gleaming machete from his belt.

In the rapid flickering of the light, all his movements appeared to be in slow motion, as if in devilish pantomime – an illusion that rendered even more horrible what happened next.

Releasing another scream of anguish, the man shook his head violently again, then reversed the machete and rapidly slashed his own stomach open. Even as his entrails spilled out, he was hacking at himself again, repeatedly, dementedly, and kept doing so until he toppled sideways, to lie still in the flattened, blood-soaked grass.

Some friends, including a woman, possibly his wife, wailed in grief and fear, then bent down to examine the dead man as the flickering strobe light blinked out, returning the night to star-draped darkness.

Within seconds, Ernst's armed thugs were hammering the grieving people with the butts of their weapons, forcing them back, as another two *contrabandistas* picked up the dead man and carried him out of sight, to be buried, as Ernst knew, in the unmarked communal grave outside the compound. When the dead man's relatives and friends continued wailing in grief, Wilson again demonstrated the power of the strobe light by rendering them unconscious with it, after which they, too, were carried away.

Feeling nothing for the murdered man, Ernst was suitably impressed. Though increasingly resenting being kept in this hellhole, he still had a healthy respect for Wilson – and, indeed, practically worshipped him. He often despised himself for this reverence, but could not fight the feeling.

'Finally,' Wilson said, knowing exactly how to impress his disciple, 'look at this.'

Again aiming his remote control at the immense transport craft, he activated the opening of panels located at half-a-dozen different points, equidistant around the top body, below the level of the mushroom-shaped central dome. With a speed that startled even the expectant Ernst, silvery objects shot out of the openings and ascended to a height of about a hundred

feet, where they stopped abruptly and hovered in the air.

They looked just like the old World War II *Feuerballs*.

'They are,' Wilson confirmed, when Ernst had made this observation. 'They're highly advanced models based on the originals.'

'How highly advanced?'

'Though still only three to six feet in diameter, they have most of the capabilities of the larger saucers and are used for reconnaissance and as antiradar and sensing devices. As they can emit strobe lights and laser beams, they're also used as mesmerising or stunning devices, as well as to draw mechanical vehicles close enough to the mother ship to be within reach of the CAMS.'

'So they're used in abductions.'

'Correct,' Wilson said. With what seemed like a sigh of regret (though Ernst suspected that such an emotion would be alien to him) he returned the advanced *Feuerballs* to the transport craft and closed the panels. He then reopened the wide ramp at the bottom of the saucer and ordered the cyborgs to herd the imprisoned Ache Indians up into it. The cyborgs turned away without a word and walked in their oddly mechanical manner to the cages where, with the help of stun guns that clearly stung, rather than inducing unconsciousness, they began marching the hurt, terrified Indians towards the saucer's ramp.

'The infrasounds,' Wilson said, 'are so condensed that they can create physical pressure on the human brain and the body's organs, even bursting blood vessels in the head. Thus, they're useful as weapons, which is why we've incorporated them into the saucers. As for the stereotaxic skullcaps, we also plan to use them to hypnotise or otherwise control human beings by remote control. We'll abduct those we want, impregnate their heads with minute, remote-controlled electrodes, then return them to the world, to do our bidding as and when required. Eventually, in this way, we'll be able to enslave the world's most powerful men and women without resorting to war and with few aware that they're under our control. In other words, they'll become our brain-implanted robots – even those in the highest seats of government.' He offered a smile that failed to warm the Antarctic blue of his eyes. 'So how are you, Ernst? I must say, you look well.'

It was a lie and Ernst knew it, though he was wise enough not to argue. He had aged overnight towards the end of World War II, when his wife and two

children were killed in an air-raid on Berlin, making him realise that he had no one left but Wilson. At least he had aged in appearance – he had seen it in the mirror – though since coming to Paraguay he had aged in an even worse way: inside, in his spirit. Now his skin had a yellow pallor, his handsome features were wrinkled, and his body, though bone-thin, felt heavy and lifeless. As for his spirit, it was trickling out of him with each passing day, leaving nothing but the ghosts of old dreams that were long dead and buried. Ernst knew that he was paying for his sins and that hell was right here on Earth.

'I feel fine,' he lied, not yet having the courage to say otherwise. 'How are things in Antarctica?'

'Things run smoothly,' Wilson said. 'No problems so far. Our secret agreements with the Americans, British and Russians have ensured a constant supply of all the materials we require. As for general manpower and slave labour, we continue to replenish those lost through experimentation or natural causes by simply abducting more people and, of course, by supplementing them with your invaluable supply of Ache Indians. You're still having no trouble in obtaining them?'

'It's easier than it was. With General Stroessner now the President of Paraguay, we have total freedom of movement. The general always wants money.'

'Greed makes strong men weak, which is what we can utilise. The former war allies are greedy for our technology, which is why I can use them.'

'I sometimes worry,' Ernst said, 'that we'll give away too much.'

'You worry too much,' Wilson said.

'Do I? Please let me remind you that earlier this year Wernher von Braun's first satellite, *Explorer*, was launched successfully into space. Subsequent *Explorer* satellites made the first scientific discoveries of the space age by locating the radiation belt around Earth. In July, a US nuclear submarine, *Nautilus*, made a successful four-day journey under the ice of the North Pole. I should also point out that the past year has seen the discovery of electronic miniaturisation in the shape of the silicon chip; and that the British and the Americans are both presently involved in Zeta programmes designed to harness the power of the H-bomb. This represents an unprecedented speed of

advancement – and it's my belief that it was possible only through the West's access to our innovations, particularly those in the field of electronic miniaturisation, which will revolutionise every branch of technology.'

'I understand your concern,' Wilson said, 'but I think it's misplaced. We can only pass on what we've already surpassed, and each time they've tried to trick us, or planned to turn against us, we've easily scared them back into line with a display of our superior powers – as we did with the so-called UFO invasion of Washington DC in 1952 and when we arranged for the explosion in the US *Vanguard* rocket during its launch in December, 1957.'

'I'd *assumed* that was your doing,' Ernst said admiringly. 'How did you manage it?'

'We abducted one of the NASA engineers, flew him to the Antarctic base, implanted minute electrodes in his head, using a stereotaxic skullcap, then programmed him to forget his experience with us, while doing for us exactly what we wanted. He planted one of our explosive devices in the rocket – a device so minute, it leaves no traces after it's exploded. Naturally, the Americans never guessed who had done that – since they never thought to examine the heads of their engineers for electronic implants. So our brain-implanted slave is still there, at NASA, to do our bidding as and when required. The seesaw arrangement is working, Ernst, and we're in control of it. Now I have to be going.'

The abruptness was typical of Wilson. It was not a sign of rudeness, but of his impatience and inability to sit still and do nothing.

As Wilson pushed his chair back and stood upright, Ernst noticed that the last of the terrified Ache prisoners had been herded up into the transport craft by the stun-gun-toting cyborgs and that the saucer was therefore ready to depart. Swelling with a sudden, startling desperation, Ernst followed Wilson across the clearing, through his own armed *Federales* and *contrabandistas*, as well as Wilson's grim, black-clothed bodyguards, before stopping at the brilliantly lit, sloping ramp that led up into the saucer. Glancing up, Ernst caught a glimpse of gleaming white, curving inner walls, a stretch of steel-railed catwalk, figures silhouetted in dazzling light. He was gripped by the pain of loss when he thought of how all of this had begun: thirty years ago, when some primitive, liquid-fuelled rockets had been shot up from an abandoned 300-acre arsenal in the depressing Berlin suburb of

Reindickerdorf. Ernst had been there at the beginning, but not for too long. Each time he had been sidestepped, which had happened too often, he had lost another piece of his soul and hope for the future. Now he wanted that back, to recapture his lost youth, and so he turned to face Wilson, his idol, his master, fighting to keep control of his emotions and brimming self-pity.

'I lied to you,' he confessed. 'I'm not feeling fine at all. In fact, this place is driving me mad and I yearn to escape it. This jungle compound is a pestilence. These moronic natives are my despair. I have no-one to talk to, no-one educated, and now pressure from the West to find and punish former Nazis has made it too dangerous for me to even visit Asuncion, which I used to do regularly when I needed a break. I repeat, Herr Wilson, that I'm going mad in this place. Please take me back with you. Replace me with someone else. Give me a respite from this hellhole and let me do more important work. Let me work on the saucers.'

Wilson stared steadily at him, his blue gaze intense, revealing neither sympathy nor contempt, but merely the icy-bright gleam of pure pragmatism. When he then placed his hand on Ernst's shoulder, Ernst felt his heart sinking, knowing what the answer would be, not able to challenge it.

'I'm sorry, Ernst,' Wilson said, 'but the time isn't right. I understand your frustration, but I have to be hard with you, to keep you doing what you must do until this job is completed. Your time will soon come, Ernst. Soon you won't be needed here. In the meantime, however, you just have to be patient and continue to do the best that you can. You have to stay here, Ernst.'

'But I'm going mad here!' Ernst blurted out, ashamed of the self-pity in his voice, but unable to hide it. 'There's no one for me here. I can't go to Asuncion. If I can't get away now and then, I'll truly go crazy.'

Wilson squeezed his shoulder. 'Don't worry, Ernst. The next time we come, we'll bring you a thirty-five-foot, single-pilot flying saucer, solely for your personal convenience. You can use it to make trips away from here, when it becomes too much for you. This small craft will take you anywhere you want, allowing you to avoid Asuncion. It possesses all the capabilities of the larger saucers and is easy to fly. Compared to this, driving a car is complicated.' He squeezed Ernst's shoulder again, trying to reassure him. 'The next time we visit, Ernst. In two weeks. I can offer you nothing else for the time being, so I trust you'll accept.'

'Yes, Herr Wilson. Thank you.'

Yet even as Ernst said this, lowering his eyes, unable to meet Wilson's gaze, he was filled with the chilling conviction that his idol was toying with him, not telling the whole truth, hiding something, planning something else for him, perhaps something not good.

When he raised his eyes again, to search for the truth in Wilson's gaze, the older man had already turned away from him and was entering the saucer. The cyborgs and armed guards followed him in, then the ramp gave off a low humming sound as it slotted back into the outer body of the saucer, once more leaving it solid and visually seamless.

Instantly, Ernst retreated to the relative safety of his front veranda. He sat in his rocking chair, started rocking automatically, staring upwards as the mighty saucer ascended slowly to just above the canopy of the trees. There it hovered majestically, silently, for a moment, then it suddenly shot off as a ball of light that shrank at great speed. Soon it became just one of the many stars above the jungle, briefly hovering in outer space, then it abruptly blinked out, as if it had never been.

Lowering his gaze and glancing around his compound, Ernst saw the high walls of wood and thatch, the guards in machine-gun towers, the open fires burning outside the shacks of the native workers, the bamboo cages for the Ache prisoners, the flogging posts and coffin-shaped, windowless boxes used for punishment; the dogs, goats, chickens and pigs, the shit and piss in the open latrines. In the day it was all shadowed by the soaring tropical trees; but most nights, as right now, it was wrapped in a suffocating humidity, besieged constantly by every imaginable kind of insect and reptile, half of them venomous, others carrying deadly diseases. Surveying it all with his weakening eyes, through senses jaded and increasingly numbed, Ernst accepted that he really *was* in hell and receiving God's punishment.

When he thought back on World War II and his early days as an idealistic young engineer, then of Himmler and Kammler and Nebe and the SS, then of his wife and children (all betrayed by him, before dying in an Allied air-raid) and, finally, of what he was doing in this vile jungle, he understood why he was being punished and knew that he deserved it.

Ernst shed sentimental tears, then called out for his servant-girl, Rosa. When she advanced reluctantly from the darkness, on bare feet, clearly frightened, Ernst knew that he would make her suffer as he was suffering, easing his pain by inflicting it on someone even less fortunate.

He had created his own hell on Earth and now had to rule it. The devil, he knew, did not need disciples; he just needed victims.

Ernst now needed a lot of those.

'Tonight we will do things you can't imagine,' he said to Rosa as she knelt obediently, fearfully, in front of him. 'Now go into the bedroom, take your clothes off, and lie down on the floor. Don't move a muscle, don't make a sound, until I come to you. Do you understand, woman?'

'Yes, master,' she whispered.

Ernst burned in the scalding light of his sick desires and sad self-destruction. Waving Rosa away and glancing up at the stars, he wondered which one of them was actually Wilson's flying saucer. Then, in the full knowledge of his loss, he filled up with choking fury and pain.

'I won't stay here,' he whispered. 'I won't! *As God is my witness*!'

So saying, he stood up and entered the spacious, eerily empty log-house, to take out his frustration on Rosa in ways unimaginable.

Chapter Twenty-Six

Flying into Washington DC at the end of January, 1959, Dwight was picked up at the airport by Bob Jackson and his wife, Thelma, the sexy blonde WAC corporal who had acted as secretary to both of them during the good days at the ATIC. Though not quite as slim as she had been when Dwight had last seen her, Thelma was still an attractive, good-humoured woman.

'A matinée idol!' she exclaimed as she gave Dwight a hug. 'You haven't changed a bit, sweetheart.'

'If I weren't in a public place,' Dwight replied, 'I'd throw you on the floor and try my best.'

'Which wouldn't be good enough,' Thelma said.

Dwight laughed. 'Don't you know it?'

The ice was broken as easily as it only can be with true friends and they left the airport, driven by Thelma in a battered old Ford, like folk who had never been parted. Dwight sat in the rear.

'A damned mess,' he said.

'My car?'

'Yeah, Bob, your car. Sooner or later we all need a hearse, but it doesn't need to be *this* bad.'

'In American society,' Bob retaliated, 'a man's judged by his automobile and his woman. Given this, though my wheels aren't of the best, I'm still on top of the heap.'

'Now you know how he suckered me,' Thelma said, lighting up a Camel and exhaling a cloud of smoke as she drove. 'I couldn't resist his Irish blarney. He made me feel like a queen.'

'Which you are,' Dwight said.

'You're so straight-laced, Dwight,' Thelma replied teasingly, 'that hearing those words coming out of your mouth makes me melt and have wicked thoughts.'

'Sorry.'

‘Don’t apologise,’ Bob said. ‘Instead, take her words as words of wisdom. Never ignore a good woman.’

‘I won’t,’ Dwight promised.

He said it without confidence, even as his chest heaved with a spasm of overwhelming love. It was love for Beth, stabbing through him like a knife, opening him with a surgeon’s precision to all the pain, joy and uncertainty of being back with her.

Getting together again hadn’t been all that easy, though it had certainly been worth it in the end. At first, when Dwight moved back in, he and Beth had been awkward with each other, no longer protected by the ease of familiarity and having to inch slowly towards one another. As with most such relationships, their greatest difficulty was in approaching each other in bed after having spent so much time apart. The first night had been bad, an embarrassed, tentative touching that had filled Dwight with the shock of renewed desire, yet simultaneously unnerved him, making him feel like an inexperienced schoolboy who didn’t know what to do. Giving up, they had slept in each other’s arms and awakened self-conscious with each other – though the rest of that day Dwight felt remarkably alive, skin glowing with the indelible touch of Beth’s soft skin on his. It had made him feel exalted.

The next night, however, was the breaking of the ice, with Beth taking the initiative, exploring him with her hands and lips, finally taking his hardness into her mouth and exciting him to the degree where he forgot the inhibitions he had developed over the barren years of separation. Set free by her equally shy, caring administrations, surrendering to the ecstasy of pure, sensual pleasure, he had lain there, breathing heavily, his body on fire, as she sat up and straddled him, her naked body pale in the moonlight, beads of sweat glistening on her breasts and thighs, running into her pubic hair.

It was possibly a tribute to the depth of their love that even now, at his age, Dwight was convinced that he would never forget that image of Beth for as long as he lived: naked, sweat-slicked, her hair falling across her face, legs spread and spine curved, full breasts thrusting out, emphasising the hardened nipples, as she moved up and down on him, turning this way and that, kneading his chest, belly and thighs with electrified fingers and an instinct that seemed to anticipate his every need and desire. He had stared up at her, wide-eyed, running his hands frantically over her, squeezing her breasts, stroking her belly, gripping her hips to let their movement excite him to the

limit; then thrusting up with his groin, trying to penetrate even deeper, to bury himself so deeply inside her that he became a part of her – all of that in beams of moonlight that fell on the bed they had purchased two days after returning from their honeymoon in Niagara Falls, thirteen years ago, when they were younger and less complicated. For that reason, when Beth came, her body shuddering astride him, and he followed closely, feeling as if he was dying, he knew that their love had a solid basis that could see them through. That thought, also, exalted him. Though even now he could not shake off the anguish caused by the knowledge, gained painfully through the separation, that nothing was permanent.

'So how's Beth?' Bob asked, as if reading Dwight's mind.

'She's fine, Bob. So's Nichola.'

'God, Nichola!' Bob exclaimed, shaking his head from side to side in wonder. 'When I saw her last Christmas I nearly freaked. They grow up so fast.'

'How old is she?' Thelma asked.

'Twelve,' Dwight said.

'Oh, boy!' Thelma exclaimed, driving the car in a distracted, deceptively careless way. 'I can't believe you have a kid that age already. She was just a *baby* in Dayton.'

'Born there,' Dwight explained. 'When you and I were young, Thelma.'

She chuckled at that, exhaling more cigarette smoke. 'Yeah, right, back in the ATIC at Wright-Patterson AFB. Weren't *those* the days?'

'Good days,' Bob said. 'You used to let me feel your leg beneath your desk, right there in the office, and my car was our regular passion pit when the sun had gone down. Now we only get together in bed, which shows how much we've aged.'

Thelma laughed outright at that. She had an infectious 'dirty' laugh. 'True enough,' she confessed without blushing. 'But you've got your times mixed up. You were feeling my leg under the desk in 1948, Bob. The passion pit entered the vernacular about 1955, along with Elvis the Pelvis. God I love Elvis!'

'Elvis killed us all,' Dwight said. 'He had the voice, the looks and the swinging groin; we only have the latter.'

'I'm sure Beth's perfectly happy with that,' Thelma said, puffing another cloud of smoke from brightly painted grinning lips. 'I know that deep down *I*

am.'

'Deep down,' Bob said mournfully. When Thelma affectionately squeezed his arm, he grinned and glanced at Dwight's reflection in the rear-view mirror. 'So the reunion's working out okay, I take it? You and Beth are okay?'

'Yes, Bob, we're fine.'

'Are you sure?'

'Yes.'

'You seem a bit down right now.'

'I'm just a bit nervous, that's all. Meting this Dr...'

'Epstein.'

'Right, Dr Epstein.'

'Nothing else?'

Brushing his windblown hair from his eyes, Dwight glanced out of the open window of the car. They were crossing the Potomac, on Memorial Bridge, and Dwight could see all the way along the Mall to the Capitol building. Washington DC always made him think of London, England, though he had never been there. He'd only seen it in books.

'Well,' he confessed finally, 'there *is* something else. The reunion's been fine – I mean physically and emotionally – but something's a bit off with Beth. I don't mean her and me... It's something else... I mean..'

'Out with it,' Bob said.

Dwight nodded. 'She's having bad dreams. Nightmares, in fact. Even when we've had a good night together, making love, once asleep she often wakes up screaming.'

'UFO dreams?'

'Yep.'

'Men in black?'

'Yep. All the things she's read about and been told about, not only when we were at the ATIC, but since I left home and went on the bottle. Thing is, she never had those dreams, or nightmares, until I returned home. We're happy being back together – I swear to it, folks, and I think I can speak for Beth – but she only started having those dreams when we got back together. I guess that's what's bothering me.'

Even Thelma, normally so ebullient, was silent for a moment, her lips slightly open, exhaling a stream of smoke, eyes focused on the buildings

slipping past as the car cut into New Hampshire Avenue, heading for 21st Street.

'These dreams?' Bob asked eventually, as if reluctant to do so. 'That's all they are? Dreams?'

'What do you mean?'

'She dreams of UFOs and men in black?'

'Right.'

'Has she said she's had actual contact? I mean, any experiences *other* than dreams?'

'No,' Dwight replied emphatically. 'Definitely not. I specifically asked her that very question and she was adamant that she was only having dreams and...' He shrugged. 'Feeling... *haunted*. She says she *feels* that she's being watched, but that's all it is – only a feeling. She thinks the feelings might be related to the dreams – a kind of hangover from them – so she's not worried about that aspect of it. It's the dreams, specifically, that are bothering her. What do *you* think, Bob?'

Bob took his time replying as Thelma, still puffing clouds of cigarette smoke, turned the car into 21st Street.

'Well,' Bob said carefully, 'obviously the dreams are related to all she's heard from you, me and others during our years of UFO investigations – the very investigations that broke up your relationship.'

'Agreed,' Dwight said.

'On the other hand, I'm concerned that she didn't have similar dreams when you and I were actually at the ATIC – and, in fact, didn't have them during your three-year separation – but has only had them since you returned home.'

'That's my concern,' Dwight said.

'So given that your reunion has been successful – '

'Which it has been – wonderful for both of us.'

' – I can only say that I'm concerned that your return home and, more unfortunately, my visit to your home, has possibly put you back in the spotlight – which would, of course, include Beth. Jesus H. Christ, I certainly hope not, but that could be the case.'

Dwight felt the darkness moving in to enclose him in broad daylight. 'You mean the people who stole my UFO photos – the men in black – might be

back on my trail.'

'Yes, Dwight, I do.'

'And you think they can affect people's dreams?'

'Affect their minds, yes. And since it's known that I'm now working for the APII and have been to see you...'

'Oh, my God,' Dwight whispered.

Thelma braked to a halt outside the Hampshire Hotel, smiled as brightly as she could manage, and said, 'Here you are, Dwight. Your overnight stop. I'm going shopping while you check in and then go off with Bob to see Dr Epstein. Just remember that after I've been shopping, I'll be coming right back here, so no belly dancers with walnuts in their navels, no bored business ladies in your room. You can go see Dr Epstein, then come back here and read the Gideon bible until I return. You got that?'

'Absolutely,' Bob said.

'Damned right,' Dwight added.

He and Bob clambered out of the car, removed the former's overnight bag from the trunk, and entered the Hampshire Hotel as Thelma drove away.

Driving back to Carillon Park after dropping Dwight off, Beth felt good for five minutes – the frost gleaming everywhere, the sky blue and brilliant, the air sharp and invigorating. Dwight's smile as he waved goodbye before disappearing through the departure gates – but within seconds of leaving the airport, even warmed by the recollection of Dwight's fond smile, she was attacked by that frightening feeling of being... *pursued*.

It was a feeling that had dogged her every day since Dwight had returned home: the feeling that no matter how good they were together, they were being threatened by something that neither could see or identify. That suspicion, which was based on all the things that had caused Dwight harm before – mainly reports of UFOs and stories about men in black – had led Beth, by night, to a succession of frightening dreams and, by day, to this feeling that she was never alone, that she was being watched somehow.

Now, as she drove along the stretch of road that passed the gas station where Dwight, when drinking heavily, had lived his bachelor life, she recalled the Dwight she had met for the first time as a fellow student at the University of Dayton. Though notably handsome and a member of the baseball team, therefore highly desirable to the other female students, he had

been surprisingly reserved and even, as some put it, old-fashioned in his beliefs, which included respect for his parents, the family unit and the Roman Catholic Church, a non-fanatical but genuine patriotism, and the general conviction that a man must do what a man must do. Those slightly chauvinistic but otherwise admirably virtuous views he had picked up as one of the four children of Ralph Randall, an aeronautical engineer working as a freelance consultant for some of the many experimental aviation laboratories in the area, and his wife, Barbara, a public relations writer for the Miami Conservancy District flood-control project. Both were church-going Roman Catholics, highly active in the community, but possessing a healthy sense of humour. Beth, whose own Roman Catholic parents shared similar views, was totally charmed by Dwight and fell in love with him shortly after meeting him at the college Prom, to which she was taken by another young man, now scarcely remembered.

Bound by convention and being typical of their times, Beth and Dwight had dated formally, swooned together numerous evenings in Dwight's car, usually at drive-in movies, but did not actually consummate the relationship, agreeing that they should wait until they were married, which they planned to do shortly. This plan, however, was thwarted by the Japanese bombing of Pearl Harbour. Almost immediately after that shocking event, with America entering the war on the side of the Allies, Dwight, who had inherited his father's interest in the aviation history of Dayton, was drafted into the Army Air Force and served as a bombardier and radar operator, flying to India, China and the Pacific with the original B-29 wing. Returning to college at the end of the war, four years later and a lot more mature, he was convinced that he had found what he wanted to do in life – be a full-time member of the Army Air Force – and so kept his reserved status, flying as a navigator in an Air Force Reserve Troop Carrier wing while working night and day to gain his degree in aeronautical engineering. He also married Beth, finally consummating their relationship during their honeymoon in Niagara Falls.

Though their initially shy sexual explorations gradually blossomed into an even more deeply satisfying emotional relationship, Beth knew that Dwight could not forget his wartime experiences and would not be kept at home by love alone. She was therefore not surprised when, after gaining his aeronautical engineering degree, he applied to go back on active duty. Luckily, he was posted straight to the recently formed Air Technical

Intelligence Centre, located at Wright-Patterson AFB, right here in Dayton, where he and Beth moved into married quarters.

Driving past the garage where Dwight had worked during his period as an alcoholic 'bachelor' – the darkest days of their marriage – Beth was reminded of how, while loving Dwight, she had resented being an Air Force wife, loathed the insular life of the married community in and around the base, and had made her resentment known to him – too loudly, too frequently. To make matters worse, her resentment had become most vocal even as Dwight was suffering from the problems created by his UFO investigations for the ATIC. She therefore blamed herself, at least in part, for his plunge into alcoholic despair and subsequent departure from the Air Force he had once loved so dearly.

Now reunited with him, her residual guilt made her work even harder at keeping him happy and providing a degree of protection from the troubles that would, she was convinced, come about from his return to UFO investigations. She also knew, however, that only by returning to that work would he fully regain the pride he had lost when he left the Air Force. For that reason, and that reason alone, she had asked his old friend and Air Force buddy, Bob Jackson, to persuade him into going to work as the Dayton stringer for Dr Frederick Epstein's highly respected Aerial Phenomena Investigations Institute, based in Washington DC. It was Beth's belief that the many trips Dwight would be compelled to make to the organisation, which would also give him the opportunity to visit Bob and Thelma, would be good for him. It was also her belief that Dwight was still obsessed with solving the mystery of why the Air Force was harassing UFO investigators, even to the point of ruining their lives, and that he could only do so through a dedicated, well funded civilian UFO organisation like the APII. On both counts, then, she felt that his teaming up with Bob and Dr Epstein, while certainly inviting trouble of one kind, would in the end be good for him. Whether Beth was right or wrong in that assumption, it was, she had decided, a chance they would both have to take.

So thinking, Beth glanced out of the open window of the car... and saw that she was still passing the garage where Dwight used to work.

Startled, she then realised that she was not in fact driving, but had pulled into the side of the road and parked, almost opposite the garage in this otherwise desolate area. Unable to recall having done so, she felt

disorientated and checked the time on her wristwatch.

The hands had stopped moving.

Shocked, suddenly frightened, she glanced left and right, behind the car, to the front, hardly knowing what she was looking for. The fields on both sides of the road were empty, as was the road itself, front and rear, but she was convinced that something was nearby and exerting some kind of force against her.

She tried the door of the car, but found that it was jammed shut. When she tried turning on the ignition, the car would not start.

Trapped, feeling oddly violated, she just sat there, gazing about her, trying to see what it was that she could feel as an invisible... *presence*.

Yet there was nothing unusual out there... Only the flat fields, the straight, empty road... and the garage at the far side of that road.

There was something strange about the garage. Its front door was open, swinging in and out with the wind, and banging repeatedly against its frame.

There was no sign of the new owner, Frank Bancroft... neither inside at the cash register, nor outside by the gas pumps.

Beth thought that was odd.

Something else was odd... When she looked more carefully, she noticed that the tall grass around the garage was quivering and being bent as if by the wind... but in an unnatural way. Behind and at both sides of the garage, the tall grass of the fields was virtually motionless, indicating that no wind was blowing there. The grass was only bending in a long, narrow line that formed an immense semicircle, enclosing the garage and stopping on the verge where the field met the tarmac road.

At least Beth *thought* it stopped there... until she noticed that the dust on the road was also being whipped up – again, only in a fine line that ran across the road to the front and rear of her car, the same distance away in both directions, about 170 feet in both directions. Within and outside those two fine lines of spiralling dust, no dust or debris was stirring.

Feeling increasingly unreal and frightened, Beth glanced in the opposite direction, at the fields on the other side of the road – the side she was parked on – and saw that the two lines of dust curved into that field where the grass was also bent and quivering, forming another large arc that ended on both sides of the road.

The lines of dust across the road, in front of, and behind, the car, joined the

two arcs of bent, quivering grass to form an immense circle that enclosed the car and garage. Outside that circle, the grass was not moving at all.

Even as Beth studied that huge circle, she saw the tips of the grass slowly turning black and smoking a little.

Suddenly, the car started shaking, as if on a conveyor belt. Startled, Beth grabbed hold of the steering wheel. The car continued shaking – even though it wasn't otherwise moving – and Beth looked on, disbelieving, as the bent, quivering grass turned blacker and formed a great circle covered in smoke. Just as she thought the smouldering grass was about to burst into flames, it crumpled into black powder and the smoke started drifting away. Soon there was nothing but that immense, dark circle, formed by the ashes of grass, dead and charred black.

The car stopped its unnatural shaking and the door locks, which had been jammed in the closed position, clicked free of their own accord.

When Beth turned the key in the ignition, the engine kicked into life again.

Impelled by a combination of terror and helpless curiosity, Beth turned the engine off, then opened the door and leaned out of the vehicle to glance along the road in both directions. No other cars were approaching and the road was deserted, running as straight as an arrow under a sky filling up with low clouds.

Looking across the road, Beth saw that the door of the garage had stopped its banging, though it was now hanging open and there was still no sign of Frank Bancroft.

Taking a deep breath, Beth glanced directly above the car. At first she saw nothing but the gathering clouds, pregnant with rain... Then, above the clouds, she saw what looked like a circular light, about the size of a dime but shrinking rapidly, though still casting its striations downwards through the clouds. Even as Beth studied that light, trying to ascertain if it was a separate entity or merely an illusion caused by a combination of cloud and striated sunlight, it shrank to no more than a gleaming speck, then abruptly blinked out.

Without thinking, though with racing heart, Beth clambered out of her car and crossed the road to the forecourt of Frank Bancroft's garage, where Dwight had once lived and worked. When she had passed the gas pumps and was approaching the open front door of the store, she slowed down, feeling more frightened than ever by the unnatural silence and realising that sweat

was trickling down her face.

Stopping by the open door, she glanced up at the sky again, checking that the strange, circular light had indeed disappeared. Satisfied that it had, she glanced across the flat field and saw that the great circle of black ash was still clearly visible.

Shivering, though sweaty and flushed with dread, she reached the open door and glanced tentatively into the store, scanning the shadowy space behind the cash register for a sign of Frank Bancroft. He was nowhere to be seen. The store, though empty, seemed untouched.

With her heart now racing so fast she thought it would burst, Beth entered the store and glanced about her. All the stock on the shelves – cans of oil, cleaning solvents, light bulbs, tools, maps, rubber floor mats, seat coverings and other automobile and driver products – was as it should have been. The cash register, Beth noticed, was firmly closed.

No sign, then, of a hold-up.

Relieved just a little, but with her heart still racing, Beth advanced farther into the store and stepped around the far side of the counter containing the cash register.

There she gasped instinctively and froze in horror.

Frank Bancroft had fallen out of his chair and was lying flat on his back, but in a dreadfully contorted position and with his eyes popping out of his head, staring at something that had clearly terrified him. He had foamed at the mouth, evacuated his bowels, and fallen out of his chair as he collapsed.

Beth didn't need a doctor to tell her what had happened. This man had died of a heart attack brought on by sheer terror.

Now terrified as well, Beth gasped again, covered her mouth with her hand, then ran back to her car. She turned on the engine, which started with no trouble, then raced the car along the road, not stopping until she came to her local police station, near Carillon Park. There she informed the officer in charge, Deputy Marshall Tom Clooney, red-faced and pot-bellied, about Frank Bancroft's death. She said nothing about her blackout, the stopping of her wristwatch, the malfunctioning of her car, the smoking grass and the great circle of black ash. Convinced that the amiable Clooney would think she had gone mad, she decided to keep her mouth shut and relate only the details concerning her finding of Frank Bancroft's corpse.

When the report was completed, the cop on duty promised to have the body

collected and the garage closed up. Relieved, Beth left the police station and drove on home.

She was still terrified.

Chapter Twenty-Seven

Once booked into the Hampshire Hotel, downtown, Dwight and Bob walked the short distance along 21st Street to the Aerial Phenomena Investigations Institute – the same modest, Federal-styled building located just off Pennsylvania Avenue where, six years ago, Dwight had given a deep background interview to the well-known astronomer and astrophysicist, Dr Frederick Epstein, Fellow of the Royal Astronomical Society, member of the American Association for the Advancement of Science (AAAS), and now the dedicated, hard-working head of the APII.

Epstein, Dwight noted, hadn't changed much in the intervening years. Back in 1953, because of his rather old-fashioned, prematurely greying Vandyke beard, he'd looked older than his age; now, though still only forty-seven, but with his beard even greyer, he looked ten years older than that. Nevertheless, he had good-natured, distinguished features, lively hazel eyes, a ready smile, and a tendency to stroke his beard when thinking. Slightly dishevelled, he seemed right at home in an office cluttered with filing cabinets, loose files, heaped reports, old newspapers, magazines and photos of UFOs.

The walls, also, were covered in photos of UFOs and poster-sized charts. One showed the most commonly reported UFO shapes, grouped into flat discs, domed discs, Saturn or double-domed discs, hemispherical discs, flattened spheres, spherical, elliptical, triangular and cylindrical. Another chart was divided into two illustrated sections, one showing the most commonly reported UFO formations, the other showing UFO manoeuvres both singly and in formation. Other charts showed the world-wide locations and flight directions of the major UFO waves from 1896 to the present; major UFO events in the United States and overseas; the major areas of alleged magnetic deviation around the world, including the North and South Poles; and the names, addresses and telephone numbers of the world's leading civilian organisations.

'A major problem we're having,' Epstein was saying as Dwight removed

his gaze from the wall charts, ‘is that the checking of UFO reports is being made more difficult by the man-made satellites circling Earth in increasing numbers and now, in the case of the unmanned Soviet *Lunik*, passing the Moon to go into orbit around the sun.’

‘Which it did only yesterday,’ Bob reminded them as he unwrapped a stick of chewing gum and popped it into his mouth.

‘Correct,’ Epstein said, distractedly stroking his beard. ‘For that very reason, Dwight, I’m really glad you’re considering getting back into this business. We can certainly do with all the expert help we can get. You remember the Levelland sightings?’

‘Yep,’ Dwight said, feeling comfortable in this company, particularly since Bob Jackson had been indirectly responsible for reuniting him with Beth and Nichola, thus giving him back his sense of purpose. ‘Texas. November 1957. The sightings caused quite a stir.’

‘They surely did.’ Epstein picked a report off his desk and studied it thoughtfully. ‘I’ve been studying this case in detail, Dwight, so let me refresh your memory by reading from my completed report.’

As Epstein read out the details, it all came back to Dwight in a rush. The events in Levelland, Texas, had formed the spectacular climax to the biggest year in UFO reports since 1952. The sightings had begun at 11.00pm on November 2 and ended at 2.00am the following morning. All the reports were of glowing, yellow-white, torpedo- or egg-shaped objects, approximately seventy-five to 200 feet long or in diameter, that had landed on the roads around Levelland, forcing oncoming cars to brake, stopping their ignitions, and emitting quite a bit of heat before taking off again, after which the cars’s ignitions had restarted.

The first sighting was at 11.00pm on the night of November 2, just north of Levelland, when one of the objects flew towards the automobile of two witnesses, causing the motor and lights to fail. When the witnesses got out of their vehicle to view the object more clearly, it came so close, they were forced to throw themselves to the ground. Considerable heat was felt as the object passed over them. When the object left the area, the automobile’s ignition and lights came back on.

An hour later, at midnight, a driver four miles east of Levelland was stopped by a brightly glowing, egg-shaped object, about two hundred feet in diameter, that was resting in the middle of the road. As the driver approached

the object, his car's engine and lights failed. When the object took off, rising vertically to a height of approximately two hundred feet and then shooting off rapidly, the witness's car started up again.

A few minutes later, another witness, driving eleven miles north of Levelland, called the police to report having exactly the same kind of sighting and experience.

Five minutes after midnight, a witness driving nine miles east of Levelland got out of his car when its engine and lights failed. He was about to look under the hood when he saw an egg-shaped object sitting on the road ahead. He later described it as being about seventy-five to a hundred feet wide, made of what looked like aluminium, and giving off a white glow with a greenish tint. Frightened, he got back into his car and watched the object for a few minutes, until it took off and disappeared. When the object had flown out of sight, the witness's car started again.

Fifteen minutes later, nine miles north of Levelland, another car stalled as it approached a similar object sitting on a dirt road. When the object ascended vertically to an altitude of about three hundred feet, then shot off and disappeared, the car's engine started up again and its lights came back on.

After receiving this latest report, Levelland Patrolman A. J. Fowler sent two deputies out to investigate. They later reported seeing bright lights in the sky, but had no ignition problems with their vehicle. However, a few minutes after they called in their first report, a witness driving just west of town saw a 'large orange ball of fire' coming towards him. It settled on the road about a quarter of a mile ahead. When the witness approached it, his car's engine cut out and its lights failed. When the lights ascended a few minutes later, the car started up again.

Thirty minutes later, a truck driver informed the police that as he was driving northeast of Levelland, his truck's engine and headlights failed when he approached a brilliantly glowing, egg-shaped object that was straddling the road ahead. When he got out of his truck to investigate, the object shot up vertically with a roar and then flew away. The truck's engine and headlights then came back on.

By this time, other deputies in the area had received similar reports and were out on the roads, frantically investigating. While driving about five miles outside the city, a sheriff and his deputy saw a 'streak of light' with a 'reddish glow' on the highway, about three or four hundred yards ahead,

lighting up the whole area. A few miles behind the sheriff and deputy, on the same road, two patrolmen saw a 'strange-looking flash' that appeared to be close to the ground about a mile in front of them. The last sighting of the evening was made by another policeman, who saw an object travelling so fast it looked like no more than 'a flash of light' shooting from east to west.

'In other words,' Epstein now summarised from his own report, 'twelve drivers, including police patrolmen, reported seeing a large, glowing, egg-shaped flying object and three more reported an unusual flash – all in a single, three-hour period covering the midnight of November second and third.'

'Forming a kind of grand climax to the biggest UFO flap since 1952,' Bob added, 'the sightings caused the Air Force a lot of embarrassment. They didn't investigate the affair until days after it took place, sent only one man to do the job, failed to interview nine of the fifteen witnesses, and stated falsely that lightning had been in the area at the time of the sightings. Under pressure from the public, the assistant secretary of defence insisted that the ATIC submit a preliminary analysis to the press. When Captain George Gregory – the head of our once beloved, now relatively useless Project Blue Book – did so, he claimed that the evidence was too slight for proper investigation, that only three of the witnesses could be located, and that contrary to reports, the object, or objects, had only been visible for a few seconds. He also reiterated that the sightings had been caused by lightning and storm conditions in the area – none of which were actually present at the time. Nevertheless, the Air Force's final report blamed the sightings on unusual weather phenomena of an electrical nature, suggesting ball lightning or St Elmo's Fire, and again dragged up non-existent stormy conditions, including mist, rain, thunderstorms and lightning. With the aid of Donald Menzel, they then tried to blame the recent wave of sightings, including the Levelland affair, on the launching of the second Russian *Sputnik*. But when this failed to wash, the public uproar became so loud that the National Investigations Committee on Aerial Phenomena, NICAP, was able to press for Congressional hearings.'

'Yeah, I read about that,' Dwight said. 'But I haven't heard much about the hearings since then.'

'No, you wouldn't have,' Bob told him. 'In August last year, John McCormack's House Sub-Committee on Atmospheric Phenomena requested

a week-long hearing in closed, secret session, but any hope that the hearing would be a fair one was destroyed when the House Sub-Committee decided to take no further interest in the matter.'

'However, what we discovered right here at the APII,' Epstein said, 'has given us even more cause for concern. Last December, the Air Force published a staff study that came down heavily on the three major civilian UFO groups, accusing us of being biased and sensationalist. To make matters worse, we also learned that the Robertson Panel, in making their recommendations back in 1953 regarding civilian UFO groups, had used the chilling phrase...' Epstein paused for a moment to pick up another well-thumbed sheet from his desk and read from it. '*The apparent irresponsibility and the possible use of such groups for subversive purposes should be kept in mind.*' He let the sheet fall back on the desk, as if it was contaminating his fingers. 'We've also recently learnt that the FBI and the CIA are keeping extensive records on people involved in UFO investigations, including the members of our own organisation. Should you be considering joining us, I feel it's only fair that you know this. You've already had a lot of trouble with the Air Force; you'll get more if you join us.'

Recalling his dire experience with the Air Force, due to his involvement with UFO research, Dwight knew exactly what Epstein meant. Nevertheless, he said, 'I'm willing to take that chance. Now that Bob's got me interested again, I won't rest until I find out why the Air Force, which so clearly was concerned about UFOs when we were in Project Blue Book, went to such lengths to frustrate our investigations and turn Project Blue Book into a farce. It was, and remains, a contradiction that still keeps me awake at night.'

'That's precisely why we want you,' Epstein said, standing up and coming around his desk to shake Dwight's hand again. 'Welcome aboard.'

Chapter Twenty-Eight

Even before opening his eyes in his bed in his suite of rooms near the summit of the mountain in Antarctica, Wilson recalled his dream and realised that it had *not* been a dream, but a powerfully vivid, telepathic exploration of his colony. Having practised meditation and astral projection for years, he had at last developed the ability to see with his 'inner eye'. This morning, in a state of half sleep, just before awakening properly, he had roamed from his bedroom near the summit, down through the hacked-out interior of the mountain, to the various layers of the colony: the guard rooms just below him, then the computer rooms; then, farther down, the laboratories and surgeries, the machine-shops and storage facilities, then the slave accommodations, dining rooms and ablutions; and, finally, at the base of the mountain, the great landing pads and maintenance hangars for the flying saucers. He had made that journey in his mind, seeing everything clearly.

Even as his body was rotting with age, with its various organs being replaced one after the other, his Extra-Sensory Perception, practiced daily for about seventy years, was increasing dramatically.

Opening his eyes, he gazed through the panoramic windows of the suite at the vast, snow-covered wastelands of the Antarctic. All white. Everything. Except for the sky. The gleaming mountains and valleys stretching out to where that sheet of sheer blue met the white horizon, though that, too, was often rendered a silvery white by wind-swept snow and frost. Light. Lots of light. A unique and dazzling vision. The light flashed off the mountain peaks and glaciers as snow broke up, rolled down the mountain slopes, or drifted like powder on the wind, reflecting and bending the rays of the blinding sun. The Antarctic was vast, supremely beautiful, and empty. There were no people out there. No noise. It was the end of the world.

Sitting upright, Wilson glanced around the bedroom: a functional room, with pine-board walls, clothes closets and a couple of chests-of-drawers. There were no paintings on the walls, no decorations or ornaments of any

kind. There were, however, a series of TV monitor screens banked along one wall and controlled from the control-panel on his bedside cabinet. Though Wilson was now able to use his ESP to scan the colony, he could more easily do so by means of the spy cameras located in more areas of the underground complex and transmitting back to the TV monitors in his bedroom and study.

Switching on the monitors, as he did every morning before getting out of bed, he used his hand-control to flick from one screen to the other and check that everything was in order: the great saucers on their landing pads in the cavernous space hacked out of the mountain's rock; the massive workshops where the saucers were constructed; the laboratories where surgical experiments were conducted on captured human beings and animals, some dead, others alive; the storage rooms for the collection of frozen human heads, limbs and organs; the slave accommodations where the nightshift workers were sleeping; and the dormitory-styled quarters for the comfort girls. Everywhere he checked, he saw hundreds of men and women at work, including white-coated scientists, technicians and surgeons; slave-workers in grey coveralls; and the flying-saucer crewmembers in their black flight suits – all illuminated in the arc lights powered by self-charging generators and fixed high on the walls of solid rock, as were the spy cameras. The underground colony was a hive of activity. Everything was in order.

Satisfied, Wilson slipped out of bed and padded on bare feet into the adjoining bathroom where he attended to his ablutions, then had an invigorating cold shower. After drying himself, he put on a silk dressing gown and returned to the bedroom, where he sat on the edge of the bed, again facing the panoramic window with its breathtaking view of Antarctica. Phoning through to the quarters of the comfort girls, he asked the matron to send him someone trained in electronic stimulation. Then he placed the phone back on its cradle and patiently waited.

The girl arrived within minutes, entering via the elevator in the study and coming into the bedroom from there. Wilson's taste in comfort girls changed from time to time - sometimes he enjoyed Eurasians, other times blacks, sometimes the Ache women flown in from Paraguay by Ernst Stoll – but his present taste was for slim white girls, preferably no younger than eighteen, no older than twenty. The girl who now entered fitted the bill exactly, being slim, blonde, eighteen years old, and dressed in a diaphanous robe that emphasised every curve in her body with each step she took. Though subdued

with a constant supply of Valium and other sedatives, she was still a little nervous of Wilson and kept her head bowed.

'Your name?' Wilson asked.

'Clare Collins.'

'Where are you from?'

'Albuquerque, New Mexico.'

'When were you abducted?'

'I think about eighteen months ago.'

'You don't know the precise date?'

'No, sir, I've forgotten.'

'Have you forgotten a lot about your previous life?'

'Yes, sir.'

'Forgetting more every day?'

'Yes, sir.'

'Good. Soon you won't remember a thing about it. Then you can come off your daily sedation. Do you know what I want?'

'Matron said the stimulator.'

'That's correct. You've used one before?'

'Yes, sir.'

'On me?'

'No sir. On some others. This is my first time up here.'

'Take your robe off,' Wilson said.

The girl nodded, then took hold of the hem of her garment to tug it up her shapely legs, off her perfect body, and finally over her head. After letting the garment fall to the floor, she stood there with her hands by her sides and her head slightly lowered. She had long legs, broad hips, a slim waist and firm breasts. Her skin, which had been sun-tanned when she was abducted, was now milky white.

Seeing her, Wilson wanted her, though he could do little about it because he could no longer obtain an erection without special help. Nevertheless, for the good of his mental health, he required sensual stimulation and the sight of this lovely, naked girl was an aid in obtaining it.

'The stimulator is in there,' he said, pointing to a closet. 'Bring it out and proceed.'

Opening the closet door, the naked girl wheeled out a mobile electronic console. Pushing it to the side of the bed, she raised its lid and lay it

backward until it formed a tray. Withdrawing vibrating pads and electrodes fixed to cables from inside the console, she laid them side by side on the tray. She then glanced questioningly at Wilson, received his nod of consent, and reached out to untie the belt of his dressing gown. After slowly drawing the robe off his shoulders and down his body, she started when she saw the numerous scars criss-crossing his skin – the visible signs of his many surgical operations.

'Don't worry,' Wilson reassured her. 'They don't hurt anymore.'

Instinctively, he ran his fingers along the most recent scar, which ran across his left breast. This was from an operation to replace his old piezoelectric crystal pacemaker with a new model. Eventually, so he hoped, he would receive a pacemaker with a plutonium power source, weighing practically nothing and lasting much longer, but a successful model had yet to be developed.

The girl nodded, relieved. 'You want oil, sir?'

'Yes,' Wilson said, stretching out on his back on the bed to let her begin. She did so by pouring slightly heated olive oil onto her hands, then rubbing it into his skin, starting with his chest, moving down to his stomach, then sliding her fingers through his pubic hair and around his penis. Once down there, she rubbed the oil in around his scrotum, onto his inner thighs, then around his hips, back over his belly and down again to the genital area. Then, taking his penis in her oil-soaked right hand, she massaged it tenderly, expertly, eventually managing to raise it a little.

Watching her with his unblinking gaze, taking in the rise and fall of her breasts, the full nipples, the flat belly running down to her blonde pubic hair between perfectly formed, smooth thighs, Wilson recalled how, even in adolescence, though helplessly aroused by sexual thoughts and feelings, he had translated his desire into a set of equations that enabled him to disassociate himself from the fallacy of romantic love and treat sex as a purely physiological necessity, like pissing or shitting. Now, even as his 'comfort girl', the abducted young beauty, Clare Collins, released his slight erection from her oil-soaked fingers and, instead, used the electric vibrating pads on the most erogenous parts of his body, he was caught between his human need to surrender to pure sensual feelings and his scientific need to transcend those same feelings and remain in control.

Yet sensual feelings, he knew, were inextricably linked to mental health,

and so, when the comfort girl dabbed paste onto his temples and fixed electrodes to him, he closed his eyes, shutting out the real woman, and let himself surrender to the voluptuous visions created by the stimulator. The Theta rhythms being passed through his brain at a rate of four cycles per second altered his mood and, in conjunction with the comfort girl's expert massaging, both with her oil-soaked fingers and the exquisitely soft vibrating pads, replaced his icy intellectualism with steadily rising, temporary desire. As the Theta rhythms increased gradually to a rate of seven per second, filling his head with carnal visions worthy of an adolescent, the comfort girl massaged his stomach, loins and inner thighs with the vibrating pads, manipulated his hardening penis with her oil-soaked fingers, and finally, when she sensed that he was coming, covered his penis with her lips and let him come into her mouth. Without sex, or, at least, without penetration, Wilson shuddered, orgasmed, found physical release, and was returned to his intellectual concerns, above distracting desires.

Opening his eyes, he watched the comfort girl wiping her lips dry with a tissue; she then turn off the vibrating pads and removed the electrodes from his temples. Her naked body now seemed offensive to him and he wanted no part of it.

'Put your robe on immediately,' he told her, 'then return the stimulator to the closet and take your leave.'

'Yes, sir. Thank you, sir.'

Backing away from him, keeping her head bowed, the girl put her robe back on and then wheeled the electronic console back into the closet and hurriedly left the room. Wilson heard her crossing the lounge. He waited until the door of the elevator had opened and closed, then he put on his dressing gown and picked up the phone to order breakfast.

'I'll have a fruit-and-nut cereal,' he said, 'and a glass of white wine. Very dry. Very cold.'

He had a single glass of dry white wine with every frugal meal of the day, including breakfast. Apart from those three glasses of wine, he did not partake of alcohol. Nor did he eat meat or fish.

His breakfast was delivered by an Ache Indian who had been lobotomised to render him passive, totally obedient and easily trained. He was dressed in grey coveralls, his feet in soft felt slippers. Knowing better than to speak to Wilson, he simply placed the tray on a table that wheeled over the bed – a

steel-framed hospital trolley – and then left the suite as unobtrusively as he had entered it, taking the elevator back down to the slave accommodations located near the base of the mountain.

When the Indian had departed, Wilson had his breakfast while watching the world news on his satellite-dish TV monitors, flicking repeatedly from one screen to another, one country to another, one news item to another, impatient with the triviality of human beings and their idiotic conflicts, most of which were, in his view, based on primitive notions of patriotism or religion.

Finishing his breakfast, he pushed the wheeled tray to the end of the bed, then swung his feet to the floor, shucked off his dressing gown, and proceeded to dress in his standard working outfit of black coveralls. Leaving the bedroom, he passed through his spacious, dome-shaped, steel-and-concrete study, which also offered a wonderful view of Antarctica, and took the elevator down to the parapsychological laboratories.

Like most other experimental areas of the underground colony, the laboratories had been hacked out of the interior of the mountain, with the exposed rock face covered in black pitch. The irregular shape of the walls made the enclosed spaces seem even more cavernous than they were in reality. Light came from the arc lights fixed high above the stone-flagged floors. While being adequately heated by phase-change solar-heat pumps located outside the mountain, the laboratories, with their pitch-covered rock, looked bleak and unwelcoming. Though not quite as hideous as the laboratories where doctors King and Eckhardt kept their Frankenstein's collection of severed human heads, limbs and internal organs, the parapsychological laboratory now held its fair share of similar horrors. These included electric chairs with buckled straps on the arms and head-braces with microphones, used for experiments that could cause haemorrhaging from the eyes, ears and nose, as well as inducing cardiac arrest or bursting the blood vessels of the brain, leading to madness or death; water tanks used for sensory-deprivation experiments on human subjects; and small, dark cells with leaded-steel doors, used for a combination of other sensory-deprivation experiments and even more cruel experiments with strobe lights flickering at a rate that caused drowsiness, nausea, acute depression or fear, absolute obedience, uncontrollable violence, and epileptic seizures.

The most notable of the horrors in this laboratory, however, was the severed head of the unfortunate Marlon Clarke, which, almost thirteen years after

Clarke's abduction, was still functioning in an inhuman way with the aid of a special stereotaxic skullcap and numerous electronic hairpin implants. At one stage Clarke's severed head, then kept in a class casing with an inner temperature reduced to just above the point of freezing, had been recording dying brain-waves on the EEG machine to which it had been wired. But before those brain-waves died out completely, Dr King had used a combination of electronic implantation and injections of chemicals to revitalise them enough to keep the brain functioning. By that time, Clarke's brain, though certainly functioning again, was doing so in an insane, chaotic manner; but eventually, when attached by the severed neck to a steel-clamp base containing artificial blood vessels and wired to the still beating human heart in a temperature-controlled glass case nearby, as well as to a pair of amputated hands, it had been able to manipulate the latter in a crude fashion, making the fingers open and close as the hands crawled across the table like large, deranged spiders.

Since then, further advances had been made and now the jaw, mouth and nose of the severed head had been removed and replaced with a metal prosthetic, the neck of which was attached by a combination of electric wiring and artificial blood vessels to the body of a small Ache Indian whose head and hands had been surgically removed, the former to be replaced with Clarke's head, the latter to be replaced with myoelectric hands that looked like steel claws.

Clarke's eyes, which once had been filled with unutterable incomprehension and dread, were now unseeing and could only be revitalised by the carefully controlled input from the electronic implants of his stereotaxic skullcap. With his metal claws, metal lower-face prosthetic and bizarre metal skullcap, the once normal human being now looked like a monstrous creature from outer space.

'He seems pacified at last,' Wilson said, speaking fluent Russian, to the head of the laboratory, Dr Nikoloi Tugarinov, world-famous physiologist and former Vice President of the Academy of Sciences of the USSR. Listed officially in the Soviet Union as 'missing', Tugarinov had actually been abducted by one of Wilson's saucer teams, 'indoctrinated' with a combination of drug therapy and hypnotic suggestion that did not otherwise impair his faculties, and then became a willing – or, rather, helplessly obedient – member of the parapsychological laboratory, working hand-in-

glove with doctors King and Eckhardt in the adjoining laboratories, where the development of cyborgs and much larger Cybernetic Anthropomorphous Machine Systems, or CAMS, was racing ahead, regardless of the cost in human suffering.

'Yes,' Tugarinov confirmed, also speaking Russian. 'As you know, Dr King's main problem was not in perfecting the psychophysical interaction between head and body, but in somehow retaining the orderly functioning of the severed head – given that it was in a state of delirium, or insanity, caused by disbelief and trauma. Having revitalised the head's dying brain-waves, which potentially opened the brain again to shock and insanity, we solved the problem by inducing amnesia with a combination of chemicals and electric stimulation. Hideous though Mr Clarke now looks, he has no recollection of himself ever looking any different and, indeed, thinks of himself as being perfectly normal. Mr Clarke is now a prototype cyborg who, when activated, will have no recollections of his former life, will therefore think of his controller as a god, and subsequently will do exactly what he is told.'

'Excellent,' Wilson said. 'But his focus seems turned inward at the moment. What's happening to him?'

'Amazing,' Dr Tugarinov replied. 'What we're finding through the parapsychological experiments relating to cyborg mentality is that being deprived of most of their senses – the loss of a sense of smell because of the lower-face prosthetic; the breathing with lungs created artificially to enable them to withstand the extreme pressures of outer space or the seabed; the inability to speak because of the severing of the vocal cords; and the general loss of their past memories and emotions – this particular form of deprivation has heightened their mental processes in another manner, enabling them to communicate telepathically, often over very great distances. Clarke appears to be focused inward at the moment because he's been programmed to cast his thoughts elsewhere.'

'I've developed such talents myself,' Wilson reminded him, 'by the ruthless suppression of all redundant emotion and feelings.'

'True – but look!' Dr Tugarinov pointed up at a row of monitor screens that were tilted just above the encased, severed head of the surgically mutated, partial cyborg, Marlon Clarke. The screens showed a series of different images, cloudy but distinct enough, of barbed wire fences, military installations, aircraft on the ground or in flight, and long-distance views of

parabolic radar dishes. They were, as Wilson knew, all located in the United States, mostly military establishments chosen by Clarke's 'controller', Dr Tugarinov, and being telepathically relayed to the TV monitors wired up to the cyborg's stereotaxic skullcap and keyed into a highly advanced computer system.

In the West, electronic miniaturisation with an integrated circuit using a single tiny chip of silicon had been demonstrated for the first time the previous year, but Wilson's scientists, unrestrained in every way, were already well advanced in computer technology and had, in fact, used their first crude silicon chips as part of their secret barter with the United States government.

'I know what you're showing me,' Wilson said. 'But what's so special this time?'

'Watch closely,' Tugarinov said, using the computer keyboard to increase or decrease the basic rhythmic patterns of Marlon Clarke's brain while flooding it with other impulses from the implants of the stereotaxic skullcap. The eyes in the severed head now attached by the neck to a cyborg torso – half man, half machine – suddenly widened, moved left and right above the hideous lower-face metal prosthetic, then seemed to lose focus as the mental impulses thus agitated leaped over time and space. The screens above Clarke's head, which had previously shown a series of murky monochrome images, now cleared to show what Wilson recognised instantly as, first the exterior, then the interior, of one of his own large flying saucers. This, however, dissolved almost immediately and was replaced by the image of a smaller, less sophisticated saucer ascending vertically from what appeared to be part of the White Sands Proving Ground.

Surprised, Wilson practically stood on tiptoe in order to check the images more clearly. The flying saucer on the screen wobbled in an ungainly manner from left to right, trying to find its centre of gravity, then it ascended vertically, languidly, above the doors of what were plainly aircraft hangars. Soon it passed off the monitors, leaving only the ghostly image of the aircraft hangars, beyond which was a barbed-wire fence and a vast stretch of desert.

'That wasn't one of our saucers,' Wilson said. 'Is that the White Sands Proving Ground?'

'Yes, sir.'

'So what's so unusual about this transmission? We've managed to project

to there before.'

'I didn't programme Clarke to telepathically leap to that area. I programmed him to track one of our own saucer flights – which you saw – and then he tuned in by himself to that new image – or, to be more precise, someone else tuned in to *him*.'

'So where are the images coming from?'

'Please observe. I'm going to key in a non-verbal request to Clarke, to identify the source of his present images. Though unable to speak, he can show you on the screens just what's going on.'

Tugarinov tapped his request into the computer keyboard, then stepped back and waited. After what seemed like a long time, but was actually less than a minute, a murky image of a city skyline appeared on the monitor screens.

'I recognise it,' Wilson said. 'Portland, Maine.'

Once Wilson had identified the location, Tugarinov tapped it into the computer to let the cyborg, Clarke, know that they had received the information. When he had done so, the image changed to an apartment block in the same city, then this dissolved to the inside of an apartment in the same building. A middle-aged woman with black hair and a look of pain on her face was tossing and turning on her bed. There were tablets on her bedside cabinet and she appeared to be having a migraine.

'She's in a telepathic trance,' Wilson said.

'Yes. And she's obviously suffering severe stress. Which suggests that she's tuned in accidentally to someone else, somewhere else. We have to find out who and where that source is.'

Tugarinov keyed another request into the keyboard and then watched as Marlon Clarke's eyes, framed between the metal band of the stereotaxic skullcap and the top of the lower-face prosthetic, turned left and right, desperately searching for something, then rolled upwards and went out of focus again, like the eyes of someone lost in their own thoughts.

On the monitor screens above, the woman from Maine gradually faded out and was replaced by a repeat of the crude flying saucer ascending above the aircraft hangars of what was clearly a US Air Force or Navy aeronautical establishment in the arid wastelands of the White Sands Proving Ground.

'Back where we started,' Wilson said impatiently.

'No. Wait.' Tugarinov tapped a few more instructions into the computer

keyboard. ‘He’ll now find the source for us.’

In less than a minute, the aircraft hangars dissolved and were replaced by the exterior of a clapboard building that had barbed-wire fences beyond it and was guarded by US Army Air Force soldiers. A closer image of the same building showed signs clearly marked ‘US Army Air Force’ and ‘Top Secret’. Those signs dissolved to make way for an image of a man wearing army dungarees sitting on a chair in a booth, wearing earphones and either writing notes or drawing sketches of what he was seeing.

The telepathic communication was not sharp or close enough to reveal what those drawings showed, but Wilson had no doubts at all.

‘That man is an ESP-trained soldier tuning into the US-Canadian flying saucer we just saw taking off from the White Sands Proving Ground. As that building, also, is in the White Sands Proving Ground, he obviously can’t transmit that far yet and is practicing on reasonable local subjects. The woman from Portland, Maine, is obviously a psychic who tuned in accidentally to him, just as our cyborg tuned into her thoughts, confusing the US-Canadian saucer for the one he was tracking – namely, our own.’

‘The accident doesn’t matter,’ Tugarinov said. ‘What matters is that the Americans, like my Russian friends in the Parapsychology Laboratory in the University of Leningrad, are now experimenting with ESP.’

‘Correct,’ Wilson said. ‘They thought they could keep it secret, but there are no secrets any more. I think my American friends might need another hard lesson, so keep monitoring that woman from Portland, Maine.’

‘Yes, sir,’ Tugarinov said.

Wilson glanced briefly at the hideous, surgically mutated head of the former Marlon Clarke, then nodded approvingly at Dr Tugarinov and left the laboratory.

Chapter Twenty-Nine

For the first six months of 1959 Dwight commuted on a regular basis between Dayton, Ohio, and Washington DC, investigating UFO sightings in the former and personally delivering his reports to Dr Frederick Epstein's Aerial Phenomena Investigations Institute in the latter. As Beth had anticipated, the frequent trips to the Capital were a welcome break from the previous monotony of his life in Dayton and rendered even more appealing because they offered him frequent contact with Bob and Thelma Jackson, both resident in Greenbelt, Maryland, where Bob had gone to work after leaving the Air Force and before joining the APII. When not at the APII, Dwight had many a good lunch or evening with Bob and Thelma, who had lost neither their good humour nor their warmth.

Returning to the investigation of UFO sightings in Dayton was indeed an experience for Dwight, not only because of his ongoing fascination with the subject and the many people he was meeting again, but even more so because of his shock at the lack of co-operation he found amongst his old friends at Wright-Patterson Air Force Base. Not that there were, in truth, many old friends left there, since most had been transferred out of the ATIC even before his departure. Nevertheless, the few still working there were singularly unhelpful, claiming that the Air Force no longer had any interest in the matter and viewed civilian investigators as a nuisance.

Apart from those who worked for Dr Epstein's APII, the other reliable civilian investigators came from the many different UFO organisations now scattered widely across the whole country. The most notable of these was the National Investigations Committee on Aerial Phenomena (NICAP), founded in 1956, headed by former Marine Corps Major Donald Keyhoe, and also located in Washington DC. Though these two major Washington DC organisations frequently were in competition with one another, it was from the NICAP that Dwight had gained a lot of the mainly young, sometimes eccentric, but always lively UFO investigators who had made his life more

interesting during the past six months.

They had a language all their own, being fond of the use of acronyms such as CE1 (Close Encounters of the First Kind), phenomena that cause a transient effect on the witness, such as time loss or radio interference; CE2 (Close Encounters of the Second Kind), phenomena that cause effects that are semi-permanent and observable by those who did *not* share the experience; CE3 (Close Encounters of the Third Kind), phenomena that include animate entities such as extraterrestrials or robotic crew members; and CE4 (Close Encounters of the Fourth Kind), events that cause the witness, or witnesses, to have unnatural or seemingly impossible experiences, such as psychic interaction, levitation and paralysis, or which affect the witness, mentally or physically, for a long time after the event occurs.

Spouting such scientific-sounding phrases and armed with survey maps, binoculars, theodolites, tape recorders, cameras, notebooks, drawing pads, pencils and pens, these enthusiasts swarmed across the country, most to desolate wastelands such as those in New Mexico and Arizona, to visit the site of a UFO sighting and take measurements and photos; interview witnesses, cajoling written statements and sketches from them; contact weather centres to check for temperature inversions or other atmospheric phenomena that could be misinterpreted as UFOs; check local civilian and military airports for information regarding general air traffic and weather balloon launches; and approach local police stations for facts regarding related sightings or witnesses not already interviewed. Considered by many, especially those in positions of authority, to be a great nuisance, they did in fact turn many a UFO (Unidentified Flying Object) into an IFO (Identified Flying Object) while also supplying invaluable written and visual material to the major civilian UFO organisations.

Apart from their contribution to the APII, Dwight enjoyed meeting them because so many of them were young, optimistic and enthusiastic in a manner that was both contagious and encouraging. He needed the encouragement because Beth had told him about her inexplicable blackout and CE1 experience on the road opposite the garage where Dwight had once worked – and where the new owner, Frank Bancroft, had experienced something so terrifying that it had caused him to die of a heart attack. Beth's story had only reinforced Dwight's belief that he – and perhaps other UFOlogists – were being watched and were also, almost certainly, in constant danger.

While Dwight's brief with the APII was restricted solely to an investigation of UFO sightings as potential extraterrestrial visitations, he was also secretly keeping his eyes and ears open for any further information on the possibility that they, or other UFOs, were man-made.

This possibility had obsessed him ever since his old friend, US Air Force Captain Andrew 'Andy' Boyle, had told him about spherical-or-disc-shaped experimental aircraft, notably the Avrocar constructed at the A. V. Roe Aircraft Company in Malton, Ontario. Though reportedly this man-made 'flying saucer' had failed to fly with any great degree of efficiency, the fact that its existence had been officially denied until it was photographed on the ground by a press photographer lent some credibility to the notion that the same project, or similar projects, but of a much more advanced kind, were still being undertaken, either in Canada or in the top-secret military research establishments of the White Sands Proving Ground, New Mexico.

As long as he lived, Dwight would not forget his experience with the men in black in that motel on the outskirts of Albuquerque in 1954, five years ago – the event that had finally made him decide to leave the Air Force for good. The description given by Andy Boyle of the dome-shaped 'aircraft' he had seen landing outside a secret hangar at Cannon Air Force Base was also an indelible memory for Dwight, since the 'aircraft' as described by Andy was almost certainly a flying saucer: its fuselage formed by two plates, one placed upside down on the other, with a raised Perspex dome in the middle – obviously the pilot's cabin – and circular, gyroscopically balanced plates revolving around it. Whether extraterrestrial or man-made, that flying saucer had undoubtedly been kept for an indeterminate period in that heavily guarded hangar at Cannon AFB.

Later, after his terrifying experience with what may have been a flying saucer hovering outside his motel window, followed by a frightening encounter with a group of men dressed all in black, who had threatened him and stolen Andy's invaluable UFO photo, Dwight had tried to contact Andy again to find out if he'd had a similar experience. First he learnt that Andy had been transferred to Alaska with hardly any notice at all. A week later, he learnt that Andy had died in an unexplained helicopter crash over Mt McKinley. Neither his body nor that of the pilot had been found.

From that moment on, Dwight had been haunted by Andy's contention that

the flying saucers could indeed be man-made. It was not a hypothesis he had dared to raise so far with Dr Frederick Epstein at the APII, since he had not come across any supportive evidence for what Andy had told him before his untimely death. He had, nevertheless, asked one of his NICAP researchers, Tony Scaduto, to bring him anything he happened to find along those lines. Now, he was on his way to meet Scaduto in a bar in Georgetown, to hear what he had sworn on the phone was a fascinating story relating to man-made flying saucers.

Dwight and Scaduto met in an Irish pub in Connecticut Avenue. Downstairs the bar was packed with drunken marines from Quantico; upstairs, where Dwight and Scaduto met, it was even more packed, but with a mixed crowd joining in the songs being played by a four-piece Irish band - autoharp, fiddle, flatpick guitar, mandolin – while turning red-faced from Guinness stout, Harp on tap, and dangerously large whiskey chasers. Tony was a twenty-five-year-old Brooklyn boy, still single, who loved rock 'n' roll music and dressed like Marlon Brando in *The Wild One*. A good-natured, fun-loving young man, he was also bright, if potentially self-destructive when it came to drinking, smoking and women.

'This is a good place to meet for a talk,' Dwight informed him, glancing at the energetic, noisy Irish band. 'I can hardly hear myself speak.'

'They go off in a minute,' Scaduto said. 'Then we can have a proper talk. Meanwhile, what's your poison?'

'I haven't been in an Irish pub for years, so make it a pint of Guinness. Anyway,' he added, after Scaduto had ordered his drink and another for himself, 'I thought you were a rock 'n' roll fan – not a fan of *this* kind of music.'

'This is the year the music died,' Tony replied laconically. 'Buddy Holly, the Big Bopper and Richie Valens – all killed in a plane crash. Meanwhile, Elvis, *sans* sideburns, is serving out his time with the goddamned US Army in West Germany, leaving us with Pat Boone, Frankie Avalon, Bobby Rydell and all the other puke-making mother's boys. No wonder I'm listening to Irish music! It's all we've got left.'

Eventually, just as the barman brought them two more pint glasses of Guinness, the band on the stage took a break to enthusiastic applause.

'They'll be off-stage for about half-an-hour,' Scaduto told Dwight. 'That should be enough time for our discussion.'

‘So what’s this fascinating story you have for me?’

‘Pretty bizarre, to put it mildly,’ Scaduto replied, ‘so I couldn’t resist it.’

‘Stop teasing,’ Dwight told him.

Scaduto grinned, sipped some Guinness, then wiped foam from his lips with the back of his band. ‘I picked this story up from one of my informants: a civilian secretary at the Office of Naval Intelligence.’

‘Sounds well placed,’ Dwight said.

‘She’s often well placed in my bed,’ Scaduto said, grinning. ‘Anyway, according to my lady friend – a great lay, incidentally – a woman psychic in Portland, Maine, recently informed the CIA that she’d had telepathic contact with extraterrestrials in what she thought was a space-ship.’

‘A crank,’ Dwight said, unable to hide his disappointment.

‘Not necessarily – though that’s exactly what the CIA thought at first. Since to them it seemed like a classic scam – a woman, a supposed psychic, using automatic handwriting for communication with extraterrestrials – the CIA gave it a miss. However, the Canadian government got their hands on the CIA report and, instead of dismissing it, which seemed the logical thing to do, they sent their leading UFOlogist, accompanied by a government-trained hypnotist, to interview her where she lived in Portland. According to the UFOlogist, the woman, in a hypnotic trance, correctly answered highly complex questions about space flight, about which she had formerly known dip-shit.’

Scaduto had another sip of his Guinness and glanced at the women scattered around the bar as he licked the foam from his lips.

‘Not surprisingly,’ he continued eventually, ‘when the US Navy learned about this, they sent two intelligence officers to talk to the same woman. During the subsequent interrogation, one of the Navy intelligence officers, who had, please note, *been trained in ESP*, tried to tune in to the woman’s contactee. When this experiment failed, he and his colleague returned to Washington DC and informed the CIA at Langley, Virginia.’

Though the Irish band had stopped playing, a few of the older patrons of this generally youth-orientated pub, their faces flushed with drink, began rocking from side to side while tearfully singing, ‘I’ll take you home again, Kathleen.’

‘Someone should take *them* home,’ Scaduto said as he glanced at them and then turned back to Dwight. ‘So, where was I?’

‘When the ESP-trained Navy intelligence officer failed to make contact with the woman’s contactee, he and his friend returned to report their failure to the CIA at Langley. So how did the CIA react?’

‘Well, instead of expressing their disappointment, the CIA – possibly impressed because Navy intelligence had gone to so much trouble for a case that they, the CIA, had ignored – displayed more interest than before, In fact, they arranged for the ESP-trained intelligence officer to try making contact from CIA headquarters, right there at Langley Field, Virginia. Six witnesses – two of them CIA employees, one of whom was agent Jack Fuller, the others from the Office of Naval Intelligence - got together in the office in Langley to observe the results of the experiment.’

Trying to ignore the tuneless singing of the maudlin drunkards nearby, Dwight, becoming intrigued despite his initial scepticism, leaned closer to Scaduto and asked, ‘Well?’

‘This time, when the ESP-trained intelligence officer went into his hypnotic trance, he made contact with *someone*.’

‘Was the identity and whereabouts of that someone made known?’

‘Not at first. When the intelligence officer, in his trance condition, was asked if he was in contact with ordinary men, spirit beings or extraterrestrials, he said it was the latter. When one of the men in the room then demanded some kind of proof for this assertion, the intelligence officer, still in his hypnotic trance, said that if they looked out the window they would see a flying saucer high in the sky over the Capitol building. When the men went to the window and looked out, that’s just what they saw: a large flying saucer hovering silently in the sky, approximately over Capitol Hill.’

‘Did they have the sense to try for confirmation of their sighting?’

‘Surprisingly, they did. A quick phone call from one of the CIA officers – almost certainly Fuller – to Washington National Airport, established that at that very moment the radar centre there was reporting that its radar returns were being blacked out in the direction of the sighting over Capitol Hill.’

Dwight gave a low whistle. ‘So what happened then?’

‘The operator at Washington National Airport had no sooner finished complaining about his blacked-out radar returns when the flying saucer shot up vertically and disappeared – reportedly as quickly as a light bulb blinking out.’

‘What was the saucer like?’

Scaduto shrugged, sipped some more Guinness, then placed his glass back on the counter. ‘That’s the problem,’ he said. ‘No description of the flying saucer was released. A lid was slammed on the whole thing.’

Dwight shook his head in despair. ‘Damn!’ he exclaimed, lowering his head. Then he looked up again. ‘So how did your friend, the great lay, come to hear the story?’

‘Good one.’ Scaduto grinned from ear to ear. ‘Major Robert J. Friend, present head of the increasingly impotent Project Blue Book, was informed of the events of that day by the CIA and promptly arranged for Duke University’s parapsychology lab to investigate both the psychic from Maine and the ESP-trained intelligence officer. That investigation led to the mistaken declassification of the original reports – and those reports eventually passed through the Office of Naval Intelligence, thus through my friend’s hands.’

‘Then on to you.’

‘Right. When we were sharing her warm bed.’

‘She didn’t give you the original reports?’

‘No, of course not!’ Scaduto pretended to be affronted, before grinning again. ‘She just lovingly whispered the info into my ear.’

‘Before sticking her tongue in it, no doubt.’

‘A gentleman never tells.’

Dwight grinned and nodded. ‘So what were the results of the Duke University investigations?’

‘God knows. Their report never materialised, Project Blue Book released no analysis of the sighting report, the government did nothing about the unexplained Washington DC radar blackout, and the origin of the flying saucer seen over Capitol Hill remains a secret to this day. As for the men present at the hypnotic trance session in that room in Langley, the CIA took *punitive* action against them by transferring them to other positions – with the single exception of CIA agent Jack Fuller.’

‘So why didn’t you ask Fuller what happened?’

Scaduto grinned and tapped the side of his nose with his index finger. ‘I did. He denied any involvement in such a matter, then laughed and cut me off.’

‘He’s a sharp bastard, that Fuller. Sharp and hard.’

‘He is that, sure enough,’ Scaduto said, automatically influenced by the pub

and sounding rather Irish.

Dwight had another sip of his drink, licked his lips, then gazed down thoughtfully at his glass. ‘A nice little story,’ he said, ‘but it seems too far-fetched to be true.’

‘It may seem that way to you,’ Scaduto responded without pause, ‘but the incident – or something very like it – must have taken place, because Major Friend later wrote about the whole business in an official Memorandum for the Record. That Memorandum has since been filed in the Air Force Archives at Maxwell AFB, Montgomery, Alabama – but it wasn’t filed until a copy found its way into the hands of a few UFOlogists. The Memorandum is genuine – either that, or Major Friend, the present head of Project Blue Book, is submitting fiction in his official reports.’

Dwight nodded affirmatively, acknowledging this undeniable truth. ‘So just what are you trying to tell me, Tony?’

‘You want another Guinness?’

‘No. I’m catching a plane back to Dayton when I leave here. Home sober when greeted by wife and daughter, then sit down, respectably sober, to dinner.’

‘Yeah, I get the picture.’ Only twenty-five years old, still single, and filled with sexual vitality, Scaduto glanced sideways, to where an attractive, raven-haired girl in tight blue jeans and sweater was studying him slyly in the mirror angled over the bar. More wily than she would realise until it was too late, he had ascertained her interest and was about to move in on her.

‘Okay,’ he said. ‘Before I offer that little sweetheart a drink or two, I’ll tell you exactly what I think.’ He smiled at the girl, then lowered his gaze as if shy, though in fact he was concentrating again on Dwight. ‘I’ve always been intrigued,’ he said, ‘by the unusual amount of official interest paid to the so-called Woman from Maine – a civilian female with supposed telepathic abilities. I am, however, wise to the fact that both the Russian secret police – the KGB – and the CIA have, for years, been investigating the espionage potential of mental telepathy, psychic photography, and other forms of parapsychology. So I’m naturally starting to wonder if there could be any connection between that fact and the Woman from Maine.’

‘What kind of connection?’

‘Since communication by mental telepathy has already been attained with some degree of success in Soviet *and* American laboratories, and between

submarine and land bases, it's possible that the CIA was genuinely concerned with that technologically-ignorant woman's inexplicable knowledge of the more complex details of space flight. As the CIA is interested in the espionage potential of telepathy, it stands to reason that they'd have certain men trained in ESP and would send one to attend the trance session. If we then accept that telepathic communication was made with *someone* in that office in CIA headquarters, Langley, Virginia, and that the agent in a trance, if not actually making that UFO materialise, had at least been informed telepathically of its existence, it then seems possible that the Woman from Maine had been in contact with a telepathically-trained US *government* employee, albeit by accident.'

'Are you suggesting that the UFO seen over Capitol Hill was a *US government* flying saucer?'

'Yes,' Scaduto said.

'Man-made?'

'Exactly. The more I look into these damned things, the more I'm convinced that the White House, the Pentagon, and certainly Army, Navy and Air Force intelligence of the White Sands Proving Ground and other top-secret areas, are deliberately causing confusion, doubt and fear regarding UFO sightings because they're protecting their own. While the more technically advanced saucers might indeed be extraterrestrial, I think the US Army, Navy or Airforce also have their own models. I don't know for sure – but I believe so.'

'Have you raised that belief with Dr Epstein or anyone else at APII?'

'No. This theory goes completely against the grain of most of the UFO organisations, including APII and NICAP, so I'm keeping my big mouth shut for now. You're the first person in the business who's told me he's interested in the same possibility, so that's why I've told you this.'

'And you're still interested?'

'Damned right I am.'

'It could be a dangerous thing to pursue,' Dwight told him.

'I don't scare easily.' Scaduto retorted, then he turned his head to smile deliberately, invitingly, at the raven-haired girl farther along the bar. She crossed her shapely legs and returned Scaduto's winning smile.

'You're in like Flynn,' Dwight told him, slipping off the barstool and taking his overnight bag in his hand. 'If you come across anything else, please give

me a call.'

'I will,' Scaduto promised, already slipping off his stool to make his move on the girl still smiling at him.

'Meanwhile, try to stay out of trouble, Tony.'

'The only trouble I'm going to get into,' Scaduto said, 'will be found between that sweetheart's legs.'

Dwight sighed, recalling the days of his own youth. Then he left the bar.

Chapter Thirty

The biggest flying saucer to date, the *Goddard*, named after Wilson's only hero, the American rocket genius Robert H. Goddard, was known as the 'mother ship' because it was 350 foot in diameter, 150 foot high at the central point between dome and base, built in three layers, and carried not only a crew of over fifty men, but also the smaller manned saucers, those the size of the original *Kugelblitz*, the even smaller, three foot to twelve foot diameter, unmanned, remote-controlled probes, and a variety of large and small CAMS either piloted by small, surgically mutated Ache Indian cyborgs, remote controlled from the mother ship, or programmed to react robotically to certain stimuli for the exploration of the sea bed. Technologically even more advanced than its predecessor, *Kugelblitz III*, the gigantic *Goddard* was powered by a highly advanced electromagnetic propulsion system that ionised the surrounding air or sea, an electromagnetic damping system that aided the craft's lift and hovering capabilities, and bodywork composed of an electrically charged magnesium orthosilicate so minutely porous that it managed to be waterproof while ensuring, when airborne, an absolute minimum of friction, heat and drag.

It was Wilson's intention to have even bigger 'mother ships' for sea-bed exploration and flights in outer space, but at the moment this 350-foot craft, submerged deep in the Sargasso Sea between Florida and Bermuda, was the best he could manage for the most ambitious series of underwater experiments he had so far attempted. These included the capturing of marine beasts and fish never before seen by man, a general exploration of the sea-bed and the collection of samples from it, the abduction of crew members of boats afloat in the area known as the Bermuda Triangle, and, in two instances, the capture of whole motorboats, complete with their terrified passengers.

'A truly great achievement,' Vance Whitaker, the new Flight Captain of the mother-ship, said as he gazed through the viewing window – he was standing

between Wilson and Sea Captain Ritter Dietrich – at the artificially and naturally illuminated wonders of the deep, including all kinds of plankton, bizarre fish, and other creatures never before seen by man and either remarkably beautiful or, by human standards, hideous. ‘Absolutely magnificent!’

Wilson did not bother explaining to the chemically ‘indoctrinated’ former NASA astronaut that the colony’s great advances in submersible technology had only been made possible because of the many undersea prototypes tried out in Antarctica with living crewmembers, none of whom had volunteered, many of whom had lost their lives when the prototypes leaked in the ice-covered sea or broke up underwater. *Goddard*, however, was the superb result of those experiments and could be used either under the water or in the stratosphere. For this reason it had a Sea Captain, Ritter Dietrich, for undersea voyages, as well as a Flight Captain, Vance Whitaker, for atmospheric and stratospheric flight. As the last pilot, another abducted USAF officer, had never managed to learn the complexities of stratospheric flight, he had recently been terminated and replaced by this new man, Whitaker, who, the previous month, had supposedly crashed in the sea near the Bahamas, 360 miles from Cape Canaveral, during a fifteen-minute sub-orbital test flight of NASA’s new Mercury spacecraft.

The three men were standing at one of the many windows of the control room, which had about a dozen reinforced viewing windows around its circular wall and a dome-shaped ceiling of heat-resistant, reinforced Perspex over which was what resembled a great umbrella of seamless steel, though it was actually minutely porous magnesium orthosilicate, like the rest of the hull. The dome-shaped steel covering of the Perspex ceiling – seen from outside as the central dome of the flying saucer – was divided almost invisibly into two concave sections that could slide apart in opposite directions and curved back down into the floor, thus giving the crew members a 360° view from any part of the flight deck.

The latter was composed of what looked like the standard hardware for a normal airliner, including switch panels, pitch-trim controls, autopilot engage switch, inertial navigation, navigational radio selector, weather radar, radio equipment, intercom switches, an unknown brand of ADF (automatic direction finder), computer selection switches, and an unusually small but exceptionally powerful computer that controlled most of the flight-deck

functions and could be activated by an electronic ‘voice’ composed of minute vibrations transmitted at varying speeds and frequencies.

Such orders were conveyed by the small Ache cyborgs who, though having had their vocal cords severed as part of their lower-face surgery, including the removal of the nose, mouth and jaw, communicated electronically from their metal prosthetics to the electronic-voice activated computer. Instructions to the cyborgs were communicated via a pinhead microphone strapped to the throat of a human superior, such as Sea Captain Dietrich or Flight Captain Whitaker, and activated by an on/off switch built into his international date-time wristwatch. As Flight Captain Whitaker had already learned, the flight deck did *not* contain such standard aircraft controls as thruster reverse light, nose gear tiller, speed brake handle, or even brake pressure or aileron and rudder trims, as these were not required for the unique propulsion system of the *Goddard*.

Dubbed the ‘mother ship’ because it was actually a carrying ship, the *Goddard* used its wide variety of large and small CAMS to pick up exotic marine life, lost treasure from ancient sea wrecks, and a wealth of normally unavailable minerals from the ocean-bed and from Earth – notably, in the latter case, the bodily parts of animals, which were required for the continuing medical experiments in the Antarctic colony.

The Goddard could also release, and receive, highly advanced versions of the original *Feuerballs*, the latest models being used mainly as spy-satellites and radar-blocking devices, but with the added capability of laser-beam technology that could make the engines of automobiles and aircraft malfunction, as well as stunning or hypnotising human beings.

Looking at the battery-charged lights beaming out through the murk of the ocean, revealing ever more as the great craft surfaced, Flight Captain Whitaker said: ‘Aren’t you frightened that the lights, if seen by the crews or passengers of ships or aircraft, will give your presence away?’

‘No,’ Wilson replied with confidence. ‘USOS, or Unidentified Submarine Objects, are even harder to identify than UFOs because of the wide diversity of marine biology, which includes a surprising amount of phosphorescent plant and animal life. Look!’ He pointed at the window, to what appeared to be unusual plants that were drifting through and around the beams of the *Goddard’s* lights, giving off their own eerie illumination. ‘Single-celled, luminous, planktonic organisms. They glow even brighter when near the

surface of the sea, being stimulated by the movement of the waves. Others, such as the *Cypridina Noctiluca*, actually *respond* automatically to beams of light, such as searchlights, by ejecting a luminous cloud in the water. Luminous crustaceans, such as copepods, some living on the water's surface, some in the ocean depths, can be found in seas all over the world. Then, of course, you have jellyfish and other coelenterates and ctenophores, which also create patches of light in the water – some very big. So, as you can appreciate, experienced sailors or pilots who see our lights under the water aren't likely to be too concerned. That only comes when we surface. Which, of course, we'll be doing shortly. Come with me, Flight Captain.'

Leaving Dietrich to supervise the surfacing of the *Goddard*, Wilson led Whitaker out of the flight deck and along a curving, steel-walled, white-painted corridor (for it was, in fact, circular, running around the inner rim of the giant saucer, as did the corridors on all levels) until they came to a closed door, which opened automatically when Wilson aimed his remote control at it. The doorway led to the top level of an immense, silvery-grey dome filled with ladders and catwalks. Below were glittering doors and platforms, modules of steel and glass, shining mazes of pipes coiled around generators, bright lights flashing off more white-painted walls. There were people down there, looking tiny and far away, climbing ladders, crossing catwalks, moving up and down that 150-foot drop in elevators constructed like steel cages.

About halfway down, fifty feet above the lowest floor, on a centrally positioned, circular-shaped, third-level platform, in the centre of the lowest, largest workshop, the smaller man-made saucer, *Kugelblitz II*, which Whitaker estimated was 150 foot in diameter, was resting on its launch pad, surrounded by four even smaller, unmanned flying-saucer probes, each about fifteen foot wide.

'This way,' Wilson said, leading Whitaker across the catwalk, above that dizzying drop, until they arrived at the cage-like elevator that descended through the centre of the *Goddard*, from just under the floor of the flight deck to the third-level platform. Once down there, Wilson, followed by the obedient Whitaker, advanced to the lowered ramp of the *Kugelblitz II*.

Just as they reached the smaller saucer, the *Goddard* broke the surface of the ocean, with the sea suddenly roaring and pounding as water parted around the outer steel covering of the dome and rushed down its sides. The great mother ship rocked gently for a moment as it floated in the turbulent waves

created by its own surfacing, but eventually, when the sea's surface had returned to normal, the rocking stopped and the metallic dome divided in two, forming separate concave plates that moved away from each other, then sank back out of sight, leaving only the immense dome of special heat-resistant, reinforced Perspex, through which sunlight beamed down to form a dazzling web of silvery-white striations that illuminated the gloomy interior.

Glancing upwards, Wilson and Whitaker saw the different floors more clearly, with men in grey or black coveralls hurrying across catwalks, clambering up and down ladders, or moving back and forth in the glass-panelled offices located around the curved inner wall of the mother ship.

'What a sight!' Whitaker whispered, clearly awe-struck.

Even as he was speaking, immense panels in a section of the wall of the mother ship slid apart like the doors of an aircraft hangar, offering a view of the vast, sunlight sky and a glimpse of the sea below.

'The level upon which this landing pad is located,' Wilson explained to Whitaker, 'is approximately fifty feet above the surface of the sea. Let's go in.'

They entered the *Kugelblitz II* by walking up the sloping ramp that would, once they were inside, be retracted to form the underside of the bottom disc. This is exactly what happened: the ramp moved back up into the loading bay on thick steel hinges, until it formed part of the wall, slotting back where it belonged with such precision that the joins around its edge could scarcely be seen and formed a perfect waterproof, airtight seal.

The loading bay was actually a space in the revolving lower disc, used only as a passageway for men and equipment; in other words, anyone, or anything, entering the loading bay from outside had to continue on until they were in the non-rotating main body of the saucer. For this reason, Wilson and Whitaker hurried through the loading bay, which could have been that of any large aircraft, and emerged to the central, non-revolving main body, which also was circular, being the bottom of the large, dome-shaped superstructure. After following the corridor around for a few more feet, they stepped into an elevator that took them up nearly fifty feet, past the engine rooms, storage rooms, barred cages for abducted people, a surgery where those abducted could be medically examined or even dissected during flight, latrines, foodstores, a small recreation room containing books, maps, and a recently invented video-TV set that could show films on tape, and, finally, into the

flight deck.

For the time being the meniscus-shaped, porous-metal covering for the Perspex dome was open, giving those on the flight deck a 360° view of the interior of the mother ship, though from their position on the landing pad they could see only the third-floor level and most of what was above it. The flight deck was, at that moment, being prepared for take-off by another crew of surgically mutated and robotised Ache Indians who, being small, and with their lower-face metal prosthetics and myoelectric metal claws (actually small CAMS), looked even more frightening than they would have had they been taller.

No sooner had Wilson and Whitaker entered the flight deck than two massive plates in what had appeared to be the seamless facing wall of the mother ship slid apart and kept opening until they formed a rectangular space about the same size as the entrance to an aircraft hangar. That great space framed a sheer blue sky, the clear horizon, and a strip of green-blue sea.

As Wilson and Whitaker strapped themselves into seats at the control panel – between the busy cyborgs whose metallic throats were giving off infrasounds that enabled them to electronically 'talk' to the computerised controls – the *Kugelblitz II* throbbed with that familiar bass humming sound, then vibrated slightly, swayed from side to side, and finally lifted a couple of feet off the landing pad. While it was still hovering, Wilson nodded to Flight Captain Whitaker, who, now taking command, spoke his instructions, in plain English, into the pinhead microphone strapped to his throat, as part of a communication system that included a covert ear piece for receiving. Those spoken instructions would be converted by the computer into an electronic language understood by the saucer's control console, which would react accordingly.

Because the saucer utilised a gravity shield that came on automatically when required, its passengers needed no protection against the pull of gravity or increasing outer pressure and were only strapped into their chairs during the initial stages of take-off. Now, under Whitaker's supervision, the hovering saucer advanced horizontally to the large opening in the sloping side of the hull, hovered again halfway across the lip of the opening, then moved outside altogether and stopped again, hovering just a few feet from the *Goddard*, but a good fifty feet above the surface of the Sargasso Sea. There, at a command from Whitaker, the meniscus-shaped, metallic outer casings of

the dome emerged from the floor at both sides of the flight deck and curved upwards and inward to meet at the top of the dome, forming what looked deceptively like a seamless whole. Matching windows in the lower half of the metallic casing ensured that the flight crew still had their 360° view, though they could no longer see directly above them.

As the dome was being sealed, the four fifteen-foot diameter, unmanned probes also emerged from the mother ship to surround the *Kugelblitz II* and prepare for take-off.

Being already in the air, the five craft did not follow the usual two-stage pattern of flying saucer take-offs: a tentative, vertical rise of between fifty and a hundred feet, then a spectacular, remarkably quick blast-off, either vertically or at a sharp angle. Instead, they hovered beside the mother ship until the gravity shield had come on, then abruptly shot off to the west, heading for Florida.

Protected by the *Kugelblitz II*'s gravity shield, those inside had no need to keep themselves strapped to their chairs. There was absolutely no sign or feeling of movement. However, as the journey from the Sargasso Sea to the Florida Keys took only a few minutes, neither Wilson nor Whitaker thought it worthwhile unbuckling his safety belt. Indeed, so fast was the saucer flying that at first, when the passengers looked straight ahead, they saw no more than what appeared to be a rapidly whipping, frantically spiralling tunnel of shimmering white light streaked with silvery-blue, a vertiginous well of brightness that gave no indication of which direction they were flying in: up, down, or straight ahead. It was, of course, the latter. Flying at a speed well beyond the sound barrier, Mach 1, over fifty miles high, on the very edge of space, they appeared to be suddenly blasted through the very sky itself, a giant envelope tearing open to reveal a vast azure sea that convulsed and turned purple, and then, just as abruptly, actually being the same sky, filled up with the dazzling radiance of a gigantic sun, even as the moon and stars also came out, clearly visible in the middle of the day, now present, with the sun, in an atmosphere so thin that even dust particles could not exist.

Seconds later, the *Kugelblitz II* and its four probes all slowed down to hovering speed, then hovered directly over Bimini, which could be seen as glowing dots on the radar screen and as it actually was on the TV monitor wired to a high-powered aerial camera. What the TV monitor showed, in fact, was a photomosaic of the western end of the Bermuda Triangle, the Gulf

Stream flowing northward between Florida and the Great Bahama Bank, and, in the middle of the picture, Bimini itself, here in monochrome, but in actuality a ravishing tapestry of green and blue streaked with so-called ‘white’ water, containing sulphur, strontium and lithium, which often made it glow eerily.

‘Send the probes down,’ Wilson ordered into his throat microphone.

Within seconds, the four unmanned ‘probe’ saucers had flown out horizontally in the four directions of the compass, stopped abruptly, hovered briefly, then shot down towards the sea off Bimini, moving so fast that they looked like no more than tiny lights, then disappearing completely as they plunged into the water and descended, still fully operational, to the sea-bed. There, under robotic control and with the use of their CAMS, they would explore and collect samples of rock, stone, soil, plants and plankton from what might be the remains of the cyclopean walls, truncated pyramids, carved pillars, causeways and stone circles of a lost civilisation, possibly Atlantis. While Wilson was not yet ready to embrace this theory, his encyclopaedic knowledge of ancient history impelled him to explore the possibilities and see what could be learnt from them. This was the job of the four small ‘probe’ saucers that were almost certainly, right now, extending their crab-like metallic claws to start picking up items from the sea-bed between Bimini and Andros.

‘So,’ he said when the probes had disappeared into the sea, ‘let’s head for Cocoa Beach.’

When the relevant instructions had been transmitted, the saucer ascended vertically about fifty feet, then shot off in a blur of speed towards Miami. With its gravitational shield also functioning as an inertial shield, the mass of the UFO with regard to gravity was reduced to a minute fraction of its former value, permitting exceptional buoyancy in the atmosphere, extremely high accelerations (so fast, indeed, that the human eye could not see the saucer’s take-off and would imagine that it had abruptly disappeared) and the capability of coming to a remarkably fast stop or going into abrupt, right-angle turns without harming those inside, they also being protected by the gravity shield.

Now on programmed autopilot, the saucer knew where it had go. Upon approaching the mainland, it suddenly stopped, made an abrupt turn, and then shot off in a northerly direction, automatically following the topography of

the land by means of a control system that bounced radar-like signals off the ground and back to the saucer for instant computer analysis and constantly changing flight directions. Because of this, as well as the weakening and strengthening of the gravitational pull of Earth when the saucer dropped low enough, the saucer appeared to be bobbing repeatedly as it sped on its horizontal flight path towards Cocoa Beach.

It stopped abruptly and precisely over the prearranged meeting place in a field in a protected area just outside Patrick Air Force Base, two miles from the village of Greater Cocoa Beach and Cape Canaveral, the swamp-land from which dozens of Atlas, Thor, Titan and Snark missiles, as well as America's first Earth satellite, *Explorer 1*, had been launched.

As the *Kugelblitz II* hovered high above the normal civilian and Air Force flight paths, waiting for the fall of darkness, Wilson and Whitaker partook of a light meal – the usual fruit-and-nut cereal, with a glass of dry, white wine – while discussing the many changes that had taken place down there on the east coast of Florida, where Whitaker had also trained and flown as a budding astronaut, before being abducted by Wilson.

'When I first went there,' Whitaker said, 'about seven years ago, Cocoa Beach consisted of a couple of dozen families strewn amongst the sand dunes and palmettos. Strangers rarely turned up and the villagers did little other than fish for their food and swim for their leisure. Now it's called Greater Cocoa Beach, which includes the original village and its environs, and it has a population of approximately ten thousand souls, including astronauts, aircraft pilots, scientists, rocket engineers, ballistics experts, and a local community obsessed with making money out of the space race. Some amazing things are happening down there.'

'Only amazing relative to the accomplishments of the rest of the West,' Wilson noted. 'Only amazing because of what we *let* them do. But we're now so many years ahead of them, they'll never catch up with us.'

'Jack Fuller thinks differently,' Whitaker said. 'And that man's no fool.'

'He's not a scientist, either, Flight Captain. That's his major weakness. His others are vanity, material greed and excessive patriotism, all of which can be used against him, if and when necessary. We've no cause for concern there.'

Feeling nervous, as he always did when outside the Antarctic colony, this being part of the chemical 'indoctrination' process undergone upon his arrival, Whitaker checked his wristwatch. 'Maybe we should have arranged

the meeting somewhere in Cape Canaveral,' he said. 'It's now a restricted military zone of about fifteen thousand acres, including a lot of uncleared jungle. We might have been more secure there.'

'Or we might have been eaten by a puma,' Wilson retorted, knowing that those animals still roamed wild there. 'Besides, these days the Cape is crawling with tourists – even around the restricted zone, which they try to spy upon with binoculars and cameras. Also, most of the military personnel in that zone still don't know about us, so they could prove to be troublesome.'

'What about the personnel of Patrick AFB?'

'The US-Canadian saucers are tested there,' Wilson explained, 'and kept hidden in hangars in a heavily guarded, top secret area – pretty much like Wright-Patterson's legendary Hangar 18. For this reason we trade with them and deal only with those on the base who've been told about us.'

'Like that CIA agent, Jack Fuller.'

Wilson smiled bleakly. 'Jack Fuller trades all over the place – where we go, he goes. So, yes, like Jack Fuller.' Glancing through the curved viewing window at the other side of the flight deck console, he saw that the sun now looked like blood pouring along the great bowl of the silvery horizon. 'The sun's setting, so they should be there by now. Complete the descent.'

Instantly, the *Kugelblitz II* started vibrating, wobbled a little, then, with its circular 'wings' rotating and their flashing lights forming a kaleidoscope, it steadied and descended vertically, first through the civilian and military flight paths, its radar constantly checking for approaching aircraft, then through the clouds, and finally all the way down to the circle of lights that marked the LZ, the landing zone, in the middle of a broad field that was encircled by electrified barbed-wire fences and further guarded by a large contingent of well-armed US Marines, spread equidistant around the perimeter.

Mere feet above the ground, whipping up dust, loose soil and leaves, the flying saucer bobbed a little and swayed gently as its hydraulic legs emerged obliquely from its convex base to dig into the ground. The bass humming sound faded away, the flashing lights blinked out in sequence, and then the saucer came to rest and was still.

Silence reigned.

Beyond the circle of upward-facing marker lamps in which the flying saucer had landed, nothing was visible except that broad, dark field and the

starry sky above it. Neither the electrified barbed-wire fence nor the Marines positioned around the perimeter were visible. For a while the saucer just sat there like a massive, silvery-grey mushroom, making no movement, producing no sound at all; eventually, however, the sound of a coughing engine broke the silence and a US Army jeep materialised out of the darkness to stop just outside the circle of marker lamps. The jeep's ignition was turned off, then its lights were extinguished, thus plunging it back into the darkness just outside the illuminated LZ.

In that darkness, Jack Fuller, wearing a light-grey suit with shirt and tie, clambered out of the jeep, followed by two Marines armed with 0.3-inch M1 semi-automatic rifles and carrying spare thirty-round detachable box magazines on their webbed belts. After staring thoughtfully at the flying saucer, Fuller nodded at the two soldiers, indicating that they should follow him at a reasonable distance. As they spread out behind him, he stepped between two of the marker lamps and walked slowly, carefully, towards the flying saucer.

Even as he was approaching the nearest edge of that immense, silvery-grey discus, a bass humming sound emanated from it and the top of a large plate, which before had formed part of the apparently seamless outer surface, moved away from the lower body, opening just enough to let out a long, thin blade of subdued whitish light. The top of the plate kept moving away from the wall, swivelling on hinges along its bottom end, falling backwards all the way to the ground, until it formed a wide ramp, eerily illuminated by the pale light pouring out from the loading bay of the saucer.

Three figures were silhouetted in that deliberately reduced lighting: a tall, slim man with two child-sized, oddly shaped creatures whose features could not immediately be defined. Only when Fuller had stopped near to where the ramp met the ground did he recognise the three figures as Wilson and two unfortunate Ache Indians, who had been surgically mutated to be fitted with metal prosthetics, including the replacement of the lower face and hands, thus turning them into robotic cyborgs, half man, half machine. What remained of their original faces was rendered even more visually dreadful by the fact that the only remotely human aspects to them were the oddly glassy eyes that turned this way and that, between the metal band of a studded stereotaxic skullcap and the metal nose of a prosthetic that had replaced the lower half of the face, including the mouth, jawbone and throat. Even Fuller, who took

certain horrors for granted, shuddered when he saw those pitiful, yet terrifying, creatures.

No wonder UFO contactees keep babbling about alien beings, he thought. What else could they possibly think, seeing creatures like these?

The cyborgs stood well apart and a little distance behind Wilson as the latter walked away from the ramp, to stop directly in front of Fuller. Glancing at Fuller's two armed Marines, he said, 'You know that bringing these men here is a waste of time. If you displease me, or in any way turn against me, they won't be able to help you.'

Fuller glanced at the two child-sized cyborgs standing behind Wilson and saw that they were holding what appeared to be stun guns in their myoelectric metal hands.

'Laser weapons?' he asked.

'What a bright boy you are, Fuller.'

'I like to keep up to date. So what do you want this time, Wilson?'

'Are you still here on behalf of President Eisenhower?'

'Yeah, right.'

'Why doesn't he send someone who has more authority. Why does he always send you?'

'Because, as you've doubtless noticed before, when dealing with the likes of generals Vandenberg and Samford, I'm a lot less antagonistic to you than men of a military mind-set.'

'You're antagonistic, all right. You just don't show it as openly.'

'That may be true, but the President still thinks it's best to keep the military out of this as much as possible. Also, he believes that if the wrong person finds out that the top brass of the White House and Pentagon are negotiating secretly with the likes of you, public outrage could lead to the fall of the whole government, including himself. Me, on the other hand... Well, I'm small fry and can be made to carry the can if we're found out. I'm not sure that's true at all, but that's what he believes.'

'You're not sure, but you know it's possible.'

'Right.'

'And you're willing to be sacrificed this way?'

'I love my country,' Fuller said.

'You're a fool.'

'So Fuller's a fool. What the hell? Now what do you want?'

For a moment it seemed that Wilson might actually display anger, but he simply stared steadily at Fuller, as if trying to read him. Obviously believing he had done so, he smiled bleakly and said, ‘As best I recall, when last you met my request for mass-produced components and other items, it left me owing you something.’

‘True enough. So you’ve come to pay off your debt to the US government?’

Again Wilson refused to rise to the bait by showing anger over Fuller’s bland mockery. Instead, he just said, ‘Yes.’

‘So what are you offering? Obviously not more scientific information. If so, I wouldn’t be here alone; you’d have asked for someone who could properly assess such information – not a scientific dumbhead like me. No, it must be to do with something else... Something to do with intelligence.’

‘You’re a fool, but you don’t lack common sense. That’s exactly it, Fuller.’

‘So *what* is it?’

‘I note that NASA has finally named the test pilots it’s selected for its first manned space project.’

‘Yeah, right: Project Mercury.’

‘I thought I should warn you not to let NASA become too complacent.’

‘Why?’

‘Almost certainly the Soviets will succeed, this September, in landing their *Lunik 2* spacecraft on the moon.’

‘Really?’

‘Yes. Over the past two years I’ve been abducting a variety of Soviet scientists, engineers, academics and cosmonauts, to brainwash them with chemicals, take control of their minds with minute brain implants via stereotaxic skullcaps, and send them back to where they came from as my spies. Right now I have such spies in the Moscow headquarters of the Academy of Sciences, where the *Lunik 2* flight was planned; in Moscow University, where the space experiments were carried out; at the cosmodrome living quarters in East Kazakhstan, where the cosmonauts are being trained; in the airfield at Baikonur, two hundred miles north of the Aral Sea, where the launch will take place; and at the radio tracking complex at Burokane, Armenia, where the flight and moon landing will be monitored. So, yes, I know what I’m talking about. I’ve already landed on the moon – albeit in secret – but now the Soviets are about to do the same, leaving the US well

behind in the space race.'

'That could be humiliating,' Fuller confessed.

'Which is exactly why the Soviets are working so hard to do it.'

'That's an important piece of intelligence, Wilson, but not exactly repayment for that last shipment of US supplies to your base in Antarctica.'

Wilson's smile was bleak. 'No, I'm forced to agree with that. I do, however, bring you something else.'

Fuller glanced at the two cyborgs standing behind Wilson in the eerie, subdued lighting emanating from the holding area of the 150-foot diameter flying saucer. Wondering what they were thinking, if anything, about what had happened to them, their surgical and mental mutation, he shivered involuntarily, then glanced beyond them, to the illuminated holding bay. The light coming out of the saucers was usually dazzling, even blinding, but this light was pale, almost yellow, and not all that bright, which meant that he could actually see more than usual – and what he saw was nothing. Clearly, the holding bay was only an entrance to the main, fixed body around which the massive rings revolved.

Disappointed, he glanced back over his shoulder, first at the two armed Marine guards behind him, then beyond the wide circle of marker lamps. The light of the lamps, however, made it impossible to see as far as the barbed-wire perimeter, where the other Marines would be standing guard, preparing to fire at the saucer, if so signalled. Still, it was no comfort to Fuller to know that Wilson was right: that if he, Fuller, said the wrong thing or made the wrong move, he wouldn't have a prayer. He'd be paralysed by a stun gun, dragged up into the saucer, and almost certainly never be seen again. It wasn't a comforting thought.

'So what's the offer?' he asked.

'You'll take this to the White House?'

Fuller sighed. 'Yes, Wilson, direct to the President. So what am I to tell him, other than what you're already told me?'

'As you probably know...' Wilson began.

'Don't tell me what I already know.'

'As you already know,' Wilson repeated, almost gritting his teeth in the first sign of anger that he had ever displayed, 'at the end of this year, in an unprecedented international agreement, a total of twelve countries, including Britain, America and the Soviet Union, will be signing a treaty stating that no

country can claim any part of Antarctica as its own, and that the continent must be held as a common preserve for scientific research.'

'A noble idea,' Fuller said.

'Once the agreement is signed,' Wilson continued, ignoring Fuller's sarcasm, 'scientific and exploratory bases will be springing up all over Antarctica.'

'Which gives you a problem,' Fuller said.

'Yes.' Wilson's gaze was as icy as the continent he seemed to love. 'So in return for a guarantee that there will be no attempts to locate or capture my base and that all sightings of my flying saucers over Antarctica will be treated with ridicule or suppressed entirely – as already they are in the United States and elsewhere – I'll guarantee that America will be the first to land men on the moon.'

'Well, we'd certainly appreciate that,' Fuller said. 'But unfortunately the US can't place restrictions on the other nations signing the Antarctic agreement.'

'The US is the only nation with the capability of launching an attack on my otherwise inaccessible part of Neu Schwabenland – still known to the West as Queen Maud Land – so I'm not yet concerned with the other nations, but only with the US.'

Realising that Wilson was as genuinely concerned as his kind could be, which wasn't much, though it was at least something, Fuller felt a flicker of pleasure, while also accepting that this trade, no matter how indecent, could not be refused. Whether or not he – or the White House or the Pentagon – liked it, they could not afford to let the Soviets be the first to land on the moon and would therefore have to accede to Wilson's demands – just as they had done so often in the past. This was truly a bitter pill to swallow.

'I'm still not sure that we can do as you ask,' Fuller lied, 'but I'll certainly present it to the President with my personal, strong recommendation.'

'Good,' Wilson replied, showing no sign of gratitude.

After a lengthy silence, in which Wilson seemed deep in thought, Fuller, losing patience, said, '*Well*? Anything else, Mr Wilson?'

'Yes, there *is* another matter. I'm concerned that a certain Professor J. Allen Hynek, well known UFOlogist and codirector of the Smithsonian Institution's satellite tracking programme, has been allowed to head an unofficial UFO advisory group recruited by Project Blue Book and including,

as well as the redoubtable Hynek, an astronomer, a physicist, a psychologist, and Major Robert J. Friend, the present head of Project Blue Book and a man too co-operative with civilian UFO groups for my liking.'

'Stop worrying about Hynek and his group,' Fuller said. 'Project Blue Book is practically on its knees and its so-called advisory group is just another red herring for the increasing number of professional and amateur UFO sleuths. That advisory group, believe me, will be disbanded by the end of next year, after serving its real purpose, which is to spread so much doubt and confusion amongst the UFOlogists that most of them will give up completely and go back to playing with toy submarines in their baths.'

'And Hynek?'

'What about him? When the group sinks, he'll probably go down with it. As for Project Blue Book, while it's continued to make a strong show of examining UFO cases, it's now under pressure from above – don't look at me! – to produce a report stating that after twelve years of investigating and analysing UFO sightings, the ATIC has *no* evidence to suggest that UFOs are either space vehicles, a threat to national security, or of any scientific value whatsoever. The same report will describe the UFO programme as a costly and unproductive burden on the Air Force. Finally, it'll recommend that Project Blue Book's staff could be more constructively used on other programmes.'

'Very good, Fuller.'

'I've nothing to do with it,' Fuller lied again, though he couldn't resist a proud grin. 'Anyway, while that report's being prepared, we're still encouraging the public to think of the UFOs in terms of extraterrestrials – your men in black are widely believed to be just that. So all in all, the UFOlogists are imagining everything *except* man-made UFOs.'

'I know you're reluctant to take credit for this,' Wilson said, 'but I have to tell you it pleases me.'

'Good. So we're even until you next need supplies. Can I leave now, Wilson?'

'Your detestation is all too obvious,' Wilson said, 'if badly misplaced. Look to your own government – the one you revere – and then tell me which one of us is truly moral.'

'I'm not up to that, Wilson.'

'No, I don't suppose you are. Morals aren't your strong point.' Wilson

glanced across the field, to where the other Marines were hidden in darkness. Though he couldn't see them, he knew that they were there and was amused by the thought. 'One last thing,' he said, returning his gaze to Fuller.

'What?'

'Have you heard about the woman from Maine?'

'No.'

'Stop lying. If I know about her – and I do – you must know that I know you were involved.'

Now understanding that Wilson really *did* have eyes and ears everywhere, Fuller, badly shaken, which was rare, simply shrugged as if it was of no consequence. 'Yeah, right, I know about her. So? *What* about her?'

'I'll tell you about her,' Wilson said, suddenly sounding as angry as Fuller had ever heard him. 'I've learnt from this case that the CIA, like the KGB, is heavily involved in parapsychological research, particularly the possibilities of telepathic communication with regard to spying. Before you try denying it, please let me say that regarding the woman from Maine, I can tell you that she accidentally broke into an experimental communication between a land-based, ESP-trained Naval intelligence officer and a submerged submarine. Any story to the contrary is nonsense.'

That Wilson had found this out was a truly frightening revelation to the normally fearless Fuller.

'I can't confirm or deny that,' he said, knowing how lame it sounded.

Wilson shook his head from side to side, as if pitying the attempted deceptions of Fuller and his kind. 'You're hoping to reach our level of achievement in this field,' he told him, 'but you're wasting your time. I know about your woman from Maine because I broke into your telepathic communication in that office in CIA headquarters in Langley, Virginia, and arranged for that flying saucer to hover over Capitol Hill as a demonstration of how advanced we've become telepathically. So you see, Mr Fuller, no matter how advanced you believe you're becoming, we'll always be at least one step ahead of you – just as we are with our flying saucer technology. Your men are wasting their time.'

'Maybe' Fuller responded, trying to sound more confident than he felt. 'Maybe not. You're playing a dangerous game with these trade-offs, so you just might slip up some day.'

'I don't think so,' Wilson said. 'Thank you and good night.'

Flanked by his two hideous, deadly cyborgs, he turned away without another word and marched back up the ramp, into his towering flying saucer. Knowing better than to be within that circle of marker lamps when the saucer took off, Fuller hurried away with his two armed Marines, clambered back into his jeep, and let himself be driven back to the other Marines keeping guard around the electrified barbed-wire fence. From the other side of that fence, Fuller and the soldiers looked up in awe as the flying saucer turned into a magically glowing, egg-shaped craft that had lights of different colours flashing in rapid sequence around its revolving rings. It lifted off vertically, hovered a few seconds above the ground, illuminating the surrounding darkness with its eerie whitish glow and kaleidoscopic lights, then suddenly shot up vertically, made an abrupt turn to the west, about a hundred feet high, hovered again for a moment, then shot off and dwindled rapidly, until it was no more than a glowing light the size of a diamond. That light also shrank, merging with the stars, then abruptly blinked out.

Though nothing unusual could now be seen up there, Fuller and the many men around him kept scanning the night sky.

'Jesus Christ!' one of the soldiers behind Fuller exclaimed in a stunned, disbelieving way.

'No,' Fuller responded, now staring at the sky and accepting that he might indeed be defeated. 'Jesus Christ was in the past, soldier. You've just seen the future.'

He clambered back into the jeep and told the driver to return him to the Vanguard Hotel in Cocoa Beach. He didn't anticipate getting a good night's sleep, but at least he could be alone there.

Fuller needed a dark cave.

Chapter Thirty-One

‘I don’t scare easily,’ Scaduto told Dwight when they were having cold beers in the sweltering heat of an outdoor bar in Carillon Park, Dayton, Ohio, in July 1960. ‘But I don’t mind admitting that this business is starting to put me on edge. Particularly this latest piece of news.’

‘What news?’

‘Haven’t you heard?’ Despite the heat, Scaduto was wearing his customary black-leather jacket, blue denims and high-heeled boots. His sideburns were ink-black and prominent. ‘It was in yesterday’s newspapers. Your former Project Blue Book chief, Captain Edward J. Ruppelt, has died of an unexpected heart attack.’

Dwight was shocked to hear that. Captain Ruppelt was even younger than he was. The last time Dwight had seen him was that sad day in December 1953 when he had informed them of the dire results of the Robertson panel report and, even worse, told them that Project Blue Book was being run down and most of its staff, including Ruppelt, dispersed to other locations. It had been a sad day for all of them, but Ruppelt had at least been his relatively young, decent, healthy self. Certainly not heart attack material.

‘I don’t like it,’ Scaduto said. ‘In 1953, Ruppelt leaves the Air Force. Three years later he writes a book in which he states categorically that UFOs are for real. Three years after that, he revises the book, reversing his previous opinions and insisting that UFOs are probably natural phenomena. And approximately one year later, in 1960, weary before his time, he dies of a heart attack. It sure makes you think, doesn’t it?’

‘Yes, it does.’ In fact, this shocking piece of news had reminded Dwight not only of the many other people involved in UFO investigations who had died unexpectedly, been killed in surprising ways, or committed ‘suicide’ for no discernible reason. It had also reminded him of the many other ways in which UFO investigators had been made to suffer, including financial hardship, problems at work, sudden transfers to far-flung locations, actual threats and

other forms of harassment from the mysterious ‘men in black’, and marital breakdowns based on one or other of the former. Something else not easy to forget was the fact that many UFO researchers had disappeared completely, leaving no indication of why or where they had gone. They had simply never been seen again.

Last but by no means least, the news of Ruppelt’s unexpected death, added to the mysterious nature of his unexplained reversal regarding the reality of the UFO phenomenon and subsequent slide into depression and poor health after leaving the Air Force, had brutally reminded Dwight of Beth’s bizarre, frightening experience eighteen months ago, when she had been driving (or so she had thought) past the garage that Dwight had worked and lived in during the years of their separation.

For months prior to the incident, Beth had been complaining that she was having bad nightmares, relating to UFOs and tormenting men in black, that she felt she was being followed, though she had never actually seen anyone following her, and that she was haunted by the general feeling that something unknown was making her constantly fretful. The day of the incident in question, when she had just dropped Dwight off at the Dayton airport for his flight to Washington DC for his first normal visit to Dr Frederick Epstein at the APII, she had imagined she was driving past the garage, taken over from Dwight by bachelor Frank Bancroft, then realised that she had actually being *staring* at it for some time through the window of her car, which was parked inexplicably by the side of the road. She then noticed that her wristwatch had stopped two hours previously – at approximately the time she would have passed the garage after leaving the airport. Yet her wristwatch was not the only item to have malfunctioned: when she tried to switch on the ignition of her car, it wouldn’t start. Presumably, then, it had stopped of its own accord, just as Beth was driving past the garage, about ten minutes after leaving Dayton airport. Which in turn meant that Beth – who could not recollect having stopped and had, for some time, clearly been *imagining* that she was driving past the garage, not just parked across the road from it – had blacked out, either just before or just after the vehicle had stopped, and had then remained unconscious for almost two hours.

It was damned mysterious.

Even worse was what Beth saw when she awakened... the immense circle created by the unnatural blowing of the wind, then given sharper

definition by the inexplicable scorching of the windblown grass, which ended up charred and smouldering; and then, infinitely more frightening, the discovery of Frank Bancroft, who had clearly died suddenly in mortal terror.

Since that incident, Beth had been more frightened than ever and Dwight, though he tried not to show it, had become more concerned for her and himself – he had even started worrying about Nichola's safety. Indeed, from that day on he had begun worrying that his UFO investigations were putting them all in mortal danger; but when he discussed this matter with Beth, she insisted that no matter the danger, he must continue the work and solve the mystery that was tormenting him, thus ridding himself of the obsession once and for all. Dwight had been deeply moved by her concern and courage.

'The news about Ruppelt is terrible,' he said to Scaduto, 'but obviously it isn't why you called this meeting. You could have told me about Ruppelt on the phone, so what you have brought me?'

'Man-made flying saucers,' Scaduto said.

Dwight glanced left and right, at the other customers packed around the trestle tables to take in the sun while drinking and eating. There were really too many people here... too many... too close to him.

'Finish your beer and let's go for a walk,' he said, feeling paranoid.

'Sure,' Scaduto said. 'I understand.' He hurriedly gulped the last of his beer, threw the can into the trash can near the table, then proceeded to stroll with Dwight through the park, which was, on this sunny day in July, filled with local people walking their dogs, teenagers careening about on roller-skates or bicycles, children playing with bats and balls. 'I think it's becoming more certain,' he began, 'that the UFOs seen over various Air Force installations are actually top-secret, highly advanced US-Canadian aircraft.'

He fell silent for a moment, letting Dwight take this in, but also relishing the melodrama, and continued talking as they meandered on through the park.

'I should remind you, Dwight, that at least *some* kind of saucer-shaped prototypes were actually constructed by the US and Canada: first, the US Navy's Flying Flounder and the Air Force's Flying Flapjack – projects reportedly worked on sometime between 1942 and 1947 – followed by the flying saucer that the Canadian government claimed had been aborted and passed over to the US in 1954.'

'Right,' Dwight said. 'I remember.'

'Now the most interesting thing about those projects is that the US Navy

claimed to have dropped its project back in 1947, though it was known to be still involved in super-secret aeronautical projects scattered around the White Sands Proving Ground, New Mexico – where so many flying saucers have been reported. Also, the Canadian government, while admitting that the enormous UFO seen over Albuquerque in 1951 was similar to the one they'd tried to build, claimed that they'd passed the project on to the US because they couldn't afford it... In other words, the UFO over Albuquerque could have been a US product based on the Canadian designs of 1947.'

'Where's all this leading, Tony?'

Scaduto stopped to light a cigarette and contaminate the pure air of the park with smoke. Though bright, he had an addictive personality that, so far, had given him a taste for alcohol, cigarettes and easy women. He had also flirted with marijuana, but so far had kept a decent reign on it. Inhaling, then exhaling a cloud of smoke, he started walking again.

'Ever since I began this man-made UFO business,' he said, 'I've found myself harping back on the fact that the first major contemporary sightings, the Kenneth Arnold sightings of June 24, 1947, took place near Mount Rainier in the Cascades in the state of Washington – which divides Canada from Oregon – and that Arnold had stated that *nine* silvery discs had disappeared in the direction of the Canadian border. As I've since found out, however, what wasn't so widely known at the time was the fact that on that very same day another man, Fred Johnson, prospecting about four thousand feet up in the Cascades, reported seeing six similar objects; and three days before that, on June 21, Harold Dahl, on harbour patrol in Puget Sound – which runs from the Canadian border to Tacoma – was following the coastline of Maury Island when he saw five UFOs manoeuvring fifteen hundred feet above the coast, before disappearing towards the open sea.'

'So what?' Dwight said, surprised by his own lack of patience. 'It's true that those facts weren't widely known at the time, but we covered the Arnold case pretty extensively at the ATIC, so we learnt about those other sightings a year or so later.'

'Okay,' Scaduto said, not remotely deterred by Dwight's show of impatience. 'Let's take it from there.'

Two young people were lying in the middle of the field on the right, under the shade of an elm tree. The girl, wearing tight blue jeans and a figure-hugging sweater, was practically buried under a young man wearing the same

kind of jeans, but stripped to the waist. Writhing together and kissing passionately, they were lost to the real world – something that Scaduto clearly noticed with his envious gaze.

'Throughout that whole month,' he continued, tearing his eyes away from the couple on the grass, 'there were a hell of a lot of sightings over the northwestern corner of the United States. By the first week in July there were also reports of strange, luminous bodies in the skies over the Province of Quebec, Oregon and New England. The following week, those sightings spread to California and New Mexico. By the end of the year – the same year the US Navy had, reportedly, *dropped* their flying saucer project – flying saucers were being reported from all over the country.'

'And the next major UFO flap was the Washington invasion of 1952,' Dwight said, 'of which I had personal experience.'

'Dead on the nose, pal.' Scaduto glanced back over his shoulder at the young couple making love on the grass, now a good distance away. The sight of them gave him distracting thoughts and forced him to concentrate. 'On reinvestigating that case,' he said, 'using your old ATIC reports as my map, I discovered that while the real flap had started on July 19, there was a record dated June 17 of several unidentified red spheres that flew at supersonic speeds over the Canadian air base of North Bay, in Ontario, then crossed over some of the southeastern states. I also discovered that nearly all of the subsequent Washington DC UFOs were reported as disappearing to the north, and that when the UFOs returned en masse, on July 26, their disappearance in a general northerly direction also applied.'

'All heading towards the Canadian border.'

'Right, Dwight, you've got it.'

'Well, it's certainly true that Lake Ontario and Lake Erie are as notorious as the Bermuda Triangle for the unexplained destruction of hundreds of aircraft and ships, the failure of gyroscopes and radio instruments, irrational behaviour in normally sane crew members, and, of course, the sighting of numerous UFOs. It's also true that Canada's one of the greatest aeronautical powers in the world.'

'Yeah,' Scaduto said, sounding richly satisfied. 'I never thought of Canada that way until I began my research. But during that research I came across an article, dated 1952 – at the height of the flying saucer scare – describing Canada as the Promised Land of Aviation. Considering that most Americans

of the time thought of Canada as a kind of No-Man's Land, I was suitably impressed to learn that in fact it was the home, even back in 1952, of a remarkable number of the most prestigious aircraft development companies in the world.'

'It also had, and still has, vast areas of heavily wooded and uninhabited land – ideal for hiding secret aeronautical research establishments.'

'Just what struck me,' Scaduto said, clearly thrilled that he and Dwight were on the same wavelength. 'So having learned these interesting facts, I decided to find out, once and for all, whether or not the Canadian flying saucer project had really been passed on to the US Air Force and, more important, if the Air Force had then really dropped the project, as widely reported.'

'So what did you learn?'

'A lot.'

Dwight liked Scaduto and was, in a sense, envious of his relative youthfulness, naive optimism, and Brooklyn-based 'street' wisdom; but sometimes, as he was forced to admit to himself, the young man's flair for self-dramatisation could be aggravating. For this very reason, he wanted to devastate Scaduto with a cutting remark, but all he could come up with was: 'Stop teasing me!'

'Okay,' Scaduto responded, satisfied with the belief that he had managed to get one up on the older man, whom he admired and wished to emulate. 'My research revealed that on...' He pulled a notebook from his hip pocket and glanced at it... 'On February 11, 1953, the Toronto *Star* announced that a *new* flying saucer was being developed at the A. V. Roe plant – now Avro-Canada – in Malton, Ontario.'

'This suggests that it wasn't the first one.'

'Shit, no,' Scaduto said, then continued to talk, picking up precise dates and details from his notebook. 'Following that February 11 press release, on February 16, the Canadian Minister of Defence Production, C. D. Howe, informed the House of Commons that Avro-Canada was in fact working on a mock-up model of a flying saucer capable of flying at fifteen hundred miles per hour and climbing straight up in the air.'

'Really?'

'It's all there in the morgues of the Canadian and other newspapers.'

'Wonderful,' Dwight said, becoming excited. 'Please continue.'

‘By February 27, Crawford Gordon Jr., then the president of Avro-Canada, was writing in the house journal, *Avro News*, that the prototype being constructed was so revolutionary it would make all other forms of supersonic aircraft obsolescent. Next, the Toronto *Star* was claiming that Britain’s Field Marshal Montgomery had become one of the few people to view Avro’s mock-up of the flying saucer. Shortly after that report, Air Vice Marshal D. M. Smith was reported to have said that what Field Marshal Montgomery had seen was the preliminary construction plans for a gyroscopic fighter whose gas turbine would revolve around the pilot, who would be positioned in the centre of the disc.’

‘Oh, my God!’ Dwight softly exclaimed, while glancing left and right at the many other people moving in both directions along the path winding through the park. ‘The *Omega*!’

‘Shit, man, you remembered! Yeah! The press dubbed that legendary machine “the *Omega*” and in 1953 the British *RAF Review* – the *Royal Air Force Review* – gave it a semi-official respectability by reprinting most of the unclassified Canadian research and including censored drawings of the actual prototype.’

‘The research and those drawings were actually *published*?’

‘Yeah... but only in Britain.’

‘Man, oh man!’ Temporarily forgetting his personal fears, Dwight felt like an excited schoolkid. ‘So what was the *Omega* like?’

‘According to the sketches,’ Scaduto said, again glancing at his notebook, ‘it was a relatively small flying wing, shaped like a horseshoe, with a lot of air-intake slots along its edge, ten deflector vanes for direction control, a single-pilot cabin topped by a cupola of transparent Perspex, and a large turbine engine that revolved around the vertical axis of the main body.’

‘Then it disappeared,’ Dwight said, trying to anticipate.

‘Not quite,’ Scaduto replied, still enjoying Dwight’s shock and excitement at his revelations. ‘In early November, 1953, Canadian newspapers were reporting that a mock-up of the *Omega* had been shown on October 31 to a group of twenty-five military officers and scientists. Then in March of the following year, the American press was claiming that the US Air Force, concerned at Soviet progress in aeronautics, had allocated an unspecified sum of money to the Canadian government for the building of a prototype of their flying saucer. Reportedly, that machine had been designed by the English

aeronautical engineer, John Frost – who'd worked for Avro-Canada in Malton, Ontario – and it would be capable of either hovering in mid-air or flying at a speed of nearly two thousand miles an hour.'

Dwight gave a low whistle of appreciation.

'This hot piece of news,' Scaduto continued, 'was followed by Canadian press assertions that their government was planning to form entire squadrons of flying saucers for the defence of Alaska and the far regions of the north. This, they claimed, was because the machines required no runways, were capable of ascending vertically, and were ideal weapons for sub-arctic and Polar regions.'

'Sub-arctic and Polar regions,' Dwight repeated, practically in a daze.

'Right,' Scaduto said, glancing sideways and grinning when he saw the growing awareness in Dwight's eyes. 'So, do you want to hear the rest?'

'Damned right I do,' Dwight said.

'On December 3, 1954, the Canadian Minister of Defence announced that the *Canadian* flying saucer project had been dropped, since it would have cost too much for something that was, in the end, highly speculative.'

Dwight stopped walking, glanced at the many people criss-crossing the park, walking their dogs, flying kites, roller-skating or embracing on the sunlit fields, and then found himself glancing more intently at them, wondering if they were as innocent as they seemed. He saw no men in black.

'So what makes you believe the saucer project wasn't dropped completely?' he asked Scaduto, who responded by turning to a new page in his notebook and glancing repeatedly at it as he spoke.

'Because on October 22 the following year, US Air Force Secretary Donald Quarles released an extraordinary statement through the press office of the Department of Defence. Among other things, he said that an aircraft of – I quote – *unusual configuration and flight characteristics* – would soon be appearing; that the US government had initiated negotiations with the Canadian government and Avro-Canada for the preparation of an experimental model of the Frost flying disc; and that the saucers would be mass-produced and used for the common defence of the sub-arctic area of the continent.'

'The sub-arctic area,' Dwight murmured distractedly. 'We're back with the sub-arctic.'

'Right,' Scaduto said. 'Ice and snow... But it didn't end there.'

Now Dwight stopped walking to stare hard at his young friend. He no longer gave a damn who overheard him. Paranoid or not, he was convinced that everything he said and did was being monitored somehow. Given that conviction, whether sane or mad, he could only follow his nose.

'Okay,' he said, following his nose. 'Tell me the rest of it.'

Grinning wickedly, Scaduto took a deep breath, held it in for some time, then let it all out as he started talking again.

'By February last year, the press was receiving ambiguous Air Force statements about a revolutionary new aircraft that had been jointly undertaken by the US Air Force, the US Army, and the Canadian government. Then, on April 14, during a press conference in Washington DC, General Frank Britten implied that the first test flight of the aircraft was imminent and that it was destined to revolutionise traditional aeronautical concepts.'

'So when's that test flight going to be?' Dwight asked, now realising that Scaduto's whole spiel had been leading up to this single, crucial point.

Scaduto brushed his ink-black sideburns with self-worshipping fingers and, taking a deep breath of the kind that all born actors employ, said, 'The test flight's already been completed. The results haven't been announced yet. But - get this! – the press has actually been invited to look at the saucer on August 25 – next month – at the Army Transport Museum at Fort Eustus, Virginia.'

'And we're both going, of course.'

'You bet.'

'What's the bet we don't see much?' Dwight said.

'I don't bet,' Scaduto said.

Amused despite himself, being otherwise deeply troubled, Dwight left the park with Scaduto, bid him goodbye, then hurried home to take comfort from Beth's embrace, taste her full lips, suck the juices from her mouth, then lose himself in the tangle of her arms and legs, in her centre, her very being, in that bed they had bought many years ago, when, in fear and trembling and mutual need, they became man and wife.

Dwight's dark cave was love.

Chapter Thirty-Two

Dwight's dark cave of love was a help, but not a cure, during the nightmarish month that followed his meeting with Tony Scaduto and the press conference arranged for the unveiling of the first officially acknowledged man-made flying saucer. Already haunted by her frightening experience at Frank Bancroft's garage, Beth had then started experiencing terrifying nightmares about UFOs and faceless men dressed in black. Soon she was also being tormented by the feeling that she was somehow being followed and kept under almost daily observation. She felt this even when in her car.

'It's hard to explain,' she told Dwight, 'because there's nothing I can put my finger on – nothing seen or heard or actually felt. But when I'm driving, particularly when on the roads outside town – empty roads – I have the feeling that something is pressing down on the car, exerting some kind of pressure, and that pressure is also pressing down upon and around me.'

She and Dwight were sitting in deck chairs out on the back yard of the tract house they had leased just a week ago, having decided that they needed something bigger than the previous apartment near Carillon Park. Nichola, presently playing in the small, pumped-up pool in front of them with a neighbour's daughter, Tanya Harper, was all of twelve years old and would soon be a teenager in need of her own space, so that had been their major consideration when deciding to move. As the sun was now blazing out of a clear blue sky, Beth and Dwight, both in swim suits and relishing the privacy of their own back yard, were trying for a suntan.

'Any effect on the car itself?' Dwight asked. 'Any malfunctioning?'

'No – yes! It doesn't malfunction, but it definitely drags. In fact, I often find myself checking the handbrake, thinking I forgot to release it when starting off. Then I find myself looking out of the car, trying to see what's around me, what's slowing me down.'

'Ever stop and actually get out of the car to look directly above it?'

'Yep. That shows you how bad it is. I sometimes get out and look up, but

I've never seen anything. Strangely, that worries me even more. And I become almost sick with anxiety when Nichola's with me. I even feel that odd... *presence*... call it what you will... when I'm taking her to school.'

'Does Nichola feel it as well?'

'She's never mentioned it and I've never asked. No, she seems happy enough, belted in there.'

During the last two weeks of that sweltering July, 1960, Beth's nightmares had become more frequent and the feeling that she was never entirely alone increased dramatically. She began experiencing it while waiting outside Nichola's school, at the supermarket, sometimes even when sunning herself out in the back yard or tending to her lawn.

'I'll be feeling perfectly fine,' she explained to Dwight, 'engrossed in what I'm doing, and suddenly, right out of the blue, I'll find myself glancing around me, expecting to see someone or... *something*.' She shrugged forlornly. 'It's a feeling so strong, you're convinced someone is staring right at you and they're close – you know? Like about the other side of the yard fence, just across the street, or only a short distance behind you in the mall. A very *strong* feeling. Shivery. I'm thinking of the shopping, or about what Nichola's doing at school, or maybe where we should go on our next vacation – then, whammo! My head jerks around before I even know it and I find myself staring to the side, behind me, wherever, expecting to see... yeah, a man, or men, in black. I always expect to see *them*. And of course there's never anyone there and, as I said, in some way that's even worse. 'Cause sure as hell it makes you think you're losing your mind or having a breakdown.'

By early August, Beth's conviction that she was being followed was confirmed when a black limousine did indeed start following her, just about every time she ventured out. At first she thought she was imagining this, but at the end of the first day with that vehicle on her tail – a particularly busy day that had her driving here, there and everywhere, including school in the morning, the supermarket, the houses of a couple of friends, then school again in the afternoon to collect Nichola – she realised that the limo was real enough and definitely following her when it stopped everywhere she stopped, then started up again and followed her when she moved off. By the end of the first day of this, she was truly frightened.

The process continued throughout a second day, then a third and a fourth. When Beth stopped, the limo stopped as well, always parking within sight of

her, though never close enough for her to see anything other than the figures of men in... black suits. As they were always too far away for their features to be discerned, Beth was reminded of her nightmares, in which the men in black one-piece suits always seemed somehow faceless.

Finally, during the fifth day, when she was waiting for Nichola to come out of school and suffering the dreadful fear that the men in black might abduct her, she got out of her car and hurried along the sidewalk towards the limo parked a good distance away. The limo didn't move until she was approaching it – until she could clearly see the two men in the front – black suits, black roll-necked pullovers, dark glasses – but could still not make out their features. Just as she was coming close enough to see what they looked like, the limo pulled away from the sidewalk, did a U-turn and raced away from her.

At once relieved and frustrated, Beth returned to her car and waited for Nichola to emerge from the school. When she had collected her and was driving her back to the house, the black limo came out of a side street and sat on her tail again. When she entered the house, clutching Nichola's hand, the limo parked a good way along the street, but close enough for her to see it from the living room window. Just as she was picking up the phone to call the police station, the limo moved off.

'Just like that,' Beth explained to Dwight, snapping her fingers. 'As if they could see exactly what I was doing, even when I was inside the house. The second I picked up the phone, those bastards drove off.'

That, however, was the last time she was tailed by the men in the limo. Unfortunately, during the second week in August, she began to have serious lapses of memory and what appeared to be brief blackouts, which, like her experience at the garage, left her feeling bewildered and disorientated. The blackouts were not dramatic and at no point harmful – she never collapsed or lost control when driving her car – but they were of a nature that was just as wrenching emotionally.

Preparing dinner in the kitchen, some time later, she would abruptly find herself lying on the bed or the sofa in front of the TV with no memory of having made the move, but with vague recollections of the usual nightmares about UFOs and men in black. Packing her shopping into the trunk of her car outside the supermarket, she would suddenly find herself emerging from the by now customary nightmares, this time slumped over the steering wheel,

with the trunk still open and the rest of the shopping still in the trolley. Sitting in her car outside the school, waiting for Nichola to emerge, she would suddenly see Nichola standing forlornly on the sidewalk as the last of the other kids either walked off or were driven home by their parents. Though unable to recall the children emerging from the school, she would rush guiltily to collect Nichola, her head still filled with a vision of herself being surrounded by the men in black in a circular, brilliantly lit, white-walled room. Such lapses of consciousness, and the nightmares contained within them, gradually made her a nervous wreck.

Beth went to see her doctor and told him she felt tense and couldn't sleep, though she didn't mention the real cause of her problem. When Valium was prescribed, some of her tension slipped away, but even the sedatives didn't help when, watching Nichola playing with Tanya in the park, she lost consciousness again and awakened to see three men in black suits talking to both children. When Beth rushed towards them, the men, too distant to be made out clearly, glanced in her direction, then hurried away to melt into the trees around the edge of the playing field. When Beth, her heart pounding furiously, asked Nichola what the men had wanted, her daughter replied: 'They asked if my mom was Beth Randall. I said, "Yes," and they just looked at each other without saying anything else. Then you came along.'

'If those men ever come near you again,' Beth warned Nichola, 'you run away and come straight to me. Understood?'

'Yes, Mom.'

Beth's nightmares then became more vivid and frightening. She dreamed that the men in black had abducted Nichola. She had another dream about Dwight disappearing and never being seen again. Mostly, however, her dreams were composed of hallucinatory, fragmented recollections of that great circle of black ash around the garage once run by Dwight; the look of stark terror on the dead Frank Bancroft's face; herself stretched out on what she felt was a surgical bed of cold metal, staring up at a ring of faces, some human, others part-metallic and dreadful: small creatures with alien faces and steel claws for hands; then curving, steel-grey corridors, a room filled with severed human heads and other bodily parts; and then herself strapped to a chair with a metal cap on her head; and, finally, white-painted steel panels sliding apart to reveal panoramic windows and, beyond them, a vast, desolate terrain of ice and snow.

The dreams, though fragmented, were relentless in the terror that they created for her, making her jerk awake, screaming, bathed in sweat, to be held and rocked by a concerned, helpless Dwight.

'It's real!' she once sobbed. 'I know it's real!'

'No, it's not,' Dwight replied. 'You're just having bad dreams, Beth.'

But even he didn't sound convinced.

In fact, Dwight was, at that point, being torn between his real concern for Beth and his rage against those who were doing this to her. It was a deeply personal kind of rage, focused on the men in black, because he now believed absolutely that they existed and were responsible for what was happening to her. Yet even as his anger grew and he determined to fight back, he was frustrated because the men in black made no more appearances.

Instead, worse things happened.

The first manifestation was similar to Dwight's experience in the motel outside Albuquerque, only this time it happened right outside his own home.

Beth had taken some Valium and was still having trouble sleeping, with Dwight holding her in his arms, when the latter felt a distinct rise in temperature, heard a bass humming sound from outside, as if directly above the house, then was startled by the violent shaking of the bed as striations of brilliant light beamed in through the window. The bass humming sound grew louder, then turned into a vibrating presence, a faint pressure, as the room shook even more violently, with framed pictures swinging crazily on the walls and ornaments falling off chests-of-drawers and cupboards. Nichola cried out in her bedroom. 'Mom! Dad!' Though sedated with the Valium, Beth tore herself from Dwight's embrace and ran into Nichola's bedroom as Dwight rushed to the window and looked out.

He stared into a dazzling radiance. It was beaming down from above the house – so bright he couldn't keep his eyes open. Cursing, he fumbled blindly at the window catches, to unlock them and open the window. As he was doing so, the bass humming sound cut out, the room stopped shaking, and then, when he opened his eyes, he was able to see clearly again.

Moonlight was shining on the untouched back yard. Nothing else. He opened the window as Beth returned to the bedroom, one arm around the sobbing Nichola's shoulder, patting her head reassuringly with her free hand. Dwight stuck his head out of the open window and looked up as high as he

could, trying to see directly above the house. He saw a shrinking light, what might have been a shooting star, then it blinked out abruptly, leaving only the starry sky.

'It's all right, it's all right,' Beth was repeating consolingly to the sobbing Nichola, where they now lay together on the bed. 'It's all right, sweetheart.'

But it wasn't all right. In fact, it was just beginning. During the final week before the press viewing of the Avrocar, as if as a warning to Dwight, the visitations occurred every night for five nights in a row, with the house shaking more each time, the noise growing louder, the inexplicable pressure becoming stronger, the contents of the house flung about and smashed, as if by a poltergeist. As Nichola howled in Beth's arms and the latter shrieked for the manifestations to stop – not knowing who or what she was shouting at, but staring fearfully at the closed window – the striations beaming in from outside would start flickering like strobe lights, the rate increasing every second, until Dwight, Beth and Nichola saw each other as bizarre, jerkily moving figures in a disorientating, constantly changing, chiaroscuro filled with hellish noise and applying an indefinable pressure upon them, making them feel that their heads and hearts were going to burst.

Sometimes the burners on the cooker would come on of their own accord; other times water would pour out of the taps, flooding over the rim of the sink and onto the floor; then the electric lights, radio or TV would come on inexplicably, adding to the general bedlam and visual chaos.

Each night was worse than the one before, with the lights brighter and flickering faster, the bass humming sound deeper and increasingly *physical* – an infrasound – and the pressure around their heads tighter and giving them headaches. Each night, when the phenomenon had ended, Dwight would either jerk the window open and stick his head out or run on to the front lawn to see what had caused it – and each time he only saw what he thought, or imagined, was a tiny light shrinking until it disappeared directly above the house, leaving only the stars in the night sky.

By the fourth day of the final week before the press viewing of the Avrocar, while the outside of the house remained normal, the grass on the front lawn and back yard was singed black. Remarkably, there was no damage to any of the neighbours' houses and tentative enquiries produced no sign that the neighbours – their houses all spaced well apart – had heard or seen anything unusual.

‘If this happens once more,’ Dwight told Beth when they were tidying up the latest mess of broken glass, picture frames and ornaments caused by the violent shaking of the house the night before, ‘I’m going to send you and Nichola to stay with your folks.’

‘Every night,’ Beth said, practically whispering, as if talking to herself, not really there. ‘Why every night?’

‘I don’t know, honey.’

‘They don’t attempt to get near us. We never see them. What do they want?’

We don’t even know who ‘they’ are, Dwight thought, but I better not say that.

‘One more time,’ he said instead, ‘and you’re out of here. You and Nichola both. I don’t know what it is, how it’s happening, but I’m getting you out of here.’

‘I’m not going if you don’t,’ Beth said.

‘Yes, you are,’ Dwight insisted.

The fifth night was the worst of all. The visitation came so late that they thought it wasn’t coming, and Beth was actually slipping gratefully into sleep. It was just before four in the morning and she was lying between Dwight and Nichola, who was now too frightened to sleep in her own bed. Dwight was still awake, looking sideways at the two most important people in his life – his wife and daughter – choked up to see them sleeping together, when he suddenly turned cold, then hot, and heard that familiar bass humming sound. At first shocked, then plunging into a cauldron of rage and despair, he reached out to Beth as her eyes opened wide, changing instantly from drowsiness to terror. Even as Beth let out a moan and turned to embrace the awakened, frightened Nichola, the bass humming sound became louder, an almost physical vibration, and the whole room began to shake, with the framed pictures again swinging crazily on the walls while ornaments and other bricabrac rattled and fell to the floor. As Nichola cried out, ‘Mom! Dad!’ and Beth held her close, pulling the sheets over both of them, light suddenly beamed in through the window, illuminating the bedroom, and then turned into a chiaroscuro flickering on and off with a rapidity that was totally disorientating.

‘Bastards!’ Dwight bawled.

As if in response, the bottom end of the bed leapt up in the air and banged

back down on the floor. The lamp on the bedside cabinet became a fountain of crimson sparks and then exploded with the wires spitting blue and yellow flames. Instinctively, Dwight rolled off the wildly rocking bed, jerked the plug of the lamp from its socket, then smothered the flames with the shirt he had draped over a nearby chair. Nichola was wailing in terror under the bedsheet, being comforted by Beth, as Dwight crawled on hands and knees across the floor, showered in debris from the plaster exploding out of the ceiling and raining down upon him.

More cracks spread across the ceiling. The bed jumped up and down liked a crazed beast. The floorboards creaked, screeched and then snapped apart under the magically heaving carpet. Though dazzled by the flickering patterns created by what seemed like strobe lights, Dwight still managed to reach the door of the bedroom. Glancing back, he saw that the bed had stopped rocking and the ceiling was no longer raining broken plaster. Knowing that Beth and Nichola, no matter how upset, would be all right, Dwight, in a fury that obliterated his terror, jumped to his feet and ran across the living room, heading for the front door.

As he crossed the living room, more cracks zigzagged along the ceiling directly above him, as if tracking his movements, showering him once more in falling plaster and clouds of powder. Even here, the furniture was jumping, lightbulbs were exploding, and the mysterious light was pouring in through the windows, still flickering rapidly. Disorientated by this, Dwight repeatedly bumped into furniture and once turned in the wrong direction, but eventually, by groping his way along a wall, he reached the front door. Without hesitation, not caring if he lived or died, he tugged the front door open and rushed outside.

What he saw there stopped him in his tracks.

The lights beaming in through the windows of the house and flickering on and off rapidly were coming from disc-shaped metallic objects no more than three or four feet in diameter and hovering in mid-air by the windows. The instant that Dwight, still in his pyjamas, rushed out of the house and stopped, frozen by shock, on the lawn path, the lights blinked out and the disc-shaped objects started spinning. The speed of their spin increased until they became no more than silvery-white blurs. Then they suddenly ascended vertically, as if shot from a cannon.

Looking up, Dwight nearly fell backwards with shock when he saw the

small, spinning discs vanishing into what appeared to be an enormous black hole inside an even bigger circle formed by multicoloured lights that winked on and off rapidly, to form a dazzling kaleidoscope. Approximately 150 feet wide, that circle was exerting a downward-thrusting pressure that seemed to press heavily upon Dwight.

Glancing about him, he saw that the stars were visible outside that great circle of flashing lights and that directly below the lights, on the ground – at least what he could see of the ground where it wasn't broken up by fences and sections of the other house – grass and dust was being sucked up to quiver frantically or billow in a curved line that obviously formed another circle matching the one above.

No sooner had Dwight noticed this than the flashing lights blinked out, leaving only a black hole about 150 feet wide and definable only by the stars surrounding it. Then, with a speed that confused Dwight's visual senses, the black hole shrank, letting the stars rush back in, followed by an abrupt flaring of lights hundreds of feet up. The flaring light than shrank and vanished altogether, leaving only the darkness.

Now, where that great hole had been, there was only the normal, star-drenched sky.

The grass and dust that had been sucked up in a matching circle had settled down again and the downward-thrusting pressure inside the circle could no longer be felt.

Realising that he had just witnessed the ascent of some kind of enormous, circular UFO and that the small discs had flown back into it before it ascended, Dwight hurried back into the house, through the living room and into the bedroom. He found Beth and Nichola embracing under the bedsheets, both frightened, though unharmed.

Convinced that the visitations were not only a means of warning him off his UFO investigations, but were also related to the forthcoming press viewing of the A. V. Roe man-made flying saucer, the Avrocar, Dwight believed that the night before the viewing, tomorrow night, would be the worst of all.

'I want you to take Nichola and go spend the night with your folks,' he told Beth the following morning, as they sat side by side on the sofa in the wrecked living room. 'I think you could both be in real danger. The effects of that... whatever it is... have been worse with each successive night, and I'm

afraid that tonight the damage will be even greater – so I don't want you and Nichola here.'

'I don't want *you* here,' Beth said, rubbing her bloodshot eyes and looking haggard. 'I'm convinced that sooner or later they're going to enter the house and take you away. I'm sure that's what it's all about.'

'If they do, I want to be here, Beth. I want to know who they are. I can't run away now.'

'If they take you, you'll never be seen again.'

'That's a chance I've got to take, Beth.'

She clung to him, sobbing, begging him not to stay, but after comforting her, he made her call her folks, Joe and Glenda McGinnis, and arrange to spend the night with them, in their home at the far side of Carillon Park. She was still sobbing as she packed an overnight bag for herself and Nichola, but she managed to gain control of herself when Dwight led her and Nichola out to the car and kissed them goodbye.

Dwight watched the car move off along the road and then disappear around the corner at the far end. It was six in the evening.

Returning to the house, which Beth had spent all afternoon carefully tidying, Dwight poured himself bourbon and then took an armchair in the living room, waiting for nightfall. The telephone rang. When he picked it up, Beth told him that she was in her parents' home, that the short drive had passed without incident, and that he was to call her, no matter the time, when the visitation had ended. Dwight promised to do so, then he put the phone back on its hook and finished his bourbon. Two more were poured and a few more hours passed before the sun sank and darkness prevailed. Dwight kept the lights out. He waited patiently for the visitation. He sat in that empty room until dawn broke, but there was no visitation.

'Nothing,' he said on the phone to Beth at nine the next morning. 'Not a damned thing. How about you?'

'The best sleep I've had in weeks,' Beth replied. 'I feel like a new woman.'

'It's as if they knew...'

'They knew. They know everything, Dwight. I'm convinced I was followed as I drove here, but they didn't do anything. I think they've been warning you off – maybe because of today.'

'The Avrocar.'

'Yes. They were letting you know that they know what you're doing and

don’t approve of it.’

‘But they didn’t come last night.’

‘The warning’s over. I don’t think they’ll come back. At least not tonight or in the immediate future. They’ll do what they want, when they want, but it won’t be tonight. If they’d wanted to stop you going to that press conference, they’d have done it last night. We’re coming home, honey.’

‘You do that,’ Dwight said.

He put the phone back on its hook, leaned against the wall, covered his face with his hands and sobbed tears of relief.

Later that day, Dwight flew to Washington DC, where he was collected by Tony Scaduto and Bob Jackson, then driven to the Army Transport Museum at Fort Eustus, Virginia. There, in a large, gloomy hangar-sized room that contained no other exhibits, with a whole pack of journalists and photographers, the latter including Jack Judges, who had first photographed the sole exhibit on display by flying illegally over the base, he was shown the formerly secret, now unclassified, man-made flying saucer prototype, the Avrocar.

What he, and the others assembled, were shown was an experimental, piloted aircraft, forty feet in diameter and weighing 3,600lbs, that combined the characteristics of air-cushion machines: a crude flying saucer based on the principles of the jet ring and, according to the Army press officer, barely able to rise above the runway during its recent test flight.

It couldn’t possibly be mistaken for what had come down over Dwight’s house the previous evening.

‘This is bullshit!’ Dwight whispered to Scaduto and Bob Jackson. ‘Just another red herring.’

‘Apart from the disc-shaped platform of this aircraft,’ the Army press officer informed them, standing beneath the Avrocar where it was dangling at an angle from the ceiling, ‘the most revolutionary feature of the prototype is the use made of the gyroscopic effect of a revolving power plant to acquire stability. As you can see...’ he pointed to the dome-shaped Perspex cabin in the middle of the disc-shaped body... ‘the pilot is seated in a central Perspex capsule that can be ejected should the aircraft find itself in difficulties. A gas-turbine power plant of unconventional design revolves around this capsule at several hundred revolutions per minute. A stationary wing containing a series

of slots in the leading edge, which feed air to the turbine, surrounds the rotating power-plant housing and forms the rim of the aircraft. Part of the intake of air is compressed, fed to combustion chambers in the wing, and ejected through a series of exhaust orifices lining the outer rim of the disc. The remainder of the airflow is fed over a series of vertical deflector vanes in the flattened trailing edge of the aircraft for control purposes. A tripod-type launching gear was planned to enable the saucer to take off vertically, but with the negative results of the test flight, the work never even went that far.'

'What technical details can you give us?' Bob Jackson asked.

'I'm afraid most of those are still classified,' the Army press officer replied blandly, 'but I *can* tell you that the powerhouse of this particular prototype housed three one-thousand-horse-power Continental J69-T-9 turbojets. It was designed to have a maximum forward speed of three hundred mph and a range of one thousand miles; but when test flown last month, it never did more than hover within ground effect.'

'Is this the only such prototype being developed?' Tony Scaduto asked.

'It's not the first,' the press officer confessed, 'but almost certainly it's going to be the last.'

'Why?' Bob Jackson asked.

'The truth of the matter is that although quite a number of aircraft featuring circular, disc-shaped or annular wing forms have been built and flown over the past few years, the aerodynamics of such shapes have been fully established. The design problems facing us are therefore formidable and, in the view of the majority of our engineers, probably insurmountable.'

'So what's happening to this project?' Scaduto asked.

'We'll be dropping it,' the press office said. 'As for this particular prototype, the Avrocar, to prove that all the talk of flying saucers is bullshit – sorry, ladies and gentlemen, I meant *nonsense* – we're going to leave it here on display for the benefit of the general public, along with everything else in the Army Transport Museum. We *have* been interested in the potential of air-cushion machines capable of vertical take-off and landing – also known as VTOL – to avoid the necessity of lengthy airways. In the event, the most we could come up with was this relatively primitive, so-called flying saucer. As for *real* flying saucers... well, if you want those, you'll have to go and buy yourselves tickets to some science-fiction movies, which I'm told are very popular these days. So please rest assured,' he continued when the laughter of

the assembled journalists had died down, ‘that the Department of Defence will soon be formally withdrawing from participation in this interesting, failed project and that no other disc-or-spherical-shaped prototypes are on the agenda. Ladies and gentlemen, thank you.’

‘Withdrawing from participation with whom?’ Scaduto whispered when the press conference was over and they were making their final, careful inspection of the Avrocar.

‘Good question,’ Dwight said.

Part Three

Chapter Thirty-Three

Approximately three years after the public unveiling of the Avrocar, which had killed off most public speculation about the possibility of man-made UFOs, Jack Fuller, who had engineered the whole scam, was having a bad morning in his office in CIA Headquarters, Langley Field, Virginia. This was due mainly to the fact that he was in the middle of an acrimonious divorce from his second wife, Lorraine Sandison, and she was trying to drive him mad on the telephone.

After his disastrous, eighteen-month marriage to Belinda Wolfe, the ravishing brunette daughter of Georgetown aristocrats, Fuller had vowed never to marry again. He didn't want kids, he didn't believe in fidelity, and he had a low boredom threshold when it came to sex or romantic adventure. Unfortunately, he also had an eye for sophisticated beauties and an inability to take 'No' for an answer. His second wife, Lorraine, another child of wealthy parents, though from Alexandria, Virginia, had resolutely refused to surrender completely to him until he had agreed to tie the knot. As she was stunningly beautiful and an adroit sexual tease, he had finally caved in and convinced himself that this time the marriage would work out.

Once he had bedded Lorraine, however, his desperate need to possess her waned rapidly. Subsequently, he had refused to give her children, returned almost immediately to the pursuit of other women, and beaten her up once or twice when she refused to submit to his more outrageous sexual demands, which included what he thought was only a *modest* brand of sado-masochistic frolics. Within three months, Lorraine, a notably cool and, in many ways, calculating beauty, was a sobbing wreck who spent more nights sleeping in her parents' mansion in McLean, Virginia, than she did in Fuller's fancy apartment off Dupont Circle in Washington DC. Two months ago, encouraged by her outraged parents, she had applied for divorce on the grounds of adultery and repeated sexual abuse – this after only seven months of marriage. In fact, Fuller had been relieved, wanting out of the marriage,

until Lorraine started picking up the telephone to fill his ear with scorn and various legal threats. When Fuller wasn't listening to her, he was listening to his lawyer, which in no way made him feel any better.

Fuller was therefore in a bad mood when his secretary called through to say she had a former USAF Captain, Bob Jackson, on the line, wishing to speak to him on behalf of the Aerial Phenomenon Investigations Institute.

Aware that APII was headed by that troublemaker, Dr Frederick Epstein, that it was now using the meddlesome Dwight Randall as a freelance stringer in Dayton, Ohio, and that it had recently been kicking up a stink about CIA involvement in the suppression of information about UFOs, Fuller was about to tell his secretary to give Jackson the brush-off. But realising that he needed some distraction from Lorraine and her scavenging lawyer, and, also, that he could not resist finding out what Bob Jackson, Dwight Randall's best friend, wanted with him, Fuller told his secretary to put the call through.

'Mr Fuller?'

'Yeah, this is special agent Jack Fuller. Is this a personal call, Mr Jackson, or are you ringing up on behalf of APII?'

'On behalf of APII.'

'APII isn't popular with this office at the moment,' Fuller sardonically informed him. 'All that talk about CIA suppression of UFO information.'

'That's the impression we get, Mr Fuller.'

'Impressions can be misleading.'

'Actually more than impressions, Mr Fuller. We have a fairly substantial bundle of evidence here to support our contention that the CIA is involved in the suppression of UFO material and the harassment of witnesses.'

'Well, you guys tend to see what you want to see,' Fuller said blandly, 'and what you're reading isn't always what it seems. Your organisation has us all wrong, but this being a democratic society, I guess that's your privilege. So what did you call me for?'

'Because we're not at all sure that this is a democratic society.'

'Oh? Why's that?'

'We've come across some old records indicating that you were the CIA officer in charge of the intelligence team that checked the Socorro UFO crash site with local farmer Marlon Clarke, way back in 1947.'

'No secret in that.'

'According to local newspaper records, Clarke disappeared soon after being

interrogated by you and Air Force intelligence about the sighting.'

'If you're implying that the CIA had something to do with his disappearance, I can only say that's paranoid nonsense.'

'I wasn't about to say that, Mr Fuller. I was only going to ask if, since 1947, there's been any new information on the fate of Mr Clarke?'

'The short answer is "No." Marlon Clarke disappeared without trace and hasn't been seen or heard from since. We, the CIA, know no more about his fate than you do. But I'm sure that's not what you really phoned me about.'

'No, it wasn't.'

'Get straight to the point, Mr Roberts. I'm here to oblige.'

'Are you willing to tell me, either on or off the record, exactly what you found at the Socorro UFO crash site?'

'I've told this to the ATIC and I've told it to the NICAP and I've also told it to your APII investigators a thousand times: what I and the others found at the crash site was the remains of a Rawin weather balloon – no more and no less. As for Marlon Clarke, he was drunk when he saw the so-called UFO flying overhead, drunk when he drove out there to see it close up, and still drunk when we arrived at his ranch to interrogate him. As for his subsequent disappearance, he probably drank himself to death in the desert and then got dragged away by a wild animal. Those things happen to his kind out there. Anything else?'

'Yes,' Jackson said. 'I don't suppose it'll come as any surprise to you that the two biggest civilian UFO organisations in the United States are feeling an unexpected financial squeeze due to a dramatic decrease in press publicity about UFOs and a corresponding wane in public interest.'

'So the membership of your UFO organisations is dwindling,' Fuller said, not attempting to hide his satisfaction.

'Yes,' Jackson admitted. 'And it's our belief that this came about because of a deliberate policy of suppression on the part of the government, through the CIA, which was bothered by our joint call for, and support of, Congressional hearings about the UFO problem.'

'That's some mouthful,' Fuller said, 'so I'm not sure what you mean.'

But of course he *was* sure... In July 1960, under pressure from the general public and, in particular, APII and the ATIC, the Senate Preparedness Committee had demanded briefings and résumés from the Air Force on some of the major UFO flaps, including the famous Washington DC and Levelland

sightings. At the main briefing on July 15, the congressmen present did not go easy on the Air Force, practically siding with the civilian UFO organisations and insisting that in future the Air Force had to keep the committee informed of all pertinent sightings. Nevertheless, against the protests of Dr J. Allen Hynek, then a consultant to the ATIC's Project Blue Book, but with the firm support of Fuller, on behalf of the CIA and Major General Luehman, director of intelligence, the call for public hearings was again resisted.

'We weren't in the least bit bothered by the thought of Congressional hearings,' Fuller lied, 'and certainly did nothing to head them off.'

'Well *someone* did,' Jackson insisted. 'Within a few weeks of the committee's request to be kept updated on all sightings and its recommendation that Project Blue Book be given more funds, it became perfectly clear that information on sightings was not being supplied and that the request for more money had been ignored. It had also become clear that the Air Force, despite the disapproval of the congressmen on the committee, was still insisting that it was doing all that was required regarding UFOs, when in truth it was doing nothing at all.'

'Money recommended by Congressional committees often ends up being side-tracked – usually to other benefactors recommended by those very same committees. It may not be correct, but it's hardly cause for conspiracy theories. As for the committee not being sent the sighting reports they requested, you'll have to take that up with Major Friend, the head of Project Blue Book, not with me.'

'There's a rumour that Friend is in your pocket.'

'Unfortunately, the Capitol thrives on rumours and that's what most of these stories are. Friend is *not* in my pocket.'

'Is it true that you and General Luehman, director of intelligence, were responsible for subverting the committee's proposals?'

'If it was, I certainly wouldn't admit it, so why bother asking?'

Jackson actually chuckled at the other end of the phone, before saying, 'May I continue?'

'Sure,' Fuller said.

'Why were the Congressional hearings slated for 1962 dropped?'

'Because the Chairman decided that there was no justification for continuing them.'

‘But the House Speaker, John McCormack, believed that the UFOs were real. That makes the abrupt turn-around seem pretty odd.’

Jackson was referring to the fact that House Speaker John McCormack, with the encouragement of the troublesome head of the NICAP, Donald E. Keyhoe, had started talking – too often, too loudly, about holding another Congressional investigation, and finally, in 1961, directed Congressman Overton Brookes of the House Science and Astronautics Committee to look into the matter. Brooks did so by appointing Joseph Karth, then head of the Subcommittee on Space Problems and Life Sciences, to hold hearings on UFOs. When news of the proposed hearings was released, Keyhoe promised that NICAP would offer proof of the Air Force’s incompetence in dealing with UFO reports. He would also, he threatened, prove conclusively that the Air Force had embarked on a course of ‘contradictory, misleading and untrue statements’ in order to suppress information about, and kill public interest in, UFO reports.

Neither Fuller nor Major General Luehman, director of intelligence, was thrilled at this prospect.

‘McCormack may have believed that UFOs were real objects,’ Fuller said, ‘but the other members of the committee weren’t so impressed when the man sent to gather evidence to be used *against* the Air Force came back to say he now supported it.’

‘You mean Richard P. Hines.’

‘Yes.’

‘We believe the CIA encouraged those statements.’

‘Simply not true,’ Fuller lied again.

In fact, though the hearings were not scheduled until 1962, in the middle of 1961, while the Office of Legislative Liaison was directing its attention to heading off the hearings, House Science and Astronautics Committee staff member Richard P. Hines visited the ATIC, was ‘thoroughly briefed’ by the Project Blue Book head, Major Friend, and returned to inform his fellow committee members that he was ‘favourably impressed’ with the Air Force’s efforts. Given this response, it was not surprising that a week after Hines’ return to Washington DC, committee chairman Overton Brooks announced that the Congressional hearings were to be dropped and not likely to be an issue in the near future. The following week, Congressman Joseph Karth, slated to head the aborted hearings, publicly attacked Donald Keyhoe and, by

implication, the other major UFO groups, including Dr Frederick Epstein's APII, for trying to 'belittle, defame and ridicule' the Air Force. He also accused Keyhoe of being guilty of 'malicious intent towards a great branch of the military.'

While the verbal slaughter of Keyhoe was still continuing, Chairman Overton Brooks died and the new Chairman, Congressman George P. Miller of California, confirmed that there would be no hearings on the UFO phenomenon.

'Listen,' Fuller said. 'Neither I personally, nor the CIA generally, can be held responsible for the fact that a Congressman with an open mind goes to collect evidence that could be used against the Air Force and instead comes back convinced that the Air Force is in the right. That just proved how wrong you and the other conspiracy theorists were.'

'Maybe,' Jackson responded quietly. 'But we now have strong reason to believe that Hines also informed his fellow committee members that Congressional interest in the UFO programme could be blamed on pressure from – I quote – "undisclosed sources on House Speaker John McCormack".'

'Where did you get that statement?'

'Wouldn't *you* like to know!'

Now it was Fuller's turn to chuckle, even knowing that Jackson's story was entirely accurate. 'If you don't reveal your source I can't verify the statement. What other surprises do you have up your sleeve?'

'We also have reason to believe that Hines, as well as dropping McCormack in the shit, dropped Donald Keyhoe in it by suggesting that he was the one who placed the so-called *undisclosed pressure* on McCormack. Since Hines and people like yourself viewed Keyhoe as the most vocal of the advocates for Congressional hearings – therefore the man most likely to break the wall of silence regarding UFOs – this would have been a good way of dirtying him with the committee, getting the hearings dropped, and discrediting his civilian UFO group and others like it.'

'More paranoid nonsense.'

Yet as Fuller knew, since he had been the one to plan it, that's exactly what happened. Once the Congressional hearings were dropped and Keyhoe ridiculed, press interest in UFOs shrank dramatically and public awareness followed suit. Within a year of Brook's death and the final cancelling of the Congressional hearings, all the major civilian UFO organisations, including

APII and NICAP, were suffering from a severe lack of funds and, even more damaging, from a lack of credibility. To add insult to injury, it was happening during a year, 1962, when sightings were three times higher than they had been in the former 'peak' years of 1947-1951. From the point of view of APII and NICAP, it couldn't have been worse. From Fuller's point of view, on the other hand, it couldn't have been better.

'I don't think it's nonsense,' Jackson said, running up his big phone bill. 'I think that you and your friends were behind Hines all the way, engineered the cancellation of the Congressional hearings, went out to get Donald Keyhoe and thus discredit the civilian UFO organisations; and even now, after seriously diminishing public interest in UFOs, are trying to get rid of Project Blue Book altogether.'

'Excuse the language, my friend, but that's bullshit. The CIA has no interest in UFOs, one way or the other. Though speaking personally at this moment, I think I can speak for the CIA when I say that very few folk here at Langley Field believe that UFOs exist.'

Which was another blatant lie. The truth was that right now, under pressure from the CIA, the ATIC was trying to transfer its UFO programme elsewhere and, hopefully, out of the Air Force altogether, to somewhere less visible. Unfortunately, neither NASA nor the National Science Foundation would touch it, which was giving Fuller a headache. Luckily, it had at least been made a part of the Foreign Technology Division (FTD) of the Air Force Systems Command, where it was languishing without the resources once insisted upon by the Congressional committee.

'All I can say,' Jackson continued doggedly, 'is that between the harassment of individuals and the suppression of civilian UFO organisations, the US government has managed to practically bury the UFO question.'

'The UFO question has cost the US government a lot of money, so that may be an understandable reaction. And for that matter, particularly regarding your conspiracy theories, if the US government is concerned with the UFO problem, why would it want to bury those searching for answers?'

'Because certain members of the US government already *know* the answers,' Jackson said. 'The UFOs are their own.'

Up to this point, Fuller had been mildly amused by Jackson's quiet belligerence, but hearing that last remark, he turned deadly serious, though without actually showing it.

‘The man-made UFO theory is bullshit,’ he told Jackson. ‘The unveiling of the Avrocar proved that conclusively.’

‘A red herring,’ Jackson said.

‘Oh, yeah?’

‘Yeah. We have a researcher – I won’t give you his name – who came up with some interesting info about the construction of US-Canadian flying saucers.’

‘The Flying Flapjack, the *Omega* and the Avrocar,’ Fuller said without hesitation. ‘They’ve all been declassified and shown to the press and, therefore, the public. No mystery there, pal.’

‘No? We have reason to believe that the flying saucers you showed publicly are red herrings; that the real saucers are a lot more advanced and kept in various secret hangars on US Army, Air Force or Navy bases. Certainly we know for a fact that one of them is housed in a top-secret hangar in Cannon AFB, Albuquerque, New Mexico. Indeed, I personally saw it.’

‘*You* personally saw it?’

‘Yeah.’

‘When?’

‘May, 1954.’

‘Eight years ago. Are you sure you remember that far back? Maybe, like Marlon Clarke, you were drunk that night.’

‘No, I remember it well. And I was stone cold sober, believe me. I was driving to a motel on the road that runs right past the base and I saw a hangar at the far end of it, rising above the barbed-wire fence of a top-security area. That UFO, which was no piss-take Avrocar, descended and landed as I braked to a halt to study it more carefully. Then it was wheeled into the hangar. What I saw – clearly and at length - was a highly advanced, saucer-shaped aircraft.’

‘That sure is some story,’ Fuller said, deliberately sounding sceptical, though he was shocked by what he was hearing. May 1954, as he knew, was the night that the present APII stringer, Dwight Randall, then a USAF captain, had paid a visit to Cannon AFB in the company of fellow USAF captain, Andrew Boyle. Unfortunately, the latter had been observed on camera a few nights before, watching the descent of a US version of Wilson’s *Kugelblitz II* as it did, indeed, descend onto its landing pad in the base, before being wheeled into the hangar that Jackson was clearly talking about. As it

was believed that no-one would have believed Boyle's story anyway, he was left alone for a few days; but when he put a call through to Project Blue Book's Dwight Randall, inviting him to Albuquerque, a close watch was placed on him. Then, when he drove Randall straight from Albuquerque airport to Cannon AFB, followed all the way, and stopped on the road that ran right past the top-secret hangar at the far end of the base, well away from the main gate, it was decided to follow Randall, also.

When Boyle handed over the photo of the US *Kugelblitz II* to Randall, both men were observed by the Air Force intelligence men following them. It was those same Air Force intelligence men, all dressed entirely in black to propagate the myth started with Wilson's original men in black, who burst into Randall's room, scared the hell out of him, and stole the flying saucer photo from him. A few months later, when Randall was falling apart from fear, confusion and drink, Boyle, who had been transferred post haste to Alaska, was terminated in an airplane 'crash' over Mt McKinley.

Now Randall's other friend, this Bob Jackson, was claiming that he was the one who had seen that flying saucer descending on Cannon AFB. Fuller didn't believe so. He believed that Jackson had heard the story from Dwight Randall and was using it to try and screw information out of him while protecting his good friend. Well, that was his mistake.

'You have anything to add?' Fuller asked, 'before I drop this phone?'

'Yes,' Jackson said. His breathing sounded more nervous now, too harsh, stop-and-start. 'We have reason to believe that the flying saucers are being used mainly for work in sub-arctic areas. Since I personally specialise in the analysis of flight patterns and have worked out that most of the saucers appear to be flying on northern-southerly routes, I believe the saucers are mainly flying between here and Antarctica.'

'Why?'

'I don't know.'

Thank God for that, Fuller thought. He was silent for a moment, then said, quite deliberately: 'This sounds like Jules Verne to me.'

'Don't be facetious, Mr Fuller. You know I can't be *too* far out.'

Still sounding slightly mocking, though in truth he was deadly serious, Fuller said: 'So what if this fantastic tale is true? What's it got to do with me?'

'We're going a long way back here, Fuller.'

‘So go a long way back.’

‘Given all the evidence now at hand,’ Jackson said, ‘the Socorro crash of 1947 almost certainly involved a man-made flying saucer. And if that’s true, you knew just what you were doing when you talked to Marlon Clarke before he disappeared. You’re in on it, Fuller.’

There was an uncomfortably long silence while Fuller considered what to do about this man, who was trying to be a hero while protecting his friends.

‘So what am I supposed to say?’ Fuller finally asked, having decided exactly what he would do.

‘Am I right or wrong?’

‘Right *and* wrong,’ Fuller told him.

‘Will you tell me more?’

‘Only under certain conditions.’

‘What are they?’

‘Let’s meet and work out an agreement. I need some protection here.’

‘When can we meet?’

‘The sooner the better, Mr Jackson. What about this evening?’

‘When and where?’

‘I know this little bar in M Street. It’s not very nice, but at least no one from Langley or the Capitol is likely to be there. A bit low-life, don’t you know? It’s called – ‘

‘Wait. Let me write it down.’

Fuller waited patiently until Jackson said he was ready, then he gave him the name and location of the bar in M Street, down near the Canal, and told him to meet him outside at nine that evening.

‘I’ll be there,’ Bob Jackson said.

Dropping the phone, Fuller kicked his chair back, placed his feet on the desk, clasped his hands behind his head and whispered, ‘I’ll bet you will.’

Back at his flashy Dupont Circle apartment, which had contemporary art on the white-painted walls, artificial-antique furniture, concealed lighting, off-white carpets and a total lack of idiosyncrasy or human warmth, Fuller mixed himself a dry Martini, then turned the TV on to the news. He rarely actually *watched* the news; he only listened to it. As he had no ear for music, it was *all* he listened to.

As he was having another sip of his Martini, his cat, a seventy-five percent

Russian blue named Doc Savage, padded into the room, rubbed itself against Fuller's left ankle, then stood on its hind legs to gaze into the dimly lit goldfish bowl. Distractedly stroking the cat's head, Fuller reached into the bowl, pulled out a wriggling goldfish and held it just above the cat's twitching nose. When the cat saw and smelt the goldfish, he leaped up, snatched it out of Fuller's fingers with his teeth, then ran back into the kitchen with the goldfish wriggling frantically in his jaws.

Amused, sipping more of his Martini, Fuller entered the subdued lighting of the bedroom, from where he could still hear the news on TV. Setting his Martini glass on the bedside cabinet, he stripped off his clothing, threw his shirt, tie, underclothes and socks into the laundry basket (his housekeeper came every day) and draped his suit with fastidious care over the coat hanger, which he hung to air on the closet door.

Naked, he glanced at himself in the mirror, noticed that his belly was still flat, given his advancing years (he'd soon be all of forty-two), then made his way into the bathroom. After emptying his bladder, he meticulously washed his hands, filled the sink with hot water, and soaped and shaved himself, using a gleaming strop razor. With the remains of the shaving cream still on parts of his chin, he went to the shower, turned the water on, adjusted it until it was steaming hot, then stepped under it. As his skin turned pink from the heat, he thoroughly soaped and cleaned himself, taking particular care with his anus and private parts, then let the hot water wash the soap away. When he had finished this cleansing process, which had left him with an erection, he turned the water from hot to icy cold, braved it for a minute or so, thus losing his erection, then turned the water off and stepped out of the shower.

He dried himself vigorously with a rough towel that further reddened his skin. Dried, he applied talcum powder to his private parts, anus and feet, then sprayed deodorant under his armpits and patted after-shave lotion onto his chin and throat.

Returning to the bedroom, he sipped more of his dry Martini, then studied his naked body in the full-length mirror. As he did so, his erection rose steadily again and he imagined a woman on her knees, slipping painted lips over it. Proud that he could still manage this at his age, he picked up his glass of Martini, carried it to the artificial-antique table where the telephone rested, and sat down on a soft, high-backed chair. After resting his Martini glass on the table, he telephoned his latest acquisition, a twenty-five year old secretary

besotted with men of some authority. He enthusiastically stroked his erection while whispering arousing obscenities to her, but finally arranged to meet her at Clyde's, also located on M Street, at 9.30pm.

When the girl had rung off, Fuller stretched out on the sofa, half propped up on one arm, sipping his Martini, listening to the babble of the TV and letting his erect penis return to normal, prepared for better things. Finishing off his Martini, he stood up again and returned to the bedroom. There, he dressed meticulously in a finely cut Italian grey suit, shirt and tie, with black patent-leather shoes. After transferring his billfold, loose change, keys, notebook, pen and small leather pouch from the jacket of the suit he had worn that day to the pockets of the fresh jacket, he checked himself once more in the mirror and left the apartment.

Lacking patience for the parking difficulties of Georgetown, he caught a cab to the bar located where M Street ran into Canal Road, which was dark at this hour. It was not dark at the front door of the bar, which was brightly illuminated by the street lights, enabling him to see the well-fed, middle-aged Bob Jackson standing uncomfortably beside a group of Georgetown University students, who were having their beer on the sidewalk.

Disembarking from the cab at the far side of the road, Fuller paid the driver, tipping him handsomely, then stood there for a moment, in the relative darkness by the bank of the Canal, watching Bob Jackson and recalling the many other times that he had either personally tailed him and Dwight Randall when they were together or had them tailed, photographed and recorded on tape by other CIA or FBI agents. From his personal observations, as well as from the audio and visual material supplied by his fellow agents, he had learned that Bob Jackson and Dwight Randall were very good friends, deeply fond of each other, with wives who also liked each other as well as their husbands. They were decent, good-hearted people who had shared a lot together and would, Fuller knew, be devastated if anything happened to any other member of their group.

Pity about that, he thought.

Crossing the road, he stepped up on the sidewalk and held his hand out to the portly Bob Jackson.

'Hi,' he said. 'I'm Jack Fuller. Have we met before?'

'No,' Bob said. 'So how did you recognise me?'

Fuller grinned and indicated the young students bunched up all around

Jackson. ‘You’re the only person here over twenty-one,’ he said, ‘so it didn’t need much deducing.’

‘Oh.’ Jackson looked a bit embarrassed, but was also clearly amused by Fuller’s comment. ‘Right, I see what you mean.’ He glanced again at the students, listened to the rock ‘n’ roll music pounding inside, and said, ‘You really think we can talk in there?’

‘Not really,’ Fuller said. ‘This used to be an adults’ place, but it’s changed with the changing times. Come on, let’s go to this other place I know, just a couple of minutes away. Just up the side of this bar, adjoining the building.’

He walked Jackson around the corner and into the road that climbed steeply up the side wall of the bar. They soon left the lamplight behind and stepped into a short, unlit strip where the darkness was deep.

Maybe Jackson sensed something, because he stopped and turned around to face Fuller, preparing to speak.

He never got the words out.

Fuller brought the hard, cutting edge of his right hand down across Bob Jackson’s neck, striking the jugular vein precisely enough to cut off the flow of blood to his head without actually damaging the vein itself. Instantly rendered unconscious, Jackson fell back against the wall and slid down it until he was resting with his back against it and his knees raised in front of his face. After glancing left and right, to ensure that no-one was coming, Fuller removed the small leather pouch from the inside pocket of his jacket, opened it, withdrew an already loaded hypodermic, and sank the needle into the back of Bob Jackson’s hand. Even as Fuller was placing the emptied hypodermic back into the leather pouch, slipping the pouch back into his pocket and walking back to the front of the building, Bob Jackson was suffering the violent spasms of a drug that would induce fatal heart arrhythmia without leaving any traces behind.

As Bob Jackson was going into violent convulsions, Fuller turned the corner of the bar, brushed past the students, and walked along M Street, to enter the noisily pleasant ambience of Clyde’s, where he found his latest acquisition waiting for him. A five-foot, four-inch blonde in a skin-tight dress and high heels, she threw her arms around Fuller when he entered and gave him a long, sensual kiss.

‘A good meal and a bottle of wine,’ Fuller said when he had managed to disengage. ‘Then we’ll make love all night. Life’s for the living, right?’

Chapter Thirty-Four

These days Dwight's mood was one of almost constant depression. For three months after Bob Jackson's sudden death by heart attack outside the student bar in M Street, Georgetown, Dwight had felt himself torn between shock, grief and deep suspicion. The inexplicable death had been bad enough, followed by the usual horrors of seeing the grief of Bob's wife and two kids, not to mention Beth, then the funeral, the wake and the subsequent dreadful days of numbed disbelief. Making matters worse, however, was Thelma's bewildered insistence that Bob wasn't supposed to have been in Georgetown that particular night, that he was supposed to have come home for dinner with friends, but phoned at the last minute to say that something urgent had come up and he would be late home. Added to this, thus to Dwight's deepening depression, was his own fearful conviction that no matter what the coroner said about Bob dying from a heart attack, he had in fact been murdered.

This conviction grew in Dwight over the months as he tried to adjust to life without Bob and spent a lot of time consoling Thelma, who, with her blonde hair now streaked with grey strands, her formerly lush body filling out into middle-aged maturity, remained bewildered as to what her loving husband had been doing up a dark alley outside a student bar when he should have been home. This didn't make sense to Thelma; and nor could she understand what had made Bob so excited that he would leave a group of friends sitting around his dinner table, rather than hurry home to join them.

'That just wasn't in his nature,' she told Dwight, 'so it must have been something pretty important – something big.'

'Well, nothing was found on him, Thelma, so now we'll never know.'

Another cause of Dwight's deepening depression was the knowledge that ever since last year's cancellation of the Congressional hearings on the UFO phenomenon, which should have opened the whole debate up for the first time, Dr Frederick Epstein's APII, along with the other major UFO

organisations, had been suffering an unprecedented series of financial and personal catastrophes, including a dramatic loss of subscription-paying members, due to lack of public discussion of the phenomenon, the abrupt withdrawal of funds from long-standing support groups and individuals, repeated investigations by an IRS desperately trying to find discrepancies in the organisation's accounts, and the damaging loss of a large number of staff through inexplicable illnesses, marital problems, and alcoholism brought on by various kinds of UFO 'hauntings', including nocturnal visits from the 'men in black'. Through all of this, Dr Epstein had battled on with admirable fortitude, but the exhaustion was beginning to show on his lined face, in his prematurely greying hair and beard.

Last but by no means least, Dwight's depression was deepening because his increasing work-load for the understaffed APII was keeping him away from home more often and placing the marriage under strain, even as Beth, who'd had a couple of years of peace after the terrifying weeks leading up to the public showing of the Avrocar at Fort Eustus, Virginia, had started being tormented as before. Once more she was having dreadful nightmares about UFOs and men in black, actually seeing men dressed in black following her, either in a black limousine or on foot, though always at a safe distance. Also, this time, to add to her deepening fear, she was receiving numerous crank calls, some from people sounding mentally unstable and whispering insults down the line, others from 'deep breathers' who refused to say anything or simply chuckled before hanging up. Eventually, though no poltergeist manifestations were evident in the house, as they had been the week before the Avrocar viewing, Beth had become convinced that her car was being tracked by a UFO that often came down practically on top of her, yet somehow managed to always stay out of sight.

Dwight could not forget that the previous 'hauntings' had finished the day before the press showing of the Avrocar and had started up again the day after Bob Jackson's death. These facts convinced him that the hauntings, in both cases, were being organised by the same people, human or otherwise.

Interestingly enough, Beth had no more blackouts, though the lack of proper sleep due to the nightmares was turning her otherwise lovely face gaunt and weary. Noting this with concern, Dwight was startled to realise that Beth was now forty years old and that they had been married for seventeen of those years, with Nichola already turning sixteen. He and Beth, then, while

clambering over that always-difficult bridge into middle age, were gradually being aged even more by the trials they were forced to endure at the hands of a malign, unseen enemy. Dwight wanted to give it up, turn his back and run away, but Beth, even in her own dire condition, refused to let him.

'To do that,' she said, 'would probably add feelings of failure to your already chronic mixture of anger, fear and frustration. In short, it would do you no good, Dwight, and might even do you a lot of damage. So never mind what's happening to us; just hang in there and fight this thing.'

'I can't help worrying about you,' Dwight replied. 'You're suffering even more than I am – they're getting at me through you – and I can't help worrying about that. Why don't you go away for a while? Take a vacation. Visit your parents. Help them fix up their new place. They'd probably like that.'

Beth's father, Joe McGinnis, had recently sold his car-sales business and retired with his wife Glenda to Westerville, a pleasant small town located in rolling countryside about twelve miles north of Columbus, about a hundred miles from Dayton. They had only moved out a week ago and phoned the day before to say they loved the new house but needed some visitors to give it that lived-in look.

'Why not come down?' Joe had asked Beth. 'I know Nichola is still at school, but it's not a long way to travel, so you could come on your own. Besides, there are times when it's good to be alone. Might take years off you, gal.'

'I think Joe's right,' Dwight now told her. 'A change of scenery, away from it all, *could* do you good.'

'Do you think I could manage a vacation without...' Beth could hardly utter the words, because the thought of a negative reply was too painful to contemplate. She wanted to know if she could go away for a short break and not be followed by... *them*. Was there anywhere she and Dwight could be private, out of sight, out of mind? If not, then their life together was truly a nightmare from which there was no escape. 'I just thought...'

'It's worth trying,' Dwight assured her. 'What can you lose?'

'Okay, then, I'll try it for a week. When should I go?'

'It's only a two-hour drive, so why not go this afternoon? Leave now and you'll be there in time for dinner – and all mothers love to cook for their daughters, so that'll be a good start.'

‘Mom’s cooking and a bottle of Dad’s beer. Sounds good to me.’

‘Can’t harm you at all.’

‘Right, Dwight, I’ll call them and check that it’s okay, then I’ll pack my valise.’

‘You do that,’ Dwight said.

After checking with her folks and receiving their approval, Beth packed a valise, had a quick shower, then let Dwight walk her to the car, an old but trustworthy Ford saloon. They kissed and embraced on the sidewalk, not caring who saw them.

‘You take care,’ Beth said.

‘You have a good time for a change.’

‘And don’t let Nichola get up to any mischief.’

‘I’m a pretty stern dad.’

‘Okay, I’ll see you next week.’

‘Can I wait that long?’

Beth wrinkled her nose and smiled. ‘What a sweet-talking man I’ve got,’ she said. ‘Here, give me a big one.’

They kissed again, then Beth slipped into the car and drove off. Dwight looked on until the vehicle had turned the corner at the end of the road, then he glanced left and right, behind him, at the sky, hardly aware of what he had just done, instinctively, with foreboding, as he returned to the house.

Beth had told Dwight she would ring him when she reached her parents’ place. When she hadn’t called him by that evening, Dwight called his father-in-law and asked if Beth had turned up yet. Sounding anxious, Joe said she had not.

‘But the journey should only take two hours,’ Dwight said, ‘and she’s been gone for four.’

‘Might have stopped for a meal,’ Joe suggested hopefully.

‘No. She was planning to have dinner with you. Six on the dot, remember? Besides, if she knew she was going to be late, she’d have called, sure as hell.’

‘Maybe she simply had a breakdown. Let’s give her another hour.’

‘Okay,’ Dwight said.

An hour later, at nine in the evening, when Beth still hadn’t called either house, Dwight and Joe simultaneously checked with their local police stations regarding breakdowns or accidents. Neither station was holding a

report on anything regarding Beth or her vehicle; they would, however, ask their patrol cars to try tracking her down and call back whenever they found her.

By midnight they still hadn't found her.

Distraught, Dwight did his best to look normal in front of Nichola, who, at sixteen, was a tall, slim young lady with long blonde hair and radiant green eyes, dangerously attractive in figure-hugging denims and sweater, already drawing adolescent boys to the front porch, asking her out. Lying that Beth was with her parents and would be calling the next day, Dwight bid Nichola goodnight and watched her disappearing into her bedroom. Blessing God for his daughter's presence, he cracked a can of beer and drank it while sitting in a chair placed strategically between the table containing the phone and a window overlooking the front yard. He sat there throughout the night, until dawn, but Beth didn't arrive home, and neither the police in Dayton nor those in Columbus had found a trace of her.

Now almost out of his mind with anxiety, Dwight tried to hide it when he drove Nichola to school, dropped her off, and then, without realising he was doing it, glanced left and right, behind him, up at the sky. Seeing nothing unusual, though scarcely aware that he was looking, he quickly drove home again.

Beth's old Ford was parked in the driveway.

Parking his own car too quickly, practically banging into the Ford, he hurried into the house and found Beth sitting on the sofa, sipping from a cup of black coffee. When he entered, she glanced at him, repeatedly blinking her bloodshot eyes, then put her coffee cup down and jumped up to embrace him. Clearly exhausted, she was shivering and seemed on the verge of tears. Seeing the state of her, Dwight made her sit down again, then he put his arms around her and said, 'God, Beth, what happened? We've been anxious as hell.'

'I don't know. I'm not sure. Another one of those blackouts.' She shook her head from side to side, rubbed her eyes, blinked repeatedly and licked her lips. 'I can only remember the journey as far as the other side of Springfield. Somewhere along the road I must have lost consciousness.' She burst into tears, was consoled by Dwight, then tried recollecting the rest of it. 'All I remember is driving out of Springfield, heading for Columbus. It was about five in the evening. I remember this empty stretch of road beyond

Springfield, then...' She lit a Camel cigarette, inhaled like someone drowning, trying to gulp in air, then blew a cloud of smoke and relaxed a little. 'Nothing!' She shrugged. 'Next thing I remember, I was still in the car, still behind the steering wheel, but the car was at the other side of Springfield – *this* side of Springfield – and parked facing back where I had come from: in the direction of Dayton.'

'Lord almighty!' Dwight said. 'What time was this?'

Beth checked her wristwatch, looked perplexed, then glanced at the clock on the wall. 'Judging by the time now, I must have awakened between eight and nine this morning. I couldn't tell the time because my wristwatch had stopped at five after five. That was either the time yesterday evening or this morning – I can't really say – though I'm pretty damned sure it was five after five last night.' She squeezed Dwight's waist and laid her head on his shoulder. 'Oh, God, I'm really scared, Dwight. This is worse than before. I feel like I've been to hell and back - and I can't explain why. I'm shattered. I feel bruised inside and out... God, yes, I'm *scared*!'

She burst into tears again, so Dwight hugged her, stroked her hair, kissed the top of her head, then gently rocked her on the sofa until she had calmed down. Then he cupped her tearful face in his hands and kissed her on the lips.

'Lie down and have a sleep,' he advised her. 'Take some Valium. I don't want to encourage you to take sedatives, but I think sleep's more important right now. I'll be here. I won't be sleeping. I'll be looking after you. You've nothing to fear.'

'You won't leave the house?'

'I promise. Not until Nichola has to be picked up – and you'll be awake by then. Until then, I'm staying right here. So come on, let's get you into bed.'

When he led her into the bedroom, she just stared silently at the bed, clearly reluctant to lie down.

'You don't have to take your clothes off,' Dwight told her. 'Just have some Valium and lie down and you'll go to sleep instantly.'

But Beth shook her head in protest. 'No, I can't sleep in these clothes. I can't wear them ever again. I feel dirty in these clothes... contaminated... God, *I can't stand these clothes*!'

Distraught, she proceeded to frantically tear the clothes off her, like someone covered in stinging ants, until Dwight managed to soothe her again and sit her down on the edge of the bed. After making her swallow some

Valium, he told her to stretch out on the bed and try to relax.

Even with the sedative, however, she insisted that she couldn't relax until she took off all her clothes and had a hot shower. This she did, becoming raw-red in water so hot that Dwight was compelled to reach in and turn the tap to mix more cold with the hot, lowering the temperature. Beth, naked and pink from the steaming water, still took a long time to thoroughly, compulsively, clean herself, but finally stepped out of the shower and, like a docile child, let Dwight dry her with a towel. Still naked and shaking her head from side to side, silently gesturing 'No!' when Dwight held out her night-dress, she crawled between the sheets and fell asleep almost instantly.

Boiling himself another coffee, sensing that he would not yet be able to digest food, Dwight sat at the table between the telephone and the front window, gazing out on the street, to where his car was parked practically nose-to-tail with Beth's Ford. He dwelt repeatedly on Beth's tale of driving out of Springfield at five in the evening and awakening the next morning on the Dayton side of town, as if somehow her car had been picked up, transported back the way it had come, and deposited again on the road leading to Dayton and home. Eventually, on an impulse, and after checking that Beth was still soundly asleep, which she was, he left the house and went to check her car.

At first he found nothing... then, upon closer inspection, he found four absolutely similar indentations, two on each side of the car, placed equidistant between the wheels, just below the front and rear doors.

In a trance of disbelief and gradual acceptance, Dwight examined those indentations repeatedly and finally came to the conclusion that his senses were not betraying him... The indentations indicated clearly that four clamps of some kind had been tightened on the bodywork, under the four doors, between the wheels, to raise the car off the ground.

Whatever it was that had raised the car, it was certainly physical.

For weeks after Beth's baffling, frightening experience, she suffered from blinding headaches and a repeat of the former nightmares. She also became more convinced that her fears about being followed by men in black had been justified... and she was seeing those men in her nightmares.

Finally, when she showed no signs of improvement, Dwight insisted that she visit a psychiatrist, if only to confirm that she was sane and had not

imagined the whole business. He felt guilty doing this, as he was already convinced, by the indentations on the car as well as by Beth's undeniable sincerity, that the vehicle had indeed been picked up by a physical object and transported back to the other side of town while she was unconscious.

Nevertheless, he also felt that the psychiatric evaluation was necessary for Beth's peace of mind and would be a validation for what he had proposed should follow it: a visit to a professional hypnotist for the purpose of ascertaining exactly what had happened along that lonely stretch of road between Springfield and Columbus over a period of eighteen hours.

After a number of consultations with Beth, the psychiatrist, Dr Phillip Dewhurst, an old friend who had served as a medical officer at Wright-Patterson AFB, confirmed that she was not hallucinating and was, instead, suffering from genuine amnesia regarding the 'lost' period in question. It was the opinion of Dr Dewhurst that the amnesia was caused by Beth's deep-seated need to obliterate either a real experience or an exceptionally frightening, possibly repellent, fantasy. Dr Dewhurst therefore recommended, as Dwight had hoped, that instead of a course of sodium amytal or Pentothal to break through Beth's resistance to her buried memory, she undergo regressive hypnotism with his friend, Dr Irma Sagan, B.A., M.A., M.D., formerly of the Society of Medical Hypnotists, London, England, and a highly respected psychiatrist in her own right.

Though initially reluctant to let herself be hypnotised, Beth, after a few more 'hauntings' and nightmares, agreed to let Dwight set up the appointment. Subsequently, a few days later, they were shown into Dr Sagan's office in downtown Dayton and asked to take the two chairs on the other side of her desk, facing her. Dr Sagan was a slim, attractive brunette with a bright, relaxing smile – certainly not what the nervous Beth had imagined a psychiatrist and hypnotist would be. When Beth released her nervous tension by blurting out what she thought, Dr Sagan just chuckled.

'I know what you mean,' she said. 'It's the curse of my life. Everyone expects me to be old, distinguished, grey-haired and, of course, *male*. They also expect me to be terribly solemn, maybe even intense or half-mad – Rasputin... Svengali. Luckily for you, I don't have to be either. This is a job like any other and I do it well. Are you feeling more relaxed now?'

'More relaxed for having met you,' Beth said, smiling, 'and seeing that you're not Rasputin or Svengali.'

Dr Sagan smiled in return. ‘Fine. Now do you have any doubts about hypnotism? By which I mean, do you believe it can be effective in psychological terms?’

‘I’m not sure,’ Beth said.

‘In other words, coming here wasn’t your own idea.’

‘No.’ Beth glanced at Dwight. ‘It was my husband’s idea, initially. Then your friend, Dr Dewhurst, recommended it.’

‘Do you trust your husband?’

‘Absolutely.’

‘Good. Now this is very important... Do you believe you *can* be hypnotised?’

‘No.’

‘Why not?’

‘Because I think it’s self-suggestion. I think that if you *want* to be hypnotised, you can be. Maybe simple-minded or easily led people can be. On the other hand, if you don’t believe in hypnotism, or don’t want to be hypnotised, then it’s not going to work for you.’

‘And you neither believe in it nor want it.’

‘I’m willing to try it on the chance that it might help me, but I don’t hold out too much hope.’

‘Those are very precise answers,’ Dr Sagan told her. ‘You have a strong personality.’ She stood up, walked around to the front of the desk, sat on its edge, directly in front of Beth, and stared down at her. ‘Let me assure you, Beth, that any intelligent adult and most children over the age of seven can be hypnotised, that only the mentally retarded and the psychotic can *resist* being hypnotised, and that hypnotisabilty is in no way a sign of weak will. Indeed, the more intelligent and imaginative the subject, the better a subject he or she will be. You therefore needn’t feel ashamed if I hypnotise you. There’s nothing *wrong* in being hypnotised. Just think of it as another branch of medicine and try to accept it.’

‘Okay,’ Beth said.

Dr Sagan smiled and nodded. ‘So how do you imagine I’m going to hypnotise you?’

‘You’ll make me lie down and use something visual and repetitive – a swinging key chain, a metronome – to focus my attention. Then you’ll talk to me as my eyes follow the movement of the swinging object.’

Dr Sagan smiled again. ‘You’ve obviously been reading up on the subject.’

‘Yes.’

‘What’s the time, Beth?’

Beth checked her wristwatch. ‘Thirty after eleven.’

‘Thank you.’ Dr Sagan placed the palm of her hand against Beth’s forehead. ‘What if I told you to raise your right hand?’

‘I’d ask why you wanted me to do that.’

‘What if I just replied by *telling* you to raise your right hand?’

Beth raised her right hand. ‘I’d ask you why you wanted me to do that.’

‘And if I refused to answer, would you refuse to raise your right hand?’

‘Yes,’ Beth said, still holding up her right hand, but clearly not aware that she was doing so.

‘Does this kind of conversation exhaust you?’

‘It does a bit,’ Beth replied, still holding her right hand up in the air.

‘Your eyes are heavy, aren’t they? Drowsy and heavy. Very heavy. So heavy you feel you want to close them, but you can’t close them just yet.’

‘That’s right,’ Beth said.

‘Would you like to lie down and close your heavy eyes and rest them for a moment?’

‘Yes,’ Beth said.

‘Would you like to lower your right hand and walk to the sofa and lie down and close your heavy eyes for a moment?’

‘I would,’ Beth said.

‘Lower your right hand, Beth, and walk to the sofa and lie down and close your heavy eyes for a moment.’

Fully conscious and feeling that this was the correct thing to do, Beth lowered her right hand, walked across to the sofa, stretched out on it and closed her weary eyes.

Dr Sagan followed her across the room and took the chair beside the sofa. After switching on the tape-recorder on the cupboard beside the sofa, she leaned over Beth.

‘Do you mind talking to me, Beth?’

‘No.’

‘Would you mind answering my questions?’

‘No.’

‘Waken up, Beth. Open your eyes.’

Beth opened her eyes. She felt unusually tired, but more relaxed and less burdened than before. Glancing across the room, she saw Dwight sitting at Dr Sagan’s desk, looking extremely concerned as Dr Sagan rewound the tape on the tape-recorder and checked her wristwatch. When Beth sat up, yawning, stretching herself, Dr Sagan smiled at her. ‘What’s the time, Beth?’

Beth checked her wristwatch, expecting to find that only a few minutes had passed since she lay down. Instead, she found that two hours had gone by. She’d been asleep all that time. ‘My God!’ she exclaimed in wonder. ‘Thirty after one! Where did the time go? What...?’

She glanced up to see Dr Sagan’s easy smile. ‘Come here, Beth. Sit beside your husband. You’ve been in a trance condition for two hours and talked through it all. Would you like to hear what you said?’

‘I’m not sure,’ Beth replied.

‘I think you’d better come over here and sit beside your husband and listen to the tape. Your husband understands it better than I do. Please, Beth, come on over here.’

Beth swung her feet down to the floor then walked across the room, to take the chair beside Dwight. She stared with widening, fearful eyes at the tape-recorder and found herself mesmerised by the sight of that revolving spool of tape. Her own voice, when it finally came off the tape, practically hypnotised her all over again.

The Beth on the tape, speaking to those in the room, gave flesh, blood and bone to Beth’s nightmares. It was the disembodied voice of a lost soul, speaking from hell.

Chapter Thirty-Five

REPORT OF TAPED HYPNOTHERAPY SESSION

BETWEEN: Dr I. Sagan, B.A., M.A., M.D., of the Sagan Hypnotherapy Clinic, Dayton, Ohio, USA, and:-

PATIENT: Beth McGinnis Randall, also of Dayton, Ohio.

PATIENT'S AGE: 40

STATUS: Private Patient (PP)

DATE: November 12, 1963

SUMMARY: Patient presented herself in the company of her husband, Dwight Randall, at the office of Dr Irma Sagan in the Sagan Hypnotherapy Clinic on November 12, 1963, on the recommendation of Dr Phillip Dewhurst, M.A., M.D., for immediate hypnotic regression and, if required, hypnotherapy.

The patient was suffering from repeated migraines, blackouts, and feelings of paranoia based upon the conviction that she was being 'haunted' by an unknown person or persons.

The recommendation for hypnotherapy was made by Dr Dewhurst after four consultations with the patient and his subsequent assessment that she was suffering from amnesia relating to a blackout that occurred on October 2, 1963, during a drive from Dayton, Ohio, to Columbus, Ohio.

The purpose of the hypnotic session was to regress the patient to the moment of blackout on October 2, induce a recollection of the event that had traumatised her, and decide a means of curing the trauma based on the nature of the traumatising event.

Penetration of the amnesia was achieved by taking the patient through the three prime stages of hypnotism: light, medium, and heavy, the latter being a state of somnambulism.

The trance session lasted a total of two hours and a complete regression was attained.

At the end of the trance session it was decided by Dr Sagan that the patient, when awakened from her trance, should be made to listen to her own description of the experience and then, in the full awareness of what had transpired during her blackout, undergo a further series of trance sessions for the purposes of hypnotherapy aimed at relieving her stress while also ascertaining the reality or non-reality of the trauma-inducing event.

At the completion of a total of twelve further hypnotherapy sessions, it was the opinion of Dr Sagan, albeit offered with reluctance, that the patient's recollections in the trance state were an accurate recall of a real event.

Transcript of interview with patient in hypnotic trance state for inclusion in the confidential archives of the Society of Medical Hypnotists, 4 Victoria Terrace, Kingsway, Hove, Sussex, England.

DOCTOR: You are relaxing, relaxing, very relaxed. You are sleeping, deep sleep, sleeping, deeper, very deep. You are sleeping, very comfortable, relaxed, very relaxed. You are deeper and deeper in sleep, very comfortable, deeper. You are relaxed and comfortable. You are deep, deep in sleep. You are relaxed and you will remember everything and you will answer my questions.

PATIENT: Yes.

DOCTOR: All right, Beth, you are very relaxed. You have nothing to fear. You are going back to the evening of October 2, 1963. To the moment when you were driving out of Springfield. You are going back now.

PATIENT: Yes.

DOCTOR: Do you know where you are?

PATIENT: I'm in the car. I'm driving away from Springfield. I'm on the

road leading from Springfield to Columbus, about fifteen miles out of Springfield.

DOCTOR: What do you see, Beth?

PATIENT: Just the road. The empty fields on either side. Not much traffic on the road. No traffic here. Sun going down. Almost dark. A nice, easy drive. It feels good to be...

DOCTOR: Yes Beth?

PATIENT: I don't want to.

DOCTOR: All right, Beth, you are very relaxed. You have nothing to fear. What do you see?

PATIENT: Feels funny... Someone following... No, there's no one there. Nothing out front. Nothing behind me. Fields all empty on both sides of the car. Nothing in the sky... Darkening... The sky's darkening... Strange feeling... Oh, no, not here as well! Something's following me... Not behind me... Above me... Damn it, where are you? Oh, God, right above me! *No! I don't want to!*

DOCTOR: You are safe, Beth. Relaxed. Very relaxed. There is nothing to fear. You are relaxed. You are safe. What's happening, Beth?

PATIENT: Beside me... Beside the car. Two of them... Flying saucers... Oh, God, Dwight, where are you? Come and see them! What you've always wanted to see. Oh, God, Dwight, where are you?

DOCTOR: Dwight's beside you, Beth. He's right here beside you. He's fine. He's okay. He wants you to describe the flying saucers. What are they like, Beth?

PATIENT: Not big... Not like the ones I've heard about... Small saucers, spinning discs, metallic and silvery-white, glowing oddly in failing light and

spinning... Only two or three foot wide. Shaped like two plates placed on top of each other, one upside-down on the other... All metal. Smooth surfaces. Spherical. Seamless. Spinning like spinning-tops as they fly through the air, pacing the car, one on each side, parallel to where I'm sitting, very close to the windows... Now they're... *I don't want to! Don't want to! Don't want to!*

DOCTOR: It's all right, Beth, you're just remembering. It's in the past. You're remembering. It's all in the past. It can't hurt you. You're remembering and it seems to be happening now, but it was all in the past, it just seems like the present. In the present. Right now. It's right now, but you're safe. What's happening, Beth?

PATIENT: Two small flying saucers, one on each side of the car, right by the front windows, pacing the car, keeping up with the car. They seem solid... seamless... I can hear them – no, *feel* them. They're spinning like crazy, sort of glowing, and I'm not sure if I'm hearing them or *feeling* them, but there's some kind of pressure. Something pressing around me, making the car drag, slowing down... *Oh, my God!*

DOCTOR: Relax, Beth. Relax. No need to worry. Just tell me, Beth.

PATIENT: The flying saucers have stopped spinning. They're still flying, but they're not spinning... Oh, God, a slot's opening up in both of them... a glass eye... staring at me... God! What's that? Some kind of light – beams of light! Those things are shooting beams of light into the car... strange light... very bright and flickering on and off repeatedly, pulsating, making a noise... No, a kind of vibration... No! Please, *no more*!

DOCTOR: What is it, Beth?

PATIENT: My head hurts. I can't think. One of the beams of light is aimed at the hood of the car; the other's right in my face... I can't see properly... The car's engine is cutting out... Oh, Christ, my head hurts... The light's blinding me... The car's still cutting out. God, it's stopping!

DOCTOR: It's all right, Beth, there's nothing to fear. What's happening now?

PATIENT: The car's gone dead and stopped and... *No! No! No!*

DOCTOR: Relax. You are relaxed. You are safe. What's happening, Beth?

PATIENT: Oh, God! Straight ahead! It's coming down over the road. Another flying saucer, but bigger.. *enormous*... About the size of an airliner. Lots of lights flashing around it. Descending slowly on the road just ahead. Hovering there – just inches above the road. Now settling down on the road and blocking my way with those flashing lights blinding me.

DOCTOR: Where are the smaller saucers, Beth? Are they still hovering at both sides of your car? Still shining the beams of light in?

PATIENT: Yes – *no!* I mean, yes, they're still there, one hovering at each side of me, but those slits in their sides have closed up and the lights aren't shining any more. I'm...

DOCTOR: Yes?

PATIENT: I'm trying to start the car. It won't start. I'm trying to get out and run away, but the doors seem locked, though I didn't lock them... Oh, God, I'm trapped here and my head is splitting and...

DOCTOR: It's all right, Beth. You needn't be agitated. I'm right here. I'm with you. Just tell me what's happening.

PATIENT: I'm trapped in the car. The doors are locked. I can't get the car to start. That gigantic flying saucer is straddling the road – over a hundred foot wide, as tall as an office building, with lights flashing on and off around its rim... No! The lights are going out. I think part of the body is spinning and slowing down as the lights flicker out... Now the lights are out and the big flying saucer is sitting there in darkness. Nearly dark. And... Now it's making a noise. A kind of bass humming sound. I can *feel* it – almost feel the sound, I mean, and... The flying saucer is opening. *Opening!* A long slit of bright light along the front, along its base... becoming bigger, higher, like a door or panel

lifting up. And... it's a door in the front – a big door, like the door of an aircraft hangar – just like Wright-Patterson, Dwight – and... Oh, God, there are people in there... Just standing there, not moving, in the light of what looks like an aircraft's holding bay... Staring at me, I think... I can't be sure... They're silhouetted. Human figures... some normal... but some... Oh, Christ, some are so small! Small and misshapen about the head and hands... The light... They must be distorted by the light... Oh, my God... *No! No! No!*

DOCTOR: You are calm, Beth. You are not really there. You are here. You are here with us, with Dwight and me, and absolutely safe. You are here and you are absolutely safe. What's happening, Beth?

PATIENT: Lights. Other lights. Two brilliant beams of light emanating from that huge saucer. Beaming right at my car, in my face. Flooding the car with light, flickering on and off repeatedly...

DOCTOR: You're safe, Beth. What's happening?

PATIENT: That noise... I can *feel* the noise! I can't think clearly because of the noise and... The light in that big saucer is expanding... No! A ramp is falling down... slowly... falling down to touch the ground, forming a path up into the saucer. Now... Christ! Something is coming out, emerging from each side of that holding bay... Large steel claws... Clamps of some kind... Now stretching out of the holding bay on hinged arms and hanging over the end of the ramp... They've stopped moving. They're just hanging there on the end of the hinged supports, like big steel claws on steel arms.

DOCTOR: What are the figures in the holding bay doing, Beth?

PATIENT: Nothing. They haven't moved at all. I can only make out the shape of them – not their faces – because they're silhouetted in the brilliant, almost blinding light. Also... My eyes hurt. I'm dazzled by the light filling the car and flickering on and off so fast that it disorientates me... And making that sound... The sound that I can *feel*...

DOCTOR: Yes, Beth?

PATIENT: They're just standing there – watching me, I think... God, those small ones aren't natural... the wrong shape. And... No, I don't believe this! Now the smaller saucers are shooting their beams of light at me again, at the car, front and rear of the car, and... *The car's moving!* It's being pulled forward! Oh, God, I've got the handbrake on but it's not holding the car back, the car is still being drawn forward... By what? The beams of light! They're drawing the car forward as the smaller saucers advance, taking me – I mean the car – towards the steel ramp of the big saucer and those men in the doorway... I want out! I want out! I can't move! *Oh, please God, let me out!*

DOCTOR: Relax, Beth. Relax. I'll make sure you get out. Just tell me what's happening.

PATIENT: The flickering light is doing something to me... pressure... numbing me... paralysing me... Ah, God, I can't move and the car has reached the ramp and those claws – the big clamps on hinged arms – are moving down on both sides of the car, two on each side...

DOCTOR: You're still here, Beth. You're only remembering. Now tell me what's happening.

PATIENT: The car's rocking. The clamps are taking hold, one under each door, between the front and rear wheels, and... Ah, Christ, I can't breathe! I'm panicking... trying to stop it... take control... Yes, better... Can breathe again.

DOCTOR: You can breathe again, Beth. You have no panic. You're still in control. What's happening, Beth?

PATIENT: The lights of the smaller saucers have blinked out and those saucers have flown into the holding bay and disappeared into the dazzling light. Thank God, they've finally gone... But... *Oh, no!*

DOCTOR: What is it, Beth?

PATIENT: The mechanical clamps... They're lifting the car slightly and drawing it up the ramp and into the holding bay, into the brightening light... And those figures, silhouetted, they're moving at last, parting, stepping aside to leave room for the car... I'm inside the saucer. *Inside!* Let me out! *Let me out!*

DOCTOR: You are relaxed, very relaxed, deeply relaxed. There is nothing to fear. You are deep, deep in sleep, you are relaxed and nothing can harm you. You are okay. You can answer my questions. You are in the holding bay of the flying saucer, but you have nothing to fear. You can answer my questions. What do you see inside?

(The patient does not respond.)

DOCTOR: Can you hear me, Beth?

PATIENT: Yes.

DOCTOR: Your car has just been drawn up into the holding bay of the big flying saucer. What do you see?

PATIENT: Light. Dazzling light. The bass humming sound has stopped. The figures are silhouetted by the light but are now on both sides of me, surrounding the car. The clamps on the hinged steel arms have just been released and the arms are now bending, withdrawing the clamps by raising them up above the car. The steel arms are moving back into the holding bay on grooved tracks, like railroad tracks, leaving the car sitting here... Every sound echoes here. The noise of the steel clamps on the hinged arms reverberates as the mechanism moves deeper into the holding bay. Now it's disappearing from view, swallowed up by the bright light. The bass humming sound has stopped and my headache is gone. I can move, but I feel drained of energy and dazed... Oh, God, now they're... I don't want to! *I won't!*

DOCTOR: Tell me. It's all right, Beth, you can tell me. You won't be harmed if you tell me. What's happening now?

PATIENT: The silhouetted figures are surrounding the car. Most of them look like normal men, all wearing black coveralls. Though some of them... *No!*

DOCTOR: Go on, Beth.

(The patient does not respond.)

DOCTOR: Tell me what you see, Beth.

PATIENT: Some of them – the ones who looked small and misshapen in silhouette – are alien creatures. They have hands like the metal clamps that pulled the car into this place – metallic claws with hinged joints. There are metal caps on their heads, studded with... I'm a not sure... electric plug. Their eyes appear to be normal – not American – Oriental? But the lower half of the face is made of metal – nose and chin, I think. The metal covering the lower half of the face has no space for the lips – no lips at all. They look just like little men from outer space; they look hideous... frightening.

DOCTOR: Yes, Beth?

(The patient does not respond.)

DOCTOR: You can talk about it, Beth. It's okay. Dwight and I are beside you, both listening. Please continue describing them.

PATIENT: They're small – about five foot tall, maybe smaller, not much taller. Like the human beings, they're wearing coveralls, but silvery-grey instead of black. Now all of them – the human beings and the small aliens – are surrounding the car... I'm frightened. Yes! But it's all in my head... I'm not doing anything because, though I'm frightened, I also feel physically drained and mentally passive. I'm waiting for them to do something. Or for them to tell me what to do. Now they're standing around the car and looking in. They're looking at *me*.

DOCTOR: Is anyone speaking, Beth?

PATIENT: No. One of the men in black coveralls is opening the car door and dragging me out. Not exactly *dragging* me out, just sort of helping me. I'm frightened, but I don't try to resist. I don't have the will. He has to help me because I feel weak and dazed and dizzy. I think he knows how I feel.

DOCTOR: So the man in black has pulled you out of the car. What's happening now, Beth?

PATIENT: I'm looking around me. The sloping ramp is swinging back up to form part of the wall... Now it's closed. It fits so well, I can't even see the joins... The walls seem made of white-painted metal. Not walls – one wall – curving around on both sides of me. Part of the circular exterior of the big saucer; the roof of the holding bay... I call it a holding bay because I feel that I'm in an aircraft, or maybe an aircraft hangar, like the ones they had at Wright-Patterson AFB... The roof of the holding bay is dome-shaped. It has that hollow ringing sound, like all aircraft hangars have, but it's shaped like a dome – or only part of a dome... Shaped like a slice of orange.

DOCTOR: What else do you see?

PATIENT: Machinery. The big machine that lifted my car and carried it into this holding bay, but with its hinged arms now folded and the clamps – giant versions of the metallic hands of the small aliens – now folded down and tucked against the wall... More machinery. Lots of it. A bit like a garage. I don't know what kind of machinery it is, but I feel like I'm in a garage or an aircraft hangar... I'm seeing all of this in the bright light... It's all bright light and shadow.

DOCTOR: What happened next, Beth? The men have helped you out of the car and the door of the holding bay has been closed, so what happened next?

(Note: When Dr Sagan went into the past tense, so did the patient.)

PATIENT: I became very frightened again. Started shaking badly. I was looking at the small alien creatures, at their hideous, mostly metallic faces,

and I guess that got to me. Then one of them, an alien, passed his hand, his metallic claw, over my face – he was holding something in it – and I felt heat going into my head and then I felt a lot calmer.

DOCTOR: You weren't frightened anymore?

PATIENT: I went kind of limp. I felt sort of dreamy, not real, removed from it all. It became like a dream.

DOCTOR: Yet you were still awake?

PATIENT: Yes. Awake. But as if I was dreaming. Dreaming though awake.

DOCTOR: Were there any distinct sounds in the hangar? Any signs of movement?

PATIENT: Yes. Shortly after the door closed – I mean, when the ramp was drawn up again to form part of the circular wall – I felt the floor vibrating – not shaking, just vibrating – and then I heard a sort of background humming.

DOCTOR: Humming? The sound of low-powered engines?

PATIENT: No. A kind of bass humming – I can't really explain it – but not a mechanical sound. More like an electrical sound – very faint, yet distinct.

DOCTOR: Any sensation of movement?

PATIENT: A kind of floating sensation. But I wasn't too sure. I still felt a bit light-headed. Though it *could* have been some kind of movement.

DOCTOR: Such as flight?

PATIENT: Could have been.

DOCTOR: And then?

(The patient does not respond.)

DOCTOR: What happened next, Beth?

PATIENT: I can't remember. I think I blacked out... Yes, I see corridors – curving corridors – with portholes along one wall and steel doors, all closed, in the other wall. Some doors were open – not many, but some. Then I caught a glimpse of what looked like a huge machine shop: jibs and cranes, catwalks, ladders, machinery, lots of men - I assume they were men, but they were a long way away - in grey coveralls. Then... *Oh, please God!*

DOCTOR: I'm still here, Beth, right by your side. You have nothing to fear. What did you see?

PATIENT: Another room. I was in a different room. Circular, dome-shaped ceiling, white-painted metal walls, men and women in white coats working at long tables between glass tanks that were covered in frost and... *Oh, please God, no!*

DOCTOR: It's all right, Beth. You have nothing to fear. What you saw was in the frosted-glass tanks. What did you see?

PATIENT: Bodies. Naked human bodies. Either sleeping or dead. With wires running out of their heads and attached to the inside of the glass tanks.

DOCTOR: Wires?

PATIENT: Cables. Electric cables, I think. They were attached to the inside of the tanks and other wires, or cables, were on the outside and ran from the glass tanks up to machines showing zigzagging lines on what looked like TV screens.

DOCTOR: EEG machines?

PATIENT: Pardon?

DOCTOR: Have you ever seen in hospitals, or perhaps on television, machines that record brain waves or heartbeats, indicating if a patient is alive or dead?

PATIENT: Yes.

DOCTOR: Were the machines you saw like those?

PATIENT: Yes.

DOCTOR: So the naked people, either sleeping, unconscious, or dead, were in frosted-glass tanks wired to machines that may have been recording their brain-waves or heartbeats.

PATIENT: Yes. The machines seemed like that. But the people in white coats, the living people, they're...

DOCTOR: Yes, Beth?

(The patient does not respond.)

DOCTOR: What are they doing, Beth?

PATIENT: Joining things together. Welding things. Fitting wires into sockets and soldering metallic joints and operating computer consoles and... joining things together.

DOCTOR: What things?

(The patient does not respond.)

DOCTOR: What things, Beth?

PATIENT: Severed heads. Amputated limbs. Internal organs... Oh, God, a human heart, still beating! Joining them to other human body parts and metal prosthetics... *I can't look!* I *won't* look!

DOCTOR: Don’t look, Beth. You don’t have to look. Look away. What happened next, Beth?

(The patient does not respond.)

DOCTOR: It’s all right, Beth, you have passed through that room. You no longer have anything to fear. What happened next, Beth?

PATIENT: Can’t remember. Darkness. Things gliding through darkness. Silence and darkness and breathing and the sound of my heartbeat. I’m floating. Can’t see. I am where nothing is.

DOCTOR: Did you have a blackout, Beth?

PATIENT: Yes, a blackout. I think so. I feel that I had a blackout. Then I awakened in...

DOCTOR: Yes, Beth?

(The patient does not respond.)

DOCTOR: You had a blackout, Beth, and then recovered. What’s happening now, Beth?

PATIENT: I’m somewhere else. Another room. Curved white walls, but I don’t think they’re metallic.

DOCTOR: An interior room.

PATIENT: Yes.

DOCTOR: And?

PATIENT: I’m looking up at the ceiling. Dome-shaped. It’s brightly lit, but I can’t see the lights. I think the lights are hidden.

DOCTOR: And?

PATIENT: I'm looking up at the ceiling?

DOCTOR: You're lying down?

PATIENT: Yes. On something pretty hard. Not a mattress. Something cold and hard. I think it might be metallic. When I move, it feels cold and hard.

DOCTOR: You're lying on something cold and hard, which may be metallic, and you're looking up at the dome-shaped ceiling.

PATIENT: Yes. A dome-shaped ceiling. White, like the walls. Curved walls, like all the other walls. All curves. All domes.

DOCTOR: And stretched out on your back on this cold, hard, metallic bed, looking up at the dome-shaped ceiling, you saw...

PATIENT: Faces. A circle of faces, staring down at me. Light beaming down on me. Spotlights, I think, not too bright or big, but beaming down from behind the shoulders of the men staring down at me.

DOCTOR: What kind of men?

PATIENT: Normal men. One handsome and oddly ageless, with very smooth pale skin, but with little movement in his features. Grey hair... No, white hair. Silvery-white hair. I thought the silvery-white hair was strange, because his face seemed so young... though expressionless.

DOCTOR: Young, but... What do you mean by 'little movement in his features'? By 'expressionless'? He looked human and otherwise perfectly normal?

PATIENT: Yes. Kind of handsome... At least given his white hair and the lack of movement, or mobility, in his features. I think he might have had

plastic surgery, though I couldn't see scars or lines.

DOCTOR: Were you strapped to the bed?

PATIENT: Not a bed. A kind of table.

DOCTOR: A surgical table?

PATIENT: Yes, maybe that.

DOCTOR: Let's call it a bed. Were you strapped down?

PATIENT: No.

DOCTOR: Did you try to sit up?

PATIENT: No... Yes, I tried once, but I just couldn't move. When I tried to move, I felt that I was paralysed – and that brought back my fear.

DOCTOR: Did any of the men surrounding you, looking down at you, actually speak to you?

PATIENT: Yes, the one with the youthful face, white hair, maybe plastic surgery.

DOCTOR: What did he say?

(The patient does not respond.)

DOCTOR: What did he say, Beth?

PATIENT: Don't worry. You're not paralysed. You're not hurt or damaged in any way. You will come to no harm.

DOCTOR: He spoke English?

PATIENT: Yes.

DOCTOR: Accent?

PATIENT: He was American – I'm sure he was American – but he also sounded kind of European, like those guys in the movies.

DOCTOR: When he spoke to you, did you try to reply?

PATIENT: Yes.

DOCTOR: You could speak?

PATIENT: Yes.

DOCTOR: What did you say?

PATIENT: I asked him where I was.

DOCTOR: And he said?

PATIENT: Nothing.

DOCTOR: Nothing?

PATIENT: He just smiled and aimed something held in his hand, a remote control, at the opposite wall. He pressed a button and two steel panels slid apart to form a big window, letting me see what was outside.

DOCTOR: What was outside?

PATIENT: Stars!

DOCTOR: Pardon?

PATIENT: Stars! I saw nothing but stars. Then he pressed another button

and the light dimmed and the stars disappeared, and then I saw...

DOCTOR: Yes, Beth?

(The patient does not respond.)

DOCTOR: What did you see through the window, Beth?

PATIENT: Earth.

DOCTOR: Earth?

PATIENT: Not earth – *the* Earth. Just as I'd seen it in those films sent back by the satellites. The globe of Earth. At least, I think it was the Earth. It looked like the Earth on the films and photos I've seen. I'm convinced it was Earth.

DOCTOR: Did the man showing you this say anything at this point? Did he speak at all?

PATIENT: Yes.

DOCTOR: What did he say?

(Note: At this point in the hypnotic trance session, the patient, who has no reported interest in, or knowledge of, acting, adapted a surprisingly convincing male voice.)

PATIENT: Beautiful, isn't it? But why look so surprised? The Soviets and Americans have both put men into space – and that's exactly where you are, Mrs Randall... above Earth, in outer space, just like Yuri Gagarin, Alan Shepherd, Major Titov and Lieutenant-Colonel John Glenn. Indeed, next month the Russians will be putting what they assume will be the first woman into space – but you've beaten her to it. Don't you feel proud?

(Note: At this point in the hypnotic trance, even Dr Sagan seems so startled

that she can think of nothing to say for quite some time. For this reason there is a large gap on the tape before the question-and-answer session picks up again. When the patient next speaks, her voice has returned to normal.)

DOCTOR: So how did you react when you saw Earth and the stars outside the window?

PATIENT: I was calm. I felt a bit remote. As if I'd been drugged.

DOCTOR: Did the man showing you Earth and the stars say any more?

PATIENT: Yes.

DOCTOR: What did he say?

PATIENT: He said...

DOCTOR: Yes?

PATIENT: We picked you up by mistake. It wasn't you we wanted. We thought it was your husband in the car and instead we got you.

DOCTOR: Anything else?

(The patient does not respond.)

DOCTOR: You're safe, Beth. Nothing can harm you. Did he say anything else?

PATIENT: Yes. He told me I shouldn't worry. That they weren't going to harm me. He said they were just going to check that I was okay and then take me home. He said that when I got back home, I wouldn't recall what had happened to me, but that eventually I would be the means of warning Dwight that he was endangering himself, as well as Nichola and me, by investigating UFOs. He said that for some time I wouldn't remember my experience, but that it would all come out eventually, at the appropriate time, which was his

way of warning Dwight off.

DOCTOR: And?

PATIENT: Nothing else.

DOCTOR: He said nothing else?

PATIENT: No.

DOCTOR: Not another word?

(The patient does not respond.)

DOCTOR: Did he say anything else? Anything, Beth? You can tell me. It's all right. What else did he say?

PATIENT: Nothing. He stepped aside. Another man, speaking German, held up a long, sharply pointed, silvery instrument... Awful! *Terrifying*! The others held my legs apart. The one with the awful instrument leaned over me, looking between my legs, and then... Oh, please, no! Please! Don't! Oh, God, it hurts! Please stop it! Oh, God, please, God help me, please don't, please stop him, I can't... Oh, God, stop! *No! No! No!*

DOCTOR: Relax, Beth. Relax. Relax, you are relaxed, you are safe, I am here, you are all right. Now tell me, Beth. It's all right to tell me. What else did they do?

PATIENT: No! No! No! No! No!

DOCTOR: Yes, Beth, yes, it's all right, I am here, Dwight is here, you're not alone, you can tell us, you can talk to us, Beth. What else did they do?

PATIENT: Oh, God, the pain! I can't bear the pain. Sometimes pain and then a kind of pleasure that goes beyond pain. Things inside me – in there. Deep inside me. Oh, the pain! Then in my ears, up my nostrils, in... I can't

accept... I refuse to believe... But they did! They turned me onto my belly and put something in there... *Pain*! Please God, help me! First the back, then the front. Needles under my skin, metallic probes in every orifice, juices sucked out and liquids pumped in, and all the pain and even more pain and sometimes... Oh, God forgive me... pleasure! Yes, that as well. They tormented me with pleasure that went beyond the bearable and brought me... my racing heart... *I can't breathe!*... to the point of... *pain*! Back to pain. Experimenting, trying to find out what was possible, from one extreme to the other, pain and pleasure combined... And all the time looking closely at me, studying me, as if I was nothing, a mere insect, something trapped on a glass slide under a microscope... Oh, God, help me, please let me go! Please don't! No more! *Please*!

DOCTOR: Forget it, Beth. It's in the past. It's been and gone. You are here now. You're safe. You're safe here with Dwight and me and can't be harmed, you are here in the present. Think of the present without fear and tell me what they are doing, Beth. They have finished and the pain has all gone and I want to know how it ended. No more pain. You can tell me. What did they do when they were finished, Beth?

PATIENT: Nothing. When they finished, they stepped aside. They took the samples they had taken out of me and then went away, leaving him – only him!

DOCTOR: The one with the handsome, oddly ageless features, and silvery-white hair and lack of expression. The one who spoke English with a slight European accent. What did he say or do, Beth?

PATIENT: I don't want...

DOCTOR: You are safe, Beth. We are here, you are protected. What did he say or do?

PATIENT: He...

DOCTOR: Yes, Beth?

PATIENT: He started lowering what looked like one of the metal caps worn by aliens onto my head – it was like being in a dentist's chair: the metallic cap was on a hinged arm – and he said he was going to erase my memory of this experience, but leave enough to be revived at a later date by others. Then he placed the metal cap on my head and somehow made it tighten around my skull. I was frightened. *I'm frightened!*

DOCTOR: Stay calm, Beth, be calm. Just answer my question. Did this metal cap have wires running out of it, attached to some kind of equipment?

PATIENT: Yes.

DOCTOR: Have you ever heard of a stereotaxic skullcap?

PATIENT: No.

DOCTOR: All right, Beth. He lowered the wired metal cap onto your head and tightened it around your skull. What happened next?

(The patient does not respond.)

DOCTOR: What happened, Beth?

PATIENT: I'm frightened. Terrified. Don't do it! Please, don't do it! I won't tell anyone! I won't! I promise! Please, don't do it! *Don't*!

DOCTOR: What happened next, Beth?

(The patient does not respond.)

DOCTOR: What happened, Beth?

PATIENT: Pain. Stars. Sparkling lights. Darkness. I am where nothing is, in the darkness, and only know that I don't know.

DOCTOR: Don’t know what?

PATIENT: My own name. What I am. Where I am. What is. I am where nothing is, in the darkness, and only know that I don’t know. I know nothing. All gone.

DOCTOR: You blacked out again?

PATIENT: I awakened.

DOCTOR: Where were you when you awakened, Beth? What did you see?

PATIENT: I was nowhere. I was just awake. I knew I’d awakened.

DOCTOR: Where are you now that you’ve awakened, Beth? What are you seeing?

PATIENT: I’m still in the car. I feel sleepy... must have slept... I’m on my way to Columbus – just left Springfield – and...

DOCTOR: Yes, Beth?

PATIENT: Where am I? I thought the sun was setting. I was heading for Columbus. Why is the car...?

DOCTOR: Yes, Beth?

PATIENT: I can’t believe...

DOCTOR: Yes, Beth?

PATIENT: That road sign... It says I’m heading for Dayton. I must have been driving home. I fell asleep driving home... No, I didn’t. I couldn’t have done that. I was driving to Columbus, out of Springfield, and now... Dayton. The car’s parked by the side of the road in the direction of Dayton. It’s... I can’t tell the time. My wristwatch has stopped. It stopped at five after five,

though I can't tell if that was yesterday or this morning... No, not this morning. It couldn't have been this morning. I was definitely driving out of Springfield, heading for Columbus, at about five yesterday evening as the sun was sinking. Now the sign says Dayton. The car's parked facing Dayton. It must be *some* time in the early morning... I'd say eight or nine... and I'm heading back to Dayton... Oh, dear God, what's happening to me*? I don't want to! I don't want to! I don't want to!*

DOCTOR: Okay, Beth, that's all we want to know. You have been very good. You have been extremely helpful. You are in deep, deep sleep, very deep, deep sleep, you are relaxed, you are very relaxed, you are sleeping, deep sleep. In a moment you can waken up. You won't remember what's been said between us. You won't remember until I ask you to do so, you are asleep, deep, deep sleep. All right, Beth, you are waking up now, you are waking, waking slowly, pleasantly, you are pleasantly waking up. You can waken up, Beth.

TRANSCRIPTION ENDS

Chapter Thirty-Six

‘There are now a great number of foreign exploration stations in the Antarctic,’ Wilson’s assistant, Salvatore Fallaci, said as he sat beside Wilson at the panoramic window overlooking the glittering white wilderness. ‘Ever since the International Geophysical Year in 1957-58, the twelve nations have, with your co-operation, been spreading out to set up more and more bases. If they continue to do so, our security is likely to be threatened.’

A former Mafioso with his hands steeped in blood, Fallaci had been abducted and brain-implanted to obey Wilson’s every whim as a scout and roving executioner; otherwise he seemed perfectly normal. He was reporting to Wilson after having just returned from a tour of Antarctica by flying saucer, checking on the movements and activities of the various nations that now had polar exploration bases here.

‘It’s been a long time since I studied the situation,’ Wilson replied. ‘What’s it like out there nowadays?’

Fallaci glanced down at his notes. ‘The US are based at McMurdo Sound and still have their Ronne Antarctic Research Expedition in the old Service East Base camp at Marguerite Bay. Australia has established stations on Heard and Macquarie islands, as well as their Mawson Station on the mainland coast of Macrobertson Land. France has established permanent bases in the Kerguelen and Crozet islands. The Argentines have established General Belgrano Station on the Filchner Ice Shelf. The Norwegians are at Cape Norvegia. The USSR, long active in East Antarctica, now also has Bellingshausen Station in the Antarctic Peninsula, is constructing at Novolazarevskaya, and plans additional stations in West Antarctica. A profusion of British, Chilean and Argentine bases are now located so close together around McMurdo Sound that we must seriously consider the possibility that they’re there for intelligence rather than science.’

‘You think they’re foolish enough to try that?’

‘Yes, boss. The more you give them, the more confident they’ll become – not really able to imagine just how much farther you’ve advanced – and the more confident they become, the more foolish they’ll be.’

‘That’s true enough,’ Wilson replied, though he didn’t seem concerned. ‘Good Sicilian logic. So what else are they up to?’

‘Inland stations for the observation of the sun, weather, the aurora, the magnetic field, the ionosphere and cosmic rays include the Byrd Station for the US in West Antarctica, Vostok for the USSR at the south geomagnetic pole and the pole of relative inaccessibility, and Amundsen-Scott Station at the South Pole, also for the US. I should also remind you that a nuclear power plant was set up at McMurdo Station in 1962 and a seawater distillation plant is being installed right now and should be ready by next year. The Antarctic is no longer a safe haven for us. We’re not alone, boss.’

Wilson smiled bleakly at that remark. ‘We’re not alone’ was a catch phrase now widely used in the West about flying saucers, still generally believed to be of extraterrestrial origin.

‘So apart from the possibility of intelligence gathering,’ he said, ‘what else excites their interest here?’

‘They believe that western Queen Maud Land, actually Neu Schwabenland, right on our doorstep, could be similar to the gold-producing Witwatersrand beds of South Africa; that the mountain belt of the Antarctic Peninsula could be similar to the copper-rich Andes; that the Antarctic continental shelves near Coats Land and the Adéle and George V coasts could be comparable to the Agulhas Basin off South Africa and the Otway Basin off southern Australia, which are potentially great sources of petroleum. They’re also racing to find the metal minerals for chromium, copper, gold, lead, tin and zinc. Even more ominous, their realisation that Antarctica contains nearly ninety percent of the world’s ice has led them to serious discussion and experimentation regarding the possibility of harnessing it as a limitless supply of non-salt water. Last but by no means least, they’re presently investigating the possibility of using the Antarctic as a long-term deep-freeze storage site for grain and other foods; and, even worse, as a site for radioactive-waste disposal and storage.’

‘I would never permit that,’ Wilson said.

‘I needn’t remind you of the increasing ruthlessness of the hunters of fur seals and the whaling ships operating around our shores and depleting the

waters. I *should* remind you, however, that tourism, which commenced way back in 1958 with nine-to-twelve day tours of the Antarctic Peninsula, arranged by the Argentine Naval Transport Command, is now expanding rapidly with hotels proposed for the McMurdo dry valleys and plans already being drawn up for the introduction of various alpine sports, including skiing and mountaineering, as well as commercial tourist helicopter flights over the wilderness. Between the planes of the tourists and those of the various exploration bases, we have a potentially serious security problem.'

'I'm not too concerned,' Wilson said. 'As long as our mutually beneficial, clandestine trade continues with the various nations located here, they'll keep their aircraft well away from Neu Schwabenland.'

'That's only the United States, Great Britain, Canada, and the USSR. The smaller countries aren't included in the trade and therefore don't know of our existence; so they'll continue to fly in this direction, and, so far, have only been prevented from seeing us by the relative inaccessibility of the terrain. But they're developing better aircraft every year – aircraft designed specifically to fly in polar regions – and some day, I believe, they'll be able to reach us. Likewise, the forthcoming tourist-flight pilots won't know about us and could choose this area as one of their flight routes. The mountain is, after all, particular spectacular from the point of view of the average tourist.'

'I've anticipated that possibility,' Wilson said, 'and been working on a means of preventing it. As you just said, the mountain is already an area of inaccessibility. Before the smaller countries or tour operators develop an aircraft that can reach here – and, indeed, before the nations we're trading with grow arrogant and turn against us – we'll have developed an invisible force field that will, like the saucer satellites, which in turn were based on our old *Feuerballs*, cause normal aircraft engines to malfunction and force them either to crash or turn back before entering the area. Should anything manage to slip through the force field, we will have by then, as a last resort, a working pulse-beam weapon. So I think we're safe for the foreseeable future. In the meantime, our saucers will continue to haunt the various Antarctic exploration bases by hovering over them, causing blips on their radar screens, or otherwise harassing their aircraft – as, in fact, we've been doing for some time now, to the consternation of the pilots and intelligence agents.'

'That's why they describe a lot of the areas in Antarctica as inaccessible.'

'Precisely,' Wilson said.

Glancing through the window, down those dizzying depths between the sheer walls of the mountain where it formed a natural well, he saw the latest 250-foot diameter mother ship on its landing pad, surrounded by smaller saucers of various sizes. Viewed from above, especially from this great height, they looked like perfectly formed, silvery plates turned upside-down. With no protruberances of any kind, no identifying marks, not even a visible seam, they had their own bizarre beauty.

'So what's the general UFO situation in America?' Wilson asked his roving scout and assassin.

'No problem,' Fallaci replied. 'I can confirm that the virtual dissolving of Project Blue Book, combined with the ridicule heaped upon UFO witnesses and the suppression of information and news about UFOs – a task undertaken by Air Force intelligence and supervised by CIA agent Jack Fuller – has reduced public interest in the subject almost to zero, removed pressure from the Air Force, and given the civilian UFO organisations severe problems, most of them due to a lack of funds caused by falling memberships.'

'Falling because UFOs have been systematically erased from public consciousness by the choking off of news about the subject.'

'Exactly.'

'This all sounds very good to me,' Wilson said with a thin, almost good-humoured smile.

'It's certainly not bad,' Fallaci said. 'Still, we must continue to keep a watchful eye on the Europeans, Americans and Soviets who have, over the past few years, been co-operating more openly, which isn't good news for us.'

'They're co-operating more openly?' Wilson said. 'That *does* surprise me.'

'Me, too,' Fallaci said, 'but it's true. They've been drawing closer for the past few years, but really got into bed together in December 1962 with the formation of a multilateral NATO nuclear force; the signing in July 1963 of a treaty between Britain, America and the Soviet Union, banning nuclear weapons tests in the atmosphere, outer space and underwater; and, finally, the installing, on August 10, 1963, of a 'hot line' between the Kremlin and the White House, to reduce the risk of accidental war. This unprecedented co-operation between these old enemies suggests that they may be hoping to unite into the one, all-powerful force that can eventually be turned against us.'

‘Fear not,’ Wilson replied with the supreme confidence of a man to whom emotion is alien. ‘I’m giving them someone else to worry about. The assassination of President Kennedy – a good job well done, incidentally – ’

‘Thanks, boss.’

‘As I was saying, the assassination of President Kennedy has already strained the US-Soviet relationship. As we anticipated, many Americans view his death as the result of a Soviet plot. Also, before this year is out, the Chinese will, with our help, successfully test their atomic bomb over Sinkiang, a western province bordering the Soviet Union. That will, I believe, make the Soviets more concerned with the Chinese than with us; while the Americans, still obsessed with the death of their president and his Soviet-loving assassin, Lee Harvey Oswald, will be extremely suspicious of the Soviets and much less concerned with us.’

The intercom on the table beside Wilson rang shrilly. Picking it up, he listened intently, then he put the intercom down, swivelled around in his chair, and used his remote-control to turn on the 28”-TV standing across the room. A machine known as a video-recorder was resting on a stand beneath the TV set and it came on automatically to record the programme being shown.

‘Intelligence,’ Wilson explained to Fallaci. ‘They say there’s something on CBS-TV that I should see. It’s starting right now.’

When the picture on the TV screen came into focus, Wilson instantly recognised the parched terrain of Socorro, New Mexico, where the famous UFO crash had occurred on July 2, 1947. The very same day, Wilson recollected, that farmer Marlon Clarke, who had been unfortunate enough to see the debris of the crash and the corpses of the crew, had been abducted by another flying saucer and brought here. Clarke’s severed head, which they had managed to keep alive for years, had recently been attached to a combination of human and mechanical parts. It was therefore still functioning, though programmed by a stereotaxic skullcap, as part of what would soon be a perfect, totally obedient, killing-machine cyborg. Now, thinking he was about to see a documentary of that old crash, Wilson was surprised to find himself viewing a documentary on another UFO crash in Socorro – but one that had taken place just a few days ago.

What he saw enraged him.

On Friday, April 24, 1964, somewhere between 5.50pm and 6.00pm, Opal Grinder, manager of the Whiting Brothers' service station in Socorro, claimed that the driver of a 1955 model Cadillac, which had a Colorado licence plate and also contained the driver's wife and three boys, stopped at Grinder's service station for gas. The agitated driver told Grinder that 'something travelling across the highway from east to west' almost 'took the roof off' his car as he was driving just south of town, north of the airport. He suspected that the object had either landed or crashed, as he had also seen 'a police car head off the road and up a hill in that direction.' Continuing into town, he had met another police car heading in the same direction. To Grinder's suggestion that he might have seen a helicopter, the unnamed man said, 'That sure would be some funny helicopter!'

Subsequent investigations by the police revealed that the object had been observed flying only a few hundred feet to the northeast of the north-bound Cadillac at 5.45pm on April 24; it was 'egg-shaped, had a smooth aluminium or magnesium-like surface, and seemed to be a little longer than the four-door green 1955 Cadillac in which the family was riding.' The object dropped to barely ten feet above the ground, flew directly at the Cadillac, and passed silently within ten feet of its top, almost touching the tip of the radio antenna. It streaked onward a few hundred yards to the southwest, where it stopped abruptly, hung in mid-air for about thirty seconds, then descended vertically, silhouetted by the low afternoon sun, to land just beyond a small hill that hid it from the view of those in the Cadillac.

The driver of the Cadillac and his wife then observed a white Pontiac police car as it turned off a north-south road that ran west of US Highway 85, cut across the rough terrain, and headed for the rise beyond which the strange flying object had landed. Thinking that perhaps they had seen some 'new type of aircraft' that was being developed in the area, the driver of the Cadillac kept driving towards Socorro, eventually passing another police car. This one, which was from the New Mexico State Police, was moving urgently in the opposite direction, also heading for where the strange aircraft had descended.

Once in Socorro, the driver of the Cadillac stopped at the Whiting Brothers' service station on the north side of town, where he told the manager, Opal Grinder, that someone was flying 'a funny looking aircraft' dangerously low over the highway on Socorro's south side, had landed, and was probably

being checked out by the officer of the pursuing police car. Then the driver of the Cadillac continued his journey with his family.

The man in the white Pontiac was later identified as Lonnie Zamora, a thirty-one-year old Socorro policeman described in a subsequent report by investigating FBI agent J. Arthur Byrnes Jr as a 'sober, industrious and conscientious officer, and not given to fantasy.'

Zamora's extraordinary experience had begun at approximately 5.45pm when he set off in pursuit of a speeding black 1964 Chevrolet, following it south, after pulling away from the west side of the courthouse. About a minute later, at approximately the same time as the unknown man from Colorado had sighted his UFO, when Zamora was a half-mile south of Spring Street, he heard a roar and noticed a brilliant blue 'cone of flame' low to the south-southwest, at a distance of approximately 2,400 ft. As Zamora was wearing prescription glasses with green sunshades, he was at this stage unable to distinguish the difference between the flying object's body and the 'blue cone of flame' shooting out of it. As the flame was over the location of a dynamite shack owned by the town mayor, Zamora assumed that the dynamite was blowing up; so instead of continuing his pursuit of the Chevrolet, he turned off the paved road and headed across the rough terrain, toward what now looked like a descending flame and sounded like a 'continuous roaring'.

Because of the position of the speeding Chevrolet, it was assumed by the investigators that its driver would have either seen or heard the descending object.

Zamora drove across the rough terrain, towards the roaring 'flame', for about twenty seconds. By this time he was able to note that the flame definitely was 'bluish, very brilliant, a little orange around the edges, more so near the bottom' and that it was 'sort of motionless, but appeared to *descend slowly*.' He could not see the bottom of the flame, which had just descended behind a hill; nor did he notice smoke. But some dust seemed to be moving over the area where the object had landed.

The 'flame' disappeared completely behind the hill, but the roaring continued as Zamora tried more than once to make his Pontiac climb the steep, gravel-covered slope. Then, as he finally began to ascend successfully, the roaring of the hidden 'flame' died away.

Turning over the hilltop, Zamora saw a 'shiny type object' down in the

ravine, or arroyo, to the southwest, at a distance of about 150 yards. He stopped his car for a few seconds, in order to study the object. At first he thought it was ‘an overturned white car’ with the far end raised higher than the nearest one. Then he saw two people in white coveralls standing close to the object.

As if having heard Zamora’s arrival, one of the individuals turned and looked straight at his car, then jumped slightly, as if startled by seeing him there.

Zamora had only stopped for a few seconds. Now, as he started forward again in his car, he noted that the object was ‘like aluminium – it was whitish against the mesa background, but not chrome’ and it seemed oval or ‘egg-shaped’ with support legs extending obliquely from it.

The individuals in white coveralls looked like normal human beings, but ‘possibly they were small adults or large kids.’

As he drove on again, Zamora descended into a dip and temporarily lost sight of the object and the two people beside it. Worried that he might have come across a top-secret experimental vehicle from the White Sands Proving Ground, and wanting one reliable witness other than himself in case of trouble with the authorities, he radioed to the sheriff's office that he was checking a possible 10-40, or accident, down in the arroyo, and wanted a New Mexico State Police Sergeant, Samuel Chavez, to come alone to the location.

As his message was being relayed to Chavez by Ned Lopez, the Socorro chief dispatcher, Zamora stopped his car again and started to get out, still talking on the radio. He dropped the microphone accidentally and leaned down to retrieve it. Even as he was straightening up again, he heard ‘a heavy slam, metal-like, heavier than a tank hatch... then another slam, *real loud*.’ He was completely out of his car and could see the object in clear view, about fifty feet away from the arroyo, with two of its four support legs extending obliquely down to the ground. He could also see, for the first time, a large, red insignia on one side of the object’s otherwise smooth, featureless, egg-shaped body.

The two individuals in white coveralls had disappeared – a fact that, combined with the metallic ‘slamming’ noises heard by Zamora, made him assume that they had entered the strange craft by some unseen door.

He had only taken two or three steps toward the object when he heard ‘a

roar... not exactly a blast, very loud roar... not like a jet... started low frequency quickly, then rose in frequency – a higher tone – and in loudness, from loud to very loud.' At the same time he saw 'bright blue flame' shooting out from the underside of the object as it started to rise vertically from the ground.

Thinking that the object was about to explode, Zamora threw himself to the ground. He felt a wave of heat, but when no explosion came, though the roaring continued, he got up again and ran back to his car. Bumping into it while glancing fearfully back over his shoulder, he lost his glasses and sunshades. Determined to keep the car between himself and the ascending object, which he still felt might explode, he ran north across the mesa, glancing back two or three times to observe that in about five or six seconds the object had risen level with his car, about twenty feet above the bottom of the arroyo. It was still roaring and shooting flame from its underside.

About fifty feet from his car, when just over the rim of the hill, Zamora turned back towards the object, but shielded his eyes with his arm in case it exploded.

At that moment, the roaring stopped and was replaced by a 'sharp tone, a whining sound' that went 'from high tone to low tone in maybe a second, then stopped.' And then there was silence.

Zamora saw that the object was no longer rising, though it *was* still moving: heading away quickly, in perfect silence, west-southwest, passing over, or, rather, south of, the dynamite shack as it flew away.

Realising that the object was in flight and not exploding as he had feared, Zamora raced back to his car, picked up his glasses and sunshades from where they had fallen, then once more radioed the Socorro chief dispatcher, Ned Lopez.

Lopez later confirmed that he had received the call from Zamora, breathlessly telling him to look out the window of the sheriff's office to see if the object was in sight. As Lopez was at the north window, not the south, and therefore could not see the object, he asked Zamora what kind of object it was. Zamora said, 'It looks like a balloon.'

Even as he was talking to Lopez, Zamora was watching the UFO disappearing in the distance. It stayed about ten to fifteen feet above the ground, following the terrain, until it was near the perlite mill on the west side of US 60, about a mile away. There, it 'suddenly angled up in a steep

climb and got small in the distance, over the canyon or mountain that way, *very fast*.' He later remembered it as 'a bright, whitish oval getting smaller and smaller as it sped away, upward and over the mountains.'

Approximately one minute and fifty seconds after Zamora had first heard the roar and seen the 'flame' in the sky, the UFO was gone.

Sent urgently to the landing zone by the message relayed through chief dispatcher Ned Lopez, New Mexico State Police Sergeant, Sam Chavez, reached Zamora just after the UFO had disappeared. Even as Chavez was approaching Zamora, the latter was making a sketch of the red insignia he had seen on the object before it took off. Though he had remained calm enough to do this, he was, according to Chavez, as 'white as a sheet' and in a cold sweat.

Examining the landing site with Zamora, Chavez also saw that the brush was smouldering in several places, after being ignited by the flame, and that there was what appeared to be a 'quadrangle' formed by four heavy, wedge-shaped imprints in the soil.

'So there you have it, folks,' the TV reporter said breezily, standing in front of the barren landing site in the wastelands outside Socorro with a microphone in his hand and a view of the dynamite shack over his right shoulder. 'A widely respected Deputy Marshal of Socorro, New Mexico, has stated categorically that he's seen a flying saucer *and* its occupants. Whether it's true or not remains to be seen. Maybe we're *not* alone, folks!'

Wilson used the remote control to switch the TV off. Then, quietly furious, he turned to Fallaci and said: 'The damned fools! That was one of *their* experimental saucers from the White Sands Proving Ground. This will probably resurrect worldwide interest in flying saucers. I have to see Fuller.'

'I'll get him,' Fallaci said.

Chapter Thirty-Seven

Wilson was right. The Socorro Incident of April 24, 1964, soon became the most famous UFO sighting since the original Socorro sighting of 1947, resurrecting widespread public interest in the subject and replenishing the depleted financial resources of the leading civilian UFO organisations by dramatically increasing their membership to what it had been three years earlier, before the dropping of Congressional hearings and the propaganda campaign against NICAP's Donald E. Keyhoe had taken their toll.

A few weeks after the Socorro Incident, Randall flew to Washington DC to have a meeting with Dr Frederick Epstein and Tony Scaduto in the revitalised APII organisation headquarters in 21st Street. As Scaduto had just returned from New Mexico, where he had been sent by Dr Epstein to check out the Socorro Incident, the purpose of the meeting was to hear what he had to say. Since Epstein was at that stage convinced that the UFOs were of extraterrestrial origin, Scaduto and Randall had still not confided their belief that at least some of the flying saucers could be man-made. Scaduto was now looking uncomfortable, because he was close to that subject.

'First thing I learned when I got to Socorro,' he reported, 'is that Deputy Marshal Zamora's radio transmissions had been heard by others, including State Police Senior Patrolman Ted V. Jordan, who arrived at the landing site shortly after Chavez, in the company of Socorro Under-Sheriff James Luckie. A cattle inspector named White, who had also heard Zamora's radio calls, turned up at the landing site; and just after 6.00pm, FBI agent J. Arthur Byrnes arrived to investigate.'

'So what did *you* find?' Dr Epstein asked in his quiet, thoughtful way, while stroking his Vandyke beard, which now had lots of grey strands in it.

'I found the burnt brush, which seemed genuine enough,' Scaduto replied. 'I then interviewed every witness I could find – the ones who'd seen the brush when the burning was still recent – and they all confirmed that the brush had been scorched by flames and that the pad prints, or landing

imprints, had been made, in the words of one investigator, "by wedge-shaped units being forced by great weight down into the well-packed soil of the ravine."'

'What size would they have been?' Epstein asked, letting the tip of his ballpoint pen dangle over his notebook.

'The wedges would have had a horizontal length of twelve to sixteen inches, a horizontal width of six to eight inches, and a vertical wedge-depth of four to six inches. I have to say, though, that this latter measurement was impossible to define accurately because of the inward falling of the soil.'

Scaduto withdrew a press cutting from his jacket pocket, unfolded it and smoothed it down on Epstein's desk with the palm of his hand.

'According to the detailed account in the April 28, 1964 edition of the local biweekly newspaper, *El Defensor Chieftain*,' he continued, reading from the press cutting, 'the landing gear imprints – I quote: "did not appear to have been made by an object striking the earth with great force, but by an object of considerable weight settling to earth at slow speed and not moving after touching the ground."'

He pushed the press cutting towards Dr Epstein, watched the older man pick it up enthusiastically, grinned nervously at Dwight, and then spoke again directly to Epstein.

'Though some of the brush was still smouldering when Chavez, Jordan, Luckie and White were present, they all agreed that there was no odour indicating that combustion of any conventional fuel had caused the burn damage.'

'Very good,' Epstein murmured.

'Jordan was particularly impressed by the fact that the flame described by Zamora had obviously sliced a large greasewood bush located almost centrally in the landing gear quadrilateral, without leaving any signs of turbulence, like the kind that would have been caused by normal rotors or jet exhausts. Jordan also took Polaroid pictures of the landing site and the four imprints within minutes of arriving on the scene.'

'You obtained copies?' Epstein asked, suddenly frowning like a stern schoolteacher.

'Yes, boss, I got copies.'

Epstein smiled and nodded. 'Fine, Tony. Continue.'

Scaduto glanced at Dwight and grinned, this time cockily, with pride, then

turned back to Epstein. ‘Reasoning that the landing mechanisms of an experimental lunar landing module could have made the depressions in the ground, I contacted informants in NASA and the Jet Propulsion Laboratory to find out if they, or any of the fifteen local industrial firms working for them, had been conducting any experiments with lunar landing modules in the area. In each case, the answer was “No.” I then established that no helicopters or aircraft were in the area at the time of the sighting and that the direction of the winds ruled out the possibility that the object was a weather balloon.’

‘This sounds too good to be true,’ Epstein said, smiling distractedly, as if lost in his own thoughts. ‘We certainly appear to be talking about a real, physical object that landed and took off again.’

‘Well, then, digest *this* interesting piece of news,’ Scaduto said, no longer looking even remotely uncomfortable and instead getting into his stride. ‘Just before leaving Socorro I received a call from my set of eyes and ears at the ATIC, and he told me that Project Blue Book, even under the leadership of the sceptical Major Quantinilla, is going to list the case as a genuine unidentified: the only combination of landing, trace and occupant case so far listed in the Blue Book files.’

Epstein gave a soft whistle to express his surprise and pleasure.

‘At least they’re still doing *something*,’ Dwight said sardonically.

‘Now, now,’ Epstein responded soothingly, knowing how bitter Dwight felt about how he had been treated by the Air Force. ‘Go on, Tony. We’re listening.’

‘Regarding Project Blue Book’s involvement,’ Scaduto continued, ‘I found that the case had been examined by Dr Lincoln La Paz, who’d worked on the old Project Twinkle, and by NICAP’s Dr. J. Allen Hynek. The last named was there in his official capacity as consultant to the USAF. I also have it on the best of authority that Hynek has already pronounced it as, I quote, “one of the major UFO sightings in the history of the Air Force’s consideration of the subject.” That was the final clincher when it came to Major Quantinilla’s decision to list it in Project Blue Book’s files as the first known combination of UFO landing, trace and occupant case.’

‘Wonderful!’ Epstein exclaimed softly.

‘So what did you find out about the landing site?’ Dwight asked more pragmatically.

‘Examination of the landing site revealed that the diagonals of the

quadrilateral formed by the four landing marks intersected almost exactly at right angles. I therefore asked for, and received, Hynek's report, which contains an especially interesting notation.'

Scaduto opened the notebook he'd been holding in his lap, flipped a few pages over, then read aloud: 'One theorem in geometry states that if the diagonals of a quadrilateral intersect at right angles, the midpoints of the side of the quadrilateral lie on the circumference of a circle...' He glanced up from the notebook. 'Here's the important point,' he said, then went back to his reading. 'It is thus of considerable interest that the centre of the circle so formed on the Socorro landing site virtually coincided with the principal burn mark on the ground. Under certain circumstances the centre of gravity of the craft would have been directly over the centre of the circle, hence making the presence of the burn mark more significant.' He closed the notebook and looked up again. 'In other words, what Hynek is saying is that the indentations and burn marks on the ground clearly indicated a real, physical object of circular shape. It wasn't a mirage or hallucination on the part of Deputy Marshal Zamora. That vehicle was real enough... and it was shaped like an upside-down saucer.'

'And if the vehicle was real,' Dwight said, 'then so were its crewmembers.'

'Exactly!' Scaduto exclaimed with satisfaction.

'This is sounding better every minute,' Epstein said.

'And it gets even better,' Scaduto told him. 'Get this... Checking with a receptionist in the Socorro County Building – a nice lady, incidentally, who saved me a night's hotel bill – I learnt that by 7.20pm on the evening of the sighting CIA agent Jack Fuller and US Army Captain Richard T. Holder, the up-range commander of the White Sands Stallion Site, met in the Socorro County Building, where they proceeded to interrogate Zamora. In the course of that interrogation – according to the tapes heard by my nice lady and others – Byrnes told Zamora that it would be better if he did not – and I quote again: "publicly mention seeing the two small figures in white" – unquote.'

'Two small figures in white,' Epstein repeated dreamily.

'Correct.'

'Not black?' Dwight asked.

'No. White.'

'But they specifically told Zamora not to mention the figures seen standing beside the saucer-shaped object,' Epstein said.

‘That’s right,’ Scaduto replied. ‘Which suggests that the figures in white coveralls were certainly there.’

‘Anything else?’

‘Yes.’ Scaduto was now visibly excited. ‘Jack Fuller then recommended that in future Zamora refuse to describe the insignia he had seen on the side of the vehicle to anyone other than official investigators.’

‘Insignia?’ Epstein asked, leaning forward to stare intently at his young researcher.

‘Yeah. There was an insignia on that aircraft. According to the report witnessed, notarised and filed in the Socorro County Building, it was red in colour and approximately one-and-a-half feet from top to bottom. Zamora sketched it for his report. According to his sketch, it was an inverted V, or a vertical arrow, with a line under it, vertical lines on each side, and a parabolic arc over the point of the arrow.’

‘Any idea what it represented?’

‘Some.’ Scaduto’s grin was now openly triumphant. ‘A computer scientist buddy of mine ran it through his data base and came up with the notion that it’s similar to a medieval Arabic sign for Venus. However, another friend, an aeronautical engineer, insisted that it’s confirmation that the UFO was a man-made vehicle.’

‘Man-made?’ Epstein echoed him. ‘I don’t think I can wear this.’

‘I think you might, boss.’

‘Okay, Tony, continue.’
